In part i. of Volume VI. of Cassell's 'Encyclopædic Dictionary,' published in 1887, and in the third edition of Prof. Skeat's 'Concise Etymological Dictionary,' the derivation of the word has been accepted as it had been indicated in *Timehri* in 1885. In the former work the authority is given. The latter omits this, but gives details which show the source of information. That they have not been misled has been established by a reference to Dr. Murray, at his "Scriptorium," where is being built up that triumphal monument of the English language called 'A New English Dictionary on Historical Principles.' Having his five millions of slips of quotations all carefully arranged, the genial Colossus of Words draws forth the several contributions for the illustration of the word rum, including the paper from *Timehri*. From the quotations submitted to Dr. Murray, the two following require no comment:

(a.) From page 9 of chapter iv. of Burton's 'English Empire in America,' published in 1685:

". . . fetching their drink from the next Spring, being unacquainted with any other, till the French and English taught them the use of that cursed Liquor, called *Rum*, *Rumbullion*, or *Kill-Devil*, . . . drawn from the dross of sugar and sugar-cane."

(b.) From pages 30 to 34 of Hughes's "American Physician," in Sir T. Pope's 'Blount's Natural History,' 1693, page 146:

". . . or else they convey it into a copper-still (as they do all their other settlings and dregs of sugar) to be distill'd, and make a sort of *Strong-Water*, which they call *Rum*, or *Rumbullion*, stronger than *Spirit of Wine*, and not very pleasant, until a man be us'd to it. This strong liquor is ordinarily drank amongst the planters, as well alone, as made into *Punch*."

It seems hardly necessary to add that Dr. Murray entertains no doubt but that Rum has been clipped from Rumbullion. L. S.

LONDON, September 26, 1890.

INVERSION OF TEMPERATURE.

TO THE EDITOR OF THE NATION:

SIR: In regard to the nocturnal inversion of temperature, it is my impression that, as a rule, on still nights the air is cooler in valleys than at a moderate height above them, owing to the fact that as it cools it becomes denser. I was familiar with the fact during all my early life in Vermont, on high ground between the Connecticut and Ompomponoosuc Rivers. On still, cold winter nights, the temperature at my home was seldom less than 5°, and sometimes as much as 10°, higher than along the Connecticut, two miles away, and about 300 feet lower. Early frosts were invariably more injurious to vegetation in the valleys than on the hills. I noticed the same thing at the Asylum for the Insane at Kalamazoo, Mich., which is about 150 feet above the level of the town. On one occasion, I remember there was a difference of 8 in favor of the higher ground.

W. L. WORCESTER, M.D.

LITTLE ROCK, ARK., October 5, 1890.

READY HANDS FOR DEMOLITION.

TO THE EDITOR OF THE NATION:

SIR: I have read with a certain degree of enthusiasm the letter of my academic superior in the *Nation* of September 25, in which he expresses a hope that Mr. Van Brunt's temporizing plea for the continued existence of the modern buildings at Cambridge may find an adequate answer from a competent hand. It is possible that the A.M. lives farther away from Cambridge than I do, and may not know that hands abound there not only competent to the task which he suggests, but also capable of carrying out to its full consummation Prof. Norton's pregnant hint. Hands abound, and doubtless would be ready, if properly encouraged, to enter upon such tasks with fervor. There seem to be, in fact, even some undergraduates who, fitly inspired and upon proper occasion, such as, *e. g.*, winning a football game from Yale, might be expected to set themselves enthusiastically "to criticise, reprove, and correct the civilization of the time." These vigorous young gentlemen are quite capable of removing the last taint of Richardsonism from the college-yard. They could easily, I should say, not only pull Sever down, but carry it off. As to the superintendence and direction of their work I do not venture to make any suggestion. Prof. Ruskin, I have heard, was found useful in a somewhat analogous position at Oxford a few years ago, when he showed himself the guide, as well as the philosopher and friend, of a body of undergraduates who, for a brief season, were possessed by a zeal for manual labor. A HARVARD B.A.

Notes.

WE have received from Mr. John Bartlett, Cambridge, Mass., specimen sheets of his forth-

coming 'New and Complete Concordance or Verbal Index to the Words, Phrases, and Passages in the Dramatic Works of Shakspere,' a quarto volume of 1,650 pages. Its aim is "to present the passages with such fulness that only in exceptional cases will a reference to the context be needed." And on the side of minuteness it includes select examples of "the verbs *to be, to do, to have*, in their different tenses, together with the pronouns, prepositions, interjections, exclamations, and words used as expletives." The text of the Globe Edition has been followed. The workmanship is of the University Press.

Charles Scribner's Sons have just issued a second edition of Mr. Henry T. Finck's 'Chopin, and Other Musical Essays,' and on the 23d instant they will publish his new volume, 'The Pacific Coast Scenic Tour: From Southern California to Alaska; Across the Canadian Pacific; the Yellowstone Park and Grand Cañon,' with twenty full-page illustrations.

Harper & Brothers have nearly ready an illustrated holiday book, 'Christmas in Song, Sketch, and Story,' by Prof. J. P. McCaskey, and 'The Boy Travellers in Great Britain and Ireland,' by Col. T. W. Knox.

By a curious coincidence, the next two volumes in the series of 'Historic Towns,' edited by Prof. Freeman and Mr. William Hunt, and published by Longmans, Green & Co., are to be histories of old York and of New York. The former is by the Rev. James Raine, Prebendary of York. The latter is by Mr. Theodore Roosevelt, and as it is the first volume of the series devoted to a city outside of Great Britain, it indicates a welcome enlargement of the scope of the enterprise. Another book of interest to students of American life which the same firm announce, is a 'Hand-book of Political Americanisms,' by Col. Charles Ledyard Norton, greatly amplified from the series of articles which he contributed several years ago to the *Magazine of American History*. Finally, they will follow Mr. Andrew Lang's 'Blue Fairy-Book' with his 'Red Fairy-Book,' drawn from many outlandish sources, and freely illustrated. Mr. Lang's busy hand, by the way, will also be seen this season in his 'Life of Lord Iddesleigh,' and in selections from Burns for the "Parchment Library."

Mr. Austin Dobson has written yet another preface for yet another edition of the 'Vicar of Wakefield,' to be illustrated this time by Mr. Hugh Thomson, and to be published by Macmillan & Co.

Mr. W. H. Goodyear is now in London, preparing for the publication of his *magnum opus*, 'The Grammar of the Lotus'— a work which he has had in preparation for several years, and which treats of the history and development of decorative art in the ancient East.

Paul Heyse's 'Children of the World' is set down for immediate publication by Worthington Co.

Houghton, Mifflin & Co. will publish 'Doctor Le Baron and his Daughters,' a new story by Mrs. Jane G. Austin.

Dr. W. Clarke Robinson of Kenyon College has in the press, to be issued immediately, a book on 'Shakspere, the Man and his Mind,' dedicated to Dr. H. H. Furness of Philadelphia.

Mrs. Oliphant's 'Memoirs of the Life of Laurence Oliphant,' based upon a large mass of his private correspondence, is promised shortly by Blackwood & Sons.

The John W. Lovell Co. reproduce, in their paper "Westminster Series," a sketch of the Oberammergau Passion Play by Canon Farrar, originally written for the Manchester *Guardian*. It is perhaps the best critical estimate of this year's performance that has appeared, and it ought to be especially gratifying to those who truly appreciated the play, as an authoritative vindication of its dignity and propriety. The same book, however, contains an article from Mr. Stead's *New Review*, which suffers badly by contrast with the scholarly criticism that precedes it.

Time is certainly taken by the forelock when the Messrs. Routledge distribute already 'Kate Greenaway's Almanack for 1891.' It is adorned with this artist's customary properties of girls and posies and garlands, daintily arranged and printed in color; and there is a semblance of hand-painted covers, tied with a pink knot.

Gebbie & Co., Philadelphia, have put forth a new edition of Charles Lamb's 'Adventures of Ulysses,' adapted for youthful readers. Mr. Andrew Lang furnishes a preface, in which he makes no allusion to the question of Homer's real existence or undivided authorship, and doubts and denies only his ability to memorize the contents of the 'Iliad' and the 'Odyssey,' concluding that he availed himself of the art of writing. It is a pity not to have given a better map of the track of Ulysses. The engravings are copies of designs whose origin we cannot determine. The print is open, and there is an index of names.

Prof. Henry Morley prolongs his "Carisbrooke Library" (Geo. Routledge & Sons) with volumes 8, 9, 10, the first being John Stow's 'Survey of London' (1598), that invaluable picture of the city in Shakspere's time; 'Masques and Entertainments,' by Ben Jonson; and 'Ireland under Elizabeth and James the First,' as described by the contemporary pens of Edmund Spenser, Sir John Davies, and Fynes Moryson. All these are preceded by the editor's learned and illuminating introductions. In that to the last-named volume he shows his purpose to have been to exhibit the nature and effect of early English rule in Ireland, as a contribution to the humane solution of the problem which yet vexes both peoples. In Fynes Moryson's 'Description of Ireland' (1600–1603) the closing selection (with which, however, Prof. Morley recommends the reader to begin), we find an earlier use of the word *bonny-clabber* than any cited in Dr. Murray's great Dictionary, where the first reference is to Ben Jonson, 1631. The spelling, too, has been overlooked. Says Moryson (p. 428): "They feed most on white-meats, and esteem for a great dainty sour curds, vulgarly called by them Bonaclabbe."

The section of Literary Theory and Criticism in Prof. Masson's edition of De Quincey's writings (Macmillan) is brought to a close in the eleventh volume. Here are grouped together criticism on German writers—Schlosser, Goethe, Lessing, Richter; on eighteenth-century English writers, particularly Pope; on contemporary poets—Wordsworth, Shelley, Keats, Landor, etc. The onslaught on 'Wilhelm Meister' is followed by praise of Jean Paul, with analects. Prof. Masson has been kept busy with footnotes in a field so full of controversy, and not wanting in inaccuracies on De Quincey's part, to say nothing of ill or unfruitful judgment.

Last year's success in reissuing 'The Marble Faun' in two volumes, beautifully printed and illustrated with photogravures, has prompted the publishers, Houghton, Mifflin & Co., to do the same by the 'Old Home' of Hawthorne. The result is perhaps less striking, but the volumes are certainly very comely, with their quiet cover in a green silk or silk-like cloth. The views have been well chosen. There are portraits of the author, of Nelson, and of Burns. Here and there the text is compared with the original entries in the 'English Note-Books,' and this offers much instruction in style and finish of composition.

The same firm makes over Lowell's 'Fable for Critics,' "with vignette portraits of the authors *de quibus fabula narratur*." These vignettes, however, are mere pen outlines, let into the margin, and, if sometimes suggestive of the original, are often mere caricature, as in the case of Holmes and Whittier. The idea was excellent, but this classic deserved better treatment, and some expense should have been ventured on portraits as nearly contemporaneous with the poem as possible. So we hope the publishers will look upon their present effort as merely that of a 'prentice hand.

Even later than usual this season is the volume of 'Les Annales du Théâtre et de la Musique,' which MM. Noël and Stoullig have published annually for now fifteen years. The preface this time is by M. Henri Meilhac, and it considers a phase of theatricals wholly unknown among us, prone as we are to follow foreign fashions, for it describes the performances given in the great clubs of Paris, when a play is written by one or more members—generally a *revue*—and acted by members of the club with the aid of professional actresses.

— In 1760, or thereabouts, the London publisher John Newbery, who made a specialty of children's books, issued the original 'Mother Goose's Melody,' which passed through eight editions in the course of twenty years. Nobody can now produce a copy, and it would appear that this nursery classic would have become obsolete in England but for its transfer to America and immense revival here. Isaiah Thomas, the famous printer of Worcester, Mass., was the prime mover in this revival, for he made reprints from Newbery's list, including 'Mother Goose,' this last about the year 1785. The year is in doubt because the covers of the only two copies extant have been torn off. Mr. W. H. Whitmore of Boston has just reproduced this first American edition in facsimile in a small quarto published at Albany by Joel Munsell's Sons. Moreover, he has entered on a laborious inquiry as to the origin of "Mother Goose," who (as the narrator of tales like "Little Red-Riding Hood," etc.) is indisputably French, and must be linked with the name of Perrault—Contes de ma Mère l'Oye. Mr. Whitmore discredits the unsupported tradition that the old lady was of Boston origin. The 'Melody' begins with John Newbery, and possibly with Oliver Goldsmith, who did hackwork for him at the time, as Mr. Charles Welsh has shown. Newbery's edition, or Thomas's reprint of it, Mr. Whitmore discovers was certainly in the hands of Munroe & Francis when, between 1824 and 1827, they issued in Boston 'Mother Goose's Quarto, or Melodies Complete,' which has proved the parent of an endless progeny on both sides of the Atlantic. Omissions were few, but additions and alterations to Newbery-Thomas many; and there were seventy new cuts, on which the best Boston engravers were employed. We can give but the barest hint of Mr. Whitmore's researches, in a line as difficult to pursue as that of equally perishable cook-books. He bespeaks a new edition, returning to the elder versions, purged of their grossness, of which the specimens retained in the reprint from Thomas cast a curious light (as do Franklin's Poor Richard's Almanacs) on the refinement of the period. He would retain of Newbery also the second part, "containing the lullabies of Shakespear," which the compiler refrained

from loading with the absurd "maxims" of the nursery rhymes proper. Meantime, Mr. Whitmore's pamphlet should be eagerly taken up, for its valuable prefatory bibliography, the queer cuts of the 'Melody,' the Munroe & Francis title-pages, and other reproductions.

—The 13th volume of the *American Journal of Mathematics* opens in a manner that characterizes it as in many respects the first, and in no respect the second, among those great mathematical journals which are devoted to the production of original articles of the profoundest and most exhaustive kind. In addition to the scientific contributions of which we are about to speak, it presents its readers with a fine head of Prof. Cayley. The opening paper, perhaps we ought to say treatise, of the new volume is in German, written by Mellen Woodman Haskell, a name wholly English; and, in fact, the paper is the work of a pupil (presumably an American) of the distinguished German mathematician, Prof. F. Klein of Vienna, and was prepared at the latter's suggestion and under his guidance. It contains abundant evidence that the pupil was very far from being a mere amanuensis. The paper occupies more than 50 pp. of the *Journal*. It is an elaborate exposition of a new method, invented by Prof. Klein, of representing geometrically, by means of a curve of the 4th order, an algebraical function of the fourth degree having 168 values. The second paper is by Prof. Cayley, "On a Soluble Quintic Equation" (6 pp.). The greater part of it is purely arithmetical, and it is amusing to observe that the purely numerical equation at the bottom of p. 57, to which the author appends the emphatic declaration "which is right," is certainly wrong, although undoubtedly the compositor and proof-reader and not the great mathematician are responsible for the error. The last term is printed "10,000" when it should be "100000." The remaining 38 pp. of this number of the *Journal* are occupied by Dr. Oskar Bolza, who begins the reproduction of a course of lectures which he delivered last year at the Johns Hopkins University, "On the Theory of Substitution-Groups and its Application to Algebraical Equations." This paper is especially worthy of the attention of mathematical students and professors because, as the editor of the *Journal* remarks in a note, "no separate work" on the subject "is found in the English language." Dr. Bolza has gathered together and moulded into a regular treatise all that is known on the subject at the present time. We presume that for some time to come the pages of the *Journal* will remain the only source of information on this important subject accessible to the English student.

—The English Dialect Society looks forward to a cessation from its labors in 1892. Nine glossaries yet remain to be published, but as the rate of issue is, on the average, only two per annum, the last report of the Society foreshadows a reluctant abandonment of one-half. This is a pity; and as it is only a question of funds, it would seem as if the $3,500 needed to finish up the work might be forthcoming even from a single donor. The way would then be clear for the Rev. A. Smythe Palmer's English Dialect Dictionary, which is to be the next lexicographical achievement of our indefatigable kinsmen across the water. To this enterprise—unlike Dr. Murray's Dictionary—Americans can contribute only with money. The Society's publications for the current year have lately come to hand, bearing the Trübner imprint as of yore, but protracted into "Kegan Paul, Trench, Trübner & Co., Limited." No. 60 is entitled 'English Dialects, their Sounds and Homes,' by Alexander J. Ellis, who has effected an abridgment of Part 5 of his 'Early English Pronunciation,' with a selection of the examples reduced to the Glossic notation. It indicates as accurately as may be "the prevalent non-received pronunciation of certain districts into which the English-speaking portion of England, Wales, and Scotland has been mapped out." The maps are two, viz., of England and Wales, and of Scotland (for the Lowland dialect), and these are colored and numbered in a manner too elaborate to be more than referred to here. Nor can any one without earnest study master the bounds of the "*sum* line" and the "*suom* line," the "Southern *teeth*" and the "Northern *dheeth* line," and all the rest of this scientific apparatus. We must confine ourselves to a citation from p. 57, in which Mr. Ellis says: "It is remarkable that in the American Colonies, afterwards the United States, a distinctly East-Anglian character was introduced, and that in the Australian Colonies the whole speech is modelled upon the N. and E. London, or so-called Cockney habits, which are essentially M E. [Mid-Eastern], and especially Es. [Essex], rather exaggerated than obliterated."

— No. 61 is a "Glossary of Dialect and Archaic Words Used in the County of Gloucester," compiled by J. Drummond Robertson, and edited by Lord Moreton. This territory is mapped on a convenient scale to show local peculiarities. It is divided by the Severn into two unequal parts, of which one has two and the other six dialectic subdivisions. No fewer than eight counties, including Shakspere's, touch upon Gloucestershire, and it is no wonder that the Shaksperian illustrations are very numerous. Under *breeze* (gad-fly), in the Addenda, surprise is expressed that Shakspere's use of the word is unrecorded in the 'New English Dictionary.' Dr. Murray's recent discussion of the derivation of *cockney* leads us to notice that *eye* (p. 45) is defined, on authority, 'a brood of pheasants'; and the compiler adds: "'I never got an *eye*,' is a phrase I have heard used in Gloucester of a hen which has failed to hatch a sitting of eggs. Has this any connection with *Ei*, an egg?" Geometry being considered magic, we are told, *jommetry* is "used of anything supported in an unknown manner," as, "It hangs by jommetry." The old North Cotteswold shepherd tells of having learned nought at school—"nether reedy, writy, nar zummy." A man's decease is regularly denoted by the expression, "He's gone dead." Of a lazy person they say, "He was born tired"; and, recalling Miss Edgeworth's "Lazy Lawrence," we may remark the Gloucestershire synonym for indolence, viz., "He has a vit o' Laurence on un." "I'll give you *best* at that," signifies confession of inferiority. *Byer* is a rather poetic word for lonelier—as of a road. *Hamperment* for perplexity is a racy localism. References to American usage are frequent in this Glossary; here is one overlooked as such, the "So long!" of parting (*au revoir*). "It is not thought lucky to say 'good-bye,' which points to a long parting." There are numerous capital specimens of the dialect in prose and verse, and we will close with a line from the ballad, "George Ridler's Oven," for the sake of its insinuation of the jolly George's baldness:

"And his yead it grawed above his yare."

CLIVE.

Lord Clive. By Sir Charles Wilson. [English Men of Action.] Macmillan. 1890.

CLIVE is one of the most interesting figures in modern military history, because his career recalls those famous soldiers of antiquity whom fortune called, with little or no previous experience, from among ordinary citizens to win renown by feats of arms. He had no professional training, not having been intended for the army, and seems never to have cared much about strategy as an art. He never had to fight against European regulars, and had at no time a force exceeding 5,000 men under his command. Yet his exploits were such as might have done credit to the most skilful captains, and such as few or none of his contemporaries, with the possible exception of Frederick of Prussia, could have performed. They were accomplished not by deep-laid plans or intricate combinations, but by an extraordinary energy, boldness, and swiftness, coupled with great self-confidence, perfect coolness and clearness of head in a crisis, and the most undaunted personal courage. Clive was one of those men of whom it may be said that they must have come to the front in almost any line of active life; yet no one seems to have discovered his talents till he first obtained a chance of independent command; and he was remarkable as a boy only for audacity and insubordination. He resembles many of the ancient commanders in the extent to which this personal courage served him. Over and over again he had hair-breadth escapes from death in personal conflicts, and the marvellous ascendency which he acquired over his soldiers was very largely due to this quality, which procured for him the name by which he became famous within a few years over India, that of Sabut Jung, or "the daring in war."

But along with this there went a singularly active and penetrating mind, which was always pondering on the phenomena of the Eastern world in which his lot was cast, and studying how to turn them to the best advantage. He soon became (again like many of the great ancient commanders, and like some among the other English conquerors of India) a politician as well as a soldier, following up by diplomacy what had been won by the sword. It is, indeed, remarkable that the longer he lived the less he desired to use the sword, and the more he preferred to rely upon political methods, in this resembling Cromwell rather than Napoleon, who could never withstand the temptation to play for higher and higher stakes at the game in which his first triumphs had been secured. Clive resisted the intoxication of success, and refused in later life occasions for fighting when glory and wealth might easily have been secured, because he was disposed rather to attain moderate aims by pacific means.

His career—that is to say, his Indian career, to which his actions in England are mere interludes of less permanent interest—falls into three periods. The first begins in the year 1751, when the capture of Arcot revealed his extraordinary talents, and ends in 1753, when he returned to England. He was only twenty-six, and a simple captain of infantry, when the rapid succession of exploits against the French and their native allies in the Carnatic—what is now the southeastern part of the Presidency of Madras—marked him out as the best man England had in the East. As Sir Charles Wilson observes, he had already then discerned the two facts to which the Oriental triumphs of England there have been due, viz., the possibility of making, by good training and bold leading, effective soldiers of the natives of India, and the wisdom of vigor and swiftness in dealing with Orientals. Dupleix, the famous French Governor of Pondicherry at that time, and perhaps the most formidable

antagonist whom the English have ever had to meet in India, had already acted upon similar principles, and Clive doubtless profited by his example. Dupleix, however, was not himself a soldier, and the support he had from France was even less than that which the English at Madras obtained from home. These two years were enough to overthrow Dupleix's schemes, and to give England a preponderance in Southern India which she never subsequently, except for one brief space, forfeited.

The second period of Clive's action lay in Bengal during the years 1756 to 1760. He had here chiefly native antagonists to contend with, and none of these men of capacity. The disparity, however, between his forces and those of the Nawab of Bengal was so enormous, and the complexity of Bengal politics so great, that his success is hardly less striking than that he had achieved in the Carnatic. This success was gained by craft and intrigue, which in one instance degenerated into fraud, no less than by arms. Clive's military gifts, and in particular his activity and daring, were conspicuous now as they had been before; but he had comparatively little fighting to do, and was becoming a diplomatist and statesman rather than a soldier. Having crushed the French and the Dutch, neither of whom had strong forces at their command, and having overthrown the Nawab in one battle (Plassey, fought in 1757), Bengal lay at his feet, and the ruler whom he set up was virtually a mere dependent of the English. By a remarkable coincidence, it was at this very time that the famous Afghan chief, Ahmed Shah Durrani, defeated the Mahrattas in the great battle of Panipat and captured Delhi, thus shattering the prestige of the titular sovereigns of India, while inflicting on the strongest native military power—for such the Mahrattas then were—a blow from which it never quite recovered. Thus it came to pass that these four years of Clive's rule laid the foundations of British rule, making the English name feared, and establishing the immeasurable superiority of European troops over native armies.

The third period, separated from the second by an interval of nearly five years spent in England, mainly in struggles for the control of the Board of Directors of the East India Company, was still shorter than the two preceding, and gave no opportunity for the display of military talents. Clive appears in it partly as the statesman, resettling the relations between the English and the native powers, which had been brought into confusion by the unwisdom of those who had represented the East India Company at Calcutta since 1760; partly as the administrator, who found in existence abuses among the civil and military servants of the Company in Bengal the most flagrant and scandalous that have ever disgraced British rule in any conquered country. Clive remained only twenty months in India, the state of his health compelling a return to England sooner than he had desired. But in that time he was able to strike boldly and decisively at these scandals, so as to keep within bounds both the tyranny and the corruption of the services until the time came when a settled and regular administration could be introduced. He had to confront not only the furious resistance of the civilians, but a sort of mutiny or strike among the officers, and triumphed by boldness and firmness over both. On the death of the Nawab of Bengal, whom he had set up in the place of Surajah Dowlah after the victory of Plassey, a resettlement of the relations of the Company to the native rulers became necessary, and Clive, in taking for his British employers the *Diwani*, or financial administration of the three great provinces of Bengal, Behar, and Orissa, made them at one step the leading authority in India and the virtual protectors of their nominal suzerain, the Great Mogul at Delhi. That prince, who at the moment had been driven away from his capital, besought Clive's intervention to restore him to the throne of Delhi; but with a caution and prudence contrasting remarkably with the dash of his earlier days, Clive forbore to undertake the wider responsibilities which a march to the Jumna would have involved, though he doubtless foresaw that the time would come when Delhi itself and Upper India as far as the borders of the Punjab would fall under the influence or rule of the Company.

On his return to England after these great services, Clive had to learn that it is not the most real and disinterested services that are best appreciated. He deserved nothing but praise for his reforms in Bengal, and he had taken no opportunity of adding to his fortune, having, indeed, spent in this third period of rule more than he received. But he had made far more enemies by his recent good deeds than by his former bad ones. Those whose exactions and oppressions he had checked, and a large band of their friends in England, stirred up public opinion against him. They attacked him, not only in the press, but in Parliament, and as they found that he was able to justify his administration in the third period, and to prove that he had gained nothing for himself by the measures which had so much irritated the wrong-doers in Bengal, they recurred to the more questionable acts of the second period, some of which could hardly be defended, though they had been already condoned by the Company, and were doubtless palliated by the conditions and temptations among which Clive stood. As Sir Charles Wilson justly observes, he ought to be compared, not to regular commanders like Sir Arthur Wellesley, or regular governors like Marquis Wellesley, but to military adventurers like Hernan Cortes or Francesco Pizarro. Beside them, and especially beside the far more vulgar and brutal Pizarro, Clive comes out well. There is not much deceit to reproach him with, and hardly any cruelty; nor are his acts of self-aggrandizement to be named along with the rapacity of the Spanish conquerors.

However, these attacks embittered the short period of life that remained to him; for within a few months after the Parliamentary conflict was decided in his favor, the sufferings which he had to endure from a painful malady drove him to self-inflicted death. At least once before, in his early days at Madras, he had attempted his own life; and the natural moodiness and despondency of his temper, which only vigorous action could relieve, was aggravated by the pressure of disease. He seems to have had very few healthy hours in his life of forty-eight years, and this fact may fairly be allowed to excuse the occasional violence and acerbity of his temper. We are not surprised to be told that he was overbearing, haughty, and deficient in personal geniality; but he proved himself more than once a loyal friend, and showed as much generosity towards his family and dependents as he did ostentation in the management of his household and the adornment of his own person—a failing which, however, he reserved for England, for in India he scorned the Oriental pomp which Dupleix had affected, and impressed the native mind by severe simplicity.

Those who remember Sir Charles Wilson's narrative of the British Expedition to Khartum in 1884-5, will find in this book the same admirable qualities of style—clearness, terseness, directness, a skilful selection of the points most interesting to the average reader, yet a complete avoidance of sensationalism or "word-painting," together with a singularly calm and luminous judgment. The difficulty of compressing such an eventful life as Clive's into so small a compass is one which few can appreciate save those who have attempted a similar task; and though there are many points on which the reader will desire to know more, he will, we think, feel that the allotted space has been used in the best available way.

We will close with one reflection which Sir Charles Wilson has not dwelt on, though it arises from his narrative; probably he has thought it too obvious to need making. England seems to have had little or no sense of the magnitude of the work which Clive was doing for her in India. Plassey gave her in 1757 the lordship of the East, as the battle of the Heights of Abraham gave her in 1759 the lordship of the West, though in twenty years by far the larger part of that lordship was to pass away from her crown, if not from her blood and speech. A recent English writer (Prof. Seeley), whose power of style perhaps exceeds the accuracy and penetration of his thought, has stated with great force the view that the wars of the eighteenth century were waged by England for colonial dominion. True it is that colonial dominion has been their chief result. But it was not the leading or even a leading motive in the minds of those who began or directed those wars. The Government of King George the Second gave a faint and halting support to those who saved Southern India, and therewith probably all India, from the grasp of Dupleix and Lally. Clive was not effectively supported in Bengal, and, when he returned with the laurels of Plassey, could not obtain that red ribbon of the Order of the Bath which it seems now the English fashion to bestow on every respectable military or naval officer who lives long enough as a general or an admiral. Her position as a sea power naturally led Great Britain to attack and annex the transmarine acquisitions of other European Powers, such as Spain, France, and Holland, when she happened to be at war with them. She did not set out with any idea of founding a colonial empire. That empire grew of itself by the force of circumstances.

THE EARLY BIOGRAPHERS OF DANTE.

Dante and his Early Biographers. By Edward Moore, D.D. London: Rivingtons. Sm. 8vo, pp. viii., 181. 1890.

THE good fortune of Dante and of Shakspere in leaving little record of their lives has often been remarked, but the reflection that this is also fortunate for the readers of their works has, perhaps, been less frequent. To know the main outlines of the life of a poet is enough,—the large relations in which he stood to his contemporaries and the world. How well it would be if we knew as little of the life of Shelley as of Spenser! How needless is a biography of Wordsworth! The greater the poet, the more universal his genius, and the deeper the sources from which he drew inspiration, the less desirable is acquaintance with the petty details of his daily commerce with men, or the knowledge of his common bed and board. His personal experiences may color his feeling and give form to the expression of his thought, but as material for his imagination they lose their personal quality, they become typical, and representative of wider interests than those of any individual man. Dante makes

himself the protagonist of his poem, but, as he himself says, its subject is man.

In this little volume on Dante and his early biographers, Dr. Moore gives an account of the biographies of Dante written within a century and a half after his death, and discusses, with characteristic learning and good sense, their credibility and authority. Dante himself is the first and most trustworthy witness concerning the events and circumstances of his life. From him we learn of his birthplace and his family, of his chief friends and early love, of his youthful education and later studies, of his beginnings in poetry, of his employment in public affairs, of his banishment, and of his wanderings in exile. He gives us a clear and sufficient outline of the course of his external life.

The first account of him by a contemporary is that by Giovanni Villani in his 'Chronicle' (ix, 136) accompanying the mention of his death. It is brief, but interesting, because Villani speaks from personal acquaintance with the poet, who, he says, had been his neighbor (*il nostro vicino*). Villani had a just appreciation of his greatness, and speaks of his work in fit terms. His closing words are:

"This Dante, because of his knowledge, was somewhat arrogant, reserved, and haughty, and, as it were, like an ungracious philosopher, knew not well how to deal with unlettered folk; but, because of the other virtues and knowledge and worth of so great a citizen, it seems to us fitting to give him an enduring record in this our Chronicle, notwithstanding that the noble works left by him in writing afford true witness of him, and to our city honorable fame."

These words of Villani's stand as the first attempt at reparation for the wrong done by Florence to her greatest citizen. Three notices of the poet are to be found in the Comment on the 'Divine Comedy' known as the *Ottimo*, which was compiled within less than twenty years after his death. All of them are interesting, especially the famous note on *Inferno* x. 85, which runs as follows: "I, the writer, heard Dante say that the rhyme never led him to say aught but what he intended, but that many a time and oft he made words say in his rhymes other than that which, for other poets, they were wont to express." In the note on *Inferno* xiii. 144, the writer says that, in compliance with his request, Dante narrated to him the old tradition concerning the foundation of Florence and its relation to the god Mars. The note on *Paradiso* xvii. 61 contains a somewhat doubtful statement as to the motives of Dante's separation from his companions in exile.

This is all the direct biographical information that we have concerning Dante from his immediate contemporaries. The first formal biography of him is that of Boccaccio, written probably near the middle of the fourteenth century, twenty or thirty years after Dante's death. Though it contains but a scanty narrative and a poor supply of facts, and is in the main little more than a rhetorical composition, it yet affords some trustworthy and not unimportant information. Boccaccio was eight years old when Dante died, he knew intimately many Florentines who had been acquainted with the poet, he was thoroughly versed in the life of the city, its family histories, its traditions, and its customs. The meagreness of his narrative is therefore disappointing, but it is to be accounted for by the special quality of his literary temperament, and by the fact that this 'Life' is one of the first attempts at biography in modern literature. The inquisitive spirit of curiosity concerning the experiences and characteristics of eminent men, no less than the critical spirit of investigation, was still generally dormant.

The 'Life' has come down to us in two forms, and there has been much discussion as to whether both are the work of Boccaccio, or whether one of them is a remodelling of his original treatise, of later date and of uncertain authorship. One of the ablest of the younger school of Italian students of the early literature of Italy, Signor Macrì-Leoni, has lately investigated the subject with great thoroughness, and seems to have proved, what others have believed on less careful sifting of the evidence, that the longer form of the 'Life,' distinguished as the *Vita Intera*, is the genuine work of Boccaccio, while the other, known as the *Compendio*, is an inferior abridgment of it, with arbitrary and hurtful changes, the compilation of some unknown writer of the fifteenth century. Dr. Moore adopts and strongly maintains this conclusion.

But, although the genuine 'Life' contains comparatively little information, it is on several points of interest the only, and on others the chief, authority. For instance, it is from Boccaccio, and from him alone, that we learn the family name of Beatrice, that she was the daughter of Folco Portinari, and (from his Comment on the 'Divine Comedy') that she was the wife of Simone de' Bardi. These statements are of interest as bearing on the question of the literal and historical reality of Beatrice. The view that she was a mere allegorical creation of Dante's poetic imagination has been, and still is, zealously maintained by many intelligent students of Dante's works, in spite of what seems to us abundant and convincing internal evidence to the contrary. Boccaccio's notices of her show that he had no doubt of her actual existence, and indicate that this was the common belief. But the correctness of his identification of her as the daughter of Folco Portinari and the wife of Simone de' Bardi, is another matter. This identification has been almost universally adopted by those who have held to her reality as a woman, and Dr. Moore argues ably in its support. But to us it seems impossible that it should be correct. The evidence which the 'New Life' and the 'Divine Comedy' afford that the Beatrice of Dante died unmarried is practically incontrovertible. At the very least, the evidence of these books is conclusive that Dante would have his readers believe so. And we do believe so, in spite of Boccaccio's positive statement, because it is much easier to account for the existence of a report that Beatrice de' Bardi was the original of Dante's Beatrice than it is to credit the idea that the 'Vita Nuova' and the 'Divine Comedy' are consecrated to the exaltation of a married woman. Who the real Beatrice was may never be known; but we must believe that she was one who could rightly confess her love for Dante (*Amor mi mosse*), and, in her reproof of the wanderings of his desires, rightly refer to that beauty of hers which, so long as it was on earth, had given him pure and legitimate delight beyond aught else in nature or in art.

After his discussion of Boccaccio's 'Life' of the poet, Dr. Moore takes up in succession the later lives by Filippo Villani, Lionardo Bruni, Manetti, and Filelfo, analyzing their contents, and describing their various claims to authority; and in a final chapter he collects what may be learned from these biographers and other sources concerning Dante's personal traits and characteristics. This part of his little volume is of special interest. There are, indeed, some omissions in it of matters that bear on the subject, concerning which the reader would gladly have learned Dr. Moore's opinion. For example, but perhaps with good reason, he does not refer to the famous Letter of Fra Ilario. Considering, however, the importance which has been ascribed to this letter, which, if genuine, would be one of the most interesting contemporary documents relating to Dante, and considering, also, that its claims to authenticity have not, so far as we are aware, been thoroughly discussed by any writer in English,* the omission to say even a word concerning it may be regretted.

The Letter is in Latin, and purports to be addressed to the illustrious Ghibelline leader, Uguccione della Faggiuola, by a brother of the Monastery of Santa Croce del Corvo. It describes a visit of Dante to the monastery, and narrates at considerable length a conversation with him concerning his poem. The most striking passage of the letter is familiar to all readers about Dante. It runs as follows:

"Ecce igitur, quod cum iste homo ad partes ultramontanas ire intenderet, et per lunensem diœcesim transitum faceret, sive loci devotione, sive alia causa motus, ad locum monasterii supradicti se transtulit. Quem ego cum viderem, adhuc et mihi et aliis fratribus meis ignotum, interrogavi quid peteret; et cum ipse verbum non redderet, sed loci tamen constructionem inspiceret, iterum interrogavi quid peteret. Tunc ille, circumspectis mecum fratribus, dixit—*Pacem.*"†

The romantic character of this description is fitted to excite suspicion, so much is it in the style of that story-telling of which Boccaccio was the chief master in the middle of the fourteenth century. And the suspicion is quickened by the circumstance that the Letter is found in but a single codex, made up, like a scrapbook, of various short pieces, and that this codex originally belonged to Boccaccio. Moreover there is a passage in the Letter in which the writer professes to give in Dante's own words his reasons for writing the 'Divine Comedy' in Italian rather than in Latin, and this passage is so similar to that in Boccaccio's 'Life' of the poet which deals with the same subject (in great part being identical with it in phrase) that there can be no doubt that either both were written by the same author, or that one is the direct source of the other. Furthermore Fra Ilario cites two verses and a half of a beginning of the poem in Latin, which, he says, Dante repeated to him. The same verses and no more are given by Boccaccio in the 'Life.' It seems impossible to doubt that either Boccaccio had at hand the Letter at the time he wrote the 'Life,' or that the Letter is of later date than the 'Life,' and, consequently, not a narrative written at the time of the supposed visit of Dante to the monastery. But there is still another consideration which bears on the matter. In the 'Life' Boccaccio states that it was Dante's intention, according to the report of some persons—*secondo il ragionare d' alcuno*—to dedicate the three parts of his poem respectively to Uguccione della Faggiuola, Moruello Malaspina, and Frederick III., King of Sicily. Others, he adds, maintain that he dedicated the whole to Cane della Scala; "but which of these opinions is the truth is uncertain, for we have no evidence but the mere assertion of different

* Mr. Longfellow, in his "Illustrations" to his translation, printed it without comment, as if he accepted it as genuine. Dean Plumptre, without disputing the judgment that rejects it as apocryphal, adduces arguments in favor of its genuineness, and speaks of it as, "if not genuine, a work of genius."

† Dr. Parsons has virtually translated these words in his fine poem "On a Bust of Dante":

"Not wholly such his haggard look
When, wandering once, forlorn, he strayed,
With no companion save his book,
To Corvo's hushed monastic shade;
Where, as the Benedictine laid
His palm upon the pilgrim guest,
The single boon for which he prayed
The convent's charity was rest."

persons (*il volontario ragionare di diversi*)." Now, in the Fra Ilario Letter, the writer states that *Dante told him* that he proposed to dedicate the three parts of his poem to the three named personages. If, then, the Letter had been genuine, in which case, as we have seen, Boccaccio had it before him when writing the 'Life,' he could scarcely have said that there was no evidence concerning Dante's purpose except *il volontario ragionare* of different persons.

These facts and others of like nature lead to the conclusion that the Letter is not what it purports to be, but is a fancy piece not improbably composed by Boccaccio himself. And this conclusion is confirmed by the internal evidence afforded by the character ascribed in it to Dante. It is a conclusion eminently satisfactory to one who, from study of Dante's works, has so learned to know their author that he finds it difficult to conceive of him as he is represented in the Letter. He was, if we trust his own evidence as well as that of Villani, *schifo e disdegnoso*, not a man to wear his heart upon his sleeve, to expand in ready confidence to a stranger, and to exhibit the affectations of a sentimentalism such as might be appropriate to a weaker nature, and to a later and feebler generation—the generation of Petrarch and Boccaccio. The whole account lacks verisimilitude. It is a piece that shows more of the author of the 'Decameron' than of the 'Divine Comedy.'

Signor Macrì-Leoni has lately promised a full investigation of the Fra Ilario fiction. It will be looked for with interest, though there is so little need of confirmation of its apocryphal character that Scartazzini, in his recent valuable but disappointing volume of Prolegomena to the 'Divine Comedy,' dismisses it without ceremony as "a silly and ridiculous imposture."

A LITERARY PARALLEL.

Notre Cœur. Par Guy de Maupassant. New York: F. W. Christern.

Two young men now dispute the field of advanced French fiction together; and though they have many points of resemblance—writing as they do about the same high society of the monarchical salons, of which both are members and partisans—they differ very much in temperament and consequently in the treatment of their material. The style of Paul Bourget is uneasy, labored, and intricate. He affects, too, a little the ephemeral Anglomania of Paris. He is a student of English literature and philosophical essays, and one meets in his pages, too often with a feeling of displeasure, English phrases lugged in by the ears, and in questionable taste. Maupassant, on the contrary, is French without the slightest cosmopolitan touch to him, and his style is as different from Bourget's as Tacitus's from Carlyle's; for, trained by Gustave Flaubert to use his language with scrupulous nicety, his stories are marvels of terseness, vigor, and lucidity. His phrases seem compact without effort, swift, consecutive, and keen. Bourget, who has written some essays on contemporary psychology, sets his people to moving through the simple yet tense crises in which he wishes to portray them, while he shows to the reader their motives, half-motives, quarter-motives, and even unknown self-deceptions and propulsions, with really unusual scientific accuracy, yet taking away from the vitality of his subjects an indefinable something, as if he had chloroformed them for the operation. Maupassant, on the other hand, tells his story, usually of some equally simple crisis in a life, limpidly, quietly, without apparent eye to *arrière-pensées* of any sort, and lets the inevitable conclusion point its own moral.

On finishing Maupassant's present story directly after we had read Bourget's "Un Cœur de Femme," we could hardly resist the impression that they had been written by previous agreement, like the friendly contest between Leigh Hunt and Keats as to who could write the best sonnet on "The Cricket." In the first place, the publication of them was so nearly simultaneous that it is easy to fancy that they might have been begun and finished at about the same time. The titles, too, are nearly identical. Indeed, if Maupassant's had been "Un Cœur d'Homme," instead of the somewhat vaguer "Notre Cœur," conjecture would seem certainty, for each author has taken up the same theme, namely, that a human heart is capable at the same time of maintaining two loves, each distinct in itself. While Bourget has illustrated this by the trial of a woman distracted between two men, Maupassant has presented the converse proposition of a man torn between two women. The two solutions are interesting.

Both seem to agree that love is very seldom reciprocal, there being in the same heart (scientifically speaking) two poles, as it were—the pole of attraction (usually sensual) towards another, and the pole of self-flattery, if it may be so termed, which is intellectual, and points towards the pleasure given to one person by another's evident adoration. Starting from this basis, Bourget shows us Mme. de Tillière, a quiet recluse, shy and withdrawn from the world, engaged in a liaison with a super-sensitive, half-invalid man, without physical charm, whose misfortunes have won her pity, whose talents and fame have impressed her mind, and whose dependence upon her and worship of her have become to her a constant source of self-gratification. The opposite pole is inclined when she meets a notorious *viveur*, rich, handsome, blasé; gradually at first, and then with almost brutal violence, till she sees a moral wreck inevitable, and, tearing herself away from all further compromises, ends her heart's mystery and tragedy in a convent.

Maupassant deals with a man's torments under this divided empire of the love-poles. André Mariolle, an impressionable, purposeless dilettante, becomes wildly enamoured of Mme. de Burne, a young widow withdrawn from the gay world, whose brilliancy, beauty, and wit have gathered around her a small salon of talent, over which she presides impartially, in spite of the fact that nearly all its members are or have been unsuccessful and jealous suitors. Mariolle courts her in an extraordinary way, certainly original, sending her every night for a long period a burning love-letter, and at the same time maintaining in her salon the utmost discretion and tranquillity. Finally she yields to him—acknowledging the influence of the pole of intellectual vanity—and begins with him a secret *liaison* with which for a time he is wholly contented. He soon, however, understands that he cannot inspire the *grande passion*—that he merely ministers to her vanity. She becomes bored in his presence: "Il semblait que son cœur ne fût point entré avec elle. Il était resté quelque part, très loin, flânant, distrait par de petites choses"; and Mariolle, perceiving this, grows more and more dissatisfied with the merely friendly return she makes to his absorbing passion, and, by constant vain endeavor to arouse a return of it, more and more wretched, till he breaks abruptly off from his slavery, and goes into solitary hiding in a little house which he rents at Fontainebleau for the summer.

Here he meets, on his occasional visits to a neighboring inn, an agreeable little waitress with a good figure—a virtuous girl, too. It chances, just before one of these visits, that some visitor has insulted her, and Mariolle, learning of it, takes her away from the inn and installs her as waitress in his new house. There he soon divines (by her increased attention to her dress and her bearing towards him) that she has fallen in love with him; and to his wounded pride this feeling that here is a woman at least who does not scorn him, is pleasing and consoling. A sudden illness, in which the maid becomes nurse—a convalescence, in which she reads to him and becomes his companion—makes Mariolle more and more dependent upon her. Elizabeth replaces with her warm affection the chilly tolerance of Mme. de Burne.

Now, however, the image of the latter, the unattainable love, rises more clearly and charmingly than ever before Mariolle's eyes; and, more than ever discontented, he reveals his hiding-place to Mme. de Burne, with characteristic brusqueness, by telegram. She does not hesitate. She comes at once to Fontainebleau to seek out her exiled lover, still drawn to him by the flattery of his love; but, before renewing their friendship, she decides that all effort to arouse a *grande passion* between them will but work sorrow to both, and she tells him that their future relations must be purely platonic. Mariolle reflects, consents, sends her back to Paris; and, consoling Elizabeth, whom the apparition of the strange lady had thrown into a panic of fear and jealousy, he promises to take her back to Paris and maintain her near him in a separate establishment. Thus the novel ends. Mme. de Tillière, being a woman, could not waver between the two poles of loving and being loved without perishing, so she took herself out of the world; but Mariolle, a man, can at least make the experiment of keeping on terms with both—the worldly, spirituelle beauty whom he worships, and who merely esteems him, and the little bourgeoise with the pleasant face, whose deep attachment for him flatters and consoles him, and for whom he feels gratitude and pity. How his experiment succeeds we are left to conjecture.

The resemblance between the two tales may be traced further in many small details. For instance, both Mme. de Tillière and Mme. de Burne are young widows and childless; both keep small unworldly salons uniquely for literary and artistic Bohemians with whom the hostess is on terms of intimate and indifferent friendship. Mariolle and Mme. de Tillière, too, are not unlike. Both are shy, reserved, secluded, and sought after without success. Mme. de Tillière has never loved a man, Mariolle has never loved a woman. The officiousness of a friend plunges Bourget's heroine into the whirlpool from which she finally emerges battered and stranded, and the same officiousness of a friend draws André Mariolle forth from his quiet haven into the troubled waters in which we leave him still eddying. 'Notre Cœur' contains, it is true, several unmistakable Maupassanteries (if we may coin the word), such as his always beautiful descriptions of nature, which in this book include Paris, the Fontainebleau forest, and his beloved Mont Saint-Michel, that "feu d'artifice de pierres, dentelle de granit," which he describes with every succeeding attempt more and more graphically, and, it would seem, with warmer and warmer affection. His characters, too, are drawn with his usual confidence; but the whole book has a certain unreality about it, a feeling of *gêne*, unusual in his books, as if his

hand, taking awkwardly to the scalpel which Bourget plies so deftly, had shaken a little in this first experiment.

Autobiography of Anton Rubinstein. Translated from the Russian by Aline Delano Boston: Little, Brown & Co. 1890. Pp. 171.

RUBINSTEIN, the most inspired of living composers, differs from the generality of modern musicians, not only in the way in which he has refused to submit to Wagner's influence, but also in his aversion to using his pen for any other purpose than that of making the dots, lines, and pauses which constitute a musical manuscript. His activity as a composer has been astounding—his publisher's catalogue of his compositions covers forty-eight quarto pages—whereas his contributions to musical literature have hitherto consisted chiefly of a few essays on Russian music and on the sacred opera or secular oratorio; and, as he himself tells us, his "future biographer will not even enjoy the pleasure of collecting my correspondence, since it has absolutely no existence. I am not a friend to the pen, and especially do I dislike letter-writing." Nevertheless, he consented, a year or two ago, to tell the story of his life, and a stenographer was engaged to take down this autobiographic interview. The result is the present narrative, which, sketchy and meagre as it is in many places where we should be delighted to have further information, is yet full of interesting comments and suggestions.

It cannot but be a matter of satisfaction for Americans to learn from Rubinstein that his tour in this country laid the foundation of his prosperity. In his early days he gave lessons at a cheap rate, and for a year and a half lived in an attic in Vienna—often suffering the pangs of hunger—till Liszt took pity on him. It was Liszt who advised Rubinstein's Russian teacher, Villoing, to take him to Germany to complete his musical education. "At this time," he says, "I was a devoted imitator of Liszt, of his manners and movements, his trick of tossing back his hair, his way of holding his hands, of all the peculiar movements of his playing; which naturally called forth a smile from those who had heard Liszt, and perhaps also increased the interest felt in the boy virtuoso." Yet when, a little later, he called on Liszt in Vienna, he was somewhat coldly received, and was told to remember that a talented man must win the goal of his ambition by his own unassisted efforts; which, says Rubinstein, "estranged me from him." Two months later, however, Liszt called on him, was shocked at the evidence of poverty in his room, "and in the most friendly manner invited me to dine with him the same day—a most welcome invitation, since the pangs of hunger had been gnawing me for several days. After this I was always on good terms with Liszt until the time of his death."

During this period his compositions did not bring him in anything worth mentioning, and, like a spring poet, he had to consider himself lucky if he found a publisher willing to print them at all. Even later, when his lessons paid better and his concerts were well attended, he led an artist's Bohemian life, the result of which was "feasting when money was plenty, and going hungry when it was gone." In 1847 he was on the point of emigrating to America with two musical friends, but was dissuaded by Dehn, his teacher in the theory of music. It was twenty-five years after this that he was offered $40,000 to make a concert tour in America with Wieniawski. He accepted, and gave 215 concerts in this country.

"For a time," he says, "I was under the entire control of the manager. May heaven preserve us from such slavery. . . . The receipts and the success were invariably gratifying, but it was all so tedious that I began to despise myself and my art. So profound was my dissatisfaction that when, several years later, I was asked to repeat my American tour, with $100,000 guaranteed to me, I refused point-blank."

On another page, where he urges the introduction of musical instruction in Russian educational institutions, he does us the honor to bracket us with Germany: "Look at Germany and America, and see how they do things in those countries." And on p. 118 he gives his opinion that "of the German people at least 50 per cent. understand music; of the French, not more than 16 per cent.; while among the English—the least musical of people—not more than 2 per cent. can be found who have any knowledge of music. Even the Americans," he adds, "have a higher appreciation of music than the English."

It was his admiration of German music, combined with his German name, that caused Rubinstein, oddly enough, as he says, to be considered a German in Russia, while in Germany he was regarded as a Russian. In art he is a true cosmopolite; and while his orchestral music roots in Beethoven, Schumann, and Mendelssohn, and his piano compositions in Chopin, his spirit is Russian and his rhythms and intervals often Oriental. Even to Italian influence he was open, at least in his early years, for he says that Rubini's singing produced so powerful an effect on his senses that he strove to imitate the sound of his voice in his playing. His special idol to-day seems to be Chopin: "One thing is beyond denial—all that enchanted us, all that we loved, respected, worshipped, and admired, has ended with Chopin."

Rubinstein, like Liszt, was always ready to assist the poor and help along needy students, and in the course of twenty years the proceeds of his charity concerts amounted to no less than 300,000 rubles. But aside from his work as a composer, his most valuable services to art have been of a patriotic kind. Thirty years ago Russian music other than folk songs was hardly recognized in Petersburg society, and the state of public feeling on the subject may be inferred from the remark of a lady who brought her daughter to Rubinstein to be educated in the Conservatory, which he had helped to found. Rubinstein informed her that all the lessons were given in Russian, whereupon she exclaimed, "What! music in Russian! What an original idea!" The Conservatory soon became popular—too popular, indeed, to suit Rubinstein, who thought when the number of pupils had risen to 700 that the Conservatory was in danger of becoming a music-factory instead of a music-school. Parents also seemed to look upon it as a sort of asylum for weak-minded children, good for nothing else, and a resort for young men anxious to secure exemption from two years' military duty by means of an easily won diploma. But to-day Russian music and Russian musicians are honored everywhere, at home and abroad, and for this change Rubinstein is very largely responsible. On pages 110–111 he gives a list of notable Russian musicians and teachers, and the concluding sentences of this chapter will please vocal teachers who are constantly accused by pupils of having ruined their voices: "In regard to singing, it is difficult to say who are the superior and who the inferior teachers. They may be compared to physicians—not even the most successful among them can insure life; and the best master in the world may ruin the voice of his pupil when trying to cultivate it."

Stratford-on-Avon. From the Earliest Times to the Death of Shakespeare. By Sidney Lee. With 45 illustrations by Edward Hull. Macmillan & Co.

STRATFORD-ON-AVON is in itself an interesting example of the growth of an English town, and the author of this volume has very dexterously woven in with the historical thread the special interest of the Shaksperian in the institutions and village life which Shakspere knew in his boyhood. The work is admirably proportioned, and avoids with great success the dulness of archæology and too much learning even when drawing from old records the necessary illustrations. Notices of the town do not antedate the seventh century, when it first emerges from obscurity as a monastic foundation dependent on the See of Worcester. From this grew the manorial group, which gradually increased, and, by means of fairs and the usual fostering influences, developed a local trade. Three natives who obtained advancement in the Church, Robert, Bishop of Chichester; John, Archbishop of Canterbury, and Ralph, Bishop of London, were special benefactors. The first two were brothers and also Chancellors of England; the last was their nephew. Robert attended to the paving of some of the long streets which had grown up; John founded the chantry in the parish church, and purchased the patronage of it from the See of Worcester for the benefit of the chantry, which thus controlled it in the same way as Westminster Abbey is now constituted; Ralph built a college for the chantry priests. Meanwhile the exercise of local functions of government had been increasingly held by the Guild, originally a religious association, but developing into one for self-help, which was the principal institution of the town. The care of the poor, the police regulation, and all general oversight gradually fell to it, and education was finally attended to by its erection of the Free Grammar School. In the Reformation the chantry and college fell, and the Guild, already somewhat decayed, was recreated as the corporation of the town, to which its government and the custody of the church, almshouses, and college-house, as well as the Grammar School, were intrusted. This was in 1557, and it was of this body that Shakspere's father was an officer in his more prosperous days. Sir Hugh Clopton, Lord Mayor of London, had already built the stone bridge and done some other benefits to the town.

The first half of Mr. Lee's narrative deals with these matters in an attractive way, and the remainder he devotes to a survey of the actual appearance of the town in Shakspere's youth, with its streets and markets, its houses and their furnishings, its sanitary condition, the visitations of plague, flood, fire, and famine, the gardens and industries of the people, the paternal oversight of the citizens by the governing board, the discipline of children at home and in the school, and their sports, indoor and outdoor, the occasional visits of the players, and, in general, the whole round of life as it was presented to Shakspere's youth. He takes up, naturally with particular attention, the story of the poaching in Charlecote Park, which he credits, and gives an interesting account of the hall and its inhabitants; and he also examines the traditions of Shakspere's drinking at the Bidford and Wincot Inns. Altogether one obtains a very full impression of the town and its doings, and of

Shakspere as one of the growing boys—some destined for London, like Richard Field, some for apprenticeship at home, some for the service of the great halls in the neighborhood. He does not follow Shakspere to London, but he follows him back to Stratford, enumerates his purchases of land, and gives details of his family and other friends in the town, and shows him in all the village relations of his latter days, including the dispute about the Welcombe Fields. Little of the material is altogether fresh, but it has been extracted from much dryer volumes and is well arranged to inform the reader what sort of a town Shakspere lived in, and what he was there as one of his own people. The illustrations are numerous and there are two maps.

Three Years in Western China. A narrative of three journeys in Sz̆ŭ-ch'uan, Kuei-chow, and Yun-nan. By Alexander Hosie. London: George Philip & Son. 1 vol. 8vo, pp. 302. Illustrated.

ALTHOUGH this handsome volume ought to have been published six years ago, since the courageous author's journeys were made between 1882 and 1884, yet there is a peculiar timeliness in its issue. The commercial metropolis of Sz̆ŭ-ch'uan (Sz-chuen), the most westerly province of China, the city of Ch'ung-ch'ing (Chungking), was, by an agreement of the Chinese Government made March 31, 1890, raised to the rank of a treaty port. The regions traversed by Mr. Hosie, and so pleasantly described by him, are now opened to European and American intercourse. Hence, to pioneers of trade, to the missionary, traveller, and interested reader at home, the mass of information which Mr. Hosie so admirably presents is doubly welcome for its value and readableness. Mr. Hosie, who is in the British Consular Service, dates his preface at Wenchow, China, September 6, 1889, and Mr. Archibald Little has furnished an introduction of twenty pages, dated London, May, 1890, which shows him master of his theme; but we take exception to his implication that Mr. Hosie here gives us "the latest information" concerning western China. About two years ago, the Rev. Virgil Hart, an American missionary, published a volume of his experiences entitled 'Western China,' in which he has put at our disposal the story of much of what Mr. Hosie has seen and of some things that the English traveller did not see. Indeed, as regards the Yang-tse Kiang Valley, Mr. Hart's record is more full of interesting detail both to the commercial man and the student of humanity.

Pausing only to do justice to a fellow-pioneer, we may say that both books agree as to the richness of the province of Sz-chuen, or, as we must hereafter write it, Sz̆ŭ-ch'uan; and that Mr. Hosie's narrative is of the liveliest as well as the most informing. We have here the record of the trained and fully equipped traveller using to the full unusual opportunities. Starting from I-chang, one thousand miles from the mouth of the Yang-tse Kiang, the port opened in 1876, he made his way by small steamer and boat to the city of Chu'ng-ch'ing, now the newest treaty-port, and thence by an overland route reached Kuei-chow, the capital of Kuei-chow province. Moving westward into Yun-nan, he journeyed back along another route to the Yang-tse River, and visited Che'ing-tu, the capital of the richest province in China. Thence through the country of the Lo-los to Ta-li on the Eul-hai (lake) and eastward to Yun-nan Fu, near another lake, he again, by a third and different route through Kuei-chow, reached the Yang-tse. Another journey was made later through the white-wax country, to the sacred mountain O-mei, and to the highest navigable point of the Yang-tse.

The interest of this readable book of travels in a country about which we are sometimes tempted to think too much has been written, arises from the fact that the races of western China are non-Chinese. Over fifty pages of the Appendix are devoted to exercises in the Pho language, which will be useful to linguists, but much more interesting to the general reader are the glimpses of pretty girls with feet unbound, of fine-looking hunters and mountaineers, the curious arts and customs of the non-Chinese races of whom both Marco Polo and Mr. Hosie tell. Further, in describing the various industrial arts and commodities, the English author has not simply transferred his Parliamentary reports to the heavy laid paper of an elegantly made English book, but graphically describes what he saw. The manufacture of "rice" paper is pictured as the deft paring into a flat sheet of a roll of pith. In one place he finds that the people, instead of cleansing their clothes by water, accomplish the same end by fire. The coat or trousers, when greasy or stained, is simply heated red hot on the coals, and the suit of asbestos is pure again. At O-mei the clouds prevented the author from seeing the "Glory of Buddha"—the Brocken spectre of Asia—which, reflected in the air-strata at eleven thousand feet above the earth, is interpreted by priest and devotee as a manifestation of the Enlightened One.

In a word, this timely volume confirms the previous reports of the richness of the great province of Sz̆ŭ-ch'uan, adds interesting data to the researches of Francis Garnier and Colborne Baber concerning the Lolo people, forms an interesting appendix to Col. Yule's 'Book of Marco Polo,' and modifies the conclusions and ardent beliefs of the great railway pioneer and trade-route seeker, Mr. Colquhoun.

In its mechanical setting, this traveller's story has been well favored. Paper, print, binding, map, index, introduction are all of the best. Despite the crowd of books on China, there is room and welcome, at the front, for this latest comer. It is another mark of British progress and record of Chinese advance, for in the same year of the opening of this far western city as a port of commerce, we read of the assent of the Imperial Government to the construction of a railway from Peking to Kirin. The prospect of a railway through China from the Russian to the Burmese frontier, built before the twentieth century is ushered in, is no longer the baseless fabric of a vision, but a well-grounded probability.

The Annals of Tacitus, I–VI. Edited, with Introduction, Notes, and Indexes, by William Francis Allen, Professor of History in the University of Wisconsin. Boston: Ginn & Co. 1890.

THE confidence with which we have awaited the appearance of Prof. Allen's second posthumous work has not been deceived. His 'History of the Roman People' evinced a comprehensive grasp of the whole subject; but his particular knowledge of the imperial period, proved by more than one publication, showed clearly that in him the student of Tacitus would find a trustworthy and helpful guide. He was also much interested in the character of Tiberius, of whose reign these six books of the 'Annals' are a history. All these facts promised an intelligent and interesting treatment of one of the great works of antiquity, and the promise has been kept.

In this edition the text (which is based upon that of Halm's fourth) is preceded by essays upon the life, writings, and style of Tacitus, the extent and administration of the Roman Empire, and the character of Tiberius. It is to this last that scholars will be most likely to turn first, for upon the conception that one has formed of the Emperor will depend one's judgment about many of the events of his reign. In this matter Prof. Allen took a moderate, and, we believe, the most reasonable course. He could not believe in the theory of Tacitus, that Tiberius was all his life a hypocrite; nor, on the other hand, had he any sympathy with "the modern fashion of whitewashing the disreputable characters of history." He rejected, too, the hypothesis that, upon the accession of Tiberius to the throne, at the age of fifty-six, he became all of a sudden, from a man *egregius vita famaque*, a hypocrite and a tyrant. The fact is, that during the fifteen years from his accession to his retirement at Capri, we can scarcely discover a manifestly unjust or cruel act on the Emperor's part. But after that time a great change came over him. Into the succeeding years misfortunes crowded thick and fast. Tiberius, always lacking in self-reliance, and now full of apprehension of personal danger, was thrown into a panic by the conspiracy of Agrippina and her sons, the murder of Drusus, and the treachery of his trusted minister Sejanus. The old Emperor, "broken in body and spirit, disappointed, morbidly brooding in solitude upon his wretchedness, knowing no one whom he could trust, . . . allowed the bad qualities which he had hitherto held in abeyance, to get the mastery over him." Such is Prof. Allen's explanation of the reasons for the fearful scenes of cruelty and tyranny which made infamous the last eight years of Tiberius.

In the commentary on the text, it is very evident that Prof. Allen was not one of those who seem to believe that Latin books were written to afford a field for the study of grammar. Attention is paid to the style and peculiarities of language of Tacitus, but the chief object is to remind the student that he is dealing with a chapter in history, to be read and understood as such. The difficult points in this line, as well as in public and private antiquities, are explained, rather than grammatical *cruces*. This, we believe, should always be the aim in a commentary on a work used by students of sufficient maturity to approach an author like Tacitus. Plenty of men in our colleges can rattle off the rules of syntax, and account for every accusative and subjunctive in the longest period; but when it comes to any real understanding of what they read, they are often as ignorant as Philip's eunuch. To such persons this book will be a real benefit. The notes are sufficient, yet always brief; they are not polemical, but present simply the editor's own conclusions, and are never padded out with a mass of lore to show his knowledge. The gap in the history caused by the loss of nearly all the fifth book, is filled out by quotations from Dio Cassius, Juvenal, and Suetonius —an excellent idea. We have also a map and several portraits of members of the imperial family.

We have hinted that Prof. Allen was no grammarian, and have rather approved of it. Yet in the course of study of any author, at any period of the student's life, certain grammatical peculiarities will always arise which it is an editor's duty to explain. We do not think that the part of the introduction which treats of the grammatical and stylistic peculiarities of Tacitus will be found sufficient by teachers or ad-

vanced scholars. It is the weak point in the book; the editor clearly felt it a task, and it bears marks of hasty work. For example, we find the statement: "Many words are used only by Tacitus, and others only by him in a certain meaning, *e. g.*, *finire*, die, *inturbidus*, undisturbed, *circumflui*, surrounded by." Of these three words it is true that *inturbidus* is used only by Tacitus; but *circumflui* is used in the same sense by other writers, while Tacitus himself sometimes uses *finire* in its common meaning. The statement is therefore defective, and cannot be improved by changing the position of the word *only*. A more serious error is in the remark that the use of the historical infinitive in a subordinate clause is peculiar to Tacitus. This is true only when such a clause precedes the main clause. In its use when following the main clause he had predecessors in Sallust and Livy, and followers in Florus and Lactantius. An error in a different part of the book is a repetition of one which we noted in the 'History of the Roman People.' In the genealogical table of the Cæsars, L. Domitius is made to figure as the son instead of as the husband of the elder Antonia. Of course this is only a slip, and not due to ignorance, for in one of the notes the two are rightly described as man and wife.

The book has two excellent indexes, and the type is clear and handsome. The editors of the "College Series of Latin Authors" deserve congratulations as well as thanks for the first American edition of the 'Annals' which can be called scholarly.

Nation-Making: A story of New Zealand. By J. C. Firth. Longmans, Green & Co. 1890.

THIS book is built in compartments like an ocean steamer. There is no direct connection of ideas between them, and what most strikes the reader in passing from one to the other is a steady and well-marked deterioration in quality from the beginning of the book to the end. In the first part Mr. Firth writes from the fulness of personal knowledge and experience of the early days of the colony, brings out the most interesting points of the Maori character in a variety of anecdotes, and paints with considerable skill and with plenty of local color a picture of the decline and fall of a remarkably fine race of savages. In all this, Mr. Firth is at his best, and, in spite of some peculiarities of style, this part of his book is pleasant reading. Another compartment is packed with statistics of more or less interest relating to the growth of population, indebtedness, railroads, etc., in New Zealand. As long as he confines himself to such statements of fact, Mr. Firth is presumably correct; but when he begins to draw inferences from the figures of imports and exports, it soon appears that he shares Mr. Blaine's grotesque ideas on this branch of political economy.

When the reader has made this discovery, he is to some extent prepared for what follows. In a subsequent compartment he is taken at headlong speed through the wars and waste places of the world's history, from the building of the pyramids down to the recent strike of the London dock-laborers. In lurid and somewhat incoherent language, he is warned that a terrific conflict is at hand between Labor with a big L and Capital with a big C, and that doubt, unbelief, and despair are casting their shadows over Humanity with a big H. If he follows the argument closely to the end, he will find that, according to Mr. Firth, four things are necessary in order to ward off the wrath to come: (1) that the day's labor shall be reduced to eight hours, (2) that trades unions shall be encouraged and upheld at any cost, (3) that the miserable theories of political economy on the one hand and those of "Darwin and his fellows" on the other shall be cast to the winds, and (4) that England shall at once spend one hundred millions sterling on new war-ships in order to become mistress of the seas. Having arrived at these invaluable results, the bewildered reader will probably examine such convictions as he may possess on these subjects, and, finding them unmoved by Mr. Firth's word-cyclones, he will close the book and murmur with thankfulness the customary Maori peroration: "Enough. It is ended."

Charles Scribner's Sons'

NEW BOOKS.

Third and Final Volume of the

Cyclopedia of Music and Musicians.

Edited by JOHN DENISON CHAMPLIN, Jr. Critical Editor, WILLIAM F. APTHORP. With over 1,000 Illustrations, including 36 Full-page etched Portraits. Three vols., 4to. Decorated Parchment Binding, uniform with the 'Cyclopedia of Painters and Paintings.' This Edition limited to 500 Numbered Sets. $25.00 per volume *net*.

This volume completes an important work which takes its place as an acknowledged authority in its special field, and ranks with its predecessor, the 'Cyclopedia of Painters and Paintings,' as an invaluable work of reference, while it resembles the latter still further in the skill and conscientious care with which it has been prepared and the sumptuously handsome form in which it is issued.

"There are, in the volumes, etched portraits of the great masters, autographs, facsimiles of famous compositions, views of birthplaces, medals, monuments, caricatures—everything, in short, that an *édition de luxe* ought to have."—*The Nation.*

Famous Women of the French Court.

Translated from the French of IMBERT DE SAINT-AMAND. By T. S. PERRY. Each volume, 12mo, with Portrait, $1.25.

MARIE LOUISE AND THE DECADENCE OF THE EMPIRE.

The period covered in this book is the intensely dramatic decline of the French Empire from the Russian campaign, when Marie Louise "had the world at her feet," to the desperate campaign of 1814, which concluded her brief but brilliant reign.

ALREADY ISSUED:

THE WIFE OF THE FIRST CONSUL.
THE HAPPY DAYS OF THE EMPRESS MARIE LOUISE.
MARIE ANTOINETTE AND THE END OF THE OLD RÉGIME.
CITIZENESS BONAPARTE.

"Full of charm and interest, brilliant description, and strong and clear historical sketches."—*N. Y. Tribune.*

A Short History of Anglo-Saxon Freedom.

The Polity of the English-Speaking Race Outlined in its Inception, Development, Diffusion and Present Condition. By Prof. J. K. HOSMER of Washington University, St. Louis. Crown, 8vo, $2.00.

Prof. Hosmer's review and analysis of the growth of the idea of popular liberty through English and American history are as significant as they are entertaining.

In the Valley.

By HAROLD FREDERIC. With 16 full-page Illustrations by HOWARD PYLE. 12mo, $1.50.

"It is uncommonly well written, and the whole *mise en scene* has verity and importance, for the valley of the Hudson, at the moment before the Revolution broke out, is new to romance and it is certainly picturesque."—W. D. HOWELLS, in *Harper's Magazine.*

Weird Tales.

By E. T. W. HOFFMANN. Translated from the German (with Biographical Memoir) by J. T. HEALEY. *New Edition, with 11 Etchings by* AD. LALAUZE. 2 vols., 12mo, $3.00.

This new edition of Hoffmann's celebrated tales is enriched with eleven superb etchings, which picture some of the most interesting and thrilling episodes of the stories.

*** *Sold by all booksellers, or sent, postpaid, by*

CHARLES SCRIBNER'S SONS,
743-745 Broadway, New York.

'The Henry Irving Shakespeare.'

Volume VIII. Completing the Work.

Containing Hamlet, Henry VIII., Pericles, Sonnets and Poems, with Index. Edited by HENRY IRVING and FRANK MARSHALL. With notes and introductions to each play by F. A. MARSHALL and other Shakespearean scholars, and numerous illustrations by GORDON BROWNE, MAYNARD BROWN, and W. H. MARGETSON. Complete set in 8 vols., square royal octavo, decorated cloth, $24.00.

"The edition is unquestionably one which every thorough student of Shakspere must needs acquire."—*London Globe.*

"Edited in a really good, workmanlike manner, for the benefit of the reader rather than for the display of the commentator's cleverness. The edition has the further merit of being beautifully printed."—*St. James's Gazette.*

"This handsomely printed edition aims at being popular and practical. Add to these advantages Mr. Gordon Browne's illustrations, and enough has been said to recommend an edition which will win publike recognition by its unique and serviceable qualities."—*Spectator.*

John Ashton's New Work.

Social England Under the Regency (1811-1819).

By JOHN ASHTON, author of 'Social Life in the Reign of Queen Anne,' 'Old Times,' etc. 2 vols., demy octavo, with 90 illustrations. $7.50.

Egyptian Sketches.

By JEREMIAH LYNCH, formerly President of the San Francisco Geographical Society and Member of the California State Senate. With 16 full-page illustrations. One vol., demy octavo, cloth, $1.75.

The Contemporary Science Series.

Edited by HAVELOCK ELLIS. Each volume containing 300 or 400 pages and illustrated. Cloth, 12mo, each $1.25.

New Volume—Nearly Ready.

Manual Training.

By Dr. C. M. WOODWARD of St. Louis, Mo.

Yearly, $2.00. Single Number, 50 Cents.

DESCRIPTIVE LIST

OF

NOVELS AND TALES

DEALING WITH

American Country Life.

The object of this list (consisting of extracts from the *Atlantic*, *Critic*, *Nation*, and other critical journals) is to direct readers, such as would enjoy the kind of books here described, to a number of novels which, in many cases, have been forgotten within a year or two after publication. It is hoped that the publication of this and similar lists will lessen in some measure the disposition to read an inferior NEW book, when superior OLD books, equally fresh to most readers, are at hand.

Respecting the list, Mr. W. D. HOWELLS writes to the compiler thus:

"I am delighted with the notion of your list of Novels about Country Life in America, and I think you have most charmingly realized it. The book will be useful to every book-lover and critic and librarian. Now that it satisfies it, I know that I have always felt the need of just such a list."

52 double-column pages. Price, 50 cents (32 specimen pages, 10 cents). Address

W. M. GRISWOLD,
Cambridge, Mass.

JUST ISSUED:

Children of the World

By PAUL HEYSE. With Photogravure Illustrations. 12mo, 75 cents.

One of the few really *great* books of the nineteenth century. The characters in it are strongly drawn, the literary construction is perfect, the language poetic and graceful. Questions that agitate our age are handled so fearlessly that it will attract attention from all thoughtful readers. Withal it is a delightfully entertaining novel.

LIMITED,
9 Lafayette Place, New York.

DICKENS' CHRISTMAS CAROL.

CHARLES DICKENS' CHRISTMAS CAROL.

Being a reproduction in fac-simile of the original manuscript from Title-page to Finis, as it left the author's hands to go to the printers, printed on paper similar to that used by Charles Dickens when writing his stories, and accompanied by a valuable Introductory Note, by Mr. Frederick G. Kitton, now the accepted authority in all matters relating to the Life and writings of Charles Dickens.

Imperial Quarto (only 250 copies printed), bound in half vellum, ornamental side design on millboard. Each copy signed and numbered. $5.00.

"Thanks to the enterprise of that zealous and industrious annotator and illustrator of the life and writings of Charles Dickens, Mr. F. G. Kitton, the amateurs of photographs have now an opportunity of procuring, at a moderate price, a literary treasure of far more interest than ordinary samples of a great man's penmanship. . . . He who owns this thin quarto may be considered to have in his possession the actual paper and penmanship of the author. . . . Altogether Mr. Kitton's volume may be pronounced to be a literary curiosity of the highest interest and value."—*The Daily News, London.*

A New Uniform and Limited Edition

OF THE WORKS OF THE LATE

Sir William Stirling-Maxwell

BARONET.

In small 4to, cloth, gilt top, price $7.50 net per volume. Also a few Large-Paper Copies with the Engraved Illustrations in duplicate, and the Initial Letters and Rules of the Text printed in Red, cloth, uncut, price $11.00 per volume, net.

Each copy of both editions will be numbered, and the type distributed.

In the Autumn of 1890.

THE

Annals of the Artists of Spain.

IN FOUR VOLUMES.

Edited, with the author's latest Additions, Corrections, and Annotations, and illustrated by the original Wood Blocks and Steel Engravings; also twelve additional Engravings from subjects chosen by him.

VELAZQUEZ AND HIS WORKS, of which an enlarged and improved edition was separately published, will, with the author's voluminous Additions and Emendations, be incorporated in its proper place in the ANNALS, where it originally appeared.

In the Spring of 1891.

The Cloister Life

OF THE

Emperor Charles the Fifth.

IN ONE VOLUME.

Edited, with Corrections and large Additions by the author, and fully illustrated by new Engravings and Wood Blocks from subjects chosen by him. There will be included in this volume NOTICES of the EMPEROR CHARLES THE FIFTH in 1555 and 1556, not previously published.

Also in the Spring of 1891.

A Volume of Miscellanies,

Comprising a Memoir of the late Sir WILLIAM STIRLING-MAXWELL, and a complete Bibliography of his Works and his Literary and Artistic Productions, as well as a Selection of his Privately Printed Pamphlets on various interesting subjects of Art, etc., etc.

NOTE TO THE READER.

"Many alterations and additions made by my father, and referred to in the Editor's Preface, have been carefully incorporated in this New Edition of his Works, and the Illustrations now added are chosen from many which he had collected for that purpose.

"JOHN STIRLING-MAXWELL.

"POLLOK, September, 1890."

Books for the Times.

Millionaires of a Day.

An Inside History of the Great Southern California Boom. By THEODORE S. VAN DYKE, author of 'The Still Hunter,' etc. Paper, 50 cents; cloth, $1.00.

An admirable narrative, rich in facts, brilliantly witty, marked by the author's well-recognized clearness and beauty of style, vivid description, sympathetic humor, and hard sense.

VAN DYKE'S OTHER BOOKS.

Southern California: Its Hills, Valleys, and Streams; its Animals, Birds, and Fishes; its Farms, Gardens, and Climate. Cloth, bevelled, $1.50.

The Still Hunter: A Treatise on Deer-Stalking. Cloth, bevelled, $2.00.

Rifle, Rod, and Gun in California. A Sporting Romance. Cloth, bevelled, $1.50.

Murvale Eastman, Christian Socialist,

or, The Church of the Golden Lilies. A Novel. By ALBION W. TOURGÉE, author of 'A Fool's Errand, by One of the Fools,' etc.

A new venture, in the trenchant and dramatic style of this author, along the lines of to-day's problems—capital and labor, wealth and poverty, journalism, speculation, etc.

Tourgee's Other Novels.

'Hot Plowshares,' illustrated, $1.50; 'A Royal Gentleman,' illustrated, $1.50; 'Figs and Thistles,' Garfield frontispiece, $1.50; 'A Fool's Errand, by One of the Fools,' illustrated, $1.50; 'Bricks Without Straw,' frontispiece, $1.50; 'John Eax, and Other Tales of the New South,' illustrated, $1.25; 'Black Ice, a Story of the North,' $1.25. *Uniform edition, 7 vols., boxed*, $10.00.

Midnight Talks at the Club.

By AMOS K. FISKE. Vellum cloth, gilt top, $1.00.

Fresh and candid discussions of social, religious, political, and moral questions that interest thinking people.

"Oftentimes eloquent and at all times sincere, even when the playful humor lies beaming on the surface, it is a book that will carry light and consolation to many doubting minds."—*New York Times.*

"This candor of mind, and a certain sweetness of temper are very alluring to the reader, who, whether he finds his own pet beliefs confirmed or gently taken apart and their incongruities made clear, will enjoy every step of the process."—*Brooklyn Times.*

Tenants of an Old Farm:

Leaves from the Note-Book of a Naturalist. By Dr. HENRY C. MCCOOK. Profusely and beautifully illustrated after sketches from nature by the author, Dan Beard, and others. New popular edition, $1.50 (instead of $2.50).

Henry Ward Beecher's Books.

'*Patriotic Addresses* in England and America, 1850 to 1885,' with Introductory Biographical Sketch by J. R. Howard, portraits, $2.00; '*Sermons*,' 4 vols. (*uniform*), $1.50 per vol., and a *New Volume* (same); '*Evolution and Religion*,' $1.50; '*Yale Lectures on Preaching*' (3 vols. in one), $2.00; '*Norwood*' (his only novel), $1.25; '*Royal Truths*,' $1.25; '*Comforting Thoughts*,' 75 cents and $1.00; '*A Summer in England*' (Portraits and MSS. Facsimiles), $2.00; '*Beecher as a Humorist*.' $1.00.

Face to Face with the Mexicans.

Seven Years' Familiar Intercourse. By FANNY CHAMBERS GOOCH. 200 Illustrations. $3.50. (*Subscription.*)

A Library of Poetry and Song.

1,500 Poems from 600 authors. Edited, with an Introductory Essay on English Poetry, by WILLIAM CULLEN BRYANT. *Holiday Edition.* Clo. gilt, half mor. gilt, full mor. gilt.

Fords, Howard & Hulbert,

No. 30 Lafayette Place, New York.

JAMES POTT & CO.

The Old Documents and the New Bible.

An Easy Lesson for the People on Biblical Criticism, by J. PATTERSON SMITH, B.D., Trinity College, Dublin, author of 'How We Got Our Bible.' 216 pages. Illustrated. Price, $1.00.

"We know of no book in the language that presents so much important information in such a small compass."—*Review.*

This book deals with the external history of the Jewish Bible; that is, the preservation and transmission of the books as they come down to us.

Records of the Past.

Being English Translations of the Assyrian and Egyptian Monuments. Under the editorship of Prof. SAYCE, assisted in the work by M. M. Le Page Renouf, Prof. Maspero, Mr. Budge, Mr. Pinches, Prof. Oppert, and other distinguished Egyptian and Assyrian scholars. Crown 8vo, 174 pages, cloth extra, $1.75 per vol. Vols. 1 and 2 *Ready.*

The new series of volumes differs from its predecessor in several respects, more especially in the larger amount of historical, religious, and geographical information contained in the introductions and notes, as well as in references to points of contact between the monumental records and the Old Testament. Translations of Egyptian and Assyrian Texts will be given in the same volume.

The Greatest Thing in the World.

An Address on I. Corinthians, 13th chapter. By HENRY DRUMMOND. Leatherette, gilt top, 35 cents. Author's Edition.

"Thoughtful and powerful, with a wealth of illustration."—*Churchman.*

The same, with special Drawings printed in two colors, beautifully bound in cloth gilt, red edges, price, $1.00. [*Ready Shortly.*]

A Southern Planter.

By SUSAN DABNEY SMEDES. 12mo, cloth, 341 pages, price, $1.50. [*6th Edition Ready.*]

"The most interesting book that has ever been written about the South."—*Joel Chandler Harris.*

"My interest in the work is not only lively but profound. . . . The exhibition of one of the very noblest of human characters."—*Gladstone, Hawarden Castle, October 12, 1889.*

Five, Ten, Fifteen.

By author of 'Miss Toosey,' 'Tip Cat,' etc. Cloth, 178 pages, Cover printed in gold and colors, $1.00.

Christianity in Relation to Science and Morality.

A Course of Lectures on the Nicene Creed. By MALCOLM MACCOLL, M.A. Fourth Edition. Price, $1.75.

"This is a very delightful book. It is an awakening as well as an elevating book. . . . Indeed, the volume is so full of interesting and impressive passages that we have found the greatest difficulty in selecting those which are most likely to attract our readers' attention."—*Spectator.*

"An admirable book, full of good thought."—*Saturday Review.*

Bagster's Teachers' Bible.

With New Helps, New Concordance, Indexed Atlas, and the Complete Bagster Bible. The only Teachers' Bible published since the Revised Version.

"We have often been asked, 'What edition of the Bible is the best for practical use by a student or teacher?' To this we answer that we consider the new edition of the BAGSTER BIBLE as the most convenient in form, the clearest in print, and the best in its tables and helps of any that we have yet seen. The editor uses it himself, and recommends it to readers who wish to obtain a new Bible."—*Rev. Dr. Hurlbut, successor to Bishop J. H. Vincent in editing S. S. Magazine, Our Youth, etc.*

WOODBRIDGE SCHOOL.
32 East 45th Street. Reopens October 1.
J. WOODBRIDGE DAVIS, Ph.D., Principal,

"'St. Nicholas,' the best of children's magazines,"

begins a new volume with the November number. If there are children in your home to be educated, amused and helped, the investment of 25 cents in a copy of this beautiful issue will bring golden returns.

With the advent of ST. NICHOLAS, seventeen years ago, began a new era in children's literature. The best writers, illustrators and engravers have contributed to its pages; and, now, at the outset of the eighteenth year, the publishers are assured of continued and increased effort to maintain it as "the king of all publications for the young."

Try the November number,—25 cents,—on every news-stand. Or send the price of a year's subscription ($3.00) to the publishers, and try it for a year. THE CENTURY CO., 33 East 17th St., New York.

JUST READY:
Harris' German Composition.
Within ten days of its publication this book was introduced into Harvard Coll., Williams Coll., Bowdoin Coll., Univ. of Indiana, Adelbert Coll., Friends' Acad., New Bedford, and several other important schools. Every teacher of German should examine it before deciding on a text-book. Introduction price, 50 cents.

Charles Scribner's Sons'

NEW BOOKS.

Pacific Coast Scenic Tour.

From Southern California to Alaska—The Yosemite—The Canadian Pacific Railway—Yellowstone Park and the Grand Cañon. By HENRY T. FINCK, author of 'Romantic Love and Personal Beauty,' and 'Chopin and Other Musical Studies.' With 20 full-page Illustrations. 8vo, $2.50.

Mr. Finck's new book is a patriotic demonstration of the superiority of American scenery. The description, by so experienced a traveller and so vivacious a writer, of the character and accessibility of the natural grandeurs of the PACIFIC SLOPE, is as entertaining as it is valuable. The picture is more comprehensive than any heretofore attempted.

A Little Brother of the Rich,

And Other Verses. By EDWARD S. MARTIN. 12mo, $1.25.

"The poems are witty, philosophical, graceful, and altogether delightful."—*New York Sun.*

Peter the Great,

Emperor of Russia. A Study of Historical Biography. By EUGENE SCHUYLER. With Portrait and 200 Illustrations. *New and Cheaper Edition.* 2 vols., 8vo, $6.00.

A new and cheaper edition of a work which has taken the highest rank as an elaborate portrait of Peter the Great, and as a graphic picture of the most interesting period in Russian history. The beauty of the illustrations is a feature of the book.

A Short History of Anglo-Saxon Freedom.

The Polity of the English-Speaking Race Outlined in its Inception, Development, Diffusion and Present Condition. By Prof. J. K. HOSMER of Washington University, St. Louis. Crown, 8vo, $2.00.

Prof. Hosmer's review and analysis of the growth of the idea of popular liberty through English and American history are as significant as they are entertaining.

In the Valley.

By HAROLD FREDERIC. With 16 full-page Illustrations by HOWARD PYLE. 12mo, $1.50.

"It is uncommonly well written, and the whole *mise en scène* has verity and importance, for the valley of the Hudson, at the moment before the Revolution broke out, is new to romance and it is certainly picturesque."—W. D. HOWELLS, in *Harper's Magazine.*

Famous Women of the French Court.

Translated from the French of IMBERT DE SAINT-AMAND. By T. S. PERRY. Each volume, 12mo, with Portrait, $1.25.

MARIE LOUISE AND THE DECADENCE OF THE EMPIRE.

The period covered in this book is the intensely dramatic decline of the French Empire from the Russian campaign, when Marie Louise "had the world at her feet," to the desperate campaign of 1814, which concluded her brief but brilliant reign.

ALREADY ISSUED:

MARIE ANTOINETTE AND THE END OF THE OLD RÉGIME.
CITIZENESS BONAPARTE.
THE WIFE OF THE FIRST CONSUL.
THE HAPPY DAYS OF THE EMPRESS MARIE LOUISE.

"Full of charm and interest, brilliant description, and strong and clear historical sketches."—*N. Y. Tribune.*

CHARLES SCRIBNER'S SONS,

743-745 Broadway, New York.

'The Henry Irving Shakespeare.'

Volume VIII. Completing the Work.

Containing Hamlet, Henry VIII., Pericles, Sonnets and Poems, with Index. With a General Introduction and Life of Shakespeare by Prof. DOWDEN, and illustrated by GORDON BROWNE. Edited by HENRY IRVING and FRANK MARSHALL. Sq. 8vo, cloth, $3.00.

Complete sets 8 vols. With notes and introductions to each play by F. A. MARSHALL and other Shakespearean scholars, and numerous illustrations by GORDON BROWNE, MAYNARD BROWN, and W. H. MARGETSON. Square royal octavo, decorated cloth, $24.00, or half Roxburgh, $30.00.

"This handsomely printed edition aims at being popular and practical. Add to these advantages Mr. Gordon Browne's illustrations, and enough has been said to recommend an edition which will win public recognition by its unique and serviceable qualities."—*London Spectator.*

"The Henry Irving edition will now take its place as one of the most thorough and careful, and it cannot fail to win popularity."—*N. Y. Tribune.*

The Life and Times of Girolamo Savonarola.

By Prof. PASQUALE VILLARI. Translated by Linda Villari. Portraits and Illustrations in photogravure. New edition, revised and enlarged. New and cheaper edition. 2 vols., 8vo, $6.00.

This is the work of an eminent scholar, who has made a special study of the period of the Renaissance. It is founded on the results of much original research, not only in the archives of the Government, but also among papers preserved by the families of the old Italian nobility. The search has brought to light many new documents of great importance, and in the light of them the author has considered Savonarola both as philosopher and as statesman. The work may be considered the only one that does full justice to the life and public services of one of the most remarkable men of his time, and one of the most brilliant lights of mediæval history.

John Ashton's New Work.

Social England Under the Regency (1811-1819).

By JOHN ASHTON, author of 'Social Life in the Reign of Queen Anne,' 'Old Times,' etc. 2 vols., demy octavo, with 90 illustrations, $7.50.

The Contemporary Science Series.

Edited by HAVELOCK ELLIS. Each volume containing 300 or 400 pages and illustrated. Cloth, 12mo, each $1.25.

NEW VOLUME—NEARLY READY.

Manual Training.

By Dr. C. M. WOODWARD of St. Louis, Mo.

SCRIBNER & WELFORD,

743-745 Broadway, New York.

To Our PRESBYTERIAN Friends.

We shall be pleased to forward circular giving examples of important Stained Glass Windows recently executed by us. Our commissions have usually been for the entire work of the building, including important figure memorials and COLOR DECORATION as well, thus making the entire color scheme of walls and windows one harmonious unit.

Some of these commissions have been as important as any executed in the United States for any denomination. This means that within the last five years there has been a marvellous change and development in the artistic side of church work, particularly so in the Presbyterian denomination. They have been willing, of late years, to accept the best resources of art for the beautifying of the house of worship.

Space does not permit us to give any description, but have you seen the work in the Bethlehem Presbyterian Church of Philadelphia? If not send for handbook describing same.

J. & R. LAMB,

The Nation.

NEW YORK, THURSDAY, OCTOBER 23, 1890.

The Week.

SPEAKER REED has not "caught on" to the new Republican defence of the McKinley Law and its higher prices. He is arguing on the ground first assumed by its defenders, that the law has, to quote the language of Belden's Congressional Republican campaign document, "in no case raised the cost of necessary supplies to the American consumer." In other words, he is maintaining that "cheapness" is a desirable thing, and that the McKinley Law has given us a great deal of it. We place a passage from his speech at Buffalo on Wednesday evening side by side with a passage from Mr. McKinley's speech in Kalamazoo on the previous evening:

[McKinley, Oct. 14, 1890.]

Well, now they say you would have things cheaper if you only had a Democratic revenue tariff. Cheap! I never liked the word. "Cheap" and "nasty" go together. *This whole system of cheap things is a badge of poverty, for cheap merchandise means cheap men, and cheap men mean a cheap country, and that is not the kind our fathers builded. Furthermore, it is not the kind their sons mean to maintain.*

[Reed, Oct. 15, 1890.]

They also ask me if I know of any article which has been lowered in price by the tariff. I could spend the entire evening in giving the facts showing that articles have been lowered in price. I can remember the time when I had to pay $1.45 a yard for ingrain carpet. Now you can buy it for 45 cents a yard. I remember when you had to pay $6 a keg for nails. Now you can get the same nails for $3 a keg. The Democrats say it is invention that lowers prices. Is invention the gift of God? In my opinion it rests upon protection. It is the protective tariff which tempts our inventors to work at inventing cheaper processes of manufacturing.

According to Mr. Reed, the McKinley Tariff Law is working to make what McKinley calls a "cheap and nasty" country filled with "cheap men."

The two apostles should "get together." Their speeches on this topic, at present, sound like the wanderings of a demented or intoxicated person, but they are really the observations of two perfectly sane but rather unscrupulous men who find themselves in "a hole." The fun of it all is increased by the fact that only two weeks ago McKinley, in an interview with the Chicago *Tribune*, tried to show that one of the merits of his bill was that it cheapened more things than the Mills Bill, by putting them on the free list. Here is his very amusing boasting on this subject:

"In spite of what has been said to the contrary, the bill gives to the people freer trade than any tariff legislation that has been put upon our statute-books in more than a century of our existence. During the first thirty years of our history nearly every article was made dutiable. In 1824 less than 6 per cent. of our imports was free; in 1833 only 15 per cent. of our imported goods was free; in 1842 only 27 per cent. was free; in 1846, the great revenue-tariff year, only 12 per cent.; in 1857 only 18 per cent. From 1873 down to 1883, 30 per cent. only was free, and in 1889 39 per cent. was free. This bill makes about one-half of them absolutely free to the people. The Mills Bill, that famous Democratic tariff bill, only made free in all about 47 per cent. of our importations. By the bill just passed one-half of our importations, or nearly so, are made free."

The way these people contradict themselves now, and not simply from year to year, but from week to week, shows how great is their perplexity. They literally lie like clockwork, on the principle of any port in a storm.

After the arguments on the evils of cheapness to which Massachusetts Republicans have been treated of late, it must have been a relief to those who attended the meeting in Boston last Thursday evening to listen to Edward L. Pierce, the Republican candidate for Congress in the Third District. He declared that on a subject like the tariff "a thoughtful man will decline to wear labels or badges, or to bind himself to any one abstract theory." Acting on this independent platform, he said that a measure like the McKinley Bill is at best a compromise between sections and interests. He pleaded for such reciprocity as would benefit New England, saying (in the face of the McKinley Bill) that "the free potato is far more essential to a laboring man's breakfast than free tea and coffee; for while these beverages are confined usually to the heads of the family, the potato goes around the table, for children and for all. The same is true of eggs, as every housewife knows." He even refused to join in the work of assailing importers of foreign goods—those conspirators who, according to the Philadelphia *Press*, are putting up prices to help the Democrats—saying of them: "There are importers in this city who are behind no class of citizens in mercantile honor, in public spirit, and in generous benefactions." A speech of this kind is, of course, very discouraging to the Lodges and Hoars and Greenhalges. The Boston *Journal* scents danger for Mr. Pierce, and comes to his defence in this way:

"We shall, no doubt, be quickly told by our Democratic adversaries that Mr. Pierce does not agree with the Republican party; that he favors free potatoes from the Provinces, free eggs, and free coal. That may or may not be true under all conditions, all circumstances, but it is only the superficial critic who will, on this account, question the quality of Mr. Pierce's Republicanism. The allegiance of a life-long, honored member of the Republican party is to be measured by no such test."

We are glad that the line of Massachusetts Republicanism is conceded to lie within free eggs and potatoes. We shall not be at all surprised, after the election returns of the next month are in, to be told that it embraces also free coal and iron ore.

The following appears in the Philadelphia *Press*:

"Some of the New York importers, acting on a request of the Democratic Congressional Committee to increase prices in order to hurt the Republicans, have already discovered that lying does not pay. A Western house was charged an advance on an order for some woollen goods, on the ground that the tariff had been increased, but examination by the Western house disclosed the fact that the old rate on these particular goods was 35 cents a pound and 35 per cent. ad valorem, while the new rate is 22 cents a pound and 40 per cent. ad valorem, a reduction instead of an increase—to say nothing of the fact the goods were in stock before the new Tariff Act took effect. As a result, the New York house lost a valuable customer. Some of the retail houses which have been trying to help the Democratic party by advancing prices on goods not affected by the tariff, are suffering a loss of customers in the same way. It serves them right."

It appears from this that the editor does not know that the beauty of dearness is now the true Republican doctrine. Consequently, the New York importers who have been raising their prices have really been helping the Republicans, and probably got their orders from the Republican Congressional Committee. It is true that there is no real unity of sentiment among the chiefs as to which is better, cheapness or dearness, or as to which the McKinley Bill will produce. In fact, its effect seems to vary with the locality in which the orator finds himself. The bill is somewhat like the horse which the owner was extolling to a possible purchaser, who asked if he hadn't got the internal disease known as "bots." "Well," said the owner, who had never heard of "bots" before, "if it's a good thing to have, he's got it." We quite agree with the *Press* that "lying does not pay." And we also agree with the gentleman who, when it was proved to him that the assertions of the New York *Tribune*, made in the canvass of 1884, that if Cleveland were elected we should have to pay $3,000,000,000 of "rebel claims," were groundless, exclaimed in breathless astonishment, "Then there has been a terrible amount of lying somewhere."

The wide range of the McKinley prices is shown from day to day by the new circulars issued by manufacturers. Two new ones reached us last week. One was from Wolff & Randolph, manufacturers of Wolff's Acme Blacking, Philadelphia, who advise the trade that an enormous increase in the cost of their raw material, due to the McKinley tariff, compels them to advance their prices. The other was from the Hayden manufactory at Newark, N. J., informing customers that the McKinley Bill has increased the cost of their celebrated "horse-clippers." So it appears that the cost of polishing the horse has gone up simultaneously with the cost of polishing his harness. The price of the horse himself has not gone up, so far as we know, although the duty on horses has been increased from 20 per cent. to 30 per cent. ad valorem. The Elizabeth (N. J) *Journal* tells us that these circulars marking up prices are issued by "Democratic conspirators," and that it is all "a shrewd political dodge." But it takes courage to believe that "this fictitious marking up of prices and sending abroad free-trade circulars will not result as was intended, because the people of this nation are not fools, whatever

the free-traders take them to be." We advise it to write at once to the parties just named, and ask them whether they are Democrats, or free-traders, or whether they have any political design in issuing their respective circulars.

One value of the new Tariff Bill as a means of proving to the people that the tariff *is* a tax, consists in the wide list of articles of which the price is increased by the bill, thus making it certain that persons of all classes will feel its influence. For instance, the photograph in these days is so common that it is no longer a luxury, but an almost universal means of keeping by one the countenances of friends, living or dead. The improvement in cameras, too, has raised up thousands of amateur photographers, who find the most innocent of pleasures in carrying away with them pictures of scenes they visit. The tariff taxer has not let the photograph escape. Albumenized paper is one of the requisites of photography. Its manufacture has been tried in this country, and photographers say that the result is a failure. But a single concern in western New York wants "protection" while it is experimenting with its paper, and the Republican Congress has raised the duty, so that the imported paper, which cost $32 a ream last year, will henceforth cost $42.50. The increased cost of each photograph will be small, but a Boston photographer estimates that the increased duty on this one article will put a tax equal to four cents a head on every man, woman, and child in this country. And what have the Republicans to offset such an argument? A picture, in the style of a circus poster, of the House with the Democrats absent when there was no Republican quorum, and when the Republicans were trying to steal the seats of legally elected Democrats!

One of the swindles of the McKinley Tariff Bill is found in the paragraph putting a duty on natural mineral waters of sixteen cents per dozen bottles. This will add at least one dollar to the price of every case of Vichy, Seltzer, Apollinaris, Giesshubler, Kissingen, Sprudel, etc., none of which are or can be produced in this country. Probably the idea of putting a tax on them was to make a better market for the American imitations of these waters. This conception was carried into effect in Conference Committee in paragraph 341, but the Committee forgot to strike out the paragraph 650 in the bill which puts "mineral waters, all not artificial," in the free list. Consequently, the law in one paragraph makes these waters free, and in another makes them dutiable at sixteen cents per dozen. The customs authorities, under the clause which directs that if two or more rates of duty shall be applicable to any imported article, the highest rate shall be assessed, have enforced the duty of sixteen cents per dozen. Whether this clause applies to cases where one of the conflicting rates of duty is no duty at all, may be a question.

"The little tin god on wheels" has been spurred to greater activity since the Pittsburgh *Dispatch* announced that the Welshmen who visited that city had decided that it would be unprofitable to start works there or anywhere in the United States. A *Tribune* despatch now tells us that "three tin-plate works in the vicinity of Pittsburgh are a certainty, while four others are contemplated." The little tin god is contemplating a great many works in different parts of the country. He is going to get his block tin, the *Tribune* despatch tells us, from Dakota, Wyoming, and California. These mines will easily supply all the tin that will be required by the three tin-plate works that are "a certainty," and the four that are in contemplation, there being no tin ore in paying quantities in any of those places. It casts a shadow of doubt upon the whole *Tribune* story to read that certain Welsh gentlemen, members of the British Iron and Steel Institute, who have been in Pittsburgh lately, have tin-plate works in contemplation. "During their visit to Pittsburgh last week," says the despatch, "they made inquiries which led the writer to that conclusion." These are the same gentlemen, no doubt, who were interviewed by the Pittsburgh *Dispatch* to the contrary effect.

The little tin god has taken the stump in Illinois, as appears from the following paragraph in a Rockford paper:

"Mr. Hitt called attention to the matter of tin plate. Up to 1879 this was entirely imported at the cost of $14 per box. An American factory was started, and the foreigners put the price down to $4 per box. This closed the American factory. The price then went up to $11. Then another American factory started, and again the price went down. This time agents were sent to this country and directed to follow the product of the American mills about, and make the price twenty-five cents lower than any price made on the American goods. The mills closed again and remained closed. It was thought that the time had come to stop this boycotting of American goods, and a tariff of two and two-tenths cents per pound had been placed upon tin-plate. What is the result? *Already a factory with a capital of $3,500,000 and to employ 3,500 hands was being organized at Chicago. Another $7,000,000 factory was started in Baltimore.* Another tin-plate factory was being started at St. Louis."

The Chicago factory and the Baltimore factory have been searched for with great assiduity since the announcement of their "contemplation" went abroad on the wires, but nobody has been able to find trace of them. Mr. Hitt's fable about a tin-plate factory in this country in 1874, and its effect upon prices, was exposed in the Senate by a quotation from David A. Wells's book, 'Recent Economic Changes,' showing that the ups and downs of the tin-plate market were due to inventions and discoveries, and to the laws of supply and demand, with which the toy tin-plate works at Demmler, Pa., had no more to do than a meteor has to do with the movement of the earth in its orbit.

The speech of Carl Schurz at Boston on Monday evening on the tariff question and the Lodge Bill, was fully up to the measure of his powers as a political thinker and a public debater. No speech of the present year has been on a higher plane of practical morality and philosophical thought. A large part of its value is due to Mr. Schurz's historical studies, for which his 'Life of Henry Clay' has especially fitted him. It is to be regretted that such a document was not given to the public somewhat earlier in the present campaign.

There is no more significant and encouraging sign of the times than the complete change in the attitude of the *Staats-Zeitung* towards Tammany. The same journal which, during the last municipal campaign, preferred Grant to Hewitt, has at last caught the drift of public opinion and thrown Tammany overboard. Nothing can be more outspoken than its characterization of the two candidates for the Mayoralty. "As regards both natural ability and education," the *Staats-Zeitung* says, "Grant is utterly beneath Scott; and if one of the two is destined to achieve political distinction transcending the limits of our city, it can only be Scott. Grant has shown that he uses his position chiefly for the advancement of his organization, and it is this fact that has made his administration so odious to thousands. Scott will not be owned by any political organization, and that is the best feature of his nomination. His experience of many years in municipal affairs, his familiarity with the laws bearing on them, which renders him independent of the doubtful guidance of 'legal advisers,' his tact, energy, and other qualities, give every assurance that he will make an excellent Mayor."

That this language will have its due effect on thousands of voters from among the class which has hitherto steadily supported Tammany, no one can doubt, nor that the permanent alienation of that vote from Tammany would be of incalculable benefit to the city. There has been for many years no greater puzzle to the foreign observer of our institutions than the rôle the Germans have played in the politics of the chief city of the American Continent. German administrative ability at home has converted an arid sand waste on the Spree into a city which is an unsurpassed municipal model, while German indifference here has largely helped to make New York, naturally one of the most favored spots on the face of the earth, a reproach to American civilization. That the Germans are beginning to recover from their apathy is evident from the enthusiasm with which some of their most prominent representatives have thrown themselves into the work of the Municipal League, and there is every reason to hope that the mass-meeting of German-Americans which will soon be called will help to communicate this enthusiasm to the masses.

The old abuse of assessing the clerks in the departments at Washington for "voluntary contributions" of specified amounts has been revived, and is again almost as unblushing as in the days of the notorious Hubbell. The Republican managers not only "re-

quest," in terms not to be refused, a certain percentage of the clerk's salary, but they also insist that he shall make a journey to his old home and vote the Republican ticket on election day. The various State associations at Washington have charge of this work, and "spotters" have been appointed to note any failure and report the offender for the punishment of dismissal, which is plainly threatened. All this is done under the administration of a President who, when a candidate, announced his belief in the wisdom of the Civil-Service Law, and declared that "the law should be faithfully and rigorously enforced."

Mr. Robert Lincoln, son of Abraham Lincoln, has been rather distinguished for commonplace doings and sayings, and has thus, and by virtue of his ancestry, gained several public positions, which he has filled in a respectable sort of way. He has now really distinguished himself by writing a letter from England to help Quay in his death-struggle in Pennsylvania. That would be quite sufficient to give him an unpleasant eminence, but the form of his letter adds something to the moral offence. He writes particularly to object to the use of the name "Lincoln Republicans" by such men as Herbert Welsh, Henry C. Lea, and others who have adopted that style and title in their fight against corruption in the politics of Pennsylvania. He says that he does not know any warrant for the use of his father's name in that fight. So much the worse for him. All the rest of the world knows the warrant for its use. Abraham Lincoln was known in his early life in Illinois as "Honest Abe." This appellation was earned by scrupulous adherence to the ten commandments, and especially to one of them which says, "Thou shalt not steal." The golden rule was no "iridescent dream" to him, but a maxim to guide him in his downsitting and his uprising in political as well as every-day life. He never could have reached the pinnacle where he stood and stands by any toleration of the ways of Quay and Delamater. It was a perfectly natural and justifiable step for Messrs. Welsh, Lea, and their associates to take the name of Lincoln. They might have taken that of Washington as properly. Mr. Robert Lincoln has written himself down very decidedly by his letter in behalf of two common cheats, but he cannot write his father down nor write Quay and Delamater up.

The Philadelphia *Ledger* agrees with us that, if our estimate of what the total population of the country according to the census will be, shall be verified, the result will be to "completely discredit" the census itself. Since our estimates were made, which were based on the returns from 137 supervisors' districts, we have received the figures for 26 more districts, leaving but 12 yet to be heard from. The total population of these 163 districts in 1880 was 47,710,933; and in 1890, according to the census, it is 59,106,931—an increase of 11,395,998, or at the rate of 23.89 per cent. A similar rate of increase for the remaining twelve districts, which in 1880 had a population of 2,453,850, would give a total for the country of 62,138,000. After deducting the increase by immigration, the rate of natural increase indicated is but 13.44 per cent. It is probable, from the location of the districts the returns from which we have not as yet seen, that the increase in them may be relatively greater than in the rest of the country; but even if the increase should average as much as 50 per cent., the rate for the country as a whole would be but 25 per cent., and the portion of this due to natural growth exclusive of immigration but 14½ per cent., or, as we have before stated, less than in any previous decade, and very much less than in any decade except that of the war and the defective census of 1870.

The penalty of ten days' suspension imposed by the Union League Club on that very queer person, Col. Elliott F. Shepard, for ungentlemanly behavior to his fellow-members, is, when one examines it, fully as queer as Shepard himself. The standard of social morals enforced by club rules is, or ought to be, precisely that which governs the intercourse of gentlemen in private houses, or in a steamer or a railroad car. That is to say, in such intercourse a man may make himself offensive by conduct resulting from thoughtlessness, from an outburst of temper, or from ignorance of certain social facts. All such cases are, as a rule, expiable by an apology couched in suitable terms. But if he should make himself offensive in ways which could not be atoned for by an apology—that is, by offences indicating incurable faults of character, such as conceit, or selfishness, or dishonesty, or mendacity, or morbid curiosity—the rule of private life prescribes the permanent cessation of social intercourse with him. When one gentleman offends another in a way which cannot be settled by an expression of sincere regret, the offended party, in the more highly civilized countries, ceases to see the offender or to communicate with him except on business. In some places he kills him, but in our happier clime he simply breaks off intercourse with him for good. He never thinks of saying to him, "Sir, your conduct on such a day in such a place shows that you have neither the instincts nor the training of a gentleman. I shall, therefore, taking everything into consideration, refuse to speak to you for a period of two weeks from this date." In other words, gentlemen do not pass sentence on each other like a police magistrate sitting on "a drunk." They do not send associates to Coventry for limited periods and then take them back as if nothing had happened. A man is either fit company for gentlemen, or he is not. If he is not, nothing that can happen to him in ten days will make him fit. No man is for social purposes an occasional or temporary blackguard or lout. If he is a blackguard on the first of the month, he is sure to be a blackguard on the fifteenth.

Dillon, we see, has announced his intention, and that of O'Brien, of going back to undergo his term of imprisonment, whatever it may be, as soon as he finishes his tour in this country. This is not a very respectful announcement to the court which will shortly convict him, but it is as respectful as the court deserves. In no Anglo-Saxon country since the abolition of the Star Chamber have public men been tried for political conspiracy proved by public speeches, before such tribunals as are now set up in Ireland. The appearance of the prisoner before them is a mere waste of his time, and he is entirely justified, if he has other engagements, in surrendering when it suits his convenience. Public opinion in England, even Tory opinion, seems to condemn Balfour's last move strongly, because it will fill the winter session of Parliament with Irish debates, in which John Morley will appear as a witness about Irish criminal procedure. But, on the other hand, it will probably insure the Liberal-Unionists another year of security in their seats, for it renders a dissolution in 1891 very improbable. Lord Salisbury will not like to dissolve in the midst of a renewal of the Irish hubbub, and of a virtual confession from Balfour that order does *not* reign in Ireland.

The latest turns in Spanish politics are decidedly in favor of the Conservatives, and there seems now to be a general expectation that they will be triumphant in the approaching elections. Indeed, Sagasta himself is reported by a Paris newspaper to have admitted that he had no real hope of success. The Conservative canvass is in the hands of one of the ablest and shrewdest politicians of Spain, Señor Silvela, Minister for the Interior, and Cánovas is left free to expend his great oratorical powers in the doubtful districts. His programme of labor legislation, after the Bismarckian model, is well calculated to cut into the Liberal strength in manufacturing centres, while the landholding interests are sure to stand by him as before on the ground of his promises of protection to national agriculture. Then, too, the dignity and success of his administration thus far, accented just now by the favorable result of the new loan to fund the Cuban debt, are strong points to his advantage. The Liberals, on the other hand, have by no means healed their dissensions, and Sagasta has been particularly unfortunate in his free talks with French reporters. He stirred up Castelar mightily by admitting the Queen Regent's right to dismiss or form a Cabinet on her own notion of what was proper, without regard to the wish of the Cortes, and drew upon himself a savage attack from Zorrilla by asserting that the Republicans ought to be content with the law of universal suffrage. The latter, in fact, challenged Sagasta to an open discussion of Spanish affairs before a Paris audience, undertaking to expose the hollowness of his pretensions, but the ex-Premier declined thus to wash the national dirty linen in the presence of strangers.

CHEAPNESS.

THE Republicans have contributed, and are contributing every day, a number of interesting novelties to economical literature. The enemies of political economy have long been in the habit of reproaching it with not being a science; but what little science there was in it will hardly survive, in America at least, the improvements which our high-tariff men are introducing. Among these improvements are the following propositions, which have until now been unknown to all the professors and politicians of other countries:

(1.) That an import duty is not a tax, and yet raises the price of articles to the consumer. (2.) That the object of raising prices to the consumer is to enable the domestic manufacturer to pay higher wages to his workmen. (3.) That although the duty does raise prices to the consumer, the consumer does not pay the duty, but the foreign vender. (4.) That if it were called a "tax," it would be paid by the consumer, but by calling it a "duty," the foreigner is made to pay it. (5.) That it does not raise prices to the consumer at all, but, on the contrary, lowers them. (6.) That the manufacturers are enabled to continue to pay higher wages to their workmen, in spite of this fall of prices, by refusing to consider the tariff in detail and looking at it "as a whole." (7.) That any one who refuses to look at the tariff "as a whole," and complains of it for either lowering or raising prices, is a bad man. (8.) That there is in all high tariffs an inward and spiritual force which makes their effect on prices really a matter of indifference to the truly devout, and that faith is just as needful in political economy as in religion.

It will readily be seen that there is hardly any more room for "science" here than in the dogmas of the Catholic Church. The high-tariff doctors are as exacting in the matter of belief as Tertullian or Cardinal Newman. Cardinal Newman wrote a book called the 'Grammar of Assent,' showing that belief is a matter of will—that is, that if you have your will in proper order, you can believe anything you please. It is just as difficult to believe that a tariff both raises and lowers prices, and enables manufacturers to pay higher wages by lowering prices, as to believe in the Trinity or Transubstantiation. You have simply to "pull yourself together," and down goes the doctrine. In fact, we know of tariff zealots who are in Tertullian's state of mind, and like a tariff of contradictions because it furnishes things hard to swallow. Their eyes glow and their mouths water with pious zeal when they light in it on a flagrant absurdity. It seems to them that the bigger the absurdity, the more "American" it is, and they gulp it down, just as Tertullian would have liked an "impossibility" for his spiritual breakfast every morning.

The hardest trial for the believer, however, and most astounding contribution of all to the protectionist gospel, has been made by two minds of very different calibre—President Harrison and Mr. Cabot Lodge. The President's mind it would be disrespectful to examine too minutely as long as he occupies his present high office. Mr. Lodge's we know to be exceedingly acute and well trained. It was President Harrison's which produced in 1888, during his canvass—simply, we admit, as what Roman Catholics call a "pious opinion"—the doctrine that cheapness is an evil. Said this great doctor in a speech in Chicago in that year: "I am one of those uninstructed political economists that have an impression that some things may be too cheap; that I cannot find myself in full sympathy with this demand for cheaper coats, which seems to me necessarily to involve a cheaper man and woman under the coats."

Now this, when you examine it, is really a tremendous proposition—a more serious one, by far, than anything contained in the Syllabus of Pius the Ninth of blessed memory. It contains an attack on the modern civilization such as no Pope has as yet ventured on. For in what does material civilization consist? Simply in making things pertaining to human safety and comfort "cheaper"—that is, attainable by less and less labor and self-denial—clothes, food, shelter, transportation. For one thousand years it has been the understanding of the civilized world that this cheapening process was a good thing, and that those who facilitated it in any field were benefactors of their race. That President Harrison's attack on it did not produce more sensation, that it did not make even more commotion than the infallible decree of the Vatican Council, has always astonished us. Probably a thousand could be got to believe in the Pope's infallibility for the one who could be got to believe that wearing a cheap coat damaged the moral side of his nature. Nevertheless, it seemed to fall rather flat except among the tailors. In tailoring circles it was received with pious awe, but the rest of the world neither accepted it nor rejected it. They simply suspended judgment about it, waiting for more light.

But now comes Mr. Cabot Lodge, the Scholar in Politics, and tells a Yankee audience at Lowell the other day, that "the cry for cheapness is un-American, and that there is such a thing as too much cheapness." Of course nobody will believe for one moment that Lodge has got this notion through the working of poor human reason. Lodge's understanding would do no such jobs for any man. He has got it, in our opinion, through the working of tariff grace in his soul. President Harrison's pious opinion sowed the seed, and tariff grace did the rest. It probably puzzled Lodge at first to find the proper depreciatory epithet for cheapness, but it came, as such things always come finally to the spiritually minded. It came upon him as a revelation that the desire for cheapness was "un-American," a sign of a carnal heart or unregenerate American nature. When the doctrine is firmly established, the American father and mother searching the town for a place where they can save money in the purchase of household utensils or the children's clothing will be looked on as a depraved couple, and be avoided by their neighbors as still under the dominion of the European Satan, the Cobden Club. It will, in fact, work nearly as great a revolution in modern thought as Darwinism. A world in which people sought for things because they were dear would, it is easy to see, be absolutely a different world economically, socially, politically, and even morally from that in which we now live. Our whole system of ethics would have to be revised. Extravagance would have to be struck from the list of public and private vices. Prudence would have to be furnished with a new meaning. Inventors would become as despicable as liquor-dealers, and the increase of taxation the highest aim of the statesman.

THE BUSINESS SITUATION.

AN examination of railroad earnings and expenses for the fiscal year just closed does not show any general cause for financial alarm, nor does an outlook over the present railroad situation point to any reason for the heavy decline in stocks which can be attributed to causes arising from transportation alone. Explanations of the large reductions in the prices of shares and bonds should be sought for outside of any serious change in the net earnings or intrinsic values of railroad properties. There are, on the other hand, some features of the general condition of our trade which should have attention. Business over the whole country is good—better, indeed, than for a few years past; while the prices of all commodities are advancing. Increasing trade demands increasing funds to carry it on. A merchant who may have railroad shares or bonds in his safe, and who feels the need of more money in his business, sees that it is better to sell his railroad investment, even at a loss, than to let his expanding trade suffer.

A small investor, who is perhaps a manufacturer, during slack times may put his reserve capital into railroads. Yet if the orders for goods increase, he will sell his railroad securities. For, profit or no profit, the manufacturer must protect his business, since though his factory may run at a small margin of profit, yet to refuse orders for goods would be fatal to his future. Manufacturing is his business, his purchases of bonds or speculative stocks being matters of mere surplusage. This, however, is not the situation of a majority of merchants. Although business men may speak of 2 per cent. as a usual profit, yet their real gains may be much more than the percentage implies. For example, a firm with a capital of a million of dollars may sell eight millions worth of goods in gross annually. If there is a profit of even 2 per cent. upon the gross sales, as well as an interest charge of 6 per cent. upon the capital, the profits really are 22 per cent. upon the original investment. If, then, there is a boom in trade warranting such a calculation, outside investments yielding 5 or 6 per cent. of money which can now be used in business, are relatively dear at half the usual quotation. Here is one of the causes of stock declines.

Another consideration is not so favorable,

The uneasy money-lender is more apprehensive of the future of general business than of the railroads *per se*. For several years prices of staple goods have been low and the volume of trade has been moderate. After such an era, it is probable that we should this fall have seen a slight advance in prices and volume of business without the McKinley Bill. That Tariff Law, coming at a time when some advance was probable, has forced the rise far beyond its natural limits. Commerce now is feverish and uncertain as to the future, while still higher prices are predicted for everything Even dealers in goods not affected by the new tariff have caught the contagion. But will the consumer continue to pay an advance estimated as high as 20 per cent. on the things he and his family have been used to buying? To do this and at the same time to purchase as much as before is a financial impossibility unless his income is increased in proportion. An increase in the consumer's wages or salary will be slow in coming, if it comes at all. Meanwhile, what is he to do? He must curtail his purchases by just the amount of the increase in price. In this readjustment between quantity and price of articles manufactured, sold, and consumed lies the danger. The question will be, What articles will the wage-earner dispense with? and which factory will (after the boom) be obliged to shorten work or close?

Every one has noticed that periods of lower and higher prices succeed each other in our commercial history. These changes, when brought about through natural causes and gradually, do comparatively little harm. On the contrary, the McKinley Bill, by its suddenness and by its large differences from former tariffs in important lines, is the greatest effort of modern times to change quickly and completely the settled channels of trade. Fortunately, the wealth and natural resources of our country will aid us in limiting the evil effects to a certain extent, and yet such a far-reaching readjustment of commercial conditions can be made only through losses. All business must feel the "boom" and the reaction to a certain degree, but many of our industries will reach a place of safety only after much financial distress. Which industries will be most seriously affected, is the question that capitalists are now asking themselves.

Railroad securities are no doubt encountering this feeling of uncertainty in advance of other business; and herein is another reason for the late declines. There is, however, good ground for believing that these same railroad securities will be found among our most stable investments by reason of the present readjustment. A reaction having been anticipated and "discounted," these securities are already prepared for any business trouble that may come. If none comes, they will be so much the better fortified.

INTERNATIONAL ARBITRATION.

THERE has lately been issued from the Government Printing-office a series of documents relating to the International American Conference. These are five in number, each one embracing a single subject, and they are bound in paper of different colors. The one entitled 'Report and Recommendations concerning a Plan of Arbitration' is in sky-blue, a most proper color, since it is conceived in the interest of heavenly peace. Of all the things considered by the Conference this is the one best entitled to commendation. Although it was not unanimously agreed to, it did, nevertheless, express the mature opinions of the American delegates and Government and of the American people, as we devoutly think. It was transmitted to the Senate and House of Representatives with a special message on the 3d of September last by President Harrison, who said: "The ratification of the treaties contemplated by these reports will constitute one of the happiest and most hopeful incidents in the history of the Western Hemisphere."

The plan of arbitration, after reciting the Christian motives that moved the framers "to lend their assent to the lofty principles of peace which the most enlightened public sentiment of the world approves," designates the subjects of international controversy as to which arbitration should be obligatory. These are "all controversies concerning diplomatic and consular privileges, boundaries, territories, indemnities, the right of navigation, and the validity, construction, and enforcement of treaties." As though this were not comprehensive enough, the next article says that arbitration shall be equally obligatory in all other cases, with one exception, namely, where, in the judgment of a nation, its independence is imperilled. Article v. declares that the scope of the plan includes all controversies now pending or hereafter arising. Article vii. provides that the choice of arbitrators shall not be limited to American States, but that any government may serve in that capacity. The remaining articles provide for the mode of choosing arbitrators and umpires, and for paying the expenses of arbitration.

The second grand division of the plan is entitled "Recommendation to European Powers." It recites that "this conference, having recommended arbitration for the settlement of disputes among the republics of America, begs leave to express the wish that controversies between them and the nations of Europe may be settled in the same friendly manner."

The appositeness of this entire scheme, and especially of the passage last quoted, to the Bering Sea dispute cannot be doubted. The subject is freshly brought to remembrance by an article in the *Herald of Peace*, an English publication, which has been sent to this country for distribution, not by the pestilent Cobden Club, but by the British Peace Society. The tone of the article is all that could be desired. Probably the publication and distribution of it is due to some shade of doubt whether the offer of Lord Salisbury to submit the Bering Sea question to arbitration is to be accepted by our Government or not. The latest information that we have had on this subject is contained in Mr. Blaine's letter of July 2 to Sir Julian Pauncefote, in which he (Blaine) expressed regret that Lord Salisbury had refused to request British sealers to keep out of Bering Sea during the present season unless the United States should "forthwith" accept arbitration. In the same letter Mr. Blaine said: "An agreement to arbitrate requires careful consideration; the United States is perhaps more fully committed to that form of international adjustment than any other Power, but it cannot consent that the form in which arbitration shall be undertaken shall be decided without full consultation and conference between the two Governments." Very proper, of course. Lord Salisbury's "forthwith" was used in the sense of "simultaneously." Mr. Blaine had asked that Salisbury should "request" British sealers to keep out of Bering Sea during the season of 1890. Such a request coming from the Premier must be construed as a command in order to be effective, and yet, if any British sealer should disobey it, he could not be punished, because Lord Salisbury had no right under English law to issue such a command. Nevertheless, he said he would take it into consideration on certain conditions, one of which was that "the two governments agree forthwith to refer to arbitration the question," etc. It was not an unreasonable condition, if Salisbury was to take a step involving a good deal of personal responsibility, that, simultaneously with it, arbitration of the whole dispute should be agreed to; otherwise he would be exposed to the charge of assuming unconstitutional powers without advancing the settlement of the controversy

Thus much explanation is requisite to show how the question now stands as between the two governments. Perhaps the time that has since passed has been usefully occupied with consultation and conference on this subject. We hope so, at all events. How it will stand between us and the world if the do-nothing policy is to spin itself out till the next season, can be read in the lines of the sky-blue document just issued from the Government Printing-office. We have, then, put upon record our testimony in favor of arbitration in all cases affecting "boundaries, territories, indemnities, and the right of navigation," and in all other cases not imperilling the independence of a nation. We have recommended the nations of Europe to adopt our plan so far as relates to their controversies with *us*. In due time we shall see what all this amounts to.

SCIENCE AND THE CHURCH.

EX-PRESIDENT WHITE'S series of articles, running for some months in the *Popular Science Monthly*, were unfeeling in their exposure of the obscurantist attitude of the Church, standing in days gone by athwart almost all lines of scientific advance, and it is not strange that they have evoked remonstrances. A very clever and plausible offset to his damaging showing has been brought forward by Prof. Wright, who reminds him that theologians are not the only men who have got in the way of scientific progress, but that scientists themselves have

vied with the most obstreperous dogmatists of the Church in disparaging and denouncing some of the greatest discoveries ever made. Why single out the latter sinners? asks the professor, who would make the opposition of the Church of other times to the scientific spirit to be only a part of the general opposition of prejudice and conservatism to what is new.

This will do very well for a telling rejoinder from a man who is eminent both in the Church and in science, but it does not really touch the essential point. It is undoubtedly true that men of science have been thick-headed and narrow-minded, and have withstood the truth as vehemently as any theologian of them all; but they have always admitted that there was at least a question to discuss, that more was yet to be learned, and that what appeared settled one year might be all overturned another. The representatives of the Church, on the other hand, had nothing to do with such give-and-take of argument. For them the case was closed antecedently and for ever. They had in their keeping, they believed and maintained, a body of authoritative teaching covering all things in this world and the next, and new light was out of the question. Hence, in their view, science was not only mistaken, but presumptuous, and to refute its assertions by simple reference to the dogmas of the Church was only a preliminary to an attempt to crush it out utterly. This is the great difference: erring scientists have hindered scientific progress by alleging lack of proof for the asserted advance; theologians have hindered it by declaring it inconsistent with an infallible authority. In one case there has been the clash of even-handed debate, out of which comes clearer knowledge; in the other, the intolerant cries of men who supposed themselves speaking in the name of supreme wisdom.

All this straw is well threshed, however, and it is not in our mind to stir it up afresh; we simply desired to refer to it as a point of departure for remarking on the sweeping change that time has wrought in the attitude of the Church towards scientific inquiry. It is no wonder that the ancient antagonism seems incredible and is denied at present, in view of the fact that to-day the results of scientific investigation are followed with keener interest by no body of men, not themselves scientists, than by the more intelligent and alert among the clergy. Indeed, the whole tendency now is, so far from decrying science, to hasten to accept its more advanced teachings, and to find in them new and convincing arguments for the truth of Christianity. Modern apologetics is filled with scientific terms and ideas pressed into service for the defence of the faith.

This changed attitude of the Church has some grotesque aspects. The old serene intolerance has in some cases given way to abject fear. We know one aged doctor of divinity who lives in daily dread that the doctrine of spontaneous generation may be proved true. He is almost afraid to read his morning paper lest he find that some man of science has succeeded in getting life from dead matter in such a way as to defy Tyndall's tests. The old divine is undoubtedly wrong in thinking that to establish spontaneous generation would be to destroy Christianity; theology has received many wounds as deadly as that would be, only to readjust itself to the new conditions and go on as before. But his alarm unquestionably reflects the real feeling of a great many of his class, who have had to get on leviathan's back, but are much disturbed as to where he may finally land them.

One curious product of the new relations between the Church and science is the lecturing charlatan who knows little theology and less science, but goes about pretending to harmonize the two in great swelling words of vanity. This type reached its consummate flower about ten years ago in the person of Joseph Cook, who has since been steadily sinking into the depths to join his own "Bathybius," much to the relief of all who love quiet. Of a far different class is Prof. Drummond, who writes his famous book, not to show that Christianity does not oppose science, not to prove that science is not inconsistent with Christianity, but to maintain that Christianity and science are identical. The chorus of delight with which this supposed demonstration was received by a large part of the Christian world sufficiently indicates the new place that science has made for itself in Christian minds. The strange tricks which geology has played with the interpretation of the first chapter of Genesis are destined to be duplicated or outdone in many departments of Christian doctrine.

Much more important than all this is the fact that there is a considerable body of Christian teachers who have made that best use of the scientific spirit of their time which consists in becoming cautious in stating their own views, and open-minded in receiving new light. The leading Professor in an orthodox theological seminary, who was an eager student even in his old age, used to say to his classes: "We really have no theology to-day, young gentlemen; we have something that will do for women and children, but have nothing for men. We cannot have it for years yet. We have to wait till we get a psychology, which we have not now. What you must do is to preach morality and religion, and let theology alone until you get something that a man can preach with self-respect." Such men must always have a better claim on the future than one like Cardinal Newman, who took fright at the spirit of inquiry, and sought refuge in the fancied security of an unchanged past.

MY EXPERIENCE WITH THE RUSSIAN CENSOR

In spite of the advantage which I enjoyed in a preliminary knowledge of the Russian language and literature, I was imbued with various false ideas, the origin of which it is not necessary to trace on this occasion. I freed myself from some of them; among others, from my theory as to the working of the censorship in the case of foreign literature. My theory was the one commonly held by Americans, and, as I found to my surprise, by not a few Russians, viz., that books and periodicals which have been wholly or in part condemned by the Censor are to be procured only in a mutilated condition, or by surreptitious means, or not at all. That this is not the case I acquired ample proof through my personal experience.

The first thing that an American does on his arrival in St. Petersburg is to scan the foreign newspapers in the hotels eagerly for traces of the Censor's blot—*le masque noir*, "caviare"—his idea being that at least one-half of the page will be thus veiled from sight. But specimens are not always or even very often to be procured with ease. In fact, the demand exceeds the supply sometimes, if I may judge from my own observations, and from the pressing applications for these curiosities which I received from disappointed seekers. The finest of these black diamonds may generally be found in the inventive news columns of the London dailies and in the flippant paragraphs of *Punch*.

Like the rest of the world, I was on the lookout for the Censor's work from the day of my arrival, but it was a long time before my search was rewarded by anything except a caricature of the Censor himself in *Kladderadatsch*. That it was left unmasked was my first proof that that gentleman, individually and collectively, was not deficient in a sense of humor. The sketch represented a dishevelled scribe seated three-quarters submerged in a bottle of ink, from the half-open cover of which his quill pen projected like a signal of distress. This was accompanied by an inscription to the effect that as the Russian Censor had blacked so many other people, he might now sit in the black for a while himself. Perhaps the Censor thought that remarks of that sort came with peculiar grace from martinet-ruled Berlin. About this time I received a copy of the *Century* containing—or rather, not containing—the first article in the prohibited series by Mr. Kennan. I made no remonstrance, but mentioned the fact, as an item of interest, to the sender, who forthwith despatched the article in an envelope. The envelope being small, the plump package had the appearance of containing a couple of pairs of gloves or other dutiable merchandise. Probably that was the reason why the authorities cut open one end. Finding that it was merely innocent printed matter, they gave it to me on the very day of its arrival in Petersburg, and thirteen days from the date of posting in New York. I know that it was my duty to get excited over this incident, as did a foreign (that is, a non-Russian) acquaintance of mine, when he received an envelope of similar plump aspect containing a bulky Christmas card, which was delivered decorated with five very frank and huge official seals, after having been opened for contraband goods. I did not feel aggrieved, however, and, being deficient in that Mother Eve quality which attributes vast importance to whatever is forbidden, I suggested that nothing more which was obnoxious to the Russian Government should be sent to me.

But when a foreigner offered the magazine to me, regularly, unmutilated, I did not refuse it. When a Russian volunteered to furnish me with it later on, I read it. When I saw summaries of the prohibited articles in the Russian press, I looked them over to see whether they were well done. When I saw another copy of the *Century*, with other American magazines, at the house of a second Russian, I did not shut my eyes to the fact, neither did I close my ears when I was told that divers instructors of

youth in Petersburg, Moscow, and elsewhere were in regular receipt of it, on the principle which is said to govern clergymen away from home, viz., that in order to preach effectively against evil one must make personal acquaintance with it. I was also told at the English Bookstore that they had seven or eight copies of the magazine, which had been subscribed for through them, lying at the Censor's office awaiting proper action on the part of the subscribers. What that action was I did not ask at the time, in my embarrassment of riches. It will be perceived that when we add the copies received by officials, and those given to the members of the Diplomatic Corps who desired it, there was no real dearth of the *Century* at any time.

About this time, also, I had occasion to hunt up a package of miscellaneous newspapers which had lingered as such parcels are apt to linger in all post-offices. In pursuance of my preconceived notions, I jumped to the conclusion that the Censor had them, regardless of the contingency that they might have been lost out of Russia. I called to ask for the papers. The official whom I found explained, with native Russian courtesy, that I had come to the wrong place, that office being devoted to foreign matter in book-form; but that, in all probability, the papers had become separated from their wrapper in the newspaper department (which was heedless) when they had been opened for examination, and hence it had been impossible to deliver them. Still, they might have been detained for some good reason, and he would endeavor to find some record of them.

While he was gone, my eyes fell upon his account book, which lay open before me. It constituted a sort of literary book-keeping. The entries showed what books had been received, what had been forbidden, what was to be erased, whose property had been manipulated, and, most interesting of all, which forbidden books had been issued by permission, and to whom. Among these I read the titles of works by Stepniak, and of various works on Nihilism, all of which must certainly have come within the category of utterly proscribed literature, and not of that which is promptly forwarded to its address after a more or less liberal sprinkling of "caviare." As I am not in the habit of reading private records on the sly, even when thus tempted, I informed the official, on his return, of my action, and asked a question or two.

"Do you really let people have these forbidden books?" "Certainly," was his half-surprised, half-indignant reply. "And what can one have?" "Anything," said he, "only we must, of course, have some knowledge of the person. What should you like?"

I could only express my regret that I felt no craving for any prohibited literature at that moment, but I told him that I would endeavor to cultivate a taste in that direction to oblige him; and I suggested that, as his knowledge of me was confined to the last ten minutes, I did not quite understand how he could pass judgment as to what mental and moral food was suited to my constitution, and as to the use I might make of it. He laughed amiably, and said: "*Nitchevó*—that's all right; you may have whatever you please." I never had occasion to avail myself of the offer, but I know that Russians who are well posted do so, although I also know that many Russians are not aware of their privileges in this direction. It is customary to require from Russians who receive literature of this sort a promise that they will let no other person see it—an engagement which is as religiously observed as might be expected, as the authorities are doubtless aware.

I did not pursue my search for the missing papers. I had allowed so much time to elapse that I perceived the uselessness of further action; they were evidently lost, and it mattered little as to the manner. Shortly afterwards I received the first of my only two specimens of Censorial caviare. It was on a political cartoon in a New York comic paper. I sent it back to America for identification of the picture, and it was lost between New York and Boston; which reconciled me to the possible carelessness of the Russian Post-office in the case of the newspapers just cited.

My next experience was with Count Lyeff N. Tolstoy's work entitled 'Life.' This was not allowed to be printed in book form, although nearly the whole of it subsequently appeared in instalments, as "extracts," in a weekly journal. I received the manuscript as a registered mail packet. The author was anxious that my translation should be submitted in the proof-sheets to a philosophical friend of his in Petersburg, who read English, in order that the latter might see if I had caught the sense of the somewhat abstract and complicated propositions. It became a problem how those proof-sheets were to reach me safely and promptly. The problem was solved by having them directed outright to the Censor's office, whence they were delivered to me; and, as there proved to be nothing to alter, they speedily returned to America as a registered parcel. My own opinion now is, that they would not have reached me a whit less safely or promptly had they been addressed straight to me. The bound volumes of my translation were so addressed later on, and I do not think that they were even opened at the office, the law to the contrary notwithstanding.

All this time I had been receiving a New York weekly paper with very little delay and no mutilation. But at this juncture an amiable friend subscribed in my name for the *Century*, and I determined to make a personal trial of the workings of the Censorship in as strong a case as I could have found had I deliberately desired to invent a test case. I may as well remark here that "the Censor" is not the hard-worked omnivorous reader of mountains of print and manuscript which the words represent to the mind of the ordinary foreigner. The work of auditing literature, so to speak, is subdivided among such a host of men that office hours are brief, much of the foreign reading at least is done at home, and the lucky members of the committee keep themselves agreeably posted upon matters in general, while enjoying the fruits of office.

The Censor's waiting-room was well patronized on my arrival. An official who was holding a consultation with one of the visitors inquired my business. I stated it briefly, and shortly afterwards he retired into an adjoining room, which formed the beginning of a vista of apartments and officials. While I waited, a couple of men were attended to so near me that I heard their business. It consisted in obtaining official permission to print the bills and programmes of a musical and variety entertainment. To this end they had brought not only the list of performers and proposed selections, but also the pictures for advertisement, and the music which was to be given. As the rare traveller who can read Russian is already aware, the programme of every public performance bears the printed authorization of the Censor, as a matter of course, quite as much as does a book. It is an easy way of controlling the character of assemblages, the value of which can hardly be disputed even by those prejudiced persons who insist upon seeing in this Russian proceeding something more arbitrary than the ordinary city license which is required for performances elsewhere. In Russia, as elsewhere, an ounce of prevention is worth fully a pound of cure. This, by the way, is the only form in which a foreigner is likely to come in contact with the domestic censure in Russia unless he should wish to insert an advertisement in a newspaper, or issue printed invitations to a gathering at his house, or send new, telegrams. In these cases he may be obliged to submit to delay in the appearance of his advertisement, or requested to go to the elegance and expense of engraved invitations, or to detain his telegram for a day or two.

Just as these gentlemen had paid their fee, and resigned their documents to the official who had charge of their case, another official issued from the inner room, approached me, requested me to sign my name in a huge ledger, and, that being done, thrust into my hands a bulky manuscript, and departed. The manuscript had a taking title, but I did not pause to examine it. Penetrating the inner sanctum, I brought out the official and endeavored to return the packet. He refused to take it—it was legally mine. This contest lasted for several minutes until I saw a literary-looking man enter from the ante-room and look rather wildly at us. Evidently this was the owner, and, elevating the manuscript, I inquired if it was his. He hastened to my assistance and proved his rights. But, as erasures do not look well in account books, and as my name already occupied the space allotted to that particular parcel, he was not requested to sign for it, and I believe that I am still legally qualified to read, perform, or publish—whatever it was—that talented production.

A dapper little gentleman, with a dry, authoritative air, then emerged and assumed charge of me. I explained my desire to receive, uncensured, a journal which was prohibited.

"Certainly," said he, without inquiring how I knew the facts. "Just write down your application and sign it."

"I don't know the form," I answered.

He seemed surprised at my ignorance of such an every-day detail, but fetched paper and dictated a petition, which I wrote down and signed. When we reached the point where the name of the publication was to be inserted, he paused to ask: "How many should you like?"

"How many copies of the *Century*? Only one," said I.

"No, no; how many periodical publications should you like?"

"How many can I have on this petition?" I retorted in Yankee fashion.

"As many as you please. Do you want four—six—eight? Write in the names legibly."

I gasped, but told him that I was not grasping; I preferred to devote my time to Russian publications while in Russia, and that I would only add the name of the weekly which I was already receiving, merely with the object of expediting its delivery a little. The document was then furnished with the regulation eighty-kopek stamp (worth at that time about thirty-seven cents), and the business was concluded. As I was in summer quarters out of town, and it was not convenient for me to call in person and inquire whether permission had been granted, another stamp was added to insure the answer being sent to me. The license arrived in a few days, and the magazine began to come promptly, unopened. I was not even asked not to show it to other people. I may state here that, while I never circulated any of the numerous prohibited books and manu-

scripts which came into my possession during my stay in Russia, I never concealed them. I showed the *Century* occasionally to personal friends of the class who could have had it themselves had they taken any permanent interest in the matter; but it is certain that they kept their own counsel and mine in all respects.

Everything proceeded satisfactorily until I went to Moscow to stay for a time. It did not occur to me to inform the Censor of my move, and the result was that the first number of the magazine which I received there was as fine a "specimen" as heart could desire. The line on the title-page which referred to the obnoxious article had been scratched out; the body of the article had been cut out; the small concluding portion at the top of a page had been artistically "caviared." Of course, the article ending upon the back of the first page extracted had been spoiled. On this occasion I was angry, not at the mutilation as such, but at the breach of faith. I sat down, while my wrath was still hot, and indited a letter to the Head Censor in Petersburg. I do not recollect the exact terms of that letter, but I know I told him that he had no right to cut the book after granting me leave to receive it intact, without first sending me word that he had changed his mind, and giving valid reasons therefor; that the course he had adopted was injudicious in the extreme, since it was calculated to arouse curiosity instead of allaying it, and that it would be much better policy to ignore the matter. I concluded by requesting him to restore the missing article, if he had preserved it, and if he had not, to send at once to London (that being nearer than New York) and order me a fresh copy of the magazine at his expense.

A month elapsed, no answer came; but at the end of the month another mutilated *Century* arrived. This time I waited two or three days in the hope of inventing an epistle which should be more forcible—if such a thing were possible—than my last, and yet calm. The letter was half written when an official envelope made its appearance from Petersburg, containing cut pages and an apologetic explanation to the effect that the Moscow Censor, through an oversight, had not been duly instructed in his duty towards me. A single glance showed me that the enclosed sheets belonged to the number just received, not to the preceding number. I drove immediately to the Moscow office and demanded the Censor. "You can tell me what you want with him," said the ante-room Cerberus. "Send me the Censor," said I. After further repetition, he retired and sent in a man who requested me to state my business. "You are not the Censor," I said, after a glance at him. "Send him out or I will go to him." Then they decided that I was a connoisseur in censors, and the proper official made his appearance, accompanied by an interpreter, on the strength of the foreign name upon my card. Convinced that the latter would not understand English well, like many Russians who can talk the language fluently enough, I declined his services, produced my documents from the Petersburg Censor, and demanded restitution of the other confiscated article. I obtained it, being allowed my pick from a neatly labelled package of contraband goods. That scratched, cut, caviared magazine is now in my possession, with the restored sheets and the Censor's apology appended. It is my proof to unbelievers that the Russian Censor is not so black as he is painted.

As we shook hands with this Moscow official, after a friendly chat, I asked him if he would be a little obtuse arithmetically as to the old and new style of reckoning, and let me have my January *Century* if it arrived before my departure for Petersburg, as my license expired January 1. He smilingly agreed to do so. I also called on the Moscow Book Censor, to find some books. The courtesy and readiness to oblige me on the part of the officials had been so great, that I felt aggrieved upon this occasion when this Censor requested me to return on the regular business day, and declined to overhaul his whole department for me on the spot. I did return on the proper day, and watched operations while due search was being made for my missing property. It reached me a few days later, unopened, the delay having occurred at my banker's, not in the post-office or Censor's department.

On my return to Petersburg, my first visit was to the Censor's office, where I copied my original petition, signed it, and dismissed the matter from my mind until my February *Century* reached me with one article missing and two articles spoiled. I paid another visit to the office, and was informed that my petition for a renewal of permission had not been granted.

"Why didn't you send me word earlier?" I asked.

"We were not bound to do so without the extra stamp," replied my dapper official.

"But why has my application been refused?"

"Too many people are seeing that journal; some one must be refused."

"Nonsense," said I. "And if it is really so, *I* am not the proper person to be rejected. It will hurt some of these Russian subscribers more than it will me, because it is only a question of *when* I shall read it, not of whether I shall read it at all. I wonder that so many demoralizing things do not affect the officials. However, that is not the point: pray keep for your own use anything which you regard as deleterious to me. I am obliged to you for your consideration. But you have no right to spoil three or four articles; and by a proper use of scissors and caviare that can easily be avoided. In any case, it will be much better to give me the book unmutilated."

The official and the occupants of the reception-room seemed to find my view very humorous; but he declared that he had no power in the matter.

"Very well," said I, taking a seat. "I will see the Censor."

"I am the Censor," he replied.

"Oh, no. I happen to be aware that the Head Censor is expected in a few minutes, and I will wait."

My (apparently) intimate knowledge of the ways of censors again won the day. The chief actually was expected, and I was granted the first audience. I explained matters and repeated my arguments. He sent for the assistant.

"Why was not this application granted?" he asked impressively.

"We don't know, your Excellency," was the meek reply.

"You may go," said his Excellency. Then he turned graciously to me. "You will receive it."

"Uncut?"

"Yes."

"But will they let me have it?"

"Will — they — let — you — have — it — when — I say — so?" he retorted with tremendous dignity.

Then I knew that I should have no further trouble; and I was right. I received no written permission, but the magazine was never interfered with again. Thus it will be seen that one practically registers periodicals wholesale, at a wonderfully favorable discount.

During the whole of my stay in Russia I received many books unread, apparently even unopened to see whether they belonged on the free list. In one case, at least, volumes which were posted before the official date of publication reached me by the next city delivery after the letter announcing their despatch. Books which were addressed to me at the Legation, to assure delivery when my exact address was unknown or when my movements were uncertain, were, in every case but one, sent to me direct from the post-office. I have no reason to suppose that I was unusually favored in any way. I used no "influence," I mentioned no names.

An incident which procured for me the pleasure of an interview with the Chief Censor for newspapers and so forth, will illustrate some of the erroneous ideas entertained by strangers. I desired to send to some friends in Russia a year's subscription each of a certain American magazine, which sometimes justly receives a sprinkling of caviare, for its folly, but which is not on the black list, and is fairly well known in Petersburg. After some delay an answer came to the effect that the publishers had consulted the United States postal officials, and had been informed that "*no* periodical literature could be sent to Russia, this being strictly prohibited." I took this letter to the Newspaper Censor, who found it amusingly and amazingly stupid. He explained that the only thing which is absolutely prohibited is Russian text printed outside of Russia, which would never be delivered. He did not explain the reason, but I knew that he referred to the socialistic, nihilistic, and other proscribed works which are published in Geneva or Leipzig. Daily foreign newspapers can be received regularly only by persons who are duly authorized. Permission cannot be granted to receive occasional packages of miscellaneous contents, the reason for this regulation being very clear. And *all* books must be examined if new, or treated according to the place assigned them on the lists if they have already had a verdict pronounced upon them. I may add, in this connection, that I had the magazines I wished subscribed for under another name, to avoid the indelicacy of contradicting my fellow-countrymen. They were then forwarded direct to the Russian addresses, where they were duly and regularly received. Whether they were mutilated, I do not know. They certainly need not have been had the recipients taken the trouble to obtain permission as I did, if they were aware of the possibility. It is probable that I could have obtained permission for them had I not been pressed for time.

I once asked a member of the Censorship Committee on foreign books on what principle of selection he proceeded. He said that disrespect to the Emperor and the Greek Church was officially prohibited, that he admitted everything which did not err too grossly in that direction, and, in fact, *everything* except French novels of the modern realistic school. He drew the line at these, as pernicious to both men and women. He asked me if I had read a certain new book which was on the proscribed list. I said that I had, and in the course of the discussion which ensued, I rose to fetch the volume in question from the table behind him to verify a passage. (This occurred during a friendly call.) I recollected, however, that that copy had not entered the country by post, and that, consequently, the name of the owner therein inscribed would not be found on the list of authorized readers any

more than my own. I am sure, however, that nothing would have happened if he had seen it, and he must have understood my movement. My business dealings were wholly with strangers.

It seems to be necessary, although it ought not to be so, to remind American readers that Russia is not the only land where the censorship exists, to a greater or less extent. Even in the United States, which is popularly regarded as the land of unlicensed license in a literary sense—even in the Boston Public Library, which is admitted to be a model of good sense and wide liberality—all books are not bought or issued indiscriminately to all readers irrespective of age and so forth. The necessity for making special application may, in some cases, whet curiosity, but it also, undoubtedly, acts as a check upon unhealthy tastes, even when the book may be publicly purchased. I have heard Russians who did not wholly agree with their own censorship assert, nevertheless, that a strict censure was better than the total absence of it, apparently, in America, the utterances of whose press are regarded by foreigners in general as decidedly startling. ISABEL F. HAPGOOD.

ARTS AND CRAFTS EXHIBITION.

LONDON, October 4, 1890.

THERE is no group of artists in England who understand so well the uses of advertisements as the men who form the Arts and Crafts Exhibition Society, which has been in existence now but three short years. To say that it has for President Mr. Walter Crane, for chief supporters Mr. William Morris, Mr. Burne-Jones, Mr. Cobden-Sanderson, Mr. Henry Holiday, and the members of the Century Guild and the East End Guild and School of Handicraft, is to explain at once that it is under the management of those artists and craftsmen who, for eccentricity either of artistic work or social creed, talk more about themselves and get themselves more talked about by others than any of their fellow-workers in this country. If a man will but declare often enough and loud enough, "I alone am great, I alone know the Truth!" he is certain to find enthusiastic followers who put all their faith and trust in him. The members of this society have so repeatedly and with such conviction proclaimed that they are the saving remnant in the modern art world, that many people not only look to them for all that is best in the arts of design to-day, but believe that with them rests all hope for the future of these arts in England. It is for this reason, now when the degeneracy of decorative work is publicly lamented and the failure of South Kensington to mend matters generally confessed, that special interest is attached to the Arts and Crafts Exhibitions.

The first had the charm of novelty to counterbalance its somewhat obvious defects; and if it seemed too much the show of a mere clique to be truly representative, the difficulty of making the Society's aims and objects widely known at the very outset was an excellent and reasonable excuse. Last year the tendency to confine the exhibition to one special and small school was still more marked; and so trivial and so numerous were the exhibits sent by one or two of the exhibitors that they were somewhat severely taken to task for monopolizing all available wall space, to the exclusion of other and better work, with the out-scourings from their own studios. Indeed, from this arose one very pretty fight in an afternoon daily, in which Mr. Walter Crane unwittingly admitted the narrow principles of his Society by complaining that a rank individualist had been sent as art critic to their exhibition. Apparently the test of contributions submitted to the Hanging Committee was the social doctrine held by artist or craftsman. But the adverse criticisms of last year have not been without their good effect, and in the Preface to the Catalogue of this year's show, just opened in the New Gallery on Regent Street, Mr. Crane is careful to explain that—

"The Arts and Crafts Exhibition Society, while at first, of necessity, depending on the work of a comparatively limited circle, have no wish to be narrower than the recognition of certain fundamental principles in design will allow, and, indeed, desire but to receive and show the *best* after its kind in contemporary design and handicraft. Judgment is not always infallible, and the best is not always forthcoming, and in a mixed exhibition it is difficult to maintain an unvarying standard.'

This desire for greater breadth shows itself in the fact that certain firms who have hitherto held aloof are now exhibiting; in the increased space given to furniture (much of which, however, might profitably have been excluded), and to embroidery, and in the moderation of the old exhibitors, who, though several still send works with a lavishness which they would be the first to condemn if indulged in by a Royal Academician at Burlington House, have not been quite so generous with their own productions as hitherto, and have contented themselves with sending serious work, and not any mere trivial and valueless experiment that might be knocking about the studio.

But while there is less triviality, and at least an attempt at less exclusiveness than there was last year, while there are fewer pieces of furniture and cartoons and drawings in which good workmanship has been aggressively sacrificed to morality, the exhibition as a whole is uninteresting and colorless. There is nothing that is very striking either in itself or for the promise it gives of a healthier and more vigorous state of things in the future, or for even a suggestion of originality. There is some good—some very good—work, of course. It is true that the exhibits which will attract most attention and furnish most paragraphs in the press depend for their interest on anything rather than their artistic quality. There is, for example, the extraordinarily ugly Irish national banner, designed by Walter Crane, executed by Una Taylor, and exhibited by Charles Stewart Parnell, with a Celtic cross of flames enclosing the national harp, and set about with heraldic devices on a vivid green ground, which will probably be more discussed than anything in the show; but while it may be full of meaning from the heraldic standpoint, it is quite wanting in beauty of color or design. The names of Holman Hunt, who, as far as I know, has never before appeared as a designer, and Ford Madox Brown, whose work can so seldom be seen in London, and of one or two other men of conspicuous personality, may lend a certain interest to examples of design and handicraft which would otherwise be passed by with indifference. There is, however, much of genuine and intrinsic merit.

Mr. William Morris, whatever doubt one may have of his sanity as a social prophet (and for some incomprehensible reason he has made it impossible to consider Morris the artist apart from Morris the Socialist), whatever objection one may make to the narrowness of his theory of the limitations of design, is unquestionably a master of his own special and admirable methods; and to the show he contributes some of the best examples from his Oxford Street shop, some of the most successful productions from his factory at Merton. One of the finest exhibits in the entire collection is a piece of handwoven Arras tapestry which, though designed by Mr. J. H. Dearle, was executed under the superintendence of Mr. Morris, and comes from Morris & Co.'s workshops. The color scheme is fine. The subject is "The Forest," and the bright yet not crude greens of the trees in the foreground are in harmonious relief against the rich deep blues of the duly conventionalized distant thicket; it is really a very beautiful piece of color, a good design skilfully and adequately rendered in the medium employed. Its weak point is the drawing in the deer browsing under the trees—indeed, draughtsmanship is not the virtue of the designers who exhibit in the New Gallery—while the decorative border of flowers in the immediate foreground might be less spotty and restless; but, altogether, it is a very successful specimen of the Morris tapestries. There are also cabinets from the same firm, excellent in design and—what is of no small importance — workmanship; drawers open easily and keys turn readily in the locks, and these are qualities to be appreciated in furniture exhibited by a society which finds ample room for the much-vaunted "love-work" (indifferently made chairs and cabinets by benevolently minded men) from Toynbee-Hall apostles of art in East London.

It is almost too late in the day to dwell in detail on the Morris embroideries. Many examples are to be seen here, and, vigorous as they are and free from amateurish prettiness, none call for special notice because of originality or unusual beauty. It is worth noting, however, that many of the embroideries, not merely of this but of other firms and individual exhibitors, show how much stronger the school of design chiefly represented is in color than in drawing. Nor do the faded tones and sickly shades associated with its leaders' names predominate. There is good strong color, well arranged and harmonized, in much of the work. One of the most striking examples is a curtain by Miss May Morris, with stiff mediæval trees (that look as if they had originally overshadowed Adam and Eve on an old missal or on an old brass placque or carven stall), worked on an almost brilliant blue background; and very effective it is.

Decorations for a plaster ceiling, designed and executed by Mr. Stephen Webb, one of the chief designers in the firm of Collinson & Lock, serve as a reminder—much needed in the Gallery—that good models of design do not cease abruptly with the fourteenth century. His charming arrangement of little naked boys, for border and centre-piece, with its delicate scroll work and flying ribbon finials, has much of the feeling of the best domestic decoration done in early Georgian days. It is a relief to find that there are English designers still left who can free themselves from archaic affectation. Conspicuous among the good things are small bronze statuettes of Mr. Onslow Ford's "Peace," exhibited at last spring's Academy, and Mr. Hamo Thornycroft's "General Gordon" (this, however, has already been seen elsewhere). And much of the glass and the brass work, notably the well-known lamps of the Bensons, as well as the fine De Morgan pottery, is of unquestioned excellence, though in design varying but little from specimens on view in the shop windows of the exhibiting firms. Mr. Cobden-Sanderson's book-bindings, while expressing none of that soulfulness which he claims for them, are very creditable examples of the book-binder's craft; and the

large exhibit made by the Chiswick Press is still more interesting to the book-lover. It is also a pleasure to know that Mr. Morris is beginning to find followers in the art of book-illumination; Mr. G. E. Reuter, whose name is new to me at least, has designed and illuminated several sheets of the 'Roots of the Mountains' in a manner which shows, if no great originality, very careful study of his master.

Of the contributions of Mr. Burne-Jones and Mr. Walter Crane there is really little to be said. Nine cartoons of angels designed by the former for a window at Jesus College, Cambridge, show nine repetitions of the familiar Burne-Jones's sexless type, this time in angelic attire. Mr. Crane has often been seen to better advantage; he sends a design for wall-paper which is excellent, if not quite up to his peacock pattern of last year, but he seems of late to have confined himself chiefly to *gesso* work, with results which suggest that either he has not yet mastered his medium, or that, if he has, it is not worth the mastering.

When all is said, the truth still remains that the exhibition fails to awaken any very lively interest or enthusiasm. Why this should be, the Society, as if to save the visitor the trouble, have helped to explain, though I fancy quite unconsciously. In their catalogue it is their custom to publish several preliminary papers on the different arts represented, written by men always of practical experience, even if sometimes of no great fame. The leading members, who this year are trying to keep more in the background than usual, have left the writing of these papers to others of less prominence, and the latter have spoken out upon their respective subjects all too honestly. One after another, with occasional exceptions, they deplore the degeneracy of modern decorative art; one after another they have sought to point out the reasons for this degeneracy, and it is significant, if unexpected, to find how well they agree that one of the chief causes is, to quote from the opening paper, "the fashion for archæological mimicry." Mr. Reginald T. Blomfield ascribes the beginning of the evil in England to the ridiculous mediævalism of Horace Walpole; declares that the men of days when good work was done "made no laborious search for quaintness, no disordered attempt to combine the peculiarities of a dozen different ages"; and warns his readers that the English tradition, without re pect to which there will never be good work in England, will not spring up again "till the artists try to make the unity of the arts a real thing, and the craftsman grows callous to fashion and archæology." "Shall we," asks Mr. John D. Sedding, writing of needlework, "shall we continue to hunt old trails, and die, not leaving the world richer than we found it? Or shall we, for art and honor's sake, boldly adventure something—drop this wearisome translation of old styles and translate Nature instead?" And Mr. Selwyn Image on the same subject is no less explicit:

"The study of old work is of the highest importance, is essential; the patient and humble study of it. But for what end? To learn principles and methods; to secure a sound foundation for one's self; not to slavishly imitate results and live on, bound hand and foot, in the swaddling clothes of precedent. Learn your business in the schools, but go out to Nature for your inspiration. See Nature through your own eyes, and be a persistent and curious observer of her infinite wonders."

It is fortunately explained by a preliminary note that, for the opinions expressed in all these papers, the writers thereof are exclusively responsible; otherwise the show would seem to demonstrate how great a gulf extends between the theory and practice of its supporters. For it is this very striving after quaint or archæological effects, this very spirit of imitation, which prevails here as it did in the old Grosvenor Gallery. And now that novelty no longer lends charm to "archæological mimicry," now that the one man of genius who in the very beginning made it possible is dead, one wearies of the repeated and childish efforts to conceal weakness in drawing under Gothic or primitive pretensions. The crude shortcomings of men who would have been the first to relinquish their imperfect methods had they lived in a later age, are copied as if these alone gave value to the old work. The thirteenth and fourteenth centuries, and not nature, have been studied. This is evident in every department, in every branch of design—in the embroideries, with their mediæval foliage and figures and arabesques; in the church decorations, with their absurd and pompous "quaintness"; in the book illustrations, with their style founded upon that of the earliest wood-blocks; in the cartoons, with their pre-Raphaelite drawing and composition. As I have already said, there are exceptions; a healthier spirit is manifested in the glass and pottery, and in the designs of Mr. Webb and one or two others. But these, it is to be regretted, are the exceptions to the general Gothic rule which gives character to the exhibition. Even when the mediævalism is less apparent, there is a seeking after eccentricity, as in several of the exhibits of the Century Guild, which is scarcely more satisfactory. With all the will in the world, eccentricity and mediævalism cannot make up for want of originality, and it is because of the absence of individuality in conception or treatment—within, of course, the due conventional limits—that the exhibition is so curiously lacking in interest as a whole.

A most praiseworthy aim of the Society is to increase the feeling for the unity of the arts, to bring artists and craftsmen, who have drifted only too far asunder, into closer sympathy. Mr. Crane, in his already quoted preface, hints that there is a possibility of a building being secured and schools opened in order that the Society's aims may be the better realized, their work better carried on and completed. But if the Society's schools borrow their standard from the Society's exhibitions, not even the union of artists and craftsmen will be sufficient to establish the arts of design in England on a sound and healthy basis.

I must not omit to mention a very practical innovation, introduced this year. There is to be a series of free evenings for "that part of the public who have no leisure in the daytime," namely, craftsmen, students, and workers in the arts. But for this sensible arrangement, many to whom the exhibition appeals most directly would never be able to visit it.

Correspondence.

THE SUNDAY-SCHOOL AND THE HIGHER CRITICISM.

To the Editor of The Nation:

Sir: I read with much interest in your paper of September 25 a letter with the above title signed with the initials "A. F. H." Your correspondent very truly says that criticism and the Sunday-school are incompatible. So are criticism and all school-teaching whatever, as it must be founded on authority or it would come to confusion. The future will find itself in the same condition as the present; it will have to assert and maintain the intellectual authority of schoolmasters, and to impose intellectual submission on their pupils, if teaching is to go on at all. The misfortune of the present age is, that while new beliefs are substituting themselves for old ones in the minds of thinking men, it is not yet possible to teach the new beliefs authoritatively, because they are not yet settled and accepted by the community.

The falseness of our present position may be compared to that of the European Governments just before the revolution in naval armaments. They were aware that the old system could not last long, yet they went on building in the old way because the new principles were not yet so clearly understood as to be brought at once into practice. So they wasted money and they lost time; yet it is not easy to see how they could prudently have done otherwise. In matters of opinion it may happen that a minority, with the force of the past behind it, overrules with that momentum the strength of a majority. In the conflict between science and theology the whole momentum of the past is on the side of theology, and it is not yet by any means exhausted. Besides this, theology has had time to associate itself with social morality and with political stability, while science is quite by itself, and has not had time to ally itself with other powers. Hence, although the morality of the Old Testament is certainly not our morality, it is somehow indirectly associated with it, which Darwinism is not.

It seems to me, however, that the time has now come when all the accepted results of science—those on which all scientific men are agreed—should be taught authoritatively in schools, and substituted for earlier systems that we now know to have been only temporary and provisional. This is already done to a considerable extent, by clear and intelligible scientific manuals, in the schools under the direct control of the French Government.

Your correspondent "A. F. H." observes that "society, public sentiment, does not require that we should practise honesty in the matter of our beliefs. It encourages just the opposite course." Yes, we live in an age when the prizes of life are freely given as rewards for hypocrisy, and steadily refused to outspoken honesty. By the prizes of life I mean honorable and lucrative situations, social rank, and the sort of marriage by which a man rises in the world. The influence of the clergy and of women is now in great part directed to procure what they know to be only an external submission, involving a considerable number of lies in the course of the year. A mother is perfectly aware that her son does not believe in miracles, and she implores him to attend mass "to please his poor mother." Sisters and wives exercise the same influence in favor of shamming when they clearly know it to be shamming. In the case of the clergy, the explanation seems to be the desire for an apparent external success; but in the case of women it is probably their instinctive conservatism, their desire to uphold all established usages. Some of your readers will remember what Sir Henry Maine said on this subject:

"Are, then, women characterized by a passion for change? Surely, there is no fact witnessed to by a greater amount of experience than that, in all communities, they are the strictest conservators of usage and the sternest censors of departure from accepted rules of morals, manners, and fashions."

What we desire for the future, and what *must* ultimately come with time, is the establishment of some moral authority in complete

harmony with modern knowledge. Any established moral authority is sure to have the support of women, and then the present conflict will be at an end. P. G. HAMERTON.

AUTUN, October 8, 1890.

UNSECTARIAN SECTARIANISM.

TO THE EDITOR OF THE NATION:

SIR: In a note of your issue of the 2d instant, mentioning the fact that a Unitarian, a Universalist, and another not a church-member are on important committees representing the trustees of the new Baptist University in Chicago, you remark: "Such things would have seemed nothing short of incredible less than fifty years ago." Permit me to call the attention of your readers to a similar breadth and liberality in a Baptist college founded one hundred and twenty-six years ago. I quote from the charter of Brown University, which was adopted in 1764, the following sentences (the italics are mine):

"It is hereby enacted, ordained, and declared, that it is now, and at all times hereafter shall continue to be, the unalterable constitution of this College or University that the Corporation thereof shall consist of two branches, to wit: That of the Trustees, and that of the Fellowship, with distinct, separate, and respective powers. And that the number of the Trustees shall and may be thirty-six, of which twenty-two shall forever be elected of the denomination called Baptists, or Anti-pædobaptists; five shall for ever be elected of the denomination called Friends or Quakers; four shall forever be elected of the denomination called Congregationalists; and five shall forever be elected of the denomination called Episcopalians. And that the succession in this branch shall be forever chosen and filled up from the respective denominations in this proportion, and according to these numbers, which are hereby fixed and shall remain to perpetuity immutably the same. . . . And that the number of the Fellows, inclusive of the President (who shall always be a Fellow), shall and may be twelve, of which eight shall be forever elected of the denomination called Baptist or Anti-pædobaptist, *and the rest indifferently of any or of all denominations.*

"And, furthermore, it is hereby enacted and declared, that into this liberal and catholic institution shall never be admitted any religious tests; but, on the contrary, all the members hereof shall forever enjoy full, free, absolute, and uninterrupted liberty of conscience; and that the places of Professors, Tutors, and all other officers, the President alone excepted [he must be a Baptist], shall be free and open for all denominations of Protestants."

Honor to whom honor is due.

Respectfully, T. E. BUSFIELD.

BANGOR, ME., October 10, 1890.

SAUL AMONG THE PROPHETS.

TO THE EDITOR OF THE NATION:

SIR: On what theory of proof do you so frequently, in order to convince your readers of the soundness of a position, quote some man whom you have all along claimed to be utterly unworthy of belief? For instance, I have been taught by you that Blaine is not only a great liar, but careless as regards matters of fact and illogical in his conclusions; and yet, as evidence to lay before, not his admirers, but your readers, you, with damnable iteration, repeat his statement that "in the McKinley Bill there was not a section or a line that would open the market for another bushel of wheat or another barrel of pork." JOHN L. STARR.

CHICAGO, October 10, 1890.

[We have no theory of proof in the matter. Mr. Blaine uttered the merest economic truism, and we commended it to the more besotted advocates of protection as coming from one of their own partisans, lately lauded to the skies by them as the greatest American statesman of the age.—ED. NATION.]

QUAY'S MICHIGAN IMITATOR.

TO THE EDITOR OF THE NATION:

SIR: Your mention of the charges against James M. Turner, Republican candidate for Governor of Michigan, leads me to believe that his nomination has become a subject of interest outside this commonwealth.

It may be stated, in passing, that the charges have been fully sustained by the publication, since your notice was written, of the candidate's own quibbling denial, and of a crushing rejoinder from his original assailant. In addition, the records of the Supreme Court of the State have been published to show that Mr. Turner had been guilty of clipping coupons from Government bonds which he had already sold in apparent good faith to Mr. Vanderbilt, and had resorted to a subterfuge to procure the payment of the coupons to his wife.

Surely no honest citizen, not blinded by partisan zeal, would select such a candidate as his choice for an office of trust and dignity. Yet honorable men, notably the present Governor of the State, with whom the charges were filed three years ago, but who thought it was not his duty to investigate them after Mr. Turner withdrew his name as a candidate for reappointment to the office of Blind-School Commissioner; and ex-Gov. Alger, well known for his Presidential aspirations, who confessed himself "staggered" by the charges and by Mr. Turner's virtual admission of their truth, but kept silent about them, as, he naïvely remarks, "any gentleman would"—these honorable gentlemen, men of influence in their party, not only failed to use their influence to prevent Mr. Turner's nomination for Governor, but have given him their support in his present candidacy, as a matter of party fealty. With such eminent examples of party loyalty before them, it is not likely that the rank and file of the party will hesitate to vote the "straight" ticket, especially as no Republican newspaper in the State has published the charges in full, or referred to them except as the "mud-slinging" of the adversary.

The truth is, that the Republican party—by its appeal to sectional prejudice in the attempt to pass a Force Bill; to greedy patriotism in its extravagant pension laws; to selfish interests in its abuse of patronage; and, above all, by its complete surrender to the rapacity of the protected classes—believes itself to be so thoroughly intrenched in the interests of its thick-and-thin supporters that it can safely defy the moral sentiment of the people—witness this nomination in Michigan and that in Pennsylvania.

By the Republican party I mean, of course, the political machine which shapes its policy and fills its offices. To learn who control this machine, who are its constituent parts, it is only necessary to visit a popular drinking-place, crowded with delegates, on the day of a political convention. It is the rumseller and the bar-room politician who make the nominations of the self-styled "party of moral ideas." In this respect, its opponent, the Democratic party, is no whit better. In the district in which I live, those of us who desire to express by vote our emphatic disapproval of the McKinley Bill and the Lodge Bill are confronted by a Democratic candidate for Congress who, in his two terms of service, has been a blatant champion of the liquor interest, but a weak-kneed disciple of tariff reform, and who in his personal habits is notoriously intemperate. In this instance it is the bar-room politician who is the candidate.

With the nominating machinery of both parties in the hands of their baser elements, there would seem to be room, at least in the State of Michigan, for a third party—a party of tariff reform, of ballot reform (including nomination by petition), and of temperance reform—or at least of hostility to the saloon in politics. Such a party would, I believe, find many supporters even in this "safe" Republican State, and, if it served no other purpose, might help to purify the other two.

Respectfully, WM. W. HUDSON.

DETROIT, MICH., October 11.

TWO COMPLAINTS FROM JAPAN.

TO THE EDITOR OF THE NATION:

SIR: The first complaint is against the United States postal system, which is ordinarily so accurate and careful to attend to the convenience of the public. The writer, having served for one year as a clerk in the distributing department of the Chicago Post-office, understands how intricate the railway postal system is, and how carefully it is planned so as to carry mail to its destination by the quickest possible way. He is, therefore, the more surprised to find that letters for Japan from the States in the vicinity of Chicago, often go first to New York city, and thus lose the steamship for which they were intended. When inquiries have been made at the American end, the excuse of the postal clerks is that they have orders to send *all* "foreign letters" to New York. Such an order may have been issued under the administration of Postmaster-General Vilas, when, during his "falling out" with the Pacific Mail on the question of its subsidy, the mail for Japan, China, etc., was sent via England. But it is very strange if that order has not yet been rescinded, or, if rescinded, that the postal clerks should continue to make such a mistake after their attention had been called directly to it. In any case, what is the sense of having letters for Japan from Wisconsin or Minnesota sent to New York?

The second complaint is against some very intelligent persons, such as editors, teachers, preachers, etc., who seem strangely ignorant of the foreign-postage rates, which can be easily ascertained by inquiry at any post-office, or else are very careless. For instance, on a letter containing only a two-cent stamp the recipient in Japan must pay six cents, or double the amount lacking to make five cents, the regular rate to this country. Or newspapers are sent out, as in the United States, with no stamp, and never reach their destination, because the pound rate, allowed in local postage, does not hold in foreign postage. Or, on photographs, carelessly sealed in an envelope, but paid for at the rates of open packages, letter postage is, of course, due at this end, and amounts to from twenty to thirty cents. Thus, although it is very pleasant, it is often also very costly to receive photographs of friends. In all these matters, slight as they are, the victims, like their patriotic forefathers of the last century, object, not to the amount of the "stamp-tax," but to "the principle of taxation," particularly as it rests upon the ignorance or carelessness of others.

UNCAS.

SEPT. 20, 1890.

A NEW WAY TO PUBLISH BOOKS.

TO THE EDITOR OF THE NATION:

SIR: I should like to call attention to the questionable methods of "The American Pub-

lishers' Association," doing business at 199 Clarke Street, Chicago.

Some time ago a lady, who lives in a little Maine village and enjoys some reputation as a writer of religious poetry, received a request from this Association for a selection of her poems for publication in a volume to be entitled 'Local and National Poets of America.' Not wishing to be disobliging, this lady took some pains to copy a few of her representative verses and despatched them to Chicago.

Some time afterwards she received the following letter:

DEAR MADAM: On September 3 we shipped to your address two copies of 'Local and National Poets of America,' at the lowest net price of $3.75 per copy (the retail price is $6), together with poems and MSS. We cordially thank you, Mrs. ——, for your subscription order and prompt and courteous coöperation; and we sincerely hope you will still further favor us by receiving the books from the express office as promptly as you conveniently can. We are already receiving complimentary letters from contributors, which we highly prize; and it would please us to receive some expression from your pen as to the merits of 'Poets of America.' Your poetry is considered excellent by the editor, and we would be pleased to know how many lines the whole of your poems make, with a view of publishing them in book-form. Hoping you will be fully pleased with 'Poets of America,' and your representation therein, we remain, sincerely yours,

AMERICAN PUB. ASSOCIATION.

I may add that, in accordance with advice, the lady, whose name was persistently misspelled throughout the correspondence, refused to accept the package of books from the express company. Accordingly she got the following letter, dated Chicago, October 14, and signed as above:

DEAR MADAM: About September 4 we shipped you two copies of 'Poets of America' which now lie in your express office uncalled for. Please let us know why you do not take them. If you cannot spare the full amount of the C. O. D., let us know how much you can, and we will instruct the agent to release the whole package to you on payment of that amount, and you can remit the balance of the bill at your convenience.

The lady wrote back that the reason she did not receive the package when it was brought to her door was, that she "had never ordered or thought of ordering such a shipment." She added: "You must have labored under some mistake or illusion in the matter, for it is difficult to think that a respectable association of publishers would deliberately attempt to force books on any person."

Such imposition as this should be stopped.

Yours, etc., A. N.

BOSTON, October 18, 1890.

BENTHAM'S DEONTOLOGY.

TO THE EDITOR OF THE NATION:

SIR: Can any reader of the *Nation* be so kind as to mention, if possible, where a copy of Bentham's 'Deontology' can be found? It was a posthumous work of Bentham's, published by John Bowring, and is not included in the eleven-volume edition of his works by that editor. Only this last can be obtained in any of the New York libraries; and as I am desirous of either purchasing a copy of the 'Deontology,' or obtaining the use of it, I shall deem it a great service to me if some one can indicate where it may be secured.

Very truly, J. H. HYSLOP.

NEW YORK, October 14, 1890.

TEMPERATURE OF THE AIR.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* for September 25 (p. 250) is a note on the temperature of the air. Its conclusions are not exactly in accordance with my observations. I have often noted the temperature of the air as it flows from higher regions, and invariably found it much lower than that of the air on the higher ground, though I have never had an opportunity to test it in a mountain region, only in hilly regions. In the mouths of ravines I have noted 6° to 12° difference. On one occasion, while camping at the mouth of a ravine on Lake St. Croix, on the Minnesota side, the thermometer on the prairie, some 150 feet above the lake, was 32°, while on the lake shore at the mouth of the ravine it was 20°. It was at sunrise. A light draught sucked down the ravine, while the air over the lake was perfectly calm. On still summer nights the same proportionate difference is observed; the air floating down the ravines on Lake St. Croix and Pepin and other points on the river is very perceptibly colder than the air out in the lake or on the sides of the ravines away from the influence of the down draught.

I noted once a decidedly cooler downflow soon after noon one hot August day. I was examining the geological structure of the deposit in the bluff formation that bounds the Mississippi River bottoms the whole length of the State of Mississippi. I was in a ravine that was entirely dry except during rains; on picking something up from its bottom, I thought I detected a cool air in slight motion. On moistening my finger it was very perceptibly flowing down, exactly as water would do; and on holding a thermometer in the air-stream it fell 3°, from 92° to 89°. There was no wind at the time. This was about half a mile from the bottom, nine miles west of this village. The stream of cool air did not seem to be more than two or three inches deep. In the bottom region just referred to, the temperature is perceptibly warmer than on the hills, so much so that the foliage is three or four days in advance of that on the hills in spring. But this doubtless is owing to the damper air arresting radiation, especially at night, more than does the air over the hill region, as the variation in level, about 200 feet, is not enough to make so much difference in foliage.

It would seem that the reason given in the note referred to for the greater warmth of the air flowing down the mountain, by compression in descent, is hardly the right one, as the compression is too slight and gradual to be perceptible. I would suggest, rather, it arose from the air passing over rocks heated during the day and not yet cooled. I have noted often, long after sunset, a mass of rock giving off a very perceptible amount of heat on a still night. In the ravines which I have noted there was in all a heavy growth of timber, grass, etc., that effectually prevented any warming by the direct rays of the sun, nor were any large enough to hold an extensive body of air; while in a mountain valley, even if it was covered with timber, it would take some little time for the air to be changed. Even then, it is hard to see how warmer air would flow downwards; it should rise, one would think. Evidently, further observations are necessary to determine the question satisfactorily.—Yours truly,

H. H. TEN BROECK.

CARROLLTON, MISS., October 11, 1890.

CAPITAL AND INTEREST.

TO THE EDITOR OF THE NATION:

SIR: In your review of a recent work on 'Capital and Interest,' attention is drawn to conflicting views of eminent economists on the subject. May a student of the "dismal science" who has no claim to eminence, venture a suggestion from a point of view somewhat (as he thinks) novel, and not unworthy of consideration?

Capital is, I believe, allowed to be the unconsumed product of labor. In this view, whatever be its existing form, it represents the equivalent of the skill, industry, and time expended in its production; it is stored-up labor—labor at rest, like any idle workman. When called into activity, it is therefore a contribution of labor towards the productive undertaking which seeks its aid, and as such is entitled to *wages*, which we may call interest, or by any other name.

Let us suppose a dozen men of equal ability intending to coöperate in some undertaking. Half the number have no capital, but their personal labor is required. The others have their savings of half their earnings to put into the concern in addition to their personal labor. This embodied labor in capital would, it seems to me, represent three more working partners, and be entitled to its proportionate wage or "interest."—Very respectfully, R. W. H.

RIVER FOREST, ILL., October 11, 1890.

[Undoubtedly; but the question discussed was not what the "three more working partners" are entitled to, but how do they get what they are entitled to? If we all got what we were entitled to in this world (which is unfortunately not the universal rule), it would still be the task of political economy to show how we arrive at that measure of justice.—ED. NATION.]

NOT WORTH A DÂM.

TO THE EDITOR OF THE NATION:

SIR: *Dâm* is a small brass coin current in Persia and India, and equivalent in value to one-fortieth of a *rûpiya*, or rupee, or about a cent. The phrase "not worth a dâm" was used by Englishmen trading in the East to express their sense of the utter worthlessness of a thing; in England, however, owing to ignorance of its origin and meaning, it suffered orthographical profanation, and came to signify a thing of so small account as not to be worth the waste of breath involved in damning it. Recently an American from the West, while taking a glass of wine in the Munich Rathhaus Keller, remarked to his companion: "I don't care a continental *dâm*." His mental spelling of the word was doubtless *damn*, although the expression was really synonymous with "continental red," "continental farthing" or "fip," and would have no sense unless it referred to some coin of small value.

E. P. E.

Notes.

HARPER & BROS. expect to publish next week 'The Tsar and his People; or, Social Life in Russia,' by Theodore Child, Vassili Verestchagin, and other writers, copiously illustrated in key with the holiday season.

G. P. Putnam's Sons add the following to their previous announcements: 'Where We Went and What We Saw'—in the Levant—by Charles McCormick Reeve; 'Pilgrims in Palestine,' with a preface by Thomas Hodgkin; 'Principles of Social Economics,' by George Gunton; 'Stories from the Arabian Nights,' selected and edited for the "Knickerbocker Nuggets" by Stanley Lane-Poole, with fresh translations of Sindbad and Aladdin, in three

volumes; and 'English Fairy Tales,' collected by Joseph Jacobs, President of the English Folk-Lore Society.

Worthington Co. will publish directly 'Asbella, from the Life of a Virtuoso,' by Ossip Schubin, translated by Elise L. Lathrop; and 'The Old Meeting-house,' by the Rev. A. M. Colton.

John Wiley & Sons have nearly ready the second volume ("Gold and Mercury") of Egleston's 'Metallurgy.'

'Veni Creator: Thoughts on the Person and Work of the Holy Spirit,' by H. C. G. Moule, is in the press of Thomas Whittaker.

'The National Cyclopædia of American Biography,' in progress under the editorship of Mr. James R. Gilmore ("Edmund Kirke"), with James T. White & Co. of this city for publishers, differs at once from the corresponding work of Messrs. Appleton in confining itself to the United States and disregarding the continent southward. The two resemble each other in the small inserted sketch portraits, which in the later work are to be accompanied by views of the homes of the more notable personages of the present day—what the prospectus calls "the future ancestral homes of America." The Cyclopædia will make six volumes.

Mr. W. J. Linton is now ready to issue to subscribers his 'Masters of Wood-Engraving'—"a history of the art by exhibition of the choicest works from the earliest times." His examples for reproduction have been sought in the Library and Print-Room of the British Museum, and are of great rarity and sifted excellence. There is nearly one inserted cut for every page of the 229 pages of text, besides "forty-eight unbacked page-subjects." The ordinary edition is limited to 500 copies, of which one-half are for this country. An edition of larger dimensions admits Harvey's "Dentatus" and Dürer's "Apocalypse" and "Greater Passion" and "Triumphal Car of Maximilian"; and this is limited to one hundred copies—one-half for America. Subscriptions are receivable by G. P. Putnam's Sons, No. 27 West Twenty-third Street, New York.

Mr. Linton's work is of the kind with which rich men can glorify a small public library, making it *pro tanto* the peer of the best endowed. Another opportunity is afforded by Mr. B. F. Stevens's 'Facsimiles of MSS. in European Archives Relating to America,' a series of which we have duly rendered account as the several volumes or portfolios have appeared. Here the edition is only of 200 copies and cannot be extended. Five of the proposed hundred volumes have been already issued, giving historical material at first hand for the Revolutionary period, 1763–1783, and drawn from the archives of England, France, Holland, and Spain. The importance of the matter will grow as the series proceeds. To say that one set at least should be accessible in every State in the Union is to speak within bounds.

Prof. Cyril Ransome has extracted from Carlyle's 'Frederick the Great' the remarkable battle descriptions, and they will be published in one volume by Edward Arnold, London.

New editions of Dr. Döllinger's 'Die Papstfabeln des Mittelalters,' originally published in 1863, and of 'Janus,' which appeared during the session of the Vatican Council in 1870, have been prepared for the press by Prof. Friedrich of Munich. Prof. Friedrich is also engaged in writing a biography of Dr. Döllinger, which he expects to complete and print in the autumn of 1891. Among the posthumous papers of the deceased is an immense correspondence, which covers the greater part of the present century and contains exceedingly valuable biographical material, but which it is no slight task to examine and excerpt.

The third and last volume of Champlin & Apthorp's 'Cyclopædia of Music and Musicians' has been issued by the Messrs. Scribner in time for the holiday market. It is, perhaps, the most complete biographic musical dictionary in any language, as far as composers are concerned, and certainly the most sumptuous in its get-up. Besides a large number of smaller portraits, this volume contains admirable full-page portraits of Rameau, Rossini, Rubinstein, Saint-Saëns, Scarlatti, Schubert, Schumann, Spohr, Spontini, Verdi, Wagner, Weber, together with other interesting illustrations, autographs, etc. A special feature of this dictionary lies in the fact that operas and other works, and even certain famous numbers occurring in them, are fully described in their alphabetic place. To "Siegfried," for instance, two pages are devoted, together with costume pictures of Unger as *Siegfried* and Lilli Lehmann as *Brünnhilde*. Original casts are given, and at the end of each article is appended a list of books and periodicals in which the subject is treated at greater length. Add to these excellent qualities the trustworthiness of the information and the beauty of the print and binding, as commending the work to the amateur.

To the mass of Revolutionary memoirs Mr. Edward Bangs of Boston has added the 'Journal of Lieut. Isaac Bangs, April 1 to July 29, 1776.' This period covered service in Boston at the expulsion of the British, and in New York up to the eve of the battle of Long Island, and the diary is remarkably full. Its military data are valuable, and its picture of the social standards of the time extremely suggestive. Both New England and New York families of note appear in the diary, and the Schuylers of Hackensack are very fully characterized, with much admiration. Among the more curious observations are those relating to the employment of steam pumps at that early day. Lieut. Bangs was a great-uncle of the editor, and, like him, a Harvard graduate. Mr. Edward Bangs, in his preface, justly smiles at the patriotic allusions to George III. as "the man George," whereas "we, whose masters chastise us with scorpions, incline to look back upon his feeble whip with a sad sense of regret, and to be not a little amused at the way in which our ancestors worked themselves up into complaining so loudly and so bitterly of impositions, trifling indeed compared to those to which we submit in meek silence." It would, in fact, be highly instructive to compare the McKinley Bills with the pre-Revolutionary acts of Parliament directed against colonial industry and commerce, of which Sabine gives a hint in the Introduction to his 'American Loyalists.'

At a time when the elder abolitionists are passing pretty rapidly away, two memoirs come to our table from survivors who illustrated in their own persons the hardships of the moral agitation, and the tender mercies of the Slave Power. One is a thin but full volume of 'Reminiscences,' by Lucy N. Colman (Buffalo, N. Y.: H. L. Green). Mrs. Colman, after her second widowhood, became a lecturer in the anti-slavery and other reformatory causes, and her excellent narrative vividly depicts the discomforts, exposures, and mob-perils of such devotion. It is a fit pendent to Parker Pillsbury's 'Acts of the Anti-Slavery Apostles.' When slavery was practically done for by the war, Mrs. Colman naturally became a teacher of the freedmen at the capital. She had been a confidante of John Brown, and she gives us an account of interviews with Lincoln, as well as of her visit to Richmond after the surrender; in fact, in many ways her 'Reminiscences' possess a genuine historical value. They are defective chiefly as to dates, but there is a steady sequence in them. The phases of American civilization (not yet outgrown) which they uncover, cannot be retraced without a feeling of shame, nor also without moral profit, and a sense of high respect for the author's strength of mind and disinterested service to the outcast.

The other volume is entitled 'Rev. Calvin Fairbank during Anti-Slavery Times' (Chicago: Patriotic Publishing Co.). It is a condensed autobiography of a Northern clergyman who, like the Rev. Charles T. Torrey, engaged in the Christian work of helping fugitive slaves to escape from bondage. Like "the martyr Torrey," he was caught and imprisoned, but his superb constitution would not let him be a martyr—in the sense of succumbing to his deadly tasks and inhuman floggings. The scene of his operations was Kentucky, and he was twice sentenced to fifteen years' imprisonment. The first time, he was pardoned out after five years (1845–1849); the second time (he had been kidnapped from Indiana) he was pardoned out towards the close of the war after nearly serving his term (1852–1864), and when he was all but sixty years old. The narrative is, for the brutality recorded, a very sickening one, and will not easily be credited by the present generation. Mr. Fairbank's experience shows an extraordinary state of things in the Kentucky prisons of his time; and if this has changed for the better since, we may be sure that emancipation has paved the way, so true is it that slavery smothered reform of all kinds. The members of the Constitutional Convention now sitting in Kentucky might well study Mr. Fairbank's prison notes. Even the convict-gang system seems in some respects less horrible than that he endured. The devotion of his betrothed, and the constancy of other friends, male and female, form the bright side of the picture, along with the freeing of upwards of forty slaves through Mr. Fairbank's instrumentality. In a literary point of view, and in sundry particulars where errors might be pointed out, this book leaves something to be desired. The wide sale of it will prove a much needed contribution towards the author's support; and we believe the same thing may be said of Mrs. Colman's 'Reminiscences.'

The *Century Magazine* now makes definitive announcement of the arrangement by which it is to print, in advance of each of the five volumes of Talleyrand's Memoirs, extracts from them, for which Mr. Whitelaw Reid, our Minister to France, will furnish an introduction.

The Oxford University branch of the Christian Social Union has decided to found a quarterly *Economic Review*, "for the consideration of social and economic questions," chiefly in their moral bearings; but the technical and the historical aspects of British industry will not be neglected. The editors are the Rev. W. J. H. Campion of Keble, the Rev. J. Carter of Exeter, and the Rev. L. R. Phelps of Oriel. The publishers are Percival & Co., 34 King Street, Covent Garden, London. "The Progress of Socialism in the United States" is one of the articles set down for the January number.

The commemorative proceedings of the Pennsylvania Historical Society on occasion of the death of one of its vice-presidents and benefactors, John Jordan, jr., lead the contents of the *Pennsylvania Magazine of Ameri-*

can History for October. To be remarked also is an admirable sketch (with a portrait) of Jared Ingersoll, one of the leaders of the old bar of Philadelphia, by the late Horace Binney, senior. Mr. Binney dwells upon the fact illustrated by Ingersoll, that Philadelphia has not habitually honored her distinguished men as other cities have done. Partly he thinks this may be accounted for by the Quaker origin of the city, but in recent years, he says, "the composition of the city gives the best explanation of the fact; for while there is something like a general temperament in the life and manners of the city, there is no city whose significant population is less homogeneous." Mr. William S. Baker continues his very valuable "Itinerary of Gen. Washington from June 15, 1775, to December 23, 1783."

Amherst College has just published the General Catalogue for 1821-1890, forming the second quinquennial issue, the last triennial having been published in 1878. The names and all appear in English, the antiquated Latin form having been given up nearly twenty years ago. Amherst has been remarkable for having had so few presidents during its period of existence, now nearly seventy years. These were the Rev. Drs. Moore, 1821; Humphrey, 1823; Hitchcock (the eminent geologist), 1845; Stearns, 1854, and Seelye, 1876. Dr. Gates, who enters upon his duties in this capacity November 1, is thus the sixth in order. The whole number of alumni is 3,319, of whom one-third have been ordained as clergymen, and only 111 have been foreign missionaries—a much smaller number than Amherst is commonly credited with graduating. Honorary graduates not alumni of the College average four to the year, which would indicate no great abuse of this power, at least in so far as numbers are concerned.

Certain students of Girgenti, Sicily, have formed a society to establish a local historical library—"Biblioteca Patria Agrigentina"—intended for a receptacle of every work or document pertaining to that classic ground. Contributions on this line are solicited.

Mr. F. Gutekunst, Philadelphia, sends us a large panel portrait of George William Curtis—a fine example of the photographic art; together with a smaller portrait, a little more full-face, and, if not a better likeness, possessing the advantages of handy size and permanence—for it is a phototype in printer's ink, and one of the best of its kind.

—Among the works about to be issued by the Hakluyt Society is one on the Rio de la Plata. This will comprise a translation of the voyage of Ulrich Schmidt from the first German edition printed in Sebastian Franck's *Weltbuch* in 1567. Schmidt (or Schmidel, as he is sometimes called) sailed in the expedition of Don Pedro de Mendoza (1534). He relates as an eyewitness the foundation of Buenos Ayres and Asuncion, describing the expeditions and wars of the Spaniards against the various Guaraní tribes at that time inhabiting all the region now included in the Argentine, Paraguayan, and Brazilian republics. Schmidt's narrative, though blunt and uncultivated in style, bearing traces of having been written or dictated by him after his return to Germany, is nevertheless valuable and almost unique material for the early history of European settlements in that part of South America. Following Schmidt's voyage, in the same volume, will be the Commentaries of Alvar Nuñez Cabeza de Vaca, translated from the original Spanish edition published in Valladolid in 1555. Upon the death of Mendoza, Cabeza de Vaca was appointed Adelantado, or Governor, of the province of La Plata by the King of Spain, and undertook to equip and lead an expedition of relief to the weakened and disheartened Spaniards at Asuncion. He successfully accomplished his task, and during his Governorship showed a just and conciliatory spirit towards the native Indians. His conduct, however, gave but little satisfaction to the more turbulent and lawless among his own followers, who organized an insurrection against him. They arrested and kept him in a dungeon for a year, during which he suffered horrible treatment, and at length sent him in irons to Spain. Though acquitted of the crimes charged against him by his enemies, he was never allowed to return to his Governorship, and passed the remainder of his days in Spain, neglected and forgotten.

—The volume to which we have called attention will be edited for the Hakluyt Society by Don Luis L. Domínguez, Argentine Minister at the Court of St. James's, who is also, we understand, engaged upon a map to illustrate these early explorations. We will improve the opportunity to observe that the Hakluyt Society does not receive the support from Americans which it deserves and which it would welcome. A letter to the Secretary of the Society, Mr. E. Delmar Morgan, at 15 Roland Gardens, South Kensington, London, with a money order for one guinea, the annual subscription, is all that is required to secure membership.

—Many minds nowadays are turning towards high philosophy with expectations such as wide-awake men have not indulged during fifty years of Hamiltonianism, Millism, and Spencerianism; so that the establishment of a new philosophical quarterly which may prove a focus for all the agitation of thought that struggles to-day to illuminate the deepest problems with light from modern science, is an event worthy of particular notice. The first number of the *Monist* (*Open Court* Publishing Company) opens with good promise, in articles by two Americans, one Englishman, three Germans, two Frenchmen. Mr. A. Binet, student of infusorial psychology, treats of the alleged physical immortality of some of these organisms. In the opening paper, Dr. Romanes defends against Wallace his segregation supplement to the Darwinian theory, *i. e.*, that the divergence of forms is aided by varieties becoming incapable of crossing, as, for instance, by blossoming at different seasons. Prof. Cope, who, if he sometimes abandons the English language for the jargon of biology, is always distinguished by a clear style, ever at his command in impersonal matters, gives an analysis of marriage, not particularly original, and introduces a slight apology for his former recommendation of temporary unions. Prof. Ernst Mach has an "anti-metaphysical" article characteristic of the class of ingenious psychologists, if not perhaps quite accurate thinkers, to which he belongs. Mr. Max Dessoir recounts exceedingly interesting things about magic mirrors considered as hypnotizing apparatus. Mr. W. M. Salter and M. Lucien Arreat tell us something of the psychology of Höffding and of Fouillée. Among the book-notices, a certain salad of Hegel and mathematics excites our curiosity and provokes an appetite for more of this sort. The writer makes much ado to state Dr. F. E. Abbot's metaphysics, certainly as easily intelligible a theory as ever was.

—It remains to explain the name *Monist*. Dr. Carus, the putative editor, says: "The philosophy of the future will be a philosophy of facts, it will be *positivism*; and in so far as a unitary systematization of facts is the aim and ideal of all science, it will be *Monism*." But this is no definition of monism at all; in fact, the last clause conveys no idea. The search for a unitary conception of the world, or for a unitary systematization of science, would be a good definition of *philosophy*; and, with this good old word at hand, we want no other. To use the word *monism* in this sense would be in flagrant violation at once of usage and of the accepted principles of philosophical terminology. But this is not what is meant. Monism, as Dr. Carus himself explains it in his 'Fundamental Problems,' p. 256, is a metaphysical theory opposed to dualism or the theory of two kinds of substance—mind and matter—and also conceiving itself to be different both from idealism and materialism. But idealism and materialism are almost identical: the only difference is that idealism regards the psychical mode of activity as the fundamental and universal one, of which the physical mode is a specialization; while materialism regards the laws of physics as at the bottom of everything, and feeling as limited to special organizations. The metaphysicians who call themselves Monists are usually materialists *sans le savoir*. The true meaning attaching to the title of the magazine may be read in these words of the editor:

"We are driven to the conclusion that the world of feelings forms an inseparable whole together with a special combination of certain facts of the objective world, namely, our body. It originates with this combination, and disappears as soon as that combination breaks to pieces. . . . Subjectivity must be conceived as the product of a coöperation of certain elements which are present in the objective world. . . . Motions are not transformed into feelings, but certain motions, . . . when coöperating in a special form, are accompanied with feelings."

—The *Revue Bleue* of October 4 announces the retirement of M. Alfred Rambaud from his position as editor, and the succession to it of M. Henry Ferrari. M. Rambaud has been connected with the *Revue* for twenty-six years, almost from the very beginning. Upon the death of its founder, M. Ernest Yung, about three years ago, he undertook the direction of it, and in his hands it has in no wise fallen off from its original excellence. In politics it has been consistently liberal Republican; in literature, what one might call liberal-conservative. It has never run headlong into any of the new literary movements, but we do not remember that it has been harsh or unjust in its criticism of any of them, or even unsympathetic. It is always able and almost always interesting and clever. One sees in it constantly a quickness of mind, a readiness and lightness of touch, that one misses oftener than he finds in English reviews. M. Rambaud retires solely in order to obtain leisure for travel and research which a more extended work he has in hand requires. He will still contribute to the *Revue*, and has, indeed, just been elected President of its administrative board. There will be no change in the line of conduct of the *Revue*, nor departure from its traditions.

—Alphonse Karr, whose name has been familiar to most of the readers of this generation since their childhood, died at Saint Raphael, near Nice, on the first day of the present month. He belonged to a school of writers, the Romanticists of 1830, the survivors of which have been of late rapidly disappearing, and which now is almost extinct. His first

book, 'Sous les Tilleuls,' came out in 1832—a story of a poetic turn, and with a certain German tender sentimentality about it. After all, it is perhaps as good as most of his later work, and as well known as any, save his immensely popular 'Voyage autour de mon Jardin.' That Karr is to be one of the immortals, and his works an imperishable monument to preserve his name, is more than one would be safe in saying. M. Jean Aicard predicted it, or something very much like it, in his funeral address, but the funeral prophet often speaks with a license which is poetic. M. Aicard gave utterance to a much wiser and more truly prophetic thing, perhaps, in saying that even though all the great literary monuments of the present century should crumble and disappear, there was still something that never would be lost; that some of the wisdom and wit to which Alphonse Karr has given permanent form, in a tongue which is at once brilliant and solid, will be dug up again out of the ruins in time to come, as we dig up coins and medals in Greek or Roman soil. It is curious to note how closely this corresponds to a modest saying of Karr's about himself, "There will remain of me," he said, "only two phrases: 'Plus ça change, plus c'est la même chose,' and 'On veut abolir la peine de mort, soit; mais que messieurs les assassins commencent.'" Karr was of German descent, as his name indicates. His father was born in Munich, but came to Paris when he was very young. Alphonse was born in Paris, November 24, 1808, but the greater part of his life was spent in the country among his favorite animals and flowers.

—Symptoms are multiplying that German literature at present is passing through a new "Sturm und Drang." While the representatives of the old idealistic school are dying out; while the barren commonplaceness of the reigning society drama *à la* Lindau, and the hopeless dulness of the archæological novel *à la* Ebers, are beginning to be taken at their real value, the younger generation, drunk with Tolstoi and Ibsen, are calling for a new society, a new education, a new faith. One of the most curious manifestations of this reformatory spirit is the sensation created by an anonymous treatise, called 'Rembrandt als Erzieher, von einem Deutschen,' which appeared at the beginning of this year (Leipzig: Hirschfeld), and has since then run through seven editions. The author, whose visionary language reminds one of the first productions of the youthful Herder, entertains a very pessimistic view of the present state of German culture. "It has by this time," he says, "come to be an open secret that the intellectual life of the German people at present is in a state of slow, some even think of rapid, decadence. Science is losing itself in specializing; in belles-lettres there are no great individualities; art, in spite of a number of good artists, lacks monumentality; musicians there are many, of music there is little. Architecture is the heart of all the arts, philosophy is the heart of all scientific thinking; but at present there exists neither a German architecture nor a German philosophy. There are no leaders anywhere: *les rois s'en vont.*" Out of this lethargy the author wants to rouse his people by pointing to the hidden treasures of the German, especially the North German, character: its chastity, its inwardness, its spirituality, its strong individualism. Rembrandt appears to the author to be the prototype of all these virtues, and in him, consequently, he finds the educator of his nation towards a culture which would sweep away the present rule of dead formulas. The book has all the faults of exaggeration and of vagueness which seem inseparable from new departures; and yet its strong appeal to the national conscience, as well as the loud echo which it has found on the part of the public, cannot but be welcomed as a sign of a new awakening of the German mind.

THIRTY YEARS OF EUROPEAN HISTORY.—I.

A History of Modern Europe. By C. A. Fyffe, M.A., etc. Vol. III. (1848-1878). Henry Holt & Co.

FYFFE'S 'History of Modern Europe' is a piece of clever literary workmanship. The writer has known what he intended to do and done it. He has produced an interesting bird's-eye view of European history during a hundred years marked by events of extraordinary magnitude. He meant his book to be readable, and it undoubtedly will be read, and, what is more, it is worth reading. All attempt at depth or thoroughness has been sacrificed to the main object with which the book is written. Mr. Fyffe's omissions are, from his own point of view, judicious; but they are startling. The history of Europe during the thirty years covered by our author's last volume is not really intelligible without some knowledge of the Sepoy revolt and the War of Secession. But a reader of Mr. Fyffe's pages would never, as far as we can see, learn that the Indian Empire of England was, in 1857 and 1858, saved from destruction, and that years of desperate warfare were necessary to preserve the existence of the United States. The Indian Mutiny and the War of Secession took place, it will be said, outside Europe. This is a good reason why our historian should not narrate the tale of the taking of Delhi or of the siege of Richmond, but it is no defence whatever for the omission of all reference to events which alone make intelligible not only the annals of France and of England, but the whole course of European opinion.

Mr. Fyffe, unless we are mistaken, belongs to a generation of Oxonians who were carefully trained in the arts necessary for producing effective essays at examinations, and who firmly believed in the maxim current at Oxford some thirty years ago, "You had always better be flippant than dull." He is rarely dull, he is often flippant. His narrative, though sketchy and imperfect, is good; his reflections are the commonplaces of writers who aim at epigram and attain to smartness. Still, we repeat, the 'History of Modern Europe' is well worth reading; it enables us to glance at the movement of European society as a whole. It suggests and in part answers the question which every thoughtful man must at times ask himself: What has been the real outcome of that marvellous period extending between 1848 and 1878? What, to express the matter a little differently, has been the main result of the struggles which will for ever be connected with the revolutions of 1848, just as all the various phases of the great French Revolution will always receive a name from 1789?

The existence of a generation, as of individuals, has always two aspects; the outward life, with its events, its visible successes and its visible failures, stands in contrast with the inward life, marked not by acts and deeds, but by thoughts and sentiments, and filled with triumphs or defeats not to be seen by the eye, but known only to self-consciousness. Whoever would understand an age must regard it in both these aspects. Let us look first at the visible events which will always be recorded as the salient features of the thirty years with which we are concerned.

If we regard that age as a whole, and take, with Mr. Fyffe, a bird's-eye view of its development, we shall see that it was marked by four characteristics. The first (and the least noticed) was the attainment of one object at which the inhabitants of continental Europe had aimed with more or less distinctness ever since the opening of the Great Revolution. This was the putting an end to the kind of inequality and despotism which before 1789 prevailed throughout the Continent. The years which followed 1848 were, it is true, years of reaction; but Mommsen's dictum that "restoration is always also revolution" holds good in more senses than one, and unconsciously the reactionists and the revolutionists of 1849 worked together for the accomplishment of the aim proposed to themselves by the Liberals of 1789. The sort of despotism which existed throughout Europe before the outbreak of the Revolution, and which still flourished in many European countries, notably in the smaller Italian States, up to the revolutions of 1848, has now, in all the civilized countries of Europe (among which no one counts Turkey or Russia), become a matter of the past. Ordinary individual freedom and some system of parliamentary government exist, except under the Sultan and the Czar, in every part of Europe. To this state of things we are all so used that we note not its significance; yet to any man whose memories carry him back over a period of thirty or forty years, there is visible one unmistakable sign of a revolutionized world. The political refugee, with all the glory and romance which attach to him, has ceased to exist. Youths who are now growing up hardly understand the interest kindled in the minds of their fathers by Kossuth or Mazzini. The picture given by Carlyle of the Spanish exiles whose calamities, heroism, and dignity stirred the enthusiasm of John Stirling, is already a picture of a past age. It represents a transitory state of things which would have been incomprehensible to our great-grandfathers, and will be incomprehensible to our grandchildren.

The second characteristic—the feature by which the thirty years which followed the fall of Louis Philippe is most generally known—is the development of the doctrine or sentiment of nationality, and the consequent unification of nations. The creation of a united Italy, the renovation of the German Empire, the re-establishment of the Hungarian Constitution, are just the kind of large facts which arrest attention, and are apt to be estimated at even more than their real and undoubted importance. What is equally true, but has not been equally noted, is, that between 1848 and 1870 two ideas, which had hitherto been blended in popular imagination so as almost to be identified, were practically separated. The realization of national unity was shown, first by Cavour, and still more distinctly by Bismarck, to have no necessary affinity with republicanism, or even with popular government. To the present generation this is so obvious as hardly to seem worth mentioning. What is worth insisting upon is, that within the memory of thousands of men now living, popular sentiment, not to say public opinion, universally identified the assertion of national independence with a desire for liberal or democratic institutions. The reasons for this identification are, of course, purely historical; but it would be impossible for any one to appreciate the condition of Europe in 1848, and the ten years which immediately followed it, who did not take into account the fact that subjects and rulers alike, for the most part, identified the cry for national unity with the demand for

more or less democratic freedom. Mazzini was never able fully to realize that Italy might be united and independent and yet not be a republic.

The blunder, on which Mr. Fyffe dwells, committed by Kossuth when he tried to turn Hungary into a democratic commonwealth, is to be explained mainly by the close alliance which, according to the belief of the time, bound together democracy and nationality. It was probably due, also, to an idea, assuredly entertained by many of the leaders of '48, that a democratic government could derive a strength from popular enthusiasm which would suffice to rout trained armies. Of this belief, which, strange as the fact now appears, was held by men of extraordinary capacity, the annals of modern Europe give the fullest evidence. Mazzini believed that in a war waged by the people the defeat of Custozza would have been an impossibility. Garibaldi, who, if not a born general, was certainly a born soldier, felt, it may be suspected, no less surprise than indignation when he found that the "miracles" worked by the *chassepots* were more potent than the miracles to be achieved by faith in Italy. Gambetta, and the crowds who heroically followed Gambetta, expected that the proclamation of the Republic would be a charm to rally together all the warlike spirit of France and scatter the victorious hosts of Germany. No man assailed more bitterly the truths no less than the fallacies of current liberalism than Carlyle; but it is impossible to read Carlyle's 'French Revolution' without seeing that he, no less than Mazzini, ascribed almost superhuman power to popular passion. Our war of secession, which, though not mentioned by Mr. Fyffe, vitally affected the whole current of European thought, proved, by a kind of demonstration far more impressive than any syllogism, that a claim for national independence, and a claim supported by enthusiasm and self-sacrifice, may be a claim not to found but to destroy democratic institutions. The triumph of the German armies proved with equal force that the proclamation of a republic may fail to insure the safety of a nation. That nationality is something different from liberalism and democracy is a conclusion taught before 1878 to the whole world by lessons which no man, however dull, could refuse to learn. But the years during which the unity of Italy was achieved will always remain noteworthy as the time when the doctrine of nationality, just because it was fused with other ideas really foreign to it, exerted a supreme and a noble and inspiring influence.

The third fact or feature which obviously marks the era with which we are concerned is the growth of huge armies. Some thirty years ago a thoughtful writer computed that the armies of the world, if brought together, would equal the then population of London. This was dwelt upon, and deserved to be dwelt upon, as an alarming, not to say portentous, fact. But a thinker who, in 1860 or 1862, was already alarmed at the waste of human resources and human labor on preparation for war, knew little of the weight of the armaments which within twenty years were destined to burden the people of Europe. At that date the idea of turning the nation into a great army was unknown. The standing forces of even military States were insignificant in comparison with the hosts which France, Italy, Germany, Austria, and Russia keep constantly on foot. Their number and their equipment receive each year gigantic additions. It was assumed, moreover, that to arm a nation was equivalent to turning soldiers into citizens. Our modern experience suggests that it may mean transforming citizens into soldiers. An armed State may mean a State where the spirit of civil life and civil freedom has yielded to the spirit of military courage and military discipline.

The increase of military power is in part a result of the fourth characteristic of the age. It has been the era of scientific discovery and scientific invention. The political, the ecclesiastical, and even the social movements of the last forty years may, it is likely enough, be forgotten. In dramatic impressiveness, and it may be in permanent importance, they fall far behind the moral and social changes which marked the era of the Reformation and the opening years of the French Revolution. It is hardly conceivable that the scientific progress of the time should not be permanently recorded in the annals of mankind. Darwin, to mention one name only, will be remembered as long as Newton. Darwinism means much more than the speculative results attained by the genius of one man. It means little less than a new way of looking at existence. It is to the nineteenth century what the discovery of the New World was to the sixteenth. To those, further, who hold material progress to be of supreme importance, the generation which has extended railways and telegraphs throughout the civilized world, which has pierced the Isthmus of Suez, which has performed miracles by means of electricity, will always, we may anticipate, be deemed worthy of remembrance. One belief, indeed, whereof the prevalence adds at the present moment factitious glory to the scientific progress of humanity, will in the long run be recognized in its true character as a delusion. The world will sooner or later learn that scientific discovery is not, as we now are apt to imagine, the same thing as the general diffusion of knowledge. It may be asserted with some truth that, as science advances, the relative ignorance of the mass of mankind increases. Ordinary men and women live in a world which to them becomes more and more mysterious. The comfort of their life, their very existence, depends on machinery of which they understand not the mechanism, and the machines which every one of us uses employ forces which few of us understand at all, and none of us can fully analyze their nature. The man who travelled ninety years ago from London to New York understood, roughly speaking, the mechanism of the coach in which he was conveyed across England and of the ship in which he was carried across the Atlantic. Comparatively few are the passengers who could give a rational account of the construction of the engine which whirls them from London to Liverpool, or of the steamer which in a week hurries them from Liverpool to New York. The man who sends a letter by post knows in a rough sort of way how the words he has written in London are conveyed to America. The educated Englishman or American who telegraphs a message from London to New York would find it more difficult than he supposes to explain, with anything like lucidity, how a message handed in to a young woman in an office in Lombard Street is within a short time given out for delivery to his correspondent by another young woman in an office on Broadway. The plain truth is, that most of us understand the life around us as little as we understand the feats of a juggler.

Nor is it only because scientific progress outstrips the advance of ordinary education that an age of science may also be an age of ignorance. Every day makes apparent the fact that, as the field of human knowledge is widened, every man's capacity to take full possession of that field is diminished. The age becomes, and must become, more and more an age of specialists. But special knowledge almost of necessity means general ignorance of most, or of many, things outside the sphere of the specialist's study. Still, when every deduction is made, the fact remains that the thirty years of which the main events are sketched by Mr. Fyffe were thirty years of progressive science. Within this period civilized Europe abolished despotism, gave a new development to the sentiment of nationality, produced something like a new military system, and gave a new impulse to the scientific progress of mankind. These are the patent, obvious, so to speak, external facts of European life between 1848 and 1878.

MARTYN'S LIFE OF PHILLIPS.

Wendell Phillips, the Agitator. By Carlos Martyn. [American Reformers, edited by Carlos Martyn.] New York: Funk & Wagnalls.

It is rather dangerous for the editor of a new series of biographies to be also the author of the first volume; and safer, on the whole, for him to let the trial trip be made by some one else. If we were to judge of the series of "American Reformers" by the example of this first issue, we should say that it is to be a piece of journalism or pamphleteering, put up in volumes; that it will be fervent, exuberant, crude, hasty, disorderly, and inaccurate. In this first issue, at least, the turgid and somewhat school-boyish style is singularly out of keeping with the well-bred ease of Phillips's own language; and the setting of the gems, industriously collected from many sources, is so poor that the book leaves the real memoirs of Wendell Phillips still to be written. It is, on the whole, an improvement on Austin's memoir; but when we consider that Austin's was avowedly an off-hand production, intended for immediate use, while this is deliberate and laborious, and largely based upon works or manuscripts unavailable to his predecessor, the later biographer is not really entitled to much more credit than the earlier. In fact, without the family Life of Garrison and the private Memorial of Mrs. Phillips, the present work would have been almost devoid of excuse or of individuality.

It is too early, doubtless, for a candid and unbiassed biography of Wendell Phillips, and we can hardly complain if his striking and fascinating personality has made this book an undiscriminating eulogium. Yet some of the praises here heaped on the subject of the biography are bestowed on the very merits which Phillips always and justly disclaimed, as, for instance, that of scholarship. To tell us that he retained through life the habits of scholarship and studied chemistry for amusement (pp. 507-8), is like the assertion in earlier pages that he was a celebrated oarsman—the fact being that neither scholarship nor chemistry nor oarsmanship (in the present sense) existed during Phillips's college days, and that he had no later opportunity to acquire them. For a man who lectures every night during the winter, pausing occasionally at home to attend a committee meeting or nurse an invalid wife, scholarship is impossible; even Theodore Parker ceased to be a scholar under such circumstances, although he had far more of the studious temperament than his friend. Phillips's was the literary or rhetorical temperament, not the scholar's. He had an admirable memory for odds and ends, for available scraps or telling incidents, and he spent his

life in training his resources in this direction; but there is no reason to suppose that he had ever in his life studied anything with scholarly thoroughness, except possibly, as he claimed, the English Revolution. This is no reproach to him—he had a great admiration for even the semblance of scholarship in others; but no man can combine everything, and it is a wrong to our young people when we assume that such a thing as universal genius is now practicable.

And as Mr. Martyn errs in classing Wendell Phillips among the scholars, he also errs in ignoring his weakest point, the lack of judicial estimate of men. He had not even that "feminine intuition" which Mr. Martyn attributes to him (p. 506); although his invalid wife, who eminently possessed it, used sometimes to invoke its aid for his benefit, often unavailingly—as in the case of Gen. Butler, whom she always distrusted, although Phillips himself yielded to that malign influence with a blindness which his present biographer emulates. The latter can see nothing but "kid gloves and cologne water" when Garrison and Emerson refused to follow Phillips in his infatuation for that utterly untruthful demagogue (pp. 386–7); and his tone on this point gives the keynote to the book. Mr. Phillips had not enough of intuition to divine the character of Lincoln or of Grant, and did but tardy justice to either; his judgments of men were prompt, fearless, independent, but the judicial quality rarely belonged to them. It belongs in a far less degree to his biographer, as one may see in the treatment of the controversy with Horace Mann. Mr. Martyn rarely admits any explanation but a degrading one for any serious difference of opinion from that of his hero. In the unfortunate dissension which arose among life-long friends over the will of Francis Jackson, he can attribute only to "pique and grudge" the course of the minority of the trustees (Messrs. Garrison, Quincy, and May) in advocating the use of a certain fund in a certain manner (p. 358).

The case was one that is now easy to comprehend. Francis Jackson, a leading abolitionist, left a will bequeathing $10,000 to the anti-slavery cause; but the Thirteenth Amendment was adopted before the money was obtainable. The majority of the trustees wished to apply the money to the support of the *Anti-Slavery Standard* in the subsequent contest for negro enfranchisement; the minority thought that it should rather be employed for the education of the freedmen. It was a perfectly legitimate difference of opinion, unfortunately intensified, not by "pique and grudge" on either side, but by the trained and inexorable sternness of the anti-slavery conscience, rendered somewhat inelastic by long toil, and not easily accepting variation of opinion among those who had so long seen, in their own favorite phrase, "eye to eye." The Supreme Court ultimately devoted the money to the use suggested by the minority, and much good was unquestionably done by it. The case was eminently one of those in which a posthumous biographer should exercise whatever of comprehensiveness of vision may have been wanting among the parties at issue.

In many respects the memoir shows inaccuracies of detail, proceeding less from carelessness than from an habitual tone of inflation. To imply that Mr. Phillips's regular price for lecturing was, for any considerable period, "$100 or $200," is a serious exaggeration (p. 360); nor can we place any credence in the estimate on p. 115 that his "Lost Arts" lecture netted him $150,000. This would, on the data given, have required an average delivery of more than once a week for forty-five half years—at the rate of $100, which could not possibly have prevailed in the earlier period, when he was more likely to have received $25. Dr. Chapin was thought to have made the most out of little when he reckoned up $20,000 from his "Orders of Nobility." It was not, again, Phillips, but his friend Daniel Wells Alvord, who was "substantially the author" of the Massachusetts Personal Liberty Bill (p. 278). The Harvard "Hasty-Pudding Club" was not in Phillips's time, and is not now, "a circle which admitted only the *jeunesse dorée*" (p. 47), though this was and is largely true of the "Porcellian Club." Mr. Phillips was never President of the Hasty-Pudding. To say of Mr. Garrison, "as an organizer he was unexcelled" (p. 106), is to be only a little more accurate than to speak of Mr. Phillips's "skill as an organizer" (p. 170). He had none; and Mr. Garrison, though the father of the anti-slavery organizations, had only the gift of moral propulsion. In the common acceptation of the term "organizer," their eminent and indispensable associate, Mrs. Maria Weston Chapman, far surpassed both. The Rev. Nehemiah Adams did not earn the name of "Southside Adams" merely "by his truckling to the slave power" (p. 120), but by the fact, which Mr. Martyn does not mention, that he wrote a book called 'A Southside View of Slavery.' Miss Greene (afterwards Mrs. Phillips) was not present at the meeting of the Boston Female Anti-Slavery Society mobbed on October 21, 1835; Mr. Martyn has confounded her with Miss Ann Greene Chapman. Of minor inaccuracies the name is legion. Mr. Martyn quotes the well-known lines by Mrs. Ellen Sturgis Hooper—

"I slept and dreamed that life was duty"—

attributing them to an inexplicable "Ellen Hooper Drake," and misquoting the second line (p. 446). Mr. B. A. Gould, the veteran Boston teacher of the last generation, whose initials still remain familiar as being those of his son, the eminent astronomer, here becomes "A. B. Gould" (p. 34); the Rev. Dr. Morison becomes "Morrison" (p. 46), Judge Durell, another classmate, "Darrell"; George W. Smalley, the *Tribune* correspondent, is disguised as "George H. Smalley" (p. 218), Joshua R. Giddings as "Geddings" (p. 284), John R. Manley as "Manley" (p. 345); Edmonia Lewis appears as "Lewes" (p. 417), Dr. Samuel A. Green as "Samuel G. Green" (pp. 428, 471), the Granary Burying-Ground as "Granery" (p. 487); Samuel E. Sewall is printed both correctly (p. 108) and as "Samuel S. Sewall" (p. 228), and is naturally duplicated in the index. After these perversions of familiar American names, we can hardly be surprised at finding *réconteur* for *raconteur* (pp. 29, 128); *en règle* for *en règle* (p. 117); *Val'darno* for *Val d'Arno* (p. 141); *Santa Cruce* for *Santa Croce* (p. 142), and the like. On p. 35 the classics are said to recommend "that golden mean—*in medias res*."

The general appearance of the series resembles that of the "American Statesmen" series, but is inferior to that, and the indexing far inferior. It is possible, of course, that, with a little timely admonition, the future volumes of "American Reformers" may show improvement and be more worthy of the importance of their theme.

MARSHALL'S PRINCIPLES OF ECONOMICS.

Principles of Economics. By Alfred Marshall, Professor of Political Economy in the University of Cambridge. Macmillan & Co. 1890.

PROF. MARSHALL'S book is altogether too big. When the first volume of a series of undefined extent contains 750 pages octavo, the general reader thinks twice before he opens it, and even specialists will groan at the prospective demand upon their time. Nowadays the surplus satisfaction, or "consumer's rent," derived from books tends to vary inversely as their length, and diminishes with increasing rapidity when the "normal" size is exceeded. This inconvenience must of course be tolerated where the author really requires all his space for the proper treatment of his subject; but this defence is not available to Prof. Marshall. His book is full of repetitions—careless and unnecessary repetitions. The same similes are repeated at length in almost the same words; the same instances are quoted again and again. We hear more than once of the reprehensible conduct of the mother who goes out to work when she might be more profitably minding her household, and of the sea which is never smooth, although always tending to be so. Space is wasted in supplying illustrations of commonplace propositions, and in giving several illustrations where one would suffice. Books of this character are not meant for babes, and adult readers may be trusted to work out many conclusions for themselves if the premises are supplied them. After we are instructed that a given income will require a larger principal to produce it when the rate of interest is low than when it is high, it is hardly necessary to furnish us with arithmetical assurances to the effect that while £8,000 at 5 per cent. will bring in £400, £10,000 will be needed when the rate of interest is 4 per cent. to produce the same income.

A much more serious matter than diffuseness of style is the practice of beginning discussions and leaving them uncompleted. It becomes exasperating to the last degree to be told, not once and again, but scores of times, after a subject has been taken up, that further consideration of it must be postponed to a later period in the investigation; and few readers have the patience to go back and gather up these loose ends when the time comes to weave them in. While we recognize fully the enormous difficulties of the subject, especially when treated upon the principles adopted by Prof. Marshall, we cannot regard this practice otherwise than as indicating a feebleness of grasp, an inability to bring unity out of diversity, that seriously impairs the value of the work. We miss the clear statement and logical sequence of principles by which all great scientific work is marked, and almost suspect that he has merely strung together the contents of his lecture cases, so that his book has not been created like a work of art, or developed like an organism of high order, but has simply grown by addition of cells of like structure. It is doubtless owing to this failure to look at his subject as a whole that so much repetition is necessary, and becomes so tedious; for it seems to be introduced not for the convenience of the reader, but to supplement the defects in the author's plan.

As to another ground of criticism, it must be said that Prof. Marshall at least sins in good company. Whether political economy is a science or an art, it is notorious that scarcely any writer upon it has refrained from treating it as an art, and from emphasizing such precepts as were most to his taste. Yet it is surprising to read that "the Laws of Economics are statements of tendencies expressed in the indicative mood, and not ethical precepts in the imperative," and at the same time that the economic man is regarded as influenced by all altruistic motives "the action of which is so far uniform in any class at any time and place that it can be reduced to general rule." Does

not this necessarily imply the existence of an accepted system of ethics, and tend to embarrass the investigation by introducing a number of variable causes, the effects of which can scarcely be determined? For it comes to this, that we must deal with man as governed by *all* motives which are regularly operative, whether altruistic or not. Now, as a rule, men do not make pig-iron because they are in a passion, or boil soap from sentiment. They do these things to make money. They do business upon business principles, and the whole fabric of industry is based upon the assumption that men are actuated by self-interest. It is true that the motives of which this is the resultant are varied. One man wishes by his gains to support foreign missionaries, another to support his children, a third to get drunk; but they all desire to get gain. It must be admitted, however, that if economics is to include the science and the art of the consumption of wealth, it must include psychology, ethics, and politics. Without these it will necessarily be to a great extent dogmatic.

So broad a basis is not laid by Prof. Marshall, and in consequence he does not confine himself to "statements in the indicative mood." In short, he occasionally preaches, but not in an offensively censorious manner, we are bound to say, for his tone is invariably restrained. Thus, he lays down the proposition that "a moderate income earned by moderate work offers the best opportunity for the growth of those habits of body, mind, and spirit in which alone there is true happiness." This might be described as the ideal of a valetudinarian, or perhaps as the professorial ideal. But it would not satisfy every one. There are men, not content with moderate work, whose achievements are worth more than a moderate income. There is an exaltation, a romance, in great feats of boldness and strength that the world could ill spare. The "one crowded hour of glorious life" is to some its own exceeding great reward; happiness is not to be found by them in a prolonged succession of tranquil states of consciousness. The world may see a general prevalence of the "piping times of peace," but the militant and adventurous spirit will burst forth in new outlets. Many persons would maintain that the widest diversity, whether in work or income, is not only favorable to progress, but is desirable as an end in itself. Prof. Marshall is of course entitled to have his ideal, and to preach it; but as we observe indications that he would enforce it upon other people by governmental compulsion, we think that he ought to demonstrate its truth.

We notice, too, a metaphysical assumption that seems to us to be of far-reaching consequence. "As a cathedral is something more than the stones of which it is made, as a person is something more than a series of thoughts and feelings, so the life of society is something more than the sum of the lives of its individual members." Is there, then, a certain substance, Society—or, peradventure, a Platonic idea that moulds human material to its form? Or what is the additional element? We do not deny that it is there, but it requires definition or explanation. If there is a consciousness, or life, of society, in the same sense that there is a consciousness of a man, we ought to know it, and if in another sense, we should know what it is.

We are unable, within our present limits, to consider the logical method adopted by Prof. Marshall, and perhaps it is better not to attempt it until his work is completed. He has been much influenced by Jevons, although his studies have been so wide that he brings before us contributions from every quarter. We shall here refer only to a single proposition, which, however, we understand to be one of the corner-stones of Prof. Marshall's edifice. It is this:

"We have already seen that the price which a person pays for a thing can never exceed, and seldom comes up to, that which he would be willing to pay rather than go without it; so that the gratification which he gets from its purchase generally exceeds that which he gives up in paying away its price; and he thus derives from the purchase a surplus of pleasure. The excess of the price which he would be willing to pay rather than go without it over that which he actually does pay, is the economic measure of this surplus pleasure, and, for reasons which will appear later on, may be called *consumer's rent*."

We are suspicious of a fallacy of division here. The proposition appears to be a universal one, and we will restate it in that form. All the prices that all persons pay for all the things they buy can never exceed, and seldom equal, what they would be willing to pay rather than go without these things. Now it is not credible that Prof. Marshall would say that we should insert a clause, so that this should read, "what they would be willing to pay—if they had no end of money—rather than go without," etc. If we all had more purchasing power, we should unquestionably be willing to pay more rather than deny ourselves anything that we had previously enjoyed. But if this is not the meaning of the proposition, what is? It can only be that persons as a rule do not live up to their income; that they always have a supply of money on hand beyond the amount which they expend for the satisfaction of their wants, and that they would expend this reserve rather than leave these wants unsatisfied. We are unable to reconcile this law with experience. We may have failed to understand Prof. Marshall's position, but it seems to us to be untenable if our criticism is valid; and if so, his whole system would need to be reconstituted.

For the reasons above stated, we do not consider this treatise, regarded as a whole—so far as one can take a part for the whole—to possess great scientific value. It is gratifying to be able to speak of portions of it with hearty commendation. There is, perhaps, not an instance in history where a great reasoner has been more persistently misunderstood and misrepresented than has been the case with Ricardo; the misrepresentation being generally due, we believe, to inexcusable ignorance. Prof. Marshall rights this ancient injustice, and scatters the followers of Marx with a few well-directed strokes. It is much to be wished that he could command the time to prepare an annotated edition of Ricardo, a work for which he seems to be exceptionally well prepared. Of great interest, too, is his examination of the law of rent with a view to its subsumption under a more general statement. Every chapter bears evidence of the extent of his familiarity with practical business and of the breadth of his scholarship. It is impressive to note that the important disclosures of the vital statistics of Massachusetts, to which attention was recently called in these columns, have not escaped his notice, and American writers on economic subjects may well feel flattered by the appreciative mention which they receive—although we must say that the phrase, "American economists from Carey to Henry George," is not of the most discriminatingly appreciative character. For the general reader, if he grapples with the work, the historical accounts of different industries, the explanations of the great movements of trade in modern times, and the details of the operation of great business establishments, will have a particular fascination. We have not hesitated to point out what seemed to us serious imperfections in this volume; but we think it not improbable that the obscurity of which we have complained will be dispelled as the work advances, and that the final statement of the author's theories will be more lucid than the preliminary adumbrations.

McCONNELL'S AMERICAN EPISCOPAL CHURCH.

History of the American Episcopal Church, from the planting of the Colonies to the end of the Civil War. By S. D. McConnell, D.D., Rector of St. Stephen's Church, Philadelphia. Thomas Whittaker. 1890.

One whose ideas of ecclesiastical history have been formed upon the histories of Mosheim and Neander would hardly think of going to any such history for entertainment; nevertheless, those who read Dr. McConnell's 'History of the American Episcopal Church' will find it one of the most entertaining books they have read for many a day. To say that it is as interesting as a novel would be too flattering to the average production of the novelist. One class must be excepted from those likely to enjoy the book—churchmen who take their church too seriously, and who imagine that its history throughout has had all the dignity and beauty of its solemn ritual. For such the book will abound in startling revelations. Aggrieved and sad, they will say to one another, in secret colloquies, "An enemy hath done this." But no; Dr. McConnell is a churchman of the most pronounced and stalwart character. And this fact, for some, will give to their reflection its utmost bitterness. They could have borne it from an enemy, but, for the wounds of a friend—if these are faithful, they are very deep and wide. How could his loyalty permit him such disclosures even if their truth is incontrovertible? In and between the lines of Bishop Ferry's more voluminous and careful 'History,' to which Dr. McConnell refers on almost every page, all that we have here was perhaps to be read. But how different the impression! More flattering certainly, but much less vivid and unique.

There is balm in Dr. McConnell's book for the wounded sensibilities of his co-religionists: it is his confidence in a church whose history has had so little in it of which he can be justly proud. A church which can afford this railing accusation is a church worth living for. And then, too, it must be remembered that this 'History' ends with the close of the war, when the Church had just emerged from the least honorable period of her career, when she was just entering on her period of most rapid growth; disfigured, indeed, by the trivialities of the ritualistic controversy, but bringing the Church into ever closer coöperation with the better forces of the secular world, and into livelier sympathy with other sects. Moreover, it is since 1865 that Phillips Brooks has lent the splendor of his talent to a church often suspicious of his liberal inclinations, and that Bishop Potter has "meddled with politics," not without sympathy and following in his own body of believers, but in a manner wholly strange to their tradition of political indifference, the outcome largely of their Church's sad experience in the Revolutionary war.

There is an engaging frankness in Dr. McConnell's dedication of his book: "To the congregation of St. Stephen's Church, Philadelphia, who were sadly neglected while it was being written"; and it is a fit prelusive note to

all that follows. He has no glozings nor suppressions. Generous, in the main, with other sects, he deals critically and sternly with his own, and exhibits, in a style that is always vigorous and alert, the defective morality of its colonial period, its aloofness from the popular mind, its chronic weakness, its unseemly quarrels, the frequent failure of its chosen leaders to appreciate their opportunity. The book is divided into two parts, the first ending with the Revolutionary, the second with the civil war. The first is introduced by a general account of the Church's condition in the mother country and the circumstances attending the various emigrations to America. These are then taken up in turn, and the relation of the colonial Church of England to each is set forth with admirable clearness. Dr. McConnell's antithetic style is dangerous, and here and there he sacrifices truth to the antithesis. Thus of the Puritans he says: "They had come to found a State. Their ill-regulated enthusiasm changed their purpose, and they set about to found a Church." But they did found a State, and, however pragmatic its theocratic spirit, it was the norm of all our larger constitutional life. Again, "The Puritan's temper has been his bane, while the Churchman's has been his strong deliverer. The former is now only a character in history, while the latter is a present force, chiefly because, in the long run, moral qualities win over intellectual ones." To this it might be objected that the Puritan's most distinctive qualities were moral, and this Dr. McConnell seems to admit a little further on, when, after setting forth the character of the Virginian churchmen in terms of undisguised contempt, he says: "A debt which the Church owes to Puritanism on both sides of the water is the restored reputation of the ministry." As for the Puritan's being merely "a character in history," while the churchman is a "present force," it was certainly the moral temper of the Puritans and not the complacency of the churchmen which served us in the anti-slavery conflict and the civil war; and, albeit those things are historical, they are of such recent date that it is unsafe to consider the Puritan entirely obsolete. The Puritan's dogma is departing, but there are fresh examples of his spirit every day, though not so many as our business and our politics require.

The chapter on the Roman Catholic settlement of Maryland is mainly notable for its qualification of the general allowance of all the virtues of religious liberty to that settlement. So far as they went, they were personal and special, and a necessity of the immediate situation. Chap. viii. is "a general survey," and brings out with special clearness the character of the Southern clergy:

"Most of them were planters, and did priestly duty now and then to eke out their income. They hunted, played cards, drank punch and canary, turned marriages, christenings, and funerals alike into revels. One bawled out to his church-warden at the Holy Communion: 'Here, George, this bread is not fit for a dog.' One fought a duel in his graveyard. Another, a powerful fellow, thrashed his vestrymen one by one, and the following Sunday preached before them from the text: 'And I contended with them, and cursed them, and smote certain of them, and plucked off their hair.' Another dined every Sunday with his chief parishioner, and was sent home in the evening drunk, tied in his chaise." (P. 90.)

The same aspects are still further developed in the instructions to the preachers sent out by the Society (p. 90), and in the chapters on the work of the commissaries sent out by the Bishop of London to superintend the Colonial Church. Swearing, drunkenness, and fighting seem to have been the order of the day. Coming northward, things were much improved. There is an interesting chapter on President Cutler of Yale and the other New England converts. Immediately after the unvarnished tale of clerical drunkards and brawlers in Virginia and Maryland, as we read of the "deep sense of the very reality of priestly acts," it is difficult to resist a smile, and we wonder a little at Dr. McConnell's own confidence in the "power as an apostolic church to confer a valid commission upon men to preach the divine word and administer the awful sacraments." This confidence, the best possession (to our author's thinking) of the modern Church, he credits to the New England converts. The chapter on the "Great Awakening" suffers from the necessity for condensation. Quite an erroneous impression is given of the causes which led to Jonathan Edwards's separation from his Northampton congregation. In this connection Dr. McConnell brings out in bold relief his own idea of the true function of the Church as a school of morals, in contradistinction to the Edwardsian ideal, which, in spite of his immediate failure, has dominated Congregationalism from his time to ours, viz., a congregation of self-conscious saints.

In the chapter on the Scotch-Irish, Dr. McConnell increases our wonder at his confidence in the divine authority of his Church, for he quotes with approval and amplification Hallam's terrible indictment of the Church of the later Stuarts. The ritualism of the Oxford Methodists is insisted on, but due credit is given to the Moravian impulse to Wesley's thought. There is no sufficient indication of the makeshift character of Wesley's organization. Dr. McConnell is not confident that any amount of wisdom and discretion could have held the American Methodists to the Episcopal Church. If it had, their increase would not have been as now, or the Church would have been profoundly modified. We cannot follow Dr. McConnell into his recitation of the Church's trouble in search of a bishop before or after the War of Independence, though it is full of interest. After the war we have the interesting spectacle of Bishop Seabury of Connecticut, who had got a left-handed Scotch ordination, exercising his office for the remainder of his life while still in receipt of half-pay as a Tory chaplain in the British Army. In the struggle for a new organization, Seabury and his New England friends represented the High Church tendency. Personally, he is more attractive than either Provoost or White, the patriot bishops. But, all around, a modern political party zealous for unity might sit at the feet of these men and learn of them lessons in opportunism.

The colonial clergy of the Church nowhere make a better appearance than in the Revolutionary war. This was their martyr age, and they bore their disabilities and sufferings often in a manly fashion. Dr. McConnell extracts a partial list of these from Sabine's 'Loyalists.' At the same time he makes large claims for the Church in the patriot army and Congress. We read that "Franklin was a churchman, so far as he had any religion at all." This is ingenious and absurd. The chapter "Structural Development" ends with the following free-and-easy estimate of the Thirty-nine Articles:

"They were ordered to be bound up with the Prayer-Book in all future editions. No formal subscription to them was prescribed. There they have stood since. What binding force upon belief they may carry, each decides for himself. They are a section of sixteenth-century thought transferred to the nineteenth. They have never exercised any appreciable influence upon the life or belief of this Church. Like all contemporary confessions, they have largely ceased to be intelligible. They are a water-mark of a previous tide. The current of the Church has flowed on unmindful of them. The last revision of the Prayer-Book provides for their being bound up next its cover; the next will probably bind them outside."

In the concluding chapters there is much interesting matter. The climax of the comical is reached in Bishop Provoost's resumption of the episcopate after ten years' neglect of church-going and the Holy Communion. A very dreary period followed the democratic triumph at the beginning of the century. The Oxford movement is treated in a brilliant chapter, with critical and judicious admiration; and its influence and that of Newman's "perversion" to Rome on the American Church are measured carefully. The treatment of Dr. Muhlenberg and his "Memorial" for an emancipated bishopric, a discretionary liturgy, and a lay diaconate, is wholly sympathetic. The remaining chapters treat of the Church in the civil war in a manner somewhat more timid and apologetic than the author's wont. Much is made of the Church's formal adhesion to the Union in certain resolutions, but the absence from these of any reference to slavery prepares us for the overwhelming defeat, in the first General Convention after the war, of Horace Binney's amendment expressing gratitude "for the removal of the great occasion of national dissension and estrangement, to which our late troubles were due." No action could have been more fit.

Could Dr. McConnell have continued his history for a quarter of a century, he might have told a more inspiriting and gladdening tale. As it is, he seems to say, "If you would be proud of your future, you must be better than your past." His own position as a churchman is interesting and significant. It reminds us of the Irishman who was "for the law, but ag'in' its enforcement." His Church theory is very high—the Church is not of man, but of God; her preachers speak His voice. Practically, he is for the most liberal construction of the Church's offices, and for breaking down the partitions that divide the sects. The theory and practice do not seem to be in full accord.

Through Abyssinia: An Envoy's Ride to the King of Zion. By F. Harrison Smith, R. N. A. C. Armstrong & Son. 1890. 8vo, pp. 271. Illustrated.

THE author of this work was sent by the British Government to Abyssinia in 1886 to present a sword to King John, as a reward for his services in rescuing several of the Egyptian garrisons confined in the Sudan. He has apparently taken his official journal and added to it some introductory chapters giving an account of his journey to Massowah, his point of departure from the coast. These are pleasantly written, though containing too many trivial details and unsuccessful attempts at humor. The most interesting part is naturally that which relates to his interviews with King John, whose tragic death a year ago had such an important effect upon the fortunes of his country. The envoy was received in a hut constructed of light poles, interlaced with twigs in basket-work fashion and covered with thatch. "An inner circle of poles, in open order, supported the roof." The King, a man of about fifty, though "his lithe frame, keen eye, and quick, intelligent expression are more those of a man twenty years younger," received him graciously. This was shown as much by the manner in which he wore his shawl as by what he said.

"This garment is made the medium for the expression of many grades and degrees of sentiment. Frigid reserve, antagonistic feelings or intentions, an overwhelming superiority, are

manifested by the shawl being drawn tight across the face just below the eyes, and so hiding nose, mouth, and chin. As these feelings are lessened, or supplanted by opposite ones, so the shawl is lowered, more or less; complete cordiality, confidence, and 'hail fellow, well met,' being expressed by the shawl lying in folds around the waist, as the dignitary sits Turkish fashion on his divan. In this way did the King receive me, and I knew at once that however difficult might be questions which he had determined to discuss with me, they would be free from any personal animosity, so far as I was concerned."

The courage and determination of the author were well displayed in the following incident: On the eve of his departure from the royal camp he discovered a mistake in the King's letter acknowledging the sword, to correct which his personal sanction was necessary. Admittance to the King's enclosure being refused,

"I endeavored, unsuccessfully, to throw back the wooden bolt by putting my arm through the openings in the gate. Tae chiefs who were assembled in the outer courtyard said that the King was asleep, that he was ill, having fallen from his horse, that it was Sunday, etc. Finding that they would not admit me, and feeling certain of a welcome from the King, I unbuckled my sword, and, tossing it to my weeping interpreter, I scaled the gate and sat on the top. At this the crowd of some two hundred people whom my appearance had attracted, took fright for themselves and fled down the hillside, fully expecting the King to come out and issue orders for a general massacre. Young Kassa, of all my own people, alone stood firm and calm. Looking down from the top of the gate upon the chiefs inside the stockade, I informed them that it was my intention to remain where I was, if I remained all night, till they told the King that I had important things to say to him."

Mr. Smith's persistence finally conquered, and the King, being informed of his presence, immediately ordered him to be admitted, and the matter was satisfactorily settled.

On the return journey Mr. Smith visited a new palace, in the style of an old English church with castellated turrets at either end, which the King had ordered to be built "to perpetuate his name." Although the author hopes "that this fine building will induce the Abyssinians to improve their architecture and style of living generally," one cannot help feeling that the home of a native in the same village was far more attractive. It was "a fine large hut, with a lofty dome-shaped roof beautifully thatched, and ornamented with ropes covered in red, white, and blue material."

It is to be regretted, considering the present interest in Abyssinia with relation to the Italian protectorate, that Mr. Smith has given so little information about the condition and prospects of the country. It is very evident, however, that, if a market could be found for grain and other agricultural products, the prosperity of the country would be greatly increased, since the quality of the soil and the varying altitudes permit of every conceivable vegetable growth. To the people our author gives a favorable character, especially for cheerful behavior under trying circumstances, and also for honesty, which is not generally regarded as a prominent Abyssinian virtue. But, says Mr. Smith, "out of about £300 worth of camp and transport gear, I only really lost about seven shillings' worth during the whole of my march." The only coin which is current is the Maria Theresa dollar of 1780, still coined annually by the thousands for use in Abyssinia. As in other parts of northern Africa, the natives are careful only to take those bearing certain marks, as, "the letters S F. under the head," and "eight dots or mustard seeds on the coronet."

In the appendices are given the author's routes, together with a sketch-map and a short glossary.

NEW BOOKS.

Famous English Authors of the 19th Century.

By Mrs. Sarah K. Bolton, author of 'Poor Boys Who Became Famous,' etc. With portraits of Scott, Burns, Carlyle, Dickens, Tennyson, Robert Browning, etc. 12mo, $1.50.

During a recent visit abroad Mrs. Bolton had the opportunity of visiting many of the scenes made memorable by the residence or writings of the best known English authors, and the incidents which she was thus enabled to invest with a personal interest she has woven into the sketches of Tennyson, Ruskin, Browning, and the other authors of whom she writes. These two companion volumes are among the best of the famous "Famous" Series.

Gold Nails to Hang Memories On.

A rhyming review, under their Christian names, of old acquaintances in history, literature, and friendship. By Elizabeth A. Allen. 8vo, gilt edges. $2.50.

This is the most original autograph book ever published. It aims to give a history and record of the more or less familiar Christian names, and at the same time to commemorate the most familiar and famous men and women who have borne them. The book, therefore, has not only an interest of its own, but is distinctively educational. Spaces are left on each page for autographs.

Jane Eyre.

By Charlotte Bronte. With 48 Illustrations, engraved by Andrew. Carefully printed from beautiful type, on superior calendered paper. 2 volumes, 12mo, cloth, gilt top, boxed, $5.00; half calf, $9.00. *Édition de luxe*, limited to 250 numbered copies, large paper, Japan proofs mounted, $10.00.

Jane Eyre is one of the books which seem destined to live. Its original and vivid style, its lifelike and powerful plot, its tremendous moral purport (once misunderstood, but now recognized), make it one of the most absorbing novels ever written. The present illustrated edition is as perfect as will ever be produced. Presswork, paper, illustrations, and binding combine into a whole that is a delight to the eye and a cynosure for a library.

Tom Brown's School Days.

By Thomas Hughes. With 63 Illustrations engraved by Andrew, carefully printed from beautiful type on calendered paper. 12mo, cloth, $2.00; full gilt, $2.50. *Édition de luxe*, limited to 250 numbered copies, large paper, Japan proofs mounted, $5.00.

Praise or comment on this classic would be a work of supererogation. Every parent sooner or later puts it into his children's hands. We can only say that the present edition is by all odds the best that has ever been offered to the American public. Printed from large type, well illustrated, and handsomely bound, it makes a book worthy of any library.

THOMAS Y. CROWELL & CO.,

46 East 14th St., New York.

DICKENS' CHRISTMAS CAROL.

CHARLES DICKENS' CHRISTMAS CAROL.

Being a reproduction in fac-simile of the original manuscript from Title-page to Finis, as it left the author's hands to go to the printer; printed on paper similar to that used by Charles Dickens when writing his stories, and accompanied by a valuable Introductory Note, by Mr. Frederick G. Kitton, now the accepted authority in all matters relating to the Life and writings of Charles Dickens.

Imperial Quarto (only 250 copies printed), bound in half vellum, ornamental side design on mill-board. Each copy signed and numbered. $5.00.

"Thanks to the enterprise of that zealous and industrious annotator and illustrator of the life and writings of Charles Dickens, Mr. F. G. Kitton, the amateurs of photographs have now an opportunity of procuring, at a moderate price, a literary treasure of far more interest than ordinary samples of a great man's penmanship. . . . He who owns this thin quarto may be considered to have in his possession the actual paper and penmanship of the author . . . . Altogether Mr. Kitton's volume may be pronounced to be a literary curiosity of the highest interest and value."—*The Daily News, London.*

COLLEGE NEWS

IN THE

NEW YORK EVENING POST.

The Evening Post has for many years given much space to news from the colleges, and to editorial discussions and important correspondence on educational subjects. The system of special letters from the colleges, published once a week in this paper, has met so cordial a reception among students and graduates as to justify its continuance and extension. This feature will hereafter appear in each Friday's edition of The Evening Post, and every means will be used to make these columns a trustworthy source of information on the current topics of educational work and student life. They will contain not only letters from trustworthy correspondents in the leading institutions, but also special articles, some of which are now preparing, on the intellectual, social, and athletic activities of the college world.

Subscriptions will be received for Friday's edition of The Evening Post at $1.50 per year. Reduced rate for clubs. A special agent wanted at every college. Address

THE EVENING POST, NEW YORK.

Reading Case for the Nation,

To receive the current numbers in a convenient (temporary) form. Substantially made, bound in cloth, with *The Nation* stamped on the side in gold. Holds about one volume. Papers easily and neatly adjusted. Sent, post-paid, on receipt of 75 cents.

Alden's Manifold Cyclopedia.

An Unabridged Dictionary of Language and a **Cyclopedia of Universal Knowledge** in one; 40 volumes; over 25,000 pages; over 4,000 Illustrations. Cloth binding, per volume, **75 cents**; per set, **$30.00**; half morocco, per volume, **$1.00**; per set, **$40.00**. *Specimen pages free; sample volume returnable, and money refunded.*

CRITICS SAY:

"Will win its way by merit."—*Advocate, Pittsburgh.*

"Must become very popular."—*School Journal, New York.*

"The work is a treasure, and such a mine of useful information as every family ought to have at hand."—*The Standard, Chicago.*

"It cannot fail to be appreciated by the great masses of the reading public, who will find in its pages, in compact form, just the information they need."—*Messenger, Philadelphia.*

"The fields of literature, science, and art, and of all knowledge, are thoroughly gleaned. The topics are ably treated, many illustrations are given, and a vast amount of information is contained in a small space."—*Toledo Blade, Toledo, Ohio.*

"Its handsome type, numerous illustrations, handy form, neat substantial binding, and, more than all, its skilful editing, which brings within such convenient limits such a vast amount of knowledge so well adapted to popular needs, are a satisfaction and a delight to students."—*Bankers' Monthly, Chicago.*

CUSTOMERS SAY:

"I think it is a grand work, and seldom, if ever, have occasion to refer to it without finding what I want."—*F. J. C. Schneider, Rio de Janeiro, Brazil.*

"It is a continual surprise to me that a work of its scope and excellence could be published at such a low price. It is more than excellent,"—*Harry G. Simric, City of Mexico.*

"It is very neat, the form convenient for use, firmly bound, of large, clear type, the contents of just that general character which the popular reader requires—comprehensive, accurate, and compact."—*Prof. Henry N. Day, LL.D., Yale College.*

"In a library in the collection of which I have been engaged more than 40 years, I esteem no book more highly than 'Alden's Manifold Cyclopedia.' From its pages I have been able to find an answer, appropriate and clear, to every question that needed it, and when I shall receive the final volume I shall feel that access to all the necessary information for my practical life shall have been placed within my reach."—*James L. Minor, formerly Secretary of State, and Librarian of Missouri.*

A Great Offer. $4.00

cash and a further payment of $26.00 in **13 monthly** installments of **$2.00** each will secure **immediate delivery** of the **volumes now ready** in cloth binding, the **remaining volumes** being delivered at intervals averaging less than one month, all within the year 1891; or, a first payment of **$7.50** and the **13** installments of **$2.50** each will secure the same in half-morocco binding. Order **immediately**, as this offer is made subject to withdrawal without notice.

MATTHEW ARNOLD IN THE "NINETEENTH CENTURY."

"The New York Nation—a newspaper which I read regularly and with profit, a newspaper which is the best, so far as my experience goes, of all American newspapers, and one of the best newspapers anywhere."

THE NATION,

an independent weekly journal, was established in 1865. Its contributors include the most prominent names in literature, science, and art both in this country and abroad. It is emphatically found in the homes of people of culture and refinement. No intelligent American desirous of keeping abreast of the best political and literary thought of the day can afford to be without it. Subscription price, $3.00 a year, postpaid.

To Advertisers:

The issues of the Nation to be published on Thursdays, November 26th, December 4th, 11th, and 18th will be holiday issues containing the announcements of the leading publishers and other discriminating advertisers. Copy for these issues should be in our hands by each Tuesday preceding the dates above mentioned.

Write for information. (Paid-up capital, $125,000.)

DESCRIPTIVE LIST
OF
NOVELS AND TALES
DEALING WITH
American Country Life.

The object of this list (consisting of extracts from the *Atlantic, Critic, Nation*, and other critical journals) is to direct readers, such as would enjoy the kind of books here described, to a number of novels which, in many cases, have been forgotten within a year or two after publication. It is hoped that the publication of this and similar lists will lessen in some measure the disposition to read an inferior new book, when superior old books, equally fresh to most readers, are at hand.

Respecting the list, Mr. W. D. Howells writes to the compiler thus:

"I am delighted with the notion of your list of Novels about Country Life in America, and I think you have most charmingly realized it. The book will be useful to every book-lover and critic and librarian. Now that it satisfies it, I know that I have always felt the need of just such a list."

52 double-column pages. Price, 50 cents (32 specimen pages, 10 cents). Address

W. M. GRISWOLD,
Cambridge, Mass.

400 { *Edition de luxe*, on large paper, limited to 400 copies, signed by author, and containing two Portraits, etc., etc.

PRICE, $10.00 PER COPY.

The publishers reserve the right to advance price without further notice.

The Novel of the Year.

THE ANGLOMANIACS.

A Story of New York Society of to-day.

1 vol., 12mo, extra cloth, price, $1.00.

"There has been no such picture of New York social life painted within the memory of the present generation."

"The success of the season."—*The Tribune, N. Y.*

"The story is brilliant."—*New York Herald.*

"Read this book and see human nature."—*Norristown Herald.*

"The brightest, keenest short story of American life that has appeared in a long time."—*Buffalo Express.*

THE LOVE-LETTERS OF A PORTUGUESE NUN.

Translated from the French by R. H., with Preface by Alexandre Piedagnal and an introduction by Josephine Lazarus. 1 vol., dainty binding, 75 cents.

This volume will prove of interest to the numerous readers of 'Marie Bashkirtseff; the Journal of a Young Artist,' which was the great success of last fall.

LONDON STREET ARABS.

By Mrs. H. M. STANLEY (Dorothy Tennant). Containing a Collection of Pictures from Original Drawings. With borders in tints.

Crown 4to, cloth gilt, price, $2.50.

A collection of Characteristic Sketches of London Street Life. Mrs. Stanley relates some experiences of "Arab" life, and gives the mode adopted in making her sketches, and various anecdotes respecting her models.

Cassell Publishing Co.,

104 and 106 Fourth Avenue, New York.

G. P. Putnam's Sons,

27 and 29 West 23d St., N. Y.,

WILL PUBLISH THIS WEEK:

Tabular Views of Universal History. A series of Chronological Tables presenting, in parallel columns, a record of the more noteworthy events in the history of the world from the earliest times down to 1890. Compiled by G. P. PUTNAM and brought down to date by LYNDS E. JONES. The Tables are so arranged that the reader can see at a glance who were contemporary rulers and what was going on in the different realms of the world at any given date, not only as to political changes, but in the progress of society. Square octavo, $1.75.

Fra Lippo Lippi. A Romance of Florence in the 15th Century. By MARGARET VERE FARRINGTON, author of 'Tales of King Arthur,' etc. With fourteen full-page illustrations in photogravure. 8vo, cloth extra, gilt top, $2.50.

CONTENTS: The Madonna Fresco—The Convent of Santa Margharita—The Painter Monk—The Convent of the Carmine—Lucrezia Buti—The Model—In the Convent Chapel—Fra Diamante—Fra Lippo and Lucrezia—The Princess Beatrice—The Nuns Garb—The Promise—The Miracle of the Cintola—The Ride to Florence—Lucrezia at Prato—The Shadow—The Parting—At Spoleto—The Tidings—The Revenge—The Return to Santa Margharita—In After Years.

KNICKERBOCKER NUGGETS:

XXIX.—Love Poems of Three CENTURIES. Compiled by JESSIE F. O'DONNELL. 2 vols., $2.00.

RECENTLY PUBLISHED:

XXVIII.—The Sayings of Poor RICHARD. Being the Prefaces, Proverbs, and Poems of Benjamin Franklin, originally printed in Poor Richard's Almanacs for 1733–1758. Collected and edited by PAUL LEICESTER FORD. $1.00.

"It not only brings together a considerable store of significant information, but it exhibits Franklin as a poet in what to many will be a new and most interesting light."—*The Beacon, Boston.*

XXVII. — The Boyhood and YOUTH OF GOETHE. Comprising the first eleven books of his Autobiography (Truth and Poetry from my own Life). 2 vols., $2.00.

"It retains the indispensable parts of the Bohn edition, and is an incomparable record of the experience, the literary and social influences, and the qualities of character through which the genius of Goethe reached its height."—*Portland Press.*

The Civil War on the Border. By WILEY BRITTON, formerly Regimental Commissary 6th Kansas Cavalry. A narrative of Operations in Missouri, Kansas, Arkansas, and the Indian Territory during the years 1861–62, based upon the official reports of the Federal commanders Lyon, Sigel, Sturgis, Fremont, Halleck, Curtis, Schofield, Blunt, Herron, and Totten, and of the Confederate commanders McCulloch, Price, Van Dorn, Hindman, Marmaduke, and Shelby. 8vo, with maps, and battle plans, and portraits of Generals Schofield and Lyon. $3.00.

"The work has the weight of thorough study and preparation, and is impartial, and it adopts an interesting style. It will be welcomed as a standard history."—*Boston Globe.*

*** *Prospectus of the Knickerbocker Nuggets; list of fall publications, and illustrated list of good books for young people, sent on application.*

Houghton, Mifflin & Co.'s New Books.

The Song of Hiawatha. By HENRY WADSWORTH LONGFELLOW. Illustrated with 22 full-page Photogravures, and about 400 text Illustrations of Indians, Indian Costumes, implements, arms, etc., by FREDERICK REMINGTON. With a Steel Portrait. Bound in full buckskin from designs by Mrs. HENRY WHITMAN. 8vo, gilt top, $6.00.

Lowell's Works. *Riverside Edition.* Vols. VII and VIII. Being the first two volumes of the four comprising Mr. Lowell's Complete Poetical Works. Crown 8vo, gilt top, $1.50 a volume; uncut, $1.50.

Verses Along the Way. By MARY ELIZABETH BLAKE. $1.25.

Distinguished by thoughtfulness, sympathy, and a genuine lyrical quality which entitle them to a high place in current poetry.

The Art of Playwriting. By ALFRED HENNEQUIN, Ph.D., Professor in the University of Michigan. 16mo, $1.25.

This book is intended for the practical assistance of those who would write plays for the stage, but it is so remarkable in dramatic scholarship that critics and students of the drama will find it extremely valuable.

Poems. By EDNA DEAN PROCTOR. Greatly enlarged. 16mo, gilt top, $1.25.

The fine thoughtfulness of these poems, with their vigorous and noble lyrical expression, renders this volume a notable contribution to American verse.

A Russian Journey. By EDNA DEAN PROCTOR. New Edition, enlarged, $1.25.

An enlarged edition of a book which Mr. George Ripley, the eminent critic of the New York *Tribune*, calls a "singularly agreeable volume," and which Mr. Whittier pronounced equal to Kinglake's famous 'Eothen.'

Houghton, Mifflin & Co., Boston,

THE FORUM.

The Forum, now midway its tenth volume, has during the nine months of this year received a greater increase in its patronage than during the whole of any previous year. The number both of its contributors and its readers has every month become larger; and, with the enlargement of its area of influence, has come, it is hoped, a higher degree of usefulness.

Contents for November.

DEMOCRACY AND WEALTH. President FRANCIS A. WALKER.—The relation of great fortunes to democratic institutions; a reply to the Rev. Dr. Lyman Abbott's "Industrial Democracy."

THE SHIBBOLETH OF PUBLIC OPINION. W. S. LILLY.—The first of a series of essays analyzing popular conceptions of the time; what reason has public opinion for reverence and what claims to authority?

TOLSTOI AND 'THE KREUTZER SONATA.' Rev. Dr. C. A. BARTOL.

THE SIX NEW STATES. Senator SHELBY M. CULLOM.

FORMATIVE INFLUENCES. Rev. Dr. EDWARD EGGLESTON.—Previous contributors to this series of autobiographical essays were W. E. H. Lecky, Prof. John Tyndall, and Frederic Harrison.

THE PROBABILITIES OF AGRICULTURE. C. WOOD DAVIS.—A review of the agricultural production of the world to show that this is the era of cheapest food; how soon the United States will have to import food.

RECENT VIEWS ABOUT GLACIERS. Prof. ALEXANDER WINCHELL.

THE EMBATTLED FARMERS. Rev. Dr. WASHINGTON GLADDEN.

FRENCH CANADA AND THE DOMINION. W. BLACKBURN HARTE.—A New World hierarchy that is hostile to American ideas.

THE PROGRESS OF THE NEGRO. Rev. AMORY D. MAYO.

WESTERN FARM MORTGAGES. DANIEL REAVES GOODLOE.—The most nearly complete statistics that have been prepared of mortgages in the most important Western States.

See announcements in the November number.
All newsstands, 50 cents a number; $5.00 a year.
THE FORUM, New York.

SECOND EDITION.
ORIGIN AND GROWTH OF

THE ENGLISH CONSTITUTION. An Historical Treatise in which is drawn out, by the Light of the most recent Researches, the Gradual Development of the English Constitutional System, and the Growth out of that System of the Federal Republic of the United States. By HANNIS TAYLOR. 8vo, gilt top, $4.50.

"Evidently a masterpiece."—JOHN FISKE.

11 East Seventeenth St., New York.

JUST PUBLISHED:
Myers's History of Rome. By Prof. P. V. N. MYERS, University of Cincinnati, author of 'Mediæval and Modern History,' 'General History,' 'The Eastern Nations and Greece,' etc. 12mo, cloth, xii+230 pp. With full illustrations, diagrams, maps, tables, etc. For introduction, $1.00. A somewhat briefer book and easier than Allen's 'Roman People.' This will also be issued with *The Eastern Nations and Greece* as
Myers's Ancient History. For introd., $1.50.
GINN & CO., Pubs., Boston, New York, and Chicago.

SPENCERIAN STEEL PENS
Superior to all others.

HEAVEN AND HELL.
416 pages, paper.
DIVINE LOVE AND WISDOM
383 pages, paper, by EMANUEL SWEDENBORG. Mailed prepaid for 14 cents each (or both for 25 cents) by the American Swedenborg P. and P. Society, 20 Cooper Union, New York.

B. F. STEVENS'S FACSIMILES
OF
Unpublished Manuscripts in European Archives
RELATING TO
AMERICA, 1773-1783.

This unique collection of hitherto unpublished material for the history of the origins of the establishment of the United States is now in course of issue, Vols. I to V. comprising 564 documents, have already been distributed to subscribers.
Two hundred copies are made for subscribers only, and the photographic negatives are destroyed.
The subscription price is, in London, $100=£20 11 0 for each group of five volumes. The volumes can be delivered in New York at an additional cost of 75 cents each for Public Institutions, or $5.75 each for private individuals. Subscriptions are invited for the few remaining sets.
Vols. VI to X are in active preparation.
Prospectus, with opinions of historians and literary men, will be sent free on application. Specimens may be seen at the office of Messrs. Tice & Lynch, 45 William Street, New York.

B. F. STEVENS, 4 Trafalgar Square, Charing Cross, London, W. C.

B. WESTERMANN & CO.,
Importers and Publishers,
812 BROADWAY, NEW YORK.

FLÜGEL'S
Larger German-English and English-German Dictionary.
AN ENTIRELY NEW EDITION.
Will be published in 12 parts at $1.00 each. Special terms for advance orders and Public and College Libraries.
Prospectus and Specimen Pages on application.

GUSTAV E. STECHERT,
Importer of Books and Periodicals
828 Broadway, New York.
Employs no agents in Europe, but has his OWN OFFICES at
London: 30 Wellington Street, Strand, W. C.;
Leipzig: Hospital Strasse, 10,
and thus has facilities SUPERIOR to those of any other firm.
Books for Libraries, Professors, and Students a specialty. Also rare and scarce books and sets of periodicals.

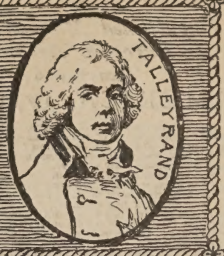
FOREIGN
Second-Hand Book Catalogues
Will be mailed to Bookbuyers, regularly as issued, on application to
E. & J. B. YOUNG & CO.,
PUBLISHERS AND IMPORTERS,
Cooper Union, 4th Avenue, NEW YORK.
Book Collectors will find in these Catalogues many choice and rare books at low prices. We have special facilities for importing from these lists. Correspondence solicited.

F. W. CHRISTERN,
254 Fifth Ave., between 28th and 29th Sts., New York.
Importer of Foreign Books, Agent for the leading Paris Publishers, Tauchnitz's British Authors, Teubner's Greek and Latin Classics. Catalogues of stock mailed on demand. A large assortment always on hand, and new books received from Paris and Leipzig as soon as issued.

E. F. BONAVENTURE,
BOOKS AND PRINTS,
WEST 31ST STREET, COR. B'WAY, NEW YORK.
Catalogues mailed on receipt of 10 cents.

DUPRAT & CO.,
Importers of Fine Books,
349 5TH AVENUE, NEW YORK.

RARE AND STANDARD SECOND hand Books. Books purchased for cash. Catalogues issued. E. W. JOHNSON, 1336 B'way, N. Y. City.



The Century Magazine in 1891.

The recent remarkable serial successes of this magazine,—the famous War Papers, Kennan's Siberian Articles, and the Life of Lincoln,—will be continued in the coming volume (the forty-first) by "The Gold Hunters of California," a series of separate illustrated papers on the gold fever of '49, telling of the discovery of gold, the movement to California (by survivors of various expeditions), life in the mines, the Vigilance Committees (by the chairman of both committees), and many other incidents of that exciting period, including a paper by General Frémont.

Another notable feature will be the publication of extracts from advance sheets of the Talleyrand Memoirs soon to be issued in book-form in Paris, the manuscript of which has been secretly preserved for more than half a century,—to be printed first in an American magazine.

Other interesting serials include "An American in Tibet," papers describing a remarkable journey, 700 miles of which was over ground never before traveled by a white man; "Personal Traits of Lincoln," by his private secretaries, Messrs. Nicolay and Hay; "Adventures of War Prisoners," experiences of Union and Confederate soldiers during the civil war; "American Newspapers," described by noted journalists; "American and English Frigates in the War of 1812"; "Indian Fights and Fighters," by officers who served with Custer, Mackenzie, Crook and Miles; "The Court of the Czar Nicholas," by an ex-minister to Russia; suggestive papers on the Government of Cities; a series of engravings of noted pictures by American Artists; the "Present-Day Papers," by Bishop Potter, Seth Low, and others. Fiction includes "The Faith Doctor," a serial novel of New-York life by Edward Eggleston; "The Squirrel Inn" by Frank R. Stockton, and novelettes and short stories by nearly all the leading writers, Joel Chandler Harris, Elizabeth Stuart Phelps, Brander Matthews and many others.

The November Number,

which begins the new volume, contains opening chapters of several important serials, including General John Bidwell's account of "The First Emigrant Train to California" (1841), "An American in Tibet," "Early Victories of the American Navy," and "Colonel Carter of Cartersville," a delightful illustrated novelette by F. Hopkinson Smith. Also "Life in the White House in the Time of Lincoln" by Col. John Hay, "On the Andersonville Circuit" by an ex-Union prisoner, "How London is Governed," "The Printing of THE CENTURY," two complete stories, etc. Nearly one hundred illustrations. Ready everywhere Nov. 1st. Begin subscriptions with November; $4.00 a year, single numbers 35 cents. Subscribe through dealers and postmasters, or send remittance directly to the publishers.

THE CENTURY CO. 33 EAST 17TH STREET N.Y.

The Nation.

NEW YORK, THURSDAY, OCTOBER 30, 1890.

The Week.

THE difference of opinion among the Republican chiefs concerning the comparative merits of cheapness and dearness still continues. Mr. Cabot Lodge denounced cheapness again on October 22 at Medford (Mass.), and repeated that it made "cheap men and women," and "this was not a cheap country"; but he also credited the McKinley Bill with having made "reductions in articles of general consumption," and had the audacity to say that "the duty on hides from which boots and shoes are made had been reduced," the fact being that there has been no duty on hides for many years. It may be well to pass lightly over the Scholar's unscrupulousness of statement of which this is an example, but why does not some one in his audiences ask him to explain his contradictions and incoherences? Why does it make cheap men and women to wear cheap clothing, and not make them cheap to eat cheap food? Why does he boast of the cheapness of "articles of general consumption" and boast of the dearness of woollen coats and trousers? Is it possible that wearing a cheap coat for a year cheapens a man as much as eating cheap bread and potatoes and sugar? The Democrats in Massachusetts make a great mistake in not getting some competent man to follow the Scholar around the State, and "heckle" him, as the Scotch say—that is, get up when his speech is ended and "corner" or expose him by questions. He might in this way be reduced to a very gelatinous moral and mental condition after every one of his discourses until he became more cautious. He inserted, also, in his Medford speech a piece of cheap demagogy, which revealed fully his own cheapness of character, in the shape of a fling at the people who "drink French champagne, and smoke imported cigars, and wear English clothes" (he is one of them himself), and suggested that the gentlemen "who talk about the increase of prices" oppose the bill simply because it increases the cost of their own luxuries. "If a man," said he, "isn't able to look over his own selfish interests, he isn't going to sympathize with the masses." What an unselfish, single-minded Scholar he is himself! And how fond of "the masses"!

On the other hand, Speaker Reed, in his speech at Bloomington (Ind.) the day before, denounced the shopkeepers for "raising prices," or pretending to raise them, and said:

> "Don't be scared. The shopkeepers can't take your money from you. An effort is being made to make you buy to-day instead of to-morrow. You will notice that prices have not gone up, but are always going to go up. They ask you to come in out of a wet that will never happen. [Cheers.] The people are showing a good Yankee spirit—or rather, I should say, United States spirit, for I feel that the people in the West are as sharp as the Yankees are—by using the entire Democratic press for advertising purposes."

Now, why should his audience be "scared" if dearness is a good thing? According to Lodge and McKinley, the shopkeepers in raising prices are doing the best thing possible for the character of the American people, and the Democrats in putting them up to it deserve well of their country. But it plainly appears here that Reed does not believe in dearness as a moral agent, and assures people that things will not be any dearer than they are now in consequence of his wise and judicious legislation of last winter. But here again comes another puzzle. If the McKinley Bill does not raise prices, what is the use of it? How does a bill protect if it does not push prices up? How will the manufacturer pay higher wages if he does not make the consumer pay more for his goods? Then, again, Dingley of Maine, in a recent speech of his, asserted that the McKinley Bill put more articles on the free list—that is, made a closer approximation to free trade—than the Mills Bill, and was loudly applauded by his audience; showing that he too believes in cheapness. In fact, to follow the speeches of these worthies makes one's brain reel, and makes one long to knock all their heads together, and then see if some coherent and concordant statement about the matter could be extracted from them.

Mr. Lodge is one of the discoverers of the new and remarkably *fresh* idea that New England ought to sink her own preferences regarding the duties on iron ore, pig-iron, and coal, "for the good of the whole," which means for the good of the iron-masters of Pennsylvania. You can't make a tariff for one particular section, he says; you must take in the whole country. But when he wrote his 'Life of Daniel Webster,' two or three years ago, he said that you could and ought to vote for your own section every time, and let other people look out for their own sections. He was writing about Webster's course on the "tariff of abominations," the tariff of 1828, which was not nearly so abominable as the McKinley tariff, and this is what he said:

> "It is true that his course was a sectional one, but everybody else's on this question was the same, and it could not be, it never has been, *and never will be otherwise.*" (Lodge's 'Webster,' p. 171.)

This shows how unsafe it is to indulge the spirit of prophecy. In this respect Mr. Lodge has been more unfortunate than his compeers. Historians have often fallen into error when predicting what other people would do. Mr. Lodge has blundered in predicting what he himself would do.

It is hard to keep pace with the McKinley prices. In fact, it is only now and then that we catch one of them, as it were, on the wing. A merchant sends us the circular of the American Linoleum Manufacturing Company, announcing new prices "owing to the increased cost of raw material." The old and new prices are these:

	Old price.	McKinley price.
A quality per square yard.....	$0.80	$0.85
B quality per square yard.....	.70	.75
C quality per square yard.....	.55	.62½

The old duty on linoleum was 40 per cent. The new duty is 15 cents per square yard, and 30 per cent.; *i. e.*, the advance in the cheaper grades is *intended* to be greater than in the dearer, and *is so*. Without doubt this is a part of McKinley's benevolence to the poor. It should be added that linseed oil is one of the raw materials of linoleum, perhaps the most important of all the materials, and that this was McKinleyed up seven cents per gallon after it had been "Trusted" up a great deal higher.

It would have been an outrage on religion if McKinley had overlooked the clergy in his distribution of the benefits arising from higher prices of goods. That the clergy are not exposed to the degrading consequences of cheapness is made plain by a letter which has been sent to us by a clergyman, and which was addressed to him by E. O. Thompson, Clerical Outfitter and Vestment Maker, Ecclesiastical Warerooms, 908 Walnut Street, Philadelphia. The letter was written in reply to an inquiry respecting certain goods in Mr. Thompson's line, and it begins with these words:

> "The cost of cloths and clothing *has been raised at least 25 per cent. by the passage of the McKinley Tariff Bill.*"

To speak more particularly, the duty on those cloths, which was formerly 45 cents per pound and 40 per cent. ad valorem, is now 49½ cents per pound and 60 per cent. ad valorem. In order to do full justice to religion and make a neat job of it, McKinley raised the duties on church organs and on chimes of bells from 25 per cent. to 45 per cent. All this on the theory that cheap vestments make a cheap minister, and cheap organs a cheap church, etc., etc.

When the Mills Bill was under discussion two years or more ago, Congressman Fitch of this city, in the course of his speech on that measure, read a letter from a physician attached to one of our asylums complaining of the absurd and barbarous duty (45 per cent.) on microscopes. This gentleman was engaged in the study of diseases and disease germs, the microscope being a necessary tool for that work. He had sent to Jena, Germany, for an instrument costing $94 at the manufactory. On this he was required to pay duties to the amount of $42.30. Later he had occasion to order an "oil immersion lens," or microscopic objective, costing $80 at the factory, and on this he had to pay $36 to the Custom-house. This was the price charged by an enlightened Government to a man who was giving his services to an asylum gratis, and contributing as much as possible to the alleviation of pain and suffering among all his fellow-citizens by his investigations of the causes of disease.

The letter made some stir at the time, but was speedily forgotten. Now, what does the precious McKinley Bill do for microscopes? A letter from Jas. W. Queen & Co., dealers in "instruments of precision," No. 924 Chestnut Street, Philadelphia, to a professor of a college in this State, tells the story:

DEAR SIR: Replying to your favor of the 13th inst., which came to hand during the absence of the writer, of a few days, we are glad to quote you a net price on the one-twelfth oil immersion [microscopic objective] that you mention, of $42. *The cost is considerably higher under the new tariff.* [This costs in Germany $25.] We think that we could let you have one of these instruments within two months. We shall be much pleased if we can give you any further information that you may desire, and hope to be favored with your order. Very truly yours,

JAS. W. QUEEN & CO.

Referring to the McKinley tariff, we find, after a good deal of searching, that the new duty on microscopes is 60 per cent., and that, like many other contemptible swindles in the bill, it is hidden under the "similitude clause." Microscopes are not mentioned in the bill at all, but they are included in a paragraph which says that non-enumerated articles shall pay the same rate of duty as the enumerated articles that they most resemble—*i. e.*, the same duty as spectacle and eye-glass lenses, which have been advanced from 45 per cent. to 60 per cent. McKinley would probably say that this was done for the benefit of people having weak eyes, in order that they might share in the advantage of high prices, as set out in his Kalamazoo speech.

Silver seems to be going down by the run. The editor of the *Silver Dollar* ought to come to New York again and look into this. In the last issue of his paper he said he had visited this city, and had discovered a conspiracy among bankers and trust companies to depress silver. He proposed as a remedy and counter-irritant that the bankers and brokers of the West and South should "withdraw their accounts from every institution in New York that has thus conspired against silver, and place their money and their business with banks and brokers friendly to silver." As he did not give the names of the conspirators, he left the bankers and brokers of the West and South in a state of mental paralysis and indecision. More singular still, he said that "the names of these trust companies, bankers, and brokers who are engaged in this conspiracy should be printed under the head of TRAITORS in every newspaper in the land." And yet he did not print them himself. Is not he guilty of misprision of treason in withholding the names of the traitors?

The Maine newspapers are naturally much interested in the recent decision by the United States District Court for Kansas that the State Prohibitory Law of Kansas is null and void as regards liquor imported in "original packages," notwithstanding the passage by Congress of the Wilson Act. The Lewiston *Journal* tries to argue that the Prohibitory Law of Maine is valid in this respect, but the Portland *Press* confesses that it cannot see why the reasoning of the decision of the Federal court in Kansas is not fatal to the Maine statute. The Supreme Court of the latter State has already decided that the Maine law could not at the time of its enactment have applied to liquors in original packages, because it was beyond the power of the State to prohibit the sale of such liquors. Congress having since that decision given permission to the States to pass laws that shall prohibit the sale of liquor in the original packages, the question, in the view of the *Press*, is, "Has this permission of itself served to convert a law which the Supreme Court of Maine has decided not to apply to imported liquors in the original packages, into a law that does apply to this class of liquors? In other words, can the mere permission of Congress to the States to pass a broader law than they had the power to pass before it was given, broaden an existing law passed before that permission was given?" The *Press* cannot detect any flaw in the logic by which Judges Foster and Phillips in their recent decision held that it cannot, and, therefore, concludes that "the only way under the sun by which our Prohibitory Law can be made to apply to imported liquors in the original package is by its re-enactment by the Legislature."

Senator Edmunds so seldom expresses a public opinion upon current issues outside the Capitol that his emphatic remarks regarding the "original-package" question at Montpelier last week are of especial significance. The occasion was the annual meeting of the Vermont Bar Association, and the President of that body had requested the Senator to give his views on national legislation as affecting the rights of the States. Mr. Edmunds spoke briefly, but forcibly. After expressing his satisfaction that the subject had been brought up, he said: "It has been a hundred years since the National Government was formed out of the States and by the States, and for the first time in that one hundred years has risen a question as to the extent and scope of the functions that the States have hitherto exercised, and without the preservation of which the Union could not have been formed, for not a single State would have gone into it. We are told now that if the principle is carried out, it is not possible for a State without the consent of Congress (and how Congress ever got the power, except in the several instances named in the Constitution, I am unable to say)—that a State cannot without the consent of Congress regulate its own internal affairs. I don't believe that sort of doctrine is going to stand review in the courts." He proceeded to declare his conviction that "the people of the States should have the charge of the preservation of their own autonomy, whether it relates to traffic in drugs, dynamite, or intoxicating liquors. Whatever restraints and regulations each State chooses to exercise, it is as indispensable, I think, for the safety of the nation as it is for the safety of each State, that each State regulate for itself in relation to such matters; each State must govern itself, and must have its own different policies and social institutions; each should have the inherent right to take care of itself in respect of such regulations. But, after all," he added, "we need not give ourselves any great uneasiness. Though the Supreme Court has, in this respect, in my opinion, invaded the rights of the States, they are liable to review and revise their action, as they have often done before, and very wisely too."

The recent controversy over the color-line in Texas is of interest throughout the country. The Houston and Texas Central Railroad began to employ black men in various departments of its service. Some of the white employees struck, and S. E. Wilkinson, Grand Master of the Brotherhood of Railroad Trainmen, in their behalf, applied to Mr. Dillingham, the receiver of the road, for the discharge of the blacks. Mr. Dillingham flatly refused to comply with the demand. "The colored men," he said, "have rendered faithful and efficient service, and I feel it would be unjust to them, as it would to any other person, to turn them out simply to put others in their places." The question was finally carried before the Supreme Council of the Federation, and that body decided that Mr. Dillingham was right. A noteworthy feature of the incident is the fact that Mr. Wilkinson is a Republican and a Grand Army man, while Mr. Dillingham was a Confederate and is a Democrat.

The outbreak of the Mafia in New Orleans lends interest to the statement as to immigration just published by the Bureau of Statistics. During the month of September, 1890, the arrivals of Italians in this country numbered 3,205, against only 1,776 in September, 1889; and during the nine months ending with September 30 the immigrants from that land aggregated no fewer than 46,748, against but 20,118 in the corresponding period of last year. Hardly less desirable than the Italians are the Poles, who are now coming very rapidly, the arrivals from January 1 to September 30 being 14,821, against only 3,887 in the same months of 1889; the Hungarians, 17,777 this year, against 10,111 during the same months of last year; the Bohemians, for whom the figures are 5,424 and 2,070; and the Russians, 32,360 in the first nine months of 1890, against 27,240 in the same months of 1889. Here is a total in three-quarters of a year of 117,130 immigrants from the most backward nations of Europe, by far the larger part of whom represent the most ignorant, if not also the most depraved, class of their populations. How much such stuff as this can the national stomach digest without permanent harm?

No tributes to the character of the late Justice Miller of the United States Supreme Court are more significant or gratifying than those which come from the Democratic press of the South. He was an earnest Republican from the origin of that party until the day of his death, and is re-

ported to have said two or three years ago that he was praying that he might live until a Republican President could appoint his successor. Yet he never hesitated to take issue with a fundamental feature of Republican policy, and more than once, as in the case of the decision annulling the Civil-Rights Act for unconstitutionality, threw the whole weight of his great influence against measures carried through Congress by his party. His arguments in such cases were so unanswerable that the Republican leaders, whose policy he had helped to overthrow, could not gainsay them, while the impartiality which his course evinced commanded the hearty endorsement of the Democrats. Happily, during his last years he received abundant evidence of the high esteem in which he was held by his fellow-citizens of both parties in all parts of the country.

The eminence of Justice Miller emphasizes the importance of the duty laid upon the President by his death. The appointment of a Judge of the highest Court is always a great responsibility, but it seems the more serious when the place to which he succeeds has been filled for nearly a generation by one of the greatest ornaments of our judicial system. The story is current that President Harrison wishes to give the office to his old law partner, Attorney-General Miller. He was credited with the same disposition at the time of Justice Matthews's death last year, but the protests of Republican newspapers were so numerous and earnest that he was dissuaded from the plan of putting so commonplace a person on the bench. We are glad to see that protests of the same sort are again made. The Philadelphia *Bulletin*, for example, says: "Harrison's judgment in such matters is entitled to a good deal of respect; but in view of the fact that the Attorney General's reputation as a lawyer was limited at the time of his entrance into the Cabinet, and that he has had no opportunity whatever for performing any service that would enable his countrymen to form an estimate of his capacity, it is certain that his nomination at this time would not command popular approval, and might encounter serious opposition in the Senate."

The loss of the Eccles election in England by the Tories, who have held the constituency firmly since Mr. Gladstone took up the Irish Home Rule, after four years' observation of the Balfour experiment in Ireland, and in particular with the Tipperary trials fresh in the minds of the voters, is a crushing blow for the Ministry, and may hasten a dissolution. Nothing has more clearly brought out the nature of their experiment than these Tipperary trials. The men who constitute the court which was to try Dillon and O'Brien are removable magistrates chosen from one class of the community, and generally ill-educated men who have failed in life. They are not simply committing magistrates either, who conduct preliminary examinations. They are judge and jury all in one, who try and condemn to ignominious punishments public men for words spoken on the platform. Moreover, before conducting these trials they head the police who disperse the meetings at which the words are spoken. One of them, named Shannon, who sits in the Tipperary case, not only is a violent partisan, but has had a personal row with Dillon, and led the police in an attack on a meeting at which Dillon spoke. His presence on the bench under these circumstances was naturally objected to by the defendants, but he refused to withdraw, and is sustained in his refusal by the Government and the English Tory press. It is very much—but much worse—as if Inspector Byrnes, after dispersing a labor meeting, and having a hand-to-hand fight with the orators, were then to open court and try them himself for language inciting to violence, and sentence them to the penitentiary. As an illustration of the way in which this sort of thing weakens all over the country the traditional respect for the principles of free government, the *Saturday Review*, endorsing Shannon, says the reason the defendants objected to being tried by him was "that he knew too much about their guilt."

The grand manœuvres of the troops in the North of France this fall have raised some very curious and important questions in military science. The use of the smokeless powder deprives strategists in a great measure of one of the chief means of determining an enemy's position. In this respect it carries back the art of war towards the primitive times when men fought with arrows. Many things that lately were comparatively of but little importance in attracting the enemy's attention must now be looked after and avoided. Some discussion is now going on about uniforms: for example, Does the color red more than others catch the eye at a considerable distance, as has been believed? Late experience seems to show that either very light or very dark colors are more easily seen than red in such a case. In the French manœuvres often the battalions of chasseurs could be made out when infantry could not; and the busts of the men clad in their dark jackets were discernible when their heads and legs could not be seen. This, of course, was at great distances; below 1,000 or 1,500 metres it made little difference. Still, since battles are likely more and more to be fought at long range, red uniforms may be found to possess some advantages. In our civil war the red trousers of the Zouaves were, we believe, looked on with disfavor as offering too good a target for the enemy, and also as inducing him to aim lower, and so avoid overshooting. But this was at rather close quarters. More than of anything else soldiers are likely to learn to rid themselves of everything white and of everything that glitters. Often in the Nord a sparkling line could be made out in the distance where nothing else could be distinguished. This was caused by the flashing of officers' sabres; and from their number and disposition a very good guess could be made as to the importance of the opposing force. Sabres and bayonets will have to be bronzed in future, as well as camp utensils; tents, also, must be no longer white, nor the men's havelocks, nor officers' pugarees. Apropos of these questions, which the *Temps* has been discussing, a correspondent writes to it to point out that it was precisely because its color attracted less attention, even under the shining skies of Italy, that Garibaldi chose the red shirt for a uniform for himself and his men.

It is no secret that, ever since 1864, the chief desire of all good Danes has been to regain possession of the northern portion of Schleswig, which, in spite of Germany's determined efforts, has remained true to the mother country. Southern Jutland, as the Danes persist in calling it, is as dissatisfied under German rule as Alsace and Lorraine. During his visit to Fredensborg this summer, it is reported that the Kaiser referred with regret in a conversation with the King to his unpopularity in Denmark, whereupon the King frankly stated its chief cause, and said that the Kaiser would win the gratitude of a whole people by returning the Danish portion of Schleswig. The Kaiser replied that the annexation had occurred during his childhood, and that besides nothing could be done without the consent of the Reichstag. That Germany would voluntarily surrender one of her richest provinces is, of course, out of the question, and therefore a year ago the Danish Government formed a plan for its recovery by barter. The Danish Minister at St. James was instructed to treat with England for the exchange of the Danish West Indies for Heligoland, which in turn was to be made the price for Southern Jutland. The negotiations fell through, in consequence, it is said, of the Minister's procrastination, and, as is known, Germany received the coveted little island directly from England.

The truth of this rumor rests upon the sudden recall of the Minister for no apparent cause, after a service extending over many years, and upon the fact that it emanated from the *Berlingske Tidende*, the Government organ, whose statements are almost invariably to be depended upon. The nature of the islands, too, and the advantage to England of their acquisition, lend it additional color. The islands of St. Croix, St. Thomas, and St. John, forming the Danish possessions in the West Indies, have a total area of 118 square miles, and a population, according to the census of 1880, of 33,763. Their exports to Denmark in 1887 amounted to 317,000 kr. (say $85,600), and to the United Kingdom £24,660 (say $135,000), while their imports in the same year from the latter amounted to more than $500,000. The exports consist of unrefined sugar and the imports of coal and cotton goods. The islands are admirably governed, and in point of order and prosperity are in marked contrast to many of their neighbors. Their situation with respect to the English islands of Antigua, St. Kitts, and Jamaica would make them of special value to England, and that country would no doubt regard their acquisition as a decided advantage both commercially and politically, for which Heligoland would seem but a very small price.

THE NORTH IN THE CENSUS.

THE population of each of the Northern States and Territories has been given out by the Census Office. The figures announced are subject to revision, but unless some extensive recounts are ordered it is not likely that they will be substantially changed. The following table gives the population in 1890 and 1880 of each of the Northern States and Territories, with the increase and decrease and the percentage of increase or decrease:

State or Territory.	Population, 1890.	Population, 1880.	Increase.	Percentage of inc.
Arizona.....	59,691	40,440	19,251	47.60
California....	1,204,002	864,694	339,308	39.24
Colorado.....	410,975	194,327	216,648	111.48
Connecticut..	745,861	622,700	123,161	19.78
Idaho.....	84,229	32,610	51,619	158.29
Illinois.....	3,818,536	3,077,871	740,665	24.06
Indiana.....	2,189,030	1,978,301	210,729	10.65
Iowa.....	1,906,729	1,624,615	282,114	17.36
Kansas.....	1,423,485	996,096	427,389	42.91

It appears that there has been an increase in every Northern State and Territory except Vermont and Nevada. In the former the decrease is almost inappreciable, but in the latter it amounted to 28.81 per cent. of the whole population. Nevada, which has been a State more than a quarter of a century, has to-day fewer inhabitants than any other State or Territory in the Union. It has one United States Senator for every 22,164 persons, and New York one for every 2,990,967. The absolute increase has been greatest in Pennsylvania, which, during the last decade, as well as during the two which preceded it, has grown more rapidly than New York. After Pennsylvania come New York, Illinois, and Nebraska in the order named. The largest percentage of increase is shown by North Dakota, which is followed by Washington, Montana, and South Dakota.

While the absolute increase in the North as a whole has been greater than during any previous decade, its percentage of increase has been less, falling below even that of the war decade of 1860 to 1870. The following table will show the population of the North at each census, the increase during the decade, the percentage of increase in the North, and the percentage of increase in the country as a whole:

Census.	Population of North.	Inc. during decade.	Percent. of inc. of North.	Percent. of inc. of country.
1890....	40,079,913	8,609,078	27.36	*24.94
1880....	31,470,835	6,921,777	28.19	30.07
1870....	24,549,056	5,421,108	28.34	22.63
1860....	19,127,948	5,600,728	41.41	35.58
1850....	13,527,220	3,798,298	39.04	35.87
1840....	9,728,922	2,716,523	38.74	32.67
1830....	7,012,399	1,863,376	36.19	33.55
1820....	5,149,023	1,390,024	36.98	33.07
1810....	3,758,999	1,072,417	39.92	36.38
1800....	2,686,582	718,542	36.52	35.10
1790....	1,968,040			

"North" in the above table is, of course, used in a political and social rather than in a strictly geographical sense, and includes all the country except the sixteen former slave States and the District of Columbia.

During the past decade the foreign immigration has amounted to 5,245,530. The census of 1880 showed that more than nine-tenths of the entire foreign-born population then in the country resided in the Northern States and Territories. There has probably been little, if any, change in this respect in the last decade. It may therefore be assumed that the North between 1880 and 1890 gained from immigration about 4,700,000 inhabitants, or 15 per cent. of its population in 1880. If such be the case, the gain from natural causes cannot have exceeded 12½ per cent., and the ratio of natural increase throughout the North as a whole has now fallen below that of Great Britain, in which the statistics of births and deaths show that the rate of natural increase is about 14¼ per cent. per decade.

With the single apparent exception of the decade from 1870 to 1880, the North has increased at a more rapid rate than the country as a whole. We say apparent exception, because there is little doubt that much of the increase in the population of the South revealed by the tenth census was due to the defective enumeration of the population of that section in 1870.

For the purpose of studying in detail the growth of the North at different periods of our national life, it will be found convenient to divide the States and Territories making up that section into five groups. The first of these includes the New England States; the second the Middle States of New York, New Jersey, and Pennsylvania; the third the five States, viz., Ohio, Indiana, Illinois, Michigan, and Wisconsin, which have been formed out of the old Territory northwest of the Ohio River. This third group of States we may call the Northern Central. The fourth group is composed of the States, and the Territory of Oklahoma, lying west of the Mississippi and east of the Rocky Mountains. These States, viz., Iowa, Minnesota, the Dakotas, Nebraska, and Kansas, and the Territory of Oklahoma, are all predominantly agricultural. We may call them the Northwestern States. The fifth and last group includes all the States and Territories of the Rocky Mountains, the Great Basin, and the Pacific Coast. The following table will show the percentage of the entire population of the North residing at the date of each census in each one of these five groups as above defined:

PERCENTAGE OF TOTAL POPULATION OF THE NORTH RESIDING AT EACH CENSUS IN EACH SECTION OF THE NORTH.

Census.	New England States.	Middle States.	Northern Central States.	Northwestern States.	Pacific and Mountain States.
1890.....	11.71	31.61	33.55	15.62	7.51
1880.....	12.74	33.36	35.61	12.67	5.62
1870.....	14.21	35.89	37.17	8.70	4.03
1860.....	16.39	39.00	36.21	5.16	3.24
1850.....	20.17	43.61	33.44	1.47	1.32
1840.....	22.93	46.52	30.06	.44	
1830.....	27.88	51.16	20.96		
1820.....	32.23	52.38	15.39		
1810.....	39.16	53.60	7.24		
1800.....	45.89	52.21	1.90		
1790.....	51.29	48.71			

At the first census the New England States, the first of the Northern States settled by Englishmen, still contained more than half of the entire population of the North. There were already some few settlers on the right bank of the Ohio and clustered around the old French forts and trading posts in the Illinois country, but they do not figure in the census of 1790. At that time the New England and the Middle States together with the South made up the United States. The rapid settlement of the back country of Pennsylvania and New York (the latter largely peopled by New Englanders) by the time the second census was taken, deprived the older group of States of their supremacy in point of numbers, the plurality passing to the Middle States and remaining with them for seventy years, when it followed the course of empire westward, and has since been held by the States of the Northern Central group. For four decades, from 1800 to 1840, the Middle States had within their borders more than half the population of the entire North. By 1840 the growth of the trans-Allegheny States had been so great that their population, together with that of the New England States, outnumbered the inhabitants of New York, New Jersey, and Pennsylvania. It does not seem at all likely that any one of the groups will ever again contain more people than all the others combined. The New England States had their maximum percentage of the total population of the North in 1790, the Middle States in 1810, and the Northern Central States in 1870. Since these respective dates these groups have steadily lost ground in percentage of the entire population. For the last twenty years it has been the two

*Decrease.

*Percentage of increase in 169 supervisors' districts. Six districts estimated.

groups west of the Mississippi which have been gaining at the expense of the other three. Almost a quarter of the entire population of the North now live west of that river, beyond which as late as half-a-century ago not one-half of one per cent. of the inhabitants could be found.

WOMEN IN MUNICIPAL AFFAIRS.

THE refusal of the audience at the County Democracy meeting held to ratify the municipal nominations, to listen to a speech on the tariff, was one of the good signs of the times. Another and better one is the open published participation in the canvass of a considerable number of women known for their activity in the field of good works. These signs are good because they indicate the gradual disappearance of the notion that municipal administration must necessarily be party administration, and that no one can make himself heard on municipal questions without being justly accused of "mixing himself up in politics." We cannot have a good city government until this notion is destroyed. It is the great buttress of our local corruption. It will be observed that all corruptionists studiously keep it alive as an essential to the permanence and success of their business. They want to keep the city revenues as stakes to be played for exclusively by professionals, and therefore treat all comments on the game by outsiders as a gross impertinence, especially if the outsiders should happen, as in the case of clergymen or women, to be persons who usually are occupied mainly with the moral aspect of affairs.

As a matter of fact, the interest of women in municipal reform is much greater than that of the men. They may be truly said to be the only portion of our population who have not lost that sound tradition of municipal government which makes the condition of the city the first and great concern of the inhabitants as voters. To women far more than to most men, the objects of municipal administration, the condition of the streets, of the sewers, of the school-houses, of the hospitals and almshouses, and of the police, are of daily and absorbing interest. Whatever improvement has taken place in the condition of Bellevue Hospital, for example, and of the hospitals on Blackwell's and Hart's Islands during the past twenty years—and it is very great—has, as a rule, been due to women's initiative and labors. No more destructive attacks on municipal abuses, in one particular neighborhood, have been made during the past four or five years, than those of an association of ladies, mainly Jewish, up town, known as the "East Side Association." Everything that concerns health and concerns education occupies the minds of women ten times more than it occupies the minds of their husbands and fathers. Their standards of administrative efficiency, too, are 50 per cent. higher than those of men. That remarkable case of municipal maladministration—the appointment of "Fatty" Walsh to be Warden of the Tombs—could not possibly have been perpetrated by women; it *was* perpetrated by highly respectable men. There is, we are sure, no woman of respectable character or fair intelligence in this city who would not have been shocked by it had it been proposed to her. She would have felt it in the very marrow of her bones as a discredit to American civilization, and have felt even still more its gross inhumanity. Women really bring to the consideration of municipal questions a loftiness of ideal and a readiness to take some action about abuses, which is only found in an occasional business man.

This is mainly due to the absorbing influence on men of professional and business pursuits. Ninety-nine men out of a hundred in this city to-day start in life with the idea that unless they make a good deal of money, the world will consider their lives a failure, and in order to achieve this sort of success, therefore, it is human and natural that they should be ready to put aside all other concerns. On this fact Tammany builds most of its arrangements, and has always done so. And these arrangements are so perfect that after "the Organization" has secured one term of power, the difficulty of arousing the male portion of the community against it is very great, as we have seen during the past two years in the present case. One of the first things Tammany sets about when it gets into office—after settling the division of the spoils of office—is the deadening of the public conscience. The lawyers—not, with some distinguished exceptions, by any means a public-spirited body in these days, we are sorry to say—it subdues through a corrupt judge or two, through the Sheriff's and Register's and County Clerk's offices. The leaders of the profession it soothes or blinds by all sorts of civilities; the juniors it terrifies by threatening to make their nascent practice tedious or costly. Some of the younger simpletons it seduces by small offices which appear to be the opening of a glorious political career. The rich of the business world, whom its scandals would otherwise disgust, it placates through low assessments and great obsequiousness. It secures the silence or condonation or incredulity of a portion of the press through business favors, or a personal acquaintance with the publishers, or the judicious distribution of little spoils among the reporters and contributors.

In one way or another, in short, Tammany is always, by a year's tenure of office, able to create and diffuse as many strong presumptions in its favor as will give an air of expert knowledge to the poor devils whom it picks up for office among the liquor-dealers, and pugilists, and loafers, so that any small political adventurer, however ignorant or corrupt, may rise up before the astonished community as an authority on paving, or draining, or sanitary matters, or general municipal administration. We have at this moment a Commissioner of Public Works whose sole preparation for the place was service as a clerk in a justice's court and in the County Clerk's office; a Mayor who got ready for his place in "road-houses" and on race-courses; a Deputy Commissioner of Public Works who got ready for his duties by keeping a "dive," and so on nearly through the whole list. *Men* get reconciled to these things very easily, as we know through actual experience; women do not; and let us add that, in our belief, if women's attention were directed to municipal matters, if they made a study of municipal administration, as part and parcel of the means of home comfort and safety, men could not get reconciled so easily. The indifferent, or despondent, or mocking view of attempts at municipal reform would soon cease. Young men of intelligence would not, as many do now, fail to register, and make a holiday of election day, to be spent in the country. The women may not know much about the tariff, or about foreign policy, or transportation, or State rights, and (let us make this concession, for argument's sake, to the opponents of women suffrage) may, owing to the distance of these subjects in their field of mental vision, be incapable of learning; but in the field of municipal government they are as competent as they are in their own kitchens or drawing-rooms. They know a "Jake" or "Mike" when they see him far better than a man does, and hate his works and ways with a sacred virulence of which most men are incapable.

At all events, nothing is to-day so important as to extend as far as possible, among all classes of the population, interest in municipal matters as really household matters. There is no mystery about them whatever, though the practical politicians try to surround them with a good deal. What the city needs is something within the meanest comprehension. Why the city cannot have what it needs is the problem with which we are now struggling. In capacity for dealing with this the educated women of the community are really as competent as the great bulk of the men. In fact, they are only surpassed in this point by the few lawyers like Mr. Scott who have made a special study of the legislation affecting the city, and have carefully watched its operation. But, more than all, they bring to the work of trying to make things better an enthusiasm and hopefulness at which New York men are disposed to sneer, but without which our Augean stables will never be cleaned out.

MUTATIS MUTANDIS.

ONE of the tales of the ingenious and inimitable Bastiat had for its moral: What we see and what we do not see. The son of Jacques Bonhomme carelessly smashes a pane of glass. The father is angry, but the sympathetic neighbors finally comfort him and themselves with the reflection that it at least gives a job to the glazier and makes trade good. The glazier mends the pane and pockets his six francs, blessing the scapegrace son. That is what we see. What we do not see is that the citizen, having spent his six francs, cannot employ the shoemaker or the carpenter, as otherwise he very likely would have done. What we see is the immediate employment of one person; what we do not see is the possible employment of other persons and the saving in wealth. This tale has long done good service in the hands

of the opponents of protectionism. What we see is the protected factory, with its hundreds of workingmen; what we do not see is the tax on every consumer in the shape of an increased price, and the waste of capital in unproductive industries.

The suddenness with which the McKinley Bill was put into operation has, for the time being, reversed the position of the story-tellers. The free-trader can now say: What we see is the increased price of many articles of consumption; what we do not see is the increase in the wages of the American laborer. What we see is the embarrassment of the importer of foreign commodities; what we do not see is the expansion of American manufactures on the basis of dear raw materials. What we see is Trusts and combinations to keep up prices; what we do not see is competition among home producers which will lower prices. What we see is the farmer paying higher prices for what he uses; what we do not see is how he is going to dispose of his surplus abroad when we refuse to take foreign commodities in exchange.

Another tale was the "Petition from the manufacturers of candles, lamps, chandeliers, reflectors, snuffers, extinguishers; and from the producers of tallow, oil, resin, alcohol, and generally of everything used for lights," that the Legislature would take measures to exclude the competition of sunlight in order that there might be an increased demand for home products. We have reversed that tale also. McKinley and his colleagues in the Legislature have excluded competition (the gifts that were more or less gratuitous), but they are greatly surprised that it has resulted in increased prices. They complain bitterly that the petitioners, after having obtained their petition, should benefit by it. But what did they expect? Did they not know that raising the duties on commodities and putting the law in operation with one week's notice placed a monopoly value on the supply of such commodities in the hands of the merchant? Can we blame the seller that he immediately raised the price of a commodity which he could not replace except at an increased price? Can the people who exclude the light of the sun complain when the price of tallow goes up?

But, leaving Bastiat, there are some more serious tales of political economy which do not need to be reversed in the telling, but which will repeat themselves with the certainty of natural law. One teaches that when you are increasing taxation, you should go slowly. An old tax to which people have adjusted themselves is often easier to bear than a new one arranged on a more scientific basis. Steps towards reforming taxes should be slow and tentative, lest existing economic arrangements be disturbed, just expectations be disappointed, and uncertainty be introduced into business affairs where certainty above all is desirable. What shall we say, then, of legislation which suddenly raises the import duties on a great variety of articles, often arbitrarily, and in many cases obscurely and indirectly, so that no one can make calculation for the future? There is a flavor of brutality about the statesmanship which will recklessly disarrange the existing order of things, and answer complaints by assuring the people that cheapness is a bad thing.

Finally, there is one tale which political economy has been repeating ever since the time of Tooke, and of which we are certainly about to have an illustration. That is, that when prices rise, the price which rises slowest and latest of all is the price of labor, viz., wages. This has been proved over and over again. To increase the prices of commodities, all the dealer has to do is to mark them up or revise his list. Of this we have had abundant examples during the past three weeks. It has not come to our ears, however, that any employer has put up the wages of his employees. Neither have we heard of any general revision of the salaries of clerks, book-keepers, and school-teachers, nor of the fees of physicians and professional men. It always requires a struggle to force up wages or to readjust fixed salaries. But every wage-earner and every salaried man is a consumer, and, while his income account remains the same, his expense account is inevitably growing larger. Neither does the dealer seem to profit. While his present stock lasts he gains, but as soon as he replenishes it, he is simply doing the same business on a scale of increased prices, that is, with an extra amount of capital needed. All these things are truisms in political economy and have been well known for many years. But it is seldom that a community has had them brought so vividly before its eyes. Every man who keeps a cash account, and every wife who keeps a careful eye on the household expenses, can see the effect of the tariff in the increased expense account on the one side and the stationary income account on the other.

THE MORMON MUDDLE IN UTAH.

SALT LAKE CITY, October 13, 1890.

THE expected has happened: the Mormon leaders have outwitted the Gentiles, and the politicians are in a quandary. The Idaho test-oath excluded from the polls the members of all organizations which enjoin polygamy as a duty and set up their own edicts as higher than the laws of the land. But it is difficult to see why the mass of the Mormons cannot now take the Idaho test-oath without fear of conviction for perjury.

After the favorite method of ecclesiastical casuists, the Mormon leaders have proved from the writings of their prophet that, under the circumstances now existing, it is profitable for the Saints to yield obedience to the powers that be, and lawful to abstain from polygamy until the truth shall have made further headway in convincing the nations. Under the present stress, President Woodruff counsels the faithful to abstain from the practice of polygamy, and the General Conference of Latter-Day Saints sustains him in his action by unanimous vote.

The reasoning is ingenious. The Lord, speaking through Joseph Smith fifty years ago, said:

"Verily, verily, I say unto you, that when I give a commandment to any of the sons of men to do a work unto my name, and those sons of men go with all their might, and with all they have, to perform that work, and cease not their diligence, and their enemies come upon them, and hinder them from performing that work; behold it behoveth me to require that work no more at the hands of those sons of men, but to accept of their offerings."

It is on this basis, according to George Q. Cannon, that "President Woodruff has felt himself justified in issuing this manifesto." And Woodruff himself justifies his conduct by numerous precedents:

"The Lord required us to build a temple in Jackson County. We were prevented by violence from doing it. . . . A great many things have been required of us, and we have not been able to do them, because of those that surrounded us in the world. . . . The Lord does not require at our hands that we cannot do."

Such were the specious arguments by which the Conference of Latter-Day Saints were convinced on the 6th of October.

Of course the Gentiles doubt the sincerity of the Mormon leaders, but the politicians are puzzled to know what to do about it. It certainly would be a questionable proceeding to require even a Mormon to swear that he never would do a certain thing, even though he should in time convince the majority of his fellow-citizens that it was a right and laudable thing to do. And so, according to last reports, Judge Zane even is accepting their oaths and allowing Mormons to become naturalized. The result can scarcely be different in respect to the Idaho test-oath.

It is evident that the general public is too oblivious of the fact that Mormonism is deeply rooted in religious sentiment, mistaken though it be. A few months ago a lady in whose judgment I have great confidence, attended one of their typical "female prayer-meetings." There were present many of the elderly women who had endured at the outset the hardships formerly connected with crossing the plains. Their exhortations to faithfulness were earnest and their reminiscences touching. As the meeting drew to a close, the stranger was asked to add any remarks she chose. This opened the way for asking them questions as to their inner feeling with reference to polygamy. To a woman they all defended it most vigorously, and were profuse in rendering reasons in justification of it. As to their relations to the Government, they said that of course they must submit for the present to the law of the land, but they were confident that eventually the world would be convinced of the truth of their arguments. We may pity them as much as we please, and regret that they have read so poorly the lesson of the world's experience with polygamy, but of the religious sincerity of the mass of the Mormons there can be no reasonable doubt. In attending a Sabbath-school, the infant class was found to be under the care of a granddaughter of the late President Taylor. After the familiar methods now in vogue in such schools, she was catechising them as to the work of the faithful members of their sect. "Where is such a one?" (mentioning his name). "A missionary in California," was the prompt reply. And so with the round of their missionaries in all the world. Every child knew the answers. "And where is such a one?" (mentioning the name of one in their neighborhood who had been arrested for polygamy). "In the *pen*," was the prompt reply. Something more than drastic political methods is necessary for the correction of an evil thus rooted in the consent of all practising it.

It is with regret, therefore, that we have seen a recent religious opponent of Mormonism urge that the only cure is to come from action of the United States Government. Already

the Government has confiscated $750,000 worth of Mormon property, and this is to be sold for the benefit of the school fund of Utah. But all this is of little avail so long as Mormons control the schools. He would, therefore, have the schools all turned over to the general Government, and Mormon teachers entirely excluded from them. To encourage Gentile immigration, he would have the general Government inaugurate vast irrigation schemes, and would have the missionary societies prepare to close their schools and devote their strength to petitioning Congress to do all the educational work of the Territory.

A greater mistake could not be made. It is not so that this kind of unclean spirits is cast out. In view of the deep-seated nature of the delusion, the Christian public is not to expect so easy a cure or such ready relief from its own heavy responsibility in the matter. As illustrating the situation, it is instructive to remark that the female singers furnishing music for the Protestant church which I attended yesterday were both of them Mormons.

It is a mistake to suppose that the Mormons are utterly impervious to the ordinary influences affecting the beliefs and practices of men. In attending the services yesterday at the Tabernacle, I was of course impressed by the great audience of well-dressed and intelligent people, the grand music, the real ability of the addresses, and the manifest religious fervor of the congregation. But for the respectful references to the "Prophet Joseph Smith," one could well have believed himself in a Campbellite or Methodist meeting. For the most part the arguments and exhortations were based on the Bible, and the people responded to the sentiments of which they approved with a universal but subdued "Amen."

Nevertheless, the audience, estimated at 4 000, was scarcely more than half what it used to be when the city was much smaller than now. Salt Lake City is having a "boom." Real estate has, in three years, increased twenty-fold in nominal va ue. Other Mormons besides the bishops and elders are becoming wealthy. The same influences which are so rapidly ameliorating the rigors of the traditional theology among the Christian sects are dispelling the illusions of Mormonism. Mining interests are rapidly drawing the attention of outside capitalists, and the exclusiveness of past years is now effectually broken up. If there were a general United States law regulating marriages and making polygamy a crime, it would seem better to admit Utah as a State, and throw upon the Gentile residents the political and other responsibilities which it is wholesome for such a large and intelligent body to bear. The evils of polygamy are becoming so manifest in the second and third generations that the Mormon women cannot long remain in the present state of delusion, and the Gentile element is already present in the large centres in sufficient force to afford protection to such as revolt against the tyranny of the Mormon hierarchy and, what is even more powerful, the Mormon public sentiment.

G. Frederick Wright.

AMERICAN ORIENTAL SOCIETY.

Princeton, October 23.

The fall meeting of this Society was held in the Murray Hall of the Philadelphian Society, Princeton, on Wednesday afternoon and Thursday morning. The President, the Rev. Dr. Hayes Ward, was in the chair.

President William A. P. Martin of Peking, China, read a paper on "Chinese Ideas of Inspiration." Dr. Martin emphasized the necessity of clearly distinguishing between the materialism of the Taoist, the idealism of the Buddhist, and the ethical Saduceeism of the Confucianist. The Taoist believes that those who attain immortality form a pantheon which rules over the destinies of man. From this belief a system was evolved very similar to our spiritualism. Only the spirits of a favored few are able to resist the inroads of decay and to defy destruction. Of these the bodies become spirit-bodies and take on new powers. They have the possibility of spirit manifestation and of renewing their intercourse with human beings, especially when in an hypnotic state. One of the chief sources through which spirits manifest themselves is the magic pen, a precursor of the planchette. A large literature, supposed to have been communicated in this way, has grown up which claims to be a revelation.

The Buddhists in China have adopted this practice of procuring spiritual manifestations, notwithstanding the many protests against the great forgeries committed in its name. For the faithful, however, there is no form of existence higher than that of Buddha, no authority beyond his. For the Buddhist the only question that remains is the authenticity of the writings ascribed to the founder of his religion.

Confucianism is really *the* religion of China. Its canon consists of nine books, pre-Confucian and post-Confucian. To the former belong the four books edited by the great master, and the 'Ti-Ki,' the book of rites, which preserves the traditions of earlier ages. Only two sketches therein are claimed to be of supernatural origin. The one is the table of mystic symbols, said to have been brought from the waters of the Yellow River on the back of a dragon-shaped horse. These are the figures on the shell of the tortoise, which ceased to be consulted only when the book was accepted as divine. The other sketch is the outline of a political philosophy, called the *Hung-fan*, the "Great Plan," which was brought to the Emperor Zu from the waters of the river Loh by a similar monster. Both stories are endorsed by Confucius. The 'Book of Odes' (1000 B. C.) goes further, and says that God reveals his will through *man*, and raises up teachers. These are the *Sheng-jin*, the "wise men," whom posterity honored as divine messengers. Confucius is the highest of them all. He himself is confident that his teaching comes from heaven, but not by supernatural means. To the Chinese, Confucius is not a god but a perfect man; not a prophet, but a constant manifestation of ideal excellence. As such his writings are sacred, and not to be altered.

Prof H. Collitz (Bryn Mawr) presented an able contribution to the phonology of the European and Indo-Iranian languages in a paper entitled "On the Existence of a Primitive Aryan *sh*." Dr. A. V. W. Jackson (Columbia), in his paper "On Avestan *ayôkhshusta* (molten metal) in the Gathas," showed by a reference to Bundahish xxx, 17-32, that by this word Zoroaster meant not the sword, but a fiery flood of molten metal. He taught that, at the Judgment, this metal would cleanse the world. In this way we can explain why in later times Khshathra Vairya presided over metals. In another paper, "Avestan Notes," Dr. Jackson suggested a parallel from the Gathas to the thought "weighed in the balance and found wanting." Dr. W. R. Martin (Trinity), in a paper on the "Position of the Fahlavi Question," traced the development of the study of this important question, dwelling particularly upon the method to be pursued.

Prof. W. D. Whitney (Yale) sent a critique of Boehtlingk's edition of the Upanishads, in which he showed the importance and the trustworthiness of this edition of the Sanskrit classic. Prof. M. Bloomfield (Johns Hopkins) explained an obscure passage in the funeral hymn Rig Veda x.16,13—14, by copious allusions taken from the later literature. In a paper "On Mourning Women in the Atharva Veda," Prof. Bloomfield showed that there were good grounds for assuming that professional mourners existed as early as Vedic times. The Rev. Joseph K. Wight (New Hamburgh, N. Y.) sketched the views of Brahmanism and Confucianism in regard to the origin of the universe, in a paper "On Early Cosmogonies of India and China."

Prof. M. Jastrow (University of Pennsylvania) spoke "On the Founding of Carthage." He dwelt on the important part played by Cyprus in the founding of this city, and endeavored to fix the date at which it occurred. Prof. Jastrow also submitted some advanced sheets of an Assyrian glossary prepared by the Semitic Seminary of Johns Hopkins University. Prof. G. K. Moore (Andover) explained that the usual translation of *Canaan*, 'lowland,' rested simply upon an old error. Rosenmüller had been misled by the Latin word "demissus" in Golius's lexicon. In 1833 Gesenius adopted the explanation of Rosenmüller, and it has in this way become a fixed tradition in our dictionaries. Prof. Moore likewise explained that the place in old Judea called *Qiryath Sepher* (Josh. xv, 15, etc.) and translated 'Book-city' should be read *Qiryath Sephar*, *i. e.*, 'Border-town.' Prof. W. R. Harper (Yale), in "Notes on the Syntax of the Tiglath Pileser Inscriptions," gave a study of the syntax of these inscriptions, as compared with the syntax of the Sennacherib (Taylor) inscription. Prof. Harper dwelt specially on the accusative and the attributive adjective. The accusative ending he finds used almost with the rigidity of the Arabic. The use of the adjective is also very rigid. There is little or no disagreement between adjective and substantive. The number of cases of a noun in the accusative followed by an adjective in the accusative is strikingly large. Rev. W. Muss-Arnolt (Johns Hopkins) sent some "Notes on Assyrian Etymologies"; Prof. J. D. Davis (Princeton) a paper "On the Moabite Stone and the Hebrew Records." Dr. Robert F. Harper (Yale) presented a criticism on Abel and Winckler's 'Keilschrifttexte zum Gebrauch bei Vorlesungen.'

After a lengthy discussion it was decided that it would be more advantageous for the Society to meet but once in the year, and for a longer period of time; and, if possible, to have the business meeting held at other cities in addition to Boston. The question of applying for a national charter was left undecided, as the members of the Society were divided as to the advisability of such action.

At the evening social gathering at Prof. Marquand's house, Dr. Cyrus Adler spoke on the proposed exhibit of Oriental life and history at the coming Fair in Chicago. On the motion of Prof. R. Gottheil the following minute was unanimously adopted: "The American Oriental Society has heard with pleasure that the Committee of the World's Columbian Exposition intends to make an exhibit of Oriental life and history, and cordially offers any scientific assistance in its power."

The Society will meet again in May next at Boston.

R. J. H. G.

ITALY IN THE TRIPLE ALLIANCE.

Rome, October 15, 1890.

Your Paris correspondent, in a letter which is now a month old, but is as true to-day as it

was then, says, "The triple alliance professes to be purely defensive"; and the refrain occurs so often in French journalism in one shape or another, and alternates so continually with distinct intimations that the alliance is regarded in France with the opposite conviction, viz., that it is intended as an instrument for the suppression of that country, that it is evident that the French really believe it and hope to make the rest of the world, out of the alliance, take their view of it. Probably no worse case of deliberate and persistent self-deception has ever been witnessed by journalism or politics. Living in the circle of the alliance as I do, and continually in intercourse with a certain number of Italian publicists who certainly know the intentions and scope of the league with the central Powers, I am competent to put the Italian case, if not with authority, yet with so much *connaissance de cause* that I am sure that if Crispi were asked to do it, he would follow the same line of demonstration if he cared to notice it.

The peace of Europe is in danger from two probable aggressive movements, and no more. The first and most menacing of these is the attempt of the Russians to regain their control of Bulgaria, Servia, and the South Slavic tribes generally, and the other is the determination of France to recover the lost provinces of Alsace and Lorraine. I defy the worst alarmist in France to point out any other tendency which can be considered as a present danger for Europe. The former threatens the destruction of Austria, for nothing is clearer than that if Russia once gets established in the Balkan, it is only a question of time how she shall undermine and destroy the polyglot empire. This, *per se*, would not cause so great grief in the Western world were it to stop there; but when the general character of Russian propaganda is considered, and that it has already to a very large extent undermined not merely Herzegovina and Bosnia, but the original Serb provinces of Austria-Hungary, so that it is a boast of the Russian agents that the Serb regiments in the army will go over to the Russians if it comes to a war between the empires—and that this game, once played successfully, is certain to go on till the German and Slav elements are face to face—we come in sight of a conflict which is fraught with greater dangers to European peace than any which is now above the horizon of actual politics. Russia is in effect to-day an Asiatic country; but with her entry into European politics at Constantinople, or as the mistress of Bulgaria (which amounts in the end to the same thing), she will become an aggressive Power, with elements of invasive strength which no other nation now in Europe possesses. The slow and certain destruction of Austria would be only the prelude to a secular struggle between the German and Slavic races, the issue of which can be only conjectured. It was the perception of this which made Austria persist in the Germanizing policy of the past half century, and the incapacity to realize it which led the Hungarians under Kossuth to play into the hands of Russia by opposing, in their blind egoism, the unification of Austria. It is the same foresight which makes Germany and Austria-Hungary allies against any advance of Russia westward, and which will always prevent any pact between Germany and Russia to the injury of Austria. This is the necessity of the situation. The sound and traditional policy of England which seconds this policy, has no direct relation to the triple alliance, and I need only allude to it as an element in the position which rather confirms the idea that the alliance is really defensive. The Austro-German alliance is a permanent institution.

The French *revanche* is a menace which is serious only as it can ally with it some other element of conflict, *e. g.*, Russia. The nation was foolish enough to provoke a war unprepared, and paid for it by the loss of two provinces, the recovery of which justifies it, in its own eyes, in keeping Europe in a state of perpetual alarm and financial depletion, and, if it is attempted by force of arms, will cost France more lives than there are inhabitants in the two provinces. Every schoolboy in America must know by this time that France will declare war on the first convenient opportunity, and attack Germany with a fury such as she has never shown in any previous war. Frenchmen are rather proud of this determination. But for this the Eastern danger might be met with comparative ease, and perhaps kept back till the Balkan States were organized for their self-defence, and effectively. It is the fact that the two dangers will break on Central Europe at the same moment, that constitutes the peculiar nature of the present impending crisis. The only hope of averting the conflict lies in the possibility of drawing into the central alliance enough of the Powers interested in peace more than in any possible gains by war, to make the confederation clearly master of the situation. This is the interest which the central Powers have in drawing Italy into the alliance, and this addition has no doubt made France less confident of victory, and retarded the outbreak of hostilities for which the French believe they were ready last year; but there is still another weight in the scale of peace in the well-founded conviction that the power of England would be thrown in against the party that began hostilities.

It is, however, against Italy that the French journals launch their deadliest shafts, because Italy is the make-weight which gives a preponderant force to the central alliance, and prevents France from attacking Germany. It is a fact well known in official circles, though denied with derision by the French journals, that two years ago France had planned an attack on Italy, hoping to cripple her effectually and compel her to capitulate before Germany could force the line of frontier defence and bring her full strength to bear on France, when it was believed that the French army would be more than a match for the German. The project was blocked by the English naval demonstration at Genoa. Nevertheless, the book, 'Rome et Berlin,' which was no doubt intended to cheer the hearts of the French with its hopeful prophecies of victory all along the line, and which was so arranged as to appear a few days after the declaration of war, was still brought out, and showed from its elaborate and official studies of the field of operations, especially the Italian coast and defences, how completely the plans had been studied out, and how great the danger to Italy would have been had no *deus ex machina* come in with his *quos ego*. I have no doubt that, so far as this part of the field of operations was concerned, the campaign would have succeeded. The conception of the plan was masterly, and the knowledge of the condition of the defences of Spezzia and the communications between the capital and the decisive field of operations in the North as well as of the defences of Rome, showed that the elements of the book were drawn from official sources, while the author was known to be a retired officer of rank. Of course, having failed, the project is denied, but I have sufficient information from the highest official sources to leave no doubt of its reality.

But this was the effect, not the cause, of the triple alliance, *i. e.*, of the entry of Italy into the league of the central Powers. The cause lies further back, and began in the occupation of Tunis. The struggle for influence in that beylik had been going on for some time, and the apprehensions of the consequences to Italy of the establishment of the naval power of France at a point so near to Sicily that it turned all the defences of the kingdom on the south, had so pressed on the minds of the Italian statesmen that there is no doubt that the Italian occupation would have preceded that of France if the latter had been anticipated. Cairoli, the Prime Minister of the day, was a Francophile, and the Italian Government was content to leave the Tunisian question in abeyance to avoid all difficulties with France. Cairoli asked and received assurances that the French Government had no intention of occupying, and definite promises that it would not occupy, Tunis; and only the day before the occupation was ordered, the Marquis de Noailles and Gambetta both declared that the French Government had no such intention, though the preparations must then have been far advanced. Cairoli resigned and Noailles was recalled, but the bold defiance of good faith and the distinct menace to the security of Italy led the Ministry succeeding that of Cairoli to look about for friends elsewhere than in France. But even before this, Italy had had very good evidence that France, under the Empire, was no friend of Italian unity. When France in her conflict with Germany cast about for help, she naturally applied to Austria and Italy. A very different triple alliance was then possible, but only on the condition that France abandoned the Pope and consented to the occupation of Rome, and this the Emperor refused. When the Empress, become Regent, called on the King of Italy to come to the help of the falling dynasty, Victor Emmanuel replied that he would move only on the same terms, which again was refused. But this was under the Empire, and the public opinion of Italy, generally highly friendly to France, as in fact it would be now if permitted, hoped from the republic better things.

The occupation of Tunis convinced the statesmen of Italy that France was unchanged, and there came a general apprehension that she would on a convenient opportunity insist on the observance of a treaty of old date by which Victor Emmanuel bound himself to respect the position of the Pope, and so maintain what was always known to be a point in the policy of France, the practical protectorate of the temporal power by France. Tunis gone and Rome and Tripoli threatened, all faith in French engagements and good-will lost, Italy turned to Germany and made the overtures which led to her admission to the triple alliance. Whose the fault? The tirades of the French press and the hostility of the French tariffs have one object—that of inducing Italy to withdraw from the triple alliance; and why? Every Frenchman, when he has a moment of frankness, admits that it is because it would leave France free to attack Germany. It is difficult for us who are in the midst of the rancor and wrangle growing out of the position to believe that there is a Frenchman who does not in his serious moments recognize the absolutely defensive character of the triple alliance.

I am a large reader of the daily press of Italy and in an exceptionally good position to know the official feeling. I have known the last three ministers of foreign affairs, and no foreign correspondent has better opportunities than mine to know the mind of Signor Crispi, and I have not the slightest hesitation in say-

ing that in no part of the kingdom and in no class of Italians is there any hostility to France, even after the intolerable insults of the French press and the official animosities of the French Government. I see continually Frenchmen in Rome and other parts of the country, and I do not believe one can be found who can complain of rudeness on the part of individual or official. On the contrary, they are invariably treated with a consideration they do not always deserve, and which probably surprises them, so that they put it down to Italian servility and the desire to placate Gallic indignation, while it is in fact only the Italian innate courtesy, that habitual politeness in which the average Italian surpasses the people of every other race. Reading the French papers, one would think that a furious polemic was going on between the two nations, but, excepting occasional replies to unusually abusive articles, one never sees any notice taken of it here. Certainly nobody here is much disturbed by it.

So far from contemplating any attack on France, Italy is very far yet from being prepared for a purely defensive campaign, and the fixed belief that the triple alliance is sufficient to avert war is so potent that all the pressure of Germany to get the army into condition for entering into one has not yet produced the desired result. Italy is far from ready for war, and, but for the English determination that she should not be the victim of an unprovoked aggression by sea, hostilities would probably have long ago begun. The consciousness that as long as the Conservatives in England are in power, and, perhaps, even if the Liberals come in, England will take part in the fray against the Power that disturbs the peace, makes it morally certain that neither Germany nor Italy can afford to take the initiative. If, indeed, England were frankly to accede to the triple alliance, and then to induce, as she alone could, the minor Powers, Holland, Belgium, Denmark, and Scandinavia, to enter it, a partial disarmament would probably at once take place, because the attack on such a combination would be hopeless.

The present policy of France is to exhaust the finances of the triple alliance by the necessity of constantly increasing its armaments to keep pace with hers; and, trusting to her greater wealth to hold out longest, she goes on increasing her army and spending for new guns. The consequences of her success in the game which she is playing would be such that the contemplation of them ought to deprive her of the sympathy of the entire civilized world, for they mean the extension of Siberia over eastern Europe, and the loss of all its independence by western ; interminable wars till Russia and France meet, and then, perhaps, a mortal struggle between the Republic and the Cossack. Meanwhile it becomes doubtful if the Powers who favor peace will not be driven to finish with the ruinous condition of affairs by compelling France to disarm or fight. This probably would have taken place the autumn that the Emperor of Germany was here had Italy been prepared; but as Italy had never taken the danger of war seriously to heart, and was most unprepared for it, nothing came of it. W. J. S.

Correspondence.

GOV. CAMPBELL AND THE OHIO LEGISLATURE.

To the Editor of The Nation:

Sir: Your readers outside of Ohio have doubtless not forgotten the revolution against Gov. Foraker which resulted, a year ago, in the election of a Democratic Governor and Legislature. It will be remembered, also, that home rule for Ohio cities was the most strongly emphasized plank of the Democratic platform, and that the Legislature elected upon that plank entered at once upon a crusade of the most vicious prostitution of city government to partisan and personal ends which the State has ever seen. In all the so-called "Ripper Bills" passed or proposed, it is putting it mildly to say that the welfare of the cities affected was left absolutely out of the calculations. A few Democratic members had the manliness to protest, but the caucus decree was sufficient to carry the point of the spoilsmen. It was well known that this brazen violation of official trust was not sanctioned by the Governor, but the unfortunate absence of the veto power stood in the way of effectual resistance.

Among the many "Bills for Turning Public Office to Private Advantage" was that creating the Board of Public Improvements of Cincinnati, throwing upon the Governor the responsibility of appointment and denying him the protection of the power of removal. There is no reason to doubt that the men chosen for this Board were appointed with a sincere belief in their honesty and ability; but it was soon evident that this confidence was sadly misplaced, and not less evident to Gov. Campbell than to any one else. The complete loss of public confidence in the Board, even though the general suspicion of moral obliquity might be wrong, was an all-sufficient reason for its immediate removal; but its creators had fortified against such a contingency in advance by providing a method of removal too tedious and uncertain to offer any encouragement. After unsuccessful efforts to induce certain members to resign, Gov. Campbell had the courage, right in the face of an election, to summon the Legislature in extra session, and ask for the abolition of the Board and the substitution of another constituted more in accordance with the demands of honest government and common sense.

That the demand to condemn and undo the work of a few months previous was unpleasant to the majority goes without saying; and especially so to the Cincinnati members, some of whom were holding lucrative offices under the very Board which they had created. This fact in itself is a sufficient answer to those who professed to have conscientious scruples against "condemning the Board without a hearing." Another, no less sufficient, is the character of the man who rushed to the Board's defence. If any acknowledged representatives of honesty in politics were in the lobby which sought to thwart the Governor's desires, their names have not found their way into the press reports.

For a time it seemed that the efforts of the lobby would succeed, but a second message from the Governor — aided by a reaction against the insult of an adjournment taken while the Governor's secretary was standing before the Speaker with the message in his hand—clarified the atmosphere sufficiently to bring the schemes of the ringsters out in their true light and insure their defeat. This message, while it secured the triumph of the Governor's recommendations, has made him not a few enemies. The advice that the new Board should not be elected in November because the shortness of time would compel nomination by party committees, which "do not enjoy the respect of the people of Cincinnati to a degree sufficient to give public confidence to their nominations," was somewhat unpalatable to the said committees and their friends. The lobby did not relish the statement that nobody in Cincinnati could be brought to the Board's defence "other than those having a direct personal interest in said Board." The Cincinnati members did not like to hear their alleged desire for harmony truthfully characterized as "mere duplicity." Members of the minority party who at one time contemplated opposition to any legislation whatever, were somewhat nettled to be publicly told that they "must, on reflection, feel that their action was unwise and unpatriotic." The advice to "let the handful of schemers who are scuffling in the dirt before you, hoping for some petty personal gain, be overlooked," was rather chafing to the refined sensibilities of certain professional politicians; and the exhortation to "wipe out the Board" has been objected to in some quarters on the ground that it is wanting in elegance of diction, but the vast majority of those fully acquainted with the circumstances will agree that a Shakspere or a Milton could not have adapted the words to the occasion more fitly than did Gov. Campbell.

That the Governor will follow up his advantage in his message to the adjourned session is altogether probable, and if he does so, the prospects for respectable municipal government in Ohio will be brighter than for many years. The people who "love him for the enemies he has made" in this fight are numbered by the thousands, among the best classes of all parties, and an honored leadership in a popular movement to rescue local government from the clutches of the spoilsmen is undoubtedly his if he chooses to go forward. That any other course, unless he shall drop out of public life altogether, will bring certain humiliation, is too evident to need argument. Fair-minded people are willing to believe that he does not desire any other course, and the friends of good government all over the Union should be ready with open approval and assistance as long as his present attitude is maintained.

W. H. Johnson.

MONEY IN ELECTIONS.

To the Editor of The Nation:

Sir: It has been a matter of surprise to many of your readers that you have not yet taken the pains to define accurately the present attitude of the Republican party towards Mr. Quay. The assumption of *Puck* that Quay stands for the spirit and ambition of that party, and is its fittest representative, is incorrect. On the contrary, it may safely be said that the Senator from Pennsylvania is regarded with the most cordial detestation by the leaders of his party; and as for the rank and file, those who still believe him to be a calumniated patriot are but few: the majority avoid all reference to him, and would be glad to know that the party had severed its connection with him.

I am inclined to think—and this opinion is based rather on a general knowledge of human nature than upon mere imagination—that many orthodox Republicans, including President Harrison and Speaker Reed, were heartily glad that Mr. Kennedy made his attack on Quay. They rejoiced that the attack was made, and that it was made directly and openly. What the Ohio member said they desired to say, but they dared not. In the recesses of their thoughts, and in the silence of their chambers, they curse Quay as a disgrace to his party. They know, as well as Mr. Kennedy does, that he is a Judas, but they do not say so, because—and this is the key to the

whole situation—*he carries the bag!* Somewhat more than a year ago Mr. Quay began the collection of a "reserve fund" for the use of the National Committee. This was to be made up by the contribution of $10 annually from each Republican voter able and willing to aid the party to that extent. No secret was made of the plan of this fund, and its collection has been carried on during the past year by agencies directly under Mr. Quay's control—quietly, however, lest questions should be asked concerning its amount and purpose. The usefulness of this fund is shown in the fact, pleasantly noted by Republican journals, that while the Democratic National Committee is greatly hampered by lack of funds, the other Committee is experiencing no such difficulty. Money is the "sinews of war," we are told, and we know it to be the very life-blood of "practical politics." The sources of this life-giving current are with Mr. Quay; is it likely that his favor will be forfeited before election? And after election? Wait and see what the friendship of the Pharisees is worth then. That the Republicans will win the coming election is highly probable, for the plan so successful in 1888 of sending funds to doubtful districts is again at work. A careful canvass of every State has been made, and maps, showing by shading every district, county, and township where the Congressional vote is doubtful, have been drawn for the guidance of the National Committee. The reserve fund, therefore, is being placed where it will do the most good. The result may not be pleasing to honest patriots, but it can hardly be a matter of surprise. But even though the party secure success, and through Mr. Quay's skilful generalship alone, we are convinced that the first move of his fellow-leaders afterwards will be to remove this officer. And they will do this in such a way as to reflect the highest credit upon themselves and upon the party of "high moral ideas," and thus rivet to the party with bands of steel the support of doctors of divinity and Sunday-school leaders.

Mr. Godkin says, in his late article in the *Forum*, that the existence of a large class of people ready to purchase votes is the most significant political fact of the time. It is a fact to whose perilous meaning no honest patriot can close his eyes. It will not do to palliate the present situation by saying that money always has been and always will be used by evil men in elections. While bribery is only a secret and disgraceful resource of the scurvy politician it can do harm, but when it becomes the open and avowed practice of party leaders who, at the same time, claim the name and the affiliations of respectability and piety, then, indeed, is our patriotism rotten to the very core. He who cannot see how this evil has grown in this country during the last ten—yes, even the last four—years must be afflicted with the hopeless blindness of those who *will* not see.

The evil effect of the use of money in elections can never be confined within bounds. It debauches not only those who actually sell and buy the votes, but all otherwise honest citizens who see and condone the crime. It is an offence that can never be confined to one party, for the other party is certain to take it up also, on the plea that the devil can only be fought with fire. It is a burning disgrace to the American name, that the shameless purchase of votes in Indiana and New York in the Presidential election of 1888 was not investigated and condemned by Congress. Why was this not done? Simply because both parties had taken part in the offence, and there were not in either any men honest enough to stand up for righteousness in defiance of party denunciation.

UNIVERSAL SUFFRAGE.

To the Editor of The Nation:

Sir: Doubtless many of your readers, like some of my personal friends, turn away from my letters with a pitying smile, saying: "Our friend works himself into a good deal of excitement, unfortunately to no purpose. He seems unable to see that the real difficulty is not in the mere surface matter of the organization of government, but in universal suffrage. Democracy is proving itself to be, as it always has been, a failure. If you give votes to the mass of the ignorant poor and foreigners, you must expect and will have bad results."

As this goes to the root of the matter, a word on that subject may not be out of season.

(1.) Whether universal suffrage is good or bad, it is upon us, and we cannot help it. Though it is only a hundred years old, the world is marching towards it with rapid strides. In this country there may be imposed some restrictions as to education and length of residence, but no property qualification will ever be enforced unless by military despotism as the result of fierce civil wars. How can the majority be induced to vote away their power? Not one of those who are most bitter as to universal suffrage ever suggests any expedient by which it can be done away with. Their philosophy is and must be to shut their eyes and say, "After us the deluge." Is this the manly view to take of it? It is the way in which their kind regarded the civil war, but the mass of the people refused to see it in that light.

(2.) Is the charge against universal suffrage true? I ask any man to go back to the period thirty years ago, when the black cloud of slavery was about to burst upon us, and when the whole outside world and half of that inside believed that the dissolution of the Union was an accomplished fact. Who was it that refused to accept any such conclusion, that insisted upon the prosecution of the war, raised the men and the money, abolished slavery, and then dismissed the vast army to the arts of peace, leaving the Union stronger than ever? It was the people of the United States, trained by universal suffrage to act together in time of war. No man enjoying the blessings of life in this country to-day has a right to say a word against such a power. Again, if the Government of Great Britain had been, as it was a century ago, in the hands of the upper classes, it would certainly have interfered on behalf of the South. London society and the military and naval services, not to say the aristocracy in general, were eager for it. What saved us from such a disaster? It was the workmen of Lancashire and other parts of the kingdom, who had become a power through, if not a universal, at least a widely extended suffrage, and who, suffering as they were from the privation of cotton, sent up a cry which warned the Government that the nation would not support such action. It would be easy to multiply instances of the beneficent action of a collective public will.

(3.) It is beyond question a fact that in the United States of to-day we do not get the effect of universal suffrage. Does anybody suppose that the things which are done at Washington or in the capitols and the city halls of the different States are really in accordance with the wishes of the people? More and more the management of politics is falling into the hands of unscrupulous rings, the choice of the people being limited to two sets of politicians between whom there is perhaps little to choose. Go through the country, into the abodes of peaceful industry and into the family life of the people, and ask yourself whether the men who swarm in the lobbies are really such as the people would of their own choice select to govern them. Before we condemn the people so unsparingly, is it not worth while to consider whether it is their fault, and whether it is possible for them to do any better with the machinery with which they have to work? And this brings us to the other alternative.

(4.) Organization. For those who sneer at expecting so much from it I have one reply. The most miserable and apparently hopeless period in the history of this country was that of the Confederation which succeeded our war of Independence. To understand that, one needs only to read the accounts of the prostration of business and the utter depression which threatened to make all the sacrifices of the Revolution of no avail. To that state of things came the Federal Constitution, as purely an à priori and conscious piece of organization as ever took place in the world. The effect was like magic. The revival of business and the restoration of credit began that career of prosperity which has made us what we are to-day. No product of machinery was ever more directly the effect of a cause.

Fortunately no such radical changes are now needed as were made then; but what work does need to be done is precisely of the same kind. My theories may be defective or erroneous in character, but of one thing I am certain, that they are in the right direction.

INVERSIONS OF TEMPERATURE.

To the Editor of The Nation:

Sir: Your remarks and inquiry concerning nocturnal inversions of temperature in the *Nation* of September 25, escaped my attention until to-day. A striking example of this inversion came under my observation in September, 1878. While engaged in survey work in the Sierras of northern California (Plumas County), for the purpose of being early at the top of a mountain I spent the night far up the side, about two thousand feet above my party in the valley, though within sight. A short time before sunrise the next morning, the difference of temperature between the two stations was 7°F., the higher being the warmer. With smaller differences of altitude in those regions I have frequently noted similar inversions. Along the sides of a cultivated valley in Sierra County I saw flourishing gardens, while nearer the axis line of the valley, not over five miles away and 200 feet lower, the gardens were in many respects failures. A similar difference in orchards located at different points along the same stream was noticed.

This difference of vegetation is not, however, due solely to difference of atmospheric temperature. A difference of a few feet in altitude there frequently made the difference between a dry camp and one mantled in dew or frost. I have noticed in many localities that sheep and other animals learn to avoid these conditions, and at night generally occupy higher ground, as the smaller knolls in a valley.

I have never known a case of inversion that could not, I think, be satisfactorily explained by considering the motion and lack of moisture of the upper atmosphere in connection with the moisture and lack of motion in the lower.

A statement from you as to where the essay

of Mr. Elliot, referred to in No. 1317 of the *Nation*, was printed would be appreciated.

S. E. TILLMAN.

WEST POINT, N. Y., October 21, 1890.

Notes.

J. B. LIPPINCOTT Co.'s holiday announcements include 'A Mosaic,' a set of photogravures from pictures never before published, furnished by the Artists' Fund Society of Philadelphia, with text; an illustrated edition of Buchanan Read's poem, "Sheridan's Ride"; and 'Tisáyac of the Yosemite,' an illustrated poem by M. B. M. Toland.

The Dunlap Society will issue at once to its members Mr. William Winter's biography of the late John Gilbert, illustrated with a portrait of the comedian as *Sir Peter Teazle*. The final publication of the Dunlap Society for this year will be a volume of 'Occasional Addresses,' edited by Mr. Laurence Hutton and Mr. William Carey, and to contain the chief of the many American poems written to be spoken at benefits and anniversaries.

Mr. J. R. Tuten, the compiler of 'The Bibliography of Wordsworth,' has prepared 'The Wordsworth Dictionary of Persons and Places,' which will be published in December by Frank Murray, Moray House, Derby, England. The large-paper copies will be uniform with Knight's library edition of Wordsworth. The work is to contain first an index of all the persons named or described in Wordsworth's poems; second, an index of all the places mentioned or described; thirdly, a collection of the familiar quotations from Wordsworth; and fourthly, a chronological list of the best of Wordsworth's poems.

'Newburgh,' historical and descriptive, is the title of a work about to be undertaken by Messrs. Ritchie & Hull, proprietors of the *Journal* in that city on the Hudson. It will be copiously illustrated, and will make a quarto volume.

The *Forest and Stream* Publishing Company of New York will issue at once the first number of a quarterly publication entitled *The Book of the Game Laws*, compiled by the editor of *Forest and Stream*, and containing all the laws of the United States and Canada relating to game and fish.

What Houghton, Mifflin & Co. attempted in the case of the 'Marble Faun'—to emphasize the local color by means of photographic views of places, buildings, statuary, etc., in a sumptuous edition—has been imitated by another Boston firm in the case of 'Romola' (Estes & Lauriat). Its two volumes are less remarkable for typographical beauty—at least, we cannot praise the press-work—than for the numerous and well-chosen illustrations drawn from the historic and artistic wealth of Florence. There are sixty of these in various tints, and they undeniably enhance the value of this edition for the untravelled, or, for that matter, for the travelled also. Two modern etchings, by William Unger, of Macchiavelli and Savonarola, are among the reproductions. The delicate binding of white and gold, relieved with color on the sides, is shielded by a scarlet cover, and a scarlet box encases the whole.

A certain external parallel to the foregoing is afforded by the two-volume edition of 'Jane Eyre' got up by T. Y. Crowell & Co. Here the text is more open and legible, but the illustrations are designs on wood by artists not named, and seemingly of transatlantic origin. They are somewhat heterogeneous, and would not of themselves justify the publishers' prediction that their edition is "as perfect as will ever be produced."

Better founded is the same publishers' assertion that their reissue of 'Tom Brown's School Days,' in one volume, is "the best that has ever been offered to the American public." Typographically it resembles the 'Jane Eyre,' and the illustrations, clearly of English origin, are superior. The binding is in a sober green cloth.

We have spoken very recently of the substance of Camille Flammarion's astronomic fantasy, 'Urania,' and need only speak now to the externals of the handsome edition just put forth by Estes & Lauriat. Large type, generously spaced, produces a volume of some 300 pages, interspersed with vignettes from tone-drawings in the French fashion. Some of these are excellent, and the major part are decorative at least. The binding is a wine-colored cloth, freely gilt.

A gulf indeed separates Darley's illustrations to Cooper from Frederic Remington's sepia drawings which give distinction to Houghton, Mifflin & Co.'s new setting of 'The Song of Hiawatha.' Mr. Remington has notoriously made close studies from nature of our Western Indians, and can depict their physiognomy with an almost scientific exactitude. He has also gone into their costumes, implements, and the like, and has amassed a small museum of pen-drawings of pipes, snowshoes, targets, jars, hammers, quivers, spears, belts, arrows, head-ornaments, etc., which are scattered up and down the margin of the text in a novel way. The full-page plates are realistic, but beauty and sentiment not seldom assert themselves, and the general effect is undeniably pleasing. The other appointments of this edition are of the first order; the cover a russet leather or leatherette, in revival of an older style. Taken altogether, the holiday ideal has been skilfully met by the publishers.

They have not stopped here, for they launch anew Lowell's 'Vision of Sir Launfal,' with photogravures from designs by E. H. Garrett, and a precious copy of a crayon portrait of the poet by William Page, made in 1842. Mr. Garrett's pencil we like best when employed in landscape, but his figure pieces are passable, and he has helped to beautify the little volume.

Another of Page's portraits, dated 1843, and in oil, has been etched for the first volume of the Poems of James Russell Lowell, in the complete Writings now in course of publication by Houghton, Mifflin & Co. The face has an Elizabethan aspect, in keeping with the tastes and powers of the author of 'Conversations on Some of the Old Poets.' The second volume is wholly given up to the 'Biglow Papers.' The first ends with the rhymed anti-slavery "Letter from Boston," which Mr. Lowell has hitherto refrained from adopting in his own anthology, but which all his admirers must agree in thinking worthy of its present place. It is not only an honorable chapter in Mr. Lowell's historic development, but an inimitable portrait gallery, in which his Hudibrastic humor jostles high poetic imagery and the acutest characterization. Mr. Lowell has added a few explanatory notes to this Letter, and he might have quoted apologetically from the MS., which has been preserved, that it was written "in steamboat haste." If there is any living poet capable of such a *tour de force*, we do not know his name.

The promised popular reprint of the late Eugene Schuyler's 'Peter the Great' (Charles Scribner's Sons) is, luxury apart, in all respects as desirable as the original. The paper has been cheapened; but that the buyer (in these days of the apotheosis of Dearness) may not feel cheapened himself by the lowered price, the binding has a look of costly elegance, without being a sham either. In a word, the new edition would adorn any library. One defect we may fairly point out: the not long list of errata should have been abolished by means of alterations in the plates. Most of them could easily have been thus disposed of.

'Our Great Actors: Portraits of Celebrated Actors in their Most Celebrated Rôles' is the title of a portfolio of sketches in water-color by Mr. Charles S. Abbé, reproduced by the Armstrong Company and published by Estes & Lauriat. The great actors chosen by the artist are Messrs. Booth, Irving, Jefferson, Lawrence Barrett, Coquelin, and Salvini. The picture of Mr. Booth as *Richelieu* and that of Mr. Irving as *Mephistopheles* are disappointing. The latter, indeed, is ludicrously inadequate. But the four other drawings are of better quality, that of Mr. Jefferson as *Bob Acres* fair only, while the portrait of M. Coquelin as *Mascarille* is excellent—emphatically the best of the half-dozen. As likenesses, the pictures of Sig. Salvini as *Macbeth* (certainly not his "most celebrated rôle") and of Mr. Lawrence Barrett as *Lanciotto* (in "Francesca da Rimini") are satisfactory.

The eighth and concluding volume of the 'Henry Irving Shakespeare' (Scribner, Welford & Co.) contains in the Introduction to "Hamlet" the last work of its late editor, Mr. Frank A. Marshall, who unfortunately did not live to complete the undertaking to which he had given so much labor. Mr. Arthur Symons furnishes the notes to this play, and also the entire commentary on "King Henry VIII.," no part of which seems to him to be by Shakspere. "Pericles" is cared for by Mr. Round, and the poems and sonnets by Mr. Verity. An excellent Index to the notes of the entire edition is at the end. Prof. Dowden contributes the Life of Shakspere, which is here introduced, somewhat out of place, in the last volume, and is a compact and reasonable summary of the facts of his biography, the order and general character of the plays so far as they illustrate the dramatist's career, and the history of his fame. Mr. Henry Irving also writes a short preface, in which he pays a tribute to the memory of his associate. The edition in its successive issues has well sustained the promise of interest and value made by its early volumes, and must take good rank as a popular edition distinguished by careful scholarship, and especially rich in its notes on the history of the plays upon the stage. The cuts have been of various degrees of excellence, but the design in them has been always markedly dramatic in feeling. The Chandos portrait has been chosen for the frontispiece in the last volume. Altogether, the plan of the edition was well conceived and has been admirably executed.

A useful aid to the correct dates of English literature has been compiled by Mr. Frederick Ryland in his 'Chronological Outlines of English Literature' (Macmillan). It consists of two parts. The first is a continuous chronological table in parallel columns, the first containing the date, the others in order the works published, biographical, foreign-literary and historical events of the same year—and last stands a column of annotations and remarks. The second part is an alphabetical list of authors, with their works and the dates of publication under each name. The author remarks upon the inaccuracy of Allibone and other leading works of reference, and has endeavored to correct their errors by consulting the British Museum Catalogue and special bibliographies. The volume makes 350 pages, is well bound

and printed, and does not attempt to give too much.

Mr. H. S. Salt has collected and edited the 'Anti-Slavery and Reform Papers' of Thoreau (London: Swan Sonnenschein & Co.), and prefixed to them an appreciative notice of their author, apparently with the design of showing that he was less disconnected with the social interests of his fellow-men than is commonly represented. He asserts that Thoreau was an anarchist in principle, but the name can hardly be applied to him with fairness now, although it is easy to quote passages to show that the hermit of Walden believed in "no government" as an ideal state. It is of much more use to bring forward the papers upon John Brown which Thoreau wrote and made public at the time of Brown's execution, since they prove the vigor of his hatred of slavery and his own moral courage and readiness to do what he could to effect reform by the expression of his opinions. The two papers upon this subject are excellent in style and matter, well pointed with epigram, and contain some of Thoreau's most characteristic sayings. The other three papers in the volume, upon "Civil Disobedience," "Paradise (to be) Regained," and "Life without Principle," are much less striking, though the first is a remarkable illustration of the mood of mind and reasoning of those who, in the anti-slavery agitation, threw off their civil allegiance, and contains besides the graphic account of Thoreau's night in prison when arrested for refusing to pay his tax. The little book well fulfils its aim of setting Thoreau forth, apart from nature, in his social or anti-social relations, and is also valuable for its illustration of the effect of John Brown's death at the time upon a certain class at the North.

The educational discussions and experiments in London occasionally bring us a volume of much interest to teachers, but we remember none more fresh or stimulating than a thin book entitled 'Elementary Schools, How to Increase their Utility,' which we have received from Percival & Co., London. It consists of six lectures delivered to the managers of the London Board Schools in 1889–1890. The titles are Science-Teaching, Music, Physical Culture and Recreation, Hand-and-Eye Training, Evenings of Amusement and Mechanics; and the lecturers were all persons of special culture in the particular subjects treated. The last lecture contains a scheme, with experiments, for a whole course in mechanics, conceived in a most intelligent way, and the lectures upon physique and music are both particularly noticeable. The whole course exhibits a tendency towards development in the direction of manual training (but not technical trade-instruction for a particular practical end), and also in the direction of gymnastics and easy sports rather than athletics. In the lecture upon evening amusements we have a good account of how these evenings were started as an experiment a short time ago, of their success, and of the methods to be employed. The experience is of value for all who are engaged in providing evening amusement for the young in our cities, in friendly clubs and like organizations. Mr. Bonsfield, who holds the leading official position among the managers of the London Board Schools, furnishes an excellent general preface. The volume deserves to be consulted by progressive teachers and school boards.

Yet another 'Popular Handbook' of literature, under the inapt title, 'Makers of Modern English' (Whittaker), is put forth by W. J. Dawson, upon the poets of this century. The earlier chapters cover a well-worked field without anything specially new or striking in their survey, but the greater part of the volume is devoted to Wordsworth, Tennyson, and Browning. The essay upon Tennyson is noticeable for its breadth and system, and is an excellent study of the obvious faults and virtues of the Laureate; that upon Browning is less satisfactory. Rossetti, Swinburne, and William Morris are treated of at the end—a sign of the progress of the century and of the unsettled conclusion of criticism upon these writers, who, though later than Tennyson, who still lives, have nevertheless done that part of their work by which they are almost certain to be judged. Mr. Dawson writes with full information, and has a firm grasp, but his criticism falls below its subject. It is book-reviewing on an extended scale.

'Tales and Legends from the Land of the Tsar,' translated from the Russian by Edith M. S. Hodgetts (New York: Charles E. Merrill & Co.), is a spirited translation of thirty-eight Russian fairy tales, and it will be welcomed by people who are in search of a new holiday book for children as well as by the students of folk-lore. An occasional lapse in grammar and use of slang mars the style, without adding to the force or naturalness of the rendering, as they were obviously intended to do. Some of the tales will be recognized as having already made their appearance in other volumes. "Vaselesa, the Beautiful" is an old acquaintance, while "Elie Muromitch" and "The Last of the Russian Warriors" are both to be found in Miss Hapgood's 'Epic Songs of Russia,' where the English version preserves the spirit of the original more closely than in the present translation.

Count Tolstoi's 'Gospel Stories' is a book to be avoided by all persons who possess the volume issued in 1887 by the same publishers (T. Y. Crowell & Co.), under the title of 'Ivan Ilyitch, and Other Stories.' The translator's Introductory Note implies that these stories are now issued in book form for the first time. As a matter of fact, they form the "other stories" in the volume above referred to. We gave them due notice at the time. Of this new issue there is nothing to be said, except that the publisher has not taken advantage of the opportunity to correct a single one of the numerous blemishes which we then pointed out, and that the pseudo-English is religiously preserved. The publishing of old books as new, with a fresh title and no hint of the antiquity of the contents, is not to be commended. The stories are to be found in the twelfth volume of Count Tolstoi's 'Collected Works.'

We read in an English paper of the auction sale at Sotheby's in London, next month, of a complete collection of Dickens's works, made by Mr. J. Hampden English, of Walton. The first editions it contains, with the serials in their original wrappers, are likely to excite a keen competition.

Students of the development of jurisprudence should possess themselves of Dr. Camillo Henner's 'Beiträge zur Organisation und Competenz der päpstlichen Ketzergerichte,' just issued by Duncker & Humblot of Leipzig. Dr. Henner is a teacher of law in the Karl-Ferdinands University of Prague, who treats the subject of the Inquisition in a purely scientific spirit, as a matter of passionless investigation. With unwearied assiduity he has assembled all accessible information, from old as well as new sources, has analyzed it, and presents the result in a condensed and methodical shape, with ample citation of authorities. So much of late years has been added to our store of documentary evidence respecting the procedure of the Holy Office in the Middle Ages, that a clear and well-arranged summary of existing knowledge, in which widely scattered facts are brought together and arranged for mutual elucidation, is a service of no little value. The work is not, of course, intended for the general reader, but the special student will prize highly its valuable assistance.

A fourth edition of Flügel's English-German and German-English Dictionary is in the press of Georg Westermann, Brunswick (New York: B. Westermann & Co.). It is sixty years since J. G. Flügel founded this work to which so many other rival enterprises have been indebted—as English lexicographers to Johnson, and as the new editor, Dr. Felix Flügel, to Todd, by his own account in the prospectus. Etymology is disregarded for the English portion, and pronunciation suggested only by a few diacritical marks, referring to a running key, as in our English dictionaries. The great feature of the work is the literary examples, with exact reference to volume and page of the work cited; and there is a special index to the authors, with titles of their works and date of issue. The dictionary will be published in twelve parts, appearing every two months. The typography will be condensed but clear.

The path of the independent critic has just been proved to be a thorny one in Spain in the person of Leopoldo Alas. That member of the group of distinguished collaborators who have given the new magazine, *España Moderna*, such deserved fame, had prepared two articles for its columns, one on the poetry of Campoamor, the other on the novels of Emilia Pardo Bazán. The editor insisted that the latter should be first published, and also that it be revised so as to make it more acceptable to the authoress than it promised to be. The critic resented both these demands, withdrew his contributions, and has now printed them in one of his series of 'Literary Tracts.' Naturally his fearless and vigorous writing can be looked for no more in the pages subject to such an editorial dictatorship.

We have received the ninth edition of the Boston Public Library's 'Handbook for Readers,' edited by Mr. James L. Whitney. While calculated for the institution which puts it forth, it is, of course, scarcely less useful for smaller libraries, for if many of the "literary guides" here enumerated at such length on a vast variety of topics are wanting in these humbler collections, it is of no little service to have the deficiencies pointed out, while the student can note the guide and perhaps consult it elsewhere. In fact, part of the bibliographical references for the Boston Library's own readers are to the British Museum's catalogue of printed books, so far as published. Of universal interest, again, is the list of indexes of periodicals, filling nearly forty-seven pages, and it was a happy thought to reprint the names of the periodicals indexed in Poole's Index. There is also a select list of encyclopædias. The regulations of the Library are prefixed to the bibliographical contents, and these are followed by an account of the special libraries included in the Boston Public, and of its works of art, a chronology of the Library from Vattemare's time down, and statistics of growth up to the present half million volumes. This Handbook has been most scrupulously prepared and printed.

We are glad to hear that the success of the Slater Memorial Museum in attracting and interesting the people of Norwich and vicinity continues to an extent far beyond the most sanguine expectations of those who were interested in its foundation. Last spring Mr.

Slater placed on exhibition there his collection of pictures, principally of the Barbizon school, and in the three weeks that the exhibition remained open it was visited by more than 3,000 people. Word now comes that a school of drawing has been established in connection with the Museum, which opens with twenty-two in the day classes and seventy-five in the evening classes. Surely no greater proof of the need of such institutions in our smaller communities could be asked for.

—Another proof, if proof be needed, of the rapid way in which our country is coming to the front in intellectual matters, is the *International Journal of Ethics*, of which the first number has just been published in Philadelphia. The *Ethical Record*, of which it is a development, was published by the Societies for Ethical Culture, and suffered consequently from the appearance of being a sectarian organ. The present periodical is to be a review of the most catholic sort; and since there exists nowhere to-day, we believe, a review especially devoted to ethical questions, it is to be hoped that it may prove as indispensable to students of morals everywhere as *Mind*, for example, is to students of philosophy. Mr. S. Burns Weston, as chief editor, is backed by a strong international committee, in which Profs. Felix Adler and Josiah Royce represent the United States. The list of future contributors is imposing, embracing some of the first names in England, Germany, and America, and the present number contains articles by Messrs. Henry Sidgwick, Adler, Höffding, J. B. Clark, B. Bosanquet, Royce, and Salter, with half-a-dozen reviews by the indefatigable G. von Gizycki. The *Journal* will appear quarterly. Taking this first number as a good expression of the contemporary spirit in ethics, what strikes one most in it is the extraordinary absence from it of the old-fashioned rigidity and formalism. The intuitionist of to-day when it comes to saying what should be done in the concrete, becomes as pliant as a utilitarian, and refers as much as he to experiment. The objective notion of "the Good of the Whole," with the individual as its organ, working in the light of his own best talent, whenever that may be, has, in fact, with contemporary intuitionists, well-nigh come to supersede the subjective one of a cut-and-dried bundle of fixed duties, to God, to our fellows, and to ourselves, respectively, imposed from above on the individual, and having the possible sinuosities of his behavior under them as the reason for their being. Mr. Bosanquet would be classed among "intuitionists," yet he says as hard things as any one we can remember, in his article upon the "Communication of Moral Ideas," against the notion that there are any fixed duties binding on individuals irrespective of condition and circumstance. Prof. Höffding, although not an intuitionist, says the same thing in a much less telling way. And Prof. Adler, in his fine address on the "Freedom of Ethical Fellowship," shows how small is the importance of systematic ethical theory even for systematically organized practical work of an ethical kind. The chaotic vagueness of all this would make an old-fashioned moral philosopher rub his eyes. And it must be confessed that *something* is gone, in the loss of all the old clean-cut abstract formulas, even though we may have gained in place of them a more concrete, rich, and living way of looking at the truth. Prof. Sidgwick, in his article on "The Ethics of Strife," shows that the only great hope for society is in the increase in the individual citizen's sense of *justice*, even in questions where his own class and country may be arrayed on one side. Prof. Clark, in "The Ethics of Land Tenure," argues against nationalization; Prof. Royce cuts up remorselessly Dr. Abbot's book on the 'Way Out of Agnosticism'; and Mr. Salter insists on the irreducible distinction in kind between ethical and scientific propositions. Altogether this first number of the *International Journal* is of first-rate quality, and the magazine will be an assured success if it does not fall below the standard thus set.

—*Harper's* for November devotes a large portion of its space to articles of travel. Southern California, Chili, Japan, and Switzerland are the subjects, and of these the first two are more than usually full in description and information. Mr. Warner always sees the best phases of the countries through which he travels; and in this case of "Our Italy," as he calls the lower Pacific counties, he has a topic which arouses all his enthusiasm, whether for beauty of landscape, salubrity of climate, or future material prosperity. The more valuable part of his article consists of its meteorological and fruit-culture sections. Mr. Theodore Child makes an exhaustive study of the outward aspects of the streets of Santiago and Valparaiso, which are portrayed with evident truth, and none of that flattery of local pride which commonly distorts such accounts as this; and he touches rapidly, but with instruction, upon the character of the people, the personality of the President, and the nature of the political struggle between him and the legislative branch, the school provision, the rising vogue of the English language, and the omnipresent influence of English capital, besides many other minor matters. The article is well conceived, is many-sided, and gives a very excellent sketch of the whole range of things Chilian. Another paper, interesting from its picturesqueness, is upon the local festival of the "Meistertrunk" celebrated at Rothenburg, in which the reader finds a curious instance of the mediæval popular-play occurring in our own times. The only other considerable article is Prof. Sloan's account of Princeton, which he describes as occupying a middle place, in its ideal of education, between Harvard and Yale. He dwells particularly on the large scientific requirements in the curriculum, on the benefits of the literary societies, on the nature of the athletic exercises, the advantages of the neighborhood of the School of Science, the prospects of the Law School in contemplation, the theological department, and the fertility of the college in public men. There is a lack of detail and definition, however, as to the character of the education actually acquired.

—The *Century* opens with the first instalment of a journey through Tibet, which must be of great and increasing interest as an account of an unknown land, but in the present number the traveller, Mr. Rockhill, arrives only at its border. The remainder of the number is rich in attractive articles, of which we can only name those upon Lincoln's personal habits, the first California emigrant-train, Andersonville, and the printing of the *Century*, while calling special attention to Mr. Shaw's description of the history and present state of the municipal government of London, and to Mr. Brownell's exceptional criticism of the French sculptors, Rodin and Dalou. The experience of London in working out its still incomplete municipal system affords perhaps the most valuable and certainly the most interesting study in the government of modern cities, and the author has dealt with his difficult subject with remarkable clearness and comprehension. He reviews the history of the guilds of the city, shows in what way they have yielded to reform sentiment, and prophesies the speedy extinction of this venerable and powerful governing body and the transference of its great wealth to the use of the people as public trusts. He states that the principle of supreme control by a directly elected body is admitted, and he forecasts the lines on which it will be developed through the County Council, and takes occasion to contrast this system with the idea of American reformers who would concentrate power in the Mayor, much to our disadvantage. He directs attention to the suffrage scheme, which admits women to the franchise, and which does not require the nominee to be a resident of the ward. He touches also upon the great question of leaseholds, taxes on rental-values, the housing of the poor, the public schools, etc.; in fact, the paper is full of the modern movement of society, and has many practical bearings upon our own problems. Mr. Brownell's paper, which deals more particularly with Rodin, is remarkable for the clearness of its critical perceptions and the justice of its temperate decisions on the ever-vexed questions, continually arising, between academic canons and original genius, between art and nature, formal style and vital expression; and in its allusions to the art of the Renaissance and of Greece it is as felicitous as in its direct criticism. In method and manner, as well as in intelligence, it takes the first critical rank.

—*Scribner's* makes interesting announcements of its prospective articles, of which the most important are papers on Japan by Sir Edwin Arnold, on India by Prof. Bryce, on the Great Streets of the World, and on Ocean Steamships, to which Mr. Stevenson's new romance, 'The Wreckers,' is to be added. In the present issue, only Prof. Shaler's concluding paper on the physical prospects of the nation need be noted. He surveys briefly the trans-Mississippi country, and gives the first place in progress to the Oregonian district, and then proceeds to general conclusions, to the effect that there has been no deterioration of the race due to its settlement in America, but rather a slight improvement, especially in recuperative power, as shown by the records of wounds in the civil war, and in longevity as shown by the life-insurance reports. The backwardness of the French Canadian element in intellectual life he is inclined to ascribe to the difference in language and to the lack of education, and he regards it as transitory. The great problem of the future of the African race is touched upon only to bring out its import to the Southern States, to which he thinks the negroes will be confined, except as there may be sufficient northward emigration to repair losses in the black population of the cities, which would otherwise, he thinks, tend to extinction. He prophesies, also, the increase of the mine-workers until in the West they will equal or exceed the surface-tillers, and in general the growth of heredity of occupation everywhere, resulting in ancestral types in the population. The three articles, taken together, are an extremely suggestive series; and after allowance is made for the singleness of the point of view, they offer valuable results for reflection.

—The *Atlantic* has a long list of topics well distributed. Mr. John Jay Chapman's trial translation of the fourth canto of the 'Inferno' is the most novel. He has attempted to render it in *terza rima*, and has made a notable *tour de force* in a measure not much employed in English. The question whether English *terza*

rima represents the same measure in Italian still remains; and when everything has been conceded to the patience, ingenuity, and good taste of the translator, there is much room for doubt. English *terza rima* tends to a very rapid flow, and has the character of a chant. Shelley's use of it exhibits these traits very markedly, and he has employed it with the strongest touch. In Mr. Chapman's hands one cannot help noticing the presence of the great defect to which it is exposed, namely, the tendency to light endings, which weaken the verse often to the point of debilitation. This slight final accentuation reacts on the body of the line also, and in this way the translator gives an impression of affectation, since his line recalls too directly the peculiar movement of the Rossetti type of verse which is due to this cause. Finally, such a forced rhyme as *Julia* with *saw* and *awe*, though cleverly veiled, is intolerable, and when single fine lines are literally and simply rendered, the neighboring lines are forced to bend and yield to the necessities of the metre almost constantly. There is, too, not a little amplification of the original. The effect, therefore, so far as it is to be taken as an illustration of the powers of English *terza rima* to reproduce Dante's measure, cannot be regarded as settling the point favorably, but in itself the translation is an interesting technical experiment in English verse and highly creditable to the writer. In the remainder of the number we find an account of the demolition of the legend of William Tell, a scholarly notice of Robert Morris's services to the Revolution, an account of the state of affairs in the Federal courts which occasions the increasing delay of justice, and several other papers, principally of an historical nature.

—The Paris *Figaro* revives the memory of an incident, now twenty-four years old, which is not to be called History by those who spell that word with the majuscule, but which is entertaining gossip at least. It concerns a falling-out that took place between Marshal MacMahon and Cardinal Lavigerie, then Bishop of Algiers. The Marshal was Governor of Algiers, and, when the see became vacant, had influence enough to secure the appointment to it of M. Lavigerie, whom he had known at Nancy. Hardly had the prelate taken possession of his see when he attacked violently and publicly the administration of the Arab bureaus, which then existed "in all their beauty." He complained of the separation, the *parquage*, of the natives, whom he hoped, rather, to unite closely with the French colonists. MacMahon took the other side. After awhile a famine came, and the Bishop appealed to the Christians of Europe for aid. The Marshal found in this appeal an implied accusation of himself as being indifferent to the people's distress, and denounced Mgr. Lavigerie to the Emperor as one who was setting the colony by the ears through the ardor of his proselyting. The Emperor thereupon wrote to the Bishop: "You have a great task to perform in preaching good morals to the two hundred thousand Catholic colonists in Algeria. As to the Arabs, leave to the Governor-General the care of disciplining them and accustoming them to our rule." Lavigerie protested at once, in a public letter addressed to MacMahon, complaining of his lack of courtesy, and maintaining his own right to work for the overthrow of all barriers between the two peoples. Then he set off for Saint Cloud, where he had a long interview with the Emperor, the result of which was a promise on his part of a proper deference towards the Governor-General, and, on the other, a letter published in the *Officiel* recognizing his right to continue and extend his conciliatory labors. The Marshal was furious, and declared that he would oppose the return of Lavigerie to Algiers, on the ground that his coming back would provoke disturbances. M. Baroche then intervened, and offered the Bishop another position, but he refused it. He went back to Algiers, and took possession of his see again. MacMahon never forgave him this defeat, and long after, when he was President of the republic, did his best to prevent his elevation to the cardinalate. It is to M. Jules Grévy that Mgr. Lavigerie owes his red hat.

— During the more than thirty years which have elapsed since the publication of Alberi's edition of Galileo's works in sixteen volumes (Florence, 1842–'56), the researches of Italian and German scholars have brought to light a considerable number of minor treatises from the pen of the great Pisan physicist, which contribute in no small degree to complete our knowledge of what he was and what he achieved as a pioneer in natural science. In view of these discoveries, and stimulated by the completion of Frisch's critical edition of Kepler's *opera omnia* (Frankfort, 1858–'70), the Italian Government resolved to publish a "national edition" of the works of Galileo which should be worthy of his illustrious name. The Minister of Public Instruction laid the subject before the Italian Parliament, which voted the neces ary funds without hesitation, and the King did honor to himself by becoming patron of the enterprise. The editorship in chief was confided to Prof. Antonio Favaro of Padua, who, in 1888, issued a pamphlet entitled, 'Per la Edizione Nationale delle Opere di Galileo Galilei,' in which he stated the critical and diplomatic principles which should guide him in the execution of his task. Associated with him is a corps of three eminent savants as counsellors, and two younger scholars as assistants. The first volume of this work has recently appeared (Florence: Barbèra), and forms a stately quarto of 430 pages. In accordance with the chronological, and therefore logical, arrangement of the dissertations and discourses adopted by the editor, we have here to do exclusively with comparatively youthful productions of Galileo, the results of studies made before he was twenty-eight years of age, while he was yet under the instruction of Ostilio Ricci, or was lecturing on mathematics in the University of Pisa. Many of the earlier papers, now printed for the first time from original manuscripts in the National Library at Florence, are mutilated beyond hope of restoration, and all of them reveal to us a young scientist who, however superior to his compeers in mental vigor and activity and in the elegance and fluency of his Latinity, is still in bondage to scholastic methods and to the supreme authority of the Stagirite. The most extended as well as the most mature treatise in the present volume is the concluding one, entitled "De Motu," in which Galileo takes the first step in the direction that led him to the discovery of the laws of motion and to the dungeons of the Inquisition. Perhaps there is no subject on which mediæval philosophers uttered such arrant and voluminous nonsense as on that of motion, of which they really knew nothing. Galileo now began to perceive the utter fruitlessness of such speculations, and to recognize the importance of experiment and observation as means of detecting the secrets of nature. It was the radical and revolutionary change of view and of method of investigation, which we see clearly indicated in this treatise, that roused the anger of the Aristotelians, and compelled the young mathematician to resign his professorship in 1591 and quit his native city. It is evident from this meagre analysis of the contents of the volume before us that their chief interest consists in the light which they throw upon the intellectual growth and scientific evolution of Galileo—an interest, however, which, in his case, is very great and quite peculiar. The editorial work, it may be added, is exceedingly well done, and the excellence of the typographical execution reflects credit upon the Florentine publishing-house.

THIRTY YEARS OF EUROPEAN HISTORY—II.

A History of Modern Europe. By C. A. Fyffe, M.A., etc. Vol. III. (1848-1878). Henry Holt & Co.

To note down and describe the outward and, as it were, visible history of a given period is a comparatively easy task; it is one of those tasks, at any rate, which a lively writer and a well-informed man such as Mr. Fyffe gets through with more or less success. The really difficult achievement is to note and analyze the flow of opinion, sentiment, or conviction which makes up the internal, and, so to speak, mental history of a generation. It is a matter with which Mr. Fyffe hardly concerns himself. Yet one may confidently assert that the essentially important characteristic of European history towards the close of the nineteenth century will ultimately prove to be the extraordinary change not only in the beliefs, but even more in the feelings, of mankind which took place, or at least became noticeable, during the thirty years which followed upon the political disturbances of 1848. At the bottom of all that alteration in men's theological, moral, social, and political opinions which is now at last forcing itself upon the attention of the world, lies one fact which, obvious and undeniable as is its existence, has hitherto received far less notice than it deserves. This fact is the existence throughout all the more civilized States of Europe, and notably in England, of a freedom of speech, or freedom of discussion, such as has hardly ever existed in anything like the same extent at any time of which we have historical record.

No doubt this state of things, which is popularly, but inaccurately, described as freedom of thought, has been coming into existence for a century and a good deal more than a century. The noticeable thing, however, is, that, under influences which it would take an essay or a treatise to describe or analyze with any fulness, freedom of discussion has, during the last thirty or forty years, been developed with extraordinary rapidity. The checks, legal, moral, or conventional, which restrained liberty of speaking and writing, have all and each been weakened or removed. Not thirty years have elapsed since the appearance of Mill's essay on Liberty. The applause which greeted the work was symptomatic; but the point to be here remarked is, that the whole language and tone of the essay is already obsolete. Mill assumes, and more than once in effect states, that on matters of the greatest importance thoughtful men held opinions which they dared not express, and that the only reason why the coercive tyranny of public opinion was little felt was, that a generation morally dwarfed by restraint did not feel the strength of chains which they never tried to break. No author who saw things as they are, could in 1890 use language which, if exaggerated, was natural in 1860. The moral courage necessary for the expression of unpopular opinion may

not have increased—an observer who was no cynic might maintain that moral cowardice was the special vice of the present time; but the less is attributed to courage the more must be attributed to freedom. It is plain that men can speak their minds, and do speak their minds, with perfect freedom about matters which, in 1860, could not, without risk of odium, be dealt with in the privacy of intimate conversation. Atheists, says a modern preacher, are nowadays not at all shy. Every word contained in 'Essays and Reviews' might now be published without attracting attention. Far stronger attacks on orthodoxy than anything contained in that celebrated volume appear every month in periodicals which lie on the tables of every well-to-do and respectable family in England. Socialism and communism are fashionable creeds. You may believe or disbelieve in any dogma or crotchet, and express your opinion, without incurring any blame which need trouble the equanimity of any man endowed with common sense or common courage.

All this, it will be said, is more true of England than of most European countries. This remark is true, but its only effect is to present another side of the very condition of opinion with which we are occupied. Freedom of discussion is practically better established in England than in any other European land; and England is, for the first time since the great Rebellion, the most revolutionary of modern States. Every institution is there open to discussion, and few are the English institutions or English convictions which will escape change. There is, of course, a general impression that freedom of discussion and consequent scepticism were far more prevalent in the France of 1790 than in the England of 1890. This notion is erroneous. The fierceness of the battle waged between contending forces during the great French Revolution would show, if other proof were wanting, how strong was still the power of conservatism. In England the combat between established beliefs of all kinds and their assailants is noiseless. The reason is that there is no widespread resistance to the freedom of criticism or of innovation. Liberty of discussion, and consequent disintegration of beliefs, whether social, political, or economical, is, we may be well assured, the note of the period of which Mr. Fyffe professes to be the historian. He never remarks this characteristic of the time—a characteristic, it must be admitted, which has become more noticeable since than before 1878—and he therefore hardly seems aware of the results which, even in the political world, have been produced by the subtle influence of criticism and debate.

Some of these results are so obvious and of such immediate importance as well to deserve attention. For example, two beliefs which in 1848 exerted untold influence, are losing their hold upon mankind. Enthusiasm for parliamentary institutions and enthusiasm for the doctrine of nationality were the mainsprings of the movements which in that year convulsed Europe. Even Socialists who, like Louis Blanc, were less inclined than most popular leaders of the day towards belief in constitutional or national ideals, still held that universal suffrage meant the triumph of Socialism, and were not consciously indifferent to the cause of national independence in Italy, Poland, or Germany; and the greater number of democrats firmly held that the establishment of representative government and of independent nations throughout Europe would be a panacea for all the evils affecting mankind. Parliaments now exist in every European State, but the belief in the blessings of government by parliament is yielding everywhere to denunciations of "parliamentarism." The new form of parliamentary legislature under which a representative assembly legislates but does not govern, expresses the prevalent, though it may be transitory, conviction that the true representative of a nation is a strong and independent national executive.

In such matters, opinion is governed in the main by palpable facts. Neither France, nor England, nor Italy is the country whose success attracts admiration. Germany is, whether rightly or not, looked upon as the leading State of Europe, and the creation of the German Empire, according to popular opinion, sprang from the triumph of Bismarck over the Parliament at Berlin. Freedom, according to the old democratic creed, was the source of national glory and power. But the national existence and the European supremacy of Germany have been achieved by the sword; and by a sword, be it remarked, which was sharpened in spite of the opposition of Liberals and Parliamentarians. Nationalism, it must be admitted, is still a force in the affairs of the world; but a calm observer may doubt whether the creed of nationality commands anything like the support which it commanded when preached by prophets like Mazzini amid the jeers of the respectable Liberalism of the day. There is no longer any nationality which fascinates the world with the charm of Italy when the treachery of France and the tyranny of Austria forbade the unity, and all but destroyed the freedom, of the Italian people. We all know now that an independent national existence is not of itself enough to renew or to create national genius, or even national prosperity. Spain is independent; but the Spanish nation contributes little or nothing to the progress of mankind. Italian unity is a great fact, and no one can restrain the hope that a country which in servitude produced men of genius, will, under the blessings of freedom, promote the reign of knowledge and enlightenment. But at the moment this is a matter of hope rather than experience. Mazzini, Cavour, Victor Emmanuel, and Garibaldi were in different ways men who arrested the gaze and the admiration of Europe. It were difficult to show that they have left successors; nor can it be said that Italy has, in the field of literature and science, displayed the talents which, thirty or forty years ago, were necessarily spent upon the solution of political problems. A free national government has also turned out in Italy an expensive form of government. The blessing is worth its price, but an Italian peasant would tell you that the price was a very heavy one.

It has, lastly, become clear enough that the doctrine of nationality is one of those doctrines which do not admit of thorough and consistent application. It may mean, and often does mean, the disintegration of great and prosperous communities. To restore Strassburg or Metz to France would be a satisfaction to French nationality, but a blow at the nationality of Germany. One of the best portions of Mr. Fyffe's last volume tells the tale of the reëstablishment of Hungarian independence; but this story makes perfectly clear that Hungarian independence is the triumph of one race among the several races represented in the Hungarian Diet. Add to all this that other ideals have for the last forty years been gradually coming into prominence which, if not actually opposed to the doctrine of nationality, are very different from it and may balance its influence.

In the place of these two beliefs have grown up two other convictions. The first is the doctrine which in 1848 was denounced by all respectable economists and politicians as Socialism. No doubt the Socialist or communistic schemes of the revolutionary era were crude ill-considered, and violent; but it was not their accidental defects, but their essential unsoundness, which offended the sober thinkers and the responsible statesmen of 1848. There are few men responsible for the conduct of national affairs who would to-day adopt any of the specific plans put forward by the French agitators who met at the Luxembourg. But the sentiment which lay at the bottom of these plans now pervades the whole of European society. Not many months have passed since a respectable and able peer, who represented the opinions of forty years ago, denounced in the House of Lords some proposal as Socialistic. He was reproved by the leader of the House and the head of the Conservative party, and told that men would not be frightened by words, and in effect that the denouncer of Socialism was behind his day. The German Emperor is no Liberal in the ordinary sense, but the German Emperor figures as the patron of State Socialism.

Look, again, at the benevolence of the time. It is very genuine and very active, but it is quite unlike the religious philanthropy of forty years back. It is in the main directed, even when under the hands of clergymen, not towards the direct saving of souls, but towards the deliverance of the people from physical want and misery. There was a great deal to be said—a good deal more than was actually said, either in the press or in Parliament—against the active part taken by a cardinal and a bishop to obtain good terms for the London dockers. But the fact that ecclesiastical dignitaries thought it right to come forward on behalf of workmen out on strike, is a sign of the times to which no one can shut his eyes. It exhibits the benevolence of the present generation, it exhibits also in a very marked manner that curious indifference to individual freedom, whether of masters or of men, which is a less pleasant feature of the time. This indifference to the kind of liberty of which Mill, though not always with perfect consistency, was the apostle, has a very close connection with the second of the two beliefs which have grown up since '48, and appear destined, for a time certainly, to spread and flourish.

This second conviction is a profound faith in men's collective action. It takes all sorts of shapes. In the mouth of most thinkers and politicians it is embodied in the repeated demand for the action of the State—that is to say, of the collective body of citizens. In every country of Europe, and notably in England, the duties of the Government are year by year increasing; and it should be noticed that demands for decentralization, as for the giving of additional powers to local bodies, are not demands that the State should cease to interfere, but that State interference should be carried out by local authorities. The same spirit, though in a different form and with different results, appears throughout the world in the sympathy felt with combinations of workmen intended to benefit the class of artisans or laborers, but also intended to confer this benefit by means of restraints placed on individual freedom. In one shape or another the idea constantly reappears that combined action, whether represented by the State or by powerful bodies within the State, must, for the benefit of the mass of mankind, coerce the selfishness, the egotism, or the eccentricity of individuals. It is no wonder that in Switzerland—a microcosm in which you may often

see an anticipation of the ideas which will ultimately prevail in the great world without—thoughtful men point out the imminence of an alliance between the Ultramontanes and the Socialists. Such a combination is natural; for ardent Catholics and ardent Socialists alike hold that the claims of a society, whether it be the Church or the State, are of paramount authority when they come into conflict with the rights of individuals.

A writer who attempts to state or analyze the ideas prevalent at a given time, especially if that time be the period in which he is living, is liable to be the victim of one gross but natural misconception on the part of his readers. They assume that any one who states that an idea or conviction is prevalent, or likely to prevail, means to assert that the idea is sound and entitled to admiration. There is, therefore, a real danger that an attempt to explain what are the thoughts which have influenced civilized mankind, especially in the realm of politics, during the last thirty or forty years, may be treated as a defence or eulogy of modern conceptions. It may be well to remind our readers that criticism need not in itself be either censure or apology. The plain truth is, that every change in the convictions of mankind, at any rate in the sphere of political and social life, implies loss as well as gain. All that in this notice of Mr. Fyffe's book we wish to insist upon is, that there is a side of the history of the years between 1848 and 1878 which he has entirely neglected. Our aim has been to call attention to a prodigious change—we might well say a revolution—in European modes of thought and feeling. This revolution is assuredly not all for good. The idea of 1848, that freedom would of itself be the salvation of mankind, was a noble conception, and generations must elapse before any one can fairly decide whether the world has gained or lost most by the fact that palpable successes which were not attained by the Liberalism of 1848, were gained by the blood-and-iron policy which will always be connected with the name of Bismarck. It is difficult to believe that any one who, say in 1908, takes up Mr. Fyffe's work, will not be called upon to admit that the world has suffered much from that gradual apostasy from faith in individual liberty which grew up between 1848 and 1878.

VENETIAN CENSORSHIP.

The Venetian Printing Press: An Historical Study, based upon documents for the most part previously unpublished. By Horatio F. Brown. With twenty-two facsimiles. G. P. Putnam's Sons. 4to.

THE only fault we have to find with this sumptuous volume is its sumptuousness. If it were a work intended merely for bibliophiles and dilettanti; if its sphere were confined to enumerating the typographical peculiarities of the 'Decor Puellarum' and the artistic effects of the 'Hypnerotomachia Poliphili,' or to reviewing the successive triumphs of Spira and Jenson, of Valdarfer, Ratdolt, and Manuzio, its ponderous size, its generous type and margins, the thickness of the paper, the lavish facsimiles, and the limited edition would all be in place. Bibliophiles would prize it for its beauty as well as for the minuteness of information with which it condenses and supplements the older labors of Hain and Panzer, and the more recent ones of Fulin, Soranzo, and Castellani. But it is much more than a mere work of antiquarian bibliography. It is an historical study of first-rate importance, largely based on original researches, and as such it ought to be accessible to the student without the restrictions imposed by undue bulk and excessive cost.

We presume Mr. Brown to be the son of the late Rawdon Brown, whose long-continued labors in the Venetian archives contributed so much interesting material to the English Calendars of State Papers. He has, therefore, doubtless an hereditary acquaintance with those archives, which at the Frari and Museo Civico offer so large a series of records rendered accessible by careful arrangement and the liberal courtesy of the custodians. Of these opportunities he has made abundant use. More than half of his volume consists of an appendix of original documents which are of great interest. With such sources at his command, it is easy to understand how valuable a contribution the author has made, not only to the history of the printing art, but to that of literature and human thought. Thus the extracts from the day-book of a bookseller in 1484, preserved in the Marciana, by its lists of sales shows us what demand existed for books of every kind and their current prices, while the account of stock and entries of daily purchases afford us a curious insight into the mental activity of the period.

There is scarce any subject connected with the production and distribution of literature on which new light is not thrown, but it is to the most interesting and important of these that Mr. Brown devotes the greater part of his investigations—the regulation and censorship of the press. In the lands of the Roman obedience this has exercised an immense influence upon intellectual development, varying in proportion to the rigidity of its enforcement. In France the papal Index was treated with little respect, and in Catholic Germany with not much more. Spain was powerful enough to erect and manage for herself the machinery with which she crushed the intellect of her people. Venice would gladly have maintained the same independence, which she vainly asserted and endeavored to exercise with a wiser regard for the commercial as well as the intellectual interests of the community; but after the League of Cambrai the strength of the Republic was on the decline, and in the prolonged struggle with the Congregations of the Inquisition and of the Index it constantly lost ground. The questions involved were very intricate. No one pretended to champion freedom of thought or liberty of the press. The State sought to protect itself, as earnestly as the Church, against all ideas savoring of dangerous innovation, and both were perfectly willing to unite in stamping out heresy; but there was a wide field in which their respective pretensions were wholly incompatible, the State asserting its independent autocracy in temporal affairs, and the Church ever on the watch to extend its *potestatem in temporalia in ordine ad spiritualia*. For this it found the censorship an exceedingly convenient and effective instrument. All books which maintained the rights of the sovereign were promptly put on the Index. To this it was impossible for the sovereign to submit, and the quarrels which thence arose were bitter and prolonged.

The spirit in which the contest was carried on by both sides may be gathered from a single incident. The Venetian printers, Gianbattista Ciotto, Zoan Antonio, and Jacopo de' Franceschi, were printing the 'Disputatio de Censuris' of Suarez. In the fifth volume the Senate obliged them to omit certain passages, for the subject was one which bore directly on the power of the Church to coerce the State with its censures, and so orthodox a writer as the Jesuit Suarez could hardly fail to take a position obnoxious to the secular authorities. Hardly had the volume left the press when, in August, 1606, the Holy Congregation of the Index thundered forth a decree denouncing it as an audacious forgery. The unhappy printers were forbidden for the future to print books of any kind, under pain of excommunication, removable only by the Pope, and booksellers everywhere were prohibited from purchasing any such books from them, under penalty of excommunication *latæ sententiæ*, a fine of 200 ducats to the Apostolic Chamber, and such other arbitrary punishment as the Congregation might order.* Presumably, the unlucky printers, thus ground between the upper and the nether millstone, were ruined.

It was in vain that the Signiory endeavored to protect the flourishing printing industry against the crushing blows of Rome. It might defend a printer himself from penalties decreed against him, but an excommunication pronounced against a product of his press necessarily limited its market and rendered it unsalable. The Venetian population was insufficient to support the vast industry which looked to all Europe for a market, and when the Roman censorship was enforced, that industry received a fatal blow. Within a few months after the publication, in 1596, of the Index of Clement VIII. with its rigorous regulations, the number of Venetian presses fell off from one hundred and twenty-five to forty. In 1596 there were twenty-four copyrights taken out; in 1597 only seven. Printers left Venice in such numbers that in 1602 the Senate enacted a law to prevent their emigration without special license. The Signiory did what it could to prevent the decay of the printing art, but its position was fatally false. It was thoroughly Catholic at heart, there was no thought of a Reformation, and the cumbrous censorship which it established itself, coöperated with that of Rome in surrounding the business with so much formality and so many risks that it could not flourish. The story is an instructive one, and is told by Mr. Brown with abundant new detail and ample knowledge.

OUR NEXT NEIGHBOR.

The Constitution of Canada. By J. E. C. Munro. Cambridge, Eng.: University Press; New York: Macmillan.

IT is only two years since the appearance of the work entitled 'Manual of the Constitutional History of Canada,' by Mr. J. G. Bourinot, clerk to the House of Commons of that country. Prior to the appearance of this book, two others by the same author had been published, one entitled 'Parliamentary Practice and Procedure in Canada,' the other 'Local Government in Canada.' Before these, came the work of Mr. Todd on Constitutional Government in the British Colonies, in which constitutional customs in Canada are discussed at length. With these treatises accessible, it could not be said that information concerning the Government of the Dominion of Canada was lacking. Nor should we omit to mention the work of Sir Edward Watkin, entitled 'Canada and the States,' containing recollections from 1851 to 1886. Although the main purpose of this book was to trace the development of the railway system of Canada, of which Sir Edward was one of the chief promoters, yet it contains a great deal of matter of political interest.

But the work of Mr. Munro is the most comprehensive manual on government in Canada that has as yet appeared. It contains in all twen-

* Mr. Brown (p. 161) gives an imperfect abstract of this decree from Reusch. It is to be found in the Index Alexandri VII., Romæ, 1664, Index Decret. n., vi.

ty-one chapters. Giving, first, a general view of the scheme of government in that country, it treats of the constitutional history of the Provinces, of the sources of the law and customs of the Constitution, of the Provincial Legislatures, Assemblies, and Legislative Councils, of methods of legislation and of administration under the Dominion and Provincial Governments, of the judicial power, of the distribution of legislative power, of the Parliament of the Dominion, and of Imperial control.

The fact that Canada is part of the British Empire, and bears the name of a colonial dependency, tends to detract from the interest which its institutions would excite if it were nominally an independent State. In reality, Canada is independent to such an extent that, in all matters relating to its vigorous colony, the Imperial Government has been reduced to a state of practical subserviency. One by one the prerogatives of the Crown and of the Home Government have been yielded up, until their existence has become chiefly suppositional. Instead of contributing to the support of that Government, we find the Dominion levying customs duties on importations from England, not merely for revenue, but also for the "protection of home industries." Although the power of entering into treaties with foreign governments has not been conferred on the Dominion, yet the Parliament of Canada has "all powers necessary or proper for performing the obligations of Canada or of any province thereof as part of the British Empire towards foreign countries arising under treaties between the empire and such foreign countries." Recently the Canadian Parliament has passed a law to authorize extradition of criminals without reference to the treaties. The exercise by the Dominion of the power to execute treaties is very familiar to the people of the United States in its application to the Fisheries Treaty of 1818, for the enforcement of which according to its own views the Dominion has adopted statutory provisions, into the support of which the Imperial Government has doubtless been rather violently drawn. So it was with a hesitation by no means concealed that the British Parliament, against much opposition, made a grant of a subsidy to a line of steamers plying between Vancouver and Hong Kong.

The people of Canada enjoy and are proud of their practical independence, and would be quick to resent any aggressions by the Crown upon their privileges. On the other hand, the same spirit of independence has prevented the growth of a desire for political connection with any other government than that now nominally supreme. It is a common error in this country to associate any opposition in Canada to the exercise of Imperial prerogatives with a supposed predilection for political union with the United States. This error sometimes prevails so far as to lead to the attribution of annexation sentiments to the whole Liberal party in Canada, that being *par excellence* the party of opposition to Imperial encroachments. It is true that whatever annexation sentiment there may be is chiefly, if not wholly, found within that party. But it is gravely erroneous to suppose that it represents, either avowedly or secretly, a movement towards annexation.

In the great reorganization of government in Canada which took place in the formation of the Dominion and the passage by the Imperial Parliament of the British North America Act in 1867, many suggestions were taken from the Constitution of the United States and the British Constitution, and adapted to the conditions then existing under the systems of government in the various British North American colonies. It is true that specified powers only were given to the Provinces, the balance of legislative power being vested either in the Dominion or in the Imperial Parliament. But if we turn to the exclusive powers of legislation committed to the Provincial legislatures, we find that they have a very wide scope. They extend, generally, to the amendment of the Provincial constitutions; to the laying of direct taxes and the borrowing of money for Provincial purposes; to the establishment and tenure of Provincial offices; to the management of prisons, charities, schools, and municipal institutions; to the creation and regulation of property and civil rights, and the administration of justice in the Provinces; and, generally, to all matters of a merely local or private nature. As in the United States, we often find laws of the Dominion and laws of the Provinces operating upon the same subject. Thus there exists a general act of the Dominion, known as the Scott Act, in regard to the sale of intoxicating liquors. At the same time, under the power to license saloons, we find various stringent local regulations on the subject.

To the exercise by the Provinces of their powers in relation to education we find certain limitations. Thus, a Provincial law is not permitted prejudicially to affect any right or privilege with respect to denominational schools which any class of persons may have had at the time of the Union. From any act or decision of any Provincial authority touching such schools an appeal lies to the Governor-General in Council, and in certain events the Dominion Parliament may make remedial laws. These provisions are suggestive of the social complications and antagonisms which were so prominently exhibited not long since in the commotion over the Jesuits' Estates Act.

In constituting the Legislature of the Dominion, the British Parliament was taken as the model, but some important departures from it were made. There is a popular branch, called the House of Commons, but the upper house, as in the United States, is called the Senate, and the hereditary principle found in the House of Lords has been discarded. The Canadian Senate contains 80 members, of whom Ontario has 24, Quebec 24, Nova Scotia 10, New Brunswick 10, Prince Edward's Island 4, British Columbia 3, Manitoba 3, the Northwest Territories 2. Senators are appointed by the Governor-General for life. They must be thirty years of age, and must hold real and personal property of the value of $4,000 over and above their debts and liabilities. This property qualification they must continue to possess, and each Senator is required, under a resolution of that body adopted in 1880, to take, within twenty days from the opening of the first session of each Parliament, an oath containing a declaration that he holds property of the value required.

The House of Commons is composed of 215 members, apportioned among the various Provinces, approximately to population. No property qualification is required to hold a seat in the Commons. The elective franchise is regulated by a Dominion act passed in 1885. Prior to that time the electors of the House of Commons were such persons in each Province as were qualified to vote for members of the Provincial Assembly. Although, under the British North America Act of 1867, the Parliament of the Dominion had the power to provide for a uniform franchise, it was not until 1885 that Provincial opposition sufficiently abated to permit the power to be exercised. As in England, the practice of introducing money bills on the advice of a responsible Minister was adopted, and in matters of practice the precedents of the British House are generally followed.

In 1875 there was established a Supreme Court of the Dominion, consisting of a Chief Justice and five puisne judges. This Court, as Mr. Munro observes, is not supreme in the American sense, since an appeal may lie to the Judicial Committee of the Privy Council in England. Among other powers, the Supreme Court of Canada has jurisdiction in controversies between the Dominion and a Province, or between Provinces, or to determine the validity of Provincial laws, where the Legislature of any Province shall have passed an act agreeing to such jurisdiction. British Columbia, Ontario, and Nova Scotia have each passed such an act.

Our Dictionaries, and Other English-Language Topics. By R. O. Williams. Henry Holt & Co. 1890.

THIS little book is mainly taken up with notes upon the use of a few words. The hasty dictum of Dr. E. A. Freeman, that the non-ecclesiastical use of *metropolis* is "slang," is easily and amply refuted. Mr. Williams well says that "for more than two hundred years the secular meaning has been the prominent one," and the only reason for not extending the statement is that Elizabethan secular writers were not fond of the Greek forms. They often alluded to London as the "mother towne" of England.

The account of "our dictionaries" could not well be flimsier; but a discriminating guide to books of reference, useful as it would be, can hardly be looked for from American publishers. "The examples collected by Johnson," says Mr. Williams, "have formed the main stock of the citations used by subsequent dictionary-makers." This, of course, does not apply to Richardson, to say nothing of Murray. The 'Century Dictionary' has as many quotations as Johnson and Richardson together. It is no wonder that the fraction of the population which has not been engaged in the production of this world of words, has included every person capable of supervising the quotations in a really masterly way; for there was no possibility of competing with Murray and his 1,300 readers. Still, most of the 'Century' citations are judicious and unexceptionable; and if the treatment of them is less severely scientific, it is more agreeable than that of the Philological Society's vast collection.

In the first ten pages of part xvi. of the 'Century' (the latest to hand), we count 260 quotations, fewer than in the earlier parts of the work, which seems to be overrunning its limits. Quotations under *pilfer* from Dryden and Bacon, under *pilgrim* from Grew's 'Anatomy of Plants,' and under *pilotage* from Raleigh, have been taken from Johnson, apparently without verification, and quotations under *pillery* from Daniel and under *pimping* from Crabbe have been similarly drawn from the 'Imperial.' An abridged quotation and wrong definition, under *pinax*, come from Webster. We may state here that a few references appear to be either erroneous, misleading, or insufficient. Under *pile*, in the electrical sense, it might have been well to quote from Volta's own description, which was originally published in English.

BOOKS OF THE WEEK.

Abbé, C. S. Our Great Actors: Six Water-Color Portraits. Boston: Estes & Lauriat. $5.
Ackerman, W. K. Historical Sketch of the Illinois Central Railroad. Chicago: Fergus Printing Co. 75 cents.
Allen, W. B. The Lion City of Africa. Boston: D. Lothrop Co. $2.25.
Baker, Sir S. W. Wild Beasts and Their Ways. Macmillan & Co. $3.50.

Ballou, W. H. The Upper Ten. John W. Lovell Co. 50 cents.
Blake, Mary E. A Summer Holiday in Europe. Boston: Lee & Shepard. $1.25.
Blake, Mary E. Verses along the Way. Boston: Houghton, Mifflin & Co. $1.25.
Bowen, H. W. In Divers Tones. Boston: J. G. Cupples Co. $1.25.

DICKENS' CHRISTMAS CAROL.

CHARLES DICKENS' CHRISTMAS CAROL.

Being a reproduction in fac-simile of the original manuscript from Title-page to Finis, as it left the author's hands to go to the printer; printed on paper similar to that used by Charles Dickens when writing his stories, and accompanied by a valuable Introductory Note, by Mr. Frederick G. Kitton, now the accepted authority in all matters relating to the Life and Writings of Charles Dickens.

Imperial Quarto (only 250 copies printed), bound in half vellum, ornamental side design on millboard. Each copy signed and numbered. $5.00.

"Thanks to the enterprise of that zealous and industrious annotator and illustrator of the life and writings of Charles Dickens, Mr. F. G. Kitton, the amateurs of photographs have now an opportunity of procuring, at a moderate price, a literary treasure of far more interest than ordinary samples of a great man's penmanship. . . . He who owns this thin quarto may be considered to have in his possession the actual paper and penmanship of the author. . . . Altogether Mr. Kitton's volume may be pronounced to be a literary curiosity of the highest interest and value."—*The Daily News, London.*

TO-DAY.

A WEEKLY JOURNAL OF

POLITICS.

3 Somerset St., Boston, Mass. $1.00 per Year.

A Record of the **Facts** and **Considerations** which show that Individual Liberty is good for the people of the United States,

And that, therefore, Legislative Regulation is injurious for them.

They are injured by governmental interference with Banks, Railroads, Post-office, Education, International Trade, Relations between Laborers and Employers, and by the countless other extensions of the political function in a socialistic sense,

Leading to the neglect of **Justice**, the one thing needful.

TO-DAY *has been published for over a year. Sympathizers with the object should come to its support. The endeavor will be to provide them with a readable and useful paper.*

J. MORRISON-FULLER, WALTER C. ROSE, Editors.

Home Rule for Ireland

By W. E. GLADSTONE,

IN

SUBJECTS OF THE DAY

FOR NOVEMBER.

In addition to Mr. Gladstone's article, there are papers on different phases of the Home Rule question throughout the British Empire contributed by Sir John P. Hennessy, Justin McCarthy, T. P. O'Connor, Prof. A. Vambery, and others.

8vo, paper, 75 cents.

SUBJECTS OF THE DAY is a new quarterly Magazine, of which the distinctive feature is that each number is devoted exclusively to the discussion (by various writers of authority) of some one topic (or group of kindred topics) of present moment. Thus the first number (May, 1890) comprised papers on "State Education for the People," and the second (August, 1890) papers on "Socialism, Labor, and Capital." The third number is now ready, and treats of "Home Rule."

Per number, paper, 75 cents.

For sale by all booksellers, or sent by mail, postpaid, on receipt of the advertised price, by the Publishers.

Dyspepsia

HORSFORD'S
ACID PHOSPHATE.

In dyspepsia the stomach fails to assimilate the food. The Acid Phosphate assists the weakened stomach, making the process of digestion natural and easy.

Dr. R. S. McCOMB, Philadelphia, says: "Used it in nervous dyspepsia, with success."

Dr. W. S. LEONARD, Hinsdale, N. H., says: "The best remedy for dyspepsia that has ever come under my notice."

Dr. T. H. ANDREWS, Jefferson Medical College, Philadelphia, says: "A wonderful remedy, which gave me most gratifying results in the worst forms of dyspepsia."

Meaning of Obscure Words.
List of Words used only Once by Shakespeare.
Maps—Localities of Plays. Index to the Notes.

WITH
600 Illustrations in Text and 37 Etchings.
BY GORDON BROWNE,
W. H. Margetson, Maynard Brown, and Frank Dadd.

The *N. Y. Tribune* says:
"The Henry Irving edition will now take its place as one of the most thorough and careful, and it cannot fail to win popularity."

The *Athenæum* says:
"The result is so good that we must congratulate all concerned in it; it is superior, in our judgment, to any illustrated edition of Shakespeare with which we are acquainted."

The *Scotsman* says:
"This Shakespeare ought to take a foremost place among those editions of the poet which general readers keep by them for reading or for reference."

The *Spectator* says:
"Enough has been said to recommend an edition which will win public recognition by its unique and serviceable qualities."

Pall Mall Gazette says:
"It is essentially a Shakespeare for the general reader."

The *Globe* says:
"The edition is unquestionably one which every thorough student of Shakespeare must needs acquire."

ROBERTS BROTHERS'
NEW BOOKS.

Our New England.

Her Nature Described by HAMILTON WRIGHT MABIE, and Some of Her Familiar Scenes Illustrated. The illustrations are photogravures from Nature, with Remarques drawn by FRANK T. MERRILL. Oblong quarto, limp cover, with Photogravure on Japanese paper, gilt edges. Price, $4.00; cloth, illuminated, price, $5.00.

Mr. Mabie's summary of the picturesqueness and grandeur of New England scenery is a clever bit of essay writing. His description of the climatic changes, of boy life in the old homestead, the varied aspects of Nature, comparing its beauties so favorably with those of other countries, is unfolded with panoramic clearness.

The Day's Message.

A Brief Selection of Prose and Verse for Each Day in the Year. Chosen by SUSAN COOLIDGE. Cover design by Mrs. WHITMAN. 16mo. White and green cloth. Price, $1.00; full gilt and gilt edges, price, $1.25.

The busy days of life are not so busy but that there is time in each for the reading of one compact little sentence of wisdom or comfort, and none need such a little, well-selected morsel as much as those who have no time to choose it for themselves.

Her Great Ambition:

A Story. By ANNE RICHARDSON EARLE. 16mo. Cloth. Price, $1.00.

A bright, fresh story of a girl with ambition. It is interesting and entertaining.

The Drifting Island;

Or, The Slave Hunters of the Congo. A Sequel to 'Kibboo Ganey; Or, The Lost Chief of the Copper Mountain.' By WALTER WENTWORTH. Illustrated by F. T. MERRILL. 16mo. Cloth. Price, $1.25.

In My Nursery.

Rhymes, Chimes, and Jingles for Children. By LAURA E. RICHARDS, author of "The Toto" Books. Profusely illustrated. One volume. Small 4to. Cloth. Price, $1.25.

Sold by all booksellers. Mailed, postpaid, on receipt of price, by the Publishers.

ROBERTS BROTHERS,
BOSTON.

Just Published:
KINGS IN EXILE.
By ALPHONSE DAUDET. Translated by LAURA ENSOR and E. BARTOW. With 104 illustrations from designs by BIELER, CONCONI, and MYRBACH. 12mo, paper, $1.50; half leather, $2.25.

9 Lafayette Place, New York.

BOOKS IN THE FOREIGN AND ANCIENT LANGUAGES. Subscription to foreign periodicals, Tauchnitz British Authors. Catalogues on application. CARL SCHOENHOF, 144 Tremont St., Boston.

To Our
PRESBYTERIAN
Friends.

We shall be pleased to forward circular giving examples of important Stained Glass Windows recently executed by us. Our commissions have usually been for the entire work of the building, including important figure memorials and COLOR DECORATION as well, thus making the entire color scheme of walls and windows one harmonious unit.

Some of these commissions have been as important as any executed in the United States for any denomination. This means that within the last five years there has been a marvellous change and development in the artistic side of church work, particularly so in the Presbyterian denomination. They have been willing, of late years, to accept the best resources of art for the beautifying of the house of worship.

Space does not permit us to give any description, but have you seen the work in the Bethlehem Presbyterian Church of Philadelphia? If not send for handbook describing same.

J. & R. LAMB,
59 Carmine Street,
Carmine Street is a continuation of Sixth Avenue south, and the Sixth Avenue cars pass the door of No. 59. New York.

NOW READY:

Millionaires of a Day.

An Inside History of the Great Southern California Boom. Cloth, $1; paper, 50 cents. By THEODORE S. VAN DYKE, author of "The Still Hunter" [$2]; "Southern California" [$1.50]; "Rifle, Rod, and Gun in California" [$1.50].

"Most entertaining; . . . done with art and judgment. . . . Mr. Van Dyke, in his highly interesting volume, gives many graphic pictures of scenery and many realistic and humorous sketches of different types of capitalists and speculators. The whole story certainly presents, as Artemus Ward would have said, a large-sized moral lying around somewhere; and at the same time it is set forth in these pages with the charm attaching to fiction."—*New York Tribune.*

Midnight Talks at the Club

Reported by AMOS K. FISKE. 16mo, vellum cloth, gilt top, $1.00.

"Attractive to those who wish to be nourished through their intelligence rather than through their prejudices."—*The Christian Union, N. Y.*

"Oftentimes eloquent and at all times sincere, even when the playful humor lies beaming on the surface, it is a book that will carry light and consolation to many doubting minds."—*New York Times.*

IN NOVEMBER:

Murvale Eastman,
Christian Socialist.

Or, The Church of the Golden Lilies. A Novel. By ALBION W. TOURGÉE, author of "A Fool's Errand, by One of the Fools," etc.

A new venture, in the trenchant and dramatic style of this author, along the lines of to-day's problems—capital and labor, wealth and poverty, journalism, speculation, etc.

FORDS, HOWARD & HULBERT,
NEW YORK.

The Nation

VOL. LI.—NO. 1323. THURSDAY, NOVEMBER 6, 1890. PRICE 10 CENTS.

The second volume in the Fiction Series for Young Readers.

KING TOM AND THE RUNAWAYS.

BY LOUIS PENDLETON.

Illustrated by E. W. KEMBLE.

The Strange Experience of two boys in the forests and swamps of Georgia.

8vo. Bound in cloth, with specially designed cover. Price, $1.50.

VOLUMES VII. AND VIII.

Lecky's History of England in the Eighteenth Century.

Large 12mo. Cloth, each volume, $2.25.

The seventh and eighth volumes, which are now ready, complete Mr. Lecky's 'History of England in the Eighteenth Century.' In these final volumes he makes important and timely contributions to the Irish question, and, in view of the present critical condition of Irish politics, his conclusions from his prolonged researches will be read with peculiar interest.

G. P. Putnam's Sons,

27 and 29 West 23d St., N. Y.,

PUBLISH THIS WEEK:

Gustavus Adolphus, and the STRUGGLE OF PROTESTANTISM FOR EXISTENCE. By C. R. L. FLETCHER, M.A., late Fellow All Souls' College, Oxford. (No. II. in the "Heroes of the Nations Series.) Large 12mo, fully illustrated, cloth, $1.50; half morocco, $1.75.

"The scholarly repute of Prof. Evelyn Abbott of Balliol College, Oxford, is sufficient guarantee of the thorough excellence of the editorial supervision of this promising series."—*Independent.*

English Fairy Tales. Collected by JOSEPH JACOBS, President of the English Folk-Lore Society. Pictured by JOHN D. BATTEN. $2.00.

This volume is addressed as well to lovers and students of folk-lore as to the little people who want "real stories" simply and graphically told.

Good-Living. A Practical Cookery Book for Town and Country. By SARA VAN BUREN BRUGIÈRE. 8vo, cloth, $2.25.

This book contains over 1,300 receipts drawn from highest authorities and many countries; from France, Belgium, England, Holland, Denmark, Spain, Italy, Austria, Russia, as well as nearer home, to suit the varied tastes of our cosmopolitan community. . . . Another aim, almost, if not quite equal, is economy, every receipt given being within the reach of any family of moderate, even modest means, in either city or country.

Helena, and Occasional Poems. By PAUL ELMER MORE. 12mo, cloth, gilt top, $1.00.

"They are a collection of short pieces of sweet rhythm and pleasant numbers. The author shows his appreciation worthy of more pretentious expression than the subjects in this volume afford him the opportunity of displaying."—*N. Y. Observer.*

"'Helena' abounds in romantic conceits, and is well adapted for the purpose of introducing descriptive and meditative passages. The writer is gifted with sensibility to natural sounds and sights."—*Ledger, Philadelphia.*

"The lines are dainty and ingenious, limpid and full of delicate tintinnabulation."—*N. Y. Sun.*

"His verse is always carefully wrought; his passion, if it may be called passion, is never overwrought. He never breaks away from the sense, from the appreciation of true art."—*Commercial Advertiser.*

Little Venice, and Other Stories. By GRACE DENIO LITCHFIELD, author of 'Only an Incident,' 'The Knight of the Black Forest,' etc., etc. 16mo, with frontispiece, 75 cents.

"These stories are all marked by a gracefulness of style, a strength of treatment, and a certain freshness in character and situation, that make them particularly pleasant reading."—*Boston Times.*

**** Illustrated catalogue of books for Young People, and illustrated list of Holiday publications, prospectus of the Heroes of the Nations Series sent on application.

UNMOUNTED PHOTOGRAPHS

Of Ancient and Modern Works of Art, embracing reproductions of famous original paintings, sculpture, architecture, etc. Price, cabinet size, $1.50 per dozen; larger sizes in proportion. Lantern slides to order. Send 15 cents for 1887 Catalogue and 1890 Supplement of 12,000 subjects.

MACMILLAN & CO.,

112 Fourth Avenue, New York.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 6, 1890.

The Week.

THE main cause of the cyclone which has emptied seventy Republican seats in Congress, is the wicked and unprincipled measure which that party devised to pay the campaign debts of Quay and Wanamaker. The cash that was subscribed to elect Harrison was charged up to the American people in a gross, uncounted sum. It was to be collected by duties on tin plate, worsted cloth, carpet wool, pearl buttons, and a thousand other things that enter into the food and raiment of the people. Such a bill could never have been carried except as a cash transaction, so much for so much. The result is now before us. At this writing, the Republican party has lost all of New England except Maine and Vermont. It has lost New York, Pennsylvania, Indiana, Wisconsin, Kansas, and Nebraska, and probably Michigan and Illinois and Montana. It has given the Democrats a greater majority than they ever had in any Congress since the time of Andrew Jackson. This result has come about spontaneously, in the face of imbecility or indifference on the part of the National Democratic Committee.

The lurid appeal with which the Chairman of the Republican Congressional Committee, Mr. Belden, closed the late campaign, showed that he expected defeat. The document reads like one of the forged and garbled foreign press extracts with which Belden stuffed his campaign circulars, for it is full from beginning to end of misstatements and obvious falsehoods. The gem of the collection is the following:

"These were the chief features of their campaign. Supplementary to them, however, was another not less infamous. It was a grand conspiracy to raise the values of all the necessaries of life, and to charge that inflation to the new Republican Tariff Bill. In order to enjoy the spoils of office, they undertook to create a condition of the market whereby the people would be shamelessly swindled out of hundreds of thousands of dollars. This conspiracy has failed. The people have discovered that the new Tariff Law is not going to cause a rise of prices or any business disturbance, and they perceive that it is going to create larger and better markets for our farmers, to build up many new industries, to give employment to thousands of workmen now idle or insufficiently occupied, and to maintain the present high rate of American wages."

We doubt if any less experienced person than an ex-Canal-Ring contractor would have ventured upon the public statement, first, that the recent general advance in prices was due to a "Democratic conspiracy," and second, that the conspiracy has failed—that is to say, that prices have not been raised. He goes on to say that the "people have discovered that the new (McKinley) law is not going to cause a rise in prices." Have they, indeed?

The election of William E. Russell as Governor of Massachusetts is a deserved triumph for a worthy candidate after an inspiring campaign. Mr. Russell has every personal qualification to adorn the high office which the Bay State used to reserve for its most distinguished citizens, until the Republicans set the bad example of letting a rich nobody have it in exchange for heavy campaign contributions; and he has won the place after a fair contest in the open field as the champion of reform in State and national administrations alike. His success puts the Democratic party in Massachusetts on a sounder basis than it has occupied before for a generation. It means much more than the victories of Gaston in 1874 and of Butler in 1882, and it will injure the chances of the Republican party in the future more than either of those events. In the last Presidential election before 1874, Massachusetts gave the Republican candidate a plurality of 74,212; in the first Presidential election after 1874, the Republican plurality sank to 41,286. In the last Presidential election before 1882, the Republican plurality was 53,245; in the first Presidential election after 1882, the Republican plurality sank to 24 243. As the Republican plurality in the last Presidential election before 1890 was only 32,037, Mr. Russell's victory this year ought to make Massachusetts a doubtful State in the next Presidential election.

The great explanatory fact of the municipal election in this city is that over 30,000 of those who registered did not vote. That Tammany polled its full vote appears to be certain. It polled the largest vote it has ever had, but only 1,000 more than in 1888. It therefore has plainly owed its victory not to any marked increase in its own strength, but to the abstention of its opponents. Erhardt and Hewitt together cast 145,000 votes against Tammany in 1888. On Tuesday the total anti-Tammany vote only amounted to 94,000. So it still apparently remains true that Tammany is in a decided minority in this city. What was the cause of this enormous number of abstentions? Here we are in the region of pure guesswork. A partial solution of the mystery is the mutual distrust of the Republicans and Democrats. The Republicans could not bear to vote for a Democrat, and the Democrats, feeling the wave of popular hostility roused by Republican performances in Congress, could not bear to inflict on Democrats a defeat of which the Republicans wou'd have got a large share of the credit and profit. Each side, too, suspected the other of unfaithfulness to the combination ticket, and one or the other was undoubtedly right; perhaps both were right in some degree.

To this cause must be added the simple negligence or indifference of probably thousands of well-to-do people. Some did not take the trouble to register, and others who did register, would not, as the day was fine, waste any part of it in voting. This class of abstainers we have always with us. They include the rich, who, to use Mr. W. W. Astor's words in refusing to subscribe to the expenses of the Municipal League, "have no political interests in New York." The meaning of this is, that they find it cheaper and far less troublesome to buy Tammany when Tammany becomes oppressive and annoying, than to fight Tammany in the political arena. If Tammany gets into power, they can always protect themselves against it by drawing a check; whereas, if they oppose it with their vote and influence, and it succeeds in spite of them, they are exposed to its vengeful levies on their property as well as to smaller annoyances. This class has always been friendly to the worst Tammany men, even to the Tweed Ring. The late reform movement may therefore be said to have failed signally to divorce municipal business from politics.

There is one Southern State where there need be no question as to the reason why a small Republican vote is polled. In Virginia, Mahone, who controls the party organization, has openly advised Republicans not to vote. He is himself a resident of the Petersburg district, which elected Venable, a white Democrat, two years ago, only to have Langston, the colored Republican, put in his place. He therefore writes a letter to the County Chairman, in which he says that Langston is not a resident of the State, that he is not the nominee of the Republican party, that he is a disorganizer, that his election would be detrimental to the interests of both parties, and that he hopes he will be defeated. In the Richmond district Mahone's Chairman of the Republican Committee issued an address calling upon the voters of his party not to participate in the election of Congressmen, and saying that on the day of the election his Committee would have a man at each of the polling-places in the district to advise the negroes not to vote. Mahone's object was clear. He was overwhelmingly beaten when he ran for Governor himself a year ago, and he knows that Republican candidates will be beaten so long as he controls the organization and such candidates are recognized as being only his dummies.

Senator Aldrich went to Brookline, Mass., the other day, to make a speech in defence of the McKinley Bill. As usual, he made a lot of very glaring misstatements of fact. Among others he said that the duty on pig-iron had been "constantly decreasing" from 1828 to the present time, and he gave what he called the figures of the different tariffs to show this, as follows:

"In 1816 the duty on pig-iron was $10; in 1828 it was $12.50; in 1832 and 1833 it was $10; in 1842 it was $9; in 1862 it was $9; in 1864 it was $7, and in this bill it is $6.72 per ton; a constantly decreasing rate of duty."

Mr. Horace P. Tobey, an iron-manufacturer, now addresses a letter to Mr. Aldrich, hauling him over the coals generally, and exposing in particular his falsehood about the duty on pig-iron. We say falsehood with

deliberation and intent in this case because it is impossible that Mr Aldrich should be ignorant of the real facts, which are these: The duty on pig-iron was first imposed in 1818, the article having been on the free list for one hundred and seventy-six years in our colonial and national life, and having been largely exported by us to Great Britain. The duty in 1818 was fifty cents per cwt., or $10 per ton. The duty of 50 cents per cwt. lasted till 1828, when it was raised to 62½ cents per cwt. Under Clay's compromise tariff of 1832, it was put on the sliding scale at $12.50 per ton. Under the sliding scale it was reduced gradually to 20 per cent. ad valorem. By the tariff of 1842 it was fixed at $10 per ton By that of 1846 it was 30 per cent. ad valorem. By the tariff of 1857 it was reduced to 24 per cent. The Morrill tariff of 1861 fixed it at $6 per ton, which was raised to $9 in 1864 by way of compensating manufacturers for the internal taxes. In 1870 the duty was reduced to $7, the internal taxes having been repealed. By the tariff of 1883 the duty was reduced a small fraction, to $6.72 per ton, at which rate it stands in the McKinley Bill.

But Mr. Tobey makes the case much plainer by showing what have been the equivalent ad valorem rates all this time. Of course, as the cost of making pig-iron becomes cheaper the duty levied by the ton becomes greater, and thus it has come about that the present duty, $6.72 per ton, is very nearly the highest in the history of the country. The percentages are as follows:

Date.	Duty on each $100
1816–1827	
1828–1831	$40.00
1832	44.44
1833–1841	45.28
1842–1845	50.90
1846–1856	30.00
1857–1860	24.00
1861–1863	40.00
1864–1869	58.70
187 –1871	46.66
1872–1873	18.33
1874–1882	40.58
1883–1890	58.20

Will Mr. Aldrich ever reply to or notice in any way Mr. Tobey's letter? Probably not.

It is pleasant to learn, on the testimony of Mr. Henry Cabot Lodge, that the binding-twine manufacturers will be able to "go on" with a protection of only 7-10 cent per pound. So Mr. Lodge said in his speech at Charlestown, Mass., last week. His words are thus reported in the Boston papers:

"We gave the cordage factories free raw material; it is perfectly right and proper that they should have it. Farmers raised a cry that they wanted free binder-twine. The duty we put upon it in the House was stricken off in the Senate. Then petitions commenced to flow in from the men who worked in factories. They didn't go to the Democratic party, they came to the Republican party. They said: Give us a duty on binder-twine that we may not be ruined; and we saved enough for them to go on, I hope."

We are particular to quote what Mr. Lodge said, because it presents such a fine contrast to a statement made by the binding-twine manufacturers in writing to the Chairman of the Senate Committee on Finance while the matter was pending in the House, viz.:

"SIR: The cordage and binder-twine manufacturers of the United States beg that your honorable committee will amend that clause in the Tariff Bill which relates to our business. It places a duty of 1¼ cents per pound upon binder-twine. *Should this become a law, it will close our mills.* We ask for 1¾ cents per pound, an increase of one-half cent."

Directly on the heels of the enactment of a rate of duty more than half a cent lower than they said would "close our mills," they became so cheerful that they offered a large part of their property in the form of preferred stock to the public, and advertised that they were in very prosperous circumstances, and had formed a combination which would insure a continuance of the prosperity. And now Mr. Lodge underwrites them to the extent of believing that they lied when they submitted their written statement to Senator Morrill.

Mr. Henry L. Pierce, one of the ablest and most honorable Representatives Massachusetts Republicans have ever sent to Congress, has been on the stump against his old party. Addressing a large audience on Tuesday week in Boston on the tariff, he made a most effective answer to those who thought the McKinley Bill had either settled the tariff issue, or ought, in the interest of business, to be considered as having settled it. He recalled something which we think has during the past year been running greatly in the minds of reflecting men—the striking parallel between the views and methods of the high-tariff men now and those of the pro-slavery men during the closing years of slavery—the arrogance, the self-confidence, the eagerness to adopt any device, however high-handed, to carry their point; the readiness to believe that every piece of legislation they forced through was a final settlement. He recalled Clay's belief that the compromise measures of 1850 had permanently settled the controversy, and his appeal to the Senate to stop all further discussion; Cass's belief that the slavery question "was settled in the public mind," and that "it was useless to make speeches about it"; Choate's belief that these measures were "a mighty charm," which had "calmed the madness and anxiety of the hour." With these he compared Chase's emphatic deliverance, that the question had been "avoided but not settled," and Hale's passionate exclamation:

"And now gentlemen flatter themselves that they have done a great deed for the peace of the country. . . . There was a time when a set of men cried, Peace, peace, when there was no peace. . . . Gentlemen altogether mistake the character of the people whose sentiments have been violated, whose wishes have been disregarded, and whose interests have been trampled in the dust."

The Baltimore *American*, a sound McKinley paper, recently said (October 28):

"In commerce and mechanics this country is a giant; in art she is an infant. The great works of the great masters of Europe are a part, and an important part, of her artistic education. Competition with them is out of the question. They are a stimulating and needed help to American art. A tariff on them is an obstacle to our own artistic growth."

But we thought the true doctrine was that it was in commerce and mechanics that this country was an "infant." If it be "a giant" in these things, where is the need of protection? Giants do not as a rule need protection when in good health. Why should we all be compelled to subscribe to keep giants on their legs? And how does the *American* know that competition with European art is "out of the question" if aided by a good tariff? True, we have no Rembrandts, or Rubenses, or Millets, or Corots, or Rousseaus; but would not a 30 per cent. duty have produced them before long? We have no tin-plate manufacture in this country now, but is not the high duty sure to produce a great deal of it? We have been informed by an American artist of distinction that there is now a Corot factory over in Hoboken at which you can order Corots by the dozen, and which sells large numbers of them to Western millionaires. Of course they are not yet as good as the French Corots, but they surely would have been before long if the duty of 30 per cent. ad valorem had been left on the French article. Whether we can ever turn out genuine Corots with only the 15 per cent. of protection given by the McKinley Bill, is questionable. We do not believe we can.

In our increasing collection of trade circulars showing advance of prices of goods under the McKinley Bill, we find a rather unique document. A firm engaged in selling fire-arms had sent out a circular advancing prices in consequence of the new tariff. One of their customers replied to the circular that it was "all humbug." "We should like to know," said the indignant buyer, "how the tariff operates to increase the price of guns made in this country?" The letter closed by offering to pay the old prices for guns, but refusing to pay a cent more. Of course, the seller of the guns can only wait and let the buyer see whether he can get them at the old price. He will perhaps find out after a little that Congress did not spend nine months in passing a bill that was "all humbug."

The utter worthlessness of the census of 1890 is demonstrated by the final announcement that the population of the country is only 62,480,540. It is no wonder that Superintendent Porter feels constrained to issue a long and labored attempt at defence of so entirely unexpected and so obviously absurd a result. His chief reliance is the admitted fact that the census of 1870 was untrustworthy, especially in the South, and the consequent claim that nobody ought to be surprised that the rate of growth between 1880 and 1890 has been on the face of the returns only 24.57 per cent., against an apparent gain of 30.08 per cent. between 1870 and 1880. The real test of the census of 1890 is a comparison with the enumerations of 1860 and 1880, both of which are accepted as correct, leaving that of 1870 out of the account. In 1860 the population was 31,443,321 and in 1880, 50,155,783—being a gain of 59.51 per cent. for twenty years, or at the rate of 29.75 per cent. in ten years. The Porter count in 1890 shows only 62,480,540 people—a gain of but 24.57 per cent. in the last ten years. The period from 1860 to 1880 included the era of the civil war, with the consequent loss, directly

and indirectly, of many hundreds of thousands of human lives; the panic of 1873 and the several years of "hard times" which followed it; and two periods when immigration fell to very small figures, first during the war and then after the panic. Yet, despite all these drawbacks, the growth of population during each of these two decades was at the rate of almost 30 per cent. On the other hand, during the last decade, the number of immigrants reached the immense total of 5,242,530, or nearly twice as many as ever before landed in the same period; the country has been prosperous; there has been a greater advance in sanitary science, and consequently a smaller death-rate, than in any previous ten years; and yet Mr. Porter would have us believe that the growth of population has been far less than during the stormy and disastrous period between 1860 and 1880! It would be a waste of words to argue such a question.

The thing which ought to be done is to confess frankly that the Porter count is absolutely worthless, and have a new census taken by a man in whom the country would have the same confidence that it felt in Gen. Francis A. Walker ten years ago. It is intolerable that a reapportionment of Congressmen and Presidential Electors for the next ten years should be based upon these obviously incorrect figures. Aside from the injustice to States and to parties, it is a disgrace to the national reputation that, in this age of progress in statistical science, the Government should stand by a census which is on its face a fraud. It would, of course, be disagreeable to confess that so bad a blunder had been made, but it is far better to confess the blunder than to commit the crime of sustaining a humbug. If the Porter count is to be accepted, the Federal census of 1890 will have to take its place beside that of 1870 as worthless, and we shall have to wait until 1900 for a trustworthy enumeration of our people.

People who thought that the Constitutional Convention in Mississippi would furnish evidence that the South does not accept the failure of secession and the supremacy of the Federal Constitution, are disappointed. The new instrument contains the explicit declaration that "the right to withdraw from the Federal Union on account of any real or supposed grievances shall never be assumed by this State, nor shall any law be passed in derogation of the paramount allegiance of the citizens of this State to the Government of the United States." A little opposition was manifested when the clause was reported from the Committee, and a substitute was proposed declaring that the State, a "coequal member of an indissoluble Federal Union of indestructible States," would never assume the right to withdraw from that Union, and stopping there; but it was voted down, after Gen. Lee, the officer who carried the order to open fire on Fort Sumter twenty-nine years ago, had told his fellow-delegates that he came out of the war convinced that secession was not only impracticable, but wrong, and that he believed every man who had "toted" a musket for four years in the service of the late Confederacy shared that conviction.

A bill has been introduced in the Vermont Legislature to give taxable women the right to vote in town, village, and fire districts, and the Burlington *Free Press* expresses the opinion of most candid men when it declares that "a refusal to grant this privilege is to argue that taxation without representation is just and right." But it adds that there is one thing which will tell against the bill, and that is the fact that "the women of Vermont, as a whole, to all appearances do not care a fig whether they are given the right of suffrage or not." Although a number of petitions for the measure have been presented in the Legislature, the circulators of such petitions have found the work rather discouraging, not a single woman being found within the limits of one town in the northern part of the State who was willing to give her signature when the place was canvassed a fortnight ago. The *Free Press* concludes that "either the women of Vermont do not want the right to vote, or it is an 'off' year in suffrage circles," and it thinks that "until they give more positive expression to their desires in this direction, the Legislature is not likely to give the subject very serious consideration." It is true everywhere else, as in Vermont, that it is now the women, rather than the men, who need to be converted to woman suffrage.

An amusing illustration of the way in which offices are sought in this country is afforded by a letter published in the *Iowa State Register* from Samuel McNutt, asking to have the address of his paper changed from Maracaibo, Venezuela, to Muscatine, Iowa. It appears that the *Register* came to be sent to Maracaibo because Mr. McNutt was appointed consul there; "but," he says, "after a full survey of my field of operations, my surroundings, and the manner in which I must live (or die) in that torrid and enervating clime, I came to the conclusion that it was best for me to return home and resign, which I have done, and I have requested the department to continue in the consulate Mr. Plumacher, who has held the office twelve years (and has had the yellow fever twice) and is acclimated." In other words, Mr. McNutt sought and secured an office at Maracaibo without knowing anything about the climate, manner of life, or character of the people of Venezuela; and as soon as he learned these fundamental facts, he turned about and came home. What fools the passion for office does make of men!

The women of Baltimore, with some assistance from those of other cities, have raised the $100,000 which the Johns Hopkins University exacted as a condition of the admission of women to the benefits of the new Medical School of the University. The money has been accepted by the Trustees, and when the school is opened, women will have access to it on the same footing as men, provided they have followed the same preliminary medical course, and provided that this preliminary training has been "obtained in some other institution of learning devoted in whole or in part to the education of women, or by private tuition." But no immediate benefit is to be derived from it, because the medical school will not be opened until an endowment amounting to $500,000 has been accumulated for its maintenance. We believe that consummation is not very far off. When it is reached, women will be placed on a better footing as regards medical education than ever before, as the Johns Hopkins Hospital will in its staff and equipment be one of the best in the world.

Balfour has gone to Ireland partly under the sting of John Morley's denunciation of his absenteeism, but in a greater degree, doubtless, under the sting of the Eccles election, to see for himself the state of the country. This, be it remembered, is the first visit of the kind made by a man, a complete stranger by birth and education, to a country which he has for four years been governing arbitrarily, by means of a military force backed by sham courts of justice, hardly distinguishable, either in composition or procedure, from a regimental court-martial. During the whole of these four years he has never hesitated to give the lie, almost in terms, about the condition of Ireland to all statements made even as eye-witnesses by all members of the Opposition, whether English or Irish; relying on the reports made to him by furiously partisan subordinates. It is only at the eleventh hour, in the shadow of an impending general election, that he has roused himself from his aristocratic lethargy sufficiently to go over the ground in person and see who was lying. What he undoubtedly now sees is, that a very considerable portion of the west of Ireland cannot produce rent for a landlord except through a life of abject poverty and degradation on the part of the actual cultivator of the soil. The land question in all these districts really is the question—since one of two, landlord or tenant, has to quit, which it should be; or in other words, whether property in land is of such an absolute nature that a landlord would be justified in depopulating huge tracts of territory if it so pleased him, and would be entitled to the aid of all the public force necessary to enable him to do so. The question is a knotty one, both from the economical and moral point of view. But it would seem, at all events at first blush, as if, inasmuch as the Irish landlords owe their very existence as landlords for two centuries not to the popular sentiment of their countrymen, but to overwhelming physical force furnished from the outside, they ought to be removed by the English Government, and compensated for their ownership out of the English Treasury. It seems very difficult to justify their claim on the Irish taxpayers which Balfour's Land Bill sets up.

CHEAP OR DEAR?

SECRETARY BLAINE took a hand last week in the family discussion which is in progress in the Republican party as to whether or not it is desirable and patriotic for an American citizen to wish to buy things cheaply. He takes the ground squarely that it is, and in this respect he differs radically from President Harrison, Mr. McKinley, and Mr. Lodge, and both agrees and differs with Speaker Reed. In order to avoid all danger of seeming to misrepresent the leading lights of the party on this question, we will quote the position of each of them in his own words. The President said: "I am one of those uninstructed political economists that have an impression that some things may be too cheap; that I cannot find myself in full sympathy with this demand for cheaper coats, which seems to me necessarily to involve a cheaper man and woman under the coats." Mr. McKinley goes even further than the President, and says: "'Cheap' and 'nasty' go together. This whole system of cheap things is a badge of poverty, for cheap merchandise means cheap men, and cheap men mean a cheap country, and that is not the kind our fathers builded. Furthermore, it is not the kind their sons mean to maintain." Mr. Lodge is firmly upon the same ground, saying: "The cry for cheapness is un-American. There is such a thing as too much cheapness."

Speaker Reed occupies a middle ground between these authorities and Mr. Blaine, owing to an unfortunate combination of circumstances. Mr. McKinley very thoughtlessly failed to give the Speaker notice that he was "coming out" against cheapness, in time to prevent the latter from going on the record in favor of it. It happened, therefore, that while he was on his way to help Mr. McKinley in the West, the Speaker stopped at Buffalo, and, on the evening preceding that upon which Mr. McKinley delivered the scathing denunciation of cheapness quoted above, Mr. Reed declared that he "could spend the entire evening in giving the facts showing that articles have been lowered in price by the tariff," and that "it is the protective tariff that tempts our inventors to work at inventing cheaper processes of manufacturing." When he reached Ohio and discovered what Mr. McKinley was saying, the Speaker modified this view into a "straddle," in which he contended, first, that the "question of price is purely relative"; second, that "most of the higher prices said to have been caused by the McKinley tariff do not exist at all"; third, that "two-thirds of the prices that will be raised in the future to take effect by-and-by — perhaps — are in cases where the McKinley Bill has lowered the tariff"; and, fourth, that the effect of a protective tariff is to establish manufacturing, and the effect of establishing manufacturing "has always been, that in the long run you get lower prices." As nearly as we are able to understand the Speaker's position, it is that if the tariff raises prices at all, which he doubts, it is only for a time, and that ultimately it lowers them, or, in other words, conduces to cheapness. Hence, in his view, cheapness is not nasty and un-American, but desirable and patriotic.

Now comes Secretary Blaine, and in a speech at South Bend, Ind., on October 29, declares that for twenty-nine years the protective tariff has been lowering prices so steadily and generally that everything we buy to-day is cheaper than it ever was before. Here is the passage:

> "I undertake to call your attention to the fact that, under the last free-trade tariff, which ended in the beginning of 1861, you were paying more for everything that entered into your living, your household expenses, what you had on your table, and what you had upon your back, than you are paying to-day. Yet the whole country is resounding with the appeals of the Democratic party to vote against the Republican party because of the high prices they are putting on you. We have had protection now for twenty-nine years. Go back, if you please, and consult the old tariff, you younger men (and you older ones will remember it); compare its results with those of the present tariff. Compare them article by article, and you will find that in almost every case they are vastly cheaper now than then. The Democratic party allege that protective duties increase prices. That is their strongest point. I don't stand here to argue theories. I invite your attention to the fact that, during the period of twenty-nine years of protection, the tendency of prices for luxuries and the necessities of this life has been steadily downward."

What does Mr. McKinley say to that? If the "tendency of prices" under twenty-nine years of protection "has been steadily downward," the tariff has been working in the direction of cheapness for all that time, has it not? and has thus been working with infernal persistency towards making this a "cheap and nasty" country, filled with "cheap men and women." The antagonism between Mr. Blaine and Messrs. Harrison, McKinley, and Lodge is direct and irreconcilable. He says the protective tariff has for twenty-nine years worked steadily to give us greater cheapness, and that this is its strongest point; they say it prevents cheapness, and for that reason every true American should thank God for it and call it blessed. In every way, we think, their contention does greater credit to their intelligence and sincerity than Mr. Blaine's does to his. They admit the truth when they say that the tariff does raise prices, and they should have credit for that, whatever may be thought of their estimate of the intelligence of their audiences in adding to the admission their denunciation of cheapness.

But what shall be said of Mr. Blaine's claim that the difference in prices for the luxuries and necessaries of life to-day as compared with those of twenty-nine years ago is all due to protection? If he believes that, what has he to say of the same difference in England, and in fact every other civilized country on the face of the globe? He knows as well as anybody that prices have fallen in England during that period under free trade even more than they have here under protection, and why should he assume that the Western people are so ignorant as not to know it also? He did not even stop at prices, but went on to claim that our increase in population was also due to the tariff. "What have we done for the population of this country?" he asks. "We have considerably more than doubled the population during the twenty-nine years of protection. Now we are a people of nearly 65,000,000. Before we were only 31,000,000. You will find this to be true if you will go through the statistics." It is true, Mr. Porter's lower total by two or three millions to the contrary notwithstanding. It is also true that, during that period, several persons in the country have attained the age of maturity, and are able to reason after the manner of intelligent beings.

THE M'KINLEY ALPHABET.

THE "Democratic conspiracy to advance prices," which forms the refrain of the latest song sung by Chairman Belden at Washington and Chairman Manley at Augusta and by all the other Republican swans, has been exposed and has failed to produce its intended effect—so the whole flock unite in saying. Political conspiracies are no new thing in American politics. Not a year goes by without yielding one or more. But nobody has ever before, we think, hit upon the idea of getting all the merchants in the country to charge more for their goods in order to beguile people of their votes. Nor has any clique or coterie within our recollection been so adroit or agile as to bring the whole mercantile community, from one end of the country to the other, mostly Republicans too, into the toils of the conspiracy, and get them drilled to their parts, within less than thirty days of the time when the plot was first formed. The thing betokens more than human power. It savors of the black art. At all events, it is a fit subject for Bill Nye, or the Society for Psychical Research, to look into, to tell us how such things can be.

Perhaps, however, there has been no such conspiracy. Perhaps the mercantile classes, looking at the McKinley Alphabet as it is printed in the *Evening Post*, or, rather, looking at it before it was printed at all, have perceived that after their present stocks of goods are gone, they cannot be replaced at the old prices, and that they must pay something more per yard, per pound, per gallon, and per cent. on account of the aforesaid Alphabet. As prudent and honest men, they have notified their customers of this plain fact. Such general notifying is what Belden, Manley, and the rest call conspiracy. They would have preferred, of course, that the merchants should make believe that they were going to continue to sell at the old prices—till after the election anyhow. But that would have been a deception amounting to a conspiracy, and would have led to very serious consequences, personal to the merchants themselves. Their customers would have come to them, after the present stocks were used up, and would have expected to buy more at the old prices. But it would have been impossible to supply them at the old prices, the McKinley Alphabet forbidding. The Alphabet was designed expressly to make higher prices; but whatever was designed, that effect could not be avoided. So the merchants were obliged to tell their customers beforehand what was going to happen.

The very head and front of the "conspira-

cy" hath this extent, no more. Prices of stocks on merchants' shelves have not in general been advanced. Merchants in most cases have shared and are still sharing with their customers whatever advantage they have reaped by laying in large stocks before the McKinley embargo took effect. But they are puzzled and worried to know what will happen next. It is very easy to say: "Buy more at the McKinley prices." The question is whether they can sell at any profit, or even get back the bare cost, at the new prices, for the public seem to have formed a conspiracy of their own not to pay the McKinley prices. Almost every buyer in the land has formed a mental resolution that he will not pay a cent more than he did before, and not a few have proclaimed that resolution. Some, echoing Belden, say that it is all a trick and a conspiracy, and they honestly believe so. Others, again, knowing better, say that they will not be imposed upon by the crowd of real conspirators who are behind McKinley, and who put McKinley and Tom Reed and the Republican party up to enacting the McKinley Alphabet.

Between these two kinds of buyers the merchants are having a hard time, and it will be harder yet when they come to make their own next purchases. Heretofore they have had experience to guide them. They have known what and how much the public would buy at a certain price. How much, if any, the public will buy at a higher price is a matter of guess-work altogether. Any man who could answer that question would command a very high salary in any and every counting-room in New York. With the great bulk of consumers it is not a question of willingness, but of sheer necessity. They cannot pay higher prices for the same quantity. They must either buy a less quantity or a poorer quality. The opinion seems to prevail that the latter alternative will be adopted by most people, and that we shall soon enter upon an era of shoddy. Prices "will be higher *next spring* if not before," is the announcement of a leading firm doing business at 302 Broadway, which happens to reach us while we are writing. This tells the exact truth. Prices of store goods have only advanced here and there. They are on the rise, and there is no help for it. The pinch has only begun. It will be a gradually increasing suffocation from now on.

Any words of ours would be superfluous to characterize the McKinley Alphabet. It speaks for itself. Look at the finer grades of steel, for example—an article necessary to support many important industries here. Think of a tax of seven cents a pound on steel. Yet that is a small matter in comparison with the tax on pearl buttons, which are necessary to other important industries. Think of a tax of $6,000 on $1,200 worth of buttons. Think, also, of a tax of 32 and 64 per cent. on the wool of which all our carpets are made, but which is not produced in this country at all. What is the use of a tax on leaf tobacco of $2.75 per pound, or of 30 cents per bushel on barley, or of 5 cents per dozen on eggs? In some places there is method in this madness, as where the tax on fishermen's seines was doubled for the benefit of manufacturers of linen twine. In others there is none. Why, for example, should the tax on microscopes be advanced to 60 per cent.? Who is interested in having amber necklaces for babies taken from the free list and taxed 50 per cent. ad valorem? Who wants to have the duty on truffles raised from 30 to 45 per cent.? Is the amber business an "infant industry" in a double sense? Does anybody propose to hunt for truffles in this country? Does anybody expect to produce the natural mineral waters of Europe here? What sort of swindling is covered up by such items as these?

As we have said, the McKinley Alphabet as published by the *Evening Post* is only a part, really a small part, of the whole. There are large classes of goods embraced under general headings of which the *Evening Post* mentions only a single one. The public will find them out, however, before six months more shall have passed over their heads.

SCIENCE IN AMERICA.

About a year ago there was more or less newspaper mention of a proposed memorial enterprise which was to signalize, in a much more permanent way than can be done by a World's Fair, the four-hundredth anniversary of the discovery of America. The scheme had its origin in a suggestion made at last year's meeting of the Phi Beta Kappa Society, and there received with great favor; and it contemplated nothing less important than a memorial history of American literature and science from the discovery of America to the present time. More accurately, two prizes of $3,000 each were to be offered for the best general survey of American literature and science respectively; and in addition to this it was proposed to secure the preparation of an extensive and detailed account of scientific achievement, the work for each department of science to be intrusted to a specialist in that department. It is plain that this last undertaking was the really serious task, and the only part of the scheme which possessed in a high degree the monumental character.

We are informed that a committee having the project in charge is about to meet and confer upon the initiation of the work. The committee consists of the presidents of some six of our greatest universities, together with one or two other gentlemen of equal eminence; and doubtless every point of importance will receive the most careful and mature consideration before any active steps are taken in the work. Yet we think that a few general remarks on some of the dangers that may beset the undertaking, will not be wholly impertinent.

In the first place, then, it must be borne in mind that it is practically impossible—even if it were desirable—for the historian of scientific production to avoid giving an estimate, either explicitly or by implication, of the value and importance of the work whose achievement he is recording. It will consequently be a primary requirement, if the memorial history is not to reflect discredit upon the country, that the men engaged to write each section of the history be men who naturally use a cosmopolitan and not a provincial standard, and who feel that their task is to measure truly the importance to the progress of science of the work under review, and not to praise good intentions or to eulogize perseverance in the face of difficulties, or to indulge in vague generalities about the excellence of work whose chief recommendation may be that it is the product of "native industry." There is many a piece of excellent work which America can show, and which will bear the application of the highest standards; such work ought to stand out in bold relief, and not be made indistinguishable from unimportant and mediocre work by that indulgence in universal laudation which writers upon American achievement in literature and science often so easily and good-naturedly fall into.

There is, of course, little danger that such a committee as that which will have charge of this undertaking will choose for any worker upon it a man who is capable of the grosser forms of puffing. But this is a process which takes on many different shapes, and often it is carried on quite unconsciously. So extreme a case as that presented by a recent magazine article on "The Private School for Girls" is seldom encountered; it is truly surprising that an article containing so much of vulgar self-laudation and so little of anything else should have found admission into a high-class magazine. In connection with this performance, we are reminded of an encyclopædia article upon Logic, in which the work of an obscure text-book-maker was given but little less prominence than that of Aristotle; it was not surprising to find, upon referring to an index of contributors, that the author of the text-book was identical with that of the article.

In addition to the temptations to undiscriminating praise which are common to undertakings of this general character, there are two circumstances, somewhat peculiar to the subject of the history of science in America, which deserve to be specially mentioned. The first arises from the very great differences that exist between the amount of achievement in different fields. If, as will necessarily be the case, the work in the various subjects be assigned to specialists in those subjects, there will be danger of each writer feeling that he is expected to make a showing comparable in dignity and amount to that of his colleagues. But no such democratic equality exists in the premises. There are some subjects in which America has done work which, for quantity at least, and in some instances for quality also, holds high rank among the contributions of the great nations of the world. This is certainly true of some departments of the natural-history sciences and of astronomy. But there are other subjects in which American work has been almost absolutely *nil*. In pure mathematics, for instance, we believe it can be said with entire accuracy that the

only really notable contribution made by an American to the science is the memoir on Linear Associative Algebra of the late Benjamin Peirce; and, what will be more surprising to most readers, it would be only a very trifling inaccuracy to call that memoir the only American contribution of any kind to pure mathematics, notable or not notable, prior to 1876. The historian of mathematics in this country must quietly bow to facts, and make his history no longer than those facts warrant, unless he wishes to make his work ridiculous by padding it with detailed accounts of the origin and progress of divers series of text-books.

The second circumstance to which we have referred is one which will call for the exercise of unusual tact and judgment. In several departments of research, nearly all the advanced work that has been done in America has been done not only by men who are still living, but by men who are still young, and the permanent value of whose work has not yet been securely determined. The delicacy of the task of treating historically the work of living men is always recognized, and in many collective works leads to the entire omission of the names of living men. This is, of course, out of the question in a history of science in our day, on account of the immense progress made during the present generation; and least of all is it possible in America, where so many branches of inquiry had been left almost uncultivated until within the last two decades. But it will present a strange appearance if the history of some department of research, after a few preliminary remarks and the mention of two or three older names, shall proceed at once to a review of the work of men who, ten or fifteen years ago, were students in American or foreign universities. It will require skill here to avoid the appearance of puffery where there is none. And, on the other hand, it will not do to accept as final the enthusiastic appreciation which the work of some of our young and promising savants is receiving. Much that the present generation values, and justly values, may prove in the next to have been important chiefly as a sign of life and work. To take perhaps the most striking example of all this: the contrast presented by the vigorous activity of so many able young men in the field of economic theory and economic discussion, to the almost utter neglect of the subject which prevailed so long in America, is most gratifying; but what a journalist may heartily welcome and praise, an historian must remember has yet to be subjected to the inexorable ordeal of time.

In all these remarks we have been looking at only one side of the matter, and that because it seemed to us of urgent importance. Nothing that we have said was meant to be inconsistent with the most jealous preservation of the record of the humble beginnings of things; with the most generous recognition of useful work of every kind; with the greatest pride in all that our country has achieved in any direction. But we have wished to show that that pride cannot be satisfied with a record in which values are inflated so as to make honest comparison with other nations impossible, or so as to reduce, in our own country, important achievement and humdrum reproduction to a common level.

CONSTITUTIONAL CHANGES IN CHILI.

Mr. Theodore Child's latest Chilian article in *Harper's* predicted a struggle between President Balmaceda and the Congress; and the rather vague despatch recently given out by the Department of State at Washington refers to the closing of the preliminary stage of the conflict. To make matters clearer, a more detailed review of the progress of events is necessary.

As Mr. Child remarks, the President of Chili, in common with most of the Executives of Spanish-American republics, has long been a practical dictator. Invested with centralized powers worked out into the most extraordinary minutiæ, he has been able not only to control the course of legislation in the most absolute way, but also to dictate the Presidential succession and to manipulate the entire electoral system. Popular disgust at this state of things had long been growing more and more intense, and it was evident at the opening of Congress, on June 1, that an attempt would be made to deprive the Presidency of a part of its swollen power. The President foresaw the coming storm, and endeavored to divert it. In his message to Congress he shrewdly threw himself, or appeared to throw himself, on the side of the popular agitation, and urgently recommended reforms in the Constitution of 1833, for the purpose of securing a greater degree of home rule to provinces and municipalities, and of more clearly defining the respective powers of the three coördinate branches of the general Government. He admitted that too much weight was assigned to the President by the Constitution, though he maintained that the remarkable stability and domestic peace of the country for the past thirty years had been largely due to a strongly centralized Government.

However, "men and institutions have their day," he went on, "and to-day we need to have other conditions prevail in our public life. But these were not to be found," he argued, "in the parliamentary régime so widely advocated." The President ought to be freed from some of his responsibilities, but the essential prerogatives of his office should not be touched; he must remain independent of the Legislature, must retain the veto power, and keep the control of all public officers having to do with general, as distinct from local, interests. "For my part," he said, "I do not accept for my country either the dictatorship of Congress or the dictatorship of the Executive; I desire a system of liberty and of independent public powers." He proceeded to give a sketch of his idea of the proper division of powers between the Executive, Legislative, and Judicial departments of the Government, and exhorted Congress to promote constitutional changes in that direction.

The Congress's first point of attack was the President's Cabinet. A resolution was duly passed calling upon the Ministry to resign, and asking the President to appoint a Cabinet acceptable to the two Chambers. The President delayed his reply, but promptly struck a blow at his opponents by getting the Council of State to enforce the laws restricting the right of assemblage; this was done to head off the great popular meetings in opposition to the President. Nevertheless, he approved the new election law passed by both houses, designed though it openly was to free the elections from the Presidential control. Then ensued a period of discord, the President stubbornly maintaining his position, and the Congress resorting to the most desperate expedients to compel him to form a new Ministry. The Chambers refused to vote the budget, and allowed a new fiscal year to be entered upon with no laws of taxation in force. On July 18, the Senate passed a bill calling for a constitutional amendment which provided that Congress could be convoked without the assent of the President, that nominations to office should be submitted to the approval of the Senate, and that the Cabinet should resign whenever a majority of the two houses, or two-thirds of one of them, should demand it. The same day a resolution was introduced in the lower house calling for a reform in the Constitution to deprive the President of the veto power.

For a long time the President stood firm, in public manifestoes and in messages to the Congress asserting his intention to maintain all his Constitutional rights. But at last the pressure grew too strong for him. He first yielded in the matter of public meetings, saying that they could be held provided they were not attended with disturbances of the public peace. Then he made advances to the Committee on Finance, so as to get the machinery of taxation at work. Finally, he told a delegation of the leading citizens of Santiago that he would do everything possible to bring the crisis to an end. This was taken to be the beginning of a surrender, and the whole of it was effected early in August by the appointment of an entirely new Cabinet. On the 11th, the new Ministers appeared before Congress, where they were received with tumultuous delight, to read their programme of action. This made a very favorable impression, and everybody was happy—except the President.

All was clear sailing for his opponents after that. They pressed their constitutional reforms forward with rapidity, and these, when consummated, as it seems probable that they will be, will greatly restrict the Presidential privilege. They passed a most important law conferring autonomy upon municipalities. The President made his last stand on the question of surrendering his control over the police of the cities, but was able to get only grudging concessions in the cases of Santiago and Valparaiso; in those cities he is to have a restricted right to name the police superintendents. As a whole he has been thoroughly beaten, and it only remains to be

seen whether the approaching elections will endorse this first bold experiment in parliamentary government.

EDUCATION IN COLONIAL VIRGINIA.

BROOKLYN, October 13, 1890.

EDUCATIONAL matters in colonial Virginia have offered no little perplexity to the historian and biographer. The product was there, for the number of educated Virginians was large as compared with such persons in other colonies; but the machinery appeared to be wanting, and in a country peopled with men of high culture (for that time) and of great political knowledge and experience, the educational factor can hardly be traced. It may be that the real culture of the Virginian was overrated, and the prominent part taken by that colony and State during and after the Revolution was in part factitious, due to pressing emergencies that brought them to the front. The fact remains, however, that the list of Revolutionary leaders in Congress and in State politics from 1765 to 1799 would be very much lessened in number and importance were the Virginians to be stricken from it.

The question of the source of the really great influence they exerted naturally leads to a study of the opportunities of obtaining an education in the colony, with the result rather of increasing than of diminishing one's surprise at meeting such a galaxy of apparently exotic talent. Of system there was none, though Mr. Gordon McCabe shows that the laws of the colony provided for schools—laws that read well, but failed to be executed. The parson eked out a scanty subsistence by teaching a parish school, where the attendant who took a full course would learn the three R's, with a little Latin and Greek. In some counties might be found a "field-school," almost as primitive in build and conduct as that of the Irish "hedge professor." A college—that of William and Mary—was the local pride, but it dragged out a precarious existence, and, just before the Revolution, was not an institution to which a careful parent would intrust the education of his son. "There so little attention is paid to the learning or the morals of boys," wrote Richard Henry Lee to his brother, "that I never could bring myself to think of William and Mary" for his own son. Nor could Washington, after making inquiries on the spot concerning the reported mismanagement of the college, make up his mind to send his step-son, Custis, to that institution. The same apathy seems to have settled upon the colonial college as infected the English university, where, as Adam Smith records, the greater part of the professors had given up even the pretence of teaching.

Unfortunately, the "parsons' schools" were no better places, either for residence or for study. The parson was very often more distinguished for his capacity for drinking, swearing, fox-hunting, and entertaining than for his fitness as a spiritual guide or monitor, or as an instructor of youth. The reports of the commissaries who at irregular intervals went from parish to parish to look into church affairs, make sad reading; but it is rather to be wondered that matters were no worse. The charge of a parish was regarded as an office at the gift of the Governor, or the Proprietor (in Maryland); so it was a reward for a "friend," a follower, or hanger-on—one who had failed in England, and failed so thoroughly as to welcome an offer in the colonies, because every other door for employment was shut on him. The "taking of orders" was a form which their conscience did not prevent their duly fulfilling, and the care of the parish was an inconvenience to be shirked as much as was possible, but a convenience as a means of support.

These "parsons" contained some good material, and have handed down a reputation through the reputation of their pupils. Jefferson remembered the "mouldy pies and excellent instruction" of a Scotch clergyman from whom he received the rudiments of Latin, Greek, and French. Madison has recorded his gratitude to another Scotch minister, Donald Robertson, a "learned teacher of King and Queen County." In Westmoreland, John Marshall and James Monroe were said to have sat under the Rev. Archibald Campbell—another Scotchman, for it was the Scotch who monopolized the schools of the colony almost as they monopolized the tobacco trade. Dr. Buchan, who set up a school in Dumfries in 1763, had served as tutor in Lord Fairfax's family. Parson O'Neil, in Orange County, was a "better teacher than preacher," and the Rev. John Cameron was minister in Lunenburg County, where he also kept a classical school of some reputation. The Rev. Devereux Jarratt was content to teach a "plain school," at a salary of about ten pounds Virginia—or say $33 a year. One name interrupts the roll of North Britons, and brings with it a memory which no breath of scandal has dimmed — James Maury, of French descent, a Huguenot refugee, whose lovable nature, generous disposition, and high intelligence commanded the respect and warm friendship of all who knew him, and exerted a strong influence upon those who were under his care.

It was at home that the beginnings of an education were laid, and in many ways Arthur Lee was permitted to run, until an advanced period of boyhood, with his father's slaves—a custom of that time, says his biographer, with respect to the younger sons of a family. Washington is said to have received his first knowledge from one of his father's servants or tenants; and Archibald Alexander from an indentured servant. To obtain a tutor from England or Scotland was a common practice, and a salary of £30 sterling a year was considered a fair remuneration. The Custis children had such a tutor, and many others could be named as having the same. This was the extent of home schooling; outside of that were the parish schools, the colleges, and an English experience. The wages of a tutor seem a small sum, and the school rates were no higher. Boucher charged for tuition £25 a year, the boy to furnish his own bed. Custis had two horses and a negro with him, which increased the expense much. At King's College the annual tuition fee was only £5; a room cost £4, and board 11s. a week; firewood, candles, and washing extra. Richard Henry Lee thought £100 a year the usual cost at one of the colleges in the colonies north of Virginia, and his own experience convinced him that an education was much more cheaply obtained in England than in any part of America—William and Mary excepted. At such a school as St. Bees, about £20 a year would cover all the expenses for board, tuition, etc., the course of studies giving "a thorough knowledge of English and the classics, with writing and arithmetic." In his three years at Edinburgh, Arthur Lee spent £419, "which might have been less, had my disposition been less careless."

The unpublished letters of Jonathan Boucher, M.A., throw much light upon this question. The man himself was interesting. Imported as a tutor into a Virginia family, he performed what was expected of him, and, after finishing that task, he was by mere chance led into the ministry. He exercised his new calling in Virginia and Maryland, and, to obtain some means above his meagre salary (for clergymen were wretchedly paid, and, in most cases, were not even worth what they got), he took in some scholars, among whom was "Jacky" Custis, the step-son of Washington. At the outbreak of the Revolution Boucher was a pronounced Tory; suffered hardly for his political tenets, which he literally proclaimed from the housetops; was driven from the country by the "good people" thereof; went to England, and took it out of his persecutors by compiling an autobiography, of which some portions have been printed. Enough is known of the man to recognize a distinct literary faculty. He could as readily frame a bill or a petition for the Legislature as turn off some verses on the meanest of subjects, and he was one of the leading lights of the Homony Club in Maryland, the sole object of which was to "promote innocent mirth and ingenious humor." This is probably the "Philosophical Society" which, according to the London *Chronicle* (1773), had been established in Maryland, and of which Lord Dunmore was said to be the patron.

The opinions of Boucher are, as a rule, very just and reliable, and the picture he gives of schooling opportunities in Virginia does not redound to the credit of that community. Natural causes were in a measure responsible for this, as the life of a Virginian was one practically isolated from the outer world. As Boucher inquired:

> "Where will you point out to me another [country] so circumscribed in its intercourse with mankind at large as Virginia? Saving here and there a needy emigrant from Great Britain, an illiterate captain of a ship, or a subaltern merchant, to whom can a Virginia youth apply for a specimen of the manners, etc., of any other people? Thus limited in the opportunity for observation, must not his ideas necessarily resemble those of a Caribbee Indian mentioned by Lafitau, who, offended at being called a savage, exclaimed, *I know no savages but the Europeans, who adopt none of our customs;* or those of the inhabitants of the Marian Islands, who, being persuaded that theirs was the only language in the universe, concluded from thence that all other men knew not how to speak?"

It followed that to the Virginian his own land was the best, his own habits and practices models, and his countrymen the finest possible. And yet, as Boucher very truly says, "Till very lately you could hardly anywhere see a piece of land tolerably ploughed, or a person who could be persuaded that ploughing made any difference"—a very severe arraignment of a strictly agricultural colony.

Boucher was settled at Port Royal, and wrote of his neighbors: "There was not a literary man, for aught I could find, nearer than the country I had just left; nor were literary attainments, beyond merely reading or writing, at all in vogue or repute. In such society it was little likely I should add to my own little stock of learning; in fact, there were no longer any inducements." While on the glebe of St. Mary's his position was no better; and, after seven years of occupancy, during which he took scholars, he admitted to Washington that he could not boast of having brought out one scholar. The office of teacher was regarded as low, and "often taken up by the very lowest fellows one knows of." Perhaps the Dominie's ire was excited by the large and increasing number of sectaries around him, much occupied in schooling the young. Jefferson noted that a majority of the inhabitants at the beginning of the Revolution were dissenters from the Established Church, while Dr. Myles Cooper described the offence

given by King's (now Columbia) College, by the fact of its being in the hands of churchmen —that is, of the Established Church. None the less the Virginian clergyman was of very dubious character, subsisting on the scanty product of his glebe, on the fluctuating pay levied and paid in tobacco, and without books for improvement, or companionship to spur him to effort.

With such educational facilities for the planters, it is almost needless to say that the poorer people were destitute of any, unless one of their powerful neighbors should take sufficient interest in the youth to bear the expenses of a schooling—a not unusual occurrence with the sons of a favored overseer. No one who has not consulted the manuscript sources of Revolutionary history can realize fully the intense labor which most of these people underwent when recording their signatures. The cross, or other merely conventional sign, was not much used, and slowly and painfully the letters were evolved, the writer evidently being more apt with hoe or rifle than with the quill. "Old Put," as Washington called the New England hero, was accurate when compared with these scribblers, but he was much worse than Artemas Ward. To sum up, the man in Virginia who wished an education, had to go far from the colony to receive it, and, with a constant intercourse with England, it is little wonder that he should, as a rule, go to English schools and universities—a not unimportant factor in judging of the social system of the colony.

The Revolution did not improve matters, save only by sweeping away what few schools there were, and so necessitating the introduction of a new system. From a MS. journal of Noah Webster, written in 1785, when he was in the South and in the full fever of his educational crusade, are recorded some facts that came under his observation. "Gentlemen are obliged to send their children to the northward for education, a shame to Virginia." A magistrate from the Eastern Shore told him that few of those who acknowledged papers before him could write their names—a curious statement when the high renown of that section even in aristocratic Virginia is considered. A merchant of Alexandria informed him that of fifty planters who sold him tobacco, all but four or five used a mark on the receipts. This is a good proof of the social revolution in the State caused by the war, and especially by the currency experiences. The man who could not read or write, but was shrewd and conscienceless enough to pay his debts in paper at the rate of one shilling in the pound, soon obtained the lands of his more honest neighbors, and, at the end of the war, was in full possession.

WORTHINGTON C. FORD.

LETTERS AND SPORTS IN SCOTLAND.

EDINBURGH, October 21, 1890.

I SAT for an hour to-day with David Douglas, the publisher, in his office at No. 10 Castle Street. I mention the house particularly because it was the one to which Scott, when he was married, brought his wife. The office, which was their dining-room, was hardly altered, except that a new grate had been put beneath the mantel; but the broad desk of Mr. Douglas stood in the place of the hospitable board of the young housekeepers. In the back room of the first street-floor, where the publisher's clerks were to-day entering items on the invoices as the porters packed the boxes, the original carved mantel reminded me of the style that prevailed in our better New England houses a hundred years ago, which was just about the time that this house at No. 10 was built.

I found Mr. Douglas busily poring over the original MS. diary of Scott, kept in his later years. It was in two quarto parchment-bound volumes, fastened with clasps, and has been preserved at Abbotsford, and was now in Mr. Douglas's hands for publication. The pages looked fair, with scarcely an erasure, though a closer look disclosed the absence of crosses to the *t*'s and dots to the *i*'s, which everybody knows, from facsimiles of his script found in Lockhart's Life, was the habit of Scott in his ordinary writing. Lockhart cited something short of one-half of this diary, and Mr. Douglas, who has compared it throughout with the text in the Life, says that Lockhart's use of it was absolutely exact and impartial. It is now to be published entire, and Mr. Douglas, who has abundantly edited it, has also had the assistance of Prof. David Masson and other friends. It will not be published here till November 10, in order to secure a simultaneous publication in New York, to which American centre a large edition has already been sent. It is stereotyped, and the indications are that the sale will be considerable, since the first edition is already bespoken.

Notwithstanding the apparent legibleness of the writing, a little reading of it made it evident that it was necessary to have both skill and patience in deciphering it. There were certain words which had not, after long pondering, been satisfactorily determined by different experts, and Mr. Douglas tried my efforts on some of them. I feel confident that the work of transcription for the press has been carefully done, and that we shall have at last this tender, self-examining, discursive and striking record of Scott's personal traits in a publication which will be helpful to all students of that noble soul and the literature he created.

"Come in and talk with me again," said the kind old gentleman. "I shall always tell you when I am busy. I want to tell you what you ought to see while you are here. By the way, have you been at No. 39?" This was the "Cabin," as Scott called his town house in Castle Street, which, when the crash came, he surrendered to his creditors. "No," said I. "I see it is now occupied by lawyers' offices. They are busy men, and I did not feel like intruding. I have contented myself with a glance at the bust of Scott, which they have considerately placed back of the glass above the door." "Come with me," he said, and, taking his hat, he led me the short distance up the street to No. 39. A porter ushered us into the back room on the ground floor, which Scott used as his workroom. It bore much the same aspect as in Scott's day, except that the middle of the room was filled with a mahogany table littered with a lawyer's papers, instead of that at which Scott so long sat, filling his sheets and laying them over in a pile, as those who watched him from adjacent windows saw him doing into the night's still hours. The large window which gave him light had still the peculiar machinery, of Scott's own devising, by which he fastened with a key the sash at any height he desired; for the novelist carefully regulated, it seems, his supply of air to the exigencies of his brain.

I have inquired at several of the booksellers' concerning the sale now attending some of our chief American poets. I find Whittier is the only one gaining in the popular estimation. They tell me that the appreciation of him came slowly, but is now growing daily more and more marked, while Longfellow (as well as Tennyson, and more particularly Browning) is steadily diminishing—or perhaps it would be best to say, in regard to Longfellow, is not increasing. Still, I find Longfellow among the portraits exposed for sale in all the shops, and in one window on Princes Street he shares the place of honor with Scott and Burns. I do not recollect to have seen a single likeness, however, of Whittier.

It is significant of the way in which our American purchasers of Americana are watching the catalogues of dealers, here and in England, that I have almost never in the provincial towns found anything in their stocks of much importance from its rarity. Everything, they say, is caught at as soon as their lists reach America, and generally through the medium of their advance sheets, which go to prominent collectors. I found, however, at one shop, something I was glad to see. It will be remembered that Falmouth, as Portland in Maine was then called, was burned in the early days of the Revolutionary War by an English cruiser, under the command of one Capt. Mowatt, who continued for some time to cruise on our New England coast, under the orders of Sir George Collier, a successor of Admiral Graves in this part of the American station. The Mowatts, it seems, are a Shetland race, and when some of the family papers were not long since sold, and were bought for the chance they might afford of throwing light on the rent rolls and prices of past days in those islands, there was found among them the manuscript which fell under my eye. It was a memorial written by this Capt. Mowatt, detailing his services on the American coast all through the war, and particularly his participancy in the luckless—for us—Penobscot campaign of 1779. This document had been intended for presentation to the Lords of the Admiralty, in order to counteract the injustice which, it was claimed, Sir George had shown towards a faithful officer in not presenting his name for promotion. The manuscript is of interest, and will add something to our knowledge of those episodes of our Revolutionary War. This is the only thing which I have found, in looking over the stocks of a dozen book-dealers in Edinburgh, that was of any importance to an American historical student.

I find that the athletic craze and canker is working the same detriment here in the University, and in such lesser institutions as Fettis College, that it is in our American colleges. I hear the same stories as with us of young men being ostracized who think more of their fitting duties than of a running match, and who begrudge the time necessary to convert a healthful pastime into an exhibition of useless skill. A close observer said to me, "If you want to see how the intellect can be degraded, you have only to glance at a group of cricketers in the photographs, and you see it in their faces." Another tells me the same story that I have so often heard at home, that over-exercise defeats its end, and the young athlete, so boastful in his college days, goes off in the end in consumption or in some other outcome of disproportioned labor. Golf, an old Scottish game, seems to be doing the mischief that base-ball does with us, and I am told that hundreds are now daily playing it on the Links, where scores were seen but a few years ago. It has become so dangerous to passers in that region that there has been a clamor for its prohibition, and the Corporation of Edinburgh has only dared to take that step of safety by first buying a tract of land farther out, where it can be played with less hazard.

The adoration of misused games throughout

Britain is beginning seriously to attract the attention of those who resist their fascinations, and they are beginning to count the loss in energy and morals which everywhere follows. At a church congress the other day, one of its members even asked the Archbishop of York, or some other dignitary—I forget whom—to intercede with the Prince of Wales to abstain from countenancing the race-course, in the interest of religion. He disturbed a good deal the sporting vicars, not to say bishops, and I do not think the one appealed to felt, by what he said, that it would avail much if he took his Royal Highness to task. That the Congress listened patiently to the arraignment is not, however, without some significance. When I remembered that some weeks ago I wandered about York for an hour after dark to get a place to lay my head, and all because the absorbing interest in the St. Leger at Doncaster had filled up all the abiding-places for fifty miles around, I could but feel, with some intensity from my misfortune, that there might have been a nobler occasion for the poor traveller's unrest. JUSTIN WINSOR.

GONCOURT IN THE SIEGE OF PARIS.

PARIS, October 17, 1890.

WITH all their defects, their affectations, the Goncourts can always be read. They are often irritating, they have a fatiguing morbidity in their style, but their observation is often interesting; it is minute, and made with a certain sort of consciousness which might be compared to the consciousness of the naturalist. They are among the precursors of our naturalist school, but their naturalism is tempered by a curious sort of grace, which they have, I suppose, borrowed from the authors and artists of the eighteenth century, of whom they have made an elaborate study, and with whom they have lived, so to speak, as much as with the men and women of their own time.

The new volume of the 'Journal des Goncourt,' which has just appeared, is peculiarly interesting, but extremely painful. It is the portion kept during the year 1870, which Victor Hugo baptized as "L'Année Terrible," the year of the Franco-Prussian war. It begins on the 26th of June, six days after the death of Edmond de Goncourt at Bar-sur-Seine. The twin brothers had always had but one soul; they had not left each other for a day; they followed each other as the shadow follows the body—and now Jules was alone. Nevertheless, he still calls his Journal the 'Journal des Goncourt'; his brother still lives in him.

Jules goes back to Paris, arriving there at the moment of the declaration of war on Prussia. Some days later—

"At the Bourse, I see nothing but bare heads, hats off, and from every mouth is heard a formidable Marseillaise. I have never seen such enthusiasm. I walk among men pale with emotion, bounding children, women with intoxicated gestures. Capoul sings the Marseillaise, on the Place de la Bourse, from the top of an omnibus; on the boulevard Marie Sass sings it, standing in her carriage, which the people, in their delirium, almost lift up bodily. But what about the despatch which announces the defeat of the Crown Prince of Prussia, the capture of 25,000 prisoners, the despatch which is placarded! I am told inside the Bourse of this despatch, which so many people declare to me they have seen. I look for it; people think they see it, they point to it. 'Look here, there it is, there it is!' and they show me a wall on which there is nothing. This despatch I cannot discover, and I look in vain for it in every corner of the Bourse."

This was written on the 4th of August. Alas! on the 21st of August Goncourt walks in the Bois de Boulogne and sees the first preparations made for the siege of Paris: the great trees fall beneath the axe, all along the fortifications, "with the tottering of men wounded unto death."

It is curious to see how, in the midst of the most tragical scenes, men find it difficult to forget themselves. One day, on the 27th of August, Zola comes to breakfast with Goncourt.

"He talks to me of a series of novels he is going to undertake, of an epopee in ten volumes, the natural and social history of a family, which he has the ambition to write, with the exposition of the characters, the vices, the virtues, developed in the *milieu*, and made different by it, like the various parts of a garden —'here shines the sun, here is the shade.' He tells me that, after the analysis of the infinitesimal of sentiment, such as was executed by Flaubert in 'Madame Bovary,' after the analysis of things artistic, plastic, and nervous, such as you, the Goncourts, have made—after these jewels in writing, these chiselled volumes, there is no place left for young writers, nothing more to do, no personage, no figure to construct; it is only by the quantity of volumes, the power of creation, that it is possible to speak to the public."

Zola has fulfilled his programme. He has astonished us by the quantity of his production; but are you not surprised at the *quantity* of his flattery? When I read these lines I remembered the words of an old Russian diplomat to a young one: "Flatter always, but never delicately."

Here and there in the Journal, very often indeed, we fall on a pretty description, a photograph in words; indeed, we find them almost at every page. What a field was Paris, in those extraordinary days of the siege! Goncourt sees everything; he describes all he sees —the flocks of sheep and oxen coming to the capital, the peasants who take refuge there, the camps of the soldiers in the open air. The 4th of September comes, and the Republic is proclaimed. Goncourt's Diary is not a political pamphlet; it is a succession of impressions, of sensations. At the end of the volume there is an alphabetical table of the names mentioned in the volume. Those which recur the most often are those of Berthelot, the chemist; of Burty, an amateur artist; of Théophile Gautier; of Nefftzer, a journalist, the founder of the *Temps;* of Renan; of Paul de Saint-Victor, a critic of art. Goncourt, Renan, Berthelot, Nefftzer, and a few others dined together every fortnight. Goncourt gives a curious account of the conversations at each of these dinners. It must be said that all the guests seem to have suffered more or less from siege fever, and to have lost their mental balance. These periodical dinners, with their free and rambling conversations, reported accurately by Goncourt, are a sort of thermometer of the Parisian mind during the siege of Paris.

Renan was much more agitated than you would suppose he could possibly be when you see his calm and clerical face. He was Biblical, apocalyptic; he was all the time predicting all the horrors of the siege of Jerusalem. The horrors of the Commune after the siege justified him in this respect. He often scandalized his friends by sudden apologies for Germany and denunciations of France. Just as in a great landscape the eye is forcibly drawn towards certain points, I confess having read with peculiar interest the accounts of these dinners, these "banquets des Girondins." If such men as Renan and Berthelot, men of culture and of science, lost their heads, it is no wonder if the Parisian population often went mad. Renan was always complaining of the "mollesse" of the Parisians and of their defence; so did those who prepared the Commune during the whole siege.

A remark which Goncourt makes is on the contrast between the "mollesse" of the battalion of the National Guard of Belleville and Montmartre, always unwilling to go to the fortifications and to run the chance of a battle with the Prussians, and the undoubted bravery and determination of the same battalions when they fought for the Commune and under the red flag. He explains the contrast by a diminution of patriotism in the working classes and a corresponding increase of internationalism. The capitalist, the Versaillais, was to the Socialist soldiery a worse enemy than the Prussians. The explanation is only partly true. The Socialists were afraid to meet the Prussians, because they knew and felt that they would surely be beaten, that they had before them a victorious, well-organized, well-disciplined, and well-led army. At the beginning of the Commune they had before them only a runaway President, a Chamber which hardly knew itself, and a few regiments coming from the German prisons, discouraged by defeat and by months of suffering. They felt sure that victory was in their hands; they remained the uncontested masters of Paris, and they were on the point of taking Versailles. If it had not been for the bravery of a few gendarmes, of the police, of the skeleton regiments which were reformed at Versailles, they would have been, for a while at least, the masters of France. In the war with the Versaillais they had to fight for their lives, and some of them fought well.

The daily account of the sensations of Goncourt during the Commune is perhaps even more interesting than his account of the siege by the Prussians. One wonders how a man who has such a keen faculty of observation, such a sensibility, such a capacity for suffering, could have gone through the dreadful period of the two sieges, especially as the war found him in the slough of despond after the loss of his beloved brother. I have read nothing that brought back to me so acutely the memories and sufferings of the war of 1870.

At the end of that great crisis, what were the feelings of those who had been its witnesses? At the dinner of the 15th of August, 1871, the guests inveigh against the principle of nationality—the principle of which Napoleon III. made himself the champion, and of which he became the victim; "they deplore this invention which takes from war its courteous character, the character of a duel between sovereigns. War will be like a struggle of animal races: one will have to eat up the other; and this condemns, in the future, either the French or the Germans to disappear from Europe." Renan interposed here, saying:

"'Well, we are mere functions—functions which we accomplish unconsciously, like the workmen of the Gobelins, who work from the inside and finish a tapestry which they don't see. . . . What is honesty? what is wisdom? what importance have these from a superhuman point of view? Nevertheless, let us be honest and wise. It is a part which is given to us by the Almighty. But he must not think that he deceives us and that we are his dupes!' And," says Goncourt, "the old seminarist said this with a low voice, almost afraid of what he had said, with his head on one side on his plate, and the air of a schoolboy who fears a blow which he feels coming—absolutely as if he feared a blow from the Almighty."

Nefftzer, the editor and founder of the *Temps*, would write no more in it after the war; he retired to Bâle, where he died a few years afterwards. He had been in his youth a student at the Protestant school of theology in Strasbourg. I knew him very intimately. He had a very original mind, and was one of those men who expend themselves in daily writing and in conversation, and who do not embody

their full measure in a great work. He was a first-rate journalist, but journalism finished him. Nefftzer showed much cynical commonsense at those dinners. He never believed in the heroism of the National Guard, in the military genius of Trochu, in the patriotism of the men of Belleville, in Paris-Saragossa blowing itself up with dynamite, etc. He was ironical and Mephistophelian; not a sceptic at heart, but full of contempt for all shams. He was thoroughly sincere. One day, at dinner (he was an Alsatian by birth), he screamed (his voice was often a thunder):

"I am German, completely German. I only defend France from a sense of duty, but I know what is coming. It is Saint-Bartholomew, believe me, which is now causing the end of France. If France had become Protestant, it would have been the great nation of Europe. You see, in Protestant countries there is a gradation between the philosophy of the upper classes and the free inquiry of the lower classes. In France, between scepticism above and iconoclasm below there is a gulf, an abyss. Believe me, this is what is killing France."

"In the café," writes Goncourt, "which was growing dark, from this large *jordanesque* face, red under the light of the candle, which colored the thick and varicose skin; from this voice, at times incomprehensible, unruly, bursting out by eructations, came thoughts full of depth, irony, paradoxes almost of genius."

Correspondence.

UNIVERSAL SUFFRAGE.

To the Editor of The Nation:

Sir: It does not seem to me that your able correspondent, "G. B.," in his plea for universal suffrage, distinguishes clearly the differences which exist between questions of morals and of economics. I am not prepared to say that moral considerations do not affect, more or less, all questions of economics; but, in questions of public policy, either the one element or the other is more prominent, and therefore more easily apprehended by the masses.

Where the moral element can be prominently displayed, and the simple question of right and wrong made clearly apparent, I hold, with "G. B.," that the judgment of the masses is apt to approximate the truth; but in questions of economics, where the benefit is perhaps somewhat remote, and where more than the average intelligence is required to comprehend clearly, the judgment of the masses may be either right or wrong, for it is influenced not so much by the economical question at issue as by other considerations, such as party fealty, the recollection of some past moral question, or the personal qualities of the candidates.

The wrongs of slavery were eloquently portrayed. The question appealed strongly to the emotions of the masses, and their decision was right; but can such enthusiasm be evoked by the discussion of the tariff or the regulation of the currency? "G. B.'s" illustration of the prevention of Great Britain's interference in behalf of the South would seem to sustain my view. The aristocracy and the traders of Great Britain saw what benefit would accrue to them by crippling their most formidable competitor; the workmen of Lancashire could see nothing but a question of right and wrong. With all respect for the good workmen of Lancashire, I do not believe, could they have been convinced that Great Britain's interference would have meant higher wages and more comforts to them, that they would have uttered a protest.

One might concede that the people of this country, trained by universal suffrage, would act together in time of war, but it by no means follows that the same people would, by their decisions on questions of public policy, prevent the necessity of acting together in time of war. If universal suffrage were all that its advocates claim for it, the immense loss of life and treasure in the civil war would have been saved us. It is to be hoped that most of the questions of the future will not have to be solved by force of arms, and it therefore affords me but slight comfort to think that the people will act together in time of war.

If, as "G. B." contends, we do not get the effect of universal suffrage, where lies the blame if not on the people? Do not these same people organize readily for the apprehension of horse thieves or incendiaries? The telegraph no sooner announces a great catastrophe than they are organized to send relief. But let "G. B." attempt to organize from the masses tariff-reform clubs, or associations opposed to the unlimited coinage of silver, and I fear he will discover but little enthusiasm among those whose votes decide such questions.

I deferentially submit the above views to the consideration of "G. B.," for whose scholarly attainments I entertain the highest respect.

C. A. W.

Baltimore, November 1, 1890.

MORE McKINLEY PRICES.

To the Editor of The Nation:

Sir: Upon the question of whether the McKinley Bill does really have an effect of increasing the cost of articles, domestic or foreign, or whether it is only a Democratic assertion for campaign purposes, I beg to direct your attention to the following letter handed me by the manager of the Hennepin Paper Company of this city. The writers are importers and manufacturers:

New York, October 15, 1890.

Dear Sirs: Your telegram 14th inst. received. We enclose bill for felt forwarded. This we bill at old price, but our stock received ere the McKinley Bill took effect is about exhausted. Hereafter prices will be as per list, *net*. F. Bredt & Co.

The felt mentioned is an essential for the manufacture of paper, and, "at old price," was sold at discounts of 25 and 10 off the list. The manager of the paper company informs me that the felts manufactured for the same purpose in this country are very much inferior to those imported (being made from domestic wool), wearing only two-thirds as long with the same use. In reply to an inquiry from him as to what American make could be substituted for the felts heretofore employed, F. Bredt & Co. write, under date of October 23, 1890:

"In answer to your question about the advanced price, would say that mills which have always used English felts will continue to do so, as it is impossible to obtain a domestic felt to give the satisfaction that an English one will. We do not know of any domestic felt we could guarantee to work as well."

A wholesale glass house here advises me that, since the McKinley Bill went into effect, the American manufacturers (who, by the way, paid their stockholders a dividend last year of $950,000) have advanced their rates upon glass, which they formerly sold to my informant at $7.50 per case, to $10 per case.

In the window of the "Plymouth" clothing-house, the largest establishment of the kind in this city, and one of the largest in the State, the following letter has been displayed for the information of the interested public:

New York, October 6, 1890.

Dear Sirs: We beg to inform you that hereafter the price of our men's best piqué kid gloves will be $22 50; other grades are raised in the same proportion.

As this advance happens to be at the beginning of the season, we would advise you to take the benefit of the risk of your importations, and to put up the retail price of the Perrin's best piqué to $2.25 immediately.

Perrin Frères & Cie.

Of course this display was accompanied with the statement that, having purchased largely before the advance in prices occasioned by the McKinley Bill, the customers of the "Plymouth" could have the advantage of the circumstance.—Yours respectfully,

John R. Van Derlip.

Minneapolis, Minn., October 27, 1890.

THE "AMERICAN PUBLISHERS' ASSOCIATION."

To the Editor of The Nation:

Sir: On reading the article entitled "A New Way to Publish Books," in the last *Nation*, I cannot resist the temptation to send you a third scene in this little comedy of swindling.

The letters I have received from this precious Publishers' Association are, word for word, like the two that you print; indeed, I should almost have supposed myself to be the "lady in a Maine village," were it not that I have never written any religious poetry.

Having persistently refused to receive the books in question, I was favored a day or two ago with the enclosed letter, which is really quite touching in its appeal for assistance. Let us hope that the gentlemen of the American Publishers' Association have other means of support besides the precarious one of endeavoring to swindle the secluded scribblers of Maine.—Very truly yours,

Laura E. Richards.

Gardiner, Maine, October 29, 1890.

Chicago, Ill., Oct. 24rd, 1890.

Dear Madam: Will you not receive Books, pay express charges and hold them subject to our order or remit for them if disposed of? You have a good representation in the work, with which we are sure you will be pleased. Have authorized the Agent to allow you examination. If you cannot possibly take them, perhaps you could find an Agent for us who would dispose of the copies.

Please let us hear from you in regard to the matter at once, and oblige,

Yours sincerely,

American Pub. Association.

CELTS AND LATINS.

To the Editor of The Nation:

Sir: I read in a Paris letter to the *Nation* on the Boulanger fiasco the following sentence: "The philosophy of Boulangism will be explained by future historians, who will find in it a proof of the hidden hero-worship which exists in the Latin race." Gen. Boulanger himself, in a letter which he has just written to a Neapolitan correspondent, says: "And it is just to say that these interests, far from making Italy the ally of the German Empire, ought to make her the ally of the Latin sister, Republican France"; and in company just now with a distinguished French authoress who has been visiting Ireland, we heard her say of the Irish that "they are so sympathetic with us, the Celts—quite Latin, in fact."

Now, there is very little Latin blood in the inhabitants of certain parts of Italy—Sicily and Naples, for instance, and Piedmont; but in that part of the peninsula where the old stock

has been more or less preserved from mixture, as in the Abruzzi, not to exclude other adjoining sections, one may still catch glimpses of the old nature, and it is as unlike anything French as one can imagine, as unlike as the German. It is easy to see the early race types in most parts of Italy, and the most casual observer will recognize, for instance, in passing from the Latin lands of the Pontine plains to the Greek shores at Terracina, that another race is in presence, or in crossing the Apennines from Tuscany to Bologna; and the Umbrians are as different from the Tuscans (still "Tuscus obesus") as the Norman is from the Breton. The Umbrian, again, is quite unlike the man of the hills of Latium. The only Italian who resembles the French Celt is the kindred Piedmontese, the descendant of the cis-Alpine Gaul of Cæsar.

The Latin conquest probably imposed a common language on all southern Europe, though the Slavic invasions of the Balkan country and the reflex influence of Constantinople, where the Greek always ruled, repelled it, except where the Latin stock dominated, as in Rumania and with the scattered Wallach communities in the peninsula. The imposition of the language of the conqueror, however, is as far from the establishment of a community of race as is the conversion to a religion. It is simply ridiculous to talk of the French being a Latin race, or of a race sympathy between French and Italian, for there is none. The Frenchman is on the whole just what he was described by the Roman historians of the beginning of the era, while the Italian (with allowance to be made for the regional differences I have noticed) is a grave, even saturnine, race, conservative to a fault, distinguished more by the inertia of his character than by any positive quality, averse from strangers even to inhospitality, but sentimental and pathetic, and if sympathetic, rather with the Teutonic than the Gallic character. There has not been to my knowledge a Frenchman in Rome, since I knew it, who did not freely express his dislike or contempt for the Italians, and I knew the city and the French as long ago as they kept garrison for the Pope. The only sympathy between them is that of the dog and cat: circumstances might make them good friends, but it is not in their natures. I have no hesitation in saying, from what I see continually of the French here, that there is no more reality in the professions of sisterly feeling for Italy than there is in the high humanity of the ideal of the communism of 1870. The plea of sisterhood of races is just as insincere as the love of peace they are always talking about, and which the Italians really feel.

I am not ignorant of the virtues of the Gaul or the vices of the Latin, but, such as they are, they are different virtues and different vices. Ethnology has enough to do when it has to include the Greek of Sicily, the Hernici of the Sabine Hills, the morose Tuscan, with the amiable Umbrian, and the thrifty, unæsthetic Piedmontese in one nationality; but there may be some blood in common from the long intercourse; we may as well go back to Father Adam as to attempt to compel science to discover the community between the Latin and the Gaul.—Yours truly, N. N.

"TRANSMOGRIFY."

To the Editor of The Nation:

Sir: As though it were a matter of public importance, Mr. Hensleigh Wedgwood recently wrote, regarding this expression, in *Notes and Queries*: "I had fully supposed that it was an invention of the present century, and was much surprised to find, from a quotation in Worcester, that it was used by Fielding, although in which of his works is not mentioned." Not altogether without interest, however, is this avowal, as showing how far, from choosing to decline expedient research, even a professed philologist may be deceived by trusting to a mere impression.

Not to speak of the *transmography* of Nathaniel Bailey (ed. 1730), Guy Miege's *Great French Dictionary* (1687) records *transmogrify'd;* and this, most probably, or *transmogrify*, was noticed by lexicographers still earlier.

Shadwell, as cited in Mr. Thomas Wright's *Dictionary of Obsolete and Provincial English*, used *transmography'd* in 1688; nor, presumably, are the following quotations among the oldest that might be produced for the word in question:

"She had almost been *transmogrify'd*." Sir Thomas Urquhart, *Rabelais* (1653), Vol. I., p. 7 (ed. 1694).

"Meaning *transmografied* [printed *transmografide*], or metamorphosed into a Mandrake." Samuel Holland, *Zara* (1656), p. 33, foot-note (ed. 1719).

The Rev. Myles Davies (1716) has *transmografying;* Fielding (1728), *transmographied*, twice; Mrs. Eliza Heywood (1744) and Foote (1776), *transmogrified;* the Rev. G. W. Lemon (1783), *transmographied*, etc., etc.

If, as can hardly be doubted, it was from Jodrell that Dr. Worcester took, abridged, what he puts forward as Fielding's, he should have retained the spelling which he found, instead of altering it to *transmogrified*.

Nowhere, I believe, except in a glossary or two, has the literary existence of *transmogrify* or *transmogrified* yet been demonstrated by a genuine quotation.

As estimated by Dr. Worcester, *transmogrify* is "ludicrous and low"; and Dr. Webster's editors think it to be "colloquial and low." Nevertheless, the taste must be somewhat squeamish that would find grave fault with Archdeacon Hare for saying, with reference to Pinkerton's egregious attempt in 'Thea Visiona of Mirza,' at the euphonization of English: "It may be amusing to cast a look at the tricks by which poor Addison has been thus strangely *transmogrified*." *Philological Museum*, Vol. I., p. 649 (1832).—Your obedient servant,

F. H.

Marlesford, England, October 18, 1890.

Notes.

Funk & Wagnalls will be the American publishers of 'In Darkest England, and the Way Out,' by Gen. Booth, chief of the Salvation Army.

Harper & Bros. will publish Sir Walter Scott's Journal, edited by Mr. David Douglas, the well-known Edinburgh publisher; Froude's biography of Beaconsfield; 'Selections from the Sonnets of Wordsworth,' with illustrations by Alfred Parsons; selections from the letters of George W. Smalley to the New York *Tribune*, in two volumes; and 'Freedom Triumphant,' the end of the civil-war series by C. C. Coffin.

A gift-book will be made by Albert & Scott, Chicago, of the essays on Friendship by Cicero, Bacon, and Emerson.

'Central Points of Our Lord's Ministry,' popular New Testament studies, by the Rev. Henry Wace, is in the press of Thomas Whittaker.

Mr. John Murray announces a life of the late Dean Burgon, author of 'Twelve Good Men' and many other books, by his friend Dean Goulburn. Dean Burgon was himself a good man beyond a doubt, and a scholar within certain rather narrow lines. But when he took up his pen in controversy (in which he delighted), he became perhaps the most amazingly and amusingly vituperative writer of our time. He was naturally a Tory both in religion and politics.

We learn from the *Academy* of October 18 that Mr. William Sharp will spend the winter in Rome at work upon a life of Joseph Severn, the friend of Keats. Severn's sons have intrusted him with the materials for this work, which are said to include a vast number of interesting letters. Severn lived in Rome for sixty years, and was in the way of seeing many people of eminence, both Italians and visitors. It will be Mr. Sharp's fault if the Life shall not prove a more than ordinarily entertaining book. Sampson Low & Co. will publish it.

The same journal states that the reason why no maps are given in Prof. S. R. Gardiner's recently published 'Student's History of England' is, that when that work is complete in three volumes, it will be accompanied by a 'Student's Atlas of English History,' upon which Mr. Gardiner is now engaged. It is hoped that this will be published in a few months.

A new edition, the third, of 'Brehm's Thierleben' is in preparation (Leipzig: Bibliographisches Institut; New York: F. W. Christern). Prof. Pechuel-Loesche has charge of the revision. Dr. E. L. Krause furnishes a memoir of the deceased author. More than a thousand new illustrations have been procured for the work, which will be issued in 130 weekly parts.

We spoke last week of a Boston edition of 'Romola,' in two volumes, copiously illustrated with photogravures pertaining to the story and to Florence. As sometimes happens, the same conception has been carried out by another house, that of Porter & Coates, Philadelphia, in a very similar style as to size of volumes, decorative binding, and illustrations. A smaller printed page with broader margins and more open typography produces volumes no larger; but this is seen to arise from the use of thinner paper, and if the print seems at first glance more readable, it cannot, on a careful examination, be pronounced so good as in the edition of Estes & Lauriat. The photogravures are just about as numerous in both, and not a few are the same or deal with the same subject. The Philadelphia series runs more to portraits and statuary, and even includes a lonesome design representing Romola and her father. On the whole, in the selection, and certainly in the execution, we prefer this series, which may be compared with the other in the view of Florence from San Miniato (identical), the portrait of Savonarola, and the panel picture of his execution. Still, one may well hesitate in making up a final judgment between the rival enterprises.

The town of Lancaster, one of the oldest in Massachusetts, has been singularly fortunate in its historian. Within the past six years Mr. Henry S. Nourse has issued two volumes, one of 'Early Records' and one of 'Military Annals,' admirable in style, matter, and scholarly accuracy; and last year he was commissioned by the town to edit a third and companion volume (partly involving the first-named), a 'Birth, Marriage, and Death Register, Church Records and Epitaphs of Lancaster, 1643-1850' (Boston: George E. Littlefield). It might easily be maintained that more labor had gone to the making of this than of its predecessors, such pains have been taken to copy literally from the records, to compare and correct and supplement, and to furnish the thread

to the whole in an index of more than fifty pages. In the nature of the case, there is hardly anything to be called readable between the covers except the list of mortal complaints of the dead and the inscriptions on the tombstones. There is a good variety of these last in verse, and those of the older time bespeak a certain cultivation in the community. The Shakers, like the Quakers elsewhere, were very brief and businesslike in their inscriptions. This Register adds another to the invaluable memorials which the pursuit of genealogy and the pride of ancestry in New England have produced.

It can hardly be maintained that New England has not had her share in the determination of the national diet, both by the propaganda of her emigrant families and by the making of cook-books. Still, perhaps her mission in this respect is not ended, and something new seems to have been struck out in Lucia Gray Swett's 'New England Breakfast Breads, Luncheon and Tea Biscuits' (Boston: Lee & Shepard). What is obvious is the minuteness of the instructions for the benefit of the inexperienced. The book is mechanically attractive, with large type.

We have received from Roberts Bros., Boston, a series of twelve photogravures of New England country and seashore scenes, with poetical captions opposite each, and a running text on nature in New England by Hamilton Wright Mabie. The illustrations are well selected, and the snow and sea-views are particularly effective and truthful, though artistically the eye is wearied occasionally by hard contrast of light and shade, and by a certain harshness in the tints. The text of Mr. Mabie is exceptional, since, so far from being perfunctory, as is usually the case in essays written for pictures, it is really a very good paper upon the aspects of New England landscape, the relation of it to the inhabitants, and the rendering of it by poets and naturalists. Mr. Mabie is a lover of the land, in all its phases, but he seems to know little of the seashore. The title of the volume, which is prettily covered, is 'Our New England.'

The late A. H. Welsh, whose history of English literature has much vogue in the West, left a nearly finished condensation of the criticism of that work, which has been completed and published under the title of 'A Digest of English and American Literature' (Chicago: S. C. Griggs & Co.). It presents a tabular view of the subject in four columns, continued page after page. In the first column historical events are entered; in the second, "characteristics" of the time; in the third, writers, chronologically arranged, with brief biography and criticism of them; in the fourth, their works, also with criticism. Only the principal works are given, and the remarks are often quoted, and usually from excellent sources. There is also an appendix in which omitted authors are listed, but without criticism, on the ground, apparently, that these are or have been known, but need not be seriously regarded. The principal value of the text lies in its condensed critical estimate of each author, which is unusually excellent, being catholic, temperate, and well expressed. Such a critical chart is unknown to us, and it may well be useful for reference and in study.

'European Days and Ways,' by Alfred E. Lee (Lippincott), is a diary of travel in the more attractive parts of Europe, Holland, Switzerland, Southern Italy, Spain, and the Tyrol, in which the sights of the country, more particularly its landscape, are sympathetically described, with some help from historical association. The author writes of Frankfort and Germany with more detail, and in this portion of the volume his individuality is more felt. As a whole, the book is a narrative of a European tour over well-known roads, with nothing specially the author's own to distinguish it from other similar works.

Another volume, partly of travel, partly of criticism, not pretending to any eminent merit, 'Old Wine in New Bottles,' by Brinton W. Woodward (Lawrence, Kans.: *Journal* Publishing Co.), is noticeable as an example of literary recreation; it is journalistic in origin, and belongs with the better sort of newspaper work that goes into the "literary column."

G. P. Putnam's Sons have begun a second series of "Literary Gems," thin pocket pieces bound in red leatherette and cased in a box, and making strange bedfellows together in their common pasteboard receptacle: Ruskin's 'King of the Golden River,' Sheridan's "School for Scandal," Butler's 'Nothing to Wear,' Froude's 'Science of History,' Carlyle's 'Nibelungen Lied,' and Mrs. Browning's 'Sonnets from the Portuguese.' All are handsomely printed, and each has an engraved frontispiece, two of which are portraits—of Froude and Mrs. Browning.

The four-volume Life of Garrison published by the Century Company in 1885-1889 consists so largely of documentary matter interwoven with and supporting the narrative that an abridgment in a single volume has naturally been attempted. In 1888, before the latter half of the main work had appeared, Frances E. Cooke rewrote the story for young people in a little volume entitled 'An American Hero' (London: Swan Sonnenschein & Co.). This has now been succeeded by a much fuller abstract, though still of moderate size, made *con amore* by the well-known Manchester librarian, Mr. W. E. A. Axon. It is called 'The Story of a Noble Life,' and has been prepared for adults as a part of the "Onward Series," cheaply issued in Manchester from the Onward Publishing Office. Mr. Axon has executed his difficult task with good judgment and excellent comprehension of the subject. On the Continent still another reduction (an "autorisirter Auszug") has been made by Prof. Georg von Gizycki of the University of Berlin ('William Lloyd Garrison'; Berlin: A. Asher & Co.). From a literary point of view, and for its ethical grasp of the personage and movement delineated, this must be allowed the first rank; typographically, too, it leaves nothing to be desired.

The railroad bridge superseding the steam ferry over the Thames River at New London was an undertaking whose costliness and difficulty may be judged from the delay in commencing it. It involved a serious alteration of the lines of approach at both ends, and it had to be built in water of great depth (an estuary or fjord rather than a river) on a bottom also very deep before hard pan was reached. The piling for the piers and the great draw was found to present peculiar obstacles, which in the end were very skilfully and even rapidly overcome, by means which are now common property. It was desirable that the operations resulting in so fine a structure should be permanently recorded for reference, and Mr. Alfred P. Boller of this city, the chief engineer of the bridge, has done well to publish an account, with views and diagrams, in the shape of his report to the general manager of the road. It is not too technical for a layman to understand and enjoy, while the statistics of tests and other data constitute a valuable acquisition for the profession.

A very sweeping generalization is made in 'Aryan Sun-Myths the Origin of Religions' (Troy: Nims & Knight), a book the value of which is sufficiently indicated by its title. It contains a large number of facts, sometimes misstated, generally misunderstood and undigested. Jesus, says the author calmly, was an Essene, and the Essenes were Buddhists—here is Christianity in a nutshell. There is a more sober Introduction by Mr. Charles Morris, the author of 'The Aryan Race.'

All Semitic scholars will welcome the 'Lectures on the Comparative Grammar of the Semitic Languages' (Cambridge: University Press; New York: Macmillan & Co.), by the late Prof. William Wright, edited, after his death, by Prof. W. Robertson Smith, who has added a few notes. It is the first attempt at a Semitic comparative grammar, and it did not enter into the plan of the lamented author to make exhaustive discussions of all questions. But it is something to have his mature opinion on so many grammatical points, and it is to be hoped that his book will stimulate further study of this important subject.

An agreeable addition to our historical apparatus is the English translation of the 'Church-History' and 'Constantine' of Eusebius, by Prof. McGiffert of Lane Theological Seminary and Prof. Richardson of the Hartford Seminary (New York: The Christian Literature Co.). The notes are numerous and helpful, and the typography of the book is excellent. The editors deserve praise for their thorough work. This is the first volume of the second series of "The Nicene and Post-Nicene Fathers," edited by Messrs. Schaff and Wace.

The lectures on religious movements delivered at the South Place Institute in 1888-89 have been collected into a volume and published under the title 'Religious Systems of the World' (London: Swan Sonnenschein & Co.). They range over a great variety of subjects, from Methodism to Buddhism in Christianity, from the old Assyrian religion to the modern Ethical Culture Societies, and are most of them vigorous, fair, and readable. The lecturers are competent exponents of the various creeds and tendencies treated, and the book gives a good idea of the currents of religious thought of to-day.

The second volume of the 'Studia Biblica et Ecclesiastica' (Oxford) contains articles on the authorship and the titles of the Psalms according to early Jewish authorities, by A. Neubauer; the origin and mutual relation of the Synoptic Gospels, by F. H. Woods; the day and year of St. Polycarp's martyrdom, by C. H. Turner; the Clementine Homilies, by C. Bigg; the evidence of the early versions and patristic quotations on the text of the books of the New Testament, by J. M. Bebb; the Ammonian sections, Eusebian canons, and harmonizing tables in the Syriac Tetraevangelium, by G. H. Gwilliam; the Codex Amiatinus and its birthplace, by H. J. White; the Italian origin of the Codex Amiatinus and the localizing of Italian MSS., by W. Sanday. This is a worthy companion to the first volume, and shows that Oxford has entered seriously on a new career of Biblical and ecclesiastical research.

Dr. C. J. Vaughan's 'The Epistle to the Hebrews' (Macmillan), while it is full of the devoutness and simplicity that characterize this estimable preacher, completely ignores the interesting critical and philosophical-religious questions connected with the Epistle, holding without argument to the most conservative point of view.

An important contribution to the history of Oriental Christian law is made by the publication of the Abessinian 'Jus Connubii' (Berlin: F. Schneider & Co.), edited, with Ethiopic and Arabic texts, Latin translation, and a juridi-

cal-historical dissertation, by Dr. Johannes Bachmann. This forms Part i. of the "Corpus Juris Abessinorum" to be issued by Dr. Bachmann. The date of this code he puts in the thirteenth century; the material, however, going back much further.

Germany is just now much exercised over the best mode of giving instruction in Hebrew in the Gymnasia, and, by way of solving the question, Dr. Bachmann offers a 'Preparation und Kommentar zu den Psalmen' (Berlin: Schneider), in which each psalm is provided with vocabulary, translation, and notes. The notes are good, and the book will be useful to others than beginners. The first fasciculus comprises Psalms 1-20.

Juan Valera's series of letters on South American literature, noticed in these columns, is now followed by the same author's 'Nuevas Cartas Americanas' (Madrid: Fernando Fé). There is little that is ordered or systematic about the book, no attempt being made to give a complete conspectus of so much as the literature of any one country, and the choice of authors treated and books alluded to depending entirely on suggestions growing out of Valera's personal acquaintance with Spanish-American writers, or on the receipt of volumes despatched to the critic for the purpose of securing his notice. Indeed, now that he has made himself a sort of herald to proclaim the merits of South American literature in Spain, he appears to be overwhelmed with books sent him by aspiring authors. However, he makes his selections so as to insure an agreeable variety in the matter discussed, while the charm and grace of his style are everywhere present. The present volume makes excursions into the literature of the Argentine Republic, Chili, Mexico, Ecuador, and Peru, and so far recognizes the United States as a part of America as to include a review of 'Looking Backward.' Valera's residence in Washington as Spanish Minister appears to have led him to give considerable attention to our writers, and his knowledge of them, freely displayed in allusions, is remarkably exact for a foreigner.

In the October number of the *Figaro Illustré*, now the most sumptuous of French monthly magazines, can be seen a proof of the position held in Paris by certain American artists of the French school. One full-page color print is by Mr. D. Ridgway Knight, and a sketch of life in India is abundantly illustrated by Mr. Edwin Lord Weeks, who figures, oddly enough, in the table of contents as Lord Edwin Weeks.

In the *Overland Monthly* for October attention will be drawn to "Some Memories of Charles Darwin," a pleasant and somewhat intimate picture of Down and the great naturalist's environment, by a friend and occasional guest, L. A. Nash. The name of the place belies its altitude, for Down "stands high up—level with the cross on the top of St. Paul's Cathedral, which shows itself on rarely clear days through the murky cloud hanging over the distant city."

A very notable article on an early American architect, Charles Bulfinch, from the pen of Ashton R. Willard, heads the table of contents in the *New England Magazine* for November. Mr. Willard has been indefatigable in research, and gives a large number of photographic views of Bulfinch's monuments, which embrace the Boston State House and part of the Capitol at Washington, with churches, charitable institutions, private dwellings, etc., in abundance. There are also two portraits of Bulfinch, whose name deserves to be remembered.

The October Proceedings of the Royal Geographical Society contains an account of a journey in eastern Persia by Lieut. H. B. Vaughan, in the course of which he passed over the western border of the Kavir or Salt Desert. At first sight it looked like "a vast frozen sea stretching away to the right as far as the eye could reach, in one vast glistening expanse. A more careful examination proved it to be nothing more than salt formed into one immense sheet of dazzling brilliancy, while here and there upon its surface pools of water, showing up in the most intense blue, were visible." Among the animals seen were snakes which "used to climb bushes, and, hitching their tails around a bough, would stick their bodies out in imitation of a withered branch, and thus remain motionless for hours. My servant said that they were waiting for a bird to come and perch on them, when they would immediately strike it." The Governor of Lagos, Sir A. Moloney, contributes some notes on that colony and Yoruba. Among other things he speaks of the Mohammedans of Lagos, who have increased in the past twenty-five years from 800 to 15,000, as "a most orderly, intellectual, and respectable class of citizens, composed of all the tribes of Yoruba." He gives also an interesting account of some Dahomey tribes who live in lake dwellings, and are "not only fishermen, but are pastoral," their cattle being kept in pens adjoining their houses, built on piles over the water, like their dwellings. This is followed by the valuable address of Sir Lambert Playfair before the geographical section of the British Association on the "Mediterranean, physical and historical," in the course of which he spoke in the highest terms of what the French have accomplished in Algeria and Tunisia.

The *Scottish Geographical Magazine* for October contains several of the papers read before the British Association at Leeds. Among these is one by Mr. J. W. Wells on the commercial development of Brazil, in which he showed that the new republic has some 8,200 miles of railway constructed at a cost of £61,000,000. This mileage will be largely increased, he believes, in the immediate future by the building of cheap railways into the interior, with a resulting "phenomenal" prosperity for the country. There is also given the extremely interesting and suggestive, though rather sensational, paper by Mr. E. G. Ravenstein, on "The Lands of the Globe still available for European Settlement," together with an abstract of the discussion which followed. His main conclusions are that, at the present standard of life, the cultivable area of the earth would feed about six thousand millions of people (5,994,000,000). Estimating the present population of the world to be 1,468,000,000, with an increase of 8 per cent. each decade, in 182 years the earth would be full.

—We can now congratulate some three to four million of people living in or about New York on having their territory accurately mapped by the leading cartographical establishment of this country, and one of the foremost in the world. We allude to the folio 'Atlas of the Metropolitan District and Adjacent Country' just issued by Julius Bien & Co. It comprises the counties of New York, Kings, Richmond, Westchester, and part of Queens; in New Jersey the county of Hudson entire, with parts of Bergen, Passaic, Essex, and Union. In other words, it embraces both sides of the Hudson to Peekskill, all of New Jersey east of Orange Mountain, between Paterson and Elizabeth, all of Staten Island, Long Island west of Jamaica, and all of New York State south of 41° 20′, lying between the Hudson and the Connecticut border. The several sheets—there are a dozen of them, besides an index map—are so devised as to overlap each other, more or less, so that, for example, the four principal cities of New York, Brooklyn, Jersey City, and Newark are exhibited both in their north-south and in their east-west relations. The scale is liberal—two inches to the mile; and, throughout, the topography is indicated by contour lines at ten or twenty-foot intervals, with conventional signs and coloring for marsh and woodland. The soundings of river and bay are also recorded. Railroads and common roads are given. The basis of the Atlas, of course, has been the New Jersey Survey and the Coast Survey; but these indisputable sources have been supplemented by special surveys conducted by Messrs. J. R. Bien and C. C. Vermeule. For real-estate purposes and the choice of a suburban home, for pleasure driving and scenic enjoyment, and for a larger grasp of the metropolitan problem, this Atlas answers every need in the most authoritative manner. The execution is beautiful, as was to be expected, while the cost to the purchaser is moderate.

—The *Cosmopolitan Magazine* for November contains two articles relating to the most Eastern countries of the world. Professor Arthur Sherburne Hardy of Dartmouth College, who spent his summer vacation in Japan seeking materials for his projected biography of Dr. Joseph Neesima, President of the Doshisha University of Kioto, has an illustrated article on "The Army of Japan." He shows that as early as 1849 "changes had been made to meet the demands of modern warfare, fire-arms having been adopted for the shogun's troops, and a tactical system borrowed from the Dutch." The late ex-daimio of Echizen was among the very first of the great feudatories of the Empire to introduce the Dutch system, and to build a gun factory in his dominions. A number of good reproductions of sketches from the recent illustrated publication of an officer in the imperial army are given. The paper will be followed by a second one giving the results of personal observation, and, among other things, describing the new rifle invented by Col. Murata of the Japanese Army, with which the troops have been armed since last year. Col. Charles Chaillé Long, recently Secretary to the American Legation in Séoul, treats of "Art and the Monastery in Corea," describing a visit paid by him to a fortress garrisoned by clerical militia, or the Monastery of Sok-Oang-Sa in the "province" of Anpien, endowed in 1392 by Ni Taidjo, the founder of the ruling dynasty, of which the present King is the 28th. He shows that Corean art was an "exotic and born[ef] in the bosom of the monastery. It came to Corea with Buddhism in its march from India through China." "It fell when temple and tower went down in the fourteenth century." While incidentally giving some information about contemporary Corean politics and Chinese influence over the "younger brother," by which China periodically frightens Corea into submission, little or no light is thrown upon that question which fascinates and baffles students of Corean history—the almost utter annihilation of Buddhism in the Land of Morning Calm. However, since the "priests from the Western Ocean," *i. e.*, American Methodists and Presbyterians, have gained access and residence inside the capital, the Buddhist monks are now memorializing the King to enjoy the same privileges in Séoul. In this, unless we greatly err, we discern less a sign of the renascence of Corean Buddhism than the zealous prodding of the Shin sect of Japanese

Buddhists, who have a mission temple at Gensan, the open port near the monastery, and who are bound, if possible, to beat the Christians at every point.

—The same number of the *Cosmopolitan* contains an excellent essay upon military desertion by Capt. J. W. Pope, commanding the military prison at Fort Leavenworth, into which is woven a description of the prison itself. Captain Pope lays especial stress upon the fact that popular sentiment fails to regard desertion as a moral crime, but classes it with revenue frauds and other breaches of the statute law. "Running away from the army" is looked upon as any other breach of contract—something that should not be done, but which neither implies vice in the doer nor deserves severe punishment. The little army, outside of the popular pale, is practically powerless to recover its own. They become hidden in a community which, when it recognizes, sympathizes with them. This general indifference to the most heinous military offence (next to mutiny) is itself responsible for the most of it, for men reared under such influences change their clothes, but not their minds, by becoming soldiers. It is very rare after men are seasoned; it is the raw and unformed, the constitutional rovers, who generally desert. It is a curious fact, however, that the desertions far outnumber the deserters, for these vagabonds have a curious fondness for again and again enlisting and repeating their crime. The difficulty of recognition, and their comparative immunity from arrest, increase the temptation. Until very recently there were innumerable obstacles (not all now removed) to their apprehension, and the present Congress by legal enactment actually relieves from all penalty every deserter who for two years succeeds in avoiding arrest. In its intrinsic nature desertion is a continuing offence, which age aggravates, not condones. But hereafter it is outlawed in two years, and the vast horde of deserters throughout the country have had thrown around them not only immunity from punishment, but, in effect, the secrecy of privileged communications while engaged in and after securing their absolution. The prison seems to be managed in a common-sense, humanitarian way, with plenty of work, but also plenty of encouragement. It would appear that the discipline is good, and that it is directed to the elevation of the convict and to making him a self-supporting civilian, not a soldier, on his release. The commandant seems well abreast of the best sentiment of modern prison managers.

—The chief interest, writes a correspondent, attached to the Pastel Show which has just opened in London is the fact that—if current report be true—it is the last of any kind to be held in the Grosvenor. The proprietor of the gallery, Sir Coutts Lindsay, it is said, finds his club more profitable, and so the rooms once sacred to Pre-Raphaelitism and all that was holiest and most affected in English art are to be sacrificed to the needs of smokers and diners. This is the more to be regretted as Pre-Raphaelites and their followers have long since deserted the Grosvenor, while last spring Sir Coutts Lindsay, in giving prominence to the work of younger Scotchmen and Englishmen, seemed on the point of inaugurating for his gallery a really healthy and vigorous career. Two pastel shows have already been held in the Grosvenor at the same season, and probably to their success is due the formation of a Society of British Pastellists which this year gives its first exhibition. But though the Society is British, some of the best work comes from foreigners. P. S. Kroyer, a Dane, has three marvellous little studies, which show him to be a thorough master of his medium, as well as of very difficult problems of light and atmospheric effects. His work and that of Mr. J. E. Blanche is a refreshing contrast to the amateurism and pastel imitations of oils and water colors with which the gallery abounds. Mlle. Anna Belinska also has sent some good vigorous studies. Among the members of the Society, Mr. Arthur Melville and Mr. James Guthrie, the two Scotchmen who distinguished themselves in the Grosvenor last spring, again come to the fore with good figure subjects cleverly handled. There are delightful little notes of glaciers, beautiful bits of color by Mr. Stott of Oldham; several very suggestive sketches of sky and meadows, autumn foliage, and cottage gardens by Mr. George Clausen; and some strong, vigorously modelled studies of tigers by Mr. J. M. Swan. But, though there is still more good work by Mr. Muhrman, Mr. Peppercorn, Mr. McLure Hamilton, and a few others, scattered through the galleries, the show, as a whole, is rather weak. The walls of five rooms have been covered; one would easily have held all that was worth showing.

—Alberich Konrad Hofmann, Professor of the Old German and Old Romance languages and literatures at the University of Munich, who died in Trauenstein, Bavaria, October 1, in the seventy-first year of his age, was a man of profound and varied learning, a type of scholar of which the poet Uhland was one of the most distinguished representatives, and which is fast disappearing even from the academical circles of the fatherland. Hofmann was born November 19, 1819, at Banz, near Bamberg, where his father held the office of *Rentamtmann*. It was here that Hofmann's early youth was spent, and the romantic historical associations of the place, heightened by the exceeding picturesqueness of its position, left a lasting impress upon his character. He pursued his preparatory studies in the Gymnasium at Bamberg, and entered the University of Munich in 1837, where he was matriculated as a student of medicine, but soon began to hear lectures on philology and philosophy. In 1843 he went to Erlaugen and thence to Leipzig and Berlin, and now turned his attention to Oriental languages — Arabic, Sanskrit, and Zend—and to palæography. In 1848 he took the degree of doctor of philosophy at Leipzig, after a course of university studies extending over eleven years. From 1850 to 1851 he was in Paris, devoting himself to special researches in the libraries of that city. He then returned to Munich, and, in 1853, was appointed to the Professorship of Old German, made vacant by the death of Schmeller. His lectures were, at first, not confined to this subject, but comprised the Romanic languages, Sanskrit, and palæography, although, during the last twenty years of his life, his academical instruction and original investigations centred in Old German and Old Romanic, and it is upon his labors in these provinces of scholarship that his reputation chiefly rests. His published writings consist, for the most part, of criticisms and editions of texts, academical dissertations and monographs, nearly all of them comparatively small in bulk, but exceedingly important for the specialist as embodying the results of original researches. It is, however, as a teacher rather than as an author that Hofmann has exerted the widest and most enduring influence. The seeds which he thus sowed with generous hand have sprung and borne fruit in many climes and in both hemispheres.

It may be added, in illustration of the versatility of Hofmann's genius, that he was also an appreciative connoisseur in art and an accomplished musician.

—Mr. Barnard, astronomer of the Lick Observatory, has communicated to the *Astronomische Nachrichten* the results of his physical and other observations of the recent comet (Brooks 1889 V), an object likely to become historical, not only on account of its companion system, more complex and remarkable than any previously discovered, but also because of the possible identity of the comet with Lexell's comet of 1770. On every possible occasion, says Mr. Barnard, from the discovery of the companions until they disappeared from sight, the comet was constantly and thoroughly observed with the great telescope, and the adjacent region was frequently scrutinized for new objects or abnormal appearances. The term "fragments," often applied to these small bodies, is altogether inappropriate, as it implies knowledge of the method of their formation which we certainly do not possess. The measures clearly show that the separation of the companions from the main comet could not have been a very recent event; and their formation as distinct bodies possibly took place, as Mr. Chandler has suggested, at the time of the appulse with Jupiter in 1886. Mr. Barnard found the companions not only comets distinctly separate in every respect, but as perfect in form and individuality as the main comet itself. Certain anomalous appendages, recorded by observers elsewhere, Mr. Barnard explains away by the comet's passage through a region of faint and unknown nebulæ —a position which his superior location and optical power may well entitle him to take. One of these companions underwent a series of changes, entirely unique—first losing its well-defined nucleus and becoming more and more diffuse from night to night, at the same time increasing in size and becoming fainter. After about a month its place became to all appearance entirely void; and Mr. Barnard has not the slightest doubt that this companion actually dissipated itself into space and absolutely ceased to exist, if, indeed, it were not absorbed into the main comet.

—This series of observations upon objects of extreme faintness, made in part with the twelve-inch and in part with the thirty-six-inch telescope of the Lick Observatory, has furnished the much desired means of critically comparing the two. In the use of the greater telescope a decided gain was found in the larger scale and increased brightness of the cometary structures; particularly were the exact measures far more easy and precise. Towards the close of the season, however, when bad weather had set in and the atmosphere become unsteady, the advantage of the greater telescope was not so marked. Another interesting feature of this work results from the capacity of the great glass to follow important comets in their recession from the sun far beyond the reach of the smaller instruments. Also, Mr. Barnard discovered incidentally many unknown nebulæ in the region passed over by the comet—a region supposed to be deficient in nebulæ—and he thinks it likely that the great telescope would readily reveal more unknown nebulæ than the entire number in Dreyer, the latest catalogue. Connected with this important research upon the Brooks comet, we should note also a novel suggestion by Mr. Barnard, in a late number of Gould's *Astronomical Journal*, as to the possibility of following the short-period comets throughout their entire orbits. As is well

known, this has never yet been done; but the extraordinary optical power now available on Mount Hamilton has already enabled the observers there to follow present faint comets to a much greater distance than it is possible for many of the periodic comets ever to attain. If this suggestion can be realized, new and important data will be obtainable for more accurate orbits of these bodies. Mr. Barnard proposes making a search with the great telescope for Winnecke's comet and Encke's, without waiting for their return to perihelion, provided the mathematical astronomers will tell him pretty nearly where to look for them.

WEEDEN'S ECONOMIC HISTORY OF NEW ENGLAND.

Economic and Social History of New England. 1620–1789. By William B. Weeden. 2 vols. Boston: Houghton, Mifflin & Co. 1890.

THE bolder outlines of New England history have been traced by the pens of many writers, but much remains to be done in filling in details. There is a wealth of materials to be drawn upon, both in published and unpublished papers, and Mr. Weeden has labored most industriously to bring these buried treasures within the reach of modern readers. It must be admitted that they make a rather disorderly pile, things being taken up very much as they occur in human life, which is an incongruous enough mixture; but as there is a full index, it is not necessary to read consecutively. Still, Mr. Weeden's transitions are sometimes so abrupt as to be confusing. Under the heading "Standards of Currency," for example, we have the following paragraph:

"The varying standards of currency are puzzling. There was the legal tender of ordinary commodities, farm produce, lumber, etc., known as 'country or money pay.' The prices of these articles were generally fixed in the rates for taxes, though Rhode Island in this year, 1662, made them 'at such prices as it then goeth to the marchants as moneye pay.' Then she allowed 40s. in country pay to be commuted into 30s. New England coin, or 22s. 6d. of English sterling coin. This made three positive currencies. In Newbury and Lynn, Mass., a cord of oak wood was worth 1s. 6d., the same as one bushel of turnips. Watertown, Mass., has a fulling-mill. Connecticut prohibits the export of tanned leather. Her tanners had the opportunity of procuring dry hides which were brought in from Virginia and elsewhere."

This seems a purely fortuitous juxtaposition, and the book is full of like instances; but as Mr. Weeden keeps pretty steadily to the chronological order of events, there is less confusion than might be expected. There is a certain impressiveness in the steady progress from the day of very small things, when a single cow was owned in shares, to the time when scores of vessels were owned by one man. There were periods when progress was less rapid than at others, and the horrible currency, to which the colonists clung with a fatal persistency, was a continual embarrassment; but, in spite of hard conditions, prosperity began soon and continued always. The remarkable thing about the currency was that there was apparently never a time when the colonies could not have supplied themselves with metallic money, or at least have maintained notes redeemable in coin. The natural laws of trade would have settled the matter for them if they had let them alone, and their privateers captured enough of the precious metals at one time and another to furnish a sufficiency for the limited requirements of the period. The errors of our forefathers have survived to plague their posterity, for as we look over the many lists of prices which Mr. Weeden submits, we are obliged to inquire in most cases as to the depreciation of the currency before we can form any judgment of their economic significance.

This intermeddling with freedom of exchange was only a part of the established policy of society. The scope of legislation was never broader. Whatever was suggested by religious feeling, prompted by superstition, recommended by propriety, or demanded by prejudice was enacted into law. Many of these laws, perhaps most of them, were futile, but this does not seem to have discouraged the ruling element, which kept steadily on with its minute regulation of conduct, as parents sometimes continue to dictate to children that have outgrown the age of obedience. This disposition to compel other people to do what we think they ought to do, was so general and so little controlled that it seems not improbable that the prevalence of socialistic theories in modern New England may be explained by it. The believers in protective theories of government can certainly claim that the history of the colonies affords an abundance of precedents, and may be pleased to find their dogmas laid down in language which can scarcely be improved upon. It must be said, however, that in those days there were truly "infant manufactures"; and where a body of proprietors held great tracts of unimproved land, they not unreasonably considered it for their interest to grant a lot to any one who would establish a needed trade. They followed the hoary Aryan village custom in so doing, but there were things at which they drew the line. Cambridge, about 1730, declined to pay a bounty of £50 to Joseph Hanford "to fit him out in the practice of physic."

Mr. Weeden cites some amusing instances of the Pharisaic morality naturally developed among the clergy by their despotic rule. One Col. Davis being about to join the church at Durham, N. H., the former pastor filed objections to his reception. The most aggravated offence was:

"his late wresting the Law of this Province in his partial Spite as[t] his own legal minister for so innocently playing at nine pins at a house noways license for a tavern, . . . besides his the s[d] Jas. Davis being so desperately & notoriously wise in his own conceit, his pretending to have so much religious discourse in his mouth, and yet live so long (40 years) in hatred unto contempt of & stand neuter from our crucified Saviour."

A later incumbent of the same parish (which it is to be hoped was exceptionally unfortunate), having a case in court, providentially discovered that the "Patriarch Joseph (under the infallible Inspiration of the Holy Ghost) made it a law unto this day" that Pharaoh should receive the fifth part (Genesis xlvii., 26). But being convinced that several of the council are against him, he offers one-fifth of his prospective award to those who decide in his favor, and gives the Governor his bond to that effect, with a recommendation of prudent concealment. This was not to be regarded "as a bribe, but a just tribute for Equitable judgment as required by the Supreme Judge (Romans xiii., 4, 6)." Gov. Belcher, however, took the liberty of "communicating narratively" the proposition of the reverend suitor, with disastrous results to the latter in his parish relations. He was removed, but sends an indignant protest to the Governor against the construction of the bond as a bribe, which he abhors in giver or receiver. "Besides, if mistaken and misimprov'd as a bribe, I've supposed it my Duty, by my said Bond of security upon my Heirs and Executors, for an Antidote against any real Bribes intended or proffer'd by implacable enemies." What would not Dickens or Scott have done with such heroes as these! Is it, after all, true that the American novelist has had no materials to work with?

Equally edifying were the pious merchants who asked the divine blessing upon the vessels which they employed in the slave trade. This traffic, and, in fact, the whole life of the time, were redolent with rum. There was nothing equal to rum as barter for slaves. One Capt. Scott tried dry goods as a substitute, but, after a disastrous experience, he pathetically declares, "I have repented a hundred times the lying of them dry goods." Some attempts were made by enlightened men to render the traffic less hurtful, Capt. Potter laying down the precept: "Make y[r] Cheaf Trade with the Blacks and Little or none with the white people if possible to be avoided. Worter y[e] Rum as much as possible and sell as much by the short mesuer as you can."

Some of the most graphic passages in these volumes are those which describe the transportation of masts and even vessels from the inland to the shore by the use of hundreds of oxen. It even appears that solid rafts of timber were navigated across the Atlantic by the hardy sailors of two centuries ago. Mr. Weeden's citations are fuller upon the subject of commerce than any other, and give a clear idea of the wonderful activity displayed from a very early time. They make it appear that the colonists were practically in rebellion against the mother country almost from the first, there never having been more than the barest pretence of enforcing the navigation acts. The Revolution was brought on, not by any novel exertion of arbitrary power, but by the attempt to exercise powers which were legitimate enough, but which the negligence of England had allowed to fall into disuse. The revenue officers were simply not permitted to collect duties, and the greater part of the trade with foreign ports was illicit. Zealous officers fared ill, as popular feeling was wholly against them. One of them, starting to prevent the landing of a whole cargo of smuggled goods, was quarantined until the emergency was past; some pretended suspicion of smallpox being assigned for his detention. When Grenville took office, the whole revenue from customs in America was but £2,000, while the cost of collecting it was £8,000. So long as England was disposed to govern in this easy fashion, the colonies were loyal; but when an attempt was made to enforce the laws, it revealed the practical independence of America.

These pages would furnish ample evidence, if evidence had anything to do with settling the matter, that our manufacturers have never needed any assistance from Government. From the earliest times the colonies were practically independent of foreign products. Franklin told the Grenville Ministry that he did not know a single article imported into the Northern colonies but what they could either do without or make themselves. Some of the colonists would have missed their wines and their tea, and most of them would have missed their rum, but before the introduction of these cheerful products they may be said to have swum in cider. A single town produced 10,000 barrels. The manufacture of iron began as soon as the country was settled, and steadily increased. Spinning and weaving were universally practised, and in 1789 Washington visited a manufactory of wool-cards that turned out 63,000 pairs of such quality that they were smuggled into England. It is intrinsically highly improbable that a population so vigorous in mind and body, so strong in moral fibre, and so en-

terprising in all directions, should not have been able to supply itself with all the necessaries and conveniences of life. Still, their advantages in the production of certain commodities were so great that only the absence of roads prevented a vast commerce. There were few carriages for nearly a hundred years after the first settlement, all travel being over bridle-paths and by ox-roads, and in 1670 it was ordained that all carts "within the necke of Bostone shall be & goe without shod wheeles."

It would be easy to ramble on in this way, but we must forego further reference to the many topics which we had marked for notice. Mr. Weeden deserves the thanks of all who are interested in the history of one of the most remarkable of human societies, for his work will prepare the way for the broader study of this history that is to come, and his volumes should be added to the library of every one who claims descent from New England ancestry.

Life of Dorothea Lynde Dix. By Francis Tiffany. Boston: Houghton, Mifflin & Co. 1890.

THE name of Miss Dix was once a very familiar one in the households of charitable people; and now that, like most reformers whose fame lives only in the work they accomplished, she has become a portion of the past of philanthropy, in which individual distinction is less tenacious of life than in many other parts of human effort, this biography of her, which is also an ardent eulogy, is likely to serve its best end by reviving her memory as an example of how much a single life can accomplish. Mr. Tiffany tells mainly the story of her work. She appears to have cared little for any literary memorial, and to have left little which could be used for one. The letters, moreover, which have survived are not such as make the matter of biographies. Her interests were narrowly limited and her personality exceptionally single and undiversified. Her life was in fact her work, and the best we can know of her is her achievements. She was born of Massachusetts stock, suffered a childhood of privation, and was brought up, after her twelfth year, by her grandmother, a woman of rigidly Puritan convictions. A starved childhood was followed by a girlhood too directly put to the work, the care and responsibility of life; but out of these conditions came a character of strong will, high standards, and severe judgments, practical from the first, strenuous and unsparing, and, of course, with all this an enfeebled constitution. She had the good fortune to fall under Dr. Channing's influence and teach his children, and afterwards she laid by a competency as the fruits of a private school, which she maintained until she was worn out. A visit to England and a long period of invalidism there, during which she experienced the delights of a friendly home, followed. It was after her return from this journey that her attention was drawn to the condition of the insane in Massachusetts, which resulted in her devotion of her life to the effort to better the public provision for them.

It is not needful to rehearse the narrative, which Mr. Tiffany has condensed with judgment into an orderly account of how, beginning with Massachusetts, Rhode Island, and New Jersey, she extended her personal investigation and patient labor with the ruling powers over all the States of the Union this side of the Mississippi, and constantly gained some new and better asylums. Her success, due to her personal authority and tact, as well as to her being a woman was very great. She suffered only one real defeat, in the veto by President Pierce of the bill devoting 12,250,000 acres of public land to the benefit of the insane, and partly of the blind, deaf, and dumb; the proceeds to be apportioned among the States as a trust for these unfortunates. This was a great disappointment to her, and she seems to have held the President in detestation ever afterwards. She had already, however, established many asylums in all parts of the country, by legislative enactment and occasionally by private charity, and had extended her efforts to Canada. She now rested from her labors long enough to go to England, but had no sooner arrived there than she began those inquiries and that agitation by personal appeal to men in authority which resulted in the change of the lunacy law of Scotland. She continued her way through Europe, and, in the Channel Islands and in Rome particularly, effected important reforms, and went as far as Constantinople, only to find the asylum of the Turks one of the best she had seen, where she had "nothing to urge and little to suggest." She returned, after making a tour through some of the Russian and Austrian institutions in particular, and in fact visiting a large part of the Continent, only to bring her great experience to bear upon the still inadequate asylums of her own country. The war coming on, she at once offered her services as nurse, and was put in control of the department of nurses' work, in which she continued until the war was over; and for her reward she received, at her own suggestion, only the stand of colors which now hangs over the entrance to the Memorial Hall at Harvard. Her activity continued so long as her strength lasted and into old age, and she died, after prolonged illness, at the Trenton Asylum, in 1887, at the age of eighty-five years.

This is the barest summary of a life-work of extraordinary power in the individual and of incalculable benefit to the humane cause she had at heart. Her work was the awakening of the sense of public duty towards one of the most pitiable and neglected classes of the State, and, besides this, and in consequence of it, the introduction of an enlightened and responsible control of the patients. But she found time for other charities by the way, and the story of her obtaining the life-saving apparatus for Sable Island or of the rescue of the kidnapped Indians in New York shows the same sense of responsibility for unrelieved suffering and the same quickness and readiness in action. Her health seems never to have been so firm but that she might at any time have excused herself from effort, had she chosen to follow the standards of the ordinary world. She was without large means or social connections or any of the subsidiary aids to encourage or sustain her in her early efforts; but she possessed herself of the facts, made influential friends, directed the use of the public funds, and thus accomplished what would have seemed, even to a sanguine mind, a hopeless task.

Her character alone can explain such results. Her personal appeal appears to have been irresistible. Her courage was absolutely without fear. Her determination was unalterable. Self-devotion so complete is seldom witnessed, and she deserved her success. In the South she awakened almost a chivalrous feeling of respect in keeping with the Southern temperament. To all this must be added a practical sense of the necessity of action at once, and an utterly unpractical obtuseness to the reasons for not doing as she wished. One incident calls for special mention, in illustration of her character. It appears that it was she who went to President Felton of the Philadelphia and Baltimore Railroad and informed him of the plot to isolate and take Washington and to prevent the inauguration of Lincoln. In consequence of this information, he sent out detectives and obtained such information that he took the measures he did for the secret journey of Lincoln and for keeping communication open. Mr. Felton is the authority for the story, and he ascribes Miss Dix's knowledge of the intentions and preparation of the plotters to her acquaintance with Southern men and character. Miss Dix forbade him to make this public, but he records it, after her death, as due to her memory.

It would be unprofitable to examine too closely the faults in such a character as this. Mr. Tiffany dwells upon them sufficiently to explain the criticisms made upon Miss Dix as the head of the nurses in war-time, and those occasionally met with in her later years when she visited and criticised the asylums. They were the excess of strength, and no more need be said. In this part of the subject, as elsewhere, Mr. Tiffany has done his work as biographer with judgment, and he has brought to it an admiration of the character and labors of Miss Dix which makes his pages glow with feeling. A memorial such as this was much needed. It is the last and best token of remembrance and respect for a fair life that can be paid; and it is matter of congratulation that the work is thoroughly and well done.

The Antiquities of Tennessee: a Series of Historical and Ethnological Studies. By Gates P. Thruston. Cincinnati: Robert Clarke & Co. 1890. 8vo, pp. 369, with 17 plates and 246 illustrations in the text.

THIS book is the outcome of a series of investigations lately made into the stone-lined graves of Tennessee; and although the articles found do not differ materially from those previously discovered in this same region, yet the facts of this and the earlier explorations are brought together in such a compact shape, and the volume is, withal, so liberally illustrated, that it must be accorded a place among the most useful works that have appeared upon this subject. It contains, moreover, a good account, so far as it goes, of the origin and probable uses of all these various objects, and to this end a comparison is instituted between them and similar articles which have been found elsewhere. The early chroniclers, too, are called upon for aid, and are made to furnish a picture of the civilization of the recent Indians whenever it is supposed to throw any light upon the questions involved.

Throughout all this portion of his work our author is especially happy. His statement of facts is usually full and fair. So, also, is his use of the authorities, and if he had been content to stop here, or, rather, if he had not insisted upon carrying his conclusion further than the facts seem to justify, we should have had only words of commendation for the volume. As it is, however, he goes further than we are willing to follow; for although he admits (p. 16) that the mound-builder and the recent Indian "cannot be divided into two entirely distinct and separate races," yet, later on, he tells us, in substance, that a study of the implements and ornaments taken from these graves, to say nothing of certain carved shell and copper "gorgets" that were found in mounds at Sevierville, Tenn., and Etowah, Ga., indicates that the people who buried in these graves and mounds had reached a stage of development higher than that to which Indians like the Iroquois, Shawnee, and Cherokee had attained. This conclusion, it is need-

less to say, we reject; and with all due deference, it seems to us that satisfactory reasons can be given for its rejection.

In the first place, granting that these gorgets, upon which great stress is laid, were the work of the so-called mound-builders, and admitting everything that can be reasonably claimed as to the superior artistic skill displayed in their manufacture, we deny that it furnishes the basis for a general inference as to the "state of society" or "degree of culture" (p. 351) of the people who made them. Unquestionably, it tells us how far these people had progressed in this particular direction, but to argue from this that they had made a corresponding advance along each and every other line of development is a step not warranted in fact or logic. That this is so will be evident to any one who will take the trouble to remember that the Navajos, who can hardly be said to be our equals in point of civilization, weave a blanket which, in some respects, is not surpassed by anything that we make.

But even if this were not the case, it would still be necessary to prove beyond the possibility of a doubt, that these carved gorgets, which, we are told (pp. 338–344–352, etc., etc.), "resemble" or "are suggestive of" Mexican art, were the work of the people among whose remains they were found. This is not done, and, indeed, the fact that the ornamentation upon them is said to be so far above the average of Indian work would seem to point the other way. That they were taken from the graves at the time and in the manner reported is admitted; but this no more proves that they were made by the people with whom they were buried than the discovery of a Winchester rifle in the grave of an Apache proves that the Indians made it. So far is it from doing anything of the sort, that the discovery in a grave of an article which in material or finish is outside of and above the usual run of such things, may be said to afford good grounds for suspecting its origin. The rule is invariable, and if we apply it in the present instance, it will, we think, furnish a clue to the seeming mystery. Take, for example, the articles from Etowah, which are, perhaps, as elaborately ornamented as any that have come down to us. The mound from which they were taken formed a part of the well-known group of earthworks at that place. It was opened under the auspices of the Bureau of Ethnology, and, according to Prof. Thomas, to whom we are indebted for an account of the exploration, it must have been thrown up after the time of De Soto. Indeed, if we read his report aright, these very gorgets furnish evidence of contact with the whites, and, curiously enough, he bases his opinion upon the study of the carvings with which they are ornamented.

In regard to the articles from Sevierville and elsewhere, about whose age nothing definite is known, but which "bear a certain resemblance to the bas-reliefs of Mexico and Central America," and are supposed by our author to be above the capacity of the historic tribes of the Mississippi Valley, we can only say that, in view of the testimony of the mounds themselves, there is no reason why they may not have been brought from Mexico or some one of the Pueblo villages. Ornaments made of shells from the Gulf have been found as far north as Minnesota, and knives and arrowheads of obsidian, which must have come from the Rocky Mountains or Mexico, have repeatedly been taken from graves and mounds in the eastern half of the Mississippi Valley. Occurrences like these (pp. 83, 84, and 355) are conclusive as to the existence of intercourse between widely separated regions, and hence there is nothing impossible or even improbable in the suggestion we have made as to the origin of these articles. On the contrary, it is a simple and satisfactory explanation of the fact; and, what is quite as much to the point, it fits in closely with all that we know of the arts and industries, manners and customs of the Indians who held all this region when first it became known to the whites. Upon this point it is unnecessary to enlarge, and we content ourselves with the remark that until it can be shown that, at some period in the past, there lived here a people, other than the Indians, who chipped flints, manufactured pots, worked in shell and copper, buried in stone graves, and carried on more or less traffic with their neighbors and others, it is a waste of time to go any further in search of the mound-builders.

Organic Evolution, as the Result of the Inheritance of Acquired Characters according to the Laws of Growth. By G. H. Theodor Eimer. Translated by J. T. Cunningham. Macmillan & Co. 1890. 8vo, pp. xxiii, 435.

MUCH as they differ in regard to methods of evolution, most believers in the unity of organized nature, to whom all the manifestations of life are a connected whole, are inclined to accept the idea of spontaneous generation as a logical outcome of their belief. At once on leaving the lowest forms of life, however, the apparent agreement disappears, and the number of phylogenies approaches that of the students. Each worthy investigator rears a genealogical tree and traces its branches from his own point of view. The book in hand contains one of the most original and vigorous of evolutionary interpretations. It has been built up by studies of things in their general aspects, in their relations to other things, by methods similar to those of Darwin, but leading to very different conclusions. The character of the latter, and the manner and depth of the search for causes, may be set forth in the outlines of a few of the more striking.

Prof. Eimer maintains that the primary elements in the production of variety, in the origin of species, are the physical and chemical changes in the organisms due to environment—light, darkness, heat, cold, dryness, moisture, food, etc.—the effects of which become hereditary. The changes are all included in his definition of *growth*. Excluding the morbid and the accidental, organic growth is defined as every physiological change of structure naturally produced in an organism by external influences or constitutional causes, and which is permanent or precedes a further modification. The two things necessary for the production of growth are the given composition of the organism and the action of stimuli—for instance, of food. Following the way pointed out by Lamarck, the causes of variation are found in functional activity and external conditions. The evolution and continuous modification of organisms takes a perfectly definite direction, which in every detail is determined by the material composition (constitution) of the body. Adaptations originate through the inheritance of acquired characters; utility, being a relative conception, cannot be a fundamental cause, as things must exist before they can be useful. There is no adaptation in inability to live without nourishment, in being devoured, or in death itself occurring when the greatest amount of experience and skill has been reached.

Everything in evolution is due to natural processes, to material physical causes. Hunger or death is conditioned by the substance of the body, and the latter by the circulation between organic and inorganic nature. Reproduction is unending growth. Germ cells, like the protozoa, are practically immortal; they retain a general completeness of matter that in part is lost by the body cells, which consequently are unable to prevent exhaustion and death. Greater power of recrescence obtains in the lower beings because in them each cell more nearly possesses the power to reproduce the whole organization. Protoplasm has the property of being altered and transformed by the action of external stimuli, both those which act directly and those which affect the functions, thus acting indirectly. "Stimuli in fixed directions and constantly repeated produced, but only secondarily, fixed paths of conduction, and reflexes of a quite different kind (reflexes). Thus arose nerves and finally apparatus for storing up stimuli, arose sensation and will—as acquired and inherited faculties."

In reflex action lies the beginning of the evolution of all mental faculties. The lower forms no doubt depend on it exclusively: they act at once from each stimulus; in the higher forms stimuli are stored for later use, in reflecting and drawing conclusions. The organ of spontaneous action, the brain, is but an apparatus for storing up faculties and experiences that have either been acquired and transmitted by ancestors or acquired by its possessor. Instinct is the result of inherited automatic actions; it is inherited faculty, inherited habit; it is the power of habitually acting without reflection so as to attain a given object in response to internal stimuli that may or may not be connected with external; it is the purposeful endeavor to satisfy an impulse, the latter being merely the urgent desire to get rid of an unsatisfactory condition of the body, to remove an unpleasant feeling. The will is "the result of a number of factors, which are partly hereditary and material, partly directly or indirectly derived from the outer world. Involuntary and voluntary action do not differ essentially, but only in so far that the latter presupposes an accumulation, a storing-up, of impressions in a common organ (the brain), and the possibility of an interaction of these. The will, therefore, can never be free. The erroneous idea of its freedom depends in each particular case on the neglect of factors of which it is always the slave." Consciousness is "the sensation of the condition, as affected by the outer world, of the brain at a given moment." Irritability is a fundamental property of protoplasm; from it are evolved, by acquisition and inheritance, the irritability of nerves in animals and the power of sensation and will.

The factors by which organs and faculties have, according to Prof. Eimer, been engendered and developed are sufficiently indicated in the foregoing abstract. It is patent that the opinions will find greatest favor with such as accept some form of Lamarckian teachings. The utilitarian principle is recognized, but is given a secondary place; and selection, though adopted, is evidently, as with warmer advocates, something of a dumping-ground for guesses and suppositions at second hand, not yet subjected to critical examination. It is likely that too much is ascribed to selection, as also to competition. For if the agents cited by the author exert the influence claimed, which is not questioned, it must be felt by all the individuals subjected to it, and the tendency to vary in accord with its demand will thus be induced and established in spite of any struggle that does not sweep them all away; the

effect of pammixis being only to average the advance by retarding in the offspring of the most precocious, or hastening in that of the least susceptible and sluggish. The author rightly asserts that competition is not at all formative, but adds that through extermination of intermediates it makes the lines more distinct. The destruction of intermediates on any such scale as is generally supposed is extremely doubtful. The inception and progress of a variation are commonly so very gradual that the animal appears at all times adapted to its situation; it is the sudden change, the accident of life, for which it is unprepared. A struggle between individuals severe enough to select, as usually postulated, would prove fatal to the young and the burdened females and thus to the species itself. By compelling migration, competition may indirectly cause a line to originate.

There are a number of minor points to which exceptions may be taken, though in the main the author's position is of the soundest and best supported. He states that moisture and elevation promote dark coloring directly. The real cause would seem to be in the quality of the light reaching the object; in this way we can account for similar phenomena under water. The chemical or photographic effects of light are brought forward in the ingenious explanation of stripes and spots in the markings of animals; in origin the first are connected with the period of monocotyledonous plants casting linear shadows, the second with the later polycotyledons which cast spotted shadows. Color details, markings, etc., are attributed to physiological causes, as by Dr. Hagen on insects. Seasonal dimorphism, in Vanessa, Pieris, Papilio, and other Lepidoptera, is caused by heat and cold: sexual dimorphism by physical differences of the sexes. Voice of males and like sexual characters are said to be due to sexual selection; why not also to physical differences?

Among slips of pen or thought we may note the following: On page 7, the 'Law of Migration' is given to A. Wagner, instead of Moriz Wagner; on page 278, the statement, "For the only possible explanation," etc., is followed in the next sentence but one by "Another explanation which might be given is," etc.; and on page 431 we find, "Accordingly there is nothing fortuitous, but everything in evolution, to the smallest detail, is governed by laws. Chance only selects to a certain degree."

As a whole, we can hardly praise this work too highly; it is a model of conciseness and clearness of statement; it is to a very great extent founded on actual researches by the author, and is filled with results of his own observation and experiment. The doctrine of material physical causes for each effect encourages healthy research; there is no disposition to skip about over all creation in a search for adaptations. The concluding sentence contains an entire creed: "Our duty is work; our right is free investigation; our satisfaction, the establishment of a grain of truth for the benefit of mankind; our hope—knowledge."

The Pacific Coast Scenic Tour: From Southern California to Alaska; the Canadian Pacific Railway; Yellowstone Park, and the Grand Cañon. By Henry T. Finck. Charles Scribner's Sons. 1890.

WITH a part of the contents of this handsome volume, as with the author's name in more than one branch of book-making, our readers are already familiar. Mr. Finck's occasional letters to this journal are here revised and supplemented, with the result indicated in the sub-title—a continuous report of the journey northward from the Mexican border to Sitka; of the Canadian Pacific route eastward to Lake Superior; of the Yellowstone Park, and the Colorado Cañon. In point of readableness and interest this narrative leaves nothing to be desired. It is very far from being a padded account of personal adventure. Mr. Finck is a close and many-sided observer, and if he never omits a mountain worth looking at, or the characteristic flora of the landscape, or the color charm of flower or lake, he is, on the other hand, prodigal of information concerning local industries and products, climatic conditions for husbandman and invalid, neglected opportunities for enterprise, social conditions, and the like. In these practical particulars, as well as in his remarks upon the scenery, he has been aided not only by early residence on the coast, in Oregon, but by wide European travel, which furnishes the basis of many useful comparisons. Though enthusiastic over the combination of Italy (or Spain) and Switzerland which our Coast States present, Mr. Finck does not overlook the struggle for existence with the forces of nature under the most favored skies, and his picture of things as they are may safely be commended as trustworthy to native and foreign readers—and the book should have many foreign readers. It is surprising to find so much detail conveyed in so compact and agreeable a form.

A vein of pleasantry pervades Mr. Finck's style, as where he says (p. 30): "Many residents in our Eastern and Middle States have often wondered what has become of the spring, which used to form one of our seasons. It has followed the general tide of immigration, has gone West, and may now be found in riotous exuberance along the coast and the foot-hills of California." One's cheerfulness is also assisted by the author's positiveness of expression in matters like the tyranny of prohibition or the stupidity of hotel-keepers or railway-managers or park-keepers. His descriptions are clear, often graphic, and show a marked sensibility to and knowledge of flowers, and a great love of mountains, as manifested in his chapters on the magnificent solitary peaks of California, Oregon, and Washington, and the Alaskan coast range. We must confine ourselves to a single specimen. Speaking of Lake Tahoe and its gorgeous reflections, he continues (p. 139):

"Its own varied and ever-changing surface-colors are equally enchanting, though more sombre and melancholy. There are several zones of color. The shore is lined with sand, coarse as bird-shot and clear as the water itself; and for a distance of several hundred yards this sand is visible as we row into the lake, corrugated by the waves like the tiny furrows in the palms of our hands, and giving the water a yellowish tint. Further in, it becomes blue, gradually shading into so deep a hue that we are ready to believe that a ship with a cargo of indigo must have gone down here, and feel tempted to dip a pen into it to see if it will do to write with; but dip up a glassful, and it is as clear and colorless as if it had just spouted from an artesian well, and as cold. . . .

"Cloud shadows climbing up a mountain height are a fascinating sight, but not to be compared with the spectacle of the irregular patches of color that are chased by the wind across the crests of the Tahoe wavelets, like semi-liquid purple, green, and violet mists, vanishing in the distance into air, and followed by other color-waves in rapid succession. . . . Looking leewards, the water nearest the shore appeared gray, bordered by a light violet, with yellowish and purple patches; then came a deep green streak, followed by a broader indigo band, and finally a deep violet field, bounded by a faint mist raised a little above the water and slightly veiling the mountains. Every morning the details were new."

It remains to add that there are twenty exceptionally good full-page process plates, many of them fresh of subject, like the stupendous setting of the Canadian Pacific Hotel at Banff, the snow-seamed sides of Devil's Head Lake, and the Selkirk glacier. On page 158, "northward" should obviously be read for "southward."

A Pocket Handbook of Biography, containing more than 10,000 names of Celebrities, showing their nationality, rank or condition, profession or occupation, the dates of their birth and death. Compiled by H. F. Reddall. Syracuse, N. Y.: C. W. Bardeen. 1890.

WE give Mr. Reddall's title nearly *in extenso*, and we will further give him the benefit of a reading-notice by quoting his prefatory note entire:

"In the following concise 'Dictionary of Biography,' particular attention has been paid to the orthography and the matter of dates, the best and most recent authorities having been consulted. A doubtful or approximate date is followed by an interrogation point. The contraction 'fl.' stands for 'flourished'—that is, lived. Nicknames, pennames, etc., also designations of kinship, are printed in italics following the real name. The words in brackets denote some work, as a book or an invention, produced by the personage, or some famous episode in his history. The Handbook will be found especially rich in names of living celebrities."

The idea of a biographical dictionary to contain the 10,000 (more or less) names about which readers and writers are most likely to require information, the description, etc., being limited to a single line, was a happy one, and has several times been realized. Fame, however, is not only fleeting, but capricious, so that in a work dealing, in great part, with contemporaries, a considerable proportion of those entitled to a place among the 10,000 of 1880 would have to give place, in 1890, to others about whom public curiosity may be equally short-lived. This consideration, however, does not seem to have weighed with Mr. Reddall so much as the advantage of having the information needed in a handy shape. He does not mention the biographical dictionary which forms a supplement to the "Unabridged" Webster, but he must, we think, have been annoyed by the inconvenience necessary in consulting the final pages of that immense quarto, and have thought that there might be a market for the same material in another form.

The Webster "Dictionary," "containing nearly 10,000 names of noteworthy persons, with their nationality, their station, their profession or occupation, and the dates of their birth and death," was compiled by Mr. L. J. Campbell in 1879, on the plan described in Mr. Reddall's preface. The work was well done, especially with reference to contemporaries, and the only fault to be found with Mr. Reddall's reissue of it is, that the revision made necessary by lapse of time is so incomplete. Thus, under Z, Mr. Campbell gives fifty-eight names; Mr. Reddall the same names, described in identical language (except for the occasional omission of a word or a misspelling), arranged in the same order, and with only one addition, viz., Zalinski. It is strange that if he made a practice of pencilling additions on the margin of Webster, it should not have occurred to him to insert Zola as well as Zalinski. Other omissions we have noticed are Alfonso XIII., Amiel, A. J. Balfour, E. Bellamy, W. Besant, Phillips Brooks, Bryce, Cairoli, Caprivi, Benj. R. and Geo. T. Curtis, Daudet, Elizabeth of Rumania, Ferdinand of Bulgaria, Chief-Justice Fuller, Lord Hartington, Humbert of Italy, Ibsen, Lassalle, Louis II. of Ba-

varia, Milan of Servia, John Morley, Oscar II., Ohnet, T. B. Reed, Rudolf of Austria, Scheffel, W. H. Smith, Tisza, Waldersee, and William II. Men who were alive in 1879 are, with some exceptions, alive still, so far as Mr. Reddall is aware. We give in parentheses a few of the omitted dates. C. F. Adams (1886), Countess Agoult (1876), W. H. Ainsworth (1882), Asbjörnsen (1885), C. Ashburner (1889), Audiffret (1878), Auerbach (1882), Augier (1881), Aurelle de Paladines (1877), Auzoux (1880), Beust (1886), G. Borrow (1881), E. Burritt (1879), Lord Cairns (1885), H. C. Carey (1879), J. Esten Cooke (1886), R. H. Dana (1882), C. Darwin (1882), R. W. Emerson (1882), Fazy (1878), Fechter (1879), W. E. Forster (1886), Countess Guiccioli (1873), Hackländer (1877), Hayne (1886), Gen. Hooker (1879), G. P. Marsh (1882), Marx (1883), Dinah (Muloch) Craik (1887), Theophilus Parsons (1882), J. G. Saxe (1887), Lord Stanhope (1875), etc., etc.

Space fails to mention the errors of commission in Mr. Reddall's addenda. The late Emperor Frederic, for instance, is entered twice, once as "Frederic William Nicholas Charles (Frederick III.), Emperor of Germany, 1831," with nothing to indicate his death. Prince Frederic-Carl, also (died 1885), appears not only to be alive, but to be styled "Prince of Prussia"—a title borne only by the heir presumptive. The sovereign of Rumania is still "prince"; L. P. Morton is only an "Am. banker," "Luise Mühlbach" is treated as a real name, Lord Wolseley is still merely a baronet, etc. In conclusion we may say that the revision of Mr. Campbell's dictionary by himself, in the 'Webster' of 1890, is far better than that by Mr. Reddall.

Five Years with the Congo Cannibals. By Herbert Ward, in collaboration with D. D. Bidwell. Illustrated from drawings by the author. Robert Bonner's Sons. 1890. 8vo, pp. 308.

THIS book has a special interest from the fact that the author was a member of the Rear Guard of Mr. Stanley's expedition for the relief of Emin Pasha. It is not, however, a defence of the actions of the leaders of that ill-fated body, the only reference to the controversy being in the preface. This contains a brief summary of the principal facts, and closes with the simple remark that, in 'Darkest Africa,' Mr. Stanley "takes much too harsh a view of a portion of his expedition that endured great hardships while doing their best"; in which opinion, so far as our knowledge goes, we heartily concur. Mr. Ward makes several other references to Mr. Stanley in the course of his book, all of which, it should be added, show the highest appreciation of his great abilities, without the slightest trace of bitterness. This fact makes a favorable impression upon the reader which the book, as a whole, in no wise diminishes. In his dealings with the natives Mr. Ward seems to have shown the tact, patience, and courage which characterize all successful travellers among savages. An evidence of their regard for him is the name, "Eagle's Wing," which they gave him in admiration of his exploits as a pedestrian. His book is not a continuous narrative, but a series of sketches of the various river tribes between Stanley Falls and the sea, and of personal adventure. They are, in the main, well told, and give a good idea of the habits and appearance of the natives, as well as of the life of an officer of the Free State. What this organization has accomplished in civilizing and developing the vast territory under its nominal control Mr. Ward, possibly intentionally, does not intimate. If any inference can be drawn from his accounts, it would be unfavorable, on the whole, to the prospects of the new State under its present management. Cannibalism appears still to be prevalent on the upper river, though it is a singular fact that part of a tribe will be avowed eaters of human flesh, while another part, living close to it, will indignantly deny the practice. On the other hand, the Bolobo, who, of all the races in this part of Africa, are the most cruel and take the keenest delight in the sacrifice of human life, are not cannibals.

"Very often," says Mr. Ward, "on these occasions [the settlement of a quarrel] a slave is purchased; the bones of his arms and legs are broken; he is carried to some open, well-known spot, generally a cross-road; a hole is dug, and he is placed in it, the earth being filled in and well trodden down around him, so as to leave his head just above the surface. Any person found giving him either food or water is liable to be served in the same way, and so he is left to die a lingering, painful death."

A tribe living on one of the great northern tributaries of the Congo has a peculiar method of hair-dressing: "They completely shave the head, and then allow the hair to grow all over for three or four weeks, after which they shave designs, such as half moons, stars, squares, and parallel lines. When the hair grows too long for the design to be visible, the whole scalp is again shaved, and some different pattern adopted." All of the tribes of the upper river are distinguished from each other by the scarring of their skins with various patterns. The Bangala tribal mark, for instance, "consists of a series of horizontal cross-cuts half an inch in length, extending down the centre of the forehead from the hair to between the eyes, with a smaller patch of diagonal cuts upon the temples."

Mr. Ward gives a rather favorable account of the famous Hamed bin Mohammed, or Tippo Tib, a name "bestowed upon him by the natives of the districts he first entered to wage war; his many guns, with their quickly recurring discharges, sounding in the ears of the affrighted natives like 'tip u tip, tip u tip,' as the marauders blazed away through the plantations of their villages." This is not, however, Livingstone's interpretation, which is "the gatherer together of wealth." The most interesting chapters are those describing the author's two canoe journeys down the river, with their ever present dangers from the sudden storms, the hippopotami, and the hostile negroes. The district which these inhabited was of several hundred miles in extent, and each village warned the next lower of his approach by sounding horns and drums. War canoes shot out to intercept his progress at every turn, both by day and night, but he succeeded in some way in evading them all, apparently without firing a shot. Mr. Ward is evidently not a naturalist, though he is something of a hunter, so that he gives little information in regard to the fauna and flora of the Congo. Elephants, according to his accounts, still seem to be numerous on parts of the river. The engineers who surveyed a route for the railway to Stanley Pool frequently came upon them, in one instance upon a herd numbering fifty five.

Many of the pictures, of which there is a large number, mostly from Mr. Ward's drawings, are admirable. Especially good, among those representing native types, is that of the leader of Manyema marauders on page 206.

Our Dictionaries and Other English Language Topics.

By R. O. Williams. 12mo, $1.25.

"Full of interest."—Mr. Wm. Hand Browne, *Johns Hopkins University.*

"Have read it with great interest and profit."—Prof. Tracy Peck, *Yale University.*

"There is a lightness of touch, a reserve of manner, a crispness of style, a seasoning of humor . . . which ought to make the book much more popular than I dreamed a book on such a subject could be without suffering some species of degradation."—Prof. Albert S. Cook, *Yale University.*

"Am glad to recognize in its teachings the tendency towards freedom of movement and of growth in our language."—Prof. Thos. R. Price, *Columbia College.*

"Evinces scholarly candor and taste."—Prof. T. W. Hunt, *College of New Jersey.*

"Have read this book with much interest, and find it sensible and scholarly throughout. The criticism on the 'New English Dictionary' at pp. 36-44 seems to me rather ungracious, but aside from this I find nothing to disapprove, and much to commend."—Prof. Isaac N. Demmon, *University of Michigan.*

"Contains all sorts of information on out-of-the-way points that was new to me."—Prof. Simeon E. Baldwin, *Yale University.*

LEGGAT BROTHERS,
81 CHAMBERS ST., - - NEW YORK,
Third door west of City Hall Park.

A Concise Cyclopedia of Religious Knowledge,
BIBLICAL, THEOLOGICAL, HISTORICAL, AND PRACTICAL.

Large octavo, about 700 pages, beautifully illustrated by woodcuts and plain and colored maps.

Edited by Rev. Elias Benjamin Sanford, M.A.

Special articles by the most eminent religious scholars in the country, among whom are:

Rev. Thos. Armitage, D.D., Rev. David D. Demarest, D.D., Rev. Edward Everett Hale, D.D., Rev. Eugene Russell Hendricks, D.D., LL.D., Rev. William Stevens Perry, D.D., LL.D., Rev. Chas. S. Robinson, D.D., LL.D., Rev. David Steele, D.D., Rev. John H. Vincent, D.D., LL.D., Rev. Edmund Jacob Wolf, D.D., and Rev. Selah Merrill, D.D., LL.D.

The work is absolutely unsectarian, as its list of contributors will show. There have been Bible Dictionaries, Religious Encyclopedias, etc., but the good ones are too expensive for many who desire them, and the cheap ones too condensed and often unreliable. *It has been our object to offer to the public an exhaustive and accurate work of reference, covering all religious knowledge, at a price far below that of any other works worthy of comparison with it.* It is the crystallization of the vast knowledge contained in the principal works of religious reference. It numbers as many subjects as the great Schaff-Herzog Encyclopedia, besides many original articles. It is handy in size, cheap, comprehensive, and exhaustive.

Fine cloth, gold stamped, $3.50; library style, leather, marbled edges, $5.00; half Turkey morocco, $6.00. Send for our Catalogue.

Publishers and Stationers,

31 West Twenty-third Street, New York.

LOVELL'S RECENT BOOKS.

Authorized Editions by arrangement with the Authors:

By Whose Hand? AND **By a Hair's Breadth.** By EDITH SESSIONS TUPPER. Am. Au. Series, No. 22. Cloth, $1.00; paper, 50c.

Two of the brightest and cleverest stories from a graceful pen, slightly detective in character, but only enough so to add interest.

It Happened this Way. By ROSE EYTINGE and S. ADA FISHER. Am. Au. Series, No. 27. Cloth, $1.00; paper, 50c.

A bright, pleasing story, easy to read, which leaves only pleasant recollections. Miss Eytinge's many friends will warmly greet this first of her efforts in the line of fiction.

Heart of Gold. By L. T. MEADE. Lovell's Int. Series, No. 120. Cloth, $1.00; paper, 50c.

"Adaptability and sympathy are two prominent qualities of L. T. Meade, the author of this story."—*Literary World.*

Dramas of Life. By GEO. R. SIMS. Lovell's Int. Series, No. 127. Cloth, $1.00; paper, 50c.

The man of the London 'Referee' has made himself famous for story-telling, both in prose and verse. His name is a guaranty of good reading.

Famous or Infamous. By BERTHA THOMAS. Int. Series, No. 129. Cloth, $1.00; paper, 50c.

An unusually well told tale with many original and strongly defined characters, which will place it in the front rank of modern fiction.

The House of Halliwell. By Mrs. HENRY WOOD. Lovell's Int. Series, No. 130. Cloth, $1.00; paper, 50c.

'The House of Halliwell' was written many years ago, but never published. It differs somewhat in style from the author's subsequent work, but every page bears the unmistakable impress of the author of 'East Lynne.'

Ruffino, And Other Stories. By OUIDA. Lovell's Int. Series, No. 131. Cloth, $1.00; paper, 50c.

The numerous admirers of Ouida's works will eagerly welcome a new work from her pen.

'Ruffino' is an idyllic fancy of the class to which belonged 'Two Little Wooden Shoes,' so much admired for its delicacy and simplicity.

Alas! By RHODA BROUGHTON. Lovell's Int. Series, No. 132. Cloth, $1.00; paper, 50c.

This most popular author has produced an old-fashioned English society novel full of incident and interest. Every one will want to read it a second time.

The Demoniac. By WALTER BESANT. Int. Series, No. 134. Cloth, $1.00; paper, 50c.

It belongs to the tragedy order of novels. Few living writers could equal Besant in this line. Prohibitionists should make it a text-book.

Missing—A Young Girl. By FLORENCE WARDEN. Lovell's West Series, No. 15. Paper, 25 cents.

"Miss Warden is decidedly the best of the modern school of English romancers. Everything she writes is novel, original, and interesting."—*N. Y. Metropolis.*

He Went for a Soldier. By JOHN STRANGE WINTER. Lovell's West Series, No. 19. Paper, 25 cents.

John Ruskin writes of Mrs. Stannard as—

"The author to whom we owe the most finished and faithful rendering ever yet given of the character of the British soldier."

Work While Ye Have the Light. By COUNT LYOF TOLSTOI. West Series, No. 22. Paper, 25 cents.

The story is mainly occupied in drawing a detailed contrast between Pagan and Christian life and thought, developed through dialogue filled with Tolstoi's extraordinary power.

For sale by all Booksellers and Newsdealers.

United States Book Company, Publishers N. Y.

Dyspepsia

HORSFORD'S

ACID PHOSPHATE.

In dyspepsia the stomach fails to assimilate the food. The Acid Phosphate assists the weakened stomach, making the process of digestion natural and easy.

Dr. R. S. McCOMB, Philadelphia, says: "Used it in nervous dyspepsia, with success."

Dr. W. S. LEONARD, Hinsdale, N. H., says: "The best remedy for dyspepsia that has ever come under my notice."

Dr. T. H. ANDREWS, Jefferson Medical College, Philadelphia, says: "A wonderful remedy, which gave me most gratifying results in the worst forms of dyspepsia."

Descriptive pamphlet free.

UNPARALLELED OFFER TO ALL NEW SUBSCRIBERS TO

THE ARENA,

THE BRILLIANT BOSTON REVIEW.

The Publishers of THE ARENA *take pleasure in announcing that they have just perfected arrangements by which they can send free, as a premium to every new subscriber to* THE ARENA, *the* COSMOPOLITAN MAGAZINE *for the ensuing year* (*old subscribers to the* COSMOPOLITAN *must remit fifty cents extra*). *This is not only the most liberal offer ever made by a leading review, but the*

COMBINATION IS UNSURPASSED.

THE ARENA, being conceded one of the few really great reviews, is without question the most liberal and progressive leading magazine published, while the COSMOPOLITAN is a richly illustrated, popular family magazine.

The subscription price of THE ARENA is $5.00; that of the COSMOPOLITAN is $2.40. But for five dollars we will send THE ARENA and the COSMOPOLITAN, postpaid, for one year, to new subscribers of these magazines.

How THE ARENA is Regarded by Leading Thinkers.

ALFRED RUSSELL WALLACE, LL.D., F.L.S., author of 'Darwinism,' 'Malay Archipelago,' etc. The eminent scientist and author writes the editor as follows:

"I think you have succeeded in the very difficult task of improving upon all existing literary periodicals. The articles deal with questions of vital interest to every thoughtful person, and they are all well written, original, and thorough, without being heavy."

Rev. CYRUS A. BARTOL, D.D., the distinguished New England clergyman, writes as follows:

"The place that was waiting for a periodical, not only free and able, but catholic and comprehensive—fair to every thinker and just to all thought, while open to any subject in which our common humanity was concerned—in my judgment you fill. THE ARENA is wider and loftier than any other broad or high church. It is the most cosmopolitan of any magazine in this country or the world."

OPINIONS OF CRITICAL JOURNALS.

"Full of mental stimulus, of breadth, and vitality."—*Boston Traveler.*
"THE ARENA is a fine magazine of the best writings."—*N. O. Picayune.*
"At the head of magazine literature of a superior sort, and is more particularly designed for educated minds."—*New York Times.*
"From the beginning this periodical has shown a comprehensiveness and breadth of plan, and a liberality in its treatment of current questions of the day, which have commended it to thoughtful readers everywhere."—*Evening Transcript, Boston.*
"THE ARENA must be numbered among the comparatively few periodicals indispensable to all persons who would keep in the van of current discussion regarding the important questions of the day."—*Beacon, Boston.*

SPECIAL NOTICE.—This great offer—THE ARENA and the COSMOPOLITAN MAGAZINE combined—is only made to new subscribers of *both magazines.* Old subscribers must remit five dollars and fifty cents, when sending their order. Address

THE ARENA PUBLISHING COMPANY, Copley Square, Boston, Mass.

THE VENTILATED

SANATORY SHOES

OF THE

DR. JAEGER'S

Sanitary Woolen System Company

are the only shoes that are strictly in keeping with popular styles, and yet combine all the conditions essential to a *perfectly* healthful shoe.

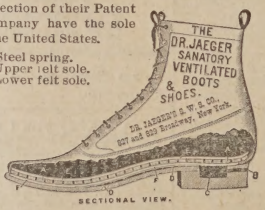
They are made in conformity to the principles of Dr. Jaeger's "Sanitary Woolen System," and are, therefore, both curative and preventive of all the ailments of the feet.

THEY ARE RECOMMENDED BY PHYSICIANS.

PRICES REASONABLE.

TAKE NOTICE!—Under the protection of their Patent and Trademark, the above-named Company have the sole right to make and sell these goods in the United States.

AA—Perforated felt sole.
B—Air duct.
C—Air well.
DD—Steel spring.
EE—Upper felt sole.
FF—Lower felt sole.



These Shoes are STRICTLY FIRST-CLASS in every way. The purchaser will find them ELEGANT, COMFORTABLE, AND DURABLE.

The customer, once fitted, can obtain the same size and quality, at any future time, with assurance of a fit, by ordering the same number, without re-measurement.

Our Shoes can be repaired by any good shoemaker.

We solicit correspondence and inspection.

For **Catalogue** and **Circulars**—free, by mail—send to

Dr. Jaeger's Sanitary Woolen System Co.,

827 and 829 Broadway, N. Y.

The Nation

VOL. LI.—NO. 1324 THURSDAY, NOVEMBER 13, 1890. PRICE 10 CENTS.

D. Appleton & Co.'s

NEW BOOKS.

First Volume in the Series of the Young Heroes of our Navy.

LITTLE JARVIS.

By MOLLY ELLIOTT SEAWELL.

Illustrated by J. O. DAVIDSON and GEORGE WHARTON EDWARDS.

Bound in cloth, with specially designed cover. 8vo. Price, $1.00.

The story of the heroic midshipman of the frigate Constellation. The second of the *Youth's Companion* prize stories.

No. 63, Town and Country Library.

A SQUIRE OF LOW DEGREE.

By LILY A. LONG.

'A Squire of Low Degree' is by a new American novelist, whose work shows rare talent. The scene is laid in the Northwest. The leading motive of the book is a peculiarly noble form of self-sacrifice.

12mo. paper, 50 cents; cloth, $1.00.

Volume XVII, International Education Series.

Edited by WILLIAM T. HARRIS, A.M., LL.D., Commissioner of Education.

ESSAYS ON EDUCATIONAL REFORMERS.

By ROBERT HERBERT QUICK, M.A.

12mo. Cloth, $1.50.

Only authorized edition of the work as rewritten in 1890.

FROM THE PREFACE.

"As the book is likely to have more readers in the country of its adoption than in the country of its birth, I have persuaded my friend, Dr. William T. Harris, the United States Commissioner of Education, to put it into the International Education Series which he edits; so the only authorized editions of the book are the English edition and the American edition published by Messrs. D. Appleton & Co."

EARLSWOOD COTTAGE, REDHILL, SURREY, ENGLAND, 28th July, 1890.

For sale by all booksellers; or any book sent by mail on receipt of price.

1, 3, and 5 Bond St., New York.

SECOND EDITION.

Economic and Social History of

NEW ENGLAND, 1620–1789. With an Appendix of Prices. By WILLIAM B. WEEDEN. 2 vols., crown 8vo, $4.50.

"Mr. Weeden deserves the thanks of all who are interested in the history of one of the most remarkable of human societies, . . . and this volume should be added to the library of every one who claims descent from New England Ancestry."—The Nation.

Choice Books for Children.

Once Upon a Time.

An Illustrated Story-Book for Children.

With Colored Pictures by Harriet M. Bennett and Lizzie Mack, and *Stories* by Mrs. Oscar Wilde, Mrs. Molesworth, Helen J. Wood, and others. Quarto, 152 pages, cloth, gilt, $2.00.

When I'm a Man;

OR, LITTLE ST. CHRISTOPHER. By Alice Weber. Illustrated by Groome. Quarto, 190 pages, cloth, gilt, $2.00.

"The story is charmingly told, and the little hero is a very human boy, not too good for human nature's daily food, but manly, brave, and resolute, and his adventures at the seaside are natural enough to please the most active youngster, without being sensational. The legend of Saint Christopher is skilfully introduced near the conclusion and makes an effective moral. Altogether it is a book that possesses many of the elements that made 'Little Lord Fauntleroy' so popular." —*Boston Sat. Eve. Gazette.*

The Old Pincushion;

OR, AUNT CLOTILDA'S GUESTS. By Mrs. Molesworth. Illustrated by Mrs. Hope. Quarto, 192 pages, cloth, gilt, $2.00.

Paul's Friend.

A Story for Children and the Childlike.

By Stella Austin. With sixteen Illustrations by Sebastian Gates. Quarto, 250 pages, cloth, $2.00.

"Stella Austin knows just what children need, and how to attract and win them. Her words are pure, healthful, and loving, and full of that brightness and happy sparkle which so attract and move the young heart. It is a book which ought to be widely sought for during the approaching holiday season, for it will prove not only a most suitable, but also a most acceptable gift to any child, whether boy or girl."—*Christian at Work.*

Dutton's Holiday Annual for 1890.

A Volume of Pictures and Stories for Little Folk. Edited by Robert E. Mack. Six full-page colored Illustrations, and monotint ones on every page. Quarto, boards, $1.25; cloth, gilt, $2.00.

*** Sent by mail, postage paid, on receipt of prices.*

HOLIDAY EDITIONS

ROMOLA. In placing upon the market this superb two-volume holiday edition of George Eliot's masterpiece, containing sixty Etchings and Photo-Etchings printed in a variety of delicate tints, we feel that we have attempted and succeeded in giving the public the finest edition of this great historic story of Florentine life ever produced in any form.

2 vols., white vellum cloth, red and gold, $6.00.

ROMOLA—Edition de Luxe.

Limited to two hundred and fifty copies. The plates, sixty-two in number, will be printed on Imperial Japanese paper, and the special Italian method of illuminated color-binding in full vellum will be executed in the highest style of the binder's art.

2 vols., full vellum, red, blue, and gold, $15.00.

HANS OF ICELAND—Edition de Luxe. This work, which ranks among the best of the author's early writings and is so esteemed in France, has singularly enough been neglected in most "Works of Victor Hugo" published in this country. It has remained for us to properly produce it in sumptuous form, exquisitely illustrated with Etchings, Photo-Etchings, and half-tone Illustrations from designs by eminent French artists. Uniform with the Édition de Luxe Notre Dame.

This edition is strictly limited to *five hundred* numbered copies.

1 vol., crown 8vo, half Roxburgh, gilt tops, $5.00.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 13, 1890.

The Week.

THE most impressive aspect of the Democratic victory in the next House of Representatives is the fact that the party has a clear majority of the members elected in the Northern States, and does not need a single seat from the South in order to outvote the Republicans. Moreover, the Democrats have a majority of the members elect in each section of the North. In New England the Democrats have elected thirteen Representatives, against only twelve Republicans, and their total would already be fourteen, except that one candidate in Rhode Island, who had a good plurality, must run a second time, when a plurality will suffice. In the old "Middle States" of New York, New Jersey, and Pennsylvania, the Democrats have elected 38, against only 31 for the Republicans. In the West, taking in the whole region from the Alleghanies to the Pacific, the Democrats and their allies among the farmers have 75, against only 42 for the Republicans. If we consider what is commonly called "the West"—including only the older States from Pennsylvania to Colorado—the Opposition have 74 members against only 27 Republicans. In other words, alike in New England, in the old Middle States, and in the great States of the West, the Republican party has become the minority party on the Congressional issue. Its losses have been heaviest in the States, like Massachusetts in the East, and Iowa, Minnesota, and Kansas at the West, which have been its strongholds.

A no less significant feature of the result is the fact that the Republicans would be placed in a minority in the Senate also of the Fifty-second Congress but for their admission of two Territories with populations of only 84,229 in Idaho and but 60,589 in Wyoming, their retention of the two Senators from the "rotten borough" of Nevada, with far fewer people than even Wyoming, and their corrupt capture of the two seats from Montana, which has just pronounced a verdict upon the performance by casting a Democratic majority. Not counting the four Republican Senators who have not yet taken their seats from Idaho and Wyoming, the Republicans have ten majority. They lose by Tuesday's elections one seat each from the States of New York, Illinois, Wisconsin, and Kansas, with the New Hampshire Legislature and its Senatorship still in doubt. Even with Montana's two seats unjustly awarded to the Republicans, they would have only 42 without New Hampshire, and 43 with that State, of the 84 seats after the 4th of March, 1891, if they had not secured four Republican Senators, and thus a total of 46 Republicans to 42 Democrats, or 47 to 41, if Blair has a Republican successor, by the gross injustice of giving the petty populations of Idaho and Wyoming as much power in the upper branch of Congress as New York and Pennsylvania possess. Moreover, for all practical purposes of legislation, it must be remembered that this Republican majority of two or four, as the case may be, includes three men who voted against the passage of the great Republican measure of the last session.

The popular wrath singled out for destruction nearly all the leading figures in the Republican riot in Congress at the last session. McKinley has gone down in Ohio; Cannon, who touched a lower depth than any other man in his subserviency to the Speaker and in exemplification of his policy that the House was "not a deliberative body," has gone down in Illinois; Rowell, who, as Chairman of the Elections Committee, led in the theft of so many Democratic seats that the Republican majority was swelled from 7 to 24, has gone down also in Illinois; Gear, one of McKinley's most powerful supporters in the Ways and Means Committee, who has been one of the foremost if not the foremost Republican leader of his State for more than a quarter of a century, having been twice elected Governor and twice elected to Congress, has gone down in Iowa; Greenhalge, who presided over the last Republican Convention in his State, and defended Quay morals in politics and McKinley principles in political economy, has gone down in Massachusetts. This is only a partial list of casualties among the leading lights of the latter-day Republican party who have crowded to the front to show their zeal for that kind of politics which takes no account of the Ten Commandments and the Golden Rule.

Conspicuous on the list of the slain in the great battle should be placed the name of John J. Ingalls, Senator from Kansas, and President pro tem. of the Senate, and author of the following celebrated statement of modern political ethics:

> "The purification of politics is an iridescent dream. Government is force. Politics is a battle for supremacy. Parties are the armies. The Decalogue and the golden rule have no place in a political campaign. The object is success. To defeat the antagonist and expel the party in power is the purpose. In war it is lawful to deceive the adversary, to hire Hessians, to purchase mercenaries, to mutilate, to kill, to destroy. The commander who lost a battle through the activity of his moral nature would be the derision and jest of history. This modern cant about the corruption of politics is fatiguing in the extreme. It proceeds from the tea-custard and syllabub dilettanteism, the frivolous and desultory sentimentalism, of epicenes."

There has never been any doubt that the author of this passage was a charlatan and a corrupt man. He has been more than suspected of having bought his seat in the Senate, yet he has been able to get that seat for three successive terms, and, though his most conspicuous characteristic as a debater is his foul mouth, he has been elected repeatedly to the Presidency of the Senate by the Republican majority. At last the "moral nature" of Kansas has shown sufficient "activity" to put an end to his career. A political revolution has taken place in the State, and a Legislature has been chosen which, according to the Chairman of the Republican State Committee, "is conceded to have an anti-Ingalls majority." It is believed to be too large for him to buy—a circumstance which will doubtless make "this modern cant about the corruption of politics" more "fatiguing" to him than ever. It will be an incalculable gain to the moral atmosphere of the Senate chamber to have this vulgar ranter tipped out of its Chairman's seat.

Although Henry Cabot Lodge secured a re-election to Congress, the fact should not be overlooked that his loss of votes was greater proportionally than in the cases of his beaten colleagues, Candler and Greenhalge and Rockwell; and that he would have been left at home if he had not had an immense partisan majority to fall back upon. In 1888 his lead over his Democratic opponent was no less than 5,294, while last week he received only 1,023 more votes than William Everett, who was, it will be remembered, nominated from without the district. If the regular Republican majority in the district had been no larger than the 2,027 which Rockwell had in 1888, or the 2,036 in Candler's district then, or the 3,220 in Greenhalge's district two years ago, Mr. Everett's brilliant campaign would have been crowned with the election which it so richly deserved.

The Republicans of Michigan have received a lesson similar to that of their brethren in Pennsylvania. They also tried the experiment of running for Governor a man who had been charged with breaches of trust while holding public office, and who had been unable to disprove those charges. In fact, he admitted some of the worst of them, and coolly took the position that there was no harm in using public office as he had done—that is, for his personal and private gain. He had taken public money and used it as his own, though the law explicitly forbade his doing so, but justified his conduct by saying that he had restored the money again and the State had lost nothing. This was also Quay's defence of his use of public funds. The people of Michigan, like the people of Pennsylvania, are obviously harsh in their views of this kind of official honor, for they have defeated the Republican candidate for Governor by about 10,000 plurality, reversing a Republican plurality of over 17,000 in 1888, when the present Governor was chosen, and a Republican plurality of over 33,000 in the election for Supreme Court Justice in 1889. Their total vote shows a great falling off, though there has been a large increase in population, their control of the Legislature

is greatly weakened if not destroyed, they have lost four Congressmen—have received, in fact, the most crushing defeat in their history as a party.

The noteworthy feature of the election in Virginia was the fact that the Republican Machine, in accordance with directions from Mahone, ordered the negroes not to go to the polls. In no other Southern State do positive orders of this sort appear to have been given, but in few places did the negroes manifest any more interest in the result than in Virginia. The Savannah *News* says that one of the most noticeable features of the election in that city was "the almost total absence of the old-time country darky, who, in days gone by, firmly believed the Government would give him 'forty acres and a mule' if he voted the Republican ticket." As to the colored people generally, the *News* says that they "took very little interest in the election. Although there was a pretty large crowd of them about the polls all day, their apathy indicated that they cared nothing for either candidate. Some of them probably were expecting a distribution of 'boodle,' but if so they were disappointed." Now that the negroes in one Southern State have shown that they will stay away from the polls if a white boss tells them to do so, and in other Southern States have shown that they care little about voting anyway, it is to be hoped that we have heard the last of the nonsense about counting every negro as a Republican voter in every election if he be not bulldozed.

The most striking and encouraging feature of the post-election discussion is the moderation manifested by the victors. As a rule, the Democrats realize that it was not a triumph for narrow partisanship, and that the result imposes upon them serious obligations which must be discharged with an eye single to the public good if they would retain public confidence. This was the dominant note of all the speeches at the great celebration held in Boston on Thursday evening. "We meet," said Governor-elect Russell, "not to exult over a defeated opponent, but to rejoice that Massachusetts, true to herself, her traditions, and her glorious history, has declared to the country in emphatic voice that the people's law shall be used for their interests only, and that legislation shall be free from selfish and improper influences With true Massachusetts spirit, the people have declared that a party to win success must deserve it; must place principle above policy, patriotism above party, promote the public welfare, and serve the people's interests only. Upon this basis we have won success; let us not forget it in the hour of our triumph." In a like spirit Mr. Corcoran, Democratic candidate for Lieutenant-Governor, after referring to the fact that his party had carried the State for Governor and elected a majority of the Congressional delegation, said: "But while that is true, we should not forget that it is to the people of Massachusetts that we owe our triumph. It was not Democratic votes that determined this contest, but it was the votes of the people who forgot, or, rather, who did not forget, but realized, that there was a God in Israel outside of the Republican party." Mr. G. F. Williams, again, who defeated the Republican candidate for Congress in the Ninth District, said: "We are on trial. Victory is worse than defeat unless we stand the test." And Sherman Hoar, who defeated the Republican candidate for Congress in the Fifth District, said: "We have shown you what we can do in the campaign, and we have yet to show the people what we can do for their good as legislators. One word of caution. We want to elect Grover Cleveland; and when you hear that your legislators at the State House or your Congressmen at Washington have done a certain thing, don't be too ready to criticise and to sneer. We have got to keep faith, not only with the Democrats, but with the whole people, and we have got to prove that tariff reform, civil-service reform, and election reform are safe in Democratic hands." All of the speakers recognized that the victory had been won upon the issue made by Mr. Cleveland, and the loudest applause was given to every reference to his expected election to the Presidency in 1892.

The bearing of the late elections upon the next Presidential contest is obvious enough to all who are not trying to deceive themselves. As the Democratic victories were won on the issue which Mr. Cleveland forced upon his party and the country, the logic of events makes him the inevitable candidate of the Democrats when the same issue shall be submitted for final decision in 1892. The Philadelphia *Inquirer*, a plain-spoken Republican newspaper, puts the case very clearly when, after frankly admitting that "protection has suffered a tremendous defeat," it says: "The results of these elections draw the lines of battle for 1892. The widespread Democratic victory forces the Democracy into positive advocacy of advanced 'tariff reform.' If Pennsylvania and the other Republican States had maintained their position in the party ranks, the most prominent candidate before the Democratic party to-day would be Gov. Hill. But the Democracy can have little use for Hill now. Cleveland is thrust to the front by force of circumstances to lead the free-trade hosts, and the issue of '92 must of necessity be the same old struggle between free trade and protection." The *Inquirer* suggests the question: "With Cleveland leading the Democratic forces, who will lead the Republican side?" But it only answers it, Yankee-like, with the further question: "Does the situation point to Blaine?"

The *Tribune* of Saturday, in offering its public "things to think about," says that

> "Free raw material, free ores and coal, pig-iron, hides, leather and lumber, free wool and barley and farm products of all kinds, would mean the closing of a great many establishments now in operation, and the discharge of a great many workers in mines or forests or on farms."

The condition of the Republican mind about hides has been one of the curiosities of the late campaign, and fairly illustrates the amount of knowledge and deliberation which was brought to the construction of the McKinley Bill. Hides have been on the free list for about fifteen years, thus fostering an immense and prosperous home leather industry; but somehow many of the protectionists have never been able to reconcile themselves to the spectacle. During the passage of the bill, Mr. Blaine wanted to have a duty put on hides in order to furnish him with materials for his great reciprocity dicker with the South American States, and at one time it seemed as though Congress would gratify him; but the leather-men were too strong for him. Others have never been able to believe that hides really are on the free list. The *Tribune*, apparently, is one of them. The Scholar in Politics is another. He calmly told a Massachusetts audience during the late canvass that the Republicans in the last Congress had lowered the duty on hides. Another wiseacre named Fox, who was put up for Congress against Sherman Hoar in the Concord district, mentioned, as one of the foul calumnies concocted against the Republicans by "the British free-traders," the charge that they were going to reduce the duty on hides. As the audience tittered, some one on the platform had to pull his coat-tails and remind him that hides were now free. In like manner and for a similar purpose, we respectfully pull the *Tribune's* coat-tails, or whatever it is that passes for or serves as coat-tails in that tariff temple

---

The "little tin god on wheels" that was circulating around the country starting tin-plate works here and there and hiring thousands of men, women, and children, has disappeared in a magical way. The Pittsburgh *Press* records his exit, and demands that the duty on tin plate, and also on metallic tin, be repealed. It is high time, for the Chicago packers of canned meats have decided to advance their prices one-quarter of a cent per pound to cover the increased cost of cans due to the McKinley tariff on tin plate. The price of tin cans in Baltimore has advanced from $2.35 to $4.50 per hundred. Of course, this is due in part to speculation—the speculation being due to the new tax, which does not go into effect till July 1, 1891. Everybody is trying to "load up" before that event, and the Welsh manufacturers of tin plate are consequently enjoying a phenomenal prosperity for the time being, at our expense.

Paragraph 383 of the McKinley tariff provides that "the duty upon wool of the sheep, or hair of the camel, goat, alpaca, and other like animals . . . which has been sorted or increased in value by the rejection of any part of the original fleece, shall be twice the duty to which it would be otherwise subject." When the first importation of carpet wool was made under this law, the Boston customs authorities decided that paragraph 383 did not apply to carpet wool. Mr. Arthur T. Lyman, the carpet-

manufacturer of Lowell, Mass, although his own interests were promoted by the Boston ruling, wrote a letter, which was published in the *Commercial Bulletin* of that city, remonstrating, in the interest of good morals, against such a glaring infraction and defiance of law. He showed that paragraph 383 makes no exception of carpet wool, and that no other clause of the act makes an exception of it. The *Bulletin* concurred with Mr. Lyman. It was supposed that when the matter should come before the new Board of Appraisers, they would overrule the Boston decision. On the contrary, they sustained it. They imported into the law a proviso that was never put there by Congress, and which, as it now turns out, the Committee of Ways and Means refused to put there when their attention was expressly called to it. This action of the Board of Appraisers was certainly freer trade than any tariff-reformer ever advocated, since it went to the length of lowering the tariff in an important particular in the face and eyes of Congress itself. The reason why this was done, the *Bulletin* tells us, was that an *understanding* existed in the Committee of Ways and Means that the Appraisers should rule as they have ruled on this clause, but that it would not be safe to make an exception of carpet wool in the law itself lest the wool-growers should get wind of it and kill the bill. This is the only explanation that has been offered for the extraordinary action of the Appraisers. We do not know whether these cool individuals who have undertaken to alter acts of Congress in order to carry out private understandings, are amenable to indictment or not, but they probably are amenable to impeachment.

The bad turn in Wall Street is evidently the result of the bad turn in London. Engagements had been made in that city to send large sums in gold to Spain and South America to rehabilitate the rickety finances of those countries. The drain on the Bank of England caused an advance in the rate of discount to 6 per cent., and with the probability of even a higher rate. This caused a drain on the Bank of France, and the latter institution stopped gold payments, as it has the right to do under the monetary system of that country, where the double standard exists legally, although silver is no longer coined. The Bank of France, when a drain of gold sets in that becomes at all inconvenient, redeems its notes in silver and then sells its gold at a premium greater or less according to circumstances. The bank cannot be blamed for taking this course, since it is required by law to receive silver at par. It cannot pay out better money than it takes in. Redeeming its notes in silver, however, does not stop the outflow of gold if the exchanges really call for an exportation of that metal. Gold becomes in that case a commodity to be bought and sold in the market along with other French property, and the question is simply whether the commodity gold shall be exported or the commodities wine, silk, sugar, broadcloth, etc.—those which are offered at the lowest prices relatively being taken for export. It is idle to attempt to forecast the present financial disturbance abroad, but it is easy to see that our own present trouble has come from the other side, where tight money has led to the throwing over of American securities in an almost unprecedented manner.

It is to be hoped that somebody's suit will shortly bring the Stanley controversy before the courts, to be made an end of one way or another. The "revelations" which now follow each other in rapid succession are extremely unpleasant reading, and settle nothing in the public mind. Who ranks whom, among Stanley's subordinates, as an authority about the rear column, is something the public outside is incompetent to decide, especially as each actor in the affair, from Mr. Stanley down, says he has not yet told all he knows. There are at least three versions now in the field, besides Stanley's own, namely, Troup's, Bonny's, and Jameson's, besides the version of the Barttelot family. The last touch, that Jameson had a girl killed and eaten in order to provide a cannibal scene for a sketch or photograph, is a slight advance upon a charge made during the Burmese war, that the officer in command had carefully grouped a lot of guerillas condemned to be shot, so that they might be effectively photographed at the final moment. This, we believe, was successfully answered; but "art for art's sake" is a terribly persistent and intrusive agency, and Africa owes it to the civilized world to provide sensations in reasonable quantity.

The Catholic Church in western Europe seems to be more and more definitely committing itself to socialism. The Catholic Congress at Saragossa went considerable lengths in demanding State intervention to settle the labor question, though not nearly so far as the similar gathering at Liége, from September 7 to 10. In the latter body, where many of the highest dignitaries of the Church were present, the advocates of State control were in a large majority, and their utterances and intolerance were decidedly radical. A letter was read from Cardinal Manning emphatically setting forth his well-known views. In one paragraph, where he seems to have inadvertently taken up Herr Liebknecht's pen instead of his own, he wrote: "It will never be possible to establish peaceful relations between employers and workingmen in an effective and lasting manner, until there shall be enacted a just and proper law regulating profits and wages—a law by which all free contracts between capital and labor shall be governed." However, such doctrines are not to be swallowed in France without some struggling. At the congress of Catholic jurisconsults held at Angers a month later, an address was made by Bishop Freppel of that city in which he strongly protested against "that wind of State socialism at present blowing in all western Europe." He specifically referred to Cardinal Manning's ideas, which he repudiated and attacked, declaring that to carry them into practice would be "to lay the hand of the State upon all forms of human activity." "In vain I ask," he said, "on what principle the State can prevent a man from working ten hours a day if he wishes to? Is it on the ground of the common good? But who does not see that in that way the door is opened, without the possibility of shutting it later, to all the demands of contemporary Socialism?"

All the churches are drifting more or less rapidly into the same position. The atmosphere at the late Church Congress in England to which we referred the other day, was full of it. It is one of the most deplorable consequences, humanly speaking, of the spread of scepticism among the working classes—that is, the absolute indifference of the poor, especially in the large cities, to religion and religious worship. They used to accept the promise of a heaven hereafter as a solatium for their earthly privations, but they refuse to do so any longer, and the clergy are forced, in order to have an influence with them or get a hearing from them, to promise them a heaven on earth, for that is what Socialism offers. The mischief which preaching like Cardinal Manning's does—that is, the social disorganization which it is likely to produce during the next fifty years—will probably be very great. The effects of it on the dock-laborers in London have convinced a great many who backed him up in that crusade, of the folly of their ways in that matter; but no man of the Cardinal's age is easily converted. The plan of "a just and proper law regulating wages and profits," like nearly all Socialist plans, assumes, as we have often pointed out, the existence somewhere in humanity of a stock of grace, wisdom, and understanding and of legislative and administrative talent which the world has not yet drawn on. Who is competent to draft such a law, and where are the saints who are to execute it so as to make the earthly paradise? Even Mr. Bellamy, perfect as his arrangements are, does not provide a general superintendent or Board of Control for his phalanstery. Three years ago there was a widespread notion that somehow the Knights of Labor had been specially consecrated for the work of regenerating at least American society, but in a very few months Satan was as busy among them with his varied assortment of deviltries as among the rest of mankind. The chiefs lied and stole, and quarrelled and failed, just like capitalists and brokers. The notion which some of the clergy are helping to spread, that human society can be improved independently of improvements in human character, has just as much promise and potency of social mischief in it as the invasions of the Barbarians in the fifth century. It may overthrow what we have, but it will take now, as it took then, a thousand years to put something decent and bearable in its place.

SLAVERY AND THE TARIFF.

That all political parties which get into power tend to perish through pushing their principle to its extreme, is one of the commonplaces of history. Monarchy, aristocracy, and democracy have all had this bitter experience in some age and some State. We are witnessing now in this country a very interesting double illustration of it, in the curious parallel between the way the Democratic party after it became a pro-slavery party, and the Republican party after it became a protectionist party, rushed on their fate.

The first attitude of the Democratic party towards slavery was an apologetic one, as was the first attitude of the Republican party towards the high tariff. From a lamentable but inevitable fact, slavery grew in the Southern press and platform into an institution with some merits; then into the wisest possible provision for the education and civilization of the negro; then into a divine institution, for his benefit; then into the coming and most advantageous condition for all laborers, white as well as black. At first it was a mistake for the negro to run away from his master; then it became a piece of great wickedness; and finally his desire to run away became a disease, known as "drapetomania," and treated by the plantation doctors with appropriate remedies. First, slavery was a form of property peculiar to the South, and only defensible on the ground of necessity and properly confined to the slave States; then it became property *jure gentium*, sacred everywhere; then it became a form of property which it was the part of political and social wisdom to plant on the unsettled portions of the national territory. The institution, instead of being a relic of the past, became the form which labor was to take in all countries. Not only was the negro well off in slavery, but, as the Southern press preached between 1850 and 1860, the white laborer would be better off in slavery than he actually was, and the labor problem of civilized nations would undoubtedly be solved by his reduction to slavery.

These abstract views were faithfully embodied in legislation as fast as circumstances would permit. Opponents of slavery were treated as criminals hired by outsiders to disturb Southern society, in all the Southern States. The right of petition was denied them in Congress. The Fugitive Slave Law was passed in defiance of growing Northern sentiment against slavery; and, finally, the Kansas-Nebraska Bill was passed, in 1854, violating the Missouri Compromise, and opening over 400,000 square miles of virgin soil to "the peculiar institution." This was the last straw that broke the camel's back, or, in other words, the extreme which brought on the civil war, although the execution of the Fugitive Slave Law perhaps did more to bring home to the general Northern mind the arrogance and desperation of what was known as the "Slave Power." There was one insult to Northern intelligence which, however, no Southern orator ventured upon. No one came from the South to preach, on the stump, to Northern laborers, the new Southern doctrine that their condition would be improved by their being converted into slaves.

Turning to the tariff, we find that in all the earlier years of American history it was thought of and talked of as a convenient means of raising revenue and of encouraging small or "infant" industries already established. It existed in this condition, with various slight ups and downs, until 1861. In that year the Republican party took hold of it, still as protection for infant industries, but also as a means of raising the immensely increased revenue made necessary by the war. But it remained possible all through the war for a free-trader or low-tariff man to be a Republican, and the high duties imposed in 1861 were generally, within the party, thought of and talked of as war taxes, to be got rid of when the necessity which had called them forth had ceased. When the war was over, they became valuable securities for the payment of the enormous public debt. When the payment of the public debt became easy and certain, they were retained and increased as the only defence of the American workman against "the pauper labor of Europe," and the "infant industry" theory passed wholly out of sight.

Then it became discreditable to hold or ever to have held free-trade views. American politicians began to deny (in some cases falsely) having ever belonged to the Cobden Club. Then the Cobden Club appeared on the scene, as a malignant and corrupt organization, having for its object the destruction of American manufactures, and using immense funds for that purpose. Then all tariff-reformers became enemies of the United States, probably hired by foreigners to attack their industries. Then importers began to be treated as smugglers engaged in a disreputable business and proper objects of hostile legislation, and manufacturers as well as office-holders began to be called on (about 1876) for contributions to the campaign funds, on the ground that the Republican party really supplied them with their "bread and butter." Then the theory that protection was a national policy, to be framed by legislators, was abandoned for the theory that protection was a favor to be asked for by the individuals or firms who wanted it for their own products, and to be accorded on their own showing that they should make more money if they got it, and should lose money or go out of business if they did not get it.

At last, in 1888, the parallel with the Kansas-Nebraska Bill was made complete, and the manufacturers were boldly asked for immense sums, virtually as loans, to be repaid by increased duties on all commodities in which they were interested, or in which they promised, as in the tin-plate case, to interest themselves by and by, or at their earliest convenience. This broke the camel's back. It was the last extreme, which in politics so often brings ruin.

We must observe, in conclusion, however, that the protectionists have really gone further than the pro-slavery men. The McKinley Bill is very like the Fugitive Slave Law and the Kansas-Nebraska Act in being an embodiment of extreme views. But the pro-slavery champions never, as we have already observed, came North and took the stump to persuade Northern workingmen that they would be better off as slaves. The equivalent of this absurdity the protectionist orators have actually committed. They have tried on the stump to persuade American fathers and mothers of families that the more they paid for the necessaries of life, the happier they would be, and that the struggle of the human race from the dawn of civilization to obtain comfort at a low cost was a huge blunder. The force of nonsense could no further go. The insult to the popular intelligence was more than the voters could bear.

REPUBLICAN EXPLANATIONS.

It is evident from the excuses and explanations which the Republican leaders and newspapers are putting forth regarding their defeat, that few of them have comprehended the real significance of what has happened to them. The almost unanimous view appears to be that if the McKinley tariff had gone into effect a little earlier, or the elections had not occurred till a year or so later, there would have been no defeat, but rather a glorious Republican victory. Mr. McKinley takes this view, and it is shared by many other party leaders and journals. It is worth while to put some of these utterances on record, both for purposes of comparison and to enable us to see how they will sound a few weeks hence.

Mr. McKinley says: "The people seem to have a wrong idea of the so-called McKinley Bill, as I have often said on the stump. It puts hundreds of articles on the free list, and only increases the tariff where it is necessary to protect American labor. I think in two years from now that its effects on the country will be so beneficial that the people will overwhelmingly endorse the Republican party." Senator Sherman says: "The McKinley Bill was growing stronger as the campaign advanced. It is a measure that is greatly misunderstood. It really reduces taxation, and while it increases the duty in some instances, its general effect is greatly to reduce the amount collected from customs. I think the workings will be found to be beneficial to the country, and when the people find this out, as they are likely to do before the next Congress is chosen and the next President elected, they will cast their votes accordingly." Mr. Lodge takes a similar view, attributing the defeat wholly to the passage of the bill on the eve of election and "the skilfully managed scare about high prices," which he declares "amounted to a panic." But he regards it as an "artificial panic about prices which shows nothing," still has faith in the bill, and expects a reaction in favor of the party when the value of the bill to the general prosperity of the country shall have been made plain. The Chairman of the

Republican Committee of Indiana says that if Congress had passed the bill last June, the "scare would have been over before election," and he "confidently believes that in a year and a half from now the bill will be in high favor."

This is the prevailing view among Republican statesmen, but there are some dissenters from it. Ex-Speaker Keifer, for example, says it was the McKinley Bill that brought about the political revolution, and indicates his poor opinion of it by saying that if he had believed what some of the Republican stump speakers in Ohio said in defence of it, he would have voted the Democratic ticket. A unique view is held by one William T. Henderson, a Republican leader in Baltimore, who has no doubt whatever that the whole disturbance was caused by Republicans who "desired to administer a rebuke to President Harrison for the manner in which he had made Federal appointments," and especially for the way in which he has allowed "Wanamaker to name the men to be appointed." Mr. Henderson seems to have lost a post-office or something else that he expected.

The newspaper explanations are much like those of the party leaders. The most difficult of comprehension are those of the *Tribune*, which vary from day to day, as the editor succeeds in getting the "smoke of battle lifted from the field." On the first day after the election the smoke was so thick that he did not discover which side had been beaten, for he observed: "It is a marvellous thing that the new tariff has been so far sustained by the people, before its beneficial effects could be realized, and while all its real and imaginary burdens were fresh in the minds of men." He was also able to remark that, "in spite of the carefully cultivated scare about rise of prices, the people have shown that they not only adhere to the principles of protection, but heartily uphold Congress in a brave application of them."

After the smoke had lifted a little on the next morning, the editor discovered from the news columns of his esteemed contemporaries that there would be a Democratic majority of 150 or thereabouts in the new Congress, and that it would be difficult to maintain his position that the people wished to show in this manner that they "adhered to the principles of protection," and "heartily upheld Congress in a brave application of them." He admitted cautiously, therefore, on the second day after election, that there had been a defeat, and went so far as to intimate that there might have been scattered here and there throughout the country several Republican voters who, from "sheer laziness and indifference," had failed to vote. He rebuked these sternly for their discreditable conduct. He then admitted that there might have been some voters who "honestly misunderstood" the new tariff, and small wonder that they should, for it had been "carefully misrepresented" by "thousands of importers and agents of foreign firms who have been made angry" by it. After this guarded concession that there had been some effect produced, after all, by the high-price "scare," he concluded by saying that it was of very little account anyway, and that the day was close at hand when the new tariff would become a "very citadel of strength for the party." The awkward size of the Democratic majority in the new Congress was not referred to at all.

On the third day after election enough more smoke had lifted to enable the editor to say that it "does not follow because the good people fail to see the merits of a measure at first, that they will never see it," and then came this bold avowal that there really had been a defeat, of inconsiderable magnitude: "The party has been temporarily defeated, and the control of the next House seized by the Opposition; but the great measures which have been enacted, or are still before Congress, will inevitably promote the welfare of the country and make Republican success two years hence a certainty."

The course of no other Republican newspaper has been quite so cautious and diplomatic as that of the *Tribune*, possibly be cause few of them have editors in the diplomatic service. Nearly all of them attribute the defeat, which they unhesitatingly admit, to the "scare about prices." Some of them call it "working the tin-dinner-kettle racket," and all of them denounce it as a Democratic conspiracy of the lowest order.

It may be said, therefore, in view of all the explanations, that the Republican position after defeat is, first, that the party has been beaten because the wicked Democrats scared the country into a belief that the new tariff raised prices; and, second, that the defeat will not be lasting, because it will be seen very shortly that the new tariff does not raise prices, but does add greatly to the prosperity of the country. How does this agree with the position which Messrs. McKinley and Lodge took during the campaign, that the new tariff did raise prices, and for that reason was a cause for national rejoicing? It will be noticed that Mr. McKinley is abandoning this view somewhat now, and is laying stress upon the claim originally made by him that his bill adds a great many articles to the free list, and thus helps to make things cheaper. How can he point with pride to an enlarged free list after he has declared his belief that "cheap and nasty go together," that the "whole system of cheap things is a badge of poverty, for cheap merchandise means cheap men, and cheap men mean a cheap country"?

He must stand to his guns, and must maintain that the country will realize the full blessings of his bill when it shall have so forced up the price of everything that there will no longer be anything cheap to be bought. Then the people will realize how mean they were when they went about seeking "cheap merchandise," and will see that he only is a true patriot who never buys save at the highest possible price. Mr. Lodge will stand by him, for he is convinced that the "cry for cheapness is un-American." The country must be brought back to the Republican party by realizing its folly in getting scared at the prospect of high prices; it must be educated to the point of view that high prices are desirable, and that the whole civilized world, from the dawn of history down to the present time, has been insane in thinking they were not. Here is the mission of the Republican party, and it is one worthy of all its powers. On no other ground can the people be brought to a position to "uphold the brave application of protection principles" set forth in the McKinley Bill, for if that measure does not raise prices it is an abject failure, a false, lying, deceitful thing, designed to create a cheap and nasty country, filled with cheap men and women.

THE PENNSYLVANIA VICTORY.

No feature of the late elections is more encouraging than the defeat of Quay, through the rejection of his tool Delamater, in Pennsylvania. Full returns show that Pattison was elected Governor by more than 17,000 majority—and that, too, after allowing for thousands of fraudulent votes counted for Delamater in Philadelphia, where the Quay machine controlled the ballot-boxes.

Pennsylvania is the stronghold of the Republican party, and gave that party a majority of over 80,000 in the last Presidential election. It is a State where partisanship is always very strong, and where the independent voter has uncommon obstacles to overcome. Moreover, it is the commonwealth which has always been the chief beneficiary of the protective policy, and which was believed to have been bound to hearty support of that policy this year by the passage of the McKinley Bill. The Republican managers made every possible appeal to the partisanship and cupidity of the Republican voters. They induced all the leading Republicans of the nation, from Mr. Blaine down, to come out for Delamater and Quay, on the ground that, to use Mr. Blaine's words, "if they can to-day elect as Governor of Pennsylvania as ardent a free-trader as President Cleveland himself, there may be no balm in Gilead that can heal that wound"; and again, in Mr. Blaine's words, "to give you a warning that as Pennsylvania votes on next Tuesday the nation may vote two years hence." They sought to frighten unwilling Republicans into support of Quay by arousing fears that Pattison's success would threaten their very livelihood; that, in the language of the Philadelphia *Inquirer*, "if Robert E. Pattison is elected Governor of Pennsylvania, the fires in the furnaces may as well be drawn and the great manufacturing industries of Pennsylvania may as well close their doors."

Despite all these appeals and "scares," and despite the obvious frauds in Delamater's favor in Philadelphia, the Republican majority of over 80,000 in the election of 1888 has been wiped out, and there is nearly 20,000 majority on the other side. In other words, tens of thousands of Republicans refused to go to the polls at all when Quay sought a "vindication" through the election of a tool, while other tens of thou-

sands went to the polls and cast their ballots directly for the excellent candidate nominated by the Democrats. A more emphatic rebuke has never been administered to an insolent boss.

The most contemptible figure in this canvass has been cut by the Philadelphia *Press*, the leading Republican organ of the State. The *Press* was the first journal in America to tell the truth about Quay. In 1885, when he was seeking the nomination for State Treasurer, it hinted in plain terms at the gigantic thefts which it knew he had committed, and warned the Republicans that his candidacy would "take the lid from off the Treasury, and uncover secrets before which Republicans would stand dumb." Moreover, it knew the personal unworthiness of Quay's tool, Delamater, and told something of the truth about his dishonorable record before his nomination. Finally, it understood perfectly that Quay's forcing of the nomination of Delamater was as offensive an exhibition of bossism as was ever seen in our politics.

All of this the Philadelphia *Press* realized and confessed before the canvass opened. Now that all is over, it makes public proclamation of the fact that it knew all along what the issue really was, and which side every self-respecting Republican journal was bound to take. In a leading editorial article on Thursday morning, entitled "What the Verdict Means," the *Press* declares that "it has but one meaning, and the force of it is plain to all. It is a repetition of that revolution against personal and selfish domination of the party which eight years ago brought the party bosses to their senses and led to many desirable reforms in party methods." It says that a Republican Governor would have been elected by the usual Republican majority "could a Republican have been elected without committing the party still further to the undesirable methods of management which have put personal ends above party principle, and obstructed party sentiment with personal selfishness." It insists that the result "means that the sentiment of the party will prevail in its management, in the creation of its platforms, and the making of its nominations. It is an organization whose traditions and purposes will not permit it to be used for the selfish ends of political traders and bosses; and as in the past, so in the future, if occasion should arise, this lesson is very certain to be taught."

Every word of this is "true as preaching," but in what a disgraceful position does it, by its own confession, leave the *Press*. It knew that Delamater could not be elected "without committing the party still further to the undesirable methods of management which have put personal ends above party principle, and obstructed party sentiment with personal selfishness"—and yet it threw all its influence in favor of thus committing the party! It knew that the defeat of Delamater was essential in order to have "the sentiment of the party prevail in its management, in the creation of its platforms, and the making of its nominations"—and yet it threw all its influence against having the sentiment of the party thus prevail! It knew that "the traditions and purposes of the party will not permit it to be used for the selfish ends of political traders and bosses"—and yet it threw all its influence in favor of these political traders and bosses!

The weak victim of an infirm will who has earned the contempt of all who know him, sometimes confers a benefit on society by serving as a "horrible example." Henceforth, when American journalists wish to cite a "horrible example" of a newspaper's cringing servility to political bosses whom it understood and despised, they will recall the course of the Philadelphia *Press* during the political campaign of 1890.

AUSTRALIAN LABOR DIFFICULTIES.

SYDNEY, October 1, 1890.

THE strike of the laboring classes at present prevailing through all the Australasian colonies presents one feature never before seen in any contest between labor and capital in any part of the world. The workingmen do not ask higher wages or shorter hours. To comprehend their demands, one must understand something of the conditions under which they have been laboring.

Every class of labor has its union, with laws more rigidly enforced than the criminal code of any existing government. A member becomes a unionist first, a citizen afterwards. The immense power of these organizations over their members has but lately been strained to its fullest extent. One of the largest, but perhaps least successful, unions is that of the sheep-shearers, and though in reality the most directly concerned in the strike, it has been the last to cease work. The arbitrary character of its rules leads many sheep-owners to employ only shearers who are not members of the Union. The pay is the same, and the conditions probably quite as favorable to the men, as under the Union. The work is hard and remuneration high—one pound per 100 sheep shorn, whether by hand or by machine (a good man will easily despatch 120 to 150 sheep per day), lodging free, food at actual cost.

To compel all sheep-owners to employ only Union shearers was the open platform of all the labor organizations this year, and to that end the wharf-laborers had decided not to handle, or put on board any ship, a single bale of non-union shorn wool. The large wool firms and shipping agents promised their clients, the sheep-owners, that their wool should be shipped, however shorn. This was the real issue to be fought out, though not the immediate cause of the conflict.

A month before any wool had come down, the officers of the coasting steamers applied for higher pay. The owners were ready to consider their request and make substantial advances, but first required that the officers' union should not affiliate with any labor union, holding that the officers were their agents and representatives, and must be in no way connected with any organization of men whom they had to command. This the officers would not agree to, feeling that only by joining the labor unions could they coerce their employers into conceding what they deemed their rights. They therefore at once left their ships. Other officers, non-unionists, were engaged in their places, with the immediate result that all seamen, firemen, cooks, and stewards declined to work on any ship that carried "blackleg" officers. Complete non-union crews were engaged. The wharf laborers refused to handle cargo. Non-union men were engaged here too. Then acts of violence and intimidation began, and many of the new men were afraid to continue work, being practically coerced into joining the unions.

The most serious difficulty became the coal supply. Nearly all the coal used in the different colonies comes from the mines in Newcastle, N. S. W., and is carried thence by large steam colliers. The coal-miners had a most disastrous strike about two years ago, and then returned to work on a definite understanding that all future difficulties were to be referred to arbitration. When the first of the non-union steamers reached Newcastle, the miners refused to work if the coal they cut was to be supplied to her. The owners immediately closed all the mines. Military protection was required to secure the loading of the coal already at the wharves. When this arrived at Melbourne, the gas-stokers refused to use it, and all were discharged. For three nights the city was in darkness, then the supply was resumed with non-union men, who had to live inside the works to escape violence at the hands of the displaced unionists.

Owing to scarcity of coal, reduced timetables came into effect on the Government railways. Many factories had to be closed, as neither coal nor timber could be supplied, the Broker Hill silver mines had to be shut down and 10,000 men were rendered idle—all Unionists, with no possible interest in the matter at stake.

In spite of all these efforts of the labor unions, work was still going on; a few coast steamers were running, deep-sea ships were being loaded. Sydney had become the central battle-field, and there all the teamsters, in whatever employ, were coerced into ceasing from work. The owners of the produce arriving by the railways (and by this time wool was beginning to come down) themselves drove the carts through the streets, escorted by a guard of mounted troopers, special constables, and police, and accompanied by a hooting mob. Arrived at the wharves, stone-throwing began; the Riot Act was read, and a charge by the troopers dispersed the crowd. So far, this has been the only instance of violence on a large scale, though the delivery carts of many of the private firms, driven by non-unionists, had to be escorted by troopers on their rounds. Euchred again in their attempt to stop all commerce, the committee managing the strike decided to call out all the shearers. In the majority of cases this call has been obeyed, probably 20,000 men ceasing work, and a strange result follows. Those employers who had gone into the Union are the ones to suffer, while their neighbors, who had all along resisted the unions and employed non-union labor, will be as well off as ever. Their sheep will be shorn, their wool shipped, passing through non-union hands only. It will reach a market less well supplied than usual, and probably command an enhanced price for that very reason. In many districts shearing was just beginning, and as the men had signed formal agreements to do the work, legal prosecutions will naturally be undertaken. The loss to the sheep-owner is not merely a year's income: through going unshorn his sheep naturally deteriorate, and in many cases disease will follow at once.

Thus the laborers, or, rather, their leaders, seem to have struck their last blow. If this fails, as in all human probability it will, they have nothing further to try. From its beginning, all affairs relating to the strike have been managed by conferences of labor delegates, one or more from each union, forming

Trades-Hall Committees in each colony. From these, also, delegates have been sent to a central or intercolonial conference which is sitting in Sydney, and takes supreme control as a powerful upper house of the labor government. Shrewd, prosperous, intelligent men these delegates are—seldom mere demagogues; for the most part convinced of the justice of their cause, and ready to risk all they possess in the effort to raise the class they belong to; holding that the laborer is entitled to a larger share of the product of which his labor is an element; blinded to the importance of the element which capital contributes. Always on the side of law and order, they have done much to maintain order while so many idle men were in the streets, angered by seeing their places filled by others.

The power in the hands of these men has been enormous; what wonder if it turned their heads? They have gone much too far. With no just cause for the strike from the first, public opinion is not on their side. Their funds must soon be exhausted, for in their efforts to bring matters quickly to a crisis they have burned their ships, cut off their own supplies. By calling out every class of labor, they have left no one to contribute to the support of the non-workers. Strike-pay so far has been issued at 10s. to 30s. per man per week. Rich though the unions are, they cannot long stand this.

The strength of the unions lies in their organization more than in their numbers. When fear of violence is removed, it proves comparatively easy to fill the places of the strikers. Probably not more than one-quarter of all the workingmen in the colonies belong to unions, and fully an equivalent of this number can be found from those at times unemployed. To prevent non-unionists from working to secure the means of existence, barracks were opened and food and lodging provided for all who would ask for it. Soon all the miserable loafers of the community were living at the expense of the laboring classes. This scheme proved ineffectual, and was too costly to be continued. In Melbourne half a crown a day was paid any non-unionist who would agree not to work.

Seeing the great power arrayed against one class of employers of labor, other classes became alarmed. A union of employers resulted, far more universal than that of the laborers, and far stronger in that it can wait idle indefinitely, without fear of actual physical suffering. Already the workmen are beaten, but they are not likely to give in for some time yet. They are anxious for a conference with their employers. This the latter decline, saying there is nothing to confer about; the men made no demands that can be granted to insure a settlement. To meet them would be to yield the very point at issue, namely, an employer's right to hire or discharge whom he pleases. The employers are ready to take back their old men so far as possible at the same rates of pay as previously, but naturally must decline to discharge those who have come to their help when their old hands left them.

To forestall the sending of contributions from London in return for the heavy subscriptions sent from Australia to the London dock-laborers' strike (nearly £40,000), the employers have had published in the London dailies the rates of wages paid here. All are per day of eight hours. Sailors earn, including over-time, £10 per month; firemen £9, trimmers £7, cooks £10, stewards £9, all "found"; gas-stokers 70s. per week, wharf-laborers 10s. per day, with 50 per cent. advance for overtime; coal lumpers 2s. per hour, with 3s. for over-time, permanent employment. In Sydney there are many restaurants where excellent meals, including soup, roast, and pudding, can be had for 6d.; a good bed, 6d. Thus, one hour's work provides a coal-lumper with food and lodging such as his poorer brother in England never dreams of. In face of these facts it seems hardly likely that much money will come from the older countries to help the laborers here in their efforts to become even greater tyrants than in the past.

Two lessons are clearly pointed by this strike. Labor unions will pay no regard to the engagements they or their members may have made previously, if a strike is mooted—a perfidy they would be the first to complain of on the part of their employers. Shearers and coal-miners each completely broke faith. To have fair promise of success, a strike must not take in all classes of labor, nor as yet can combined labor hope to fight successfully capital combined against it. Doubtless the laborer has taught his master the lesson of combination, but it is one the latter is not likely to forget and is certain to improve on. Never has trades-unionism reached such a perfect stage as in Australia, and never has it, to all appearances, invited such a defeat as it is now likely to receive.

J. E. Bullard.

A SCOTTISH UNIVERSITY LECTURE-ROOM.

Edinburgh, October 24, 1890.

To one familiar with the decorousness of a Harvard class-room, a lecture in Edinburgh University is in strange contrast. It is the custom here for the professor to open his courses with an address apart from the subject of the immediate purpose of instruction, and intended, as it were, to give the collegiate constituency some taste of his quality, preparatory to the enrolment of his classes. I had to choose the other day between hearing Geikie, the well-known author of 'The Ice Age,' and Masson, perhaps even more famous as a Miltonian, for their addresses came at the same hour. I was sitting in the Librarian's office, where I could look across the stately courtyard of the University building to the door which led to Masson's room. As the hour approached, one of the uniformed servitors of the University stationed himself without the doorway, a sort of guardian of the precinct, and a few students had entered when I was prompted to join them. The room was the usual academic theatre, with a steep, uncomfortable, circular range of seats, in which I anticipated much discomfort for an hour, but the interest of the occasion made me forget it. The students trooped in rapidly, making a heavy tramp, with which those in the seats joined. Somebody whistled a tune, and in a moment the whole hall was whistling in unison. As some popular fellow came along he was perhaps chaffed above the tumult. Then the whistle-tune changed into another, and as the number increased, and the tramp of the heels redoubled, the whistlers heaved their breasts to rise above it.

The hall was now nearly filled, and the servitor stationed himself within the door, and pointed out the few remaining seats to the still insurging crowd. Presently the whistling and the thumps subsided before the rising cheers, for the students of the outer ranges had espied the Professor as he left his anteroom across the entry. The rugged, manly form of Prof. Masson, with his Oxford cap atop his close-cut silvery hair and beard, and blue-lined black gown, nearly filled the door as he entered. The redoubled cheers shook the roof as he walked slowly up the steps and along the platform. He laid his cap on the table, and, with his manuscript in hand, leaning across the little desk, his other arm buttressing himself from the table, he looked unemotionally into the room, while the cheers went on. There was the beginning of a lull, and a pretty general hiss tried to suppress the few remaining cheers, and had almost succeeded, when the cheerers rallied, and the unearthly noise swelled once more. At last Masson raised his hand—the signal was enough, and a solemn silence came rapidly over the benches.

"Gentlemen," said the lecturer in a tender, delicate voice, deepened at the same time with a slight Scotch broadness, and every ear was alert. He began by a reference to the loss which the University had sustained in the death during the vacation of Sellar, the eminent Latinist, and, after paying an emotional tribute to his friend, Prof. Masson passed on to the subject of his lecture. This was Scott's diary of his later years, whose publication is now impending, and which, during its passage through the press, had fallen under the scrutiny of the lecturer. Masson's manner is well calculated to elicit the responsiveness of the youthful nature. He gives the sure signs of his culminations, and forewarns his hearers. His gestures are few, and almost always a clinching of the fist to mate his energy, and the swing of it from the front behind. The outbursts of the students' applause, therefore, could be easily foreseen for a minute. When he referred to any blight upon Scott's happiness, the whole room seethed with a sort of wail of commiseration, amid which there was an accentuated *tut-tut-tut*. He referred to the common parallelism which was made in Scott's day between him and Shakspere; and when he cited from the unpublished diary Scott's own comment on this habit, "Shakspere—not fit to brush his brogues," the hall burst into a tumult of applause. The lecturer went on to discuss the fluent methods of Scott and Shakspere, and called them, though different in kind, the most remarkable in literary history; not (he added) that the habit of fluency and speed is safe for lesser writers, or for *you* (with emphasis)—and the students burst into a roar of laughter. It was interesting to remark how, after one of these outbursts, the audience to a man settled down at once into the closest attention.

The straightening of the lecturer's broad figure and the illumination of his face showed that the close was at hand; and as he finished with saying, that with all the difference of the two men, the Scot and the Englishman, and however inferior the modern was in many respects to the earlier, there was no impropriety in leaving in his hearers' mind the figure of the Scottish Shakspere in Walter Scott, a tumult of applause followed. The lecturer slowly placed his manuscript in his portfolio, took up his cap, and, bowing slowly, with but a slight inclination, turned to leave the platform. An eager student rushed for the door before him. "Shame! shame!" and a hurried hiss prevented others from following, and a still and deferential air settled upon the standing audience, as the Professor was allowed to lead the way out.

I stepped for a moment into his anteroom, and there I found him at a table, busily engaged registering the thronging students. It was no time for more than a word, and I left the place with the impression that though we may do this sort of thing with more outward decorum, many an American lecturer would fall behind the Scotchman in the heartiness of the sympathy which he establishes with his hearers. I chanced a day or two afterwards to

mention this scene to Sir William Muir, the chief of the University, and his head began to sway from side to side. "Tradition, tradition!" he muttered; "I wish it were otherwise." I find on further acquaintance that there is more or less repression exercised by some of the professors, but the younger classes are in the main irrepressible. Some of the professors are indifferent to it; others seem to like it. There can be little question, I think, that to lecturers of the emotional kind, who throw themselves feelingly into their subjects, this active responsiveness serves to better their performance. I never chanced to see anything like it in our leading colleges, though I believe that in the Law School of the University of Michigan the uproarious element is under very little restraint. It may obtain in some degree in the less known colleges; and indeed the seemliness of quiet attention was not always observed at Harvard forty years ago.

JUSTIN WINSOR.

Correspondence.

THE LOBBY IN MASSACHUSETTS.

TO THE EDITOR OF THE NATION:

SIR: While the tariff is the absorbing feature in the political campaign, a tempest has also broken out in this State on the subject of the lobby. Hon. William E. Russell, the candidate of the Democrats, has forced the fighting, Gov. Brackett has been compelled to take up the issue, and two members of the Legislature, a Republican and a Democrat, have joined in the fiercest denunciation of the "third house." As this may be the first gun in the conflict with an enemy who has taken possession of the whole country, and will require a tremendous struggle before he can be dislodged, it may be worth while to consider some features of the situation. Of course the lobby is the same in Washington, in every State, and in every city hall in the United States; but as it has, I believe, first had in Massachusetts the honor of a special investigating committee and a report of the same, and as it is there that the first note of resistance has been sounded—a far-off echo of Lexington and Bunker Hill, and in a no less important cause—it may be best to place the local specimen of the *genus* under the microscope.

In doing this we must first examine the organization of the State Government. When the Legislature assembles, the House consists of 240 members, of whom the majority come there for the first time and very few have been there for more than one previous session. They are for the most part strangers to each other, ignorant of the forms and history of parliamentary business and of the affairs of the State, suspicious and liable to panic—in short, just in a condition to fall a prey to cunning manipulators. The first thing which this incoherent mass of units has to do is to elect a Speaker, the most powerful man in the Government, because he has the power of appointment of the standing committees which control all business. The career of Mr. Thomas B. Reed of Washington shows what the office may be made. The Speaker knows as little of the members as they know of him, and the natural course is to give the best places to those who have secured his election. Here the lobby steps in at once. If it can get a Speaker elected, it can get such committees as it wants. If it can get such committees, the game is in its hands.

The standing committees are now appointed and the work begins. Observe that not one single item of business has been got ready for the Legislature, so that the whole body has to sit idle for six weeks to two months (awaiting the proverbial tactics of Satan), while the committees are preparing some business for it. Every kind of measure on any subject, which any member may wish to introduce for himself or his friends, from the most important business of the State to the application of an individual for a change of name—all are sent to the committees without distinction and without precedence. Bills are piled up by hundreds and thousands, and the committees fairly stagger under the rush of people wanting to be heard. Around them has grown up a class of men, largely past members and Senators, who are not new or inexperienced in the business. The greater the confusion and turmoil of business, the greater their opportunity. They make it a point to acquaint themselves with every member, his proclivities and his weaknesses. They play into each other's hands. Not only is it their profession to promote legislation of the kind which is paid for, but to block legislation of any kind unless the parties seeking it employ and pay for their services; and they laugh at any unsophisticated person who imagines that he can get through any bill, even of purely public interest, without their help.

Their efforts are powerfully seconded by another circumstance: the State of Massachusetts is absolutely unrepresented in the Legislature. Neither the Governor nor any State official ever has any voice there as to policy or legislation. Whatever is done is the result of a struggle as to what interest or measure shall secure the greatest number of votes. There is no official leader, speaking on behalf of the State, around whom independent members can rally. When the reports of the committees come tumbling in at the end of the session, there is no State authority to guard the public interest. The lobby has only to work up one after another the local members, who have no direct interest and no authority at all to undertake the defence of the State.

What is the executive branch of the Government doing all this time? It is difficult to imagine a more false position than that of the Governor. The candidates are supposed to be nominated by two conventions of something like one thousand members each, but in reality are so by a small knot of politicians, who might just as well do it without troubling the convention to assemble. The candidates are called a Democrat and a Republican—names which have about as much meaning as the "greens" and the "blues" in the faction fights at Constantinople when the Eastern Empire was tottering to its fall; but the people have no choice except between these two. After election, unless the Governor chooses to join in a game of intrigue with the lobby, he remains a complete figurehead. He has no voice as to policy or legislation. He can send messages to the Legislature, but they are sent to the standing committees, and receive no more attention than the proposals of any member or even of any average citizen. He has the veto power, but it is as absurd as it would be in the hands of the general of an army who had a veto on tactics of the line officers. What sort of a government is that which has no power to say what shall be, but only what shall not be, done?

If the Governor has no control over policy, he has also none over administration. The chief officers of the State are all elected separately, and are wholly independent of him and of each other. As administration under such circumstances is impossible, the Legislature has set up a number of commissions, which are the real Executive of the State. They never come in contact with the Legislature, can never enforce or even urge a policy, they receive little or no pay, and their doings are shrouded in complete secrecy, except as to what they choose to tell. Impotence in the Executive, anarchy in the Legislature, and no responsibility anywhere—these are the ideal conditions for the development of the lobby.

The immediate cause of the present outbreak is as follows: There came before the Legislature last winter a number of petitions for a charter for an elevated railroad. That of the West End Company, the most powerful of the applicants, was progressing under full sail when Mr. Williams, member of the House from Dedham, charged that it was being carried by bribery on the part of the lobby. Both houses appointed committees of investigation, which were not very anxious to discover anything. The West End Company admitted that they employed the lobby, since that was the only way to get anything done. If it was a bad way, the Legislature ought to provide a better; but as it was, they must use what methods were before them. The report of the investigating committees said substantially the same thing. The West End Bill passed both houses and the Governor signed it. At the same time was rushed through both houses an act requiring all persons employing agents to procure legislation to register their names, to render a sworn account of expenses incurred thereby, and not to make payment dependent upon the legislation obtained—an act which will be about as effective for its purpose as would be an act forbidding men and women to marry.

As the campaign waxes warm, more and more light of a very curious kind is thrown upon the internal working of the lobby. While all the speakers join in denouncing and trying more or less to make party capital out of it, no one of them seems even remotely to suggest any practical remedy. If the causes are in the conditions I have indicated, relief must be sought in reversing those conditions by giving greater and more concentrated power to the Executive, introducing more of order and system into the Legislature, and enforcing more direct and individual responsibility in both. Without, however, dwelling upon that now, I have thought the incidents worth recounting as touching a matter of the deepest importance if not interest to the whole country, and which may occupy a large place in its future history.

G. B.

BOSTON, November 1, 1890.

A SLIP CORRECTED.

TO THE EDITOR OF THE NATION:

SIR: Allow me to correct a serious arithmetical error in your comments on the census of the population in the current number of the *Nation*. A "gain of 59.51 per cent. for twenty years" is obviously not "at the rate of 29.75 per cent. in ten years," as you have it. In fact, a gain of only 26.30 per cent. per decade produces a gain of 59.51 in two decades. This correction very greatly reduces the discrepancy you point out between the average rate of increase in the two decades 1860–'80, and the rate of increase shown by Mr. Porter's figures for the decade 1880–'90.

Of course, this correction leaves quite unaffected the strong points you make against the result, resting on the checks to the natural growth of population, and still more to immigration, caused by the war and by the long period of industrial depression following the

panic of 1873; checks which have had nothing corresponding to them in the decade just closed.

Yours very respectfully, F.

BALTIMORE, November 9, 1890.

Notes.

B. WESTERMANN & Co. will publish immediately Part i. of Volume ii. of Karl Brugmann's 'Elements of a Comparative Grammar of the Indo-Germanic Languages,' treating of wood-formation, root-formation, and inflection, with additions by the author since the German edition appeared, and with elucidations from the Anglo-Saxon contributed by the translator, Dr. Conway, of Cambridge, England.

The Seeger & Guernsey Co. of this city have in press a Spanish edition of their 'Cyclopædia of the Manufactures and Products of the United States,' for circulation in Mexico, Central and South America.

Worthington Co. have nearly ready 'A Boy's History of the United States'; and 'A Sister's Love,' from the German of W. Heimburg, by Margaret P. Waterman.

Chatto & Windus in London and the United States Book Co. in this country will bring out Mr. Moncure D. Conway's editing of Washington's "Rules of Civility," concerning which he has already written in these columns.

For the forthcoming volume on the Centennial Celebration of Washington's Inauguration (1789–1889), Mr. Clarence W. Bowen, Secretary of the Committees on the Celebration, desires information respecting portraits of the following members of the first Congress under the Constitution. Mr. Bowen's address is No. 251 Broadway, New York:

Theodore Bloodworth, North Carolina; Benjamin Bourne, Rhode Island; Jonathan Elmer, New Jersey; Theodore Foster, Rhode Island; George Gale, Maryland; Benjamin Goodhue, Massachusetts; William Grayson, Virginia; Samuel Griffin, Virginia; Jonathan Grout, Massachusetts; Thomas Hartley, Pennsylvania; John Hathorn, New York; Daniel Heister, Pennsylvania; John Henry, Maryland; Samuel Johnston, North Carolina; George Leonard, Massachusetts; George Mathews, Georgia; Andrew Moore, Virginia; Josiah Parker, Massachusetts; Thomas Scott, Pennsylvania; George Partridge, Massachusetts; John Steele, North Carolina; Joseph Stanton, jr., Rhode Island; Michael Genifer Stone, Maryland; Jonathan Sturges, Connecticut; John Walker, Virginia; Alexander White, Virginia; Paine Wingate, New Hampshire.

The Leonard Scott Publication Co., New York, add henceforth to the eight original editions of English periodicals which they supply to their subscribers, *Blackwood's Magazine*, by arrangement with the Edinburgh publishers.

A welcome awaits the new one-volume edition of the 'Poetical Works of Matthew Arnold,' just published by Macmillan & Co. in a style uniform with their one-volume Wordsworth. As the print is admirably large and the paper solid, a certain bulkiness could not well be avoided, and the poems fill 500 pages. A steel portrait of Arnold is prefixed, and his own notes are placed at the end. Doubtless, in time we shall have notes by another hand, and then we may hope to have the dates of the several pieces determined. This is often of no little consequence, and always of interest. Here and there in this edition the year is either given or inferrible.

Paul Hervieu's 'Flirt,' translated by Hugh Craig, as published by Worthington Co. in a handsome quarto volume, is embellished with numerous illustrations by Mme. Madeleine Lemaire. Her graceful designs partly mask, and also, it must be said, partly reinforce, this disagreeable story, on which a woman's art ought not to have been expended.

Possession without ownership may be exemplified for the thousandth time by any one who will purchase 'The Christmas Carol' of Dickens (New York: Brentano's). This edition, a fine quarto, reproduces in facsimile the novelist's original MS. of his world-famous story, for which MS. $1,500 was paid on its last change of ownership. The public of 500 admitted to share in the facsimile (250 copies being reserved for America) is all but as well off as the present owner of the MS., so far as the mere aspect of the handwriting is concerned, and better off by virtue of having the whole history of the 'Carol' interestingly related, in connection with the facsimile, by Mr. F. G. Kitton. Both Leech and Linton were associated with the first edition of 1843. The proceeds of it disappointed Dickens, but the popular favor continued, and the latest cheap edition has sold enormously at a penny. Dickens's "copy" is furiously rewritten and interlined.

'The Song of the Passaic,' by John Alleyne Macnab (New York: Walbridge & Co.), is a sincere tribute, in correct and respectable verse, to the chief river which heads in New Jersey, and whose meanderings bespeak the geological revolutions of the tract through which it wanders. The author justifies his love and praise of the stream by well-chosen photographic views, and has supplied a map of its course and tributaries, with statistics of elevation, besides a formal description and sundry useful notes to his own verse. The little book recommends itself to all who know the manifold loveliness of the Passaic watershed.

Mr. H. E. Krehbiel has now issued five volumes of his useful 'Review of the New York Musical Season,' containing the full programmes of all important entertainments, together with selections from the author's criticisms in the *Tribune*; and the success has been sufficient to warrant their continuance (Novello, Ewer & Co.). The issue for 1889–90 contains lengthy articles on "Parsifal," "The Flying Dutchman," "The Barber of Bagdad," "Don Juan," etc. The essay on "Don Juan" embodies some original matter relating to the American career of the librettist Da Ponte, the value of which has been recognized abroad. A novel feature is a list of choral works performed in forty American cities during the past season, and in connection therewith Mr. Krehbiel's article on "American Conductors and Choral Societies" is reprinted from *Harper's Weekly*. One of the most interesting chapters in the book is, as usual, the retrospect of the opera and concert season. The statistics provided show that Wagner maintained his superior popularity over other composers, the average receipts on Wagner nights being $3,582, as against $3,056 on non-Wagnerian nights. Speaking of the Patti performances, Mr. Krehbiel says: "The audiences were largely composed of curiosity-seekers, impelled by the desire to be able to say in the future that they, too, had heard the greatest songstress of the last generation of the nineteenth century. Considerable as the receipts were from the Patti representations, it is scarcely open to question that they were nearly or quite devoured by the 'off nights,' which were wofully neglected by the public (I was told on good authority that when Mme. Albani sang in 'Rigoletto' only $150 was taken in at the box-office), notwithstanding that, aside from the singing of Mme. Patti, they were far and away the most interesting and delightful entertainments of the season."

Among the large number of new books on musical topics which have lately been put into the market, none deserves a more cordial welcome than Mr. L. C. Elson's 'Theory of Music as Applied to the Teaching and Practice of Voice and Instruments' (Boston: New England Conservatory of Music). The first thirty pages are devoted to a condensed but remarkably clear summary of the principal phenomena of musical acoustics. Then follow fifty pages on the compass and functions of all the important musical instruments, with many interesting side-lights on the peculiar use made by great composers of certain orchestral combinations for producing definite emotional results; and the rest of the book is devoted to an elucidation of musical notation, the various forms of composition, etc. Mr. Elson is often very happy in his definitions, as in the following: "Counterpoint is the support of melody by *melody*, while harmony is the support of melody by *chords*." The concluding chapter contains some useful hints to musical students, *à la* Schumann; and on the subject of woman in music the author has this to say: "We have spoken of the musician throughout this book in the masculine gender; there have as yet been no leaders in the musical field among women. The chief cause of this may have been that they have studied music too entirely with the intention of *pleasing*, merely."

Mr. Frederick J. Crowest's 'Musical Groundwork' (F. Warne & Co.) is a book of about the same scope as Mr. Elson's, and it is well written and interesting, although a beginner will hardly find it as clear and logical as Mr. Elson's treatise. More attention is paid by Mr. Crowest to the historic side of the various musical topics, and the book in fact begins with a brief chapter on ancient music. His remarks on instrumentation and musical forms are too brief to serve as a useful guide. On p. 174 the misleading statement is made that "all ancient music appears to have been an unwritten art," whereas Mr. Crowest surely must know that the Greeks had two kinds of notation, one for vocal and one for instrumental music. But the chief fault of the book is that, like most English works on music, it treats the art as if everything of interest to be said about it came to an end with Beethoven and the period immediately following him. Thus, there is a special chapter of ten pages on "Progress of Orchestration," in which Berlioz, Wagner, and Liszt are not even named! Then there are four pages on the Symphony, while the symphonic poem, the most important orchestral form of our period, is entirely ignored. On page 230 occurs this extraordinary sentence: "Among modern *German* musicians, the most notable are Wagner, *Rubinstein*, *Liszt*, *Gade*, Brahms, Raff, and Joachim." The italics are ours. Has Mr. Crowest ever heard of Robert Franz, generally regarded as one of the three greatest song-composers the world has ever seen?

The involved character of the game and fish laws of the various States and of the Dominion of Canada is a source of vexation to those whose function it is to consult them frequently. Until the appearance of the comprehensive compilation called 'Book of the Game Laws' (Forest and Stream Publishing Co.), it has been necessary to be equipped with a large number of distinct volumes. It is proposed to issue in connection with this brochure, which will be published annually, three supplements, which will contain any changes in the laws that may occur during the year. The book contains the fish and game statutes of every State and Territory of the Union, where such are in force, and of the Dominion of Canada.

The first calendar for 1891 to reach us is the Whist Calendar (Boston: W. B. Clarke & Co.), compiled by Robert Fuller. It consists of the customary ornamental backing, with a pad for the several days of the year. The selections are all pertinent to the game, and mostly from well-known writers upon it, but occasionally the Scripture, Marcus Aurelius, or Shakspere is levied upon with good effect.

The October *Bulletin* of the Boston Public Library contains a list by centuries of the purchases made for that institution at the sale of the Barlow Library last February, beginning with the great prize which caused so much discussion, the Latin edition of Columbus's letter to Raphael Sanchez announcing his discovery of the New World "supra Gangem" (1493). This eight-page letter is reproduced at the end of the *Bulletin* by the heliotype process, accompanied by Major's translation.

In the *Bollettino* of the Central National Library at Florence of October 15, mention is made of a new 'Guida della Stampa Periodica Italiana,' by Nicola Bernardini, to which Prof. Bonghi furnishes an introduction. The work embraces the journalism of the peninsula, past and present, the press legislation, the features of provincial journalism, and Italian papers published in foreign parts.

We learn from Dr. Murray that reading may yet be done on this side of the water for the Philological Society's 'New English Dictionary,' of which he is the controlling spirit. He instances Fynes Moryson's 'Description of Ireland' which we lately cited in Prof. Morley's reprint in the "Carisbrooke Library." He adds that his monumental enterprise is hampered by the want of funds to buy books to be read for quotation. It would be honor cheaply earned for some wealthy American to bestow $500 or $1,000 annually by way of endowment for this purpose.

Mr. H. H. Johnston, the well-known African traveller, has contributed to the London *Graphic* two illustrated articles on "Nyasaland," which have some points of peculiar interest. He draws a charming picture of Blantyre, the home of the Scotch missionaries in the Shiré Highlands. A part of the elevated plateau between the two lakes, now nearly depopulated by the native wars, he regards as well adapted to European colonization. It is an "African Devonshire, with its red soil, its rounded hills, covered with short green turf, its many rills and rivulets," the only un-English sight being the banana groves. "At night the temperature is cool and crisp; even during the day the heat of the sun is only that of an English summer." Mr. Johnston's account of the East African Arab is especially noteworthy, as being contrary to the general impression that he is always a slave-trader, and chiefly responsible for the decimation of central Africa. He believes that though the most of them buy slaves from the negro raiders, the Masai or the Angoni, for instance, they would cease to do so if a legitimate commerce was opened to them. In fact, they would readily join the European in subduing and taming the savages whose raids are the cause of most of the misery and bloodshed in Africa. Mr. Johnston characterizes them as an "eminently sober people, industrious, enterprising, and in many respects not unreasonable," who as colonists and soldiers may prove very useful allies in the development of the Continent.

The *Bulletin* of the Société de Géographie contains an article by M. E. Blanc, which is important as indicating the policy of France with relation to the Sudan. A detailed description of the great commercial routes from the Mediterranean to the south is preceded by a short account of the physical difficulties to be surmounted by the caravans. The only parts of the desert which are practically impassable are the great plateaus or hamadas. These are elevated plains covered with hard, angular stones, apparently of the same size, and forming a bed generally as thick as the diameter of a single stone. These curious formations, resulting entirely from the action of the wind, as he claims to have proved from actual experiment, are the only parts of the Sahara absolutely without water. From M. Blanc's description, aided by an outline route map, it is evident that both Algeria and Tunis have very few ways of reaching the south, while both Morocco and Tripoli are well provided with them. The French possessions are practically cut off from the south, partly by the nature of the desert on their frontier, and partly from the fact that all the natural routes beyond these frontiers are in the hands of the Moors and Tripolitan Turks, or of natives hostile to the French interests. Within the past twenty years Turkey has consolidated its power in Tripoli and extended the limits of the province far to the west. In this way it has absorbed the whole of the "Hinterland" of Tunis, and thereby diverted all its trans-Saharan trade to Tripoli, where three or four caravans, numbering sometimes 2,000 persons, arrive every year, besides smaller fortnightly caravans coming from a less distance. While disclaiming any intention on the part of France to possess itself of Tripoli, M. Blanc protests against this extension of her frontiers, and asserts that the two important points of Rhadames and Rhat, lying to the south of Tunis, and now garrisoned by Turks, France must and will have in order to sustain commercial relations with the Sudan. But it is inconceivable that any appreciable amount of trade from the rich Mohammedan kingdoms of the central Sudan, except that in slaves, which now constitutes practically the whole of the traffic between the Sudan and Morocco and Tripoli, would cross the desert in preference to seeking the vastly nearer route by the River Niger; and the most important of these kingdoms have lately concluded treaties with the Royal Niger Company for a monopoly of trade.

— The new Library edition of 'Milton's Poetical Works' (Macmillan), by Prof. Masson, in three beautifully printed octavo volumes, contains some new matter, and exhibits some changes in arrangement. The poems are printed in chronological order for the first time; a memoir is introduced, admirably adapted to its purpose; the minor introductions are revised, and a short paper on Milton's handwriting is added. The most important change is the insertion, in the introduction to 'Paradise Lost,' of a full discussion of the indebtedness of the poet to previous writers upon the same or allied subjects, and in particular to Vondel. We reviewed the question in our notice of Mr. Edmundson's monograph on Milton and Vondel at the time of its appearance, and Prof. Masson's searching examination of the alleged parallelisms can only strengthen the opinion then expressed. He does not find any evidence of Milton's direct borrowing, nor any proof that the poet had read Vondel; but, in deference, apparently, to Mr. Gosse's opinion, he will only admit at worst that Milton had read the Dutch author, and that some echoes remained in his memory. He quotes, however, in a foot-note, Vondel's latest editor, Van Lennep, who says that he does not regard Milton's acquaintance with Vondel or his tragedy as proved. In our own judgment, Prof. Masson has gone further than he had any editorial warrant, in acknowledging the very slight obligation of a vague remembrance of Vondel by Milton as at all likely. The futility of the hope of editorial exhaustiveness is illustrated by the fact that this discussion of Milton's sources takes no account of the latest "precursor" of the poet, Avitus, whose claim probably had not been heard of when the essay was written. Prof. Masson adds also a translation of the Latin poems, meant to show their rhythm and substance, but not pretending to poetical excellence. Such a version is useful to the unlearned student, but it very faintly represents the beauty and grace of these poems. The notes are sufficient, and have been well-restrained within practicable limits. They are most full on geographical points; if more space could have been afforded anywhere, it would have been most welcome in the citation of the classical sources, where Milton's obligation is direct. Here the editor, we think, might have allowed himself more latitude. The description of the youths in 'Comus,' 291-302, for example, justifies a reference to Euripides's "Iphigeneia in Tauris," 267, *et seq.* In such matters, however, scholarship may indulge its own tastes too much. The edition is a very admirable one, and is much perfected by its revision. It takes rank in accuracy and care with the unsparing labor of the editors of Shakspere.

—It is a wonderful sort of enlightenment that one occasionally derives from popular purveyors of the *omne scibile*. For instance, in the 'Dictionary of Phrase and Fable,' by the Rev. E. Cobham Brewer, LL.D., we read, under the title "Juggernaut," of "King Ayeen Akbery"; the 'Â'în-i-akbarí,' or 'Institutes of Akbar,' a work of the celebrated historian Abulfazl, being thus hominified and accorded royal rank. Again, in the anonymous 'Dictionary of Every-day Difficulties,' published by Ward, Lock & Co., for which we are assured that "the best authorities have been consulted," the account given of Brahmans is a gem of the first water. "They take their title," we are told, "from Abraham, whom they called Brahma, and affected to imitate the life of the patriarch by living in deserts." To return to Dr. Brewer: according to him, the Brahmans "claim Brahma as the founder of their religious system," and a Brahman is "a worshipper of Brahma"—statements which the veriest smatterer in Hinduism, as set forth by writers of any credit, knows to be mere moonshine. Far from the least of the evils inseparable from the cheap multiplication of books is the spawning, by sciolists, of manuals professing to impart miscellaneous information. That, as a general rule, these artists produce no vouchers for what they advance is, of itself, a pretty evident proof that, provided it hits their fancy, whatever they have read, or otherwise picked up, if not, in their estimation, authentic, is, at any rate, considered by them as quite good enough to offer as fact to those who resort to their pages for instruction.

—We have once or twice heretofore made reference to a society formed a few years ago in England called the Association for the Improvement of Geometrical Teaching. It was a kind of organized rebellion against the tyranny of Euclid, who, from the revival of learning down to the middle of the present century, had reigned supreme in all English schools. This heretical conspiracy, which included some of the ablest mathematical teachers in England, originated in the conviction that the human race had made some progress, not only in the dis-

covery of new geometrical truths, but also in the methods of teaching and in the construction of text-books, since the days of the Greek geometers. The Society first published a 'Syllabus of Plane Geometry,' which it afterwards expanded into a complete text-book covering the same ground as the first six books of Euclid's 'Elements.' To what extent this has been adopted in English schools we are not informed. That the Society has been in some measure successful may, however, be inferred from the fact that it is now extending its sphere of operations beyond the limits of pure geometry. Its last publication is a 'Syllabus of Elementary Dynamics,' Part I., treating of Linear Dynamics, with an appendix on the meaning of the symbols in physical equations. It is a small 4to of 39 pages, divided into chapters and sections, and containing the definitions and propositions of a regular text-book, and a designation of the places where explanations, illustrations, examples, and exercises should be inserted.

—The manner in which this syllabus was prepared will serve as a specimen of the method adopted by the Society in the construction of its publications. The Syllabus was first drawn up by Mr. R. B. Hayward, M.A., F.R.S., late President of the Association, formerly Fellow of St. John's College, Cambridge, and now the Senior Mathematical Master of Harrow School. He submitted it to the members of the Association, and it was referred to a Committee, who, after due examination, reported it in what they considered the most satisfactory shape. Next it was discussed in full session by the Association, and finally adopted and ordered to be published as an authoritative exposition of the views of the Association as to what should be the form and substance of a text-book on 'Linear Dynamics.' Our readers will at once see the complete analogy of this process to the course of a bill in a legislative body from its introduction to its final enactment. We are not yet prepared to form an opinion as to how far this method of constructing a text-book will prove satisfactory and therefore successful. Mr. Hayward also prepared and submitted to a committee of the Association a 'Syllabus of Solid Geometry,' which met with their approval. Instead, however, of seeking what might be called its "passage" by the Association, Mr. Hayward preferred to develop out of it and publish on his own responsibility a regular treatise on 'Elementary Solid Geometry' (Macmillan). Heretofore nearly all the English schools have contented themselves with the first twenty-two propositions of the eleventh book of Euclid. Mr. Hayward's book is a 12mo of 130 pages, and is much more in accordance with modern modes of thought and methods of teaching than the portion of Euclid hitherto used. The first chapter, written rather for teachers than pupils, will prove of interest to advanced mathematicians, as will also the appendix to section v, "On Symmetry in a Plane and in Space."

—The *Levant Herald* of September 22 quotes a curious letter from Bjelina, in Bosnia, which discloses a state of things among the Bosniaks that recalls some of the old stories we used to hear about China. It appears that numbers of Bosniaks had recently applied to the authorities for permission to be beheaded in the place of Baron de Rothschild. The authorities at once set themselves to investigate the matter, and found that a rumor had been spread abroad among the rural population that Baron Rothschild had been sentenced to death for some crime or other, and that he would pay a million florins to any one who would become his substitute and undergo the penalty for him. Clubs were speedily formed among the peasants who desired to share the million, and each member bound himself to sacrifice his life for the benefit of his fellow-members if he should draw the fatal lot that designated one of the club as the victim. The money, of course, was to be divided among the rest as a prize. In this manner several substitutes for the Baron were provided, and they offered themselves to the authorities ready to fulfil their bargain to the last. No explanations were sufficient to convince them that the story was a hoax, and at last accounts new postulants for decapitation were still coming in, and still going away grieved and unhappy in their disappointment.

—The *Temps* of October 5 had something to say upon a question which has lately been touched in our columns—the lack of originality in the architecture of the present century. Laymen attribute it, the *Temps* says, to a lack of genius in the architects; architects, to the crude ideas of their clients, which are imposed upon them in a way that deprives them of all initiative. This last assertion may be held to have less weight when it is remembered that the French Government gives its architects much liberty of design in the construction of public buildings, and yet does not get markedly better work from them than individuals do. At any rate, both private and public buildings often show *banalité* even when they escape ugliness. The Exposition of 1889, notoriously, has given hope to some by attracting attention to the use of iron as a material. The group of architects who, under the direction of M. de Baudot, "keep up in the *Encyclopédie d'Architecture* the traditions of free research and independence of Viollet-le-Duc," are convinced that in this way distinction lies, and they have sent out an appeal to all French architects, and invited them to a free competition. Designs for buildings of any sort whatsoever, and of any material whatsoever, are asked for. Architects are to be constrained by no considerations but those of art, and may go wherever fancy leads the way. The jury is made up with a perfect eclecticism. All the designs are to be sent in before November 15; and when they are exposed, there will, no doubt, be an exhibition worth seeing for many reasons. One would say that whatever qualities it lacks, it is sure to have one which possibly its projectors did not most ardently seek: it is sure to be very *fin de siècle*.

A RUSSIAN TRACT.

Labor. By Count Lyof Tolstoi. Translated by Mary Cruger. Chicago: Laird & Lee; and New York: The Pollard Publishing Co.

Toil. By Count Leo Tolstoi and Timothy Bondareff. Translated by James F. Alvord. Chicago: Charles H. Sergel & Co.

THERE is very little choice between the above three editions of the work under review. The translations were made from the same French original. Miss Cruger's is the more easily read, the more flowing. Mr. Alvord's is angular, awkward, and inelegant, but keeps closer to the text, and retains phrases which Miss Cruger has omitted. Mr. Alvord's translation is also to be commended because, although, like the others, his wrongly bears Count Tolstoi's name before Bondareff's, it omits from both cover and title-page the false statement that the book has been or is "suppressed" or "interdicted by the Czar of Russia." The admission in the French translator's preface that the tract was printed in the journal *Russian Wealth* settles that question. The manner in which Count Tolstoi's name and this false statement are employed upon the covers and title-pages furnishes sufficient proof of the factors which were relied upon for success in the light of recent experience. Assuredly, nothing short of the factitious interest which at present attaches to the name of Tolstoi could ever have forced into print these utterly incoherent ravings of an uneducated, uninspired peasant. Count Tolstoi is in no sense the author. He has corrected the peasant Bondareff's orthography, and written a short explanatory preface, while the French translator devotes about the same amount of space to eulogy of the peasant's "simplicity" and "profundity," and to an elucidation of this simplicity in the peasant and in Tolstoi.

The doctrines of love, brotherhood, and the dignity of labor have been inculcated constantly since the opening of the Christian era. They have been admitted, in theory at least, by nearly every one who has meditated upon the subject. Count Tolstoi has been ripening towards them all his life; and such preaching is, moreover, his special inheritance as a Russian. At the fateful moment, he made the acquaintance of the sectary Sutaeff and of the peasant Bondareff. The three met at the cross-roads of theory and practice. In the argumentative works which Tolstoi has written since that time, he both claims that he is himself the discoverer of the hitherto unknown road to salvation, and confesses his obligations to his humble teachers. Hence there is nothing new in his remarks, and the sole interest lies in the date appended—that of March, 1888. As Tolstoi has already, in a later work, announced his change of belief as to woman's mission, one half of the immutable Scripture decrees, as interpreted by Bondareff and himself, is annulled. The other half may have been also abrogated in the same easy, infallible manner ere this. The reader cannot be blamed if he bears this fact in mind during his attempts to reconcile Bondareff's lucidity and profundity with prevalent standards, and to comprehend Tolstoi's statement that he has banished all repetitions and digressions to the appendix.

When one reads the dictum, "Labor for bread restores intelligence to those who have lost it," he will probably query a moment why Count Tolstoi himself wrote his best things before he labored with his hands instead of since. When he reads that Bondareff's words "are as obligatory to the believer in the Old Testament as to him who accepts the Gospel, to the man who rejects Scripture and relies on his own reason as to him who comprehends the truth of the doctrine," and reflects that these words inculcate the "labor for bread"—*i. e.*, raising grain solely—the reader is struck dumb with amazement. We may excuse the ignorant peasant, but can hardly excuse the educated noble, for not taking into consideration the inhabitants of the Arctic regions of dense forests and of deserts, where neither the thirty to forty days' labor which he pronounces sufficient (nor any other amount of time) would raise a crop. He should have explained that the forty days cover the peasant's period of work—haying, harvesting, ploughing, and sowing—in Russia. He should have prescribed rye as the grain to be sown, and sour black bread as the divinely instituted medium of salvation. The inevitable cucumber, fresh in summer, salted in winter, is also most unaccountably omitted.

But we must turn to Bondareff. Passing over the question as to how he came to be in Siberia, one may inquire: If he allows himself

to be the righteous possessor of a small cottage and a bit of ground, as the result of forty days' work per annum, why does not he accord to others who are willing to take only eighty festival days' rest, and work 285 days a year, the right to own a larger house and more land? Surely, if labor constitutes salvation, the more labor the more salvation. Or should a Protestant, who may toil on Sundays also, and observe imperfectly only the four or five legal holidays imposed by the tyrannical American Government (all governments being tyrannical according to this theory), be forced to content himself with Bondareff's cot and plot? He lays great stress upon the fact that his text, "In the sweat of thy face shalt thou knead bread," occurs in the beginning of the Bible. Certainly, every one who is familiar with the peculiar reasoning of "inspired" ignoramuses will agree that it could not have occupied a more dangerous and inflammatory position—unless it had been at the other end of the Bible, in the Apocalypse, which also affords exceptionally fine opportunities for miscellaneous raving. If there be any force in this argument, everything between Genesis and Revelation may safely be disregarded. But what becomes of the permission accorded to Adam, in a still earlier verse, to eat freely of all things which had grown without the bestowal of labor?

Bondareff says that labor is perfect joy. But his rallings at the rich, his demands to have restored to him his "stolen fortune" (his 11,500 rubles for twenty-three years' labor), his confessions of envy and hatred, lead one to the conviction that he would jump at a chance to renounce this joy and the salvation which, like all fanatics of his class, he is positive that he has secured, and embrace the vileness of wealth, like other preachers of labor and poverty before him. "Man is a hypocrite," he cries. "I now hate all men, and that is why I will not have them touch my coffin after my death." He declares that if a poor man sins, it is because he has shirked this *divinely* imposed toil; and he furnishes the corollary: "But educated and intelligent people avoid this labor. . . . *They* have *imposed*" (the italics are ours) "all labor upon the poor and weak, but these, in retaliation, do not sleep or lose their presence of mind: they steal, kill, burn, and defraud each other." Very true. And the moral?

After insisting that no one shall do anything but raise bread crops, and that nothing shall ever be sold or bartered, which evidently debars him from purchasing the fruits of unhallowed labor, he says: "The merchants raise the prices of their merchandise, and so make us pay the amount of the taxes"! He also forgets that no one forces the peasants to sell their surplus grain to the rich and so furnish the latter with a weapon of "oppression." His manner of suggesting that "the poor martyrs, laborers, should be delivered from a wearisome labor," does not seem to indicate profound faith in the joy or sanctity of Adam's curse. And he more than once intimates that he expects praises and rewards for fulfilling his divine joy, although he declares, "This labor is not difficult, but easy and useful."

He mixes up the condition of affairs before and since the emancipation of the serfs in the way which will best suit his own purpose. Three days a week was the legal maximum of labor for the proprietor before emancipation, and rarely enforced even then. If the peasant raises his finger for any one but himself nowadays, he gets the equivalent in arable land, pasturage, money, or what firewood he cannot steal. He admits that they all "work against their will." Paragraphs 124–5 are fine specimens of arithmetic, misstatement of conditions, and argument. According to Bondareff's own showing, from sixty to eighty days are amply sufficient for the support of a family for two years; hence, if it were true that he had but 155 days, he has twice as much as he requires. And the dozen children are not obligatory. Such exclamations as, "What brigand has stolen my fortune?" (money being accursed and useless), and "Oh! if the wrong they do us were only temporary, but it is eternal!" sound more like the inconsistent grumblings of a commonplace Socialist than the elation of a man condemned to perennial joy and everlasting salvation at the cheap rate of from thirty to forty days a year. "You see the effect this commandment can have," he says again. "Thanks to it, the old man becomes young, the feeble strong" (not true of your disciple Tolstoi, good Bondareff!), "the idle industrious, the imbecile intelligent" (not true of yourself, Bondareff!), "the drunkard sober" (not true of the peasants), "and the poor rich. . . . If the poor knew their own strength, they would not submit to such outrages. Man would then deliver himself from the indigence and misery which strangle him." Evidently, "the poor would become rich" by violence. And again consistency seems, to the ordinary intelligence, to be lacking.

Some of the other unexplainable mysteries are how Bondareff arrived at the peculiar etymology which makes *muzhik* mean 'beast' (one translation makes it 'stupid'), when it is simply the diminutive of *muzh*, a *man*, with literally not a letter of the other words in it; where he gets his allusions to the 'Arabian Nights,' Caligula, Darius's daughter with her serpents, and so on; and why he should acknowledge the right of the Czar, as an equal with God (after previous denunciation of all superiors), to judge the righteousness of his cause, when he insists that "God, bread, and the laborer" form the real Trinity. He admits that Christ did not labor himself, and "did not give precedence to the law of labor, because, from his infancy, he saw in it little virtue, and considered it to be a great misfortune"—whence he draws the deduction which might have been expected, viz., that he himself is the true and only Messiah, who has been preordained since the foundation of the world to discover the truth and preach it. Count Tolstoi, who holds the same conviction with regard to himself, as stated in 'My Religion,' neglects to comment upon this view of the New Testament doctrine.

We admit the dignity of labor, but we demand a broader interpretation than either Bondareff or Tolstoi supplies. The majority of people read carelessly, as a sort of "mental dram-drinking," or in obedience to the dictates of temporary fashion. Therefore, we have devoted valuable space to showing up a book which deserves no mention from its intrinsic merits. The conclusion of the matter is that discriminating persons have, in all probability, already arrived at the decision that the Czar of Russia must be a man of good judgment, whose condemnation, real or fictitious, is a sure indication of the bad quality of a book; and that Count Tolstoi's praises are equally final in the same direction, when the book deals with social questions.

RECENT LAW BOOKS.

In the second edition of Mr. Justice Stephen's 'General View of the Criminal Law' (Macmillan), the original work, which appeared in 1863, has been thoroughly rewritten, and with the result, rare in the career of law books, that the new treatise (although it contains, as we are told in the preface, the essence of what the writer has learned during a long and greatly varied experience of thirty-six years as a barrister, a member of the Indian Council, an author, a draftsman, and a judge) is brought within two-thirds of the compass of the first edition. This condensation is due, in large measure, to the learned author's ability to make frequent reference, for a fuller statement of his views, to his well-known Digests of Criminal Law and Criminal Procedure and his 'History of the Criminal Law.' But apart from this gain in proportion, the new edition is an improvement throughout upon the original treatise. The historical introduction remains, as before, the least satisfactory part of the book. There is a certain vagueness in regard to several matters, and there are some inaccuracies, as, for example, the remark that the appeal of theft was soon disused; and the statement that the judges in 1482 made a rule of their own authority that persons indicted for murder should not be tried for a year, so that the party's right to bring an appeal of murder in the meantime might not be interfered with. This rule of the judges was not the result of judicial legislation, but the affirmance of a doctrine as old as the time of Britton.

But the distinguished writer was chiefly interested in dealing with the Criminal Law as it is or ought to be, and here he is eminently successful. The dogmatic portion of the book is conspicuous for the arrangement of the subject, for clearness of statement, and for vigorous and wholesome criticism. An illustration of this last quality is found in the remark that the maxim "Non est reus nisi mens sit rea," is "neither more nor less valuable than the other scraps of Latin which have found their way into the law, and which are generally used when counsel do not clearly know their own meaning." The book as a whole seems to us to be the best of the author's works, and must be of very great value to the student, the legislator, and the intelligent general reader.

Not much is to be expected of a law-book which is intended neither as a text-book nor a digest, but rather as a series of compact statements of the law, substantiated by very numerous citations of the important English and American decisions relating thereto. But in the 'Law of Trusts and Trustees,' by James H. Flint (San Francisco: Bancroft-Whitney Co.), the author has fallen far short of his limited ambition. The book is marked by much repetition, many erroneous or misleading statements, and a general lack of discrimination. In a word, the subject, and not the writer, has proved the master. As a book of reference for authorities the publication may have an occasional value as a supplement to Perry's treatise on the same subject.

'Bank-Officers, their Authority, Duty, and Liability,' by Albert S. Bolles (New York: Homans Publishing Co.), is a large treatise for so limited a subject; but bankers, for whom, as well as for lawyers, it was intended, will doubtless not find it too voluminous. The book shows the marks of careful study, is well written, and seems to be generally a safe guide. But an exception must be made as to the statement, on page 15, that "officers are justified in lending to a trustee on the pledge of trust stock, unless they have reason to believe that he intends to misapply the money." This slip arose from a failure to distinguish between an executor and a trustee.

'Dillon on Municipal Corporations' is deservedly regarded by the legal profession as a

work without a rival on the subject of which it treats; and as it is nine years since the third edition was published, the fourth edition (Boston: Little, Brown & Co.) will be gladly welcomed by the bar, especially as the author assures us that he has gone personally over the book, section by section, and changed and added to the text when it seemed necessary. In fact, so great has been the development of this branch of the law in the last nine years that the author might well have said that he had rewritten the work which has played so large a part in that development. The typography, from the University Press, is a model for law books.

In this respect a striking contrast is afforded by 'The Law of Railways,' by Charles Fisk Beach (San Francisco: Bancroft-Whitney Co.), which has been published in two volumes in the "Pony Series." It is to be regretted that a better form was not given to it. The book is not intended as a substitute for others on the same subject, but to be used as a supplement. It is in regard to the management of the internal affairs of railroad corporations, as distinguished from their relation to the public as carriers, that Mr. Beach's treatise will be found useful. Here the author goes more into detail, although it should be said that he has paid particular attention to the Inter-State Commerce Act and the decisions thereunder.

Early in the present year we called the attention of the bar to Mr. John D. Lawson's 'Rights, Remedies, and Practice' (Bancroft-Whitney Company), of which two volumes had then been published. Volumes iii., iv., v., vi., and vii. of this important and highly meritorious work have since appeared, thus completing the author's great task, with the exception of an index volume, which is promised. They have been prepared with the same care that characterized the first two, and more we need not say.

JAPANESE POTTERY.

Japanese Pottery, with Notes describing the thoughts and subjects employed in its decoration, and Illustrations from examples in the Bowes Collection. By James L. Bowes. Liverpool: Published by the Author. Pp. 576.

A GLANCE at the opening pages of Mr. Bowes's sumptuous book shows that the author claims to have brought together a collection of Japanese pottery so complete, as representing provinces, makers, and marks, that he ventures to imply that the Japanese themselves will in the future be obliged to appeal to it to learn about their own pottery. It devolves upon us, therefore, to determine, if possible, how far his claim is justified, and first of all by answering the question, What should such a collection include?

In any comprehensive study of the potter's art in Japan one must collect and study the common ware made for kitchen utensils, the vessels used by the better classes, and the brilliantly decorated and even gaudy vases, plaques, and grotesque figures made expressly for export. A museum of art or an ethnological museum would be justified in excluding the latter class of objects—a museum of art, in that the decoration would not represent the true art feeling of the people; and the ethnological museum, in that the objects are not such as the Japanese find use for. Pieces of this nature might find a home in some industrial art museum, though even here their influence, on the whole, would be pernicious.

Any complete collection of Japanese pottery which is to furnish material for a work on the subject, should include only those objects made for the Japanese, and representing, of course, only things in accordance with Japanese taste and traditions; and these products should cover the whole range of fictile ware. A collection, even for an art museum, would not be true if it included only pieces having great intrinsic beauty; or, to put it in another way, if an art museum were to preserve only the beautiful pottery of any country, nine-tenths of the objects of this nature from England, Belgium, Holland, and Germany, and a goodly portion of the pottery of other countries, would have to be banished. Applying the same rule throughout a museum of art, other collections would suffer in the same way—rusty iron-work, rough glass and begrimed wood-carvings, faded fabrics and fragments of ancient sculpture, pewter dishes and roofing-tiles, patina-covered coins and indistinguishable paintings of mediæval age—all would be discarded. The idea is at once so monstrous that no museum of art yet founded would listen to such a scheme for an instant. In the minds of many it has been found difficult to draw a hard-and-fast line between the collections proper for a museum of art and those for an ethnological museum. An acute student of classical antiquities regards as proper for an art museum all objects from nations which have been conspicuous as producers of art work in any line, and in these lines the collections should be exhaustive. The ethnological museum finds it still more difficult to draw the line, but its material comes usually from savage and barbarous peoples. This division does not, of course, exclude from the museum of art objects of savage and barbaric art.

Returning, then, to what a complete collection of Japanese pottery should be, a collector finds the following groups to study. First, the common ware of the masses, such as kitchen utensils, jugs, pans, etc. A few of these might well be got together to show how tasteful even common pottery is in an artistic country. This pottery, when of fair age, is usually the rarest to get, for, being in daily use and without value, it is when broken thrown away. Second, pottery for table use; objects used by the more refined classes for the tea ceremonies, for the writing-table, for the serving of wine, for flowers, and for house adornment generally, and for heating and illuminating purposes. The work of the amateur should also be collected, as showing a curious phase of the art, nor must be overlooked pieces noted for their age or ugliness, but which excite the admiration of the tea-lover, not for their beauty (for they have none), but because they come from the site of some famous kiln, or were used by some celebrated man in past times. Such specimens are breathlessly examined by the *chajin* in Japan in much the same way that an American, if it were possible to induce any reverence in him, might examine the boots of Christopher Columbus or the jack-knife of George Washington. The collection would not be complete without examples of the pre-historic and early lathe-turned pottery of the country.

If a collector were to limit himself to any portion of this scheme, he would obviously select the pottery made for the better classes—the poet, the artist, the scholar, the lover of tea and flowers—just as in collecting pictures he would not care for the painted signs, the pictorial advertisements, and least of all for the stuff painted for the foreign market, but would collect paintings which had adorned the houses of cultivated people. Above all, no collection would be worthy the name that did not include as far as possible the marks of the various potters. In every important work on pottery, silverware, and the like, the marks have been assiduously collected and recorded, for, after all, if the piece is genuine, the mark is the first and last source of appeal.

With these brief suggestions as to what a collection of Japanese pottery should embrace, let us examine the beautiful work before us We are not concerned with the statement on the title-page that the author is "His Imperial Majesty's Honorary Consul for Japan at Liverpool," but we are with the statement that he is joint author of 'Keramic Art of Japan,' for, in the ten years that have elapsed since the publication of that work, he should have awakened a sadder and a wiser man. A casual survey of the objects figured prepares one to understand why he is at variance with nearly all collectors and artists who have been fascinated by the intrinsic beauty of genuine Japanese pottery. Not only does he find their tastes in this respect unaccountable, but he criticises a little manual issued in 1878 by the National Museum in Japan as being singularly deficient in information in regard to the brilliant development of the artistic taste of the country at an epoch to which he assigns many of his pieces. In his preface he acknowledges his indebtedness to a number of Japanese friends for assistance in verifying or correcting his classification, and he thanks them for specimens, some of them heirlooms, which were necessary to complete the sequence of several of the groups; Government departments even aiding him in this.

From these positive statements one prepares himself to enjoy a book which for the first time is to ascribe Japanese pottery to its rightful dates, makers, and provinces; to expect, also, that all the important makers at least, and all the provinces in which pottery was produced to any extent, are to be represented either by figures, marks, or descriptions. It is true, the author has never been in Japan, has never come in contact with Japanese connoisseurs, or spent days poring over the treasures in some musty *kura;* has never sat down with the amiable Rokubei, the dignified Dohachi, the good-natured Yeiraku; has never had the opportunity of gathering words of wisdom from the lips of Kohitsu, Machida, Tanemura, Maida, Ninagawa, and other experts. It is amazing to learn, however, that this not only makes no difference, but that such an experience is rather a hindrance to the proper forming of a correct judgment in regard to the subject. According to this dictum, then, we are to believe that Prof. Fenellosa's profound knowledge of Japanese art would have been more trustworthy had he obtained his information by roaming about England and the Continent; and that Dr. Anderson's collection of kakemono in the British Museum would have been far better if he had picked it up from bric-à-brac shops and auction sales.

Let us see the result of this confidence on the author's part as affecting the proper identification of the specimens he figures. The following corrections we make with the kindliest—nay, the most sympathetic—feeling, knowing the insuperable difficulties one must encounter so far away from the "base of supply." We pass over for the present Mr. Bowes's numerous mistakes in confounding the name of the kiln with that of the potter, the marks which have been wrongly read, and, above all, the erroneous dates assigned to so many specimens, and come at once to the vital question as to whether the attribution of many of his pieces is correct or not. If correct, then his book may be taken as a guide, as far as it goes. More than a third of the specimens figured come under the category of export goods, many of them exceedingly beautiful, but we

are concerned only with such as truly represent native pottery. And here we might apply the author's own words, which are quite just in regard to the old Japanese porcelain in the Dresden Museum, made, as every one now knows, by the Japanese expressly for export. Mr. Bowes says: "Turning, now, from this old Japan porcelain, which, as regards the form of the objects and their decoration, is at variance with the taste of Japan," etc.

Fortunately for the student, the plates, some of which have done service before in 'Keramic Art of Japan,' are marvels of the chromo-lithographer's skill, and the book is also illustrated by many excellent heliotypes. The pieces are so well depicted that one can tell at a glance the character of the specimen figured. On the plate lettered as Satsuma are specimens from three other provinces, a bottle from Tamba, a square bottle of old Kiyomidzu (called *amamori* by the Japanese, from a peculiar staining which resembles the rain stains on the paper *shoji*), and a *choku* from Higo. On the plate marked Province of Higo there are figured six specimens, only one of which belongs to that province; two and probably three of them are Chikuzen, and two of them Satsuma (Mishima, white on gray). Of the nine specimens figured and described as Higo, only three are from that province, and one of these has been defaced by subsequent decoration. On the plate marked Suruga not one of the specimens figured was made in that province. The two specimens figured as Awaji of the eighteenth century were made within thirty years at Shido, Sanuki. (This will add an important province to Mr. Bowes's list, and if he can get examples of the beautiful work of Minzan and Nawohachi and of the Tomita, Yashima, Takamatsu, and other ovens, the province will be fairly represented.)

Nine specimens are catalogued as belonging to the province of Nagato, four of which appear on Plate lviii, one on Plate lvii, and one on Plate lxvi. Following the catalogue numbers in the description, we find No. 1 is Shino, Owari. No. 2 is an exceedingly rare and old specimen of Onohara, Tamba. (The figure of this specimen is so accurate that we venture to say its bottom is unglazed and bears the impression of cloth on a dark-red clay.) No. 3 is Mishima Satsuma obscured by subsequent decoration. Nos. 5 and 6 are not Nagato. No. 7 is questionable, and Nos. 8 and 9 from the description alone should be recognized by the novice as Kiyomidzu, Kioto, and if further proof were needed, the mark is given which, though unintelligible to the author, is that of Kitei, one of the typical Kiyomidzu makers.

Why go further? Yet it is impossible to pass over such a glaring error as in the case of the specimen figured in Plate lxvi, as belonging to the province of Kii, and made by Sanrakuyen. Shades of Zengoro! It was not made within three hundred miles of that province, and there is no such maker as Sanrakuyen. On the decline of a ware made at an oven in Kii, a potter was hired to revive, if possible, the ware in Tokio, Province of Musashi. The oven was called by the poetical name of Sanrakuyen. The essay of this oven proved such a dismal failure that, after a few years, it was abandoned. The pieces bear either the large or small mark, and sometimes the painted mark of Sanrakuyen. As this specimen was figured in a plate that has already done service in the work of Audsley and Bowes, published nearly ten years ago, time enough has elapsed to have corrected the error.

On Plate xl. a piece is figured as Omi, whereas it was made in Ofuke village, Owari. A plastic figure is described as made by Nagami Iwao, Province of Yamashiro, whereas it was made by a potter named Nagami in the village of Yamashita, Province of Iwami. (This will add another province to Mr. Bowes's list.) With the exception of two tea-jars, the ten specimens described as Idzumo are all of the yellow, buff, and mottled brown glazes. The example No. 981 was not made in the early part of the century, but within thirty years, evidently under Government direction, as the decorated model may be seen in the National Museum, Tokio. There is not a suggestion in Mr. Bowes's collection of the vigorous work of Zenshiro, the beautiful productions of the Rakuzan oven, or the remarkable white glaze and blue decorated wares of two hundred years ago. Similarly, under the province of Settsu, the poverty of his collection is shown by cataloguing eleven pieces of Sanda celedon, mostly modern; one piece of Kikko; a trap for cuttle fish, and two pieces made in Kobe for export. Not a word, however, about the brilliant glazes of the Sakurai oven, the pure white and quaintly decorated pieces of Kosobe, the varied and remarkable products of Kiuzan, and the æsthetic work of the early Niniwa oven. Mr. Bowes's estimate as to the artistic quality of the pottery of Tamba, Totomi, and certain other provinces is invalidated because his material, as revealed by his catalogue, is altogether too meagre and imperfect upon which to base an opinion.

The work, for what relates to the identification of pottery, is a striking example of how far one may go astray who undertakes to study the products of a country from just the opposite side of the globe.

Emin Pasha and the Rebellion at the Equator: A Story of nine months' experiences in the last of the Sudan Provinces. By A. J. Mounteney-Jephson. With the revision and coöperation of Henry M. Stanley. With map and numerous illustrations. Charles Scribner's Sons. 1890. 8vo, pp. xxiv., 490.

MR. MOUNTENEY-JEPHSON'S work is more than a mere narrative of personal adventure. It gives an account of the downfall of the Equatorial Province, and furnishes, as well, an important chapter in the history of Mr. Stanley's expedition. There is nothing in it of the dry, official tone of a report, but it is an unaffected, straightforward statement of what the author saw, told with more than ordinary descriptive power. Evidently Mr. Jephson is a good observer and a shrewd judge of men, as his life-like portraiture of Emin and his principal officers plainly shows. Endowed with great courage and a high spirit, which, however, he kept carefully under control, and a warm heart, he won the confidence and affection of his companions, both white and black. The simple words with which he tells what enabled him and his fellow-officers during all the "darkness and misery" to be "steadfast and comparatively cheery," best show what manner of man he is. "First, the love and interest we all had for our work. Second, the implicit trust and confidence we have ever had in our leader. And third, and I think not least, the strong friendship which has always existed between Stairs, Nelson, Parke, and myself." Referring to Barttelot's death, he says:

"The hardest part of the experiences a man travelling in Africa has to go through, is not the physical hardships, starvation, or disappointments, but the sufferings and deaths of his comrades, European or negro. The hardships and starvation may be forgotten; but the deaths of such men as Barttelot and Jameson, and of our faithful Zanzibaris, must ever remain fresh in my memory as the saddest of the many sad memories which rise in my mind whenever I think of these past three years. That Barttelot had done his duty bravely and honestly I never for a moment doubted. He may have been injudicious, he may have been hasty. The story of that terrible time will never, I fear, be correctly known; but whatever may have happened, any one who really knew him must intuitively recognize that he was honorable and upright and brave, and that, like Lawrence, he tried to do his duty."

Mr. Jephson wisely confines himself to a narrative of what took place during his absence from the expedition, and his book should be read before one reads the second volume of 'In Darkest Africa,' for the clear understanding of that part of Mr. Stanley's story. He was detailed, it may be remembered, to accompany Emin Pasha to his province to aid him in preparing his people for their removal. His first impressions were decidedly favorable. The "exquisitely clean and neat" stations; the smartly dressed officers and soldiers; the contented and happy people; the numerous flocks and herds; the vegetable gardens, the cotton fields and banana groves which lined the lake shore and the river bank, all presented a most attractive picture. Had he been a mere passing traveller like Dr. Felkin, he would doubtless have written as enthusiastically as this gentleman of what Emin had accomplished for his people and his province. The whole credit, however, does not belong to him, for Mr. Jephson says: "I could not help being struck with the fact that nearly all the good and lasting things had been brought into the province by Sir Samuel Baker." Many of the old soldiers often spoke with affection and pride of him and of Lady Baker, or Nyadué, "the Morning Star, by which name she was called in admiration of her fair-haired beauty."

But it was not long before the true condition of the province was revealed to Stanley's officer. He found that one of the Pasha's two battalions had been for four years in open rebellion. They garrisoned the northern stations, and their discontent arose from his attempt, after the first Mahdist invasion, to evacuate these stations in order to concentrate his forces near the lake. Although the remainder of the soldiers were still loyal, they not only were unwilling to leave the province, but were also exceedingly sceptical as to Stanley's having come from Egypt. This was owing in part to their persistent disbelief in the fall of Khartum, the wretched condition of Stanley's people, and to the fact that, by a strange oversight, he brought them no letters from their friends in Egypt. As to the natives, although about the stations immediately under Emin's influence they seemed to be well-disposed, nevertheless, as he journeyed northward he "could see by the many marks of deserted villages, and the almost entire absence of cattle or goats, that the soldiers evidently robbed the natives to such an extent that they were forced to leave their villages and cattle and remove their goods away from their thievish influence." This had caused the "Turks" to be regarded with a most intense hatred, which showed itself in uprisings and massacres before Mr. Jephson's escape.

Gradually the conviction was forced upon him that the province was in fact only a miniature of Khedivial Egypt, with its thin veneer of civilization overlaying an unbounded corruption, and with the same grinding oppression of the people—with this important exception, that Emin was no Ismail. Rigidly upright in his conduct of affairs, not one of the many accusations brought against him was found to be true. This state of things was not unnatural, considering the fact that of his fifty-six Egyptian officers and clerks there

was scarcely one in the province "who was not at that moment undergoing a sentence of banishment from Egypt for such crimes as murder, rebellion, or highway robbery." His other officers were mainly Sudanese, entirely under the influence of the Egyptians, while the soldiers were natives from the various tribes in the surrounding region. It is not surprising, then, that these men were unwilling to leave a country where they lived in luxury unattainable in Egypt, nor that the arrival of Stanley was made the pretext to seize their Governor and Mr. Jephson, on the ground that they were to be removed by force and enslaved to the English. The judgment of the author's Niam-Niam servant was a just one: "Master, these are a rotten people; the good material in them is not sufficient to make a hut, but there is enough evil in them to build a palace."

The story of the imprisonment and the proceedings of the rebel council is exceedingly interesting. During the whole time it is evident that Mr. Jephson conducted himself with great tact and courage. He did not hesitate on one occasion to bitterly reproach the rebel officers for their treatment of him, so contrary to the strict law of Mohammedan hospitality, thereby compelling their admiration and assent. "By Allah!" exclaimed their leader, "he has spoken truly and he shall join his people." It is impossible to say what would have been the ultimate fate of Emin and Mr. Jephson at the hands of the Egyptians—both finally condemned to be hung—if an invasion of the Mahdists, or Donagla, as they were called, and the capture of the important station Rejaf, had not caused the rebels, stricken with fear, to set them at liberty. The province had become thoroughly disorganized and well-nigh defenceless, while the officers spent their time in wrangling and in drunken carousals. Emin was entreated by them to resume the government and to rescue them from the impending danger, as the Mahdists were only awaiting reinforcements from Khartum to overrun the whole province. It was under these circumstances that Emin joined Stanley and that Mr. Jephson's story comes to a close.

Our author had comparatively few opportunities for observation, but he made good use of those which he had, and his book is full of bright descriptions of the stations and the lake and river scenery. Especially successful is he in conveying vivid impressions of his companions, the false-hearted Egyptians, fawning and obsequious to-day, treacherous and insolent to-morrow. Here is a warning given by one of the worst of them to him: "In this country there are only Sudanese and Egyptians. If a Sudanese comes at you with scowls on his face and a loaded gun, while on the other hand an Egyptian comes to you with a carpet and a friendly salutation, turn to the Sudanese; he with his loaded gun will do you less harm than the Egyptian with his smiles and carpet." Far different were the three Peacock Dervishes, "fine-looking fellows of the Arab type," who came with a letter to Emin from the Mahdist leader, Omar Saleh. They were dressed in white shirts of native-made cotton cloth, which reached nearly to their knees and were "patched all over with bits of red, blue, green, yellow, and spotted calico. . . . Slung across their backs were thongs of leather, to which were attached numerous little round, oblong, and triangular leather cases, containing different verses from the Koran. Each man had a small volume of the Koran," while for arms he had a large, straight, double-edged sword, and three immense spears from twelve to fifteen feet long. They were manly fellows who, though cruelly tortured by the Egyptians, refused to reveal any information in regard to the strength of the Donagla. Eventually, "they were taken down to the river and beaten to death with clubs, and their bodies were thrown to the crocodiles."

Among the curious customs which Mr. Jephson noticed was this of the Sudanese on the occasion of a marriage: "On the evening before the wedding, a number of young Sudanese gathered in front of the bride's hut, and, forming a circle, began to sing and whip each other with hippopotamus hide whips until the blood came. This, it appears, was to show the bride what a plucky race her husband was sprung from." The natives of whom he saw the most were the Baris, who name their boys after animals and their girls after flowers. They decorate their pottery slightly, and pave the floors of their huts with little triangular pieces of broken pottery, so that they "resemble black mosaic floors, so beautifully, evenly, and closely are they fitted together." The Baris have large herds of cattle which are kept principally for their milk. "Women are never permitted to milk or to meddle in any way with the cows." When Emin and Mr. Jephson reached Wadelai after their release from captivity, "a sheep was killed, and we were made to step over the blood; some of the blood was also dashed against the lintels of the doors of our houses for luck"—a curious reminiscence of Israel in Egypt.

Mr. Jephson has comparatively little to tell of the fauna of the province, but he mentions that, on one occasion, while going down the bank of the Nile, he saw "an immense herd of nearly 200 elephants. . . . This great number of huge black bodies moving slowly along with their long white tusks gleaming in the sun, was perfectly overpowering. Wherever you looked, for the space of half a mile, nothing was to be seen but elephants marching sedately along at the foot of the mountains. The very face of the plain seemed moving."

The central figure of Mr. Jephson's book is, of course, Emin Pasha, and the man is brought before the reader with almost photographic distinctness. His fine qualities, his generosity, his integrity, his devotion to the welfare of his province, his care for his people and faith in them, his scientific ardor, are all faithfully delineated. So, too, are his weaknesses, his unmanly sensitiveness, his vacillation, his inability to tell unwelcome truths, his lack of moral courage, his moodiness and ingratitude. The Pasha evidently strongly attached his young companion to him, and only a sense of duty has impelled the latter to write as plainly as he has done. His book, with the exception of the closing chapter, was all written before Emin showed his hostility to his rescuers. The last chapter, in refutation of recent German insinuations and accusations, adds other proofs of Emin's "causeless resentment" and base ingratitude towards men who had perilled their lives a thousand times to help him. "Emin can dream noble things," says Mr. Jephson, in conclusion, "but he cannot act them, because, unfortunately, he is nearly always below his best self."

Mr. Stanley, of whom there is a fine etched portrait, writes a warmly appreciative prefatory letter, in which he takes occasion to refer strongly to the want of an international copyright law. There is an excellent index, with a map and many interesting illustrations. Among these is a charming group of "African ragamuffins" and a dwarf with bow and arrow, by Mrs. Stanley.

A Boy's Town, described for *Harper's Young People*. By W. D. Howells. Harper & Bros. 1890.

THE defect of Mr. Howells's description of his boyhood, as a book for boys, is that he writes of it from a man's point of view. He has so disillu-ioned himself that he seems constantly to patronize his small self, to apologize for him, and in more than one passage he is frankly ashamed of him. This critical temper, which is constantly turning the boy round to see what an incomplete creature he was, and to show off his weak points, interferes with the pleasure of the perusal; and the criticism is not confined to the little fellow, but takes in the whole life of the village as far as Mr. Howells remembers it, and in particular the religious and moral ideas in which he was bred. What we have is only incidentally a boy's book; essentially it is a study of a Western town and its life from the materials which have survived in the author's memory and which he has reflected upon. It is true that the matter of the volume is mainly anecdotes and reminiscences of the town and its features, the boys and their sports, studies and pets, the family life, the printing-office, the holidays, and such heterogeneous things as sometimes come into a boy's purview, and, by some trick of their own, stick in his memory; but the binding element in all this, the continuous strain, is an unfavorable criticism of it all, to the effect that the life of the people was very limited, and the boy in an embryo state of foolishness, crude ideas, cruelties, ridiculous errors, and so on. There is a lack of cheerfulness, of spirits, of wholesome enjoyment, which makes the whole rather painful. There is so much self-pity for the boy that one thinks he must have had a very unhappy time; and yet it appears that he had his share in most of the things that are good for boys, and suffered only as a sensitive nature does in companionship with rougher spirits. One can see through the cloud of comment, nevertheless, the principal elements in the life of boyhood on the Miami forty years ago, and if he can bring out of his own boyhood some sympathy for the children, he may counteract the author's unfortunate pessimism.

My Study Fire. By Hamilton Wright Mabie. Dodd, Mead & Co. 1890.

THE title of Mr. Mabie's volume is apt, and suggests that vein of reverie which distinguishes it and classes it at once with books of literary sentiment. The fire is described in all its stages, with the eye of a lover who turns from it only to see the books whose titles it lights up, or the autumnal and wintry views outside to which it stands in cheerful relief. Wife and children also necessarily sit in its glow; the scene is that of the student's quiet home and paradise. The seasons, as they pass, bring Christmas and New Year's and the first snowfall, the earliest flight of returning birds; and with these well-worn motives of reverie the text unfolds its story in a loitering and desultory way, touching on nature and on genius, on Goethe and Alexander Smith, Amiel and Méryon, Lowell and the 'Imitation of Christ,' changefully and irresponsibly, without emphasis and without weariness. It is especially an indoor book, though once the author wanders out from his fire to tell of the delights of a journey on snow-shoes; and once he interpolates a kind of story of a sort that we have long ceased to meet with, and whose absence in current literature has not been greatly lamented. Mr. Mabie's thought is not exacting of the reader's attention; it is very smooth-flowing, and one has only to float on

the stream; his fancy is pleasantly active, and his style equable, refined, and clear. He writes at leisure and must be read at leisure, for entertainment of a quiet sort; he succeeds in finding a middle way between poetry and prose, reflection and sentiment, books and life, and he brings with him much cultivation of taste and real regard for the great work of the past; but his vignettes of winter weather and of fireside seclusion are the most charming part of his labors, or, perhaps we might more fitly say, his recreation.

The Autobiography of Joseph Jefferson. The Century Company. 1890.

"THE reason why so few good books are written," said the late Walter Bagehot, "is that so few people who can write, know anything"; and by this he meant that the literary class, leading a retired existence, has little experience of life in its broader aspects. Unfortunately, those who are in the thick of the struggle, and who are, therefore, in a position to know something, cannot write—most of them. When, by any accident, the man who knows something can write, we get a book we take to our hearts: this is one reason of the success of Grant's 'Memoirs.' During the past year the readers of the *Century Magazine* have been delighting in two series of articles, neither of which was written by a professional author, the brilliant "Letters from Japan," of Mr. John Lafarge, a painter, and the "Autobiography" of Mr. Joseph Jefferson, an actor. The latter is now before us complete in a book by itself, and a rereading of its chapters confirms one in the opinion that the distinguished comedian belongs among the people who know something and who also can write.

Mr. Jefferson's style is easy and flowing, like that of Mr. Booth (in the two brief papers written five years ago for 'Actors and Actresses'). It is that of a man who has kept good company all his life, who has spoken every night the chosen words of the dramatists, from Shakspere to Sheridan. The actor's enforced and daily familiarity with the vocabulary of the masters of speech ought in itself to be a training in the apt use of words. Mr. Jefferson's style has the cadence and the color of good dramatic writing, with a charm which seems to be his own. There are no purple patches anywhere in this book; there is much quiet and playful humor, and an ever-present kindliness of tone. Mr. Jefferson reveals here what Bagehot called "one of the rarest of artistic charms, that of magnanimous autobiography." Quaint and odd as were many of the personages whom he recalls for us in these pages, he sketches them with unfailing charity, with never a hint of acerbity, and with very remarkable skill. Some of his full-length likenesses are worthy to go in the gallery with Colley Cibber's incomparable reproduction of Mrs. Bracegirdle, one of the most marvellously life-like pen portraits in all literature.

It is with Cibber's 'Apology' that Mr. Jefferson's 'Autobiography' is to be classed rather than with the merely amusing 'Wandering Patentee' or Tate Wilkinson, the 'Reminiscences' of Michael Kelly, and the 'Retrospections' of John Bernard in England; or, in America, with the 'Recollections' of William B. Wood, the 'Thirty Years' of Joe Cowell, or the 'Theatrical Management' of Sol Smith. Quite as amusing as any of these, and quite as abundant in anecdote, Mr. Jefferson's book, like Cibber's, is something more than merely amusing. It has a stronger backbone, a wider philosophy. We find in it not a little of the quality which gives value to Fromentin's discussion of the old masters. We see here the judgment of an expert with broad sympathies and a chastened taste. Any discussion of the principles of an art with an intelligent artist is fertile—with an artist, that is, who has intelligence beyond what is needed for the exercise of his profession. This is what we gain in reading Cibber on the one side and Fromentin on the other; and a like profit can be had from this book of Mr. Jefferson's. It is a book that most people will read with pleasure, and one from which those who seek light can learn much.

Note, for example, the author's description (pp. 108-9) of the way in which Burton and Burke played into each other's hands, and the account (p. 384) of the discussion with the late Charles (James) Mathews about the necessity the actor is under of enlarging his manner when acting in a larger theatre than he is accustomed to appear in. Compare this last assertion with the criticism (p. 153) of Mathews as *Charles Surface*, which was a failure because the comedian could not rid himself of his modern air and of the trifling manners of the man-about-town of to-day, quite out of keeping with the more robust character of Sheridan's hero, and remark that Murdoch succeeded where Mathews failed, because he gave color, dignity, and picturesqueness to the older characters, playing them in the spirit in which they had been conceived. Only less instructive is the criticism (p. 138) of the amateur actors who—like Hackett and Mrs. Mowatt in the past—have gone on the professional stage after they were mature, and when they had acquired faults almost ineradicable.

Especially worthy of careful consideration is the whole of chapter XVI., containing Mr. Jefferson's "Reflections on the Art of Acting." M. Coquelin, Mr. Irving, Signor Salvini have lately talked freely about their calling, but no one of them is shrewder in seizing the elemental principles of the histrionic art than Mr. Jefferson in these pages, nor is any more adroit in the selection of apt illustrations. Evidently Mr. Jefferson's opinion on Diderot's "Paradox" is closely akin to M. Coquelin's: "For myself, I know that I act best when the heart is warm and the head is cool"; and it is pleasant to find the foremost comedians of France and America in accord. Equally interesting is the American comedian's elucidation of "dramatic action" (pp. 185-7), of its vital necessity, and of the impossibility of moving an audience without it, whatever may be the merely external "literary merit" of the play. Elsewhere Mr. Jefferson discusses the disappearance of the old "stock companies," and makes a strong plea in favor of the present system of travelling "combinations," not quite as convincing as his argument in favor of the right of an actor to modify the text of an old play in accordance with modern taste. Here we think Mr. Jefferson is quite right. Good-naturedly he quotes the late William Warren's jest that the autobiographer's recent performances of the "Rivals" recall Buchanan Read's line, "And Sheridan twenty miles away." But the physical conditions of the theatre are always changing, and, to keep the stage, a play must needs be modified to meet these changed conditions. Mr. Jefferson has done to Sheridan only what is done to Shakspere every time "Hamlet" is acted.

For the benefit of those who may not have seen any of the articles which make up this book as they appeared, month by month, in the *Century*, it may be said that Mr. Jefferson tells the story of his life from his earliest appearances on the stage, in a little village called Chicago, to his triumphant success as *Rip Van Winkle* in Australia, England, and America, going on to the more recent revival of "Rivals," and ending with a humorously pathetic account of some of his neighbors when he retires to rest at his plantation in Louisiana. As we follow the adventures of the actor, we meet with quaint characters, we hear good stories, we learn much about the art of acting, we have many portraits of prominent actors and actresses of the past, and we find ourselves more and more drawn toward the author as he stands revealed before us in his own pages.

The book has been beautifully printed at the De Vinne press; and its illustrations are of the variety and excellence to which the Century Company has accustomed us in its publications. The cover is a most successful novelty, recalling that of Mr. Howard Pyle's 'Robin Hood' by its decorative quality, at once rich and simple. The design (by Mr. G. W. Edwards) is embossed on veritable vellum, "blind-tooled" on the sides and touched with gold on the back.

On the Hills. By Frederick Starr. Boston: D. Lothrop Co. 1890.

THIS work consists of a series of elementary essays on geological topics, in a style fitted to attract young readers, although there is no preface to tell us that such is the object of their preparation. The best part of the book is the good-humored personal element, with narrative of the author's field experience, by which the essays are brought down to a form of statement that boys may easily appreciate. The brighter readers of such a book may be led to the excellent result of going out on the hills themselves, and discovering that they too can find stories that are worth telling, for they will be flavored with the delight of personal effort.

Some of the pages are too lightly written, and at times the difficulties of the subject are too greatly simplified; a more advanced teacher might hesitate where Prof. Starr asserts without qualification, but such assertion seems to be regarded as an essential of "popular" scientific style. The chapters on fossils describe so many species that are far beyond the success of the ordinary collector that the beginner will be disappointed if he attempts to follow them out doors; indeed, they represent the author's experience in the museum or with his books rather than on the hills, and for this reason they have less value than the others. The chapters on physical geology will lead the youthful investigator to better hunting-grounds. The glacial moraines, the waterfalls and gorges, the ringing rocks are accessible to all who live in their neighborhood; but the hadrosaurus, the ichthyosaurus, and the rest are to be found only in museums by most of us. Occasionally the author's personality is a little too prominent, as in the excursion to Kittatinny Mountain up the Delaware Valley. The painful experience of the younger members of his walking party is in such contrast to his own success that the story can hardly serve except as a discouragement to the "lower-class men;" and when Prof. Starr calls Kittatinny "my mountain," he must arouse many Pennsylvanians who love it with him to assert their claims to partial ownership at least. This fine mountain wall was well called endless by the Indians, but it can hardly be said to extend "1,500 miles as one great ridge from Massachusetts to Alabama." It does not reach Massachusetts, and in parts of its course it is too much doubled on itself to be called "one great ridge." Indeed, the real personality of Kittatinny is not clearly brought out; it deserves

further study and fuller history. We hope Prof. Starr will write more books, and carry his work on the hills further towards a scientific end.

The Women of Turkey and their Folk-Lore. The Christian Women. By Lucy M. J. Garnett. With an Ethnological Map, and introductory chapters on the Ethnography of Turkey and Folk-Conceptions of Nature by John S. Stuart-Glennie, M.A. London: David Nutt. 1890.

MISS GARNETT is already favorably known to students of popular literature by her 'Greek Folk-Songs,' in which she likewise had the co-operation of Mr. Stuart-Glennie. The present work is of more general interest, and is a more valuable contribution to folk-lore. The prefatory material cannot be examined here at any length, especially as we recently (in a review of Taylor's 'Origin of the Aryans') considered one of the topics treated by Mr. Stuart-Glennie, the European origin of the Aryans. Of Mr. Stuart-Glennie's theory of folk-lore we can now say only that it is a compromise between the views of those who hold that mythology is the outcome of the civilized mind, and the views of those who believe that it is the creation of the savage mind.

The most interesting and valuable part of the work is Miss Garnett's, and of it we can speak with the highest praise. The present volume is devoted to the women of the Christian nationalities; the one which is to follow will treat of the Semitic and Moslem women. The author takes up in turn the Vlach, Greek, Armenian, Bulgarian, and Frank women, and describes the social status and activities, family ceremonies, beliefs and superstitions, and folk-poesy, which last includes national traditions, religious legends, animal stories, folk songs, etc., of each nationality. Some of the material relating to popular songs and tales has already appeared in other collections; but that pertaining to customs and social observances is entirely new, and constitutes the chief value and interest of the work. Miss Garnett gives a very encouraging account of the Christian women of Turkey, and the advance which they have recently made in education; if the next volume shows any similar advance on the part of the Semitic and Moslem women, we need not despair of the future of the country, which meanwhile presents a most attractive field for missionary labor.

Notes on Military Hygiene, for Officers of the Line. A syllabus of lectures at the U. S. Infantry and Cavalry School. By Alfred A. Woodhull, Major Medical Dept., Bt. Lt.-Col. U. S. Army. John Wiley & Sons. 1890. Pp. 150.

MAJOR WOODHULL has made an admirably clear and succinct presentation of the principal hygienic rules applicable to soldiers gathered in barracks and encampments. He has aimed at providing a manual for the pocket, which every line officer may carry, and which shall give brief but definite instruction in everything that pertains to the health of the men and the sanitary condition of quarters. Among other things there are chapters on clothing, food, habitations, sewage, water, etc., all so full of valuable suggestions that not only every army officer, but every officer of a hospital, a school, an asylum, and even every head of a family, may greatly profit by familiarity with this little book.

Modern Ghosts. Harper & Bros. 1890.

THIS collection of gruesome tales, translated from Maupassant, Alarcón, Kielland, Kompert, Becquer, and Magherini-Graziani, is introduced by Mr. George William Curtis in an agreeable preface; but after these preliminary pages the way of the reader is through horrors, the charnel-house, and that panic of the mind which is always fascinating in fiction, however fearful in reality. The first tale, by Maupassant, is the most powerful and the most original in its motive, though the terrors which it holds in suggestion are not so well worked out as those which it embodies physically. The second tale, by the same author, is more artistic, and has one scene of the true weird in it, while the analysis of the state of the mind in the actor, and the study of the river as a source of vague fear, are in the best style of Maupassant's minute and slowly elaborated art. A third story of a tall woman blends the ghastly and grotesque with success, and secures the effect aimed at. Of the remaining tales none reach a very high excellence. In all the series one cannot but observe the peculiar opposition of the Latin feeling for the horrible to the English feeling. The stories are more in earnest than our own race-genius tolerates. There is lacking that flash of humor which relieves the terrible and transforms it into a less shocking and intolerable aspect. The purely physical element is absorbing in it; and although the mind is struck with fear, it remains principally a bodily fear. Consequently, one must acknowledge that these tales are foreign in the sense that they do not appeal to us with their full native force; they are exotic; and though they satisfy the universal crude craving for the horrible, they do not seem sufficiently within the pale of nature to have our credit, and be accepted temporarily by the imagination. They are rather to be read as examples of foreign art.

BOOKS OF THE WEEK.

Abbott, Dr. C. C. Outings at Odd Times. D. Appleton & Co. $1.50.

A Larger Print Edition.

Bellows' French Dictionary.

By JOHN BELLOWS. Revised by A. BELJAMS. 600 pages, 12mo, half roan. $1.25. French and English, English and French, both divisions on the same page. By JOHN BELLOWS. Masculine and feminine words shown by distinguishing types; conjugations of all the verbs; liaison marked in French part, and hints to aid pronunciation, together with Tables. The smaller fine edition, 32mo, full mor., $3.65; roan, $3.00.

Oliver Wendell Homes says of it: "I have been reading a recent French work which has a great number of slang words in it; indeed, it was written partly to show up the new French vocabulary; but it has also a great number of familiar conversational phrases. Now I found that your little microscopic dictionary was equal to the hard task I put upon it, surprising me by the richness of its little columns and the exceedingly knowing way in which common French colloquialisms were rendered into corresponding English ones. I was fairly astonished that such an atom of a book could be such a cyclopædia of phrases. I consider the little lexicon the very gem of my library."

PUBLISH THIS WEEK:

Lorna Doone. A Romance of Exmoor. By R. D. BLACKMORE, author of 'Cradock Nowell,' etc. Authorized American issue, with new Preface specially written by the author for this edition. The Exmoor Edition. 3 vols., 16mo, $3.75.

". . . This Lorna visits you, not by force of savage ravishers, but under escort of gentle men, fair knights of the order of Copyright. And if you ask her how it is, when so many better tales are told and die upon the fitful wind, that her simple story still has life and buoyancy on the lips of men, she answers not, but drops her eyes and wonders more than you do."—*Extract from Author's Preface.*

The Story of Switzerland. By R. STEAD and Mrs. ARNOLD HUG. (No. XXXI in the Story of the Nations Series.) 12mo, cloth, $1.50, half leather, gilt top, $1.75.

ROBERT BONNER'S SONS, Publishers, COR. WILLIAM AND SPRUCE STREETS, New York.

SALE EXTRAORDINARY
RELICS OF
GEN. GEO. WASHINGTON.

Estate of Major Lawrence Lewis, last surviving executor of the Est. of Gen. Washington (and his Nephew) also the Estate of his son, Lorenzo Lewis, of Clarke Co., Virginia.

By order of H. L. D. Lewis, Administrator of the Estate of Mrs. Lorenzo Lewis, Dec'd. To be sold Wednesday, Thursday, and Friday, Dec. 10, 11, and 12, commencing at 8 o'clock each evening, at the auction Rooms of Thos. Birch's Sons, 1110 Chestnut St., Phila., Pa.

This is the most important sale of the belongings of Gen. Geo. Washington ever held in this country, and we may say the last that will ever be held, as it includes all the relics kept by the Family, the balance having been sold to the Mount Vernon Society some years ago. In this collection will be found Washington's Personal Account-Books wherein he has enumerated with his own hands the various items of money expended from time to time, and for what purpose. His Original Autographic Survey-Books, his Original Ledger of Mount Vernon Distillery and Fishery, with his vouchers throughout of his Secretary's (Tobias Lear) correctness of the accounts.

The collection of documents and letters is extraordinary as well as of the greatest interest, containing his Autograph List of Slaves, on eight folio sheets; his List of United States Loan certificates; his Prophetic Letter in relation to the Abolition of Slavery; his letter to Lawrence Lewis mentioning what he has left him in his will, and numerous Autograph Letters, Deeds, Releases, Surveys, Plans of Towns, Estimates, and in fact all his private papers which were kept by his executors in settling his estate, together with their original Letters Testamentary. The Personal Belongings consist of his Punch Bowl of Rose China and Silver Ladle; his Secretary Candlesticks, which shed the light to write his letters; his Mantel Clock, Music Books (the score of which he drew and words in his handwriting); about seventy five pieces of elegant Cut Glass, China Cups and Saucers; Indian Pipe presented to him by Indian Chiefs; his Books, and a great variety of other articles.

The sale will also embrace the Library of Lawrence Lewis and of Eleanor Parke Custis, Washington's adopted daughter, also Martha Washington's Family Bible, with her Autograph in three places through the Book, and Nellie Custis's Piano and Piano-Stool, both masterpieces of Carving in Mahogany. Catalogues mailed on application after November 20, when they will be ready for distribution.

Parties residing out of the city desiring to inspect the collection before they are opened to the view of the general public can do so by addressing the Manager of the Book Store, stating a day for that purpose. THOS. BIRCH'S SONS,

1110 Chestnut Street, Philadelphia, Pa.

CRITICS SAY:

"Will win its way by merit."—*Advocate, Pittsburgh.*

"Must become very popular."—*School Journal, New York.*

"The work is a treasure, and such a mine of useful information as every family ought to have at hand."—*The Standard, Chicago.*

"It cannot fail to be appreciated by the great masses of the reading public, who will find in its pages, in compact form, just the information they need."—*Messenger, Philadelphia.*

"The fields of literature, science, and art, and of all knowledge, are thoroughly gleaned. The topics are ably treated, many illustrations are given, and a vast amount of information is contained in a small space."—*Toledo Blade, Toledo, Ohio.*

"Its handsome type, numerous illustrations, handy form, neat substantial binding, and, more than all, its skilful editing, which brings within such convenient limits such a vast amount of knowledge so well adapted to popular needs, are a satisfaction and a delight to students."—*Bankers' Monthly, Chicago.*

CUSTOMERS SAY:

"I think it is a grand work, and seldom, if ever, have occasion to refer to it without finding what I want."—*F. J. C. Schneider, Rio de Janeiro, Brazil.*

"It is a continual surprise to me that a work of its scope and excellence could be published at such a low price. It is more than excellent."—*Harry G. Simric, City of Mexico.*

"It is very neat, the form convenient for use, firmly bound, of large, clear type, the contents of just that general character which the popular reader requires—comprehensive, accurate, and compact."—*Prof. Henry N. Day, LL.D., Yale College.*

"In a library in the collection of which I have been engaged more than 40 years, I esteem no book more highly than Alden's Manifold Cyclopedia. From its pages I have been able to find an answer, appropriate and clear, to every question that needed it, and when I shall receive the final volume I shall feel that access to all the necessary information for my practical life shall have been placed within my reach."—*James L. Minor, formerly Secretary of State, and Librarian of Missouri.*

A Great Offer.

$4.00 **cash** and a further payment of $2.00 in **13 monthly** installments of **$2.00** each will secure **immediate delivery** of the **volumes now ready** in cloth binding, the **remaining volumes** being delivered at intervals averaging less than one month, all within the year 1891; or a first payment of **$7.50** and the **13** installments of **$2.50** each will secure the same in half-morocco binding. Order **immediately,** as this offer is made subject to withdrawal without notice.

KRUELL'S CONTEMPORARY PORTRAIT-GALLERY.

"The Nation."

1865-1890.

In commemoration of the 25th anniversary of this journal, Mr. Kruell has engraved on wood, in the highest style of the art, after a recent photograph by G. C. Cox, a portrait of the founder and present editor of the *Nation*,

Edwin Lawrence Godkin.

"*It is an admirable portrait, and the head might stand for that of one of Velasquez's hidalgos.*"—Prof. Charles Eliot Norton.

The size of the block is 9x6 inches; the impression is on Japan paper, under the personal supervision of the artist, and is loosely mounted. *Only one hundred proofs* will be offered for sale, and each will be signed and numbered. Price, Ten Dollars, carriage prepaid. Address GUSTAV KRUELL, East Orange, N. J.

*** Mr. Kruell offers at the same price, and in the same style, proof portraits of CHARLES DARWIN (one in his prime, one in old age), ASA GRAY, WILLIAM LLOYD GARRISON, and WENDELL PHILLIPS. The edition in these cases is limited to 200 copies for all except Gray (100).

"*Certainly we may look in vain among other graphic arts for anything comparable with these portraits.*"—The Nation, January 23, 1890.

SPENCERIAN STEEL PENS Superior to all others.

MATTHEW ARNOLD IN THE "NINETEENTH CENTURY."

"The New York NATION—a newspaper which I read regularly and with profit, a newspaper which is the best, so far as my experience goes, of all American newspapers, and one of the best newspapers anywhere."

THE NATION,

an independent weekly journal, was established in 1865. Its contributors include the most prominent names in literature, science, and art both in this country and abroad. It is emphatically found in the homes of people of culture and refinement. No intelligent American desirous of keeping abreast of the best political and literary thought of the day can afford to be without it. Subscription price, $3 00 a year, postpaid.

To Advertisers:

The issues of the NATION to be published on Thursdays, November 26th, December 4th, 11th, and 18th will be holiday issues containing the announcements of the leading publishers and other discriminating advertisers. Copy for these issues should be in our hands by each Tuesday preceding the dates above mentioned.

Charles Scribner's Sons'

NEW BOOKS.

In Scripture Lands.

New Views of Sacred Places. By EDWARD L. WILSON. With 150 original Illustrations engraved from Photographs taken by the author. Large 8vo, $3.50.

Mr. Wilson's journey was the first instance in which a fully equipped artist photographer has visited the scenes made memorable by the Bible narratives, and has reproduced both by camera and by word-painting, the people, the ruins, and the famous spots which have become household words throughout Christendom.

Electricity in Daily Life.

A Popular Account of the Application of Electricity to Every-day Uses. With 120 Illustrations. 8vo, $3.00.

A work similar in scope and importance to the 'American Railway,' published last year. Eminent experts treating in a popular manner of the electric railway, motors, lighting, telegraphs, cables, and their laying, electricity in the household, in warfare on land and sea, and as applied to the human body.

The Evidence of Christian Experience.

By Prof. LEWIS F. STEARNS, D.D., 12mo, $2.00.

Prof. Stearns's important work opens up a new field in theological science, dealing in a masterly way with a subject that finds no place in the traditional system of apologetics.

Pacific Coast Scenic Tour.

From Southern California to Alaska—The Yosemite—The Canadian Pacific Railway—Yellowstone Park and the Grand Cañon. By HENRY T. FINCK, author of 'Romantic Love and Personal Beauty,' and 'Chopin and Other Musical Studies.' With 20 full-page Illustrations. 8vo, $2.50.

"It will prove a revelation to many readers ignorant of the Pacific. It is a far more definite and detailed picture than has been drawn by any one else. It is a work of exceptional interest and value."—*Brooklyn Times.*

A Short History of Anglo-Saxon Freedom.

The Polity of the English-Speaking Race Outlined in its Inception, Development, Diffusion and Present Condition. By Prof. J. K. HOSMER of Washington University, St. Louis. Crown, 8vo, $2.00.

"It is safe to say that it is among the best books of its kind. Careful in historical facts and giving the student clear ideas of both motive and result."—*Chicago Inter-Ocean.*

In the Valley.

By HAROLD FREDERIC. With 16 full-page Illustrations by HOWARD PYLE. 12mo, $1.50.

"It is uncommonly well written, and the whole *mise en scène* has verity and importance, for the valley of the Hudson, at the moment before the Revolution broke out, is new to romance and it is certainly picturesque."—W. D. HOWELLS, in *Harper's Magazine.*

A Little Brother of the Rich,

And Other Verses. By EDWARD S. MARTIN. 12mo, $1.25.

"The poems are witty, philosophical, graceful, and altogether delightful."—*New York Sun.*

*** Sold by all booksellers, or sent, postpaid, by*

The Life of Lord Stratford de Redcliffe, K.G.

By STANLEY LANE-POOLE. (Popular Edition.) With three Portraits. 397 pages. Crown 8vo, $2.50.

**** The present edition is condensed from the Library Edition, published in two volumes in 1888, chiefly by the omission of the larger despatches and memoranda. While nothing of general interest has been sacrificed, reference must be made to the larger work for such detailed explanations and authenticating references as are necessarily excluded from a volume of this scope.

Historical Review of the Legislative Systems

OPERATIVE IN IRELAND (1172–1800). By the Right Hon. J. T. BALL, LL.D., D.C.L. 8vo, $2.25.

"A valuable contribution towards the formation of clear views regarding the settlement of the Irish question."—*The Nation.*

History of England:

From the Conclusion of the Great War in 1815 to 1858. By SPENCER WALPOLE. Cabinet Edition. Revised. 6 vols. Crown 8vo, each $2.00.

"The most adequate account yet presented to us of a great epoch."—*Academy.*

"Mr. Walpole may finally be congratulated upon the successful completion of his laborious task. His statements, as far as we have been able to test them, are singularly accurate, and his style is appropriate and dignified."—*The Times.*

A History of Greece:

From the Earliest Times to the Macedonian Conquest. By C. W. C. OMAN, M.A., F.S.A., Fellow of All Souls' College, and Lecturer at New College, Oxford. With 11 Maps and Plans. 12mo, 545 pages, $1.50.

"A boon to young and unlearned students. . . . Tells the story of that famous land in a succinct and lively form, and it brings out strongly her great states and her great men. It is, in fact, if we may so far trust our memory, the best of all school histories of Greece. . . . We strenuously recommend this history to the attention of schoolmasters and to the large class of readers whom it is customary to call 'general,' it combines liveliness with solidity as they are rarely combined, and it deserves to meet with a large and rapid sale."—*Spectator.*

Messrs. Longmans, Green & Co. will be happy to send their Catalogues to any address on application.

LONGMANS, GREEN & CO.,

PROPERTY OF THE MOUNT LAUREL ROOM

The Nation

VOL. LI.—NO. 1325 THURSDAY, NOVEMBER 20, 1890. PRICE 10 CENTS.

WORTHINGTON COMPANY'S NEW SETS OF BOOKS.

Wharton's Wits and Beaux of Society. With preface by Justin H. McCarthy, M.P. Illustrations by H. K. Browne and James Godwin. In 2 vols., 8vo. English edition, 1890. $5.00.

An inexhaustible mine of anecdotes about Gramont, Chesterfield, St. Simon, Walpole, Selwyn, Duke of Buckingham, and others.

Wharton's The Queens of Society. With preface by Justin H. McCarthy, M.P. Illustrations by C. A. Doyle. In 2 vols., 8vo, English edition, 1890, $5.00.

Anecdotes and gossip about Lady Montague, Mme. de Sévigné, Mme. Récamier, Mme de Staël, La Marquise de Maintenon, and many others.

Wilson's Noctes Ambrosianæ. By Prof. Wilson. With steel portraits and memoirs of the authors, by R. Shelton Mackenzie, D.C.L. 6 vols., 8vo, including "Christopher North," a memoir of Prof. Wilson, from family papers and other sources, by his daughter, Mrs. Gordon. Cloth, $9.00.

Most singular and delightful outpouring of criticism, politics and descriptions of feeling, character and scenery, of verse and prose, of eloquence and especially of wild fun.

Napoleon. Memoirs of Life, Exile and Conversations of the Emperor Napoleon. By the Count de Las Cases. With eight steel portraits, maps and illustrations. 4 vols., 8vo, cloth, $6.00.

Napoleon in Exile; or, A Voice from St. Helena. Opinions and Reflections of Napoleon on the Most Important Events in his Life and Government, in his own words. By Barry E. O'Meara, his late Surgeon. Portrait of Napoleon, after Delaroche, and a view of St. Helena, on steel. 2 vols., 8vo, cloth, $3.00.

Napier's Peninsular War. By W. F. P. Napier. With fifty-five maps, plans of battles and five portraits on steel. 5 vols., 8vo, $7.50.

The most valuable record of that war which England waged against the power of Napoleon.

Gray. The Works of Thomas Gray, in Prose and Verse. Edited by Edmund Gosse. With portraits, facsimiles, etc. 4 vols., 8vo, cloth, gilt top, $6.00.

"Every lover of English literature will welcome the works of Gray from the hands of an editor so accomplished as Mr. Gosse."—*London Athenæum.*

Don Quixote de la Mancha. Translated from the Spanish of Miguel de Cervantes Saavedra by Motteux. With copious notes (including the Spanish ballads), and an essay on the life and Writings of Cervantes by John G. Lockhart. Preceded by a Short Notice of the Life and Works of Peter Anthony Motteux by Henri Van Laun. Illustrated with 16 original etchings by R. de Los Rios. 4 vols., 8vo, cloth, $6.00.

Gil Blas of Santillane. Translated from the French of Le Sage by Tobias Smollett. With biographical and critical notice of Le Sage by George Saintsbury. New edition, carefully revised. Illustrated with twelve original etchings by R. de Los Rios. 3 vols., 8vo, cloth, $4.50.

Taine (H. A.). History of English Literature. Translated by H. Van Laun, with introductory essay and notes by R. H. Stoddard, and steel and photogravure portraits by eminent engravers and artists. 4 handsome octavo volumes, cloth, white labels, $7.50. The same in 2 volumes, cloth, white label, $3.75.

Browning (Elizabeth Barrett). Poems. The most satisfactory American edition issued, printed from excellent type on paper of superior quality; with introductory essay by Henry T. Tuckerman. 3 vols., 8vo., gilt tops, $5.25.

Rotteck (Chas. Von, LL.D.). The History of the World. A general history of all nations in all times. New edition revised. Illustrated with numerous full-page engravings. 4 vols., large 8vo, cloth, gilt extra, $7.50, half morocco or half calf, $15.00.

W. Heimburg's Novels. New uniform edition. With photogravure illustrations, 8 vols., half morocco, $10.00.

Lazarillo de Tormes. By Don Diego Mendoza. Translated by Thomas Roscoe. And GUZMAN D'ALFARACHE. By Mateo Aleman. Translated by Brady. Illustrated with 8 original etchings by R. de Los Rios. 2 vols., 8vo, cloth, $3.00.

Picturesque Ireland. Descriptive and Historical. With fifty full-page engravings on steel from drawings by W. H. Bartlett, and an account of its cities, towns, mountains, waters, ancient monuments, and modern structures, by Markfield Addey. 2 vols., 4to, cloth extra, gilt edges, $10.00.

These two handsome volumes will make the reader better acquainted with the picturesque features of the "Emerald Isle" than any work that has ever preceded it.

Cyclopædia of the Arts and Sciences. Botany, Zoölogy, Mineralogy, Geology, Astronomy, Geometry, Mathematics, Mechanics, Electricity, Chemistry, etc., etc. Illustrated with over 3,000 wood engravings. 1 vol., 4to, cloth extra, $6.00; sheep, $7.50; or in half morocco extra, $10.00.

This Encyclopædia is more than a first-class book of reference; it is a library of popular scientific treatises, each one complete in itself.

Old Spanish Romances. *English Edition,* including Don Quixote, 4 vols.; Gil Blas, 3 vols.; Lazarillo de Tormes, 2 vols.; Asmodius, Bachelor of Salamanca, Gonzales, in all 12 vols., 8vo, cloth, $21.00. The same 12 vols. in half rox., gilt top, $24.00.

"This prettily printed and prettily illustrated collection of Spanish romances deserve their welcome from all students of seventeenth-century literature."—*The Times.*

No. 63, Town and Country Library.

A SQUIRE OF LOW DEGREE.

By LILY A. LONG.

'A Squire of Low Degree' is by a new American novelist, whose work shows rare talent. The scene is laid in the Northwest. The leading motive of the book is a peculiarly noble form of self-sacrifice.

12mo. Paper, 50 cents; cloth, $1.00.

Volume XVII. International Education Series.

Edited by WILLIAM T. HARRIS, A.M., LL.D., Commissioner of Education.

ESSAYS ON EDUCATIONAL REFORMERS.

By ROBERT HERBERT QUICK, M.A.

12mo. Cloth, $1.50.

Only authorized edition of the work as rewritten in 1890.

FROM THE PREFACE.

"As the book is likely to have more readers in the country of its adoption than in the country of its birth, I have persuaded my friend, Dr. William T. Harris, the United States Commissioner of Education, to put it into the International Education Series which he edits; so the only authorized editions of the book are the English edition and the American edition published by Messrs. D. Appleton & Co."

EARLSWOOD COTTAGE, REDHILL, SURREY, ENGLAND, 28th July, 1890.

For sale by all booksellers; or any book sent by mail on receipt of price.

1, 3, and 5 Bond St., New York.

SALE EXTRAORDINARY

RELICS OF

GEN. GEO. WASHINGTON.

Estate of Major Lawrence Lewis, last surviving executor of the Est. of Gen. Washington (and his Nephew) also the Estate of his son, Lorenzo Lewis, of Clarke Co., Virginia.

By order of H. L. D. Lewis, Administrator of the Estate of Mrs. Lorenzo Lewis, Dec'd. To be sold Wednesday, Thursday, and Friday, Dec. 10, 11, and 12, commencing at 3 o'clock each evening, at the Auction Rooms of Thos. Birch's Sons, 1110 Chestnut St., Phila., Pa.

This is the most important sale of the belongings of Gen. Geo. Washington ever held in this country, and we may say the last that will ever be held, as it includes all the relics kept by the Family, the balance having been sold to the Mount Vernon Society some years ago. In this collection will be found Washington's Personal Account-Books wherein he has enumerated with his own hands the various items of money expended from time to time, and for what purpose. His Original Autographic Survey-Books, his Original Ledger of Mount Vernon Distillery and Fishery, with his vouchers throughout of his Secretary's (Tobias Lear) correctness of the accounts.

The collection of documents and letters is extraordinary as well as of the greatest interest, containing his Autograph List of Slaves, on eight folio sheets; his List of United States Loan certificates; his Prophetic Letter in relation to the Abolition of Slavery; his letter to Lawrence Lewis mentioning what he has left him in his will, and numerous Autograph Letters, Deeds, Releases, Surveys, Plans of Towns, Estimates, and in fact all his private papers which were kept by his executors in settling his estate, together with their original Letters Testamentary. The Personal Belongings consist of his Punch Bowl of Rose China and Silver Ladle; his Secretary Candlesticks, which shed the light to write his letters; his Mantel Clock, Music Books (the score of which he drew and words in his handwriting); about seventy five pieces of elegant Cut Glass, China Cups and Saucers; Indian Pipe presented to him by Indian Chiefs; his Books, and a great variety of other articles.

The sale will also embrace the Library of Lawrence Lewis and of Eleanor Parke Custis, Washington's adopted daughter, also Martha Washington's Family Bible, with her Autograph in three places through the Book, and Nellie Custis's Piano and Piano Stool, both masterpieces of Carving in Mahogany. Catalogues mailed on application after November 20, when they will be ready for distribution.

Parties residing out of the city desiring to inspect the collection before they are opened to the view of the general public can do so by addressing the Manager of our Book Department, appointing a day for that purpose. THOS. BIRCH'S SONS,

1110 Chestnut Street, Philadelphia, Pa.

BOOKS IN THE FOREIGN AND ANCIENT LANGUAGES. } Subscription to foreign periodicals. Facsimile British Authors. Catalogues on application. CARL SCHOENHOF, 144 Tremont St., Boston.

MACMILLAN & Co.'s NEW BOOKS.

Now Ready. With Numerous Illustrations. 4to, cloth, gilt, $3.50.

GLIMPSES OF OLD ENGLISH HOMES.

By ELIZABETH BALCH, author of 'An Author's Love.'

With numerous Illustrations. 4to. Cloth, gilt, $3.50.

Just Published. Sir Samuel W. Baker's New Book. Cloth, extra gilt, $3.50.

WILD BEASTS AND THEIR WAYS.

REMINISCENCES IN ASIA, AFRICA, AND AMERICA.

By SIR SAMUEL W. BAKER, F.R.S., etc., author of 'Albert Nyanza,' etc.

With numerous Illustrations. Large 12mo, cloth, extra gilt, $3.50.

Uniform with 'Oxford.' By Andrew Lang. 12mo, cloth, $2.00.

STRATFORD-ON-AVON.

FROM THE EARLIEST TIMES TO THE DEATH OF SHAKESPEARE.

By SIDNEY LEE.

With Illustrations by Edward Hull. 12mo, cloth extra, $2.00.

Now Ready. 12mo, cloth, $1.25.

F. MARION CRAWFORD'S NEW NOVEL.

A CIGARETTE-MAKER'S ROMANCE.

By F. MARION CRAWFORD, author of 'Mr. Isaacs,' 'Sant' Ilario,' etc., etc. 12mo, cloth extra, $1.25.

"Never has Mr. Crawford done more brilliant realistic work than here."—*N. Y. Tribune.*

"It is a touching romance filled with scenes of great dramatic power."—*Boston Commercial Bulletin.*

THE GREEK WORLD UNDER ROMAN SWAY.

Forming a sequel to 'Greek Life and Thought.' By the Rev. J. P. MAHAFFY, M.A., Professor of Ancient History in Trinity College, Dublin. 12mo. *Just Ready.*

Temple Library. New Volumes.

THE POETICAL WORKS OF THOMAS LOVELL BEDDOES.

Edited, with a memoir, by EDMUND GOSSE. With etchings by HERBERT RAILTON. 2 vols., cloth, $4.00. Large Paper Edition, post 8vo, $7.00.

Just published. Small foolscap 8vo, bound in half cloth, cut or uncut edges, 40 cents.

POCKET VOLUME OF SELECTIONS FROM

THE POETICAL WORKS OF ROBERT BROWNING.

Small Foolscap 8vo, 40 cents.

New and Complete Edition. 12mo, $1.75.

POETICAL WORKS OF MATTHEW ARNOLD.

With portrait. 12mo, $1.75.

*** This edition is uniform with the one-volume complete editions of Tennyson and Wordsworth.

NEW BOOKS FOR CHILDREN.

By LEWIS CARROLL, author of 'Alice's Adventures in Wonderland.'

Author's Edition.

THE NURSERY ALICE.

Containing 20 colored enlargements from TENNIEL'S illustrations to 'Alice's Adventures in Wonderland,' with text adapted to Nursery Readers by LEWIS CARROLL. 4to, colored cover. $1.50.

SYLVIE AND BRUNO.

With 46 Illustrations by HARRY FURNISS. 12mo, cloth, $1.50.

"A charming book for children. The illustrations are very happy."—*Boston Traveller.*

Mrs. Molesworth's New Book. 16mo, $1.25.

THE CHILDREN OF THE CASTLE.

By MRS. MOLESWORTH, author of 'Carrots,' 'Herr Baby,' etc., with illustrations by WALTER CRANE. 16mo, $1.25.

4to, Bound in Half Vellum, $11.00.

THE FINDING OF WINELAND THE GOOD.

The History of the Icelandic Discovery of America. Edited and translated from the earliest records of ARTHUR MIDDLETON REEVES. With phototype plates of the Vellum MSS. of the Sagas. 4to, bound in half vellum, $11.00.

THE

MYOLOGY OF THE RAVEN

(Corvus corax sinenatus.)

A Guide to the Study of the Muscular System in Birds. By R. W. SHUFELDT. With numerous illustrations. 8vo, $4.00.

A MANUAL OF PUBLIC HEALTH.

By A. WYNTER BLYTH, M.R.C.S., L.S.A. With colored plates and numerous illustrations. 8vo, $5.25.

Nature Series. New Volume.

ARE THE EFFECTS OF USE AND DISUSE INHERITED?

An examination of the view held by Spencer and Darwin. By WILLIAM PLATT BALL. 12mo, $1.00.

THE

SCIENTIFIC PAPERS OF JAMES CLERK MAXWELL,

M.A., LL.D., D.C.L., F.R.S. Edited by W. D. NIVEN, M.A., F.R.S. With steel portraits. 2 vols. 4to, $25.00.

AN INTRODUCTION TO SOCIAL PHILOSOPHY.

By JOHN S. MCKENZIE. 8vo, $2.60.

Science in Plain Language Series.

ASTRONOMY; SUN, MOON, STARS, Etc.

By WILLIAM DURHAM, F.R.S.E. 12mo, 50 cts.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 20, 1890.

The Week.

THE currency scheme (known as the "interconvertible bond") which, it is said, Secretary Windom is considering as a possible feature of his forthcoming report, has been mooted several times since the close of the war. It proposes that the Government shall make a new issue of bonds bearing a very low rate of interest, say 2 per cent., and sell these to the public at par, and that whenever thereafter the depositors shall want to have their money back, they can get it by simply passing the bonds back to the Treasury—the interest to stop when the reëxchange is made, and the process to be repeated *ad libitum*. The principal objection to the plan is, that it creates a permanent national debt, and to some extent engages the Government to find profitable employment for the money of the people. It is true that 2 per cent. is a very low rate of interest, but it is also true that six or seven hundred millions is now invested in Government bonds at about 2½ per cent., counting the premium that the bonds command in the market. This 2½ per cent. is the rate that investors are willing to accept when they get a satisfactory security running not more than seventeen years. For a bond running indefinitely, 2 per cent. would be an attractive investment. It would absorb an immense sum of money, and the question would immediately arise what to do with it to make it earn its own interest If it is locked up in the Treasury, it produces contraction at once—that is, it produces the very condition which the interconvertible bond was intended to prevent or allay. But the Government has no use for money except to pay its own current obligations and its funded debt as the latter matures. It cannot buy railroad securities with the proceeds, nor can it invest in bond and mortgage, as savings banks do. It can do nothing but keep the money till the bondholders call for it. For these reasons, which every banker and business man will appreciate, we think that the interconvertible-bond scheme will prove a failure, whether recommended by Secretary Windom or not.

Mr. W. D. Foulke, Chairman of the Civil-Service Reform League's Executive Committee, has addressed a letter to Robert P. Porter, Superintendent of the Census, which puts that functionary in a very unpleasant light. Mr. Porter had taken the high ground that a national census could not possibly be partisan, but that a police census taken in New York might very easily be such, and probably was such. Mr. Foulke very pertinently asks why a national census may not be partisan when its chief officer refused to have the census-takers chosen by the civil-service rules, but insisted that they should be selected by partisan "boss" methods. The heinousness of this method of taking a national census was made all the more glaring by the fact that the Republican national platform promised an extension of the civil-service rules to all branches of the public service where it was applicable. To no branch of the service could it be more applicable than to the national census, where accuracy is the first requisite. No census can be of any value unless it commands public confidence. It may serve for the mere purpose of apportioning members of Congress, but that is a small part of the information that we look for in such a work. We expect to find in it statistics of every description, which shall serve for business men to make calculations upon, for Congressmen and public speakers and journalists to appeal to, and for historians and scientists to build upon. With subordinates of the best training and of proved fitness, errors will creep into such a work, but they will be small and will not impair confidence in the work as a whole.

What sort of riff-raff was gathered up by Porter for this immense and costly work may be learned by one example. There is no reason to suppose that the census-takers in Indiana were worse than those in the country generally, since they were all chosen by the same method, the Republican Congressmen being allowed to make patronage and loot of the whole body. The *Civil-Service Chronicle* and the *Journal* of Indianapolis gave us some account of these interesting people last June. The Supervisor of the Census for Indiana selected Mr. Merrill Moores, an active politician and a member of the Republican City Committee, to take charge of the work in Indianapolis. Mr. Moores naturally gave the jobs to the party workers. The work was so shockingly done that Mr. Moores himself cried out against it, and declared that some of his appointees had turned out miserable failures. Out of forty compositors working in the *Journal* office twenty were missed by the census-takers. "The trouble," said the *Journal*, "grows out of the inexperience of enumerators and slipshod, unfaithful performance of duty on their part." Exactly so. You choose a parcel of ward "heelers" to do a work requiring education, character, and experience, and then complain of them for slipshod, unfaithful performance of duty.

The official figures of the Pennsylvania election afford an interesting study. They show that Pattison had a clear majority of 222 over all candidates, and a plurality of 16,554 over Delamater. At the same time, Pattison's total vote was about 3,000 smaller than that of the Republican candidate for Lieutenant-Governor, and over 4,000 smaller than that for the Republican candidate for Secretary of Internal Affairs. While the Republican vote this year is 78,000 smaller than that cast for Harrison in 1888, it is 35,000 larger than that cast at the last election for Governor, in 1886. In fact, it is the largest vote which the party has ever cast for a candidate for Governor. The vote for Pattison is the largest vote ever cast for a Democratic candidate for either Governor or President, being 18,000 larger than the vote cast for Cleveland in 1888, and 94,000 larger than that cast for the Democratic candidate for Governor in 1886. The total vote cast for all candidates, including Prohibition and Labor, is 69,000 less than that cast for all candidates in the last Presidential election, and nearly 109,000 greater than that cast in the last election for Governor. Delamater ran about 20,000 votes behind the other Republican candidates.

While it is very plain that nearly all the sworn statements of expenditures during the campaign, which the candidates at the last election in this State are filing under the Corrupt Practices Law, are more or less direct violations of the spirit of the law, they are still not entirely valueless. They show several things very clearly, one of which is that the practice of assessing candidates is pretty general by both parties throughout the State. Moreover, all the candidates are minute and exact in giving the sums spent for postage, railway fares, and the like, but in every instance in which a large sum has been disbursed, the amount is put down as a lump payment to a campaign committee or organization. One candidate for the Assembly, Mr. Mase of Dutchess County, declares that he paid $819.15 in getting elected. As the salary of the office is only $1,500, it is difficult to see how Mr. Mase is going to be able to pass the winter at Albany without being out of pocket. His case is typical of many others, for one of the most striking things brought out by these statements is the proof they furnish of the widespread craze for office at any price.

An amusing difficulty has been created by the sworn return of his expenditures filed by the Democratic candidate for Congress in the Thirty-third District, Mr. Bunting. He declared that he had paid $750 to the Democratic County Committee. The Chairman and Treasurer of the Committee says he never received more than $500. Mr. Bunting says he paid the other $250 to the Secretary of the Committee, Mr. Weatherwax. The latter says he did receive some money from Mr. Bunting, declines to remember the precise amount, and asserts that he paid it over to the Treasurer of the Committee, who declares that he never received it. The matter is likely to get into the courts for settlement unless somebody's memory is made more definite by some means or other. We should advise Mr. Bunting to keep close upon the track of Mr. Weatherwax, until he finds out precisely where that $250 went to when it was supposed to be in transit from the hands of the Secretary to those of the Chairman and Treasurer. This business

of accounting strictly for campaign funds is a new one among campaign workers, and it is not surprising that some of them should get into complicated states of mind in trying to execute it.

Every additional statement of election expenditures which is filed by a Tammany candidate confirms the fact, already sufficiently disclosed, that the "assessment" evil flourishes with slight check under Gov. Hill's Corrupt Practices Act. The statements filed on Thursday of last week by Mayor Grant, John J. Gorman, Tammany candidate for Sheriff, and James M. Fitzsimons, Tammany candidate for City Court Judge, show that each of them paid an assessment of $4,000 to Tammany Hall as the price of his nomination. The Mayor rather ingeniously disguises the payment in his case by dividing up the amount into items for printing and circulating of "pasters" and documents, but the others reveal the payment openly. The statement of Col. Fellows confirms the previous view that the regular assessment for a Tammany Congressional nomination was about $1,000. The Colonel gave $150 of his amount to the Voorhis Democracy, thus disclosing the proportionate size of the return which Tammany made to that speculative organization for its "endorsement" of the Tammany ticket. The assessment on candidates for the Assembly seems to have ranged from $150 to $500, and on candidates for Aldermen from $100 to $200, according to the ability of the victims to pay.

An estimated table of Tammany's total receipts through "assessments" upon candidates, assuming that there has been no falsehood or evasion in the sworn statements, shows the following results:

Mayor	$4,000
District Attorney	4,000
Sheriff	4,000
County Clerk	5,000
Comptroller	2,500
President of the Board of Aldermen	2,000
Superior Court Judge	10,000
City Court Judge, two candidates	8,000
Coroner (not yet filed)	2,000
Civil Justices, two candidates	4,000
Congressmen, six candidates	6,000
Assemblymen, twenty-four candidates	7,500
Aldermen, twenty-four candidates	3,500
Total	$62,500

The price which Judge McAdam paid for the Superior Court nomination emphasizes the well-known fact that Tammany has for years obtained a higher price for its judicial nominations than for almost any other within its control. The long term and the high salary which pertain to the more important judgeships are considered sufficient reason for this. It has happened frequently in the past that as much as $25,000 has been paid for a Superior or a Supreme Court nomination. In fact, the "assessment" evil has always assumed its most extreme as well as most dangerous form in reference to judicial nominations. Nothing but explicit legal prohibition either to levy or pay any price for the nomination will suffice to break up the practice.

The banquet to ex-Senator Thurman of Ohio at Columbus last Thursday, on the occasion of his seventy-seventh birthday, was a merited tribute to a man who is highly honored throughout the country, as well as in the State where he has spent nearly his whole life. It was essentially a tribute to robust integrity, for that has been the distinguishing characteristic of the man, and the general recognition by the nation of his high qualities evoked by the occasion should go far towards compensating him for the ingratitude which the Democratic Machine in Ohio has more than once shown toward him of late years when it had a Senatorship to dispose of. It was natural and proper that the honors of the evening should be shared by ex-President Cleveland, who embodies the same sturdy qualities which characterize Mr. Thurman. It was inevitable that the speeches should take their tone from the recent great victory of the principle for which Cleveland and Thurman stood two years ago; and the ex-President's remarks upon the new Republican doctrine regarding "cheapness" illustrate afresh the absurdity of the position which the party has assumed.

The following interesting despatch comes from Kansas City:

"J. A. McKay, the Farmers' Alliance candidate who was elected Judge of the judicial district composed of Barber and Comanche Counties, Kansas, never studied law, never was admitted to the bar, and never was in a court in any official capacity. His Alliance will send him to Ann Arbor to study law for sixty days and prepare himself for the bench."

But how can his Alliance do this for him without expelling him after his studies are completed? Under its rules and regulations lawyers are excluded from membership because of their unfitness to promote the public welfare. Resolutions have also been adopted repeatedly by the Alliance declaring that farmers alone should be elected to fill judicial positions. Sixty days' study of law, therefore, while it might not make a farmer enough of a lawyer to unfit him, from the Alliance point of view, for the bench, would certainly unfit him for a member of the Alliance. Why "poison" his mind with sixty days' study of what is sure to be bad for him as a promoter of public interests? If precedent is wanted for putting Mr. McKay upon the bench in the present condition of his legal knowledge, it can be found in this city. We have eight or ten police justices on the bench here, each drawing a salary of $8,000, who were in that condition when they were put there, and have remained in substantially the same condition ever since.

It is not the tariff issue alone on which prominent Republican newspapers at the West insist that their party must back down. The Force Bill also is recognized as a case of kicking against the pricks. "The McKinley Bill," says the St. Paul *Pioneer Press*, "has cost us a majority in Congress. The Lodge Elections Bill, if its passage is insisted upon, is more than likely to cost us the Presidency." Referring to a report from Washington that it would not be surprising if the bill should be quietly abandoned, the Omaha (Neb.) *Bee* says: "Undoubtedly that course would be heartily approved by a very large majority of the Republican party. Whatever may be said in defence of legislation of this kind as an act of justice to a large body of the people who are deprived of the franchise, and therefore are not properly represented in Congress, or indeed are not represented at all, the fact must be owned that the masses of the Republican party do not believe such legislation to be expedient, while many thousands of them hold the opinion that it would fail of its purpose. Under existing circumstances it is obviously the part of wisdom to allow the Election Bill to quietly die."

The attempt to call in question the validity of the McKinley tariff because of the omission of a paragraph in the engrossed copy of the bill submitted to the President for his signature, has attracted some attention abroad, where the McKinley Bill is regarded with greater interest than has perhaps ever before been bestowed on any enactment of Congress. The Berlin *Nation* recalls a similar accident in the passage of a military penal code for the German Empire in 1872, but there is really a vast difference between the two cases. In the German case there was also, it is true, an unintentional dropping of a clause from the bill as first drafted and as intended to be submitted to a vote; but the omission had occurred before the bill had gone to a second reading. The law was passed by the Reichstag, approved by the Emperor, and officially published in its erroneous form. The error was then discovered and was corrected in a characteristic manner. The Government announced in its official journal, in the following year (1873), that *by a misprint* a clause had been omitted from the law, which should read as follows—giving the version which the Government assumed that the Reichstag had meant to pass. So arbitrary a proceeding would never be tolerated in any country which possessed a valid tradition of constitutional or parliamentary government. The only proper way of correcting the error would have been for the Legislature of the Empire to pass a supplementary bill, or an amendment to the code, setting forth the correct tenor of the law. By the course actually pursued, the law officers of the Crown took it upon themselves, by a simple official rescript, to usurp legislative functions. One can imagine how promptly all parties in the British Parliament would lay aside their differences in a unanimous rebuke of any attempt to set so dangerous a precedent. So great, however, is the German docility, and so accustomed are the German people to acts of this kind, that they accept them as a matter of course. In the present instance it would seem that a law has been upon the statute-book for eighteen years without ever having been legally enacted by any competent authority.

The excitement in Europe over Dr. Koch's

discovery continues to increase, which is not surprising, considering that it promises the extinction, or at least great diminution, of one of the scourges of the human race. Medicine has for the last twenty years lagged behind surgery, and threatened the physician proper with the loss of a portion at least of his old pre-eminence, in the popular mind, over the surgeon. Bacteriology, however, seems now to promise a great renewal of his ancient fame, and to raise the bottle once more high above the knife. For even if the Koch discovery be only half as successful as it now promises to be, it opens up a field of possible remedy for some of the more serious human ills the importance of which it would be difficult to exaggerate. The bacillus as a cause of disease has been found out beyond question, and Dr. Koch's even partial success in destroying it in the case of consumption will of course infuse fresh energy and activity into the search for the means of attacking it in cancer and many other maladies. So that we may fairly expect the next ten years to be the most fruitful in the annals of medicine.

The European papers are indulging in much appropriate lamentation over the extinction, in the male line at least, of the glorious House of Orange—the House which produced William the Silent, and Maurice of Nassau, and William III. of England, and which won the Dutch Republic, foot by foot, both from the ocean and the tyranny of Spain. It has at last come to an end in the person of the present King, who has been pronounced hopelessly insane, and has consequently been deposed, his place being taken by a Council of Regency pending the majority of his daughter. No royal house in Europe—in fact, no existing European family—has had such claims on popular respect. It is the only one which, from its first appearance on the scene, has been associated with the cause of civil and religious liberty, and has defended it through good and evil fortune, in peace and war. It has given shelter and security to many of the greatest masters of modern thought—to Descartes, to Spinoza, to Jurieu, to Arnauld, to Bayle, to the French Jansenists and Huguenots, as well as to the English Puritans. It delivered England from the Stuart tyranny and confusion and discredit, and made a bulwark for the Protestant cause when Protestantism was the sole refuge of free thought and free speech in the world. To have it end in a lunatic is a melancholy commentary on the evanescence of all human greatness.

The usual parliamentary struggle in Denmark has begun with the presentation before the lower house of the budget for 1891 1892. The statement of the Minister of Finance estimates the income for that period at 54,889,874 kr. (say $15,100,000), and the expenditures at 59,166,508 kr. (say $16,300,000), leaving a deficiency of over a million dollars. Among the proposed expenditures are 1,000,000 kr. for the civil list, and 223,240 kr. for the appanages of the royal house. The interest on the public debt will amount to 6,866,280 kr.; 10,683 413 kr. is requested for the army, and 6,794,508 kr. for the navy. It is interesting to note that, while the railroads in charge of the State show a profit of over two million kroner, the telegraph system is run at an annual loss of over a quarter of a million. The items in the budget that will attract most attention and afford material for the hottest debate are those connected with the army and navy. In addition to the amounts already mentioned, 3,598,800 kr. is requested for fortifications around Copenhagen and for certain special needs of the army, and 500,000 kr. for the construction of new war-ships. The request for 400,000 kr. for an art museum in Copenhagen, to contain the collection of statuary recently presented by the brewer Jacobsen, will also doubtless meet with fierce opposition on the part of the Radical majority in the lower house.

The chief bone of contention between the two parties is, however, the question of the defences of Copenhagen and the increase of the army and navy. The Conservatives, bearing in mind Nelson's bombardment of 1807, insist upon the necessity of providing against a similar attack on the part of Germany, while the Radicals claim with equal obstinacy that Denmark's only safety lies in a policy of unarmed neutrality. In the meantime the royal will is executed by means of the provisional law, against which the protests of the majority are of no avail. How this strange conflict will terminate it is impossible to foresee. That it cannot last for ever is self-evident, and before many years some compromise will undoubtedly be made. The influence of Berg, the early leader of the Left, is undoubtedly on the wane, and his party are beginning to doubt the wisdom of Brand's motto in Ibsen's drama of that name, "All or nothing." The Ministry, too, have for several years shown a willingness to meet their opponents half way. Under a less popular king and a less honest and capable ministry, the people would long since have asserted their opinions by force of arms; but of such violent measures there seems at present to be no fear.

Parnell's political career may possibly be closed by the verdict of the jury in the O'Shea case. This catastrophe has long been impending. His prolonged and mysterious absences from London during the Parliamentary session have been a source of great anxiety both to his Irish followers and his English allies during the last two or three years. They have never felt certain that there might not come any day out of these dark places some damaging explosion. The anxiety would probably have been greater but for his peculiarities of temperament, particularly his great reticence, not to say secretiveness, and his general disposition to solitude and isolation. It is a little difficult, for this reason, to foresee how he will take this final blow. His leadership only covers the Irish party in the House. The English and Scotch have neither followed nor consulted him, but they will now find it difficult or impossible to act with him or stand up for him, even if the Irish are willing to continue to serve under him. But it is just possible the Irish may be willing to serve under him as a sort of defiance to English public opinion. They will not feel as much responsibility for his private morals as if he were a Catholic, and they may resent English indignation over his fall as a piece of hypocrisy. For the truth is that the English public, of the upper class at least, only resents these lapses from virtue on the part of a public man when they are found out by the complaint of the injured husband. They have condoned, and are now condoning, far longer and more persistent and more conspicuous wrongdoing than Parnell's, of a similar character, on the part of a prominent politician; but then it has not been dragged to light in a divorce court. It must be admitted, too, that the rule on which they act, that no public man shall be damaged by charges of this kind unless they are proved in court, has the merit of great convenience and decency as well as of fair play. It saves them from being deluged with filthy scandal during their electoral contests, besides saving innocent men from having their private lives laid bare every time they seek a seat in Parliament. But the Irish, who are very indifferent just now to the *convenances* of English political life, may refuse to acquiesce in this arrangement, and may assume a defensive-offensive policy in Parnell's behalf.

That Parnell's downfall will have much if any effect on the political situation is very unlikely. The "Irish question" is too old and well established to be dependent either for its continuance or seriousness on any politician's life or character. It has survived a great many leaders, and will doubtless survive Parnell. The Irish as a people have earned the appellation which a distinguished historian has bestowed on them of being "the most persistent of races." That is, they, like the French, display, as a community, qualities which their character as individuals does not lead one to expect. A score of things have occurred in the ups and downs of Irish agitation during the past century to lead the English public to believe that the eternal Irish bother was at last over, but the turmoil has always begun again, the Irish demand, after each collapse, rising higher than before, and the difficulties of the situation becoming greater. Dillon is very likely to take Parnell's place, in case the latter is deposed. He will not impress the British public as much as Parnell has done, but he will do, for the eighty-six votes will follow him as steadily as they followed Parnell, and it is these votes, and not Parnell, which make the trouble. There are among them, too, Mr. Morley said recently—and he appealed to all who had served with them in committees to corroborate his statement—at least six who in quickness of perception, in readiness in debate, and in capacity for business are the equals of every one in the House except Mr. Gladstone.

THE ORIGIN OF THE TROUBLE.

THE regularity with which Lombard Street goes into wild foreign speculations and loses its money is one of the striking phenomena of British history. Some people are still living to whom the present difficulties in London will recall the crisis of 1825. "All the gambling propensities of human nature," said the 'Annual Register' of the period, "were constantly solicited into action, and crowds of individuals of every description, the credulous and the suspicious, the crafty and the bold, the raw and the experienced, the intelligent and the ignorant, princes, nobles, politicians, patriots, lawyers, physicians, divines, philosophers, poets, intermingled with women of all ranks and degrees, spinsters, wives, and widows, hastened to venture some portion of their property in schemes of which scarcely anything was known except the name." The speculations of that period began with Mexican and South American mines, but they soon ran into the wider field of Government loans. "No sooner," says Professor Leone Levi, in his 'History of British Commerce,' "was it understood that the State of Peru had consented to borrow, than the utmost anxiety prevailed to lend. The contractors, with scrip in hand, had difficulty in checking the eagerness of a crowd of applicants. Portuguese and Mexican, Greek and Brazilian, Peruvian and Buenos Ayres loans were in equal favor, purchasers little knowing and caring less about the financial or economic condition of the States to whom such money was lent. The loans contracted between 1821 and 1825 amounted in all to £48,000,000."

This is a very apt description of what has been repeated half-a-dozen times since, and is especially descriptive of what has been going on during the past three or four years, not only in England, but on the Continent as well. The London *Statist* has kept close watch of the Argentine speculations, and has repeatedly raised the cry of warning, and has as often been censured by the great houses that were promoting them. The crisis which the *Statist* foreshadowed has come, but, fortunately, means have been found to save the great house of Baring, the principal offender, from suspension. Probably the steps taken for this purpose are sufficient to include all the other derelicts, for it would be idle and useless to stop the crevasse at one place only. Undoubtedly the $55,000,000 clubbed together will take care of everything. Undoubtedly it was necessary that the house of Baring should be saved, lest, as in the case of Overend, Gurney & Co. in 1866, the fall of one mammoth institution should carry down a multitude of others.

The South American speculations which have come to such a disastrous close have consisted chiefly of loans to governments, provinces, and cities, for every conceivable purpose, for railways, harbors, street paving, public buildings, school-houses, markets, tenement-houses, bridges, theatres, hospitals, boulevards, public squares, and drainage, besidesbanking and farm mortgages. They began as long ago as 1881. Prior to that time the Argentine Government proper had been a moderate borrower. It negotiated loans through the Barings to the net amount (*i. e.*, exclusive of conversions) of £19,169,000 between the years 1866 and 1889, besides a net amount of £7,455,000 through other houses, English and continental. In addition the Government had guaranteed the interest on railway capital to the amount of £1,382,390 per annum. The interest on the national debt proper was at the average rate of 4¾ per cent.

In addition to these there were loans to the separate provinces amounting in the aggregate to £20,148,836, all negotiated since 1882, all bearing interest at 6 per cent., and municipal loans to the amount of £18,201,056, all negotiated within the past three years and bearing interest at the average rate of 5½ per cent. Adding the capital sum of the railway loans to the Government, provincial, and municipal loans, the *Statist* foots up £100,000,000 of foreign borrowings by the Argentines, nearly all since 1882. But that is not the end. There is a mass of "insecurities," issued by Argentine companies at home, estimated by the Buenos Ayres *Standard* at $600,000,000 silver, plus $500,000,000 of land mortgage bonds, guaranteed by the Government, known as Cedulas. All this mountain of debt rested on a population of only four millions, and not the very best kind of population, although remarkably puffed up with a sense of their own importance, as people are apt to be when they have a rage for internal improvements which they are gratifying with the money of foreigners. The situation is very like that of our own Western States in 1837.

Of course such a situation could not last. Interest could not be paid except by further borrowing, and there must come an end to borrowing some time. Last spring we began to hear of negotiations for a fresh loan of ten millions sterling. The great houses, and especially the Barings, were eager to make this loan, provided the money should be left in London to pay the interest on past borrowings. But this did not suit the Argentines. They wanted the money "to go on with," but were told flatly that they could not have it. Then they talked about leaving half of it in London and taking the other half to go on with. While this sort of chaffering was in progress, the revolution in Buenos Ayres broke out, and it became pretty generally known that the head of the Government was a corrupt rascal, and that the local banks were rotten. Argentine securities fell on the London Stock Exchange, but not so much as might have been expected. The great houses could not afford to see a heavy decline. They were obliged to sustain Argentines, and to do so they had to sell Americans. This was in the month of August. The pressure on our market soon became serious. The *Statist* of October 25 says that this selling of Americans in anticipation of the Argentine crisis began in June, that "it caused a persistent fall, and that every fall, by augmenting differences and wiping out margins, compelled fresh sales."

In September, President Celman having resigned, the new Government was authorized to add a new issue of $60,000,000 of irredeemable paper to the existing stock of $260,000,000, although the premium on gold was 190 per cent. It became more and more apparent that if a new gold loan were made for any purpose whatever, the great houses would have to furnish the money themselves, since the public would not buy a share or a bond. On the contrary, the shopkeepers, the clerks, the country parsons, the widows, and the small speculators were selling at every favorable opportunity. As security for a new loan of $20,000,000 gold the Government offered to turn over the Andes Railway and its own claim on the Buenos Ayres Waterworks. Simultaneously the Government assumed the debts of the provinces and took over the property represented by the debts; but as the Government could not pay its own debts, this confession that the provinces also were bankrupt did not help matters. The situation became so strained in October that rumors began to circulate on the Continent that the Barings were in difficulties. These rumors were published in a Paris newspaper, and although the publication was ascribed to blackmail, it nevertheless obtained a certain amount of credence even in London, where the house of Baring has been a synonym for stability for more than a century. About ten days ago it was reported by cable that a large sum in gold had been taken in London for export to South America, and that the Bank of England had raised the rate of discount to 6 per cent. It is doubtful whether any gold was really sent to South America, for the cable now tells us that Dr. Plaza, the Argentine expert, who is now in London, is treating with the Barings and other firms regarding immense operations, involving a loan of £4,000,000, besides the settlement of the national, provincial, and Cedula loans, but that he has not yet formulated proposals acceptable to the financiers. This means that the great houses are still hovering about the corpse of Argentine credit, but are unwilling even yet to look facts in the face and to acknowledge that it is a corpse. The true cause of the crisis on both sides of the Atlantic is there.

THE REPUBLICANS AND SCIENCE.

WHEN the Republican party was founded thirty-five years ago, it either then, or very soon after, comprised the great bulk of the intelligent and educated men in the Northern States. It was not very long before it absorbed most of the teachers, the professors, the ministers, the literary and scientific men in all parts of the North. It became par excellence the enlightened party—the party which had the mind of the country at its back, and from which all forms of mental activity were surest of encouragement and protection. The way in which, as soon as it became simply a tariff party, it hastened to lay aside this distinction and sacrifice all the higher civilizing agencies to money-

making for manufacturers, is one of the most interesting episodes in its history.

We cannot in an article like this follow step by step its conversion into an enemy of nearly all the instruments of knowledge and scientific progress. Suffice it to say that, in its rage for useless money, it taxed books, and pictures, and scientific instruments, in fact nearly every leading agency of intellectual advance besides steadily refusing to give foreign authors the benefit of copyright on their books, and to make any effort to secure for American authors similar protection abroad. An assembly of Gauchos from the South American pampas could not well have been more indifferent to or more contemptuous towards the claims of science and literature and art to recognition or encouragement than the Republican majorities in both houses for the last twenty years. Within that period experts in nearly every department of human knowledge have become a butt for the ridicule of Republican politicians, under the general name of "bookmen" or "littery fellers"; and scorn for their opinions has, during nearly the whole of that period, been one of the notes of party soundness.

In the McKinley Bill this scorn has found remarkable expression. The bill may be considered as the dying declaration of the party touching its attitude towards civilization, and as such its sincerity cannot be questioned. The branch of medical science known as "bacteriology"—that is, the study of the minute organisms to whose agency many of the worst diseases which afflict the human race are now known to be due—has during the past twenty years assumed immense importance, culminating in the discovery of Professor Koch which is now making so much sensation. The result of this of course has been to raise the microscope from the rank of a toy into the most valuable and important—we do not think this is an exaggeration—of all medical instruments. It occupies the highest place in pathological study and in the diagnosis of the most serious diseases. One has only to ask the first doctor one meets about its uses, to conclude that there is no product of human ingenuity more important to human welfare, that no civilized government could do too much to encourage the multiplication of microscopes and diffuse their use, for through their agency the humblest worker in the remotest village may light on some fact or indication of the utmost value to the scientific explorers of the highest rank. Well, this precious instrument the Republican party has for years been taxing *45 per cent.* ad valorem—that is, every American who has bought a microscope for the past twenty years has had to pay nearly one-half more for it than it would have cost him without the interference of the Government.

This was bad enough, but when McKinley came to look over the tariff this year, after the great importance of the microscope to humanity had been fully demonstrated, he determined to increase this tax by raising it to *60 per cent.*, so that a microscope which can be had in Germany for $94 would now cost here $150.40. This increase was made, too, in the teeth of a touching appeal read to the House by Mr. Fitch of New York, from Dr. Northrup, the eminent pathologist to the New York Foundling Asylum. Dr. Northrup further added that, to procure an oil emersion lens costing in Germany $80, he had to pay here at the custom-house $112. We must extract textually what he said about another instrument necessary to microscopic investigation, called the microtome:

"Hermann Katsch of Berlin makes an instrument called microtome, for cutting infinitely thin sections of shavings from the surface of a piece of an organ of the body hardened in alcohol. Herr Katsch is the only man in the world who makes this particular variety of the instrument. To prepare a section thin enough for careful study under the high powers of the microscope, this mechanism is necessary. To get this microtome from the Custom-house, I had to wait two weeks and pay a duty of 40 per cent. on its factory price.

"The celebrated Dr. Koch of Berlin published a report of the Cholera Commission, conducted under the auspices of the Government. At most, twenty men in this country could require this work, and they must needs pay 25 per cent. duty to get it from the Custom-house after paying in publisher's price and freight. What use would this report be to these scientists? To aid them in maturing methods of recognizing the disease when it appeared on shipboard in our harbors; to devise means to suppress it; to protect the country.

"It was to the expert work of one such scientist that the city of New York must give its gratitude that a certain steamship just developing cholera among its steerage passengers was detained at Quarantine, and the city escaped overwhelming infection.

"For Koch's report he paid 25 per cent. duty and never received anything from the city or Government."

Not content with the attack on the microscope, McKinley increased the duty on mathematical glass instruments from 45 to 60 per cent. ad valorem. Everybody knows the importance of glass tubes in laboratory work; well, the brave McKinley increased the tax on them from 40 to 60 per cent. Every one knows the value of telescopes in astronomy and navigation. McKinley has increased the duty on them from 45 to 60 per cent. His keen protective eye also fell on "raddle," a substance used in polishing lenses for microscopes and telescopes, so he put the duty on that at $1.50 per ton. What rate per cent. this is we are unable at this moment to say, but nobody but an ignorant barbarian would have taxed it at all. Every one knows the value of spy-glasses on shipboard. McKinley has raised the tax on them from 45 to 60 per cent., and to prevent cheap navigation he has raised the tax on compasses from 35 to 45 per cent. Glass disks for optical instruments he has also raised from 45 to 60 per cent. He has done the same thing by glass tubes for thermometers. Lest the scholar should burn the midnight oil too freely, McKinley has raised the duty on glass lamp chimneys from 40 to 60 per cent., and on the shades from 45 to 60. To prevent cheap worship of God, he has raised the duty on stone altars from 20 to 40 per cent. On eye-glasses, in order to hit the student in his tenderest point, he has raised the tax from 45 to 60 per cent. On all lenses he has raised the tax from 45 to 60 per cent. On hydrometers and hygrometers, "as philosophical instruments"—mark the distinction—he has raised the tax from 35 to 45 per cent. On philosophical instruments of metal he has raised the tax from 35 to 45 per cent. Noting the use made of papier-maché skeletons in instruction in physiology, he has raised the tax on them from 30 to 35 per cent.

We might increase this list, but what would be the use? There is enough here to make any intelligent stranger ask whether it is possible that the men who did these things were really nineteenth-century Americans, or Gothic or Arab conquerors, playing tricks with a subject population whose civilization they despised and wished to hinder or destroy.

THE OFFICIAL EXPLANATION AT LAST.

AFTER an unusually long silence, Speaker Reed, who was the only person really competent to explain the recent disaster to the Republican party, has told to a Portland correspondent of the *Sun* exactly how the matter stands. When one reads the explanation, one is reminded once more of Columbus's egg. It is so simple that any one might have thought of it, and yet it remained a secret until the Speaker gave it out to the press. Here it is:

"You know that when we have a really big tidal wave on this earth, it is not one thing alone that brings it about. The sun and moon happen to be in just such a position in regard to the earth, and other conditions come in to help. In the same way this political tidal wave was caused by a peculiar conjunction of circumstances. For one thing, the Democrats began their campaign in the close districts on an average at least a month earlier than we did. Republican Congressmen had to stay in Washington until the last moment, and in such a campaign as this a month's start meant a great advantage to the other fellows. Then the course of many manufacturers was to the great disadvantage of the Republican party. After the Tariff Bill was once passed and they had obtained just what they needed and wanted at the hands of the majority in Congress, what did many of them do but turn around, and, for the sake of a little temporary advantage, help to set the people into a panic about the McKinley Bill. Again, in hundreds of cases the drummers were, intentionally or unintentionally, missionaries to preach Democratic doctrine. They went all over the country with their stories of advances in prices that were to be made next week or next month on account of the McKinley Bill. But I am inclined to think that the most important factor in the result of this election was the women of the country. It is the women who do the shopping, who keep the run of prices, who have the keenest scent for increased cost. They heard in every store the clerks behind the counters explain how this article or that could not be sold hereafter at the former price because of the McKinley Bill; they went home and told their husbands and fathers, and their stories had a tremendous effect at the ballot-box."

Now, what are all these admissions but admissions of the incompetency of Republican legislators, including Mr. Reed himself, who led the majority in the House and guaranteed the success of the McKinley Bill? In the first place, it must have been known to the Speaker, and to many if not most members of the majority, that the McKinley Bill would raise prices. In fact, it was a matter of common rumor in all the newspaper offices of the country that the raising of prices was the chief object of the bill. If it did not raise prices, how was it to benefit the manufacturers, and enable them to pay higher wages and keep out

foreign goods? There is no occult virtue in a tariff. Its mere existence on paper does not benefit the community. It has to be an *opus operans*, that is, a tariff that works by enabling good Americans who have things to sell to get more for them than they would get if there were no tariff.

In the second place, Mr. Reed's personal experience of manufacturers and dealers must surely have prepared him for their readiness to get a "temporary advantage" when they can—that is, to watch the market and put up prices the moment they think the market will bear the advance. He must have noticed this disposition even around his own home from his earliest boyhood. The only way to prevent this, and to give the better element in the storekeeper's character a chance to assert itself, would have been to insert in the bill a clause forbidding the prices of articles affected by it to be raised before a certain date. He ought not to have relied, as he has relied, on the better angels of the manufacturers' nature, to keep prices down till the Republican party was ready to have them go up. He ought to have helped to protect these men against their own weakness by positive statutory prohibition.

Thirdly, let us ask, in no carping or unkindly spirit, how was it that the Speaker, with his knowledge of the world, expected the drummers to stop "going round the country" and talking about the bill, or, as he expresses it with pardonable bitterness, "acting intentionally or unintentionally as missionaries of Democratic doctrine"? Drummers are proverbially a migratory and loquacious class. There is no corner of the country to which they do not penetrate, and they let their tongues rattle about everything they can think of and especially about prices. Was there a word said to them by the Speaker or any one else, impressing on them the duty of treating the effect of the McKinley Bill on prices as strictly confidential? Not one, as far as we know. This effect was the subject of prediction and denunciation in all the Democratic and Mugwump papers for six months before its passage. The Speaker must have known that the drummers would hear of it, and blab about it to their customers. Very few of them, indeed, confine their newspaper reading to the *Tribune*. They read all sorts of papers in their long journeys in the train, and are the last men in the world to be relied on to keep secret anything about prices which will help them to get orders at an advance. We do not defend their conduct towards the Republican party at this crisis. We simply say that it was folly to expect anything better from them.

Another class which has disappointed the Speaker is the women. It appears that he did not foresee, when he was pushing his bill, that the women would go shopping after its passage, and go home and tell their husbands and fathers that prices had gone up in consequence of the bill. Now, how, in the name of common sense, could he have expected anything else? Was there one word in the bill, was there one word uttered in debate or on the stump, even by Mr. Reed himself, warning the women to stop shopping, or not to chat with clerks in stores about prices, until after the election? Did any one warn them of the probable political effect of their telling their fathers and husbands and brothers of the increased cost of articles of household use? Mr. Reed knew that women, as well as drummers, were talkative. He knew that they, as a rule, did the household shopping. He knew that they lived in relations of close confidence with their fathers and husbands, and got from them nearly all the money they handled; and yet he made not the slightest provision, either in the bill or in his rules, for the mischief their gossip might work.

The sum and substance of his explanation is, that if the manufacturers had not taken a mean advantage of the bill to raise prices suddenly; if the drummers had not told storekeepers that prices were going to be higher in consequence of the bill; if the storekeepers had not told the women, and the women in turn had not told their husbands and fathers—then the Republican party would never have been defeated at the polls. Why not, however, produce the blanket explanation which will cover the whole ground, by saying that if the bill had never been concocted, or pressed with diabolical and yet crackbrained persistency and blindness, the party would still be in a majority? This would have also the merit of relieving the drummers and the women from their present heavy load of responsibility.

BALLOT-REFORM IN THE ELECTIONS.

In thirteen of the States which took part in the recent elections, ballot-reform laws were in force, in a few cases for the second time, and in the remainder for the first time. From all these comes the same report of satisfactory results. There are a few complaints about unnecessary complications in the details of the law in some States, and it is noteworthy that nearly all of these are in reference to laws which are defective applications of the Australian system. More complaints are heard, in fact, from the working of the New York and Connecticut laws than from all others combined, and these two contain provisions which are to be found in none of the others, and which were added to them to meet the objections of professional politicians who refused to accept the new system without them.

The States which voted under the new system for the first time in a general election were New York, New Jersey, Maryland, Indiana, Minnesota, Missouri, Wisconsin, Tennessee, and Washington. Those which used it for the second time in such an election were Massachusetts, Rhode Island, Connecticut, and Montana. Ten of the thirteen laws provide for a single blanket ballot for each voter, upon which are printed the names of the candidates of all parties. Under one of these, that of Missouri, the voter indicates his choice by striking out the names of all candidates save those for whom he wishes to vote; under nine, those of Massachusetts, Rhode Island, Minnesota, Wisconsin, Tennessee, Indiana, Montana, Maryland, and Washington, he indicates the candidates of his choice by placing a mark after their names, or at the head of a group in cases where party grouping is allowed. The Indiana and Maryland laws provide a stamp for the purpose. The other laws simply provide pencils. Under the New York, New Jersey, and Connecticut laws each party is provided with a separate ballot. The New York law requires each of these ballots to be folded separately, and those not used to be deposited in a box provided for the purpose. The Connecticut and New Jersey laws require no accounting for unused ballots, and permit the distribution of official ballots outside the polling-places. The New York law is the only one of the thirteen which provides for the use of a general "paster" ballot, and which uses the stub or coupon attachment for the official ballots.

From no State are more enthusiastic reports of the successful working of the system received than from Indiana, which has one of the best and most thorough applications of the Australian method to be found in this country. The newspapers of all parties, with scarcely an exception, echo the verdict of the Indianapolis *Sentinel*, that the "election was altogether the quietest, honestest, and most satisfactory ever held in the State," that "the 'floaters' generally stayed at home," that "the 'trusted men with the necessary funds' cut no figure worth mentioning," and that the "law worked liked a charm and has ushered in a new and better era in the politics of Indiana." A system which can accomplish a reform like this in Indiana, whose elections have hitherto been the most corrupt in the Union, and which were made famous in the last Presidential election by the "blocks of five" exposure, needs no other test to have its efficacy established. Summing up the reports from Wisconsin and other Western States, which, like it, tried the new system for the first time, the Milwaukee *Journal* says: "The popular approval of the system wherever it has been tried shows that it is a valuable one, and one which will reduce to a minimum the abuses which have grown up on our political methods." From Massachusetts, Rhode Island, and Montana, after a second trial of laws equally as thorough and excellent as these Western laws, come unanimous reports that the system is more heartily approved and more completely successful than on the first trial.

In every instance, under the blanket-ballot provision, the voter must use some intelligence in the exercise of the right of suffrage, must be able in some way to distinguish the candidates of his choice. He has succeeded in doing this so easily and satisfactorily in ten States that no serious complaint is heard. In Massachusetts, Rhode Island, Minnesota, Montana, Tennessee, Wisconsin, and Washington, the names of candidates are arranged in alphabetical order, and the voter must be able to read in order to mark his ballot; yet no complaint comes from those States. Even in cities like Boston, Providence, St. Paul, Minneapolis, Milwaukee, and Memphis, the system works smoothly and there is no complaint that

voters are disfranchised. There is provision made in nearly all these laws for aid to illiterates who take oath that they cannot read. Far less harm is shown to come from that provision than from the New York "paster" and separate party ballots.

The plain fact about the New York, New Jersey, and Connecticut laws is, that they were amended by the enemies of a secret and honest ballot for the express purpose of preventing such a ballot. Gov. Hill's contention has been that thousands of voters in our larger cities would be disfranchised under a law which required so much intelligence on the part of the voters as these ten successful laws mentioned above demand for their operation. He opposed the blanket ballot, even with the names of candidates arranged in party groups, and would only sign the Saxton bill after the "paster" and separate-ballot provisions had been substituted. All our troubles and annoyances on election day came from these provisions. They are certain also to be the basis upon which trickery and bribery at the polls will be attempted in future elections. Neither the New Jersey nor the Connecticut law can be said to belong to the Australian system. They simply provide for the furnishing of ballots at the public expense and for the isolation of the voter while preparing his ballot. They undoubtedly accomplish much good in securing more orderly elections, and in preventing bulldozing and espionage at the polls; but beyond that they do not count for much as reform measures. The Connecticut law is the poorer of the two, and it is mainly to its slipshod and inadequate provisions that the present post-election muddle in that State is due.

It is the opinion of careful observers of the working of the new laws that they were of perceptible assistance in securing the recent defeat of Republican Congressmen on the tariff issue. There were gains of Democratic Congressmen in every one of the thirteen States which have these laws, aggregating forty in all of them. If there had been such a law in Ohio, the manufacturers in McKinley's district who have been reducing the wages of such of their workmen as voted the Democratic ticket, would never have known whether they voted it or not. No such persecution is reported in any of the States with ballot-reform laws. It is significant that loud demands are heard in Ohio since election for the enactment of such a law there. Similar demands are heard also in Illinois, Pennsylvania, Michigan, Maine, Alabama, and in fact in nearly every part of the country in which the reform has yet to be adopted.

THE FUTURE OF FOOTBALL.

Football is obviously gaining in popularity, and bids fair soon to become an established national sport. A few years ago it was played only in two or three of the leading colleges; now it is established in all the colleges and in the preparatory schools. Moreover, it is getting a hold outside the college circles; athletic clubs in the cities have their elevens; and every year the game attracts a larger and larger audience from the miscellaneous public. The combination of discipline, individual skill, and brute strength which it calls for; the splendid fierceness of the game; the element of personal combat, which delights the savage instinct lingering in the breasts even of the most civilized among us—these qualities account for its growing popularity, and promise a vogue even wider than it now enjoys. There would be little rashness in predicting that within ten years we shall have in the great cities professional elevens, like the professional baseball nines, and that thousands will gather to shout themselves hoarse at the exploits of hired rushers and backs.

This prospect suggests some questions as to what will be the quality of the game when it is no longer exclusively in the hands of the gentleman amateur. It differs from sports like baseball and cricket in some important respects. In the first place, violations of the rules of the game are easy, and give distinct advantages to the side that practises them. Thus, if you violate the rules by running ahead of a comrade of yours who is carrying the ball, and harass the member of the opposing team who tries to tackle him, you help most effectively towards scoring. If a rusher "holds" his *vis-à-vis* in the rush line—*i. e.*, not merely blocks him by getting in his way, but grabs him and holds on—he enables his own half-back to get through so much more easily without being seized. This is "foul play," in the technical sense; and, unfortunately, there is also abundant room for foul play in the literal sense. If your opponent in the rush line is an effective player, it is a fine thing to disable him, by "winding" him, or gouging in the stomach, or strangling viciously when you tackle, or giving him a smart blow on the nose if you happen to know his nose is very sensitive (this illustration is from a notorious case). There is a constant suspicion by each party that the other side is trying to "lay off" its good players; sometimes the opposing rushers fall into regular fisticuffs, and in any game a brutal fellow has abundant opportunity to abuse its possibilities.

Further—and this is another distinguishing feature of the game—the foul plays, technical and literal, are very difficult to detect and prevent. When the ball is put in play, there is a confused mass of running, rushing, blocking players, with heads, arms, legs, heels intermingled; and it is impossible for any umpire to see more than a small part of what goes on. The unfair or brutal player has more than an even chance of escaping detection; and at worst, he will only be disqualified, and a fresh, unfatigued hand takes his place.

Given these peculiarities, and given also the extraordinary feeling which the college public, graduate and undergraduate, has about the success of the college teams, and it is easy to see why the game, even in the hands of the gentleman amateur, tends to degenerate into a competition of underhand play and of "slugging." Not infrequently it is tacitly understood that the referee is to close his eyes to fisticuffs, and to let the opposing rushers fight it out to their hearts' content. To such a pass had the sport come a few years ago that the Harvard Faculty prohibited its undergraduates from engaging in intercollegiate matches, and removed the prohibition only when certain changes were made in the rules with the design of removing the objectionable features. The most important of these changes was the addition of a second umpire or referee, whose special duty it is to watch the players; an acknowledgment of the absence of honor among gentlemen which gives the strongest evidence of the temptations to unfair play in the game. The immediate result was some improvement; but the improvement was not great, and promises not to be permanent. The spirit of the American youth, as of the American man, is to win, to "get there," by fair means or foul; and the lack of moral scruple which pervades the struggles of the business world meets with temptations equally irresistible in the miniature contests of the football field.

Transfer these conditions to contests between professional athletes, before the sort of public that now goes to the baseball games, and the development is not likely to be in the direction of moderation. There is so much of the savage left in the average citizen that nothing draws like a prize-fight; and if we permitted gladiatorial shows, they would be enormously profitable. If football reaches the stage in which baseball now is, it will be the slugging matches that draw, and the managers will respond to the demand. Possibly in the end its brutalizing effects will become such that, like the prize-fight, it will have to be prohibited by law. Meanwhile, the game grows apace; and the world is treated to the curious spectacle that the one absorbing question for the graduates and undergraduates of two great institutions of learning is whether eleven Yale boys can beat eleven Princeton boys at football on Thanksgiving day.

TARIFF PROBLEMS IN SPAIN.

The existing tariff laws of Spain date back in their main outlines to the revolution of 1868. Some advance out of the ancient fiscal barbarities had been made by amendments to the customs laws enacted in 1849, and other changes were proposed in a parliamentary report of 1855, and in an administrative report of 1865. A decree bearing date November 22, 1868, had put an end to the old differential duty on goods brought in foreign bottoms. But it was the triumph of the revolution that brought about sweeping tariff reforms in the revenue laws of 1869-70. The maximum duties had been at the rate of 50 per cent.; they were lowered to 30 per cent. More than that, the fifth article of the bill provided for a gradual reduction of even the latter rate, after periods of six years, until a rate of 15 per cent. should be reached. Finally, in 1883, came the so called law of raw materials, greatly lowering the duties on some forty classes of imports used in manufactures. With this step, the movement for free trade seems to have spent itself, though the negotiation of seven or eight

commercial treaties, under the same impulse, should also be reckoned in.

But the Conservatives were steadily opposed to carrying out the fifth article. They were in power when the date came for the first reduction to take effect, that is, 1875, and at once passed the law of June 17, of that year, suspending the application of the offensive article. To repeal it was their ultimate purpose, but the political whirligig brought in Sagasta again, under whose administration a bill was passed, July 6, 1882, repealing the suspension, and putting the first reduction into effect. By the terms of the same bill the second reduction was to be made in 1887, and the final one in 1892. But as the fatal date drew near, so much opposition was displayed to the enforcement of the law, the protectionist sentiment of the country having risen rapidly, that the Liberals themselves were forced to suspend the article in their turn, which they did by the law of August 5, 1886. At the same time the whole tariff question in all its bearings was referred to a Royal Commission, to be appointed before 1890, to take the entire matter into consideration.

This Commission was appointed by a royal decree, October 10, 1889, and was specifically charged with investigating the probable effect of the second reduction called for by the famous fifth article, the wisdom of renewing the commercial treaties which expire in 1892, and the question of commerce with the colonial possessions. Named before the fall of the Liberal Administration, this Commission naturally had a majority of sympathizers with the Liberal policy; yet the progress of its discussions shows that its recommendations are nevertheless to have a strong protectionist color. Even Señor Moret, who, as one of Sagasta's ministers, had advocated measures tending to greater freedom of trade, is found voting for the most extreme measures of protection. The Commission is in session as we write, but there can be no doubt that it will recommend to the Cortes the repeal of the fifth article, the denunciation of the commercial treaties, and the entire exclusion of any foreign flag from the commerce between the mother country and any of her colonial ports.

This last point, the commercial relations of Spain with her colonies, is one which has given no end of trouble. The good old way was to hit the colonists both going and coming by prohibiting them from sending their goods to Spain in foreign bottoms, on the ground that the trade was essentially the coasting trade, and yet compelling them to pay duties just the same. However, for a long time now the customs laws have made discrimination in favor of colonial imports. For example, sugars coming from the Antilles were dutiable, under the law of 1869, at only half the rate applicable to those coming from foreign countries. The persistent demands of the Cubans at last secured them even better treatment, a law of 1882 providing for gradual reductions on Cuban exports until all of them but tobacco should be admitted free in 1892; and the process being hastened in the matter of sugars by a law in 1884 exempting those from all duties. In respect to freedom of navigation, however, the colonists have not fared so well. At present, the trade between Spain and the colonies is effectively reserved to the Spanish flag by means of a differential duty laid upon goods brought in foreign bottoms. Under the law of 1882, by which all duties are to be abolished in 1892, the trade is to be regarded as coasting trade, and so exclusively to be carried on in Spanish ships. The Cuban member of the Royal Commission referred to made strenuous efforts to obtain a recommendation of free navigation, but his proposal was overwhelmingly voted down.

Our own concern with the attitude of the Spanish Government in regard to changes in its customs laws, has chiefly to do with our trade with Cuba. There is no doubt that Spain is ready to negotiate a treaty of commercial reciprocity with the United States. The personal organ of Premier Cánovas has recently so declared. The trouble is, as Mr. Blaine fully realizes, that the McKinley Bill, with its admission of sugar free, has pretty effectually kicked over the kettle of reciprocity fish. We have nothing to concede to Cuban products now, except in the case of tobacco, and there is no likelihood that a treaty based upon that article alone could get ratification in the Senate. There remains the wonderful McKinley scheme of reciprocity: President Harrison can threaten to tax Cuban sugar unless the Spanish tariff on flour and petroleum is lowered. It may be partly in prevision of this move that Cánovas is getting ready to raise the tariff on flour and our other agricultural exports. Certainly the Spanish Tariff Commission is recommending great advances in the rates on those articles. Then Mr. Blaine's dicker will not gain him much. More likely, however, the Spanish Prime Minister will act in the spirit of his remark of some weeks ago, that it would be wise to wait and see if the people of the United States themselves approved the McKinley Bill. It is probably clear to his mind by this time that they do not, and that he need live in no fear of our tolerating increased taxation by Presidential proclamation.

SARDOU'S "CLEOPATRA."

PARIS, October 31, 1890.

THE great success which Sardou achieved with his "Theodora" induced him to try his hand at a "Cleopatra." I confess to have been much amused and interested by "Theodora." The plot was dramatic, many details were ingenious, and Sardou had a fine opportunity to display his great love for scenery. He gave us a real circus, real gladiators, Christians, Greek philosophers, a Gaulish prisoner, etc. There was more life in "Theodora" than is generally found in a play which is in reality a succession of great tableaux.

Before going to see "Cleopatra," I prepared myself by reading Shakspere's "Antony and Cleopatra." I had somewhat forgotten it, and I was struck by its beauty. At the same time, I could not help feeling all the while how little the play is fitted for the modern spectator —I mean the French spectator, supposing this ideal Frenchman to understand English in perfection, but to have all the habits of mind of the average Parisian playgoer. We have in Paris an expression which is very characteristic: you will often hear a person say of a play, "There is much style, much spirit in it, but *cela ne passe pas la scène*," which means that what is too refined in language, too delicate, too poetical in expression, is lost on those who are not on the stage—the public, in fact. I shall perhaps surprise you by telling you that for a long time the directors of our French Theatre hesitated to play Alfred de Musset's pieces; and the reason of their hesitation was the delicacy, the poetic character of the style, the delightful developments which do not help the action. It is only by degrees that the public became accustomed to "On ne badine pas avec l'amour," "Il ne faut jurer de rien," etc. Musset is perhaps the only French writer who had in him what I may be allowed to call a Shaksperian vein. In reading "Antony and Cleopatra," I fell constantly upon passages which had an extraordinary lyrical beauty, but which, being useless for the action and the development of the drama, were of the class of passages of which our average Parisian says, "Cela ne passe pas la scène." And, truly, such passages are perhaps better enjoyed when you read them quietly by your fireside, when you have them all to yourself, and when they can evoke in your mind's eye visions far more splendid than anything to be seen at the Opéra or at the Porte-Saint-Martin.

When you have gone through a certain number of operas and modern dramas, you care very little, in one sense, for mere scenery, for costumes, and for decorations. It makes me angry when I hear that in such or such a piece the public applauded a *décor*, much as I admire the extraordinary skill of our modern decorators. I would not go so far as to make war on local color, or on the adaptation of the costumes to the times. We could hardly nowadays see "Phèdre" or "Andromaque" played by actors and actresses in the costume of Louis XIV. But the local coloring, the costumes, the scenic illusions, are, after all, or at least ought to be, only what the frame is to the picture. A beautiful line, a dramatic situation, is more to me than all the false splendor of the stage. What do I care for the costumes or the decorations of an opera if the music is dull, confused, and colorless? The best operas of Mozart were represented first on the most humble stage.

On the other side, and to return to what I said about "Antony and Cleopatra," there is a certain sort of lyric poetry which is hardly fit for the stage. Action is the first element of the drama, and whatever retards it or draws off the attention from the matter in hand is a defect, from the theatrical point of view. A play may be perfect in a lyrical point of view, and produce little effect on a great public; it may be very ordinary in a merely literary point of view—that is to say, devoid of any of those traits which flatter a fine imagination or a delicate mind—and nevertheless be very effective if the struggle of the human passions is well represented, if the characters are clearly drawn and interesting. In the latter case, all the operatic splendor of the stage becomes useless; in the midst of a battle we do not look much at the landscape. Fine scenery is perhaps more necessary when the drama verges on lyrical poetry, when the action is slow, when the situations do not take our breath away.

The new "Cleopatra" belongs to neither of these two classes of dramas; it has not the lyric beauty of the "Cleopatra" of Shakspere, and it is not dramatic. It is a mere succession of tableaux. The scenery is so absorbing that

you have no time to pay attention to the words; and when, here and there, you are forced to follow the conversations, either by the shrill and hard voice of *Antony* or by the silvery and melodious voice of Sarah Bernhardt, you are struck by the unreality, if I may say so, of those conversations. There is no real life or movement in them. *Antony* and the Roman generals are vulgar, and talk very much in the same style as Parisians who meet on the boulevard. The local color is thus merely external. The costumes, the helmets, the swords, the bucklers may be all that could satisfy a member of the Academy of Inscriptions; but, when these Romans open their mouths, they are deplorably modern. If here and there you are agreeably surprised by some passage, you may be sure that it is a reminiscence, almost a translation, of Shakspere.

When the curtain is lifted for the first act, we are at Tarsus in Cilicia. *Antony* is on a throne waiting for *Cleopatra*. Nature has cut for Garnier, who plays the part of *Antony*, the profile which we see on the medals and busts of a Roman Emperor; it is his only title to play the part, as a more detestable actor could hardly have been found. If *Cleopatra* does not come to the interview, *Antony* will condemn to death all the inhabitants of Tarsus who sided with the murderers of Cæsar, and who are hanging about the stage in multicolor costumes. The moment approaches; *Antony* is impatient. *Cleopatra* was to intercede for the people of Tarsus; if she comes not, they are doomed. At the very moment when *Antony* is about to pronounce the sentence of death, we hear the sound of flutes, and slowly approaches the barge of *Cleopatra* on the waters of the Cydnus, filled with her slaves and her musicians. This charming scene is taken from Plutarch, and is perhaps the most striking in the whole drama.

Cleopatra descends with slow steps, supported by two maids. I had not seen Sarah Bernhardt for some time, and her appearance caused me real emotion. How changed I found her from that Sarah who played in "Hernani" and "Phèdre" and "Andromaque" at the French Theatre! Her slender and serpentine form has become more massive. She has kept the wonderful grace which makes a sort of music of all her movements; but her face, covered with paint, is no longer what it was. As *Cleopatra*, she had her face and arms stained brown; her head was covered—almost crushed—by an immense wig of auburn hair, falling in thick locks all over her shoulders. She wore one of those tunics, which I cannot describe, which seem to have been contrived only with a view to making her look as much as possible like a Tanagra statuette. Her voice is still melodious, but there is now in it a certain sort of plaintive monotony. In this first scene, where her object is to seduce the rude and violent *Antony*, the contrast of the softness of her voice with his hoarse organ had a charming effect. She brings him by degrees to her feet; she seduces him by the mere sound of that silvery voice which utters words it is not necessary to comprehend. Racine has a verse:

"J'oublie, en vous voyant, ce que je viens vous dire."

Antony might say to Sarah: "J'oublie, en écoutant, ce que je voulais dire." Her triumph is immediate, complete: "Veni, vidi, vici." *Antony* is enslaved; he accompanies *Cleopatra* to Egypt, forgetting Rome and the Triumvirs.

The second act shows us *Cleopatra* and *Antony* in Egypt, enjoying what Plutarch calls their "inimitable" life. This act is really a mere ballet, and what a ballet! During the Exposition of last year there was a street in Cairo, with small Oriental cafés, in which to the sound of a few instruments Oriental houris danced their national dances. We have ever since been pestered with the famous "danse du ventre"; even at the Opéra it has introduced itself, but in a mild form, as if it were ashamed of itself. Now we have it in "Cleopatra," in all its impurity. A sad spectacle! Fortunately for the great *Antony*, who sits, in a flowing gown, on a couch with his "Serpent of the Nile," some Roman generals arrive and bring him news of Italy. *Antony* is roused. *Cleopatra*, who wants to see him the master of the world, sends for his helmet, his sword, and his cuirass; she helps him to put on his war dress, and sends him to the battlefield.

In the third act we find her moaning and pining for her *Antony*. She is lying (it is to be remarked that throughout the piece Sarah is almost always lying on a bed) on a terrace which overlooks the Delta of the Nile, the distant pyramids, the dark line of the sea. The sky is full of stars. The Queen of Egypt is waiting for a messenger. We have here the famous scene of the messenger of Shakspere. Sarah plays it well. She shows a sort of childish femineity when she learns of the marriage of *Antony* with the "sweet Octavia." She cross-examines the messenger, and from the few words which she extracts from the terrified slave she concludes that Octavia is short, ugly, and stupid. This is the only humorous part of the play. A second messenger sends *Cleopatra*, with the Egyptian fleet, to Actium. We find her there, on *Antony's* bed, where she has been brought secretly, rolled up in a carpet. Hidden behind the curtain, she overhears the conversation of *Antony* with his generals; they all abuse her, and hope that she has not accompanied the Egyptian fleet. When *Antony* is left alone, she shows herself to him, and there naturally ensues a duo of anger and rage, ending in a duo of renewed and passionate love. I am obliged to pass over some details. The generals, for instance, told *Antony* that *Cleopatra* had taken a new lover, in the person of the general of the Egyptian army; to convince him of his error, the injured *Cleopatra* sends for *Cephren*, and tells him that he is accused of having raised his eyes to his sovereign. He must die. She offers him poison; he is ready to drink it, when the generous *Antony*, who has heard the conversation, interferes and saves his life.

The fifth act brings us back to Egypt again. *Cleopatra* has run away during the battle of Actium, with her fleet; *Antony* has followed her. She wished, says Sardou, to have him all alone to herself, conquered, unable to return to Rome. This last act is not written at all on the lines of history; but why should we care? All the public want is to see the asp bite Sarah. The asp is a live serpent, and we have heard much about its education; the papers have been full of it. On the whole, it must be confessed that we have been a little disappointed; the serpent is very small, Sarah merely puts him in a sort of pocket which is inside her gown. She dies, as she knows how to die, and we don't know what has become of the serpent. It is late, very late; we feel that Sarah requires some rest, as we do ourselves, though she has been lying on luxurious beds of every shape, during five acts. We must leave her. We have heard enough of vague, indistinct Arabic melodies, our eyes have been dazzled enough with colors in motion, we are drunk with sensations—and we have not preserved a thought.

DEMOCRATIC ASSUMPTIONS.

I.—Vox Populi.

London, October 17, 1890.

No constitution can exist or flourish unless there prevail among the persons subject to it certain beliefs or assumptions favorable to its existence. The maintenance of a theocracy involves the belief not only in the rule of some divine power interested in the government of the world, but also in the authority of some priesthood to expound the will of the Deity. An aristocracy will not long maintain its hold in any land where men do not believe in the inequality of mankind and in the hereditary transmission of character and capacity. A real monarchy needs for its support faith, if not in the divine right, yet, at any rate, in the necessary superiority and wisdom, of kings. Democracy forms no exception to the general rule: the popular constitutionalism, or republicanism, of to-day has come into being and retains its power because the peoples of the civilized world entertain certain beliefs—for example, the doctrine of human equality and the like—which, just because they are generally received, are, except here and there by the maintainer of a paradox, rarely defined and still more rarely questioned. Things not disputed are thought indisputable, and a dogma which no one disputes passes as an axiom.

In these letters I propose to state, in the character neither of an opponent nor of a eulogist, but simply of a critic, a few of the assumptions which lie at the foundation of the democratic creed as it prevails, at any rate in England; and, further, to show that, amidst the general disintegration of beliefs which is the marked feature of the age, the assumptions of the dominant political faith are being gradually laid open to dispute. They are, through the spread of knowledge and through the influence of patent facts, rendered doubtful not only in the eyes of thinkers, which is a matter of little immediate importance, but, what is a far graver thing, in the view of men whose conduct is guided by the current rules of average common sense.

Let me examine to-day the dogma which may be conveniently designated by the name of the *vox populi;* it is, in substance, that authority rightfully belongs to the voice of the people uttered through the mouth of the majority among the citizens.

Democratic institutions can flourish only in those countries whereof the inhabitants habitually respect the legally expressed will of the majority. Reverence, however, for the will of the majority, though defensible on grounds of expediency or of necessity, rests in the main on the belief that a majority is the organ for expressing the "will of the people"; and this belief, again, involves the assumption that on every matter of importance a distinct will of the people, or *vox populi*, exists, and can, by the use of proper machinery, be discovered. This doctrine, which exerts immense though hardly recognized influence, may be stripped of what I venture to call its mystical form and be reduced to a plain and prosaic shape. The belief in the authority of the majority assumes that on all issues which may demand public decision, the mass of the citizens entertain some one predominant opinion, and that, in favor of or against any proposition which can be submitted to popular judgment, there may be found a majority so overwhelming as to represent the virtually unanimous will of the nation. The expression "virtual unanimity," just because of its inaccuracy,

best expresses my meaning. No person capable of thought really believes that on any of the subjec s which divide nations into parties actual unanimity exists; debate or agitation involves dissent and opposition. But in popularly governed countries most people believe (and not without a show of reason) that on the political questions of the day it is possible to obtain from the citizens, not indeed a unanimous, yet a nearly unanimous, verdict.

That this is often the case no observer of politics or student of history can doubt. In 1789 there must have been among the privileged classes of France thousands who dreaded innovation; but we may fairly assert that the French nation demanded the convocation of the States-General. When the Seven Bishops stood on their trial, perhaps even when William landed at Torbay, the vast majority of Englishmen, or at any rate of those Englishmen who took any interest in politics, condemned the tyranny of James II., and were prepared to curb his power just as, nearly thirty years before, the vast majority of the nation hailed with frantic joy the restoration of Charles II. There were a minority of loyalists —if Mr. Lecky is right, a larger minority than most persons suppose—who wished to maintain the connection between England and her colonies. Yet every one feels that the declaration of American independence was rightly considered the fiat of a nation. In our own days, the expulsion of the foreigner from Italy was desired by the Italians with a feeling as like unanimity as can exist in a country numbering its inhabitants by millions. Pio Nono, it is said, as against the Austrians, entertained even to the end of his life the feeling of an Italian rather than of a Pope. Even in these cases, of which a score more might easily be given, of virtual unanimity, a dissentient minority really exists; but the majority is so large that the voice thereof may rightly enough be considered the voice of the nation. From the knowledge that a voice of the nation may have a real existence, the speculative defenders of democracy, and all men who take an active part in the conduct of popular government, assume its constant existence.

This assumption is shown by the whole language, and by the very "slang" of current politics. In England, or France, or America every politician of every school appeals to the will of the nation. In general he believes in perfect good faith that this voice speaks in his favor. If his party commands a majority, however small, the case is clear enough. If, as may happen, our Tory or Radical does not find that his party is supported by the greater number of votes, then he has recourse to one of two courses. If he is a man of singular coolness and temperate judgment, he admits that the nation has gone against him; but he is convinced that, by force of argument, agitation, and the like, he will soon obtain a real national verdict in support of his views. If, as is far more likely, he be a heated and headstrong partisan, he believes that the nation has been misled by intimidation, by fraud, or corruption, and would speak in his favor were its real voice allowed to be heard; or he asserts, sometimes with and sometimes without reason, that existing constitutional arrangements do not permit the true body of the citizens to pronounce their will. In all popularly governed countries, demands for an extension of the suffrage, or for a new distribution of seats, have in ninety-nine cases out of a hundred been stimulated by the bona-fide, though often quite groundless, belief of a minority, that, were the nation properly consulted, the views of the minority, which to them seem the views of all just and virtuous men, would be affirmed by that *vox populi* which is deemed to echo the voice of God.

This firm belief in the possibility of discovering the will of the people is witnessed to by a curious phenomenon which must strike every attentive student of French revolutionary annals. From 1789 up to the present day every French party—Monarchists and Republicans, Constitutionalists, Girondins, Jacobins, and Imperialists—have all asserted, and have, we need not doubt, all honestly believed, that they were supported by the true people of France. Defeat in representative assemblies and defeat at the ballot-box have been hitherto equally unavailing to shake this faith, which, like all true faith, is its own justification. The various devices by which minorities have persuaded themselves and tried to persuade others that they represented the nation, form a curious chapter of constitutional history. Sometimes it has been boldly assumed that a portion of the people, say the Parisian mob, more truly represented the nation than the chosen representatives of the country. On other occasions a faction in power has, under the form of a so-called plébiscite, submitted the question of such faction's authority to a popular vote under circumstances which made but one answer possible. Another resource has been to enact as a rule of constitutional law that citizens who on a given occasion did not vote at all, must be assumed to have voted in the way desired by the Government. This perverse assumption, which marks at least one of the polities which have been created by the ingenuity and destroyed by the restlessness of Frenchmen during the last hundred years, has the great merit of increasing a desired majority by the very fact that thousands, or it may be millions, of citizens are so indifferent, so hostile, or so terrified that they will not give any expression to their opinions. Hence abstentions from voting which are, or may be, meant as a silent protest against a proposed institution or policy, are so used as to support the very proposal which men who will not vote intend to condemn.

The simplest, however, as well as the most usual and effective method for insuring something like national unanimity, is to treat opponents as bad men, as aristocrats, as oligarchs, as traitors, or as malignants; as persons, in short, whose voice, whose vote, and whose wishes count for nothing. This monstrously unfair course is generally taken by partisans without any deliberate consciousness of its unfairness. This, at any rate, was so during the earlier stages of the great French Revolution. Every candid historian now knows that the French people were split into parties. It is also highly probable that in many cases the faction which obtained most power possessed the smallest number of followers. The Constitutionalists outnumbered the Republicans; the Girondins outnumbered the Jacobins; and the Terrorists were a minority of a minority. The matter, however, which deserves our immediate attention is that each and all of these factions entertained the firmest conviction of being the true representative of the nation. When France, with something like unanimity, execrated the Reign of Terror, Robespierre conscientiously believed that the "good people" of France was with him. Let it be noted, also, that this faith added to the bitterness of the conflict. The triumph at the elections or in the Assembly of an adverse party was a proof to their opponents of fraud, of corruption, and of wickedness. If the Jacobins could not command a majority in the Convention, this was proof to the Mountain that the majority of the Convention were knaves, who either corrupted or cheated the people.

That this mode of argument was unreasonable enough is clear to every candid critic. But this irrational way of reasoning flowed naturally, if not with absolute logical necessity, from the assumption that there existed a decisive will of the nation on the issues which divided politicians. This assumption was made by every party in the State; each party made it because each party felt that its moral authority depended on the support of a practically unanimous people. Every party assumed that, if properly appealed to, the people would express the will of the people with unmistakable clearness. The point in dispute was how that will was to find expression. The idea that no true voice of the people existed, and that the wishes of the nation were as much divided as were the wishes of politicians, was an idea which never occurred to the revolutionary statesmen of France, and which even now is most unwelcome to ardent democrats. It is unwelcome because the notion, if true, strips democratic government of its imaginative impressiveness. The awe with which a king was regarded vanished when kings were felt to be nothing more than magistrates who held a dignified office by an hereditary tenure. We may venture to assert that the halo which in many men's eyes still surrounds a republic, will vanish if ever it is felt that democratic government is merely government by majorities, and not government in effect by all the citizens of the State. The voice of a mere majority is, as regards its effect on the imagination, a very different thing from the august *vox populi*.

Yet in England, at least, it is every day becoming more and more apparent that the will of the nation may be, and often is, divided and uncertain, and that what is called the will of the nation, the voice of the country, and the like, is, and can be, in many instances, nothing more than the wish of a majority which may exceed by very small numbers the opposed minority. The circumstances which force this fact upon popular attention may easily be recognized by any one who looks ordinary facts in the face. The unanimity which has on special occasions characterized the sentiment of a nation is of rare occurrence, and is likely to occur less frequently than in past times. National unanimity is rare because it is created only by those great crises which arise when the fate of a country is at stake, as, for example, when a people rise to shake off a foreign yoke, when a land is threatened with invasion, or when the existence of a community is menaced by some sudden danger. Such crises must be exceptional events, and the more civilization advances, the more exceptional they are likely to become. During the growth of Roman power the total destruction of a city was a calamity which any conquered State might fear. The conquest of England by Spain in the sixteenth century meant a very different thing from the invasion of a modern State by a hostile army.

Nor is it only the infrequency of great crises which renders the predominance of one sentiment throughout the whole of a political society an uncommon event. Till recent times political societies were small, or, to speak more accurately, the "active citizens" (to use foreign terminology) who shared the public life of any State were few in number, and all belonged to a limited class. The electorate, for example, of England, in 1790, represented little else than the land-owners and the traders of the country, and was quite unlike the huge body of householders who to-day control the destinies of England. But it is far more likely

that a small body of men belonging in the main to one class of society should be influenced by the same conviction or passion than that a vast crowd, differing from one another in wealth, in education, and in prejudices, should on any topic of magnitude be swayed by a simultaneous feeling of enthusiasm, of dread, or of determination. We may well doubt whether, should a writer endowed with the rhetorical power of "Junius," or with the genius of Burke, reappear, he could have anything like the influence on the opinion of England exerted by the unknown author of the celebrated 'Letters,' or by the denouncer of a Regicide Peace. Knowledge and education, moreover, are fatal to unanimity; discussion necessitates dissent. It is hardly conceivable that in a country like England, where everything is now discussed, there will ever again exist that unanimity of political conviction which was, apparently at least, displayed by the English people on more than one occasion during the seventeenth and eighteenth centuries.

Diffusion of knowledge is, moreover, the spreading of light; but the more light is shed upon the details of history, the more clear it becomes that the unanimity constantly attributed by popular imagination to the wishes of a people has always been more or less fictitious. It is natural to say that England rejoiced at the defeat of the Armada, and it is probably true that the great majority of Englishmen rejoiced in the ruin of the Spaniard. But we may be quite certain that hundreds of English Papists saw in the destruction of the Armada nothing but the triumph of heresy. Historians who talk of the nation supporting Pitt in the war against France, or of the great Reform Bill having been passed in deference to the wish of the country, know well enough that there was in each case a minority, and in the second case a very influential minority, who condemned the policy which was supported by the greater part of the electors. To this we must add that, even at those supreme moments of national destiny when we are glad to imagine that all men felt alike, there always has been found a large body of easy-going persons who are in reality quite uninterested in the political contests of the day. What has hitherto been practically known only to students of history is now becoming common knowledge. The voice of the people, even when it speaks most loudly, is at best the voice of a majority; it is never anything like the voice of the whole people. The *vox populi* is, in short, to a great extent the creation of fancy; the will of a majority is, and is now seen to be, in many cases nothing but the voice of a slightly preponderating number of citizens.

In the facts I have noted there is, let it be observed, nothing which suggests that government by majorities is not, at any rate for the civilized States of to-day, the best form of government which has hitherto been invented. What the facts do suggest is, that the system of government in accordance with the will of the majority will need, as time goes on, to be defended exclusively on grounds of obvious expediency. Democracy will have to part with the dignity and impressiveness which have accrued to popular government from the belief that the decisions of a majority were always, or generally, divine commands uttered by the voice of the people.

AN OBSERVER.

Correspondence.

UNIVERSAL SUFFRAGE.

TO THE EDITOR OF THE NATION:

SIR: I desire to thank "C. A. W.," first for his courtesy, and second for offering a point of resistance which gives a refreshing change from perpetual preaching. He will please to remember that my object was to do in the case of universal suffrage what is occasionally necessary in matrimony—turn the best side outward of that which we cannot help. We are agreed that the mass of the people will take the moral side of any question where their private interests are not especially involved, and I think that the thousands who work for day wages and salaries are much more fitted to do this than the hundreds who are engaged in an eager chase after money, or who, having independent means, are less accustomed to personal sacrifice. It seems to me he does injustice to the Lancashire workmen. They *did* suffer from want of work, and therefore of wages, through the scarcity of cotton, and knew, or were told, that, if the Southern ports were forced open, cotton would be plenty; and yet they stood firm.

We are agreed, also, that while the masses may be counted on in morals, they cannot be in economics. But the inference I draw from that is, that they should not be asked to settle economical questions, but that everything should always be presented to them from the moral side. And the instrument for doing this is personality. The most powerful motor in the world has always been enthusiasm for persons, whether the person was Christ, Mohammed, or Napoleon. Even the dry science of finance would excite popular enthusiasm if identified with a man of pure and lofty character and proved ability. Now, the strongest characteristic of our political arrangements is that they aim to suppress personality in every possible way. Everything is done, by Democrats and Republicans, by majorities and minorities—or, rather, pluralities; by committees and commissions, caucuses and conventions. And yet Quay, Reed, Lodge, and McKinley will thrust themselves into men's mouths in spite of everything. Go among your acquaintances and see how the sparks fly at the mention of Blaine or Cleveland. Before, however, a man can under our system work himself into public notice, he has to do things which forfeit the respect both of himself and others, so that almost every prominent man is tainted in some way, and those who are not merely illustrate how powerless for good personality is.

Take the tariff as an example. McKinley is the accident of an hour—here to-day, gone to-morrow. The bill made him, not he the bill, which was reeking with the influence of the lobby. If his name is in the mouth of every man, woman, and child in the country, it is as that of some mysterious monster. Now, suppose that the Secretary of the Treasury, the official representative and guardian of the national finances, and of the vast interests behind them, were to stand up in Congress to give his views upon the tariff. How the eyes of the whole country would be turned upon him! None but a man of high honor as well as ability could stand the process to which he would be subjected. The weak ones would soon disappear, but by and by would come a man who was proof against attack, and then public opinion would do for him in finance what it did for Lincoln and Grant in war.

"C. A. W." thinks that, if the people showed energy and resolution in time of war, those qualities were also the cause of war and are likely to be so again. In the first place, given an imaginary line, with negro slavery and its consequences on one side, and the freest people in the world on the other, it may be doubted whether any government which ever existed could have prevented war. And yet I believe, and have always believed, that if we had had a previous series of Presidents and Cabinets who were real personal leaders, chosen by and responsive to the people, with a positive voice in policy and legislation, some expedient for avoiding the war might have been found. The trouble was then, as the danger is now, in demagogues forcing themselves to the front in spite of our elaborate checks and balances which suppress honest and able men, and deprive the people of their natural food for enthusiasm. Was there ever a people more peacefully inclined than ours to-day? If they are led into a quarrel, it will be because some Blaine or Reed, the scum of impure materials, and using the same arts which have so far served a purpose, misleads them with a false glitter of personality.

If we do not get the effect of universal suffrage and have not proper organization, asks "C. A. W.," where does the blame lie if not with the people? Can he see no difference between a spasmodic concert of action to arrest a horse-thief, or send relief in a catastrophe, and the contending with an elaborate political network which has been forming around them for a hundred years, which they do not understand and are powerless to deal with? It is just one of those economic questions which are beyond their reach, so long as they are without leaders. The legislatures, which are supposed to act for them, are not *their* representatives, but those of caucus politicians, and are, moreover, themselves in a state of chaos, and just as much in need of leaders; while the executives, who should do the leading, sit with both hands tied.

A real leader will have to make his appearance from the outside, and if he ever does, we shall see whether the people are competent for the work.

BOSTON, November 15, 1890.

GERMAN LUTHERANS IN POLITICS.

TO THE EDITOR OF THE NATION:

SIR: The result of the recent election has been studied and commented upon by every observer of public affairs, and the undoubted *causa efficiens* of the Republican defeat is found in the popular condemnation of the course pursued by the dominant party in Washington. This fact should not, however, divert attention from the side-issue which was presented in Illinois, and especially in Wisconsin, and which, though now a cloud no larger than a man's hand, may portend serious future danger to the country.

The appearance of the German Lutheran Church of the Northwest as a compact and united force in politics is an event of great importance, and justifies a closer examination of the new factor, with which legislators and statesmen, considering provisions for the future educational and intellectual development of our foreign population, will have to deal. It would be superfluous now to discuss the famous "Bennett Law," which contained several absurd and unwise provisions, and which should have been amended in any event. But the principle underlying the law, and which was attacked by the German Lutheran clergy, and especially the religious press under their control, with a bitterness and injustice scarcely paralleled in American political strife, is the

duty of an American State to provide for and enforce the *English* education of its citizens. This principle, which was denounced as "paternal government" and "undue interference with the rights of parents" (upon the ground, among others, that the German language was scarcely more foreign in this country than the English), has been assailed, and, so far as the last election was concerned, condemned, by a large majority of the voters of two important States of the Union.

It is an instructive inquiry to ascertain how this majority was made up. Reference is omitted to the Roman Catholics, whose opposition to the public-school system is well known, and who can hardly be called a new factor in politics. The organization which has been most important and active in the late contest, and which in many respects now first emerges into public view, is the "Evangelical Lutheran Synod of Missouri, Ohio, and adjacent States." This body, known and referred to as the "Missouri Synod" by German Protestants everywhere, has now, with its affiliated synods, a membership in this country of nearly a million souls, including about 2,000 clergymen and more than 2,500 congregations. It also controls about 1,500 parochial schools. Its centre of gravity is in St. Louis, Mo., where its chief founder and leader, Rev. Dr. C. F. W. Walther, resided until his death, about two years ago. He was a man of great theological learning and considerable general ability, albeit warped by many amusing sectarian prejudices, and his successors are his faithful disciples.

In home missionary work no church organization of this country has shown more activity and greater results. The poorly paid pastors of the Missouri Synod in the extreme Northwest are to-day spreading Christianity and at least the rudiments of culture among thousands of recent immigrants and others, with a self-sacrifice and a noble heroism worthy of the best days of Christianity; and the benefits which they are thus conferring upon this country are incalculable and should not be forgotten in the criticism of other features of their system. It is, however, not too much to say that the entire spirit of the organization is thoroughly un-American, being German—and German, not of the nineteenth, but, on the contrary, of the sixteenth century.

This spirit is shown in the literary productions of the official publication house of the Synod at St. Louis, Mo., better than in any other way. The statistics of this publishing house would be a great revelation to many of your readers regarding German-American literary activity. Not a book or a pamphlet is published there but shows the intolerant spirit which dominated the Lutheran Church for a short period in the sixteenth century. The theology of Luther, and in fact everything that he ever wrote, is treasured with a fetish-like worship, differing but little from the Roman regard for tradition, and it is carried so far that in the new great edition of Luther's works, in twenty-five quarto volumes (each about half the size of 'Webster's Unabridged Dictionary'), now publishing in St. Louis, the 'Colloquia' (or 'Table Talk') is published with such completeness that all puerile and filthy remarks are preserved among the gems of thought. Thus, with all reverence for the great reformer, his most devoted disciples seem to delight in pointing to the more vulgar features of his mind, and to furnish a treasure-house for his opponents and detractors.

A series of school-books, notably Bible histories, is published, wherein the artist of the nineteenth century represents the Deity according to the spirit of the sixteenth, as an old, rather benevolent-looking gentleman, with a full beard, dressed in a long, loose gown; and this conception is logically carried out in other books of the series. Perhaps the most characteristic proof of what I may call the un-American tendencies of this great body of citizens is given in their most popular book of devotion, to wit, the Bible, with prefaces, summaries, and final prayers for each chapter, by a few Lutheran court theologians of the year 1560, commonly known as the 'Altenburger Bibelwerk.' Of this work, in three volumes, large octavo, upwards of forty thousand copies are said to have been printed, and certainly a very great number is now used in the daily devotional exercises in the families of church members. I will quote a few extracts showing clearly the extent to which this book helps to make worthy American citizens. The summary to the tenth chapter of the Second Book of Kings, verses 18 to 36 (Volume i., St. Louis edition, 1860, page 518), is as follows:

"This is an example of a particular and princely virtue which pleases God and is rewarded with rich blessings—that Jehu slew all false prophets who had assisted in the idolatrous worship of Baal, and that he made the house of Baal a draught-house. For such action appertains especially to secular government: it should restrain idolatry with all seriousness and without any mercy (*ohne alle Gnade*). For since God's honor and the salvation of our neighbor are concerned, one should not be lazy or negligent about it. God will thereafter pay (*bezahlen*) for this by a happy reign. Thus Jehu reigned for twenty eight years, and his children to the fourth generation. The Papacy needs such a Jehu, even to this day, with all its establishments and monasteries, in which just as horrible (*greuliche*) idolatry is practised as was then by the priests of Baal (*Baalspfaffen*)."

From the summary to chapter xi., page 519:

"Then there is another example, how Jehoiada, the priest, brake down the house of Baal, slew all the priests of Baal, and restored the true worship which had been suspended under Athaliah, verse 18. Such works appertain particularly to government, if good fortune and success are to attend."

Page 525-526, chapter xv.:

"Let us learn that secular government commits a grievous sin if it does not restrain idolatry with vigor, even if it [government] be not itself guilty of personal idolatry."

From the preface to chapter xxi., page 536:

"If God punishes sin in high potentates, kings, princes, and lords, we may be very sure that he will not let it go unpunished in ordinary people, such as citizens and peasants."

This Bible is to-day the officially recommended book of devotion of the Synod, these sentiments have never been disavowed, and the quotations of equally scandalous matter could be multiplied, if necessary, indefinitely. It may be added that in the official journals of the Synod, and in the principal Teachers' Seminary at Addison, Illinois, until very recently the doctrine was taught that Christianity and the Copernican system of astronomy are incompatible, and that a genuine belief in the inspiration of Holy Writ required the acceptance of the Rev. Jasper's theory that "the sun do move," as well as the rejection of the entire science of geology. (*Cf.* Charles Dudley Warner's 'Studies in the South and West,' pp. 343, 344.)

It would be rank injustice to call these vagaries Lutheran, and thereby cast a reflection upon the great body of Evangelical Lutherans in this country, who are rightly proud of their church as being in many respects the most Biblical, liberal, and progressive, as well as the largest Protestant denomination. It would be interesting to trace the causes of so abnormal an intellectual development on American soil. Beyond doubt the late tariff of 25 per cent. on foreign books has had great influence. The enlightened works of modern German theologians being practically inaccessible to these Western clergymen by reason of the price, and (to their honor be it said) a scrupulous regard for private property, even in the absence of international copyright, preventing any pirating, recourse was necessary to the old books of the sixteenth and seventeenth centuries, which have been reprinted and have furnished mental and spiritual food to the members of this Synod. Nor would it be just to class the latter with the Roman Catholics in point of hostility to American institutions. The laity probably lay very little stress upon such theories as are illustrated in the above quotations, and the second generation begins to show that wholesome indifference to dogma which is so characteristic of modern active and enlightened Christianity. It was and is only natural that an organization with such a faith and discipline should bitterly oppose the principle underlying the Bennett Law.

A knowledge of English and a consequent access to English and American literature is all that is necessary as an antidote to this sectarian virus. The attempt to translate the Missouri Lutheran views into English has failed. The only English organ of the Synod, the *Lutheran Witness*, is a ludicrous example of Germanized English in respect to idiom and grammar. The Missouri Lutheran denomination dare not admit it, but it is a fact that their peculiar views and principles stand and fall with the German language.

This is the true explanation of the Illinois and Wisconsin elections, so far as the educational question is concerned, and it behooves political thinkers and legislators of all parties to take notice of the fact. That the English school will ultimately triumph in its struggle with superstition and fanaticism is certain. It is no less true that the great benefits to this country of the Missouri Synod's practical Christian work will remain, independently of any language; and for this reason every well-wisher of the Lutheran Church will hope to see the underlying principles of the Bennett Law speedily incorporated in the legislation of every State where the condition of affairs renders such a course necessary.

I am, sir, yours truly, ANDOVER.

NOVEMBER 10, 1890.

THE CENSUS AND THE VOTE.

TO THE EDITOR OF THE NATION:

SIR: There was a Presidential election in 1880; there was another in 1888. For the first time in the history of this country the electors, in *all* the States, were in 1880 chosen by the popular vote. But both in 1880 and in 1888 the five States of South Carolina, Georgia, Alabama, Mississippi, and Louisiana brought out a feeble and one-sided vote, from which no inferences as to population can be drawn. In the other thirty-three States, voting in 1880 and in 1888, the popular vote increased from the former to the latter occasion in the ratio of 1.0000 to 1.2621+. This denotes the increase for eight years. Multiplying this ratio by its fourth root, which denotes the increase for two years, we get a pretty near approach to the ratio in which the popular vote in these thirty-three States would have increased in ten years, namely, 1.0000 to 1.3378.

Now, according to the census of 1880, which is admitted to be fully reliable, the population of the thirty-three States which returned a fair

or nearly fair vote was 43,499,986—almost forty-three millions and a half. Multiplying this sum by the ratio 1.3378, the same States ought to contain in 1890 no less than 58,194,281 souls.

Some States, say Virginia and Kentucky, did not turn out fully in 1880; Maine and Florida were rather backward in 1888. Taking it all round, the contest between Garfield and Hancock was about as hot as that between Cleveland and Harrison; and, granting that the vote was brought out a little more fully in 1888 than in 1880, on the other hand, the number of unnaturalized foreigners must have been much greater in 1888, and each vote cast therefore represented a larger population than it did in 1880. All in all, the popular vote returned at the two periods is the best index of the growth in population, that is to say, in these thirty-three States.

But while from the increased Presidential vote we should credit these States with 58,194,281 souls, Mr. Porter could not find more than 53,947,361, a difference of 4,246,920. Assuming that his figures for the five "bulldozing" cotton States, for the new States, the Territories, and the District of Columbia are right, we must simply add these 4,246,920 to his aggregate of 62,480,580, making the true aggregate 66,727,500.

It is, however, very probable that the error outside of the thirty-three States first considered was proportionally as great as it was in these—that is, only 10,000 were counted for every 10,787. Adding 7.87 per cent. to the 8,533,179 found by Mr. Porter in the Cotton States, new States, etc., or 673,561 to the above figures, we have as a very likely estimate of the population of the United States (aside from the Indian Territory, Indian reservations, and Alaska) 67,401,061, or 67,400,000. L. N. D.

Louisville, Ky., November 3, 1890.

[If the true population of the country in 1890 is, as calculated by "L. N. D.," 67,401,061, the total increase during the decade must have been 17,245,278, or 34.38 per cent., and, deducting the gain from immigration, the rate of natural increase must have been 23.92 per cent. The apparent natural increase during the decade from 1870 to 1880 was at the rate of 22.78 per cent. Superintendent Porter estimates the omissions in 1870 at 1,500,000. Gen. Walker does not think that they much exceeded 500,000. If the former is right, the natural increase between the ninth and tenth censuses was at the rate of 18.90 per cent.; if the latter, it was at the rate of 21.48 per cent. It follows that if the population is now as large as "L. N. D." estimates it to be, the rate of natural increase in the last decade exceeds the highest estimate of the rate of that increase in the next preceding decade by about 2½ per cent. Such an acceleration in the rate of natural growth is, under all the conditions existing during the last ten years, so extremely improbable that nothing short of the clearest and most convincing proof would justify a belief in its having taken place. Such proof we do not think can be found in the facts cited by our correspondent.

The whole argument made by him rests on the assumption that the "contest between Garfield and Hancock was about as hot as that between Cleveland and Harrison," and that therefore, "all in all, the popular vote returned at the two periods is the best index of the growth of population." There is no way of certainly testing the truth of this assumption. Whether it is correct or not is a matter of opinion, and, within certain limits, of mere guess. Of the adult males in the United States in 1880, less than 73 in every 100 voted. If in 1888 80 in every 100 cast their ballots, there would be an increase of 10 per cent. in the vote cast, independent of any increase in population. A total vote equal to 80 per cent. of the adult male population is quite within the bounds of possibility. In 1880 the total vote in Indiana was equivalent to 94½ per cent. of the total adult male population. If 80 per cent. of the adult males voted in 1888, the total vote would have been proportionately 10 per cent. greater, and the census of 1890 would be approximately correct, for upon the assumption that the vote was proportionately no larger than in 1880, our correspondent finds that the population in 1890 is 5,000,000 (or 10 per cent. of the population of 1880) greater than the census office returns it.

Now, we do not believe that in 1888 80 per cent. of the adult males voted, and we feel confident that the census total of population is somewhere between 2,500,000 and 3,000,000 below the truth; but there are various reasons on the other hand for holding that the total vote in 1888 was proportionately larger than in 1880. In 1880, after the October elections in Ohio and Indiana, Democratic success in November became highly improbable. In the last few days of the canvass the betting men gave odds of two, three, or even four to one on Garfield. In 1888 there were no October elections. The betting was practically even up to the last. The result was close and doubtful until the polls closed

Moreover, the campaign of 1888 was the first Presidential election since the formation of the Republican party in which the tariff was the principal issue. Both parties were to common knowledge divided on the question. Everywhere there were Republicans who it was known intended to vote for Cleveland, and Democrats who were openly supporting Harrison. An element of uncertainty was thus brought into the canvass which made it possible to hope or fear great changes in the relative strength of the parties in States which in 1880 no one regarded as really contested. The number of States in which both parties had an object in exerting themselves to get out their full vote was thus much greater than in 1880. The Democrats in 1888 hopefully challenged Republican supremacy in the Northwest, and the Republicans were equally sanguine and energetic in the border Southern States. A vigorous assault compelled a vigorous defence, and in Maryland, the Virginias, Kentucky, Tennessee, Missouri, Illinois, Iowa, Michigan, Wisconsin, Minnesota, Kansas, and Nebraska the vote was proportionately much heavier in 1888 than it was eight years before. On the other hand, outside of the Cotton States, it was only in Maine, Pennsylvania, and Oregon that there was a hotter canvass in 1880 than in 1888. In Maine, in 1880, the Greenback movement made the State doubtful. Neither in 1884 nor in 1888 did the Pennsylvania Democrats make a canvass at all comparable in vigor and efficiency to those made in 1876 and in 1884. Oregon was in 1880 a doubtful State. The Republican majority at the June election of 1888 made it certain that the electoral votes would be given to the candidates of that party.

To a certain extent the size of the vote depends upon the efficiency of the organization of the parties; and whether those organizations are efficient or not in their turn depends, other things being equal, upon the amount of money at the command of the party managers. There is probably little doubt that the campaign chests of both the parties were much better filled in 1888 than in 1880.

A comparison of the results of the census of 1890 with those of its predecessors shows that it is defective; on the other hand, a similar comparison demonstrates that our correspondent's estimate is probably about as much above as the census figures are below the truth. The great difficulty of basing any safe estimates of the size of the population upon the votes polled at a particular election must always make that method of approximating the number of inhabitants very unreliable.—Ed. Nation.]

ONE EFFECT OF PENSION LAWS.

To the Editor of The Nation:

Sir: Some years ago, I was at a summer resort in the Alleghany Mountains. Not far away lived a man who used to make and polish canes which he sold to gentlemen who liked to carry away a memento of the place. On one occasion some ladies walked with the gentlemen in the evening to this man's cabin, where we sat and talked with a woman who was supposed to be his wife. On our return, we were told by the wife of our landlord, a lady well acquainted with the mountains and the neighbors, that this woman was not the wife of the cane-maker; that, however, she lived faithfully with him and no other, but they never had been legally married, for the following reason: The woman, when young, had married an old soldier of the war of 1812. He died, and his widow received his pension, but if she married again, it was discontinued, and so she neglected to have a legal marriage.

I tell this as an outcome of pension legislation. E. A. B.

Washington, Ga., November 6, 1890.

THE PHILOLOGICAL OBSCURANTISM OF ENGLISH NEWSPAPERS.

To the Editor of The Nation:

Sir: A critic in the *Guardian* for 1877, p. 1360, having come across the word *extravagate*, objected, that "such a verb . . . ought scarcely to pass, even in a writer who dates from New York." In reply to this stricture, I immediately sent the editor of that journal a letter, fated to be silently ignored, showing that the expression impugned had long enjoyed the sanction of English literature. Not only did I point out its use by Bp. Warburton, as cited by both Archdeacon Todd and Dr. Richardson, but I transcribed numerous quotations for it of my own collecting. Some of these, given at length, or indicated by references, here follow:

"We will return to our purpose, from whence we have *extravagated*." Rev. Dr.

John Donne (died 1631), *Ancient History of the Septuagint* (ed. 1633), p. 16.

"A Quakeress does not *extravagate*, when she engages in such an enterprize as that of attempting to reform the wretched inhabitants of a London prison." Robert Southey, *Sir Thomas More* (1829), vol. ii., p. 323.

"In general, this is a topic on which the moderns *extravagate*." Professor F. W. Newman, *Miscellanies* (1869), p. 105.

Bp. R. D. Hampden, *Bampton Lectures* (1833), p. 543 (ed. 1848).

Cardinal Newman, *Lectures and Essays on University Subjects*, p. 178 (ed. 1859); *Discussions and Arguments* (1872), p. 26; *Tracts Theological and Ecclesiastical* (1874), p. 136.

Rev. F. Oakeley, in *Essays on Religion and Literature* (edited by Cardinal Manning), Series II. (1867), p. 159.

Mr. John Morley, *Rousseau* (1873), vol. ii., p. 305.

I now pass to the substantive *scientist*, instead of which Professor A. De Morgan substituted *scientific*, tallying with *classic*, *eccentric*, *lunatic*, etc. Though it is still reprobated by some, any censure of it is quite on a par with Lord Macaulay's censure of *saturation*. It has been condemned repeatedly. In the *Academy* of September 19, 1874, Mr. Alexander J. Ellis, F.R.S., palming off fancy for fact, thought fit to denounce it as being, in its established acceptation, an "American barbaric trisyllable." With truly original notions of philology, he assumed that it was formed by adding *-ist* to *scient;* a word which I have, indeed, met with, though only as an adjective, in Lydgate, Bp. John King, and Walter Savage Landor. On the ground that *scient* could well be taken as a synonym of "man of science," "scientific man," he went on to propose its admission in that sense, while, however, retaining *scientist*, with the signification of an "adherent to scients." Something like what we have in this was anticipated by Coleridge, who, from antipathy to *influential*, as an alleged Americanism, experimented with *influencive* and *influensive*, in its place. For the rest, much at one with Mr. Ellis's fashion of etymologizing, *providential* comes from *provident+-ial*, and *Christ+-ian* is a resolution of *Christian*.

Before the days of *copyist*, we had, as an adaptation of the French *copiste*, *copist*, of which the elements are, ultimately, *copi-am+-ista*. Again, from *theoria*, a Latin adoption, we have *theorist*, presupposing *theorista*, which is made up of *theori-am+-ista;* from the parallel *oeconomia* we similarly have *economist;* and *epopeist* and *hygeist*, taken directly from Greek bases, are to be dissected in like manner. Antedating *theorist* we might have had *theorize*, which would, as its predecessor, have regularly stood, at least in accordance with Greek analogies, as its parent; and so *scientize*, "to devote oneself to science," had it existed, might have developed *scientist*. However, regard being had to history, and to the scientific rules of verbal composition exemplified above, it follows that *scientist*, to import "man of science," represents the factitious Low Latin *scientista*, which is to be analyzed into *scienti-am+-ista*, and (except by undue utilization of the participal base, *scient-*) can be analyzed into nothing else. The merging of the final *i* of *scienti-* in the *i* of *-ist* is an instance of a coalescence too familiar to require dilating on.

Unhappy as Mr. Ellis was in endeavouring to account for *scientist* etymologically, he was no less so in designating the term as "American." The same year in which he aimed to stigmatize it by the application of that epithet, a correspondent in your journal, vol. xix., p. 422, quoted Dr. Whewell as having suggested it in his *Philosophy of the Inductive Sciences*. In the first edition of that work (1840), we read, in vol. i., p. cxiii: "We need very much a name to describe a cultivator of science in general. I should incline to call him a *scientist*." To the best of my information, no countryman of ours is recorded to have countenanced it, in practice, before 1849.

But certain Englishmen, under the misguidance of Mr. Ellis, or of some other person or persons taken to be authoritative, or of mere whim, still impeach *scientist*, as being a grave violation of propriety. To move their spleen against it, of course they have, for the most part, only to be brought to believe that it originated in the United States. The scholastic abecedarianism requisite for the discovery that its structure is strictly normal and legitimate, is what they have still to acquire.

Within the last decade I have, on six several occasions, written to English newspapers in which I had seen the word reprehended as "a barbarous Americanism," and what not, and have stated, more or less briefly, in its defence, what I have stated above. But all was to no purpose, as I was pretty well convinced, beforehand, would be the upshot. Comprehending, as a matter of course, the peculiarities of the people among whom I have lived so long, I have felt no surprise that, in every case, the waste-paper basket has been deemed the fitting receptacle for my contributions. The last of these was addressed, a few weeks ago, to the *Daily News*, in the issue of which for September 20 *scientist* is spoken of as an "ignoble Americanism" and as a "cheap and vulgar product of trans-Atlantic slang."

Abundant observation has acquainted me with the prevalence, among the conductors of the British press, of the specific unscrupulousness which has been here instanced, namely, the election, where they have erred, to abet the diffusion of error, by stifling what is laid before them of a contradictory tenor. Simply for brevity, however, I have confined myself to the suppressions of the *Guardian* and the *Daily News*, typical specimens, respectively, of a high-class religious newspaper and a secular. As to the delinquencies which have been brought home to their editors, they can admit of but one explanation. The reputation of those editors for accuracy, especially where a topic of such general interest as our language is concerned, must be upheld, be the event what it may; and writers on their staffs are, accordingly, to be protected, by whatever measures, from the imputation of fallibility. To this end, as the readiest of all possible devices, what they have once put forth must remain uncontroverted; and, if it happens not to be the truth, why, so much the worse for the truth. The obvious comment on this is, that different ethics from those which are practically inveracious ought, surely, to be expected from the spokesmen of a nation that plumes itself on its hatred of mendacity.

As is well known, our characteristic deviations from the standard speech of Great Britain are admitted to constitute one of the grounds for the scornful aversion to us which Englishmen entertain so widely. At the same time, very few Englishmen have qualified themselves, to any notable extent, to speak as critical philologists. What with their dislike of us and their want of conversance with literature, the result, then, is, that any chance solecism of phraseology, or unfamiliar vocable, which they light upon is, too often, at once decided, by many of them, to be an Americanism. Nor, from its ministering to what it is esteemed so desirable to encourage, animosity, is the decision lightly to be revoked, though ever so clearly made out to be groundless. A demonstration to this effect is, therefore, certain to be resented, in some way or other, above all if its author is one of ourselves. More than this, Englishmen, as I have learned from nearly half a century of intercourse with them on their own soil, not only, as a rule, are difficult to persuade that an American can have a decent acquaintance with the English language, but not seldom receive with marked contempt, or as a personal affront, any remark on the subject that he may happen to offer.—Your obedient servant, F. H.

MARLESFORD, ENGLAND, October 28, 1890.

HONEST ANSWERS TO HONEST INQUIRIES.

TO THE EDITOR OF THE NATION:

SIR: I have been a reader of the *Nation* for several years, and, although reared among hard-shell protectionists, I have admired its sound treatment of the tariff. Since it is preeminently a question on which a newspaper ought to be fair and reliable, ought to admit *some* truth on the other side, ought, as it were, to swear to its own hurt and change not, I trust you will answer an honest question or two.

(1.) How, in No. 1320, does the "dealer in pearl buttons," whom you quote in an editorial, make out the additional duty under the McKinley tariff on 1,473 gross to be $754 80? In my copy of the bill the additional duty is said to be two cents—but two cents per what? $754.80 on 1,473 gross is equivalent to about two cents per half dozen. Is the rule of measurement too complex for the lay mind?

(2.) Can you mention any men, heads of firms announcing the rise in prices since October 6, that vote the Republican ticket?

Yours with respect, THOS. W. SMITH.

MINNEAPOLIS, November 12, 1890.

[Pearl buttons are sold by the gross. The old duty was 25 per cent. ad valorem. The new duty is 25 per cent. ad valorem plus 2½ cents per line per gross. The line is one-fortieth of an inch. If the diameter of a pearl button is half an inch, *i. e.*, twenty lines, the duty is 50 cents per gross plus 25 per cent. ad valorem. The cost in Vienna of an invoice of 9,528 gross of pearl buttons, recently published in the newspapers (the sizes running from eleven lines to thirty lines), was $1,519, an average of 13⅞ cents per gross. The duty on the entire invoice under the old tariff would have been $379.75. Under the McKinley Tariff the lines were measured and counted. They footed up 184,220 gross-lines. At 2½ cents per line, the specific duty was $4,605.50. Add to this the ad-valorem duty of 25 per cent. and we have a total duty of $4,985.25 on $1,519 worth of property, or about 350 per cent. On the cheaper grades of pearl buttons the duty is much higher, being equal in some cases to 1,400 per cent. The result is that the mother of a family who paid say 2 cents for a dozen pearl buttons must now pay about 7 cents for the same quantity.

Among the firms that have, since October 6, announced an early advance of prices, may be mentioned John Wanamaker and J. & J. Dobson of Philadelphia, the former in tinware and the latter in carpets. Both these houses are prominently identified with the Republican party.—ED. NATION.]

VANDALISM IN EGYPT.

To the Editor of The Nation:

Sir: The names of Englishmen are being solicited to a petition to the British Government to use its great influence with the Egyptian Government to put a stop to the illegal and shocking mutilation of the monuments and sculptures of old Egypt. It is in the power of England to accomplish much. A list of American names will be forwarded by me to the British Museum, to be placed in the proper hands, and I ask for signatures from our people for that petition. Will not our press state this fact?—Most faithfully yours,

Wm. C. Winslow,
Vice-President of the Egypt Exploration Fund.

Boston, 525 Beacon Street, Nov. 17, 1890.

Notes.

Henry Holt & Co. have nearly ready an illustrated work, 'Greek Literature,' by Thomas Sargeant Perry, forming an octavo volume of some 900 pages.

Harper & Brothers will publish immediately 'Strolls by Starlight and Sunshine,' a sumptuous volume written and illustrated by William Hamilton Gibson; 'Curiosities of the American Stage,' by Laurence Hutton, and 'Ten Tales' by François Coppée, translated by Walter Learned.

'Voces Populi' is the title given by F. Anstey, the humorous author of the 'Tinted Venus,' to a series of overheard conversations excerpted from *Punch*, to which Mr. Anstey is a contributor. Longmans, Green & Co. will shortly issue it.

Anson D. F. Randolph & Co. will publish immediately the Cabinet Edition of 'Jesus, the Messiah,' by Alfred Edersheim; 'Unknown Switzerland,' by Victor Tissot; 'Aunt Dorothy,' an Old Virginia plantation story, by Margaret J. Preston; 'Etchings in Verse,' by Charles Lemuel Thompson; 'The Variations of Calvinism,' by Henry J. Van Dyke; 'Our Father's Kingdom,' by Julius H. Seelye; 'The Hittites: Their Inscriptions and Their History,' by John Campbell, M.A.

An illustrated Biography of Isaac Pitman of Bath, the inventor of Phonography, by Thomas Allen Reed, will be published on December 1 by Griffith, Farran & Co., London. Mr. Pitman, who is in his seventy-eighth year, still presides over the Phonetic Institute at Bath, which he has superintended uninterruptedly for more than half a century.

'Gipsy: the Story of a Dog,' by Mrs. Helen E. Starrett, is to be reprinted in a volume by Searle & Gorton, Chicago—a firm of women, by the way.

'Ways and Means,' by the Rev. F. E. Clark, President of the United Societies of Christian Endeavor, is in the press of D. Lothrop Co., Boston. It treats of the organization and conduct of these societies.

Henry Carey Baird & Co., Philadelphia, are about to bring out in a volume the essays on 'Road-Making and Maintenance' awarded the prizes offered through the University of Pennsylvania by the "Committee on Better Roads" of Philadelphia. Such a work deserves a wide circulation.

Col. T. W. Higginson's first recreation after the war was a revision of Mrs. Elizabeth Carter's standard (and at that time only) English translation of the Works of Epictetus. The result of his labors appeared in 1865, and was reviewed by us at the time. Through the same publishers (Little, Brown & Co.), he now prints a new edition, in two volumes, in response to a gratifying demand. The interval has been so well improved that, as Mr. Higginson says in his new preface, his translation "now bears few traces of Mrs. Carter's." For this reason one would have been glad to see, in this handsome edition, a trace of the good lady and good scholar herself—say a copy of Sir Thomas Lawrence's drawing of her in the National Portrait Gallery. There is no need to recommend these volumes for their contents, or as a permanently choice and suitable gift.

Gebbie & Co. of Philadelphia have published a handsome quarto volume, entitled 'At Susa,' by Mme. Jane Dieulafoy, translated from the French by Frank Linstow White. Mme. Dieulafoy assisted her husband in one of the most successful pieces of archæological work executed in modern times, and this may be said while the full historical value of their labors is not yet apparent. 'At Susa' does not present the serious results, but is simply an entertaining diary of the travel and incidents which attended the two years spent in Persia.

The genesis of the two bulky volumes containing the 'Complete Poetical Works of John Milton' which come to us from the same publishers, may thus be set forth: The quarto size was adopted for the sake of the ancient plates (after Martin, Westall, Flatters, Frost, Bida, etc.), here reproduced by photogravure; the text and notes were borrowed from Bishop Thomas Newton, his edition being at a safe distance of one hundred and fifty years. To all this there would be no objection, but the publishers both misname their "India proof edition," and put it forward as, "on the whole, . . . the best that has ever appeared." Prof. Masson's edition, which we noticed a week ago, furnishes the answer to such a pretension, as regards text or notes or size, if Milton is to be read, and not kept to lumber up the drawing-room table.

The garish all-gold cover of 'The Poet's Year' (Boston: D. Lothrop Co.) repels acquaintance with the really good body of selections, in the sequence of the calendar, which Mr. Oscar Fay Adams has here got together. The scheme of this oblong, well-printed volume is, nearly enough, a dozen leaves to each of the twelve months, with illustrations regularly interspersed, not unpleasingly. It would, of course, be easy to make as large a volume, if not as good, out of what regard for the law of copyright or editorial oversight has omitted. Perhaps one might not succeed better with November in finding verse in which the month's name is actually introduced; Mr. Adams fills up freely with Indian Summer. Under this rubric we miss Tom Hood's negative "No-vember," and indeed Mr. Adams quite eschews the humorous, so far as we have observed, else he might have reinforced Lowell's "May is a pious fraud of the almanac" with Cowper's skit on the same theme, in which May pinches blue the scribbling fingers of the poetic hacks who continue to chant her praises rather than those of her next younger sister.

Another, and to us a novel, principle of verse selection is followed in Elizabeth A. Allen's "'Gold Nails' to Hang Memories On" (T. Y. Crowell & Co.), in which Christian names of men and women replace the names of the months in the preceding collection, and a blank space after each name enables the owner of the book to make an autograph album of it. Here, as with Mr. Adams's series, it is easy to suggest omissions—under Lawrence, for example, the Miltonian sonnet begun with that prænomen, and the same poet's "Daughter to that good Earl," under Margaret; under Lucy, Wordsworth's classic lines, and under Thomas, his sonnet to Clarkson; under Patrick, Coleridge's "Dejection," and under Arthur, "Where is the grave of Sir Arthur O'Kellyn?" etc. In fact, there is a needless amount of rhymes expressly made to eke out the gallery, as in the case of Cora, Corinne, where Herrick was ready to stand in the gap. A special index gathers together the historical characters commemorated.

In 'The Day's Message' (Boston: Roberts Bros.) we have a spiritual diary chosen and arranged by "Susan Coolidge," with Job, the Psalms, Tennyson, and Marcus Aurelius on the first page. Fitness to the date is observed where possible, and the compiler's standard is refined and even, as was to be expected.

A companionable little 'Pocket Volume of Selections from the Poetical Works of Robert Browning' has just been issued in London by Smith & Elder (New York: Scribner & Welford). It comprises only the lyrical product of the dead poet, ending with the inspiring epilogue to 'Asolando.'

The indefatigible editor of Thoreau, Mr. H. G. O. Blake, has gathered from his various volumes a little book of selections, 'Thoreau's Thoughts' (Boston: Houghton, Mifflin & Co.), to which is appended a very full bibliography of Thoreau's writings and of criticisms upon him. Thoreau was occasionally a coiner of epigrams, but not sufficiently often to make a reputation as a writer of "thoughts," which must always be judged by the French standard. In his books the current of thought sometimes eddies into a felicity which sums up what has gone before and flashes it out, but the effect is due to the rarity of its occurrence. This volume, therefore, cannot add to Thoreau's reputation, but it may assist in making his works more sought for. The subjects are mainly the inner life, the influences of nature, the dissipation of society; friendship, love, and the sense of the divine element in our lives. They are not treated with that condensation and sharpness which results in maxims or popular quotations, but they illustrate the unity and constancy of Thoreau's mood and his way of taking life. To read a few continuous pages of his volumes, however, would give a better impression of his talent and the peculiarities of his temperament.

The convenient Stott Library does a real service to those with a taste for good literature by including in the series the 'Familiar Letters of James Howell,' edited by Mr. Bennett in two volumes. The introduction is careful and not too long, and the letters themselves are the most agreeable of unlaborious reading, being in the main an intelligent and interested traveller's account of the sights of the Continent and its political news in the first Stuart period, told with a personal touch and often a warmth of friendship that are charming. France, Italy, Spain, and the Low Countries are the ground traversed. The volumes, it should be said, though the editor omits to do so, contain only a portion of the letters; the appearance of the rest, we are told elsewhere, will depend on the public's reception of the present venture.

The eleventh volume of the "Carisbrooke Library" (George Routledge & Sons) consists mainly of 'Gulliver's Travels,' reprinted with great fidelity from the first edition. To these Prof. Morley adds for comparison an account of Cyrano de Bergerac and his 'Voyages to the Sun and Moon,' and sundry small pieces of Swift, including his "Essay on Modern Education," "Hints towards an Essay on Conversation," and "Letter of Advice to a Young Poet."

Tales and romances, original and from the

German, "Klosterheim" leading off and Tieck's "Love Charm" closing the collection, fill the twelfth volume of Masson's edition of De Quincey's writings (Macmillan). They have been got together with no little labor, and several are not to be found in any other collective edition.

The general scrappiness which characterizes the *Bookworm*, and is all the more noticeable when the series is bound up, is relieved in the third volume (A. C. Armstrong & Son) by four papers, by W. Roberts, giving a history of the *Gentleman's Magazine*. The obituary notice of the late lamented William Blades is accompanied by a portrait, and there is a full-length of Mr. F. Locker Lampson in connection with an account of his Rowfant Library. A number of other illustrations are scattered through the volume, over which one may pass an idle hour with some amusement, some instruction, and no expenditure of thought.

Goldthwaite's Geographical Magazine is a new periodical that will make its appearance in this city on January 1, embellished with maps and illustrations (W. M. & J. C. Goldthwaite). The freshest news of exploration and discovery is promised. Each volume will be indexed.

Mr. W. M. Griswold's latest novelty in his useful line of aids to readers and students is a little 'Continuous Index,' of pocket size, issued since October 1. Upwards of forty periodicals are kept the run of. Mr. Griswold, whose address is Cambridge, Mass., desires early subscriptions with a view to the securing of pound rates of postage.

Readers of *Science* have, during several months past, given some attention to a series of articles on meteorological questions by Prof. H. A. Hazen of the Signal Service, from whom, as has been remarked abroad, *Science* takes its tone on these matters. Most of the articles have been reprinted in book form under the name of 'The Tornado,' of which a brief notice has appeared in our columns. Since then we have received two essays which show how completely Prof. Hazen's views are repudiated by other meteorologists. The first is by Dr. Julius Hann of Vienna, the leading meteorologist of Europe, in the *Meteorologische Zeitschrift* for September. The second is by Prof. William Ferrel, the most eminent of American meteorologists, in the *American Meteorological Journal* for November. The same writer had already sent a note to *Science* for October 3; and he now again briefly shows how completely Prof. Hazen has been in the wrong in certain of his fundamental statements. It is not likely that many readers have been seriously affected by the latter's errors, but if they have, it would be well for them to refer to the papers by Ferrel and Hann.

In the eleventh annual report of the Harvard "Annex," there is very gratifying evidence of the service which this institution renders to young women capable of assuming professorial duties in other colleges devoted to their sex, especially since instruction in astronomy has been afforded. Among graduates who have distinguished themselves by special investigations is cited Miss Marion Harwood Gleason, who has produced a monograph on the legislation, colonial and later, respecting fugitive apprentices and slaves, that will shortly be printed. Funds for insuring like publications are solicited. The first scholar-ship has been established, and two new prizes (for a translation from Dante and an essay on him) announced. Dr. Sargent's prize for a metrical translation from Horace, won last year by Miss Helen L. Read in competition with the Harvard undergraduates, is renewed. In all respects the Annex is in a prosperous condition.

Miss Bruce's gift of $6,000 to the Harvard Observatory in aid of astronomical research has been distributed on both sides of the Atlantic, as just announced by Prof. Pickering, who reports several deserving cases that could not be reached, and asks for further gifts, of which the results "would be very far-reaching, and would be attained without delay."

The College of Physicians of Philadelphia invites essays on any subject in medicine, to be sent in before May 1, 1891, in competition for the Alvarenga prize (about $180).

The International Congress of Americanists met this year in Paris for a session of six days, beginning on October 15. M. de Quatrefages of the Institute delivered the opening address, in which he maintained with ardor the thesis that it was by immigration only and not at all by autochthonism that the American continent had been peopled. The second day's sitting was taken up largely by a consideration of the question, now grown wearisome, of an indigenous origin of the name America. By a nearly unanimous vote the Congress decided that this theory ought to be set aside, and that the question ought not to figure hereafter on any order of the day. On the last day there was a most lively debate upon the vexed question of the priority of discovery of America, which everybody will like to read. The next session of the Congress will be held in 1892, in Spain.

The International Congress of the Geographical Sciences will meet in Berne on July 10, 1891, and sit till August 15, participating in the 700th anniversary of the founding of the city.

M. de Nolhac, who is a lecturer at the École des Hautes Études, read at the meeting of the Academy of Belles-Lettres on the 26th of October an account of an unpublished and hitherto unknown work of Petrarch's that he has lately discovered in a manuscript belonging to the Bibliothèque Nationale. Petrarch's unfinished book, 'De Viris Illustribus,' written in Latin and taken for the most part out of Roman history, is well known. M. de Nolhac's discovery reveals an earlier essay of his in the same general direction. It contains thirteen wholly new biographies drawn from the ancient history of the East and from Greek mythology. This collection shows that Petrarch began the 'De Viris' on a different plan and on a much wider scale than that which he adopted in the end. Besides the new biographies, the book has a long preface in which Petrarch explains the aim of his work and the method he has followed in the use of his authorities. This preface, M. de Nolhac thinks, throws much new light on historical study in the fourteenth century, and points out Petrarch as a precursor of the Orientalists of a later time.

We learn that in attributing the revision of the biographical dictionary in the new 'Webster' to the original compiler, we gave credit where none was due; the revision, which was done with unusual care and painstaking, having been made by Mr. A. P. C. Griffin of the Boston Public Library.

—Mr. C. Alexander Nelson writes us from New Orleans:

"The American Publishers' Association's 'little comedy of swindling,' as Mrs. Richards calls it in the *Nation* of the 6th, is not confined to ladies in Maine. They have attempted to foist two un-ordered copies of their book upon me by sending them C. O. D. by express. I enclose a copy of their last cry for help. Evidently they do not consider the books of sufficient worth to order them back and pay the express charges. I wonder if they suppose natives of the Pine Tree State (of whom I have the honor to be one) are more gullible than other people?"

—Among the illustrated holiday books of the year are two from the fertile pencil of George Wharton Edwards. 'Certain Sonnets by Sir Philip Sidney, Kt.' (Cleveland, O.: The Burrows Brothers Co.) is a collection of Sidney's verses, not all sonnets by any means, from the 'Arcadia.' The other is Austin Dobson's 'Sun-Dial' (Dodd, Mead & Co.). The two books are much alike, and both show Mr. Edwards's great cleverness in the purely decorative part of the work, while the illustrations proper, reproduced by some one of the "photogravure" processes from drawings in mixed wash and line, are unsatisfactory in direct ratio to their importance. The artist's draughtsmanship is weak and capricious, and his figure-pieces are seldom more than pretty, and not infrequently are lamentably ill-drawn and disjointed. His tendency to "take his own where he finds it," or rather to take whatever he finds that will suit his purpose, also crops out here and there. Dodd, Mead & Co. send us also, under the somewhat infelicitous title of 'The Haunted Pool,' George Sand's 'Mare au Diable,' illustrated with fourteen etchings by E. Rudaux, which are delicate and pleasing, but somewhat over-finished and lacking in character. So far as one can judge without critical comparison with the original, the translation by Frank Hunter Potter is well done and fairly successful in rendering the manner of the book, though its simplicity seems more markedly of purpose in English. The volume will prove a very acceptable holiday gift. Another of the books of the season of far more than an average degree of merit is the 'Selection from the Sonnets of William Wordsworth' (Harper & Bros.), with illustrations by Alfred Parsons. The drawings, many of which are republished from *Harper's Magazine*, are sometimes elaborately delicate in rendering of botanical detail, always accurate, workmanlike, and thoroughly respectable, if somewhat prosaic. The inspiration which Wordsworth himself does not always show, though more often, perhaps, in these sonnets than elsewhere, is lacking, but we should be thankful for serious and sound drawing of landscape, which we cannot often get in book-illustration. Mr. Parsons's few figure drawings are less successful. The printing is good, the paper heavy, and the binding permanent. Everything considered, it is a book to be recommended.

—The prolific letter H reckons its second instalment in Vol. 24 of Leslie Stephen's 'Dictionary of National Biography' (Macmillan), and still does not get beyond the first vowel of the alphabet (Hailes–Harriott). In accordance with British admiration for Handel, this composer occupies the greatest space (14 pp.); but his biographers are candid both as regards his originality and his rank in the development of music. It almost seems inharmonious to have the Right Hon. A. J. Balfour cited for the most temperate and critical discussion of the charges of plagiarism against Handel. John Hampden gets 12 pages, King Harold 8, Sir Matthew Hale and Lady Hamilton 7, Bishop Hall, Halley, Halliwell-Phillipps, and Sir William Hamilton about 5 each. Among the throng of Hamiltons one might have expected to find that born British subject, Alexander Hamilton, not less than Judge Haliburton ("Sam Slick") or Charles G. Halpine ("Miles O'Reilly"). American interest is further involved in the notices of Basil Hall, the precursor of Mrs. Trollope, and Marshall Hall, discoverer of the reflex action of the *medulla oblongata*, who combined philanthropy with medical science, and produced, as a result of his travels in this country, a

work on the 'Two-fold Slavery of the United States.' Another celebrity, Jonas Hanway, remembered chiefly for the moral courage which made it "good form" to carry umbrellas in the streets, was a philanthropist of no mean order, yet violently opposed to the naturalization of the Jews; and so voluminous a writer that a mere list of his works fills two pages. The inventor of the Hansom cab appropriately keeps him company in this volume. Thomas Hancock, the English Goodyear; Chester Moor Hall, inventor of the achromatic telescope; James Hargreaves, who gave us the spinning-jenny; and Robert Harrild, who made an enormous contribution to the diffusion of knowledge by substituting composition rollers for the ancient balls with which types were inked, are again names which should be kept in mind. Harrild was also in ordinary ways a public benefactor, and it was he who preserved the printing-press now in the Patent-office at Washington, on which Franklin worked as a journeyman in London. No great literary name distinguishes this volume, or called for treatment at the hands of the senior editor.

—When the *Critic* obtained, by a small post-office ballot, a list of forty favorite American authors—all men—we found some interest in analyzing the list, in respect to birthplaces and local habitations. The result showed that, in the estimate of the readers of a New York periodical, New England yet held its own to a remarkable degree, under both these tests. It may be worth while to make a similar analysis of a corresponding list of women authors lately obtained from the same quarter. We have relied mainly on Mr. Arthur Stedman's "Short Biographies" in the "Library of American Literature," vol. xi., and on Mr. W. M. Griswold's 'Directory of Writers.' It is to be noted, however, that some of the names on the list were evidently selected on other than literary grounds, and the result of the balloting has on the whole a rather boarding-school flavor. The whole number of votes is stated to have been 275 "or more," bestowed as follows: Harriet Beecher Stowe, 268; Frances H. Burnett, 241; Mary N. Murfree (*Charles Egbert Craddock*), 215; Julia Ward Howe, 204; Elizabeth Stuart Phelps Ward, 203; Sarah Orne Jewett, 193; Mary Mapes Dodge, 182; Constance Fenimore Woolson, 149; Edith M. Thomas, 146; Margaret Deland, 142; Adeline D. T. Whitney, 125; Celia Thaxter, 123; Amelia E. Barr, 123; Lucy Larcom, 118; Rose Terry Cooke, 104; Mary Abigail Dodge (*Gail Hamilton*), 102; Harriet Prescott Spofford, 97; Louise Chandler Moulton, 97; Mary E. Wilkins, 96; Blanche Willis Howard Teufel, 84; Mary Hallock Foote, 78; Margaret J. Preston, 75; Sarah Chauncey Woolsey (*Susan Coolidge*), 73; Louise Imogen Guiney, 69; Margaret E. Sangster, 68; Martha J. Lamb, 67; Rebecca Harding Davis, 64; Alice French (*Octave Thanet*), 62; Mary Virginia Terhune (*Marion Harland*), 60; Frances E. Willard, 56; Harriet W. Preston, 54; Mary A. Livermore, 53; Agnes E. Repplier, 52; M. G. Van Rensselaer, 52; Kate Field, 51; Frances Fisher (*Christian Reid*), 49; Helen Gray Cone, 47; S. M. B. Piatt, 47; Elizabeth B. Custer, 37; Elizabeth B. Stoddard, 31.

—The analysis of birth and residence is as follows: *Birthplaces*—(Mass.) Ward, Whitney, Larcom, M. A. Dodge, Wilkins, Guiney, Lamb, French, H. W. Preston, Livermore, Stoddard, 11; (N. Y.) Howe, M. M. Dodge, Foote, Sangster, Willard, Van Rensselaer, Cone, 7; (Conn.) Stowe, Cooke, Moulton, Woolsey, 4; (Pa.) Deland, M. J. Preston, Davis, Repplier, 4; (Maine) Jewett, Spofford, Teufel, 3; (N. H.) Woolson, Thaxter, 2; (England) Burnett, Barr, 2; (Ohio) Thomas, 1; (Tenn.) Murfree, 1; (Va.) Terhune, 1; (Mo.) Field, 1; (Ky.) Piatt, 1; (N. C.) Fisher, 1; (Mich.) Custer, 1. *Residences:* (Mass.) Howe, Ward, Jewett, Deland, Whitney, Thaxter, Larcom, Spofford, Moulton, Wilkins, Guiney, Livermore, 12; (N. Y.) M. M. Dodge, Thomas, Barr, Sangster, Lamb, Terhune, Van Rensselaer, Field, Cone, Custer, Stoddard, 11; (Europe) Woolson, Teufel, H. W. Preston, 3; (D. C.) Burnett, M. A. Dodge, 2; (Conn.) Stowe, Cooke, 2; (Pa.) Davis, Repplier, 2; (Miss.) Piatt, Willard, 2; (Mo.) Murfree, 1; (Va.) M. J. Preston, 1; (Iowa) French, 1; (R. I.) Woolsey, 1; (Idaho) Foote, 1; (La.) Fisher, 1.

—The attention which "General" Booth's panacea for abolishing poverty is receiving gives a timely flavor to Prof. A. G. Warner's excellent paper on "Experiments in Behalf of the Unemployed," in the last issue of the Harvard *Quarterly Journal of Economics*. The Booth scheme is for the transportation of great numbers of the city poor to agricultural colonies, in the country or beyond sea, where they may have healthful work and the chance of independent support. The idea is not novel, but the actual experiment on a great scale would be, and it is therefore pertinent to ask what the smaller experiments of the sort have amounted to. Prof. Warner's paper gives some attention to the Provident Wood Yards which have been tried in some of our cities, but is chiefly concerned with the laborers' colonies of Germany and Holland. The German experiments have been tried on a considerable scale since 1882. There are twenty-one colonies, with accommodations for 2,500 laborers at a time; and a total of 36,000 persons have been admitted to them since the start. The inmates are given work, chiefly farm labor, and the object is to train them to become independent and self-supporting. The success has been of the most moderate sort. A few of the colonists graduate into independence, but the majority continue to be what they were before—tramps. Indeed, a regular class of bummers has grown up "who go from colony to colony, with brief periods of wandering freedom between dismission from one and admission to the other." A very large proportion of the colonists are ex-convicts, and Prof. Warner notes that the work of the colonies corresponds largely to that done by our Prisoners' Aid Associations. The Dutch experiments have been of a different sort. In the laborers' colonies of Holland, the poor are planted permanently on considerable tracts of land, and removed for good from the ordinary competitive struggle of life. After an apprenticeship as laborers on model farms, they are made tenants of small plots on easy terms, with an outfit given. The results are less unsatisfactory than those of the German scheme, for these manufactured farmers maintain themselves with at least an appearance of thrift. But they are not entirely self-sustaining; the experiment as a whole, which is in charge of a State aided association, needs regular charitable support; and, most striking of all, the number of colonists established tends to decline rather than increase. Our own impression is that Prof. Warner gives a rather more favorable account of the operations than the history of the Dutch experiment warrants; but at best the story does not inspire hope that the colonizing scheme will prove the long-sought panacea against poverty.

—It would not be surprising if the success of the new systems of balloting suggested by the Australian law should give an impetus to another reform originating from the same remote source—the registration of titles. Nor is it surprising that a movement in this direction is beginning to make itself felt in Massachusetts, a community that seems to be quite as progressive as any of its sister States. The customary practice of recording deeds grows more and more cumbersome, and, after all, as Lord Cairns said, "It only puts on a formal record all that multitude of deeds and conveyances of the extent and complexity of which we have already so much reason to complain." The principal merit of the Australian system is declared by Sir Robert Torrens, its originator, to lie in the avoidance of "the accumulation of instruments with voluminous indexes." Under this system the landowner may, by proving his title before the registrar, obtain a certificate from the State that he is the owner in fee, and thereafter the land thus registered cannot be conveyed by deed. The certificate operates as a State warranty of title, being conclusive evidence in any court. Sales and mortgages are conducted in much the same way that we now effect transfers of shares of stock in corporations. While it may be admitted that this system is extremely simple and inexpensive, and that it gives great security of title, it should not be forgotten that a considerable portion of the existing fabric of credit rests upon the law of liens upon real estate. Creditors will not be hasty in approving a law that will enable a man to convert his land into cash at an hour's notice; and it may be argued that a sound business policy requires that some form of property should exist which can be converted only after such delay as will afford some opportunity for creditors to secure their claims. The matter of proving titles, too, in an old community is a serious obstacle. The subject is too complicated to be fully considered here, but it can do no harm to suggest to the advocates of the reform that they will promote their cause by a careful and even sympathetic consideration of the objections that will be raised, even though many of these objections emanate from the selfish opposition of vested interests.

ADAMS'S ADMINISTRATION OF MADISON.—I.

History of the United States of America during the First Administration of James Madison. By Henry Adams. Charles Scribner's Sons. 2 vols. 1890.

It is no fault of Mr. Adams that the earlier portion of this history, at least so much as covers events prior to the declaration of war with England in 1812, should be less interesting than his former volumes devoted to the Administration of Jefferson. Madison was essentially a "closet statesman," and as an executive officer and political leader he must be accepted as a much less imposing figure than the Sage of Monticello and Apostle of American Democracy. It must be confessed, moreover, that the stream of our national life flowed over the flats and shallows of much helpless and hopeless irresolution from the beginning of Madison's first term down to the eventful day when, on the 18th of June, 1812, the nation plunged into the tempests of an unknown sea—into a war of which nobody could foresee the consequences.

A narrative history of the successive phases under which our diplomatic and political vacillations appear, disappear, and reappear in this long period, is likely to be tedious just in proportion to the minuteness and fidelity with which the story is told. The monotony of the British aggressions on our commerce, committed under color of the Orders in Council, and the monotony of the similar aggressions

committed by Napoleon under color of his Imperial Decrees, are exceeded only by the monotony of the counter-proceedings with which the Government of the United States vainly sought some way of escape from the devouring maw of one monster without rushing into the open jaws of the other—an alternative choice of evils which the nation was obliged to make, because it evidently was not equal to the task of grappling with both monsters at once. The legislation and the diplomacy of the country during the whole epoch were involved in a mesh of uncertainties, and presented a painful object-lesson in confirmation of that fine saying of Bacon, that "truth emerges sooner from error than from confusion." The country for long and weary years had not enough of pith or purpose to venture on the hazards of any affirmative policy, lest haply that policy should prove to be a blunder, and so continued to flounder in a slough of despond without the courage to draw resolution from its despair, and without seeking to find correctives for its imbecility in the possible mistakes of positive action in any given direction. The Government rested in a practical state of unmasterly inactivity, or rather, we should say, in a state of diplomatic and political see-saw as it librated between the English Cabinet and the French Emperor. If this libration was not the greatest mistake of all, it was at least likely to be regarded as the mark and sign of a discretion which transcended valor. In England and France it was sneeringly charged that the United States was shielding itself behind the coward's insensibility to insult.

Mr. Adams gives us a very exact description of all these perplexities during the period when the more the medley of our politics changed, "the more it was the same thing," to use the oft-quoted phrase of the French wit. The difficulties of the situation are naturally reflected in the difficulties of the literary art which is called to hold up its mirror to these dissolving views. But for this reason Mr. Adams does not shirk the duty of the faithful historian as he discloses to us the subsidence of faction at the beginning of Madison's Administration; the brief alienation from France which, in 1809, was for a time so full of promise to the Federalists, and which created for Madison a popularity as transient as it was delusive; the seeming concessions of Canning, as he trod with uncertain steps "among the slippery and ill-balanced stepping-stones" of the British *via mala;* the ill-omened arrangement of Erskine, concerted in neglect of his instructions, with its consequent disavowal by the British Government; the brief diplomatic career of "Copenhagen" Jackson, brought to such a dramatic close by an insolence which had at least the merit of being in keeping with *his* instructions; the triumph of Napoleon as, fresh from the bloody field of Wagram, and with his foot on the neck of Austria, he launched the Decree of Vienna, which sequestered at will every American ship that came within his military control. At this stage of Mr. Adams's narrative we are landed in the heart of the plot which awaits its slow dénouement in the subsequent pages of this history.

It was universally felt in the United States, at least among the Republicans, that the disavowal of Erskine's arrangement "had capped the climax of British atrocity." But now it was that the insolence of Napoleon came to put a fresh affront on the honor and rights of the nation. Yet the double-headed aggression did but set in stronger relief the executive weakness and the legislative impotence which it served to explain. Without were fightings and within were fears; for Madison's Cabinet had been handicapped from the beginning with the incapacity of Robert Smith, the Secretary of State, while the anti-Gallatin faction, in the Senate and press, was working at perpetual cross-purposes with the Administration it professed to support on the lines of a Republicanism more Republican than that of Madison himself.

Mr. Adams does not blink the difficulties of the situation created for Madison by causes beyond his control, but evidently thinks that the evil of the situation was intensified by Madison's incapacity to deal with the duties and trials of executive administration. Everybody will admit, as has been already implied, that Madison is seen at his best in the mild wisdom with which he always sought to arbitrate among interfering claims of opinion or inclination in the forum of civil debate, rather than in the high and quick resolve which plucks the flower safety from the nettle danger. But, after all due allowance made for the defects of his qualities, the average reader will sometimes wish that the historian could have looked with as much complacency on the bright side as on the "seamy side" of the character and conduct here described.

At the threshold of the story it is charged that Madison, in his inaugural address, made use of conventional speech in order to conceal, rather than reveal, his thoughts; that "the resemblance between him and a cardinal" was not imaginary, because he could bide his time in supplanting a friend who was in his way; that if his fame as a statesman should rest on what he wrote as President, he would be thought "among the dullest of men"; that he had "a feminine faculty for pressing a delicate point" in matters of controversy; that the "unfailing note of his mind was irritability without passion"; that he was "always treated by his associates with a shade of contempt as a closet politician," and "paid surprisingly little regard to rules of consistency or caution"; that, though "doubtless a man of veracity," he risked statements in the matter of the alleged revocation of the French decrees in 1810 which he had every reason to believe were fallacious, and which he continued to reaffirm after everybody in England had detected their falsity, and after everybody in America who was willing to confess the truth could but "laugh in his face" for the pertinacity with which he clung to the French legend. Such "pertinacity" was entirely in keeping with Madison's character as portrayed by Mr. Adams. He says that Madison, though never carried away by bursts of passion, "was fretful rather than vehement, pertinacious rather than resolute." It is admitted that this pertinacity sometimes served him a good turn, as when, for instance, it caused "the pliable nature of Monroe" to succumb to executive dictation soon after that statesman entered the Cabinet of Madison with views very different from those he was made to support.

As to the much-mooted topic of the alleged revocation of the French Decrees in 1810, on which the whole policy of the Administration was subsequently made to hinge, we do not purpose to hackle anew the well-beaten straw which Mr. Adams passes through the sharp teeth of his threshing machine. That straw was beaten with a thousand flails on the threshing-floors of English and American diplomacy at the period in question. It is not necessary to inquire what Napoleon really meant to say when he directed the Duc de Cadore to acquaint Armstrong, the Minister of the United States, on the 5th of August, 1810, with the following intelligence: "I am authorized to declare to you that the Decrees of Berlin and Milan are revoked, and that, after November 1, they will cease to have effect—bien entendu qu'en conséquence de cette déclaration les Anglais révoqueront leurs Arrêts du Conseil, et renonceront aux nouveaux principes de blocus qu'ils ont voulu établir; ou bien que les États-Unis, conformément à l'acte que vous venez de communiquer, feront respecter leurs droits par les Anglais."

Whether this latter clause, which we have preferred to cite in the French original rather than in Mr. Adams's translation, was meant to signify a "condition *precedent*" or a "condition *subsequent*"; whether the revocation of the French Decrees, declared to be actual in the first clause, imposed at once an obligation on the English Government to recall its Orders in Council, since the latter were "retaliatory" on the former; or whether that Government might properly wait till the 1st of November to see if the Decrees would really cease to have effect at that date—that is, whether the interval between August 5 and the 1st of November was meant to serve as a *locus penitentiæ* for France and England, while serving as a stumbling-block for the United States—all these are questions which, for the nicety of their terms, may be said to rival the famous distinctions between the question *de fait* and the question *de droit* which once figured so largely in the controversy waged between Jesuits and Jansenists over the 'Augustinus' as it *was*, and the 'Augustinus' as it was *understood* in the Monastery of Port Royal. Mr. Adams, we observe, omits to mention that the disputed clause, in the shape given to it by the Duc de Cadore, differs in phraseology from the minute of the note as preserved in the 'Correspondance de Napoléon I.,' at the opening part of its twenty-first volume, and differs in a way which would have made it impossible for Madison to commit the mistranslation ascribed to him.

It is not difficult to perceive the sense in which Cadore's words were understood by Armstrong in Paris, by Pinkney, our Minister, in London, and by Madison in Washington. And it is not difficult to perceive, that the words were, on their face, susceptible of the meaning given to them by the American authorities, and that Madison may have been honest, if over-credulous, in presuming that the words were meant to signify what they imported instead of being a trap set for him by the French Emperor. It is true that, in accepting the words as an immediate and prospective revocation of the Decrees, and in promptly acting upon that understanding, he pierced himself through with many sorrows, and was betrayed into a diplomatic position which he felt to be most uncomfortable, and which was made doubly uncomfortable by the slings and arrows of the Federalists. In his judgment on the case, Mr. Adams sides in these volumes with the Federalists and the British Cabinet; but in his excellent 'Life of Gallatin' we understand him to be less censorious on the same showing of facts. In that Life he says (p. 461) that "the diplomatic mistake [made by Madison] did not affect the essential merits of the case, and the factiousness of Congress merely prevented the possibility of a peaceful solution [of pending questions with England]. Neither the one nor the other offers the smallest evidence of inconsistency in Mr. Madison or in his Cabinet."

The duplicity of Napoleon in the premises cannot be overstated. In close connection with the foregoing statement in his Gallatin biography, Mr. Adams remarks that while "there is reason to regret that Mr. Madison should have made himself so eagerly the dupe

of Napoleon," yet it still remains to say that "the good faith of the American Government cannot be called in question." Cobbett, we know, wrote from his Newgate prison a frank defence of the American position in this matter, though it is not cited by Mr. Adams. The best exposition of the American contention is undoubtedly that found in the despatch of Pinkney to Lord Wellesley under date of December 10, 1810. For nice analysis of documentary evidence that paper has rarely been surpassed. Mr. Adams finds the argument of Pinkney "not easy to understand." We have read it, and find it quite intelligible. We find no paradox in Pinkney's logic, and therefore cannot concur with Mr. Adams's suggestion that the American diplomatist thought his argument would produce the stronger impression the more paradoxical it was. As his ground for this suggestion, the author says that in 1810 "centuries of study at Oxford and Edinburgh, and generations devoted to the logic or rhetoric of Aristotle, Cicero, and Quintilian, had left the most educated classes of Great Britain still in the stage of culture where reasoning, in order to convince, must cease to be reasonable." We know that the study of Greek and Latin has been held responsible for much mischief, but we had not supposed that the case was quite so bad as Mr. Adams hints.

In assessing the measure of blame that should be visited on the Government of the United States for its vacillations in the critical matter of declaring war against England in 1812, it seems to us that Mr. Adams is both more happy and more just in the judgment he pronounces under this head in the same Life of Gallatin to which we have already referred. He there says that Madison had been ready in 1808–9 "to throw forward the flag of the country," if only he could be assured that "the people would press onward to defend it." "He had urged measures almost equivalent to war," adds Mr. Adams, "in every following session, so far as Congress would allow him to do so. . . . It is not to be denied that his party was far behind him, and that as a consequence the whole foreign policy from February, 1809, to June, 1812, was one long series of blunders and misfortunes" ('Life of Gallatin,' pp. 460-461). If here the blame is properly assessed, it is also properly laid at the door of public sentiment. If even the Republican party was not ready for war, what shall be said of the Federalists, who, when the war came, were well-nigh ready to take sides, argumentatively at least, with the public enemy? As early as 1809 the Governor of Connecticut, when asked to assist with the State militia in the enforcement of the embargo, had declined a compliance with the request, because the Embargo Act "interfered with the State sovereignties," while the Legislature of the State affirmed it to be the duty of the State authorities "to watch over the powers not delegated to the United States, but reserved to the States respectively or to the people."

London Street Arabs. By Mrs. H. M. Stanley. Cassell & Co. 1890.

MRS. HENRY M. STANLEY'S graceful little book, consisting of a dozen pages of introduction and about two-score of wood-engravings from her drawings, all preceded by a portrait of herself, falls in very happily with the spirit of her husband's more extensive work. It proves that Mrs. Stanley also is in her own way an adventurous and persistent explorer of phases of life almost as unknown and as dark as those in "darkest Africa" itself.

Mrs. Stanley, under her maiden name of Dorothy Tennant, has long been well known to many circles of society on account of her several gifts and graces. She was at once recognized as the original of one of Sir John Millais's most popular pictures, called "Yes or No?" with which almost every one is familiar through engravings. Her beauty was also celebrated on canvas by the eminent painter of so many of England's famous men, Mr. G. F. Watts. But her best title to lasting reputation Miss Tennant earned for herself by her faithful and touching delineations in oil of the manners and habits of the little waifs and strays of stony London deserts. Hitherto, however, only the fortunate few who frequent the London picture exhibitions have been able to make acquaintance with Mrs. Stanley's portrayal of street Arab life. It is pleasant, therefore, to welcome this first venture of hers in book form, and doubly pleasant to be let by her into the method and secret of her work.

The secret of her success is, after all, no other than the time-honored one of patient industry. The best recipe she knows, for instance, for learning to draw babies is, she tells her readers, "to go out for a walk, determined to shut your eyes to everything but babies. For half an hour study the average of babies' arms; then take the average of mouths and noses—the way their pinafores get huddled up—the way their socks run down into their heavy little laced boots, etc., etc." To coax a small ragamuffin as model into a studio requires, according to Mrs. Stanley, a large expenditure of "time, eloquence, and sixpences." The ragamuffin is shy about venturing into unfamiliar precincts, and is besides an excitement-loving elf, so that after he is caught he must, if he is to be kept, be well entertained. Mrs. Stanley's piano grew prematurely old under the thumping fore-fingers of ragamuffins whom she was successively forced to teach how to strum "God Save Our Gracious Queen." She may surely be pardoned for vigorously denying that her piano could play any other tune besides.

In return for her pains, Mrs. Stanley not only finds that "the more you look the better you draw," but also that

"the little model always interests or amuses you. He tells you true stories and makes deep observations; he confides in you and wishes to please you; so that after a while you find yourself attached to Tommy Jones, or Freddy Scott, and you confide *in him*, and even consult him, his opinion of your work being by no means to be despised, since he frequently improves the picture by suggesting modifications in the attitudes."

The drawings which form the chief part of this delightful little volume, are executed in an admirable spirit of realism. Only very occasionally does a touch of sentimentalism give a more conventional character to a sketch, or has a hackneyed vein of pathos been indulged, the latter principally in the case of the Italian-eyed little musician who gazes hungrily and despairingly into a cheap eating-house window (we hope it is not without intention that the man in the background is in the act of putting a hand into his trousers-pocket), and who reappears on another page in a desolate garret, trying to warm and comfort a small sister. But as a whole the pictures are full of originality. The street Arab leaps and plays on Mrs. Stanley's pages with an ease and abandon to be seen nowhere else off the pavement which is at once his nursery, his school-room, and his playground. He is instinct with life and motion and animal spirits. Mrs. Stanley knows every turn of his head, every line of his supple little body. Nor is it to be supposed that it is only the male Arab of the street who here finds himself perpetuated in black and white. The bare-legged, shock-headed little girl is to be seen sharing with her brother in the delights of the kerbstone. More often, it is to be noted, she exhibits signs of thoughtfulness beyond her years, gazing reflectively at the baby she is minding, or pinning a shawl closely about the head of a shred of humanity still smaller than herself. Sometimes, however, she throws herself with all her soul into the unexpected chance of a swing or a hilarious dance to the tune of a hand-organ.

The engraver has not done his work as well as might have been wished and as the artistic merit of the pictures deserves. But the prints, whatever may be their shortcomings as to workmanship, are eminently humanizing in their effect. No one, after looking over them, can ever again be quite blind to some of the pictures that meet the eye on almost every walk in a large city, nor to the deep pathos of the lot of the almost unfathered and unmothered children of the "submerged tenth." Mrs. Stanley's insight into the nature of the ragamuffin is rare and unusual, but the springs of pity and sympathy she touches are fortunately common to all.

By Leafy Ways: Brief Studies from the Book of Nature. By Francis A. Knight. Illustrated by E. T. Compton. Fourth edition. Boston: Roberts Bros. 1890.

Idylls of the Field. By Francis A. Knight. Illustrated by E. T. Compton. Boston: Roberts Bros. 1890.

THESE two idyllic volumes by an English lover of English nature differ from those to which our American descendants of Thoreau have accustomed us by being wholly free from any meditative strain, any sophistication of the intellect, any intrusion of self-consciousness of the Concord stripe. They are most direct in their method, and show an author contented to use his eyes, and to tell us over and over again what he has seen of the life of birds and the little beasts of the field and river, and the beautiful changes of atmosphere and sea in which these have their being. Indeed, Mr. Knight almost overwhelms the reader's attention by the multitude of minute facts of mere vision which he records, and he is never tired of repeating that the air is warm and the sky is blue, the swallows flying and the plover calling, so that the "perpetual miracle" of nature is as constant with each of his chapters as it is with each of his mornings. This abundance of detail and unceasing freshness of pleasure in it makes the books little fitted for continuous reading. The sketches were originally written for the *Daily News*, and hence have a unity each by each which they lack when strung together. The reader, too, is wearied by the unfortunate affectation of rhythmical sentences and the recurrence of paragraphs so short as to make the page resemble chapters of Biblical verses. With these drawbacks, however, our criticism ends; in the substance of the work is an immense information about English wild-nature, and this is given with so true a love of the living things, and so fine an eye for landscape, and besides with so much real poetical feeling, that the books are treasure-trove to the initiated. The newest of the volumes, 'Idylls of the Field,' is more definite and ordered and more localized, the Devon coast taking in it the place that the Norfolk Broads hold in the first; and once the story leaps to Germany. Birds are the principal subject, and after them the seacoast, and morning and evening. If any one would know the elements of beauty in the

foggy island, he cannot do better than seek an introduction through these sketches; but he must have something of the poet's soul.

Over the Teacups. By Oliver Wendell Holmes. Boston: Houghton, Mifflin & Co. 1890.

THE literary recreations of Dr. Holmes in his age keep the old lines in which he pleased an earlier generation of readers, and he is still mainly the poet and the talker. The present volume follows, as naturally as the years themselves, its predecessors, with a full circle about the table whose conversations found nearly forty years ago so fortunate a reporter, and whose occasional poems were received with a general welcome. Those who were most attracted by the earlier books of the Autocrat in his various changes of character, have no doubt already made acquaintance with these last papers, to which we have referred as they appeared in the *Atlantic Monthly*, and have found in them the same discursiveness, happy sayings, and acute remarks, mingled with the new reminiscent flavor which is a marked trait of Dr. Holmes's later writings. There is the same slight thread of a story serving to bind into something like continuity the fragments of essay and discussion; and none of the old leading interests—the physician's, the poet's, the quasi-theologian's—are missed from the pages. The sign of the new age is occasionally stamped on the topic, as in the paper on the delights of a socialistic and altogether equal state of life on a neighboring planet; but the treatment is that of which the success had already been assured. Of the new poems none is likely to be remembered longer than the "Broomstick Train," in which the reader recognizes the peculiar characteristics of the author's muse, and sees that it was written with real interest and remarkable vivacity of mind.

In the book, it is felt, Dr. Holmes means rather to greet his old readers, and to keep companionship with them to the end, than to appeal to the tastes and hearts of the new generation; and this feeling is enhanced by the intimacy with which he opens himself to the sympathies of his audience. Nor does he now lay down the pen, but promises to continue his occasional observations, sure of a welcome which does not wear out.

BOOKS OF THE WEEK.

Abbot, W. J. Battle Fields and Camp Fires. Dodd, Mead & Co. $3.
About, E. L'Homme à l'Oreille Cassée. William R. Jenkins. 60 cents.
American Boys' Manual of Practical Mechanics. Dick & Fitzgerald. 50 cents.
Babyland. Boston: D. Lothrop Co. $1.
Balzac, H. de. The Chouans. Cassell Publishing Co.

HENRY HOLT & CO., Publishers, New York.

S. B. LUYSTER,
98 NASSAU STREET, NEW YORK,
AND LONDON, ENGLAND,
Importer of Standard English Books,
OLD AND NEW.

Catalogues issued bi-monthly, and sent gratis to any address, on application.

FRENCH, GERMAN, - - - - SPANISH, ITALIAN.

You can, by ten weeks' study, master either of these languages sufficiently for every-day and business conversation, by Dr. RICH. S. ROSENTHAL'S celebrated MEISTERSCHAFT SYSTEM. Terms, $5.00 for books of each language, with privilege of answers to all questions, and correction of exercises. Sample copy, Part I., 25 cents. Liberal terms to teachers.

MEISTERSCHAFT CO., 299 Washington St., Boston.

ELLIS & ELVEY,
29 NEW BOND STREET, LONDON, ENGLAND,
Dealers in Choice Books and MSS.

Catalogues issued periodically and forwarded regularly to purchasers. Early illuminated MSS.—XVth Century books, with woodcuts—Horæ on vellum—Fine bindings—Rare Americana, etc., etc.

EUROPEAN WINTER AND SUMMER Resort, University town of Innsbruck, Tirol Austria; 1,900 feet above the sea, with dry, bracing climate. Hotel Tirol, open all the year. Carl Landsee, Proprietor. Large, airy, sunny rooms, well furnished. Elevator. Superior cuisine (table d'hôte or à la carte). Reduced rates in winter. Carriages and sledges at low rates. Charming excursions made from the hotel at all seasons. Unusual advantages for securing teachers of the languages, history, science, art, music, etc., at very moderate terms. Eminent medical care and skilled nurses if desired. Best English and American references. Illustrated pamphlets sent on application.

". . . *But she will make every reader wish to be a follower. . . . Her enthusiasm of exploration and discovery is contagious. And so her book becomes dangerous, for its awakening of longings which for the most of us it must be impossible to gratify.*"—Literary World.

UP THE NILE.

By AMELIA B. EDWARDS, Ph.D., LL.D., L.H.D., etc. With upwards of seventy Illustrations engraved on wood by G. Pearson, after drawings by the author. Revised edition, with fresh Notes. 8vo, cloth, $2.50.

"*Under her magic pen the ruins hum with busy life, blossom with color, and echo with chant or dirge. The latest revelations of the spade, and the identifications, readings, and interpretations of scholars, are set before us in abundance. The secrets of chronology, and the reasons why the Egyptians were so different from us as well as from the Greeks and Hebrews, are set forth in a few words, as only the facile expert can set them forth. In addition to the notes, which will be 'nuts' to the scholar and reader seeking solid information, there is the narrative, lively, piquant, full of fun, and eminently readable.*"—The Critic.

BY THE SAME AUTHOR, AND UNIFORM WITH THE ABOVE.

Untrodden Peaks and Unfrequented Valleys

A Midsummer Ramble in the Dolomites. Revised edition, with Illustrations and Maps. 8vo, cloth, $2.50.

"*It is quite a treat to fall in with this bright, breezy record, in every line of which we seem to hear the ring of that cheery laughter wherewith its author greets every new mishap of the road, meeting scanty food, hard quarters, noise, dirt, rain, bad roads, the buffeting of mountain storms, and the stupidity of mountain peasants, not as a direct personal injury to be avenged by persistent ill humor, but as a kind of rough practical joke, rather exhilarating than otherwise.*"—New York Times.

*** *For sale by all Booksellers, or sent, postpaid, on receipt of the advertised price, by the Publishers.*

Cleopatra, *A Study from the French* of HENRY HOUSSAYE.
DUPRAT & CO.,
1 vol. 16mo, $1.00. 849 5th Ave., New York.

A. C. McClurg & Co.'s New Books.

Sweet William.

By MARGUERITE BOUVET. With Illustrations by Helen and Margaret Armstrong. 4to, $1.50.

This very attractive little volume is unlike any other book that can be called to mind. It takes us back to mediæval times, and introduces us to the lords and ladies who then inhabited the splendid castle that still looks down from the heights of Mt. St. Michael, on the coast of Normandy. It tells the pathetic story (with a happy ending) of a little boy, who, had he lived today, would have been a genuine Little Lord Fauntleroy, and introduces us also to a genuine Little Lady Fauntleroy, with whom we cannot help falling in love. The illustrations are singularly beautiful and appropriate, and make it altogether one of the most attractive juvenile books of the year.

Henrik Ibsen, 1828-88.

A Critical Biography. From the Norwegian of HENRIK JAEGAR by WILLIAM MORTON PAYNE. Portraits and Illustrations. 12mo, $1.50.

"The book is by far the most complete and most edifying story of Ibsen's life that has as yet appeared in English. . . . It was needed, and can hardly fail of a wide reading."—*Saturday Evening Gazette, Boston.*

Education and the Higher Life.

By the Right Reverend J. L. SPALDING, Bishop of Peoria. 12mo, $1.00.

"The reader will seldom find a volume, of 200 pages richer in great thought, made practical to life's everyday duties. . . . The man who reads the book and enters into its spirit will not be asking the vain question, 'Is life worth living?'"—*Chicago Inter-Ocean.*

Martha Corey.

A Tale of the Salem Witchcraft. By CONSTANCE GODDARD DU BOIS. 12mo, $1.25.

The same material drawn upon by Longfellow for his 'New England Tragedies' is here used with greater fulness and with no less historical exactitude. The story has for its background the dark and gloomy pictures of the witchcraft persecution, of which it furnishes a thrilling view. It is remarkable for bold imagination, wonderfully rapid action, and continued and absorbing interest.

Masterpieces of Foreign Authors.

This series will comprise translations of the best known European writers, presented in compact 16mo volumes, well printed on good paper, and prettily bound. Per volume, cloth, *net*, 75 cents; half vellum, *net*, $1.25.

Now Ready.

DOCTOR ANTONIO. By GIOVANNI RUFFINI.
THE MORALS AND MANNERS OF THE XVIIth CENTURY. Being the Characters of La Bruyère. Translated by HELEN STOTT. Portrait.
WILHELM MEISTER. By GOETHE. Carlyle's Translation, with an Introduction and Notes by EDWARD DOWDEN, LL.D., and C. L. SHORTER. Portrait. 2 vols.

Other volumes to follow.

The Laurel-Crowned Tales.

16mo, gilt tops. Per volume, $1.00.

"The publishers have shown excellent discrimination in their choice of material for their library of choice fiction, and they have given the initial volumes a form that bespeaks the warmest praise."—*Beacon, Boston.*

RASSELAS. By SAMUEL JOHNSON.
ABDALLAH. By EDOUARD LABOULAYE.
RAPHAEL. By ALPHONSE DE LAMARTINE.
THE VICAR OF WAKEFIELD. By GOLDSMITH.
THE EPICUREAN. By THOMAS MOORE.
PICCIOLA. By X. B. SAINTINE.

Other volumes to follow.

Savonarola,

His Life and Times. By WILLIAM CLARK, LL. D. 12mo, gilt top, $1.50.

Prof. Clark writes in popular style, thoroughly explains the intricate political system of Florence in its transition state, and succeeds in giving a well-rounded history of a man whose character will always be one of the most interesting in history to study.

Essays by Francis Bacon.

Edited, with a Biographical and Critical Introduction and New Notes, by Prof. M. B. ANDERSON. Tastefully printed and bound. 16mo, cloth, gilt top, $1.00; half calf or half morocco, $2.75.

The painstaking and conscientious efforts of the editor of this new edition of Bacon's Essays, together with its elegance of form, warrant its publishers in believing that it will win wide appreciation and popularity. In its preparation the previous editions and the commentaries upon Bacon have been carefully examined, errors discovered and corrected, and new notes added.

Odes from the Greek Dramatists.

Translated into Lyric Metres by English Poets and Scholars. Edited by ALFRED W. POLLARD. 16mo, gilt top, vellum, *net*, $1.75.

The success which attended the publication, in exquisite style, of Wharton's 'Sappho' and Pollard's edition of Sir Philip Sidney's 'Astrophel and Stella,' has justified the publication of this volume as the third in this choice and beautiful series. The editing is of the same careful and scholarly character as that of the former volumes. The Greek text is given, together with the best translation which existed or could be procured.

Dyspepsia

HORSFORD'S

ACID PHOSPHATE.

In dyspepsia the stomach fails to assimilate the food. The Acid Phosphate assists the weakened stomach, making the process of digestion natural and easy.

Dr. R. S. MCCOMB, Philadelphia, says: "Used it in nervous dyspepsia, with success."

Dr. W. S. LEONARD, Hinsdale, N. H., says: "The best remedy for dyspepsia that has ever come under my notice."

Dr. T. H. ANDREWS, Jefferson Medical College, Philadelphia, says: "A wonderful remedy, which gave me most gratifying results in the worst forms of dyspepsia."

Descriptive pamphlet free.

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

CAUTION: Be sure the word "Horsford's" is printed on the label. All others are spurious. Never sold in bulk.

NEW ILLUSTRATED BOOKS.

OUR EARLY PRESIDENTS, THEIR WIVES AND CHILDREN.

From Washington to Jackson. By HARRIET TAYLOR UPTON. One hundred and fifty portraits, pictures, and autograph letters. 4to, gold cloth, $4.00; half calf, $6.00; full morocco, $8.00.

The only work of the kind in which any attempt has been made to trace the history of the descendants of the American Presidents, or to give any picture of the fireside life in the White House.

A valuable contribution to the history of the United States.

THE POET'S YEAR.

Edited by OSCAR FAY ADAMS. Oblong 4to. 150 illustrations, of which 25 are full-page drawings by Chaloner. Beautifully bound in gold cloth, $6.00; morocco, $10.00.

A sumptuous presentation of poems on nature, selected from the most famous poets of all times. The most attractive gift-book of the season.

FAR WEST SKETCHES.

By JESSIE BENTON FREMONT. 12mo, $1.00.

"Mrs. Fremont's tales of adventure can never be duplicated between these seas while the world stands."—*Golden Rule.*

AN ADIRONDACK CABIN.

By MARGARET SIDNEY. 75 illustrations, including over 30 original full-page pictures of scenes in the Adirondacks. 4to, cloth, $2.25; boards, $1.75.

A brilliant story of camp life, picturesque jauntings, and idyllic days in the heart of the Great Wilderness. The delightful record of a delightful summer.

THE LION CITY OF AFRICA.

By WILLIS BOYD ALLEN. Illustrated by Bridgman and others. 8vo, cloth, $2.25.

A dramatic recital of thrilling adventures and hair-breadth escapes, of the strange cannibal dwarfs, and the more strange buried city in the heart of the 'Dark Continent.'

CHUCK PURDY.

The Story of a New York Boy. By W. O. STODDARD. 12mo, $1.25.

A capital story of boy life in New York City, strong, honest, breezy, practical and absorbing. By one of the young people's favorites.

ROBERTS BROTHERS' *NEW BOOKS.*

POEMS.

By EMILY DICKINSON. Edited by Mabel Loomis Todd and T. W. Higginson. 16mo. Bound in drab and white cloth. Gilt top. Price, $1.50.

"It is believed that the thoughtful reader will find in these pages a quality more suggestive of the poetry of William Blake than of anything to be elsewhere found—flashes of wholly original and profound insight into nature and life; words and phrases exhibiting an extraordinary vividness of descriptive and imaginative power."

NEWS FROM NOWHERE;

OR, AN EPOCH OF REST. Being some chapters from a Utopian romance. By WILLIAM MORRIS, author of 'The Earthly Paradise.' With a drawing by Walter Crane. 16mo. Cloth. Price, $1.00.

Mr. Morris is infinitely removed from all other imitators of Mr. Bellamy's book. He is as much aloof from them in the matter of his story as he is superior to Mr. Bellamy himself in the manner of relating it. The tale is crowded with English local color; the narrator falls asleep today, awakes an old man on the banks of the Thames, and finds himself in an amazing land, among curious people, in the year 1971.—*Philadelphia Press.*

NANON.

By GEORGE SAND. Translated by Elizabeth Wormeley Latimer. 12mo. Half Russia. Price, $1.50.

One of the prettiest and most carefully constructed of George Sand's later works, giving the best view of the French Revolution from a rural standpoint.

Sold by all Booksellers. Mailed, postpaid, on receipt of price by the Publishers,

Do you know these Reviews?

Nineteenth Century.
Fortnightly Review.
Contemporary Review.

You will find them well worthy of investigation. The list of contributors is very large, including every writer of eminence in Europe and America. The subjects treated cover every vital question of the day.

They bring to your library table the very best thought of the world as recorded from month to month. They offer a trustworthy guide to current events in literature, science, art, sociology, politics, religion, history, education, and all other subjects of pressing importance. You will find them fresh, thoughtful, invigorating, and you will speedily deem them indispensable.

They appeal directly to every person of culture by reason of their completeness and the thorough way in which they cover every step of modern progress.

They are the only periodicals that issue no prospectus, prepare no programme, make no promises for anything but to furnish the best and most timely papers by the best writers. They are essentially

Present Day Periodicals.

"They force in on any thoughtful reader the conviction that it is to these English Reviews we must turn for the latest results of thought or science, for the latest news of discovery and investigation, for the soundest dicta of criticism. We have nothing to compare with THE NINETEENTH CENTURY, THE FORTNIGHTLY, THE CONTEMPORARY."—*The Independent.*

"The broad-minded reader must have them all. In their pages the best thought of Eng and finds aggressive expression, and no topic of moment to the intellectual world fails to find in one or all of them full and forcible expression."—*Boston Beacon.*

"For examples of the best types of the most finished English now written, as well as for the foremost thought, the leading English reviews are looked to as pre-eminent. It has become the custom of the great thinkers and the best writers in command of the English language to offer their ideas for publication in these magazines. It would seem that every American might read them and with great increase in breadth of thought, culture, and information."—*Public Opinion.*

We issue and furnish the original English edition—not reprints—printed in England and published by us by authority of the English publishers. Our prices are nearly 50 per cent. less than those of the foreign copies.

We will send sample copies and circular giving detailed information concerning these periodicals to all mentioning the *Nation.*

Charles Scribner's Sons'

NEW BOOKS.

In Scripture Lands.

New Views of Sacred Places. By EDWARD L. WILSON. With 150 Illustrations from Photographs by the author. Large 8vo, $3.50.

"A very interesting, instructive, and handsome book. Notwithstanding the host of publications relating to the Holy Land, this book is fresh, and adds to our knowledge of the field. The illustrations are excellent."—*Christian Intelligencer.*

Life of John Ericsson.

By Col. WILLIAM C. CHURCH. With 50 Illustrations. 2 vols., 8vo, $6.00.

"A faithful and well-written history of Ericsson. Col. Church undertook the work at the special request of Mr. Ericsson, who left him all his private papers and documents."—*N. Y. Herald.*

How the Other Half Lives.

Studies among the Tenements of New York. By Jacob A. Riis. With 40 Illustrations from Photographs by the author. 8vo, $2.50.

This is not only a vivid picture of the New York underworld, but a helpful consideration of the forces therein at work, and the best means of counteracting them.

Electricity in Daily Life.

A Popular Account of the Application of Electricity to Everyday Uses. With 120 Illustrations. 8vo, $3.00.

"Clear, comprehensive, and popular, the book is full of interest to the general reader, and of valuable information to the student."—*Boston Budget.*

Pacific Coast Scenic Tour.

From Southern California to Alaska—The Yosemite—The Canadian Pacific Railway—Yellowstone Park and the Grand Cañon. By HENRY T. FINCK. With 20 full-page illustrations. 8vo, $2.50.

"In point of readableness and interest, this narrative leaves nothing to be desired. It is surprising to find so much conveyed in so compact and agreeable a form."—*The Nation.*

Famous Women of the French Court.

Translated from the French of IMBERT DE SAINT-AMAND, by T. S. PERRY. 6 volumes now ready. Others in preparation. Each 12mo, with Portrait, $1.25.

ALREADY ISSUED:

MARIE ANTOINETTE AND THE END OF THE OLD RÉGIME.
CITIZENESS BONAPARTE.
THE WIFE OF THE FIRST CONSUL.
THE COURT OF THE EMPRESS JOSEPHINE.
THE HAPPY DAYS OF THE EMPRESS MARIE LOUISE.
MARIE LOUISE AND THE DECADENCE OF THE EMPIRE.

"M. de Saint-Amand writes an entertaining book. He has a picturesque and lively fancy. His style is animated and pleasing, and his historical judgments well taken."—*N. Y. Times.*

In the Valley.

By HAROLD FREDERIC. With 16 full-page Illustrations by HOWARD PYLE. 12mo, $1.50.

"It is uncommonly well written, and the whole *mise en scène* has verity and importance."—*W. D. Howells.*

A Little Brother of the Rich,

And Other Verses. By EDWARD S. MARTIN. 12mo, $1.25.

"The poems are witty, philosophical, graceful, and altogether delightful."—*New York Sun.*

Dainty Books for Holiday Gifts.

CAMEO EDITION. Two new volumes have just been issued in this tasteful edition; Cable's OLD CREOLE DAYS and Page's IN OLE VIRGINIA, uniform with Donald G. Mitchell's 'Reveries of a Bachelor' and 'Dream Life,' issued last year. Each volume with frontispiece etching, 16mo, $1.25.

EUGENE FIELD. Exquisitely printed and bound, the writings of this popular author, A LITTLE BOOK OF WESTERN VERSE and A LITTLE BOOK OF PROFITABLE TALES, are contributions of genuine value to American literature. Each 16mo, $1.25.

"These handsome volumes are examples of a wit, humor, and pathos quaint and rare."—*N. Y. Tribune.*

*** Sold by all booksellers, or sent, postpaid, by*

HARPER'S MAGAZINE.

CHRISTMAS NUMBER.

PROMINENT among the attractions offered in this number are EDWIN A. ABBEY'S illustrations of Shakespeare's comedy, **"As You Like It,"** accompanied with comment by ANDREW LANG, and including a frontispiece printed in tints, entitled **"In the Forest."** THEODORE CHILD, in an article copiously illustrated from paintings by D. G. ROSSETTI, BURNE-JONES, and G. F. WATTS, describes the interior of a famous **"Pre-Raphaelite Mansion"** in London. **"Japanese Women"** is the title of an entertaining article written by PIERRE LOTI, and illustrated from paintings by H. HUMPHREY MOORE. **Charles Dudley Warner,** in "THE WINTER OF OUR CONTENT," continues his series of illustrated papers on southern California. The article is accompanied by numerous illustrations from photographs and from drawings by the foremost artists. The fiction of the number includes **"A Christmas Present,"** by PAUL HEYSE, illustrated by C. S. REINHART; **"Flute and Violin,"** an old Kentucky story, by JAMES LANE ALLEN, with twenty illustrations by HOWARD PYLE; **"P'laski's Tunaments,"** by THOMAS NELSON PAGE, illustrated by J. W. ALEXANDER; **"Gibble Colt's Ducks,"** by RICHARD MALCOLM JOHNSTON, illustrated by A. B. FROST; **"Jim's Little Woman,"** by SARAH ORNE JEWETT, and **"A Speakin' Ghost,"** by ANNIE TRUMBULL SLOSSON. The Editorial Departments, too, have **a distinctive holiday flavor.** GEORGE WILLIAM CURTIS discourses upon the delightsome character of the modern Christmas. WILLIAM DEAN HOWELLS describes a Christmas dream of ideal literary bliss. CHARLES DUDLEY WARNER discourses upon the pleasures of giving, and pleads for the exercise of good judgment in the selection of Christmas gifts.

Longmans, Green & Co.

PUBLISH:

Prince, Princess, and People.

An Account of the Social Progress and Development of Our Own Times, as illustrated by the Public Life and Work of the Prince and Princess of Wales, 1863–1889. By HENRY C. BURDETT. With Portraits and Autographs of their Royal Highnesses, and Illustrations of their Norfolk House. 8vo, $6 00.

"Careful, conscientious, and painstaking as a work of reference, and the author's style and treatment of his subject is marked not only by dignity and decorum, but by great tact and delicacy of feeling."—*Observer.*

Historical Review of the Legislative Systems

Operative in Ireland (1173–1800). By the Right Hon. J. T. BALL, LL.D., D.C.L. 8vo, $2.25.

"A valuable contribution towards the formation of clear views regarding the settlement of the Irish question."—*The Nation.*

A Student's History of England.

From the Earliest Times to 1885. By SAMUEL RAWSON GARDINER, LL.D.

**This book is intended for the upper classes in schools, and aims at avoiding on the one hand the allusive style of writing, which is so puzzling to young people, and on the other hand the multiplicity of detail which unprofitably burdens their memories. The book will be illustrated under the superintendence of Mr. St. John Hope, Secretary to the Society of Antiquaries, and will be accompanied by a School Atlas of English History prepared by Mr. Gardiner. The work will ultimately appear in a single volume, but for the sake of schools which do not wish to incur the expense of so large a book, there will also be an edition in three divisions.

Vol. I., B. C. 55—A. D. 1509, with 173 Illustrations and Index. Crown 8vo, 410 pages, $1.20. [Just ready.

Church and State Under the Tudors.

By GILBERT W. CHILD, M.A., Exeter College, Oxford. 8vo, pp. 450, $5.00.

"Mr. Child makes some things yet plainer that ought to have been plain before, he says stress on much that has been industriously concealed or questioned, he casts a new light on several minor points; he has shown himself capable not only of gathering materials for history, but of writing history itself."—*Independent.*

Select Epigrams from the "Greek Anthology."

By J. W. MACKAIL, M.A., Fellow of Balliol College, Oxford. 8vo, 416 pages, $5.50.

The Patentee's Manual:

A Treatise on the Law and Practice of Patents for Inventions, with an Appendix of Statutes, Rules, and Foreign and Colonial Patent Laws, International Convention and Protocol. By JAMES JOHNSON, Barrister-at-Law, and J. HENRY JOHNSON, Past President of the Institute of Patent Agents. Sixth Edition Revised and Enlarged. 8vo, $3.50.

Papers on Maritime Legislation.

With a Translation of the German Mercantile Laws relating to Maritime Commerce. By ERNEST EMIL WENDT, D.C.L. 3d Edition (1838). Royal 8vo, 852 pages. $10.50.

Longmans' French Grammar.

By T. H. BERTENSHAW, B.A., etc. Part I. Up to and including Regular Verbs, with copious Exercises and Vocabularies, etc., 30 cents net. Part II. Including Pronouns, Reflexive Adverbs, Verbs, Irregular Verbs, the Subjunctive Mood, the Infinitive, and Participles, with Vocabularies, etc., 30 cents. The two parts complete in one volume, cloth, 60 cents.

**This series of French Lessons has been drawn up with special reference to an English boy's difficulties. Pronunciation is dealt with on a new plan, and very great care has been used in the selection of the vocabularies, and in an attempt to render the exercises more than usually interesting. Wherever possible, a *vend voce* exercise embodying any new principle is given before proceeding to the more difficult exercise. Grammar is taught systematically, but all matter of secondary importance to beginners is put in an appendix.

Inorganic Chemistry. *Theoretical and Practical.*

By WILLIAM JAGO, F.C.S., F.L.C. With 78 Illustrations and a Colored Plate of Spectra. (LONGMANS' ADVANCED SCIENCE MANUALS.) Crown 8vo, 470 pages, $1.50.

For sale by all booksellers. Sent on receipt of the price by the Publishers,

LONGMANS, GREEN & CO.,
15 East Sixteenth Street, New York.

Scribner & Welford's

NEW BOOKS.

Concluding Volumes of Miss Pardoe's Works.

The Life of Marie de Medicis.

Queen of France, Consort of Henry IV., and Regent of the Kingdom under Louis XIII. By MISS PARDOE, author of 'Francis the First and his Times,' 'Louis the Fourteenth,' etc. With numerous portraits and plates on steel. 3 vols., 8vo, cloth, $15.00.

The War in the Crimea.

By General Sir EDWARD HAMLEY, K.C.B. With five Maps and Plans, and four Portraits on Copper, namely: *The Emperor Nicholas, Lord Raglan, General Todleben, Council of War.* 8vo, cloth, $1.75.

**The opening volume of "*Events of Our Own Time.*" *A series of Volumes on the most important Events of the last half century.*

"Gen. Sir Edward Hamley, who perhaps knows as much as any one now living of the theme, has written a small volume concerning 'The War in the Crimea.' This volume will find a hearty welcome from all who wish to learn the facts, and have but little time to devote to the study."—*Journal of Commerce.*

Nutshell Novels.

By J. ASHBY-STERRY, author of 'The Lazy Minstrel,' 'Cucumber Chronicles,' etc. Crown 8vo, cloth, $1.50.

"Many readers will devour the book and leave off wishing for more."—*The Scotsman.*

"All his stories have plots, and all his characters are flesh and blood, every-day people, whose vicissitudes of fortune are narrated in a style which is thoroughly genial and pleasantly picturesque."—*London World.*

A Vindication of the Rights of Woman:

WITH STRICTURES ON POLITICAL AND OTHER SUBJECTS. By MARY WOLLSTONECRAFT. New Edition. With Introduction by Mrs. HENRY FAWCETT. Crown 8vo, cloth, $2.00.

This is a reprint of the first edition, which appeared nearly one hundred years ago.

"The women of to-day can scarcely realize the conditions their sex had to confront in those old times; but the degradation was very real, and the protest against it was very much needed. Mrs. Fawcett's introduction will be found highly interesting and helpful."—*N. Y. Tribune.*

A Manual of Bibliography.

Being an Introduction to the Knowledge of Books, Library Management, and the Art of Cataloguing. By WALTER THOMAS ROGERS, F.R.S.Lit. With illustrations and a colored frontispiece. 12mo, vellum covers, ant que style, gilt top, uncut edges, $1.75.

The Art of Bookbinding.

A Practical Treatise. By JOSEPH W. ZAEHNSDORF. With Plates and Diagrams. Second Edition, revised and enlarged. 12mo, cloth, $1.75.

Scientific Voice, Artistic Singing and Effective Speaking.

A Treatise on the Organs of Voice, their Natural Functions, Scientific Development, Proper Training, and Artistic Use. By THOMAS CHATER, Principal of the South Kensington Vocal Academy. 12mo, cloth, $1.00.

****The above books for sale by all booksellers, or sent upon receipt of advertised price. New Catalogue of Rare Books ready, and sent on application.*

SCRIBNER & WELFORD,
743-745 Broadway, New York.

A Superb Edition of Bulwer's Masterpiece.

THE LAST DAYS OF POMPEII.

By BULWER-LYTTON. With 35 full-page illustrations from designs by Frank Kirchbach and others. 8vo, cloth, $3.00.

Beautifully printed from new type on fine paper, splendidly illustrated and handsomely bound. A production in every way worthy of this great historical romance.

SONGS OF A SAVOYARD. By W. S. GILBERT. With 50 illustrations from designs by the author. 4to, cloth, $3.50.

A collection of the most popular songs from Gilbert and Sullivan's favorite operas.

DISCOVERIES AND INVENTIONS OF THE NINETEENTH CENTURY. By ROBERT ROUTLEDGE, B.Sc., F.C.S. New edition. With numerous illustrations. 8vo, cloth, $3.00.

This edition is brought down to the current year, and includes, among other recent inventions, descriptions of the Forth Bridge, the Eifel Tower, and the Manchester Ship Canal.

PICTURESQUE INDIA: An Unconventional Guide-Book. By W. S. CAINE. With 200 original illustrations by John Pedder, H. S. Dale, and H. H. Stanton, and maps. 8vo, cloth, $3.50.

An entertaining description of the writer's experiences and observations while travelling in Britain's great Eastern empire.

CHIVALRY. By LÉON GAUTIER. Translated by Henry Frith. With numerous illustrations. 8vo, cloth, $2.50.

An account of the origin of this romantic institution, its history and curious customs, with many anecdotes in illustration.

A Stirring Tale for Boys.

A ROUGH SHAKING.

By GEORGE MACDONALD. With full-page illustrations by W. Parkinson. 12mo, cloth, $1.50.

Narrates the adventures of an English lad who lost his parents in an earthquake in Italy, and who possessed a remarkable power over animals, both wild and tame.

THE SWISS FAMILY ROBINSON. Edited by W. H. G. KINGSTON. With 100 illustrations on wood, and 12 full-page plates printed in colors, by Ernest Nister. 8vo, cloth, $2.50.

ROBINSON CRUSOE. By DANIEL DEFOE. With 100 illustrations by J. D. Watson, and 12 full-page plates, printed in colors, by Ernest Nister. 8vo, cloth, $2.50.

These two famous stories of desert-life are issued in uniform style with the Andersen, Grimm, and Arabian Nights previously published in this series; their wealth of (colored and plain) illustrations, the beauty of their typography and the appropriateness of their bindings making them in every respect really handsome editions.

GREAT AFRICAN TRAVELLERS. By W. H. G. KINGSTON and Lieut. C. R. Low. With many illustrations and portrait of Stanley. 12mo, cloth, $2.50.

Dedicated, by permission, to Henry M. Stanley, with whose rescue of Emin Pasha the volume concludes.

SHIPWRECKS AND DISASTERS AT SEA. By W. H. G. KINGSTON. New edition. With 180 illustrations. 12mo, cloth, $1.50.

A graphic portrayal of the perils of the deep, of hair-breadth escapes, and of the sufferings of castaways.

For sale by all booksellers, or sent by mail, postpaid, on receipt of the advertised price, by the Publishers.

GEORGE ROUTLEDGE & SONS, Limited,

9 LAFAYETTE PLACE, NEW YORK.

EASTWARD; OR A BUDDHIST LOVER.

By MRS. ROBERT HOSEA. Cloth, 12mo, $1.50.

"As direct and fearless an attack on theological dogma as can be found in the whole range of fiction. . . . Compared with it in this respect, 'Robert Elsmere' is a timorous affair."—*Cincinnati Commercial Gazette.*

PENELOPE'S WEB; AN EPISODE OF SORRENTO.

By "OWEN INNSLY," author of *Love Poems and Sonnets.* Cloth, 12mo, $1.50.

"Exercises a rare fascination over the reader by its delightful sketches of Italian life and scenery."—*Boston Globe.*

NEW PUBLICATIONS.

LORNA DOONE. A Romance of Exmoor. By R. D. BLACKMORE, author of 'Cradock Nowell,' etc. Authorized American issue; with new preface specially written by the author for this edition. The Exmoor Edition. 3 vols., 16mo, $3.75.

"This 'Lorna' visits you not by force of savage ravishers but under escort of gentle men, fair knights of the order of Copyright. And if you ask her how it is—when so many better tales are told, and die upon the fitful wind—that her simple story still has life and buoyancy on the lips of men, she answers not, but drops her eyes, and wonders more than you do."—*Extract from author's preface.*

THE STORY OF SWITZERLAND. By R. STEAD and Mrs. ARNOLD HUG. (No. XXXI. in the Nations Series.) 12mo, cloth, $1.50; half leather, gilt top, $1.75.

"The narrative runs easily and pleasantly along, and, both from the nature of its subject matter and its treatment, the volume is one of the most interesting in the series to which it belongs."—*London Graphic.*

FRA LIPPO LIPPI. A Romance of Florence in the 15th Century. By MARGARET VERE FARRINGTON. With 14 full-page illustrations in photogravure. 8vo, cloth extra, gilt top. $2.50.

A YOUNG MACEDONIAN IN THE ARMY OF ALEXANDER THE GREAT. By the Rev. ALFRED J. CHURCH, M.A., author of 'To the Lions,' etc., etc. 12mo, cloth, with sixteen illustrations, printed in colors, $1.25. Nearly ready.

"The historical characters, as well as the imaginary personages of the story, are brought before us with all the skill of a scholar who is perfectly familiar with the history and literature of the period with which he deals."—*London Spectator.*

GILBERT ELGAR'S SON. By HARRIET E. DAVIS. A charmingly written story of Quaker Life in Maryland. 16mo, cloth, $1.25.

"The heroine, Robin Elgar, who is at once daughter and 'son' of the Quaker owner of Airlie farm in Maryland, wins upon the reader from the opening of the tale to the close. . . . The pictures of Quaker life in Maryland are painted with loving touches and the book is one to be enjoyed by readers who do not demand sensational incidents."—*Plain Dealer, Cleveland.*

LITTLE VENICE, AND OTHER STORIES. By GRACE DENIO LITCHFIELD, author of 'A Hard Won Victory,' etc., etc. 16mo, with frontispiece, 75 cents.

"These stories are all marked by a gracefulness of style, a strength of treatment, and a certain freshness in character and situation, that make them particularly pleasant reading."—*Boston Times.*

AMONG THE MOTHS AND BUTTERFLIES. A revised and enlarged edition of 'Insect Lives.' By JULIA P. BALLARD, author of 'Building Stories,' etc. Small 8vo, Cloth, $1.50.

"The book is one of abounding and abiding interest, both in its matter and in its literary manner. It is copiously and exquisitely illustrated, and though obviously written for the entertainment and instruction of youth, is attractive to young and old alike."—*Boston Gazette.*

THE TREES OF NORTHEASTERN AMERICA. By CHAS. S. NEWHALL. With an Introductory Note by Nath. L. Britton, E.M., Ph.D., of Columbia College. With illustrations made from tracings of the leaves of the various trees. 8vo, Cloth, extra, $2.50.

"There has long been great need of just such a work, and it has at last been met in this handsome volume in a most satisfactory manner. It is a book which should be found in every library."—*Christian at Work.*

A MANUAL OF ARCHÆOLOGY. Containing an Introduction to Egyptian, Oriental, Greek, Etruscan, and Roman Art. By TALFOURD ELY, Member of the Council of the Society for the Promotion of Hellenic Studies. With 114 illustrations. 8vo, $2.00.

*** List of illustrated books for young people, catalogue of holiday publications, Catalogue No. 7 of Old and Rare English Books, and prospectus of the Nation Series sent on application.*

D. Appleton & Co.'s

NEW BOOKS.

WIDOW GUTHRIE: A Novel.

By RICHARD MALCOLM JOHNSTON.
Illustrated by E. W. KEMBLE.
12mo, Bound in cloth, $1.50.

"*It is understood that Colonel Johnston regards 'Widow Guthrie' as his strongest work.*"

In this charming picture of life in the Georgia of sixty years ago, Colonel Johnston shows a mastery of effects and a power of character-drawing which will surprise even his admirers. No other writer has an equal knowledge of the phases of American life which he delineates with such fidelity, force, and delightful humor.

A Charming Autobiography.

THE LIFE OF AN ARTIST.

By JULES BRETON.
With Portrait.
Translated by Mrs. MARY J. SERRANO.
12mo. Cloth, $1.50.

'The Life of an Artist' is a work of much personal charm and interest, written with an entire absence of reserve. It contains recollections of the Barbizon painters and others of world-wide reputation.

International Education Series.
Edited by WILLIAM T. HARRIS, A.M., LL.D., Commissioner of Education.

VOL. XVI.

HIGHER EDUCATION OF WOMEN IN EUROPE.

By HELENE LANGE.
Translated by L. R. KLEMM, Ph.D.
12mo. Cloth, $1.00.

The author, Miss Helene Lange, is the Directress of the Victoria Lyceum for Young Ladies in Berlin, and one of the most distinguished teachers in Germany. The book is written in a polemical style, and one may see reflected in it the whole history of the movement of the higher education of women in all countries from the beginning. Dr. L. R. Klemm, the translator, adds some graphic charts and statistical tables in an introduction, showing the exact status of the movement in the United States.

VOL. XVII.

ESSAYS ON EDUCATIONAL REFORMERS.

By ROBERT HERBERT QUICK, M.A.
12mo. Cloth, $1.50.

Only authorized edition of the work as rewritten in 1890.

Good Books for Young Readers

The first two volumes of the Fiction Series.

I.

CROWDED OUT O' CROFIELD. By WILLIAM O. STODDARD. Illustrated by C. T. HILL.

How a plucky country boy made his way. One of the most successful of this popular author's stories.

II.

KING TOM AND THE RUNAWAYS. By LOUIS PENDLETON. Illustrated by E. W. KEMBLE.

The strange experience of two boys in the forests and swamps of Georgia.

Each volume bound in cloth, with specially designed uniform cover. 8vo. Price, per vol., $1.50.

First Volume in the Series of the Young Heroes of our Navy.

LITTLE JARVIS. By MOLLY ELLIOT SEAWELL. Illustrated by J. O. DAVIDSON and GEORGE WHARTON EDWARDS.

The story of the heroic midshipman of the frigate Constellation. The second of the *Youth's Companion* prize stories.

Bound in cloth, with specially designed cover. 8vo. Price, $1.00.

For sale by all booksellers; or sent by mail on receipt of price.

1, 3, and 5 Bond St., New York.

Houghton, Mifflin & Co.'s New Books.

Richard Henry Dana.

A Biography. By CHARLES FRANCIS ADAMS. With Portraits. 2 vols., crown 8vo, $4.00.

"This biography is, in its sphere, as admirable as Mr. Cabot's 'Emerson,' and invaluable as a memorial of the spirit, the men, and the times of the last Boston generation."—*Boston Post.*

The Genesis of the United States.

A Narrative of the Movement in England, 1605–1616, which resulted in the Plantation of North America by Englishmen, disclosing the contest between England and Spain for the possession of the soil now occupied by the United States of America; the whole set forth through a series of Historical Manuscripts now first printed, together with a reissue of Rare Contemporaneous Tracts, accompanied by Bibliographical Memoranda, Notes, Plans, 100 Portraits, and a Comprehensive Biographical Index. Collected, arranged, and edited by ALEXANDER BROWN, Member of the Virginia Historical Society, and of the American Historical Association, Fellow of the Roya Historical Society of England. With map. 2 vols., 8vo, $15.00.

Dr. LeBaron and his Daughters.

A third historical novel of the Plymouth Colony, by JANE G. AUSTIN, author of 'A Nameless Nobleman,' 'Standish of Standish,' etc. $1.25.

Representative Sonnets by American Authors.

With an Essay on the Sonnet, its Nature and History, including many notable Sonnets of other literatures; also Biographical Notes, Indexes, etc. Selected by CHARLES H. CRANDALL. Crown, 8vo, $1.50.

American Sonnets.

A choice selection, edited by THOMAS WENTWORTH HIGGINSON and Mrs. E. H. BIGELOW. $1.25.

English and Scottish Popular Ballads.

Edited by Prof. FRANCIS J. CHILD of Harvard University. Part VIII. $5.00.

The *Saturday Review* of London says: "Prof. Child's books supply at once a joy to the bibliophile and an opulent treasure to the student of old customs and old songs. Mr. Child's learning, perseverance, sense, and good taste are beyond all praise."

For sale by all booksellers. Sent, postpaid, on receipt of price by the Publishers.

Houghton, Mifflin & Co., Boston,

11 East Seventeenth St., New York.

Children's Literature.

WHAT "ST. NICHOLAS" HAS DONE FOR GIRLS AND BOYS.

THE old St. Nicholas slily tossed bags of gold into poor widows' houses, and then ran away. His modern namesake has been sending, for nearly twenty years, by the postman, to all children within his reach, that which ought to give more lasting happiness and benefit than the money-bags which the older saint dropped in at the window.

The *St. Nicholas Magazine* is a fine flower of the nineteenth century. For childhood, as we understand it, is a recent discovery. The world had neither books, pictures, nor other implements of happiness suited to child-nature until our own time. What a step from the rude horn-books and incomprehensible catechisms to the pictures and stories of this day, in which the best literary ability, the highest artistic skill, the ablest and most experienced editing, the largest publishing enterprise, and the finest mechanical appliances, are all enlisted and combined to rejoice and enlighten children!

RECREATIONS.

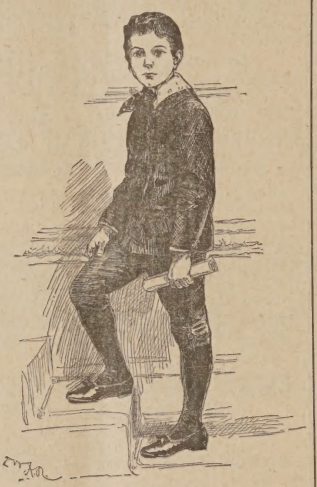
"The first work of a child is play," said the great teacher, Frederick Froebel. He who will lead children rightly must know how to win and hold a child's sympathy by entering into his play, and this *St. Nicholas* has done in many ways. On the side of honest sympathy with the spirits and pursuits of young people, there are descriptions of home amusements of various kinds, plays for parlor or school representation, drills and healthful exercises for both girls and boys, indoor games, funny pictures, the famous "Brownies," the never-to-be-forgotten jingles, and the riddles, the rebuses, the charades, the what-nots of elaborate entanglement that have called forth the ingenuity of puzzle-makers, old as well as young.

TIMELY ARTICLES.

Whatever subject comes up, *St. Nicholas* tries to give its young readers a good understanding of it while it is fresh in the public mind. This can best be demonstrated by noting a few of the many timely subjects that the magazine has treated in its pages. Coast-guard service, or life-saving on the coast, the work of coastguards in aiding ships and securing cargoes that have gone ashore, the use of light-houses and light-ships, cable telegraphy, the method of stopping cars by a vacuum-brake, the management of the city fire department, the use of turret-ships, torpedoes, torpedo-boats in war, the telephone, the minting of money, the foretelling of the weather, the electric light, the making of pottery, the cable railway, the elevated railroads, the transportation of the obelisk, the work of the war-correspondent, modern harbor-defences, the making of steel ordnance, Stanley and his exploring achievements, are examples of many papers that have been printed on subjects of immediate interest at the time.

SERIAL STORIES.

The stories of *St. Nicholas*, long ones and short ones, are too widely known to require any description here. They have taken the widest range, and appealed to the most diverse tastes, but it has been the special aim of *St. Nicholas* from the start to supplant unhealthful literature with stories of a living and healthful interest, uncontaminated and invigorating as the open air of heaven. There have been among the serials in the pages of *St. Nicholas* some of Miss Alcott's best stories for children, and Mrs. Dodge's "Donald and Dorothy"; stories of breezy adventure and boyish life, by J. T. Trowbridge; such pictures of frontier life and base-ball adventure as Noah Brooks's "The Boy Emigrants" and "The Fairport Nine"; tales of remote lands, by Bayard Taylor; Frank R. Stockton's "A Jolly Fellowship" and "What Might Have Been Expected"; Mrs. Frances Hodgson Burnett's "Little Lord Fauntleroy," her most famous juvenile story, and her other stories, "Sara Crewe" and "Little St. Elizabeth." Many of the *St. Nicholas* stories have passed into juvenile literature as classics. It is not too much to say that almost every notable young people's story produced in America now first seeks the light in the pages of *St. Nicholas*.



A SENATE PAGE.
From "The Routine of the Republic," in St. Nicholas.

"ST. NICHOLAS" AS AN EDUCATOR.

Put a boy to studying geography, and he gets a vague idea that Greenland is a green spot on the upper part of his map. But let him read Dr. Hayes's "Adventures on an Iceberg," and the arctic land, as by a touch of magic, becomes a real country. All the dry facts in the schoolbooks about the "chief products" and "principal seaports" of Japan will never make that land of dainty decoration half so real as will the article in Volume VI., entitled "The Blossom-Boy of Tokio," with its thirty-seven illustrations. But there is not one of the numbers of the magazine that does not stir the curiosity, inform the memory, stimulate thought, and enlarge the range of the imagination. One of the ingenious methods used by the magazine to excite interest in scientific study was the Agassiz Association—the most successful society of young people ever organized for scientific purposes, which was originally founded by *St. Nicholas*.

St. Nicholas, in short, fulfils the modern ideal of an educator—reaching and moving the whole intellectual and moral nature of a child.

ITS MORAL AND RELIGIOUS INFLUENCE.

"ST. NICHOLAS" would be a great benefactor if it did nothing but preoccupy the ground, and so crowd out the ill weeds of noxious books and papers, which are sure to find their way where the attention is not engaged and the taste elevated by better reading. The great antidote to frivolity is mental occupation—and this antidote a juvenile magazine of the highest grade affords. But *St. Nicholas* does far more than this: to hundreds of thousands it is a teacher of religion—not in cold, dogmatic form, not in any sectarian sense. But it teaches what a great orator once called "applied Christianity"—the principles of religion as they are applied to ordinary life. Unselfishness, faithfulness, courage, truthfulness—these things are taught in a hundred ways by stories, poems, and precepts. And these are the very core of true religion applied to the life. What a galaxy of eminent men and women has *St. Nicholas*, by some hook or crook, beguiled into writing for its lucky children! It would be easier to tell the few writers of note who have not contributed than to recite the list of those who have.

THE PICTURES.

So much has been said of the charming illustrations of *St. Nicholas*, they have been so often and so highly praised, they have brought warm words of commendation from high authorities in England as well as in America—that we should run the risk of becoming tedious if we enlarged upon them and their rare educational, refining influence. The leading paper of Edinburgh pronounces the illustrations "infinitely superior" to anything produced in juvenile publications in Great Britain. The London *Spectator* calls *St Nicholas* "the best of all children's magazines," and "The Thunderer," the London *Times* itself, pronounced *St. Nicholas* superior to anything of its kind in England, and said that its "pictures are often works of real art, not only as engravings, but as compositions of original design."

IN CONCLUSION.

Of the success of the magazine it is not needful to speak. Eminent persons have subscribed for the benefit of those not able to pay for it, for the sake of its educating influence. The Ames family subscribe yearly for two hundred copies for the children of the employees in their works at North Easton, Mass. In the third largest public library in America, more than three thousand people read *St. Nicholas* every month.

When the magazine began, Charles Dudley Warner said: "If the children don't like it, I think it is time to begin to change the kind of children in this country." Well, the children do like it, but, all the same, *St. Nicholas* has changed the kind of children. It cannot be that multitudes of them should see such pictures and read such stories and poems without being better, more thoughtful, more refined, and in many ways another kind of children than those who have gone before them. *St. Nicholas* has a great list of attractive features for the coming year; it will be "better than ever," the editors say, but just how they are going to manage it is a puzzle. The price is $3.00 a year, and the publishers, The Century Company, 33 East Seventeenth Street, New York, will be glad to send a recent back number, without charge, to any reader of this article who is unfamiliar with *St. Nicholas*.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 27, 1890.

The Week.

THE dimensions of the recent political revolution are strikingly portrayed in a table compiled by the Chicago *Tribune*, which covers the ten Congressional farming districts of Illinois, and which shows the majority for the Republican candidates in each of the districts in 1888, and the Republican and Democratic majorities when the same men ran for re-election in 1890:

		1888.	1890.	
		Rep. Maj.	Rep. Maj.	Dem. Maj.
5	Hopkins	10,059	5,782	
6	Hitt	6,236	502	
7	Henderson	5,039	2,572	
8	Hill	3,142		702
9	Payson	2,381		1,021
10	Post	2,658	813	
11	Gest	2,077		1,882
14	Roswell	1,830		1,222
15	Cannon	2,093		583
20	Smith	1,819	452	
	Majorities	44,690	10,126	5,415
	Net Rep. Maj.	44,690	4,711	

It will be seen that in 1888, before they had voted for the McKinley Bill, every one of the Republican candidates was elected, their majorities aggregating 44,690; while in 1890, after they had voted for the McKinley Bill, five of them were defeated, and all ten of them received only 4,711 more votes than their Democratic opponents—a net loss of almost 40,000 votes.

The Committee of Ways and Means in the present House of Representatives consists of eight Republicans and four Democrats. All of the Democratic members have been re-elected, while three of the Republicans have been defeated, and one (Bayne of Pennsylvania) declined a re-election. The three defeated members are McKinley, Gear, and La Follette. Another (Payne of New York) had his former majority of 10,000 cut down to 2,000. A committee so constituted cannot have any real influence in the House. Such standing as it has is merely mechanical. It can obstruct business, but it can do nothing more. It can prevent a vote being taken on any measure to repeal or modify the McKinley tariff, whether the same shall be introduced by Republicans or by Democrats. It is altogether likely that some such measure or measures will be introduced by Republicans, and it is even possible that they might command a majority vote if a vote upon them could be obtained. McKinley will find a way, however, to block any such game, and the Speaker will help him if he needs help. Meanwhile, the McKinley Bill, with its tide of rising prices, will grind the faces of the people and prepare them for the next series of elections.

The demand of Western Republican newspapers that the Republicans shall reopen the tariff question and modify the McKinley Bill as soon as Congress meets, shows no sign of abatement. The clerk of the House Ways and Means Committee, who is also Washington correspondent of the Philadelphia *Ledger*, informed his newspaper the other day that there is reason to believe that if the House could have an opportunity to vote on separate bills to make salt, lumber, wool, binding-twine, and other commodities free, and to restore the former rate on tin plate, some of them would prevail, but that the Republican members of the Ways and Means Committee will not allow any such bills to come to a vote. In other words, the Reed-McKinley faction know that bills to reduce the tariff would pass the House—and if the House, the Senate also—if they were put to vote, and they will refuse to allow the majority a chance for a vote. The Omaha *Bee* says of this policy: "There is no valid reason why eight men in the House of Representatives should refuse to permit any change to be made in a law which the popular judgment of the country does not sustain, particularly in the event of proposed changes coming from the Republican side of the House, as doubtless some will. If the Committee shall pursue the arbitrary course suggested as probable by its clerk, the effect upon public opinion is very likely to be unfavorable, and assuredly the Republican party would lose thereby."

Among the McKinley muddles that are coming to light day by day, one of the most interesting is that which grows out of the Worsted Bill, which was passed on the 9th of May last. The worsted people could not wait for the regular McKinley Bill to give them what they wanted. Nor could they rest content with the decision of Secretary Windom that worsted goods were dutiable as woollen goods, although the Tariff Act of 1883 had made worsteds dutiable at a lower rate than woollens. So they went to Congress and persuaded McKinley to pass a special act for them in these words:

> "That the Secretary of the Treasury be and he is hereby authorized and directed to classify as woollen cloths all imports of worsted cloth, whether known under the name of worsted cloth or under the name of worsteds, or diagonals, or otherwise."

It will be observed that this law does not in any way change the rates of duty on woollens or worsteds. It merely says that the Secretary of the Treasury shall classify worsteds as woollens. What might be the effect of such a law if the Secretary of the Treasury were the classifying officer of customs is at least doubtful, but he has nothing to do with classifications. Prior to the passage of the McKinley Administrative Bill, the Secretary could take action in classifications on appeal from decisions of the collectors, and not otherwise; but even this power is taken away from him now, and lodged with a Board of General Appraisers. Here is "a pretty kettle of fish." No wonder that the persons importing worsteds prior to the 6th of October, when the McKinley tariff went into effect, have put in claims for the difference between the worsted rate of the tariff of 1883 and the woollen rates in the same tariff, which difference is about 11 per cent. The case has been submitted to Judge Lacombe of the United States Circuit Court, under the McKinley Administrative Act. The General Appraisers have washed their hands of it, there being no facts in controversy, but merely a question of law. It looks as though Uncle Sam were about to be mulcted in a large sum for refunds again, but not so large as in the hat-trimmings case.

We are astonished to find people under arrest in Philadelphia, of all places in this world, on charges of smuggling carpet wool. Such a case was on trial there on Saturday. The alleged culprit is J. Henry Schmidt, a wool broker. He is charged with importing 162 bales of wool under an invoice describing the same as "cattle hair," which is free of duty. The wool was passed as hair by a customs examiner named Brearly, and the bulk of it was then sold to Thomas Dolan & Co. Mr. Dolan is President of the Manufacturers' Club in Philadelphia, and is a tremendous high-tariff man. The examination has not been concluded, and Mr. Schmidt is out on bail of $5,000, furnished by John Dobson, a carpet-manufacturer, and another great high-tariff light of the Quaker City. The Boston *Journal of Commerce*, commenting on the case, says, "The probabilities are, if the allegations are true, that there are more than the importer connected with the affair." But the allegations may not be true.

Congressman Dingley has told Editor Dingley that the recent advance in the price of carpets is not due to the increased duty on carpet wool, but to the fact that last year there was a glut in the carpet market and prices went down below cost and are now coming up to their normal price, and Editor Dingley has printed this statement in his newspaper, the Lewiston (Me.) *Journal*. Congressman Dingley ought not to deceive Editor Dingley with half-truths in this way. It is true that there was some overproduction of carpets last year, and that prices were unnaturally low. It is also true that the duty on carpet wool has been raised from two and one-half cents per pound (which is equal to 27 per cent. ad valorem) to 32 per cent. ad valorem. As all our carpet wool is imported, and none can be obtained without the 32 per cent. tax except by smuggling—which is an extremely hazardous undertaking—it follows that carpet-manufacturers must pay 8 per cent. more for their wool than formerly. In addition to this

advance in cost there are a lot of new and embarrassing regulations in the McKinley Administrative Bill which have paralyzed the trade in Donskoi wools in the ports of Russia. Paralyzing foreign trade is the thing aimed at in both of the McKinley bills, as Congressman Dingley knows, and he ought to tell Editor Dingley so. The result has been to make the actual cost of carpets greater than formerly; so that while it is no doubt true that a small part of the recent advance in price is due to other causes, the greater part is due to McKinleyism and Dingleyism in the tariff.

If "a cheap coat makes a cheap man," it follows that a cheap coat must make a cheap child. In fact, the damage to the moral nature must be even greater in the case of the child, whose mind is in a plastic condition. We were consequently astonished to read the following statement in the Postmaster-General's advertisement in Friday morning's Philadelphia *Press*:

> "Little Gretchen coats (6 to 12 years) at $7.50, worth $10 at least."

If "little Gretchen coats" are really "worth $10 at least," what right has John Wanamaker to sell them for the cheap price of $7.50? Does he not know that "cheap and nasty go together," and that "this whole system of cheap things is a badge of poverty"? Why does he help to infect the rising generation with the pernicious notion that there is some advantage in getting a coat for $7.50 instead of $10? Does he not see that the proper thing for a Sunday-school Superintendent of the McKinley stripe would be to advertise in this way?—

> "Little Gretchen coats (6 to 12 years) at $10; sold by 'cheap and nasty' dealers at $7.50."

The *Photographic Times* exposes a piece of swindling in the McKinley Bill of which the photographers of the country are the victims. Albumenized paper under the tariff of 1883 was dutiable at 15 per cent. ad valorem. The article is not made in this country, and the photographers accordingly indulged the pleasing hope that it would be put on the free list. To their astonishment it was reported by the Committee of Ways and Means at 35 per cent. ad valorem. An agitation was started in the trade to prevent this increase of tax. Protests were sent to members of Congress in such numbers that the rate was reduced in the House bill to 25 per cent. ad valorem. In this form it passed both House and Senate. But in the "Committee of Conference on the *disagreeing votes* of the two houses" the duty on albumenized paper was raised to 35 per cent. ad valorem, and so it stands in the present law. When a similar trick was played in Conference Committee in 1883 with the duty on iron ore, Senator Aldrich explained, years afterwards, that it was done at the earnest solicitation of Senator Mahone of Virginia, who was not himself a member of the Conference Committee. Perhaps Senator Aldrich will tell at some future time at whose solicitation this trick was played with albumenized paper. Of course he knows.

The great increase in pensions is now engaging the attention of the Committee on Appropriations at Washington. The *Tribune's* correspondent says that the *deficiency* on account of pensions will be about $40,000,000. This means that the amount appropriated at the last session to carry the Government to the 30th of June next will fall short of the requirements by a sum nearly equal to the surplus left in the national-bank depositories by the Cleveland Administration. It will be remembered that there was a colloquy in the House last summer between Mr. Cannon, Chairman of the Committee on Appropriations, and Mr. Dockery of Missouri on this subject. Mr. Dockery affirmed that the appropriations for pensions fell far short of the requirements for the fiscal year under existing law, and he charged that the intention of the majority was to make a false showing of economy for campaign purposes. Mr. Cannon replied that a deficiency bill was a regular thing, and that, since there would be another session of Congress before the end of the fiscal year, no harm could come from leaving the subject open for further light. The additional light has come in a blazing way. The *Tribune's* correspondent continues:

> "The appropriation for the last fiscal year, including deficiencies, was $106,000,000; and the appropriations for the current year, including deficiencies, will be $137,000,000, an increase of $31,000,000, of which, according to Commissioner Raum, about $25,000,000 will be paid to pensioners added to the rolls by the law approved at the last session, and the rest to claimants whose pensions have been allowed or increased under prior laws."

If this is done in the green tree, what will be done in the dry?

The more the New Hampshire controversy is examined, the more clearly does it appear that it is a case for the courts rather than for the politicians. It is simply this: Under the Constitution and laws of the State as they existed on the 4th of November, 1890, what towns and wards were entitled to choose members whose names should go upon the roll when the new House meets? The strength of the Democratic position is, that they desire a judicial determination of the questions. Indeed, their first step was to submit all the facts in the case to E. Rockwood Hoar, Attorney-General of the United States under Grant, and William G. Russell of Boston, and those eminent lawyers have just rendered an opinion which is fatal to the claims of the "if entitled" set of men to seats, and holds that of the "classed towns" only those could legally elect members this year whose turn it was under the old act passed after the census of 1880. The result of this, as we understand it, would be to give the control of the House at the start to the Democrats. It is hard to see how the extra session can result in any other way than to aggravate the existing trouble, and many Republicans were opposed to having it called. The true way out of the difficulty would seem to be to get the controversy before the Supreme Court of the State—a course to which the Republicans should interpose no objection, as the bench is composed of members of their party.

The Washington correspondent of the *Tribune* has discovered a "scheme" or "plot" to unseat Mr. Thomas B. Reed in the next Congress, as soon as it meets, on the pretext that the good man was elected in his district by "wholesale bribery and corruption." The correspondent says that "it is not difficult to understand the meaning and purpose of this Democratic plot." It may not be difficult for him, but for the rest of the community it is quite impossible. In fact, the story is incredible. We do not believe there are a dozen Democrats in the new Congress who would not subscribe according to their means to keep Mr. Reed in his place. In fact, they all want him there, under the influence of that ancient and, we admit, barbarous instinct which at one time made men enjoy gladiatorial shows and the consumption of primitive Christians by lions and tigers, and at a later period bull and bear-baiting, cock and dog-fighting. The coarser and more brutal a Democrat is, the more he desires to keep the poor "Czar" in his place in the Fifty-second Congress. He wants to bait him, in fact, and trample on him, and pay him off; and "flesh and blood," as the Quaker said, "can't blame him." If there be a "plot" or "scheme" to get Reed unseated, depend upon it it has been concocted by some of the good Samaritans among the Democrats, men blessed with more than the ordinary share of the finer feelings of our nature.

The relatively strong position of the banks of New York is shown by comparison with the latest official statement of the Joint Stock Banks of London, dated August 7, at which time these banks were fortifying themselves for the impending trouble due to Argentine speculations. The footings of the twelve Joint Stock Banks, the largest of which is the London and Westminster, show deposits £125,751,442, against cash on hand and in the Bank of England £15,493,128. In other words, the reserve is about 12 per cent. of the liability to depositors as against 25 per cent. here. The Bank of England itself keeps not more than 40 per cent. of the money of the other banks as a reserve against its liability to them. The Joint Stock Banks have, however, upwards of £25,000,000 invested in consols or other securities believed to be immediately convertible into cash. Experience shows that even consols are liable to considerable shrinkage in a panic.

It is fair to question the fidelity of a leader who has been acting as Mr. Parnell has been acting for the past three or four years. To pursue his own pleasure, for all this period, knowing well that discovery not only would discredit him, but might ruin the public enterprise in which he was engaged, was not the course of a faithful man. It was a poor return for the unlimited confide-

which the Irish people had reposed in him. In truth, it would not be vituperation to call it an act of treachery. The controversy between the English and Irish, to which the affair has given rise, is not an academic dispute. If it were, the Irish might possibly get the best of it by citing numerous examples of unconcealed, unreprobated immorality among English public men. Unhappily, it is a dispute about a pressing problem of practical politics. The question is not whether the impunity some of the Irish propose to allow to Parnell can be matched by the impunity which the English have allowed to Fox, Palmerston, Wellington, and others too numerous to mention. The question is whether any such impunity for Parnell at this juncture may not ruin the Irish cause or indefinitely postpone its triumph. By no endeavor can English cant be made to cover Irish folly.

The Irish Home-Rule members of the House of Commons having committed what seems the immense folly of unanimously refusing to accept Mr. Parnell's resignation of the leadership of the party, Mr. Gladstone has announced, in an admirable letter, that he cannot maintain the old political alliance with the Irish party if Parnell remains in command of it. He will probably, in that case, withdraw this winter from the House of Commons, and leave the Irish Home-Rulers to fight their own battles. The Liberal party in general undoubtedly approve of this view of the situation. Their chief organs declare without hesitation that if the Irish persist in their determination, the Home-Rule cause is lost for the present. Lord Salisbury will probably in that case dissolve Parliament while the catastrophe is fresh in the public mind, and win an easy victory at the polls over the disheartened and confounded Liberals. The one ray of hope in the matter comes from the possibility that the vote of the Nationalist meeting is a complimentary one, simply, and that there is a secret understanding that, having received this testimonial, Parnell will, as of his own free will, retire from the scene.

The conviction of Dillon and O'Brien by the Clonmel court was a foregone conclusion, so that it cannot be said to have much political or other importance. The sentence is six months' imprisonment, which gives a right of appeal; but the law of conspiracy, as laid down in the Coercion Act, is such that nothing but a defect in procedure would make an appeal of any use, and the procedure is so simple, even simpler than that of a court-martial, that errors in it are almost impossible. Mr. Balfour, who is evidently very angry with them for running away and coming to America, has been telling an audience in the North of Ireland that their flight was a sham, and that he could not have prevented it if he had so desired, as they were out on bail. But this is a mere quibble. They could and would have been arrested, had it been possible, on a fresh warrant for some other offence. Nearly every Irish agitator commits offences by the half-dozen, under the Coercion Act, every week, and the question of prosecuting him in each case is decided on grounds of political expediency; so that Dillon and O'Brien might have been seized at any time before they got away, and, undoubtedly, would have been, had their intentions been known.

The question, what is a "political offence," or an "offence of a political character," which has been so much debated by the makers or critics of extradition treaties, has received an interpretation by the Queen's Bench in England which will probably govern the practice, of English tribunals at least, hereafter. The case was that of Castioni, a refugee from the canton of Ticino, in Switzerland, where he took part in the recent rising of the Liberals against the constituted authorities. There was a rush of the insurgents into the State-house at Ticino, and one of the members of the Government was killed at the head of the stairway by a shot fired, nobody knew by whom, but Castioni was suspected. He fled to England, and his extradition as a murderer was demanded under the Extradition Treaty, and was ordered by the police magistrate. He then appealed to the Queen's Bench on a habeas corpus, and he was discharged by that tribunal after an elaborate discussion, both by bar and bench, of the meaning of the term "political character" as applied to offences under the English Extradition Act. John Stuart Mill, who took part in the discussion when the Act was passed, defined a political offence as "an offence committed in the course of or to further civil war, insurrection, or political commotion." The counsel for the Swiss Government fought hard against this definition, and contended that it must be shown that the act constituting the offence, if any, was necessary or likely to promote the movement in which the person was engaged at the time of committing the offence. The Court finally held that a political offence was "an act in furtherance of, or assisting in, a political rising or great dispute as to which of two parties should have the government of the State in its hands." It was clearly shown from the state papers of the Swiss Federal Government that the movement at Ticino was a movement of this description, and Castioni had no difficulty in showing that he had no knowledge of or spite against Rossi, the man who was killed.

But the judgment leaves unsettled the question how much of a "movement," or "rising," or "commotion" there must be to give offences against public order a "political character." The insurgents in Ticino were, as was shown by the result, the strongest and more numerous party in the State, and they rose against the neglect or refusal of the party in power to make the matter in dispute the subject of a *referendum*, or, in other words, to submit it to the popular vote when requested to do so in the manner prescribed by the Federal Constitution. Suppose they had been a small and comparatively insignificant body, and that their movement had been hopeless from the beginning in the eyes of all rational men. Would the killing of a man in the course of it have had a "political character"? Suppose, too, as in the Irish dynamite cases, the killing had been done in order to aid a political movement by simply terrorizing the Government, though without malice against the particular person killed, would this have been "a political offence"?

The scheme of Gen. Booth, the chief of the Salvation Army, for the relief and regeneration of the lowest class of city paupers and tramps, appears to be meeting with a good deal of encouragement from English philanthropists, and subscriptions are coming in towards the half-million dollars which he asks for to start it. It consists simply in the transportation of the good-for-nothing portion of the urban population to a series of farms, some close by, others farther away, and some in the colonies. The ne'er-do-weels are to pass from one to the other as their character is improved and their capacity is developed, until the fully regenerated finally get to the colonies. That the dregs of the city population cannot be redeemed without some tremendous effort on the part of the community everybody admits. Whether any effort short of a general remodelling of the social organization would suffice is the problem which General Booth's experiment proposes to solve. The initial difficulty he has to contend with is the getting of the money to prepare his farms. Then he has to get some legislation to enable him to constrain the broken-down people to leave town and engage in what nearly all of them consider the most repulsive kind of labor—work on a farm—and to keep them at it till they are improved. It would be easy enough to give him a chance at the criminals and paupers seeking public relief; but it remains to be seen how he could get legal control of the simple incompetents, the great army of the well-meaning or blameless, with whom everything goes wrong, and who are always dependent on somebody for the means of livelihood. Would it be possible to condemn them to association with the ordinary tramps and habitual criminals, who are really, as some one has well said, "belated savages"—that is, primitive men, relics of a vanished type of humanity, born out of date? The discipline of all these farms, too, would have to be that of an army, and would call for far more faculty for command than any military force, because it would deal with a far more unmanageable class than soldiers ever are. Gen. Booth estimates the number of ne'er-do-weels in the United Kingdom at 3,000,000. But he only proposes out of these to take charge of the "out-of-works, drunkards, and harlots." There must be a million of these, if his estimate of the whole number be correct. Looking at them, the old question again comes up—where is the administrative talent to officer such a host?

CLEVELAND—AND HILL.

THE announcement is made through various sources, all likely to be authentic, that Gov. Hill has reached the conclusion that the Democratic tide in favor of Mr. Cleveland's renomination in 1892 is too overwhelming for him to attempt to resist it, and that the wisest course for him to pursue is to go to the United States Senate. The Governor's intimates say that he has been devoting much thought to the meaning of the recent elections, and has been examining carefully the Democratic expressions of opinion in the West and South, as to the bearing which those elections have upon the question of a Presidential candidate in 1892. It has not been difficult for him to discover that while there was very little in them which seemed to point to himself as a candidate, there was a great deal which pointed directly to Mr. Cleveland. He could perceive distinctly that there was in all parts of the country a general and spontaneous recognition of the fact that the Democratic victory was the outcome of Mr. Cleveland's famous tariff-reform message of 1887; but the most painstaking search failed to reveal anywhere, except in the columns of the Butler organ of 1884, signs of a belief that Gov. Hill had contributed anything to bring about the result.

In view of this decidedly one-sided condition of Democratic sentiment, the Governor is said to have reached the conclusion that the same hand of destiny which points to Mr. Cleveland's unanimous renomination for the Presidency, points to a chair in the Senate for David B. Hill. We think he is sound in this conclusion. His term as Governor will expire next year, and the prejudice against third terms is so strong that he will not venture to encounter it by running a third time. If he does not go to the Senate, therefore, he must consent to go into private life. There are those of his admirers, we believe, who think that he has in him elements which may secure for him a Presidential nomination in 1896, or at some other date in the near future; but we are sceptical on this point. His chief recommendation for such a nomination has been his alleged original sentiment, "I am a Democrat"; and while that has excited boisterous enthusiasm among "Jeffersonian Democrats" and in Tammany Hall, we have not been able to discover that it made much impression upon the country at large. It has been all that he had to oppose to Mr. Cleveland's tariff-reform services, and its effect as a rival attraction has been so slight that he himself has concluded to withdraw it. There is a possibility that it may develop into larger and more impressive dimensions in the future, and we therefore advise the Governor to keep it on hand for use in emergency.

The retirement of Gov. Hill will leave the way for Mr. Cleveland's renomination entirely unobstructed. No man can foresee what may happen between the present time and the meeting of the National Democratic Convention in the spring of 1892. What we wish to call attention to now is, the position which Mr. Cleveland holds before the country to-day. It can be said with absolute truth that he is his party's unanimous choice for the Presidential nomination at the moment when that party is at a higher point of popular strength than at any previous time since the war. There cannot be found, from one end of the country to the other, a single Democratic newspaper or a single Democratic leader or politician whose opinion is worth a moment's serious consideration, that does not say that the recent great victory, amounting to a political revolution without parallel in the history of the country, is so directly traceable to Mr. Cleveland's influence as to be literally his personal triumph. No public man of this generation has more conclusively demonstrated his right to be called a leader of his party. He has led it against its own will, and at the temporary sacrifice of his personal interests, to a higher and stronger position than its most sanguine members ever dreamed of its being able to occupy.

It is easy to see, as we look back over the field to day, that more has been gained for the country by Mr. Cleveland's defeat in 1888 than could have been gained by his election by what would necessarily have been a narrow majority. If he had succeeded in that contest, the Democrats would have been made so timid by their narrow escape from defeat that they would have been over-cautious. Nothing that they could have done or left undone could have helped the cause of tariff reform a hundredth part as much as the phenomenal blundering of the successful Republicans has helped it. Mr. Cleveland, by the boldness and self-sacrificing character of his famous tariff message, startled the whole country into a more thoughtful consideration of tariff questions than years of ordinary discussion could have brought about. He did not quite accomplish the miracle of so far educating sixty millions of people upon the tariff in a brief Presidential campaign that enough of them would vote, against a deeply rooted prejudice, to reëlect him; but he came very near to doing so. He got a popular majority of nearly 95,000 to come to his side. Then the Republicans came into power, and, by their partisan blindness, cupidity, and reckless defiance of public rights and public interests, showed the country the wisdom of what Mr. Cleveland had said, and gave, so clearly that the simplest mind could not fail to comprehend it, an object-lesson upon the chief principle of his political creed, that the tariff was nothing but a tax, and that unnecessary tariff duties meant unnecessary and burdensome taxation. This elementary truth in political economy has been mastered so firmly by the American people that it can never be forgotten. There will, we may rest assured, be no step backward on that point.

Great as we believe Mr. Cleveland's service to the country will prove to have been from the point of view of wise economic legislation, there is another and even higher benefit to be found in it. He has set to the youth of the country an example of courage and honesty in political life which will be of incalculable value. He has demonstrated that courage and honesty are not only admirable qualities, but that, in the phrase of the practical politician, they "pay" better in the long run than all others known to politics. It is before the stupendous popular success secured by the display of these qualities that Gov. Hill, one of the most expert practical politicians of modern times, has been forced to bow and retire with scarcely a handful of followers to show for his eight years of indefatigable and inexhaustible scheming and working. There is not a professional politician in either party to-day who would not rejoice to have behind him a popular support like Mr. Cleveland's, and there is not one who has anything approaching it. Mr. Cleveland risked his political fortunes upon his faith in the intelligence and honesty of the American people, and his victory will raise the standard of political morality in America for generations to come.

THE FOREIGN ENEMY.

WE have already several times recently complained of the cruel way in which our high-tariff friends treat the human understanding. Some of the demands they have lately made on it have been barbarous in the extreme. That a high tariff does not raise, and is not meant to raise, prices, but to lower them; that the McKinley Bill does not raise prices, and that the story that it does is a Democratic lie; that if it does raise prices it is a good thing, because high prices promote human happiness while low prices lower human character, *e. g.*, "A cheap coat makes a cheap man" (B. H.); that the foreigner pays our customs duties out of his own pocket; that the increase of price which follows increase of duties is not caused thereby; that manufacturers are able to pay higher wages by having the market value of their goods diminished; that the profitableness of international trade is a question of language; that money may be made in it by trading with people who speak Spanish or Portuguese, but not with people who speak English or French; that nevertheless we now lose tens of millions of dollars in trading with Cuba and Brazil, but do not mind it in the least, but keep on trading just the same; *e. g.*, "We lost $41,000,000 in Cuba, from which our imports were $52,000,000, and to which our exports were only $11,000,000. Forty-one millions is a pretty large sum to lose in one island in a single year. In the Republic of Brazil we lost $51,000,000; our imports from Brazil were $60,000,000; our exports to Brazil were $9,000,000" (J. G. B.)—all these, we say, are demands on the human intelligence which no merciful man or party ought to make.

The latest draft of this kind is the proposition—of which great use was made in the late canvass, and which the Republican press is now using largely for defensive purposes—that the sorrow of foreign nations over the passage of the McKinley Bill, and their joy over the defeat of its authors at the late elec-

tion, indicate hostility to the American people. Of all the mediæval ideas with which the high-tariff brain is stuffed, this is probably the most mischievous. All over Europe, from the fall of the Roman Empire down to the discovery of America, the foreigner was considered by the bulk of the community a national enemy, no matter in what guise he came. He mostly came, it is true, for purposes of robbery and murder, but his malignity when he came for purposes of trade was considered hardly less doubtful. For what was his design in trying to trade with other countries than his own? Simply to get hold of their gold and silver and take it away to bury it in the ground in the pot in which, in those days, he kept his bank balance. Accordingly, he was looked on as little less than a marauder, and many royal ordinances were passed to discourage his coming, or, if he did come, to prevent his getting away with the gold.

This view of international relations has died out in every variety of intellect except the tariff intellect. There it holds its own firmly. That you can trade profitably with a foreigner, or that a foreign trader can be a harmless, friendly person, is something which this type of mind steadily refuses to believe. The modern philanthropist or theologian expends his rhetoric on it in vain. He may talk as much as he pleases about the march of science, about steam, electricity, ether, human brotherhood, and the parliament of man; his audience is sure to fly in alarm if a foreigner appears laden with goods for purposes of exchange.

Let any one who thinks that in saying all this we are dealing in extravagance or burlesque, ask himself why we consider the rejoicing of the English over the popular condemnation of the McKinley Bill a sign of hostility. Is it not because they want to sell us cheap goods in exchange for some of ours? Why did they lament over its passage? Was it not because they thought it would reduce the quantity of cheap goods they could sell us? Can there be anything more mediæval than the notion that a man who desires to sell you cheap goods is necessarily an enemy? Suppose a man were to apply this doctrine to our domestic trade, what would his friends say? Suppose that when a drummer from Massachusetts offering him cheap cottons, or from Pennsylvania offering him cheap Wanamaker clothes, or from Chicago offering him cheap hams, entered his office, he was to receive him revolver in hand, and drive him forth with execrations, as having designs on his property or domestic peace, would not his family sorrowfully apply for a commission *de lunatico?* In the more enlightened portion of the modern world, joy at the prospect of being able to sell us goods, and sorrow over the discovery that we have decided to place our orders elsewhere, is considered a sign of amity and good will, in so far as it is considered as an indication of any moral condition whatever. A desire to "do business" with a man is everywhere now among civilized men taken as a compliment, although when manifested too freely, as in the case of the book agent or life-insurance agent, it may become annoying. But, owing to the curiously twisted condition of the high-tariff mind, to the American protectionist the sight of a foreigner coming to trade inspires the same sort of fear and hate as the appearance of Capt. Cook excited in the breasts of the Hawaiians.

THE POPULAR VOICE IN THE ELECTIONS.

FULL returns have been received on the Congressional vote in nearly all the States, and an examination of them reveals much that is instructive for politicians and students of politics. The great general fact which the figures from all the States show, almost without exception, is that thousands of Republican voters stayed away from the polls. They were too much dissatisfied with the conduct of their own party to vote for its candidates, but they were not sufficiently dissatisfied with it to vote with the Democratic party. This is the general showing of the official figures. In some of the Western States there were many Republicans who were too indignant to be merely passive in their anger, and who voted with the Democrats. This was notably the case in Iowa and Illinois. We will take for examination the total Congressional votes of four typical States, New York and Massachusetts in the East, and Iowa and Illinois in the West, as being best calculated to disclose the nature of the popular verdict upon the tariff question.

The full returns from the thirty-four Congressional districts of New York State are now at hand with the exception of the Democratic vote in the Thirty-first District, which will not materially affect the grand total. We have estimated it in the table at 12,000. The figures for all the other districts are official:

NEW YORK.

District.	1890.		1888.	
	Dem.	Rep.	Dem.	Rep.
1	19,024	14,014	24,374	22,711
2	22,237	15,077	23,497	17,625
3	15,537	15,479	18,410	21,281
4	18,359	8,434	20,987	14,760
5	16,298	10,705	18,613	16,461
6	10,179	6,574	13,079	9,833
7	10,855	4,351	16,739	8,343
8	15,958	8,840	24,605	13,456
9	14,292	4,462	18,257	7,329
10	13,884	5,288	13,749	12,016
11	17,033	8,859	20,073	15,619
12	19,169	7,187	25,546	12,273
13	28,268	11,820	28,580	19,412
14	18,391	12,211	22,485	18,340
15	14,430	13,061	18,284	18,358
16	4,423	13,424	6,370	18,912
17	15,438	13,129	20,217	21,826
18	15,939	17,285	19,717	23,639
19	18,020	12,912	21,494	18,988
20	16,838	18,369	20,065	25,966
21	9,859	13,313	1,963	21,561
22	9,115	13,891	13,582	24,309
23	12,104	11,765	18,387	20,119
24	14,127	13,928	17,273	18,532
25	11,455	17,283	6,691	24,672
26	14,112	17,804	18,985	26,267
27	15,972	17,962	18,327	28,903
28	12,436	12,349	15,564	16,822
29	13,369	14,722	16,969	21,794
30	15,047	14,796	16,106	21,819
31	1[illegible],000	13,716	14,082	19,566
32	21,213	16,240	20,859	22,468
33	12,597	10,792	15,765	15,141
34	10,128	15,817	12,027	27,453
Total...	508,873	420,250	581,817	634,084

1888—Democrats..... 15 Republicans 19
1890—Democrats..... 22 Republicans 12

The most impressive fact brought out by these figures is that the Democrats have carried the State by a majority of 88,623. This surpasses anything they have ever had except the extraordinary majority given to Mr. Cleveland for Governor in 1882. In this, as in the other tables which follow, we have made the comparison with the Congressional vote of 1888. Ordinarily the fairest comparison would be with the vote cast on the last preceding "off-year." But the vote at the Congressional election of 1886 cannot be taken as a basis for comparison with the vote of 1890, for the reason that the tariff issue played a very small part in that contest. By comparison with the vote cast in a Presidential election there is danger of an erroneous impression being made because of the fact that there is, in all elections on other years, a great falling-off in the total vote of both parties. This should be borne in mind in examining the tables. In running the eye down the columns of the New York table it will be seen at a glance that the Democrats this year have in nearly every instance come much nearer to polling the vote cast in 1888 than the Republicans have. When we reach totals, this fact comes out with startling clearness. The total vote of both parties this year is 929,123, against 1,215,401 in 1888. Here is a total falling off of 286,278 votes. The total Republican vote this year is 213,834 smaller than that of 1888, while the total Democratic vote is only 72,444 smaller. In other words, nearly the entire missing vote can be traced to the Republicans. In 1888 the Republicans had a majority of 52,767 on the Congressional vote. This has now given place to a Democratic majority of 88,623. If there be any comfort for the Republicans and McKinley-tariff advocates in these figures, they are welcome to it.

If now we take Massachusetts, we find substantially the same showing as in New York:

MASSACHUSETTS.

District.	1890.		1888.	
	Dem.	Rep.	Dem.	Rep.
1	6,488	8,502	5,103	14,583
2	10,518	11,449	13,388	17,072
3	14,952	11,075	16,838	14,780
4	11,781	4,175	13,749	6,518
5	13,136	10,809	13,465	14,929
6	12,562	14,586	14,304	19,508
7	10,900	12,512	12,224	16,796
8	11,079	10,547	11,273	14,493
9	11,440	11,240	13,678	15,718
10	10,323	10,707	12,050	13,965
11	9,223	9,026	11,519	15,353
12	12,105	11,712	11,826	14,853
	134,507	126,291	149,917	178,671

1888—Democrats.....2 Republicans 10
1890—Democrats.....7 Republicans 5

It will be seen that the total vote this year is 260,798 as compared with 328,588 in 1888, a falling off of 67,790. Of this loss no less than 52 380 is upon the Republican side, the Democrats having come within about 15,000 of their vote in the Presidential year.

When we go West, however, it becomes apparent that thousands of Republican voters of that section have burned their bridges and gone over to the Democratic party. The following table of the Iowa districts shows this fact unmistakably:

IOWA.

District.	1890.		1888.	
	Dem.	Rep.	Dem.	Rep.
1	17,322	16,394	17,256	18,130
2	21,941	13,837	20,874	15,842
3	19,458	19 688	16,872	21,457
4	18,438	16,853	16,639	18,852

1888—Democrats..... 1 Republicans..... 10
1890—Democrats..... 6 Republicans..... 5

It is apparent at a glance that the total vote here is almost equal to that of 1888, being only about 11,000 less. When the Republican votes of the two years are compared, it will be noticed that that of this year is 23,477 less than that of 1888, while the Democratic vote of this year is more than 11,000 greater than that of 1888. In fact, in every district except two the Democrats have gained upon their vote in the Presidential year. There were few Farmers' Alliance votes in this State. The tariff issue was pressed more directly and systematically in Iowa than in any other State, through the efforts of the Reform Club of this city, and the result is the most convincing proof possible of the importance to the Democratic party of educating the people on this subject.

The Illinois table, in an almost equal degree, illustrates the facts brought out by that of Iowa :

ILLINOIS.

District.	1890.		1888.	
	Dem.	Rep.	Dem.	Rep.
1	21,796	22,235	22,607	26,553
2	17,383	6,750	10,051	12,969
3	20,069	17,933	21,295	23,671

20	16,273	17,580	17,186	19,005
Total...	343,041	308,537	329,472	357,139

1888—Democrats..... 7 Republicans..... 13
1890—Democrats..... 14 Republicans..... 6

Here we have a total vote 35,023 less than that of 1888, and a Republican vote of 48,602 less, while the Democrats have made a gain of 13,569 upon their vote of the Presidential year. The Republican loss is practically uniform throughout the State, while the Democratic gain is regular and large—exceptionally large in the ten farming districts.

LIBERALITY TO PASTRY COOKS.

We are assured by Macaulay, whose information was equally unhesitating and positive on all subjects, that the chief recipients of literature not otherwise in request are the pastry-cooks. Thus he tells us that each week Major Scott, whom Warren Hastings unfortunately selected as his counsel, produced a new pamphlet which found its way into the hands of those useful members of society. On this point we shall have no dispute with the great essayist. We shall assume that his knowledge of the needs of pastry-cooking was complete and well-grounded; and, taking it for granted that the necessities of the business are the same to-day, we propose to show that the prospect of supplies is exceedingly promising, especially at the hands of the Government of the United States.

For many years a standing topic for trite jesters has been the agricultural reports, with embellished pages that suggest a pictorial account of the possessions of Jacob, when the flocks conceived before the rods, "and brought forth cattle ringstreaked, speckled, and spotted." Although this publication may originally have been designed, in part, at least, to answer the ends of the culinary art, it has been diverted to other uses. It is seldom seen in the great centres of cooking. It is chiefly distributed by the bagful among rural constituencies as a souvenir of support in the past and an incitement to loyalty in the future. Having ponderously performed this function, it lies for a time neglected on the table, and is ultimately utilized in kindling the winter's fires.

Perhaps more useful from the point of view of cookery is the *Congressional Record*. While its distribution is not so strictly rural as that of the agricultural reports, it is, probably for that reason, still less read, and the amplitude of its pages renders it peculiarly available for pastry. It is a pregnant illustration of the cloying effect of extreme verbosity on the public taste. There was a time when the reports of Congressional debates were widely perused. But the habit of reading speeches in Congress, together with the abuse of the leave to print essays never delivered, has taken from the discussions the flavor of controversy and argument which once awakened the public interest and whetted the public appetite.

Without going through the list of publications, scientific and political, from which supplies may be drawn, we may come at once to a new department of public printing, which may be described as that of Unknown Law and Unknown Tongues. To ward off the eager approach and competition of the scientific, we may say that this department is not within the domain of antiquarian research or of speculative prediction. Its unknown quality is simply and strictly unknowable. It need, therefore, excite no feeling beyond the temporary repugnance which such an announcement may naturally arouse, until the demonstration of the hopelessness of inquiry compels acquiescence.

The first publication in the new department is entitled "Extra-territorial Criminal Jurisdiction and its Effect on American Citizens." It was referred to the Committee on Printing on July 25, 1890, and on the 14th of the following month was reported and ordered to be printed. As published, it forms a document of only forty-five pages, but it is all available for the purposes of cookery. Beginning with the topic of libel, it lays down the following luminous rule: "The writer or publisher of a libel, in circulating his libellous paper abroad, does not commit a second offence; circulating being the purpose of publishing, circulating and publishing are united to causal relationship. The circumference of the circulation of a malicious libel may only be regarded as a measure of the degree of maliciousness of the libeller, and, in consequence of that, referred to it in limiting the punishment." Passing by the discussion of other rules, we find the consummate application of the various jurisdictional principles worked out in the treatment of the German Dynamite Law. At the outset, the author declares himself to be an advocate of codification in the following manner: "Since emanation of her *organic* criminal statute-book (in 1871), Germany has indulged in continuous *special* legislation on different matters brought under criminal aspect. By such action, so contrary to German method of scientific systematizing, German criminal legislation, past 1871, lost its rational coherence and systematic connection. That is the curse of all inorganic legislation." Following this is an exposition of the vicious characteristics of the German Dynamite Law, but its full enormity is not laid bare until the end of the treatise, which concludes as follows:

Take for instance the following case:

I return, on a visit trip, to Germany. There I meet two Germans, whom I knew in St. Louis, but who were bitterly opposed to me on account of political or private or business reasons.

They denounce me and swear:

"We met this man every noon at the table of Tony Faust in St. Louis; at the 1st January we overheard him at such opportunity bespeaking with other ones, we shall be able to identify, the plan of perpetration of a dynamite crime."

I would have to answer, that I remember very well to have often met those two witnesses at the table of Tony Faust in St. Louis; that I was there at the 1st January, too, with two gentlemen, and that we had a pleasant dinner-talk, perhaps *we chatted* about some dynamite affair in an innocent way; but we did not plan any perpetration, etc.

Now, what can I do, if those two witnesses *swear?*

I am not able to produce those two gentlemen with whom I chatted at the 1st January; they were tradesmen; one has gone to Mexico —I don't know where there—and the other one had disappeared to Canada.

With the aid of two Pinkerton detectives, to be appointed for that purpose here by the German secret police, every offensive German-American returning to the mother country can be indicted on the ground of section 6 of the Dynamite Law. There are people, and especially Pinkertonians, that swear to anything desired of them.

I should think the United States would do better not to wait for the actual appearance of such a case, but to prevent its eventuality.

The publication of this treatise is full of promise—for pastry-cooks.

THE PROPOSED BRIDGE OVER THE ENGLISH CHANNEL.

At many different times since 1802, when Mathieu, a French engineer, submitted to Bonaparte, then First Consul, elaborate plans for a tunnel under the English Channel, plans for effecting a "dry land" connection between the island and the Continent have occupied the attention of English and French engineers and statesmen. In 1856 M. Thomé de Gamond,

*Farmers' Alliance candidate, 4,271.

after careful geological investigations, completed plans for a tunnel to be bored by sinking shafts through islands, artificially constructed in the line of his proposed tunnel, and driving to the right and left after the manner of tunnelling on land. This scheme was referred to a commission, by order of the Emperor of France, but appears to have gone no further. Many engineers have thought it impracticable to tunnel through the Channel bed, and have proposed various kinds of submerged tubes. Mr. Bateman, an ex-President of the Institute of Civil Engineers, proposed to solve the difficulty by means of a cast-iron tube, thirteen feet in diameter and four inches thick, laid in sections of ten feet in length. Other devices have been suggested by those who have thought a tunnel of any kind offered too many difficulties to be overcome. M. Boutet had a rather wild scheme for an iron bridge, which was carefully investigated by the late Emperor Napoleon and was warmly supported in France; but a little observation showed very clearly that the flexibility of iron rendered any such project a vain hope.

In 1882, John Fowler, the well-known English engineer, asserted that the objections to either bridge or tunnel were so great that they were never likely to be overcome, and argued at length in favor of his alternative, "huge floating railway stations, which would traverse at a high rate of speed the distance between the English and French coasts." This plan of transporting trains on ferry-boats had been embodied in a bill ten years before, and, after being approved by the Commons, had been killed by the Lords. Mr. Fowler's resurrection of the plan seems to have had no result. Sir Henry Bessemer's attempt to alleviate the sufferings of Channel passengers by means of a swinging saloon centrally placed in a large steamer, was interesting as an experiment. Unhappily, the steamer proved so unwieldy that on her trial trip, in May, 1875, she demolished about one hundred feet of the Calais pier.

The relieving of sea-sickness, however, has never been the first object of those interested in these enterprises. The vast trade that was carried on between England and the East, formerly, when the profits of the undertaking depended on speed of transportation, took its way through France, Mt. Cenis, and Italy, and, by ship, from Brindisi to the east coast of the Mediterranean. Since the construction of the Gothard line, however, the trade has been diverted from the French road to the shorter rou e which lies through Holland, Germany, and Gothard. The danger that France would be cut off completely from this trade was still more increased by the construction of the Eastern railroad extension to Salonica and Constantinople. To save for themselves any real share in the through traffic, French railroads, by the lowest possible rates, by a hastened forwarding of goods, by abolishing or lessening transfers, by lightening duties, and by other means, must offer to shippers inducements that will compensate for the disadvantages of a longer route. Any artificial or arbitrary means, however, would surely cause a rate-war which would entail ruinous losses to the railroads. A dry-land connection, therefore, with England, which would make possible a through trade without transfers of goods, and would guarantee the traffic to France, is looked upon by that country as of the highest importance. Merchants and consumers of England have scarcely less to gain, as the improved transportation facilities would increase trade and lower prices.

It was these considerations which led England in 1876, after the geological investigations of Prof. W. Boyd Dawkins had demonstrated the practicability of successfully boring through the chalk beds at the bottom of the Channel, to enter into negotiations with France, by which it was agreed that the tunnel between the two countries should be built. A company was organized, $400,000 in France and $300,000 in England were expended in preliminary work, and arrangements had been made for boring 2.5 miles from each coast, about a fifth of the whole distance. In the meantime, however, a perfect storm of opposition had been aroused in conservative England. It was argued that England's supremacy was largely due to her insular position, and anything that tended to lessen her insularity was a blow at her future peace and prosperity. Lord Dunsany published in the *Nineteenth Century*, for March, 1882, an article in which he quoted the opinion of "a high military authority," well known to be Lord Wolseley, that, in spite of the most careful precautions, in spite of the most skilful devices for flooding or blowing up the tunnel in time of danger, a possibility would always exist for a bold adventurer to surprise the posts controlling the tunnel, and hold open a road for the invasion of England by all Europe. A paper war ensued: every journal and magazine in England argued the pros and cons. It was a question between commercial advantage and military security, real or fancied. The fears of England were thoroughly aroused, and, with a change in the Government, came a change of policy. On April 3, 1882, the Board of Trade ordered the Channel Tunnel Company not to proceed with further boring.

France, however, undismayed by the failure of the tunnel scheme, almost immediately set about devising means for bridging the Channel. The *Zeitung des Vereins Deutscher Eisenbahn-Verwaltungen* for the 20th of September last gives an account of the origin of this latest undertaking, and the plans that are proposed. In 1887 Admiral Cloué, Minister of Marine, succeeded in interesting in plans for a bridge the director of the iron works of Creuzot, Mr. Schneider, and the ex-President of the Institute of Civil Engineers, Mr. Hersent, who acquired a name by the part he took in the work of the Suez and Panama Canals, as well as the two English engineers, John Fowler and Benjamin Baker, who had become well known by their building the Forth bridge. These gentlemen believe they have proved the practicability of a steel railroad bridge; and, to carry out their plans, the Channel Bridge Company was organized in England, and, on December 3, 1889, received a charter from the French Minister of Public Works. According to this plan the bridge will take the path indicated by nature, which combines the shortest distance and the least depth, and runs from Folkestone in England to a point near Cape Gris Nez in France. This line is about 23.39 miles in length, and lies over two shallows which will lighten greatly the labor of erecting the piers. These two shallows lie approximately in the middle of the Channel, and over them the water has a depth of only seven to eight metres. The space between the shallows and between one of them and the English coast has, too, only a depth of twenty-four to twenty-seven metres, but between the other and the French coast, for some distance, the Channel bed lies nearly fifty-five metres below the surface at flood-tide.

The bridge proper will rest upon huge metal crossbeams of 100 to 500 metres span; the crossbeams will be supported by metal piers, which will, in turn, rest upon foundation piers of masonry. These foundation piers are to be built in caissons so arranged that they can be floated from the shore to the desired spot and there sunk to the ground, which will have been previously carefully prepared. The height of the foundation piers will be fifteen metres above the surface, and on each of them are to be erected two cylindrical metal piers, forty metres high, and on these finally will rest the main beams of the bridge platform. At ebb tide the clear height will be sixty-one metres and at flood tide fifty-four metres. The bridge platform will have a breadth of eight metres for two tracks, each 1.5 metres wide. To avoid all possibility of slipping, and to obtain as much resistance as possible to the wind, the rails will be grooved. To satisfy any opposition to the plan on grounds of military expediency, a means has been devised by which, in case of war, one or two spans of the bridge can be made impassable; moreover, in case of necessity, the whole bridge could be readily destroyed by ironclads. The undertaking is almost unprecedented in its vastness. It is calculated that the weight of the bridge will be about 850 000 tons, that the cost will approximate $172,000,000, and that ten to twelve years will be needed for the completion of the work.

As yet this bridge exists only on paper and in the minds of a few engineers. However, the French Minister of Public Works has, by agreement with the Cabinet, appointed a committee, under the leadership of Messrs. Schneider and Hersent, to investigate the plan, and in France the undertaking appears to be on the road to success. The danger again threatens from England. The *Daily Telegraph* says:

"The plan is very fine, but it is unnecessary to ask whether a further pursuit of it will repay the pains, as England will never give her consent. We need neither bridge nor tunnel to connect our island with a mainland, bristling with soldiers, especially with a country whose irritable and adventurous people have stood opposed to us in bitter hostility for a hundred years past, and are not even now reckoned friendly to us.

It is, indeed, much to be doubted whether men like Lord Wolseley, whose latest fear, if he be correctly reported, is that civilized nations are to be shortly driven from Europe by invading hordes of Orientals, or a people which believes that its high position among the nations of the world would be destroyed by a tunnel, can ever reconcile themselves to any plan of a dry-land connection between their island and the mainland. Of the great advantage in increased facilities for trade and lessened discomfort to thousands of passengers who annually cross the "silver streak" in misery, there can be, however, not the slightest question.

"BEAU AUSTIN" AT THE HAYMARKET.

LONDON, November 4, 1890.

IT is a pleasant theory of Mr. Henry Arthur Jones, the author of "Hoodman Blind" and "Judah," that the English stage cannot be redeemed from mediocrity until the play-going public cease to assign a secondary position to the dramatic author, and to be indifferent to the literary and intellectual side of his work. But Mr. Jones argues too exclusively from his own experience: when this literary side does exist, it is readily recognized, and the author receives his due prominence. It is, for example, the fact that the authors of "Beau Austin" are Mr. Robert Louis Stevenson and Mr. W. E. Henley, which made the first performance of that play, at the Haymarket Theatre, yesterday evening, the most important dramatic event of the London winter season.

It is true that, even if the play had been but a new creation by an ill-appreciated dramatist the occasion would still be noteworthy, since it marks a new departure in modern London stage management. During the last year or two there has been in the English press much discussion of the theatre and all things theatrical. Present evils were then attributed principally to actor-managers and long runs. The only practical outcome of all the excitement was a determination on the part of Mr. Beerbohm Tree, one of the most conspicuous among the actor-managers, to devote Monday evenings in his theatre—the Haymarket—to new and original plays, even if the piece given during the rest of the week was enjoying a phenomenal success. By doing this the manager could encourage the British drama, which, it is said, languishes because young dramatists of talent, often of genius, have no hope of getting their work accepted and having it properly tested; while the actor would provide himself with wider scope for his powers and escape the pitfall of mannerism into which long runs but too frequently precipitate him. This scheme cannot be too highly commended. Moreover, it is but in keeping with Haymarket traditions, for even in Hazlitt's time it had been the immemorial practice in this theatre to bring out every season a number of new pieces, good, bad, or indifferent. One can only regret that Mr. Tree's capacity as actor falls so far short of his generous ambition as manager. Yesterday evening was the first of these Mondays, and this is why the occasion in itself was notable.

Far more interest, however, centres upon the work of Mr. Stevenson and Mr. Henley. It is a refreshing novelty to see a modern English play in which manner is as carefully considered as matter, and artistic effect is preferred to melodramatic morality. Only the other day, Mr. Rider Haggard explained, with feeling, that he objected to a proposed English Academy of Letters, because in it men who thought chiefly of style would find no place for those who were all for matter and spirit! This is the attitude that prevails in the dramatic world. What if the English of Mr. Jones be that of a bagman (I am using the English argument, and therefore the English word)—is not his ethical meaning fine? What if Mr. Herman Merivale's blank verse be atrocious, does not his "Ravenswood" serve as the reason for another series of beautiful Lyceum pictures? But one was certain beforehand that Mr. Henley and Mr. Stevenson would both cheerfully sacrifice ethics and meretricious sensationalism rather than that perfect form without which there can be no true work of art; and in this respect "Beau Austin" was no disappointment.

The plot is simple. The scene is laid in those Georgian days, as Mr. Henley says in his Prologue,

> "Whose style still breathed a faint and fine perfume
> Of old-world courtliness and old-world bloom:
> When speech was elegant and talk was fit,
> For slang had not been canonized as wit;
> When manners reigned, when breeding had the will,
> And Women—yes!—were ladies first of all;
> When Grace was conscious of its gracefulness,
> And Man—though Man!—was not ashamed to dress.
> A brave formality, a measured ease,
> Were his—and hers—whose effort was to please."

Beau Austin, a very prominent type of the time—to be exact, 1820—is, as the title explains, the hero of the play. Six months before it opens, he, then quite an elderly beau, had, after the fashion of his kind, seduced a young and beautiful girl, *Dorothy Musgrave*, of a good county family. He had then at once deserted her. But the six months find them back again at Tunbridge Wells, the scene of his conquest and her fall. She has not, however, yet met or heard from him when, in the first act, an old lover from home, *John Fenwick* by name, follows her to the Wells to offer himself in marriage. His honest, devoted love so touches her by the contrast with the baseness of her other lover, that in her desire to be true to him whom she can now never marry, she tells him the story of her frailty. He easily guesses the name of his unworthy rival, and determines to have his life. But *Dorothy* confesses her love for the *Beau*, and *Fenwick* promises, for her sake, to forego his revenge, as he has already lost his happiness. More than this, so great is still his own love that he resolves to save her from disgrace. He goes to see *Beau Austin*, whom he does not know, and so eloquently appeals to his generous heart, which the world's code of honor has not totally destroyed, that the *Beau* is moved and prevailed upon, for the first time in his long career as *roué*, to repair his fault. He hastens at once to the girl he has wronged—the last, as he a little before boasted, of many victims—and asks her to honor him with her hand. But *Dorothy* refuses; thanks to him, she is no longer worthy to be the wife of any gentleman; his reparation is too tardy; it should have been made six months sooner. The *Beau*, penitent and humiliated, learns too late the greatness of the love he has forfeited, and pleads for pardon at least, even if she will not accept his hand.

Now, in the meantime, *Dorothy's* younger brother, *Anthony*, whom she cared for as a child, and over whose education she watched, and who is now an officer in the army, has come down from London to Tunbridge. He has just celebrated his twenty-first birthday, and is full of his responsibility as head of the family. The poor boy learns quickly enough how heavy this responsibility is. He hears from *Barbara*, the maid, of his sister's disgrace. He is at once for challenging the *Beau*, but *John Fenwick* interferes, and he promises to await the result of the *Beau's* visit. When *Dorothy* tells him there is to be no marriage because she will none of it, he refuses to believe her, and swears to her he will kill her lover or perish himself. Foreseeing this, the reformed *George Austin* had arranged to leave not only Tunbridge, but England immediately. But under royal orders to attend the *Duke of York*, then at the Wells, that very afternoon, his going must be postponed till the morrow. To prevent the challenge, since he has promised *Dorothy* never to meet her brother in mortal combat, he seeks to spread the rumor of his proposal and the rejection of his suit. Unfortunately, *Anthony* does not hear it in time, and, knowing from his sister of her seducer's proposed departure, he appears before him just when he is in attendance on the *Duke of York*, and insults him. When the *Beau* pays no heed to the insult, *Anthony* strikes him in the face.

There is a tremendous sensation on the Pantiles, where this scene takes place. And then the *Beau*, faithful to his promise and ever a gentleman, explains to his Royal Highness and the assembled company the situation so as to reflect ridicule upon himself, and yet make his acceptance of the challenge so given seem even more ridiculous. He has been, he says, refused by *Miss Musgrave;* he then has presumed to make advances through her maid. But "the maid derided, the mistress denied, and now comes in this very ardent champion who publicly insults" him. *Dorothy*, overwhelmed at his generosity, throws herself at his feet and tells him to do with her what he will. The *Beau*, in an agony at this public exhibition of affection, raises her quickly and presents her to the *Duke* as *Mrs. George Frederick Austin*, and the curtain falls. The plot, it will be seen, simple as it is, is dramatic, and has many good, and a few powerful, situations.

Where the excellences are many, it is best to point out the defects at once, and it must be admitted that there is one very serious blemish in the construction of the piece. This is the utter improbability of the chief incident upon which the plot turns. That a man of *Beau Austin's* life and character should suddenly be led into the path of virtue by the Quixotic appeal of a young man who is an utter stranger to him, would be simply impossible off the stage. His rôle of seducer was as much a part of his character as *Beau* as foppishness in dress. And this, it must be remembered, was very far from being the first affair of the kind in which he had been engaged. "If I had married every lady by whom it is my fortune—not my merit—to have been distinguished, the Wells would scarce be spacious enough for my establishment," is his boast in the text. His theory of love is also best explained in his own words:

> "Is not love a warfare? Has it not rules? Have not our fair antagonists their tactics, their weapons, their place of arms? And is there not a touch of—pardon me the word!—of silliness in one who, having fought and having vanquished, sounds a parley and capitulates to his own prisoner? Had the lady chosen, had the fortune of war been other, 'tis like she had been Mrs. Austin. . . . You know the world."

I quote these two passages because they illustrate so admirably the accepted theory of gallantry in those late Georgian days, into the spirit of which Mr. Stevenson and Mr. Henley have so thoroughly entered. But both were left out by Mr. Beerbohm Tree, less from prudishness, I fancy, than from the realization that they can but add weakness to a scene already sadly lacking in strength.

The last act also could be much improved. The introduction of a speechless *Duke of York* reminds one too forcibly that he is there merely for the convenience of the dramatists whose puppet he is; the machinery here is just a little too apparent. Artistic effect is always lessened when the artist takes us into the secret of his methods.

But if the *Beau's* reform could be believed in, if the presence of a mere royal automaton could be forgiven, there would remain nothing but praise. The play is well constructed; it has plenty of action. The characters are well defined; they live, and are not mere puppets like the unfortunate *Duke*. There is no attempt to teach a moral lesson—what a happy gulf between a *Dorothy* and a *Nora!* And this is no small merit now that dramatists and actors in England are so mightily concerned with the ethics of the stage. There is no desire to give expression to personal predilections or fads. The authors are not fired with the fever of modernity, nor are they ambitious to figure as *fin-de-siècle* experts. They have confined themselves to their business as writers of a play, and have not sought to do the work of the scientist, the missionary, or the philanthropist. Having laid the scene seventy years ago, they realize the life of that time so naturally and unobtrusively that, clever as is Mr. Beerbohm Tree's stage realization, the play never degenerates into a mere fashion-plate or picture-book of a bygone age, as do but too many Lyceum adaptations from the past.

But, best of all is the dialogue: racy, witty, polished, it has the true literary flavor, which in the average modern English play is con-

spicuous by its absence. It might be almost too polished for the careless talk of to-day, but it is in perfect keeping with that Georgian era "when speech was elegant." There are many passages which, in their expressive simplicity and musical use of words, are delightful examples of Mr. Stevenson's style, for here his share in the work is unmistakable:

"*Anthony*, I have tried to be a good sister," *Dorothy* says to her brother, when urging him not to seek a duel with the *Beau*; "I brought you up, dear, nursed you when you were sick, fought for you, loved you. Think of it, think of the dear past, think of our own home and the happy winter nights, the castles in the fire, the long shining future, the love that was to forgive and suffer always."

And throughout, there is this same touch, this same charm. To compare *John Fenwick's* love-making with similar scenes in "Judah" would be a useful literary lesson for Mr. Jones. The dialogue between *Dorothy* and the *Beau* where she rejects his suit, is a triumph of literary art. And the wit is as delicate and refined—too refined, almost, for audiences whose tastes have been coarsened by Gaiety humor and music-hall jokes.

It is much to Mr. Beerbohm Tree's credit that the play was so well put on the stage. Though very uncertain whether he could give it more than two performances, not a detail was neglected. Costumes and scenery alike were thoroughly studied and correct in every particular. It is to be regretted that the Haymarket company were not better fitted for their task. A poor play well done is to be preferred to a good play indifferently rendered. Mr. Beerbohm Tree was capital as the *Beau* in certain scenes. He is an actor greater in experiment than in achievement, one who better understands the masquerader's than the player's art. He has made his way to the first rank in his profession by his versatility in costume. But it was not merely the brocaded dressing-gown, the ruffled shirt, the high-collared coat that made his *Beau;* it was the courtliness, the manner, the self-complacency as well. As long as he was the genuine *Beau*, who, by being the perfect gentleman, realized the noblest ideal of his age, he was unquestionably good. But as the penitent he relapsed into his favorite sentiment, while he seemed as little convinced as his audience of the *Beau's* penitence. Mrs. Beerbohm Tree, unfortunately, does not understand the first principles of her art; she cannot even manage her voice, nor has she sufficient personal charm to make up for her failings. Her *Dorothy* was as unconvincing as Mr. Tree's penitent *Beau*. The scene between them which should have been the most powerful in the play, was tame and weak. As for the other characters, Mr. Fred. Terry, who is excellent in farce, made a sad prig of *John Fenwick;* Mr. Brookfield was not without humor as the *Beau's* confidential valet; while Mr. Edmund Maurice, as *Anthony Musgrave*, was more effective in his swaggering than in his serious moments.

E. R. P.

REFORM OF THE UNIVERSITY OF EDINBURGH.

EDINBURGH, November, 1890.

I FIND the University of Edinburgh at the present moment in a situation of great concern, buoyed with hopes and anxious with fears as to the movements which are contemplated to the end of lifting its methods out of the old traditional ruts, and broadening and strengthening its aims. Not the least of its hopes is that of opening its doors to women, a consummation which, so far as I have talked with the professors, is not to meet with great obstacles. There is more or less instruction now given under circumstances which recall the relations of Harvard College to the "Annex." These seem likely with us, as it is made evident to one not an officer of instruction, to end in making the "Annex" a dependent college of Harvard University. That the "Annex" will long remain an institution of separate instruction I cannot believe, for a husbanding of professional strength will inevitably, I hope and expect, create an autonomy for it as a woman's college, distinct in organization, but more or less conglomerate in methods with the general department of arts in the University. It seems likely, from what I observe here, that the halfway expedient of a distinct college for women will be abandoned, and that the sex will be admitted on the same standing to the curriculum of the men.

Parliament has instituted a commission to make all these changes in Edinburgh University, and this body is now sitting here. Its President is Lord Kinnear of the Court of Sessions, and it embraces men so well known as Sir William Thomson, Dr. Blackie, and the Earl of Elgin. The only officer of the University in their number is Prof. Butcher of the Greek department, and one of the movements which may be consummated is the displacement of Greek, in some degree at least, from its dominating position in the past. I have before me a large mass of documentary projects and recommendations which from time to time during the last half-year have been adopted by the Senatus of the University, as suggestions to the Commission. These papers have been given to the public through the press. In addition to this they have called expert testimony, kept private, from the English and Continental universities; and as there happens to be here at this moment a representative of the American system, he has been asked to submit to their examination. It is represented that the American university system, as exemplified in Harvard, has much more of correspondence with their traditional ways and future intentions than they find to be the case with the systems of other countries. They have on their staff a considerable representation of those acquainted with the methods of England and Germany, arising from years of study at Cambridge, Heidelberg, and elsewhere; while they have mainly depended on their study of the Harvard catalogue and reports for what they know of the American system. Sir William Muir, the Principal, has depended, I perceive, in some respects upon what he has learned to have been the observation of Sir Lyon Playfair during his numerous visits to Massachusetts. Sir Lyon, it will be remembered, was the representative of Edinburgh at the jubilee of Harvard in 1886, and I read a few days ago, as preserved in the University library, Harvard's congratulatory Latin, which was sent on parchment to Edinburgh when they observed their three-hundredth anniversary. I have not in Britain been so well satisfied with our own scant American antiquity as when I have thought how this great University is scarcely sixty years older than we are at Harvard; nor have I felt a solider confidence in our stability than when I recollect that the charter of 1 50 for Harvard which hangs in my room at home, and which is to-day in operation, outdates the fundamental law of this chiefest though the youngest of the Scotch universities.

I suppose there are to-day in the undergraduate department of Harvard University some 1,300 students—I have not seen this year's catalogue; and I learn that there are here about 800. We are putting upon the American world not far from 300 graduates every year, much the largest part of whom are loyal sustainers of their Alma Mater, forming themselves into clubs in all our broad country, and keeping themselves alert to the interests of their college. There seems to be nothing like it here, and I have heard the officers express regret at it. Their lack of a dormitory system, or, as they call it, a residential system, seems to have something to do with accounting for this inertia. The migratory disposition of the Scotch is another element. The habit with the scions of their leading families of going to Oxford and Cambridge has perhaps still more to do with it. The system of brotherhood through clubs does not seem to be quite so hearty as with us, and there can be no doubt that such warmth of affiliation serves in no small degree in cementing the graduate's affection for his college. They are beginning to be aware of this here in considering the endowments from personal benefactions as they actually are and as they wish they were. When one looks round the yard at Harvard, he sees in University Hall, I think built in 1812—I have no chance to verify my impression—the evidence of the last pecuniary assistance which the State of Massachusetts gave to Harvard College; and the Commission now charged with bettering the Scottish universities could do nothing except that the British Parliament has backed their authority with a grant to give their judgment effect. As their acts are private, it will not be known what their judgments are for a year or more to come.

The pecuniary aspect is indeed the chief obstacle to the perfection of any intended scheme. In the Department of Arts, for instance, there are now eighteen professors, the instruction of only seven of whom is necessary to attain a degree. It is the wish of the University Senatus that these seven classes of subjects should be increased to twenty-six, and of this number fifteen are to fall within the Department of Arts. The eighteen chairs, as now constituted, have an income of about £13,000, of which £2,200 comes from Parliamentary grants, and of the remainder sundry endowments yield £3,600, while the student's fees give double that amount, or about £7,200. In another way of looking at it, those seven chairs whose instruction is necessary to a degree, get £8,000 of the total income, while those not necessary get £5,000. But the discrepancy is much more marked when we find that of the former £8,000, there come £6,000 in fees, while only £900 is derived in this way out of the other £5,000. You can understand from this, then, that when I asked the other day, "Is the size of your classes apportioned in any way to the attractiveness of the professor's lecturing?" I got the answer, "Not a bit!" Those whose lecturing is necessary to a degree get the large classes; and great gifts in instruction are necessary to secure a small class with the other professors. It is manifest that this is not making professional talent tell for all it is worth. The highest income among the necessary chairs in art is £1,500, that of the professor of mathematics; the lowest is £875 (moral philosophy), while that of engineering, the chief of the non-necessary chairs, has only £600. The hoped-for changes involve the equalizing of salaries; and if there is no falling off in fees, the fifteen professors of the new staff will only receive £578 apiece, while £1,000 is thought to be the minimum that is desirable. Edinburgh is considered a much more expensive place for a professor to live in than is either Oxford, Cambridge, or the other Scotch University towns. This is estimated to arise

from the fact that Edinburgh is a favorite residence of people with large incomes and no business or professional occupation. It is said that £700 or £800 will go as far at the other universities as £1 000 here.

The fees now are collected by the professors themselves. They look in the future to their being turned into the coffers of the University for the treasury to deal equitably with them. There are no more urgent advocates of this, I find, than the most favored professors under the existing methods; and with the strong regard for vested interests which obtains in Britain, they can well afford to be advocates. No one ventures to intimate that any of the existing occupants of the chairs will be subjected to reduction of pay. Their successors, as one by one they come into office, will be enrolled under the new conditions. To make this change and give to the much increased staff equitable pay is going to demand a large increase of pecuniary resources. The Senatus reckon, as their published papers show, that an annual £4,000 of increase will be required, and the capabilities of the Commission in furnishing this increase will necessarily be the measure of the new development.

Instead of the seven classes of studies that are now competent to lead a student to his degree, it is proposed to have twenty-six. I have heard a British East Indian say that when you hunt the tiger, it is rare sport, but not quite so exhilarating if the tiger takes to hunting you. In the present curriculum the studies hunt the student. There is little freshness and vigor, it is to be feared, beneath the trammels of the old methods. The young blood of Scotland is longing to hunt the tiger, and to enjoy the exhilaration of a hapful, all-round development. One is surprised to find, for instance, that there is not a single chair of history, in any proper sense, in all the Scotch universities, either at Edinburgh, Glasgow, St. Andrews, or Aberdeen. All that the hampered youth of Scotland get here at Edinburgh is what little is incidentally shaken off the shoulders of the professor of constitutional methods in a law course. It is proposed now to have a hundred hours of instruction in this department during the college year, and this is to be accomplished, as the proposal is, by adapting the present chair to larger duties in history, and by adding two or more additional instructors.

I have been surprised to find how little is done even in instructing in their own Scottish history. To the rest of the world the stories of the clans are thought to be remarkably interesting, but there is nothing better for the younger students than what Scott left them in his 'Tales of a Grandfather.' They hand you this book in all the shops. I inquired the other day at four of the bookshops if there was such a thing as a history of Edinburgh for a child, which I could send to a youngster across the sea. "There is no such book," they answered; but one of the booksellers, when I told him that in Boston I could find him two or three just such books respecting that city's history, awoke to the idea and added, "Capital project! Never thought of it before; there shall be one." I said the other day to the Chairman of this Universities Commission in a private interview, when I was explaining how much we aid in instructing in history, that I marvelled there was so little of it here, and that such a story as their own Scottish annals afforded ought not to be neglected in implanting an interest in history in the early days of their youth. "Come to Boston," I said to him, "and ten to one you will be asked, as many other eminent men have been, to speak to crowds of children, filling the Old South Church. You shall take a Scotch subject. Take the battle of Dunbar; tell its story; follow the shipload of Scottish prisoners which Cromwell sent from that stricken field to Boston; picture them as outcasts in a strange community; tell how they banded together for mutual help, and how their blood is some of our best blood to-day, and how the 'Scots Charitable Association' which they there formed in 1652, is to day the oldest charitable organization for mutual benefit in the United States, and one of the most prosperous. You will have, I promise you, an interested audience."

If I can judge from the dearth of juvenile literature on Scottish history which I find in the shops, there would be nothing like the same interest here, evoked in a similar way, in the same class of the community.

JUSTIN WINSOR.

THE INLAND SEA OF JAPAN.

NAGASAKI, October 12, 1890.

FOR fifty days I have "gone to and fro in Japan, and walked up and down in it." No, I have walked little. A man-power sulky can be hired for sixty-five cents a day, so that I cannot afford to walk. Among mountains, where paths are too steep for a jinrikisha, I have been carried by three men in a kago.

Last of all, embarking at Kobé for Shanghai, I find my crowning mercy in the Inland Sea. It is an old saying, and as true as old, that sea-travel is pleasantest near land and land-travel near water: *Ambulatio prope aquas, navigatio prope terras amoenissima.* This truth has grown more and more clear while skirting the north coast of the Mediterranean, from Cadiz to Constantinople, and so on, calling at all Levantine ports, even to Alexandria, as well as in a similar navigation of Swiss, Italian, and American lakes, and along the Island of Hawaii. In all these fairest scenes of land and deep combined, there are points at each of them where the actual vision transcends all memories of the past and all anticipations of the future. Sober second thought will, however, give preëminence over all to the Inland Sea of Japan. What is it? If words or pictures could tell, it were foolish, indeed, to adventure to these farthest shores washed by the farthest sea. Nevertheless, it is easy to specify some salient features in this great wonder of Japan, and to note some of its superiorities.

The Inland Sea has more islands, it may be, than have ever been counted. The question there at once arises, "What is an island?" The international commissioners who divided the islands in the St. Lawrence, when confronted with this question, decided to call nothing rising above water an island which had not a tree on it as high as a man. According to this definition, hundreds of rocks in the Inland Sea, like Rock Dunder near Burlington, on Lake Champlain, each many times larger and more picturesque, and sometimes all velvet with moss or low herbage, are not islands. Indubitable islands, however, are everywhere. Before, behind, and on every hand they enwheel us round. Sometimes they hedge up our way so that we are land-locked. Anon they open a path for us where we least look for it. Greek scholars are reminded of the gates of Olympus which Homer describes as unfolding of their own accord when the chariot of Juno approached. Tourists from Minneapolis think of rides up an elevator in Pillsbury's mill, where they seem ready to dash against the ceiling, and are startled to see a trap-door unclosing to speed them on their upward way.

The Inland Sea, at once both Bosphorus and Archipelago, stretches 400 miles from Kobé to Nagasaki. It is so narrow or so islanded that in all that distance steamers are never out of sight of land, and usually hug some shore so closely that they are near enough for distinct vision. At one point the broad water narrows to 600 feet. We have in full view weather-beaten dark houses with white gables, groves, terraced hills, here tolerant of culture to the very top, and there torn by torrents till they look like the variegated rocks of Dakota Bad Lands. We can even discern the jinrikishas coursing along the Tokaido, the seaside highway; and the wayside chapels on many an eminence. But verdure is the most surprising feature. This greenness is due partly to a rainfall twice as great as that which gives Ireland her emerald, partly to a semi-tropical latitude where some crops are always green, and partly to spade and garden tillage as well as profusion of fertilizers, which, leaving no corner of the land untouched, and "deracinating all savagery," render vegetation luxuriant and exuberant. Accordingly, no epithet so well befits the landscapes as verdurous —walls, as it were, of Milton's Eden. The shades of green, too—shade unperceived still softening into shade—are more multitudinous than elsewhere.

Cities of local celebrity, and hence fleets of junks, are often met with. But sampans are abroad on every wave, in quest of fish, at night, with each a solitary torch. No waters yield so many varieties of fish as the Japanese, or in more exhaustless harvests. Wheresoever the carcase is, eagles gather. The fishermen are more numerous because no more than one-tenth of the soil in Japan is under cultivation, and its people are perforce largely ichthyophagous—a greater percentage, it is said, than anywhere else. They even eat whales. Hence it comes about that the Inland Sea is populous, yes, crowded with fishermen, who give it everywhere an intense human interest. Their little life, the build of their craft, peculiar oars, sails, crews (usually a family—man, wife, and child), flash on us at every turn. The frailty of their craft makes us watch them the more.

The shores, nowhere low, are often mountainous, or formed by foot-hills showing mountains beyond; green range behind range, with blue heights towering further inland, every one with a sky-line unique and all its own. But, on the whole, the Inland Sea would lose its cardinal charm if it lacked islands. Thanks to islands, voyagers enjoy surprises every hour and oftener, till they are dazzled and drunk with beauty. Many are cones, regular as Vesuvius and sometimes as gray. Others are pyramids, but most are as fantastic and grotesque as anything that can be seen in Japanese paintings. One rock island, at least, shows a natural bridge, or rather a Gothic arch, piercing it through from side to side, which to the eye is as regular as the nave at Cologne, and so large as to be seen through when miles away. The triumphal arch of Napoleon at Paris the French call the Arch of the Star, because avenues radiate from it in every direction like the rays of a star. The Inland Sea abounds in such stars—central points from which perspectives diverge towards every quarter between files of islands which seem ranged just where they afford the most of surprise and pleasure. Few islands are near the sea level; some rise a thousand feet, and many are half that height. Their summits, and, indeed, those of the mainland, are knife-edged. At all events, they are described by Shakspere so much to the life that one is ready to think he was a Japanese: a

"blue promontory with trees upon it that nod unto the world and mock our eyes with air." No feature is so peculiarly Japanese as such a fringe of trees cresting a height, or a solitary tree at its very acme. The island coves, and hamlets, and ravines opening into inmost recesses, are additional attractions. But for islands so studding it and so grouped, a voyage through the Sea of Japan might be as monotonous as that through Lake Superior. As it is the half cannot be told about it. if every single feature could be enumerated, no fraction of a beholder's impressions could be reproduced any more than an idea of the Lady Olivia's beauty could be gained from its inventory item by item. J. D. B.

Correspondence.

ANTI-McKINLEY PEDLARS.

To the Editor of The Nation:

Sir: Just before election in this State, there was noticed an unusually large number of tin-pedlars circulating among the farming districts. These men were a little different from the ordinary run of pedlars; they were bright and intelligent, wore good clothes, drove sleek horses, smoked good cigars, and seemed anxious not so much to sell their wares as to bring them to the notice of the farmer and his family. Their sales were slight, but their spirits seemed to be not in the least dampened thereby. They would go from farm-house to farm-house, tie the horse to the fence, and come in with an armful of tinware. They never talked crops or politics, but confined themselves to begging people to buy tinware. When remonstrated with for charging such a high price, they admitted the price had risen: tin pans and cups and dippers, it is true, used to be sold at such a figure, but they positively couldn't think of selling them at that figure now. In fact, they were offering these same pans and pails at a ruinously low profit to themselves; there was really nothing in it for them.

"What has raised the price?" asked the farmer. "The McKinley Bill," answered the pedlar, in hushed tones; "we are very sorry, very sorry, indeed, but positively we are not making more than a bare living our-selves; we don't understand the bill, never did bother about politics, don't care a snap who is elected. We only know that in our business we have to pay more for tinware, and of course have to charge you more for a dinner-pail or bread-pan than last year. Can't sell you any tin? Sorry. Good day." Thus these amiable, engaging emissaries of trade went on, working township after township; cheerful and industrious, paying their bills promptly, and never colliding. After election they disappeared as suddenly as they came. But there was an ominous falling off in Republican votes in the territory they had covered.

And now the Republicans claim that these suave and loquacious people were no true tin-pedlars at all, but wicked Democrats in disguise. Maybe they were; but at any rate they succeeded in educating the farmer by using the tin-pail as an object-lesson. With true pedagogic skill, the word "tariff" was "developed" in a way that would have delighted Pestalozzi's soul. The farmer, like the child in the kindergarten class, when allowed to see, feel, and handle the object, acquired a "vivid and lasting concept" of the word. Like a good little boy, he learned his lesson thoroughly, and, when called upon at the polls, recited it with startling effect. It does not matter much who his teachers were, but it must be confessed that, from a scientific point of view, they were adepts in stannic and bucolic psychology.

E. L. M.

South Chicago, November 14, 1890.

A NICE QUESTION.

To the Editor of The Nation:

Sir: In the article on the Pattison victory in your issue of November 13, you make the following statement: "The most contemptible figure in this campaign has been cut by the Philadelphia *Press*, a Republican organ of this State." Are you not unintentionally doing the *Press* an injustice? It is generally recognized to be a straight-out, hide-bound party organ in this State, and is expected to uphold everything that the party managers introduce, through thick and thin. The *Evening Telegraph*, on the other hand, has been a paper of a different sort. Though not possessed of much backbone politically, it has had the reputation of being on the right side in considering questions of decency or morality; but it seems unjust to the *Press* (of which nothing was expected) to say that its attitude in this late campaign has been more contemptible than that of the *Evening Telegraph*. Throughout, the *Telegraph* has ignored and refused to assist the work of the Lincoln Independent Committee, which was badly in need of a helping hand from a Republican paper; but on the day after election it published the enclosed editorial, which takes identically the same position as was occupied by the Independents. Moreover, during the latter part of the campaign the *Telegraph* day after day published, in one column, editorials inveighing against the provisions of the McKinley Bill, and in the next others urging the necessity of voting for Delamater lest his defeat might lead to the repeal of that bill. The idea suggested by this course was that the *Telegraph* expressed its own sentiments in the first column, and rented out the second to Andrews and Cooper for their tariff bugaboo articles. Is not this more contemptible than the attitude of the *Press*?

Very truly yours, Theo. J. Lewis.

Philadelphia, Pa., November 19, 1890.

THE MICHIGAN BALLOT-LAW.

To the Editor of The Nation:

Sir: In your article "Ballot-Reform in the Elections," in your issue of yesterday, it seems to me that you have overlooked the fact that in this State (Michigan) we voted for the first time under a new law, providing booths and tickets furnished by the State. The election by the Democrats of the entire State ticket and a gain of six and perhaps seven Congressmen, giving us eight or nine of the entire eleven, was certainly a great surprise to politicians as well as to the rank and file of all parties; but whether the result was attributable in any marked degree to the new method of voting, I am not sufficiently informed to say.

Yours truly, Geo. B. Daniels.

Stanton, Mich., November 21, 1890.

MAYNE REID AND FENNO HOFFMAN.

To the Editor of The Nation:

Sir: In the recently published memoir of Capt. Mayne Reid by his widow, there is printed at length as *his* work a poem entitled "Monterey," beginning:

> "We were not many, we who stood
> Before the iron sleet that day,
> Yet many a gallant spirit would
> Give half his years if he but could
> Have been with us at Monterey."

This poem was familiar to many schoolboys of thirty years ago, but in the school-speakers, and in Mr. C. A. Dana's 'Household Book of Poetry,' it is attributed to Charles Fenno Hoffman. It also appears in a collection of Hoffman's poems published a few years ago. There can be no doubt as to its authenticity.

Mrs. Reid has, no doubt, made an innocent mistake, but she should correct it. Mayne Reid has just claims to the gratitude of the boys of the last generation, and he never could have claimed that which was not his own.

Geo. H. Fisher.

Philadelphia, November 18, 1890.

BLIZZARD FOSSILS.

To the Editor of The Nation:

Sir: In No. 1319 of the *Nation*, p. 286, I find a letter from Mr. S. Garman, dated Cambridge, October 3, 1890, in which this investigator refers to a little paper published by myself in the *Naturwissenschaftliche Wochenschrift* of February 23, 1890, entitled "Snow-storms as Destructive of Diluvian Mammals." In this paper I endeavored, from my own researches, to prove that many deposits of bones of mammals might not have been caused by floods, but probably owed their origin to the snow-storms of antiquity.

Although I reached this conclusion independently and through my own reflection, it is very far from my thought to lay any claim to priority with regard to it (though for many particulars in the exposition of the hypothesis priority perhaps might be conceded to me). As I have since learned from the work of Leopold Schrenck on 'The First Discovery of a Carcase of *Rhinoceros Merckii*' (St. Petersburg, 1880), this able investigator advanced as early as 1871 the opinion that the mammoth-elephants and rhinoceroses whose unrotted carcases are found in the icy soil or frozen snow of Northern Siberia, were overcome by snow-storms. Schrenck thus gave expression nineteen years ago to the leading idea contained in Garman's communication to the *Nation* on "Blizzard Fossils."

Without doubt, however, Mr. Garman has priority over me in that he published as far back as 1882 and 1883, with regard to certain deposits of fossil bones in North America, views similar to, if not as elaborate as, those embraced in my paper cited above. For the rest, in that paper I by no means expressed myself as if I had been the *first* to surmise that snow-storms extinguished the diluvian mammals. I left it an open question whether any one had anticipated me in publishing this surmise. Nevertheless, every one who reads my paper in the original will gain the impression that it rests on *my own* researches, and that I arrived at my hypothesis *quite independently*. Since in composing my paper I was acquainted with neither Schrenck's nor Garman's notions on the same subject, my exposition was in no manner influenced by theirs, while it contains much that has been left unsaid by both of them.

The circumstance that three naturalists in three different places have reached individually the same conclusion, must vouch for its soundness. In closing, I call attention to pages 43 *et seq.* and 128 *et seq.* of my recent book, 'On Tundras and Steppes of the Present and of Past Time, with Special Reference to their Fauna' (Berlin: Ferd. Dummler, 1890).

Dr. Alfred Nehring,

Berlin, November 5, 1890.

Notes.

THE American edition of Talleyrand's 'Memoirs' is to be published in this country by Messrs. G. P. Putnam's Sons, simultaneously with its issue in Paris and in London. The work is to be complete in five volumes, the first of which is expected to be in readiness early in the new year, the others following at intervals of a few weeks.

An elaborate essay, by Daniel Greenleaf Thompson, on 'The Philosophy of Fiction in Literature,' is in the press of Longmans, Green & Co.

'Seven Dreamers,' New England dialect stories, by Annie Trumbull Slosson, is announced as nearly ready by the Harpers.

The 'Dictionary of Political Economy,' which Mr. R. H. Inglis Palgrave, F.R.S., is editing, and which is to be published by Macmillan & Co., is now assuming a definite shape, and the first part is to be out in January. Among the contributors are a number of well-known American writers. The object of the 'Dictionary' is to give a statement of the position of political economy at the present time, together with such references to history, law, and commerce as may be of use. Macmillan & Co. have also in press 'A Dictionary of Classical Mythology, Religion, Literature, Art, and Antiquities,' revised and edited from the German of Dr. Seyffert by H. Nettleship and J. E. Sandys. The work will contain nearly 500 illustrations.

J. B. Lippincott Co. will publish early next month vol. vi. of the new edition of 'Chambers's Cyclopædia.' They will shortly issue also 'A Successful Man,' by the author of 'A Diplomat's Diary'; and a 'Dream of a Modest Prophet,' a novel of social regeneration, by Gen. M. D. Leggett.

The first English translation of Claude Tillier's 'My Uncle Benjamin' will have the imprint of Benj. R. Tucker, Boston.

The J. G. Cupples Co., Boston, promise 'The Chevalier of Pensieri-Vani,' by Stanton Page.

A third historical novel of Julius Wolff's, 'Fifty Years, Three Months, Two Days,' translated by W. H. and Elizabeth R. Winslow, and 'A Web of Gold,' by Katherine Pearson Woods, author of 'Metzerott, Shoemaker,' are on the list of T. Y. Crowell & Co.

John Wiley & Sons have in preparation 'Wire: its Manufacture and Uses,' by J. Bucknall Smith, and 'Wooden Trestle Bridges,' by Wolcott C. Foster.

Dr. W. Clarke Robinson, Professor of English Literature in Kenyon College, Ohio, has been authorized by Prof. ten Brink to translate from the German his standard history of English literature, which was recently reviewed in the *Nation*. The translation is already in part in the hands of Prof. ten Brink for revision, and will be published simultaneously by Henry Holt of New York and George Bell of London.

The thousandth anniversary of the birth of Saadia Gaon (892) is to be celebrated by the publication of the works of this Jewish and Arabic scholar in fifteen volumes (including a biography by Dr. A. Harkavy, and essays on Saadia's philosophy, etc., by several hands). The laboring oar will be taken by Prof. Joseph Derenbourg of Paris. The subscription price is ten dollars for an ordinary set, and forty dollars for an edition on Holland paper. Checks, to the order of Jacob H. Schiff, Treasurer, should be sent to Prof. Morris Jastrow, jr., University of Philadelphia, Pa.

The Red Book of the Exchequer is being edited for the Rolls Series by Mr. Hubert Hall of the Public Record Office. This is the most important of ancient English records after Domesday Book. It is not only a Roll of Honor for the England Baronage, etc., but is the official Entry Book of the Exchequer on which all great officers of state were sworn, that is, as containing formulæ of their oaths. Mr. Elliot Stock will shortly publish 'The Antiquities and Curiosities of the Exchequer,' by the same author, who is already well known by his 'History of the Customs Revenue Society in the Elizabethan Age' and 'Court Life under the Plantagenets.' This work will form vol. i. of the new "Camden Library."

The copy of Captain Cook's Journal purchased by the late Mr. Comer is about to be edited in a popular form by the latter's literary executor, Mr. Bell. A collation of this Journal with the copy in the Admiralty archives shows some differences. Dampier's voyages are to be edited for the Hakluyt Society by Lieutenant Dampier, R.N., under the supervision of Mr. Clements Markham, C.B., the President of the Society.

In the catalogue of "Additional" MSS. which is being prepared for publication by the authorities of the Bodleian Library, there are two items of some interest to Americans. One is the Journal of the Quaker George Fox's travels in America and the West Indies in 1671-1673; the other is the Log-Book of Admiral Byron during that officer's not very distinguished command in North America and in the West Indies in 1778-1779. The Admiral lay for some time in Nantasket Road. Students will find the former MS. classified as A 95, and the latter as C 70. We may add, by the way, that among the Tanner and Rawlinson collections of MSS. will be found many documents relating to the colonial period of American history.

A number of new editions are on our table, first to deserve mention being the two volumes (iii. and iv.) of Lowell's Poems in the ten-volume edition of his 'Writings' (Houghton, Mifflin & Co.). The poems are now complete, as is shown by the indexes of first lines and of titles. Vol. iii. leads off with the "Fable for Critics," and we must not pass it by without extracting the author's truthful vindication, not only of the "Fable," but of his other occasional characterizations of his contemporaries: "You may be sure that I know what is meant by a caricature and what by a portrait." The "Fable," he tells us, was "extemporized, I may fairly say, so rapidly was it written"; and this language could be applied to the rhymed "Letter from Boston," dashed off two years before. Finally, we remark yet another portrait, on steel, of a date not indicated, but in the poet's prime of years. The "Exmoor Edition" of Blackmore's 'Lorna Doone' is in three pretty volumes, bound in blue cloth, that issue from the Knickerbocker Press of the Messrs. Putnam. The author furnishes an introductory note of approbation, and rejoices in the substance of copyright which his publishers secure him. The justice-loving public should accordingly discriminate in favor of this form of a novel popular enough to have been pirated, or, in Mr. Blackmore's euphemistic language, to have visited us "by force of savage ravishers." Charles Reade is redivivus in his 'Peg Woffington' and 'Christie Johnstone,' which usher in the "Giunta Series" of Dodd, Mead & Co. The typography is distinguished, for the letters are a specially imported French face, and the composition of them has been intrusted to the University Press, Cambridge, Mass., with the best results. The volumes are of handy shape, and these two are adorned with frontispieces. The binding is buff-colored, stamped, we think, with less taste than the elegance within called for. Long's translation of the 'Thoughts of Marcus Aurelius' has been in all respects handsomely and conveniently reproduced by the Chiswick Press for the London firm of Geo. Bell & Sons (New York: Scribner & Welford). The covers of this companionable work are durably backed with an olive-green canvas.

A youthful production of Prosper Mérimée's, the historical novel called 'A Chronicle of the Reign of Charles IX.,' otherwise a romance of the Saint-Bartholomew, has been newly translated by the competent hand of Mr. George Saintsbury. The Cassell Publishing Co. have put it forth in sumptuous apparel—generous quarto or grand octavo page, broad margins, heavy paper, and a wealth of illustrations irregularly disposed and for the most part effective and ornamental. Nothing is wanting to attract those in search of a gift-book of such a class.

Mr. Walter Thomas Rogers's 'Manual of Bibliography' (Scribner & Welford), a pretty and handy book in white and gold, defines Bibliography on p. 161 in a glossary of terms; but of the four meanings none fits that intended to be conveyed by the title of this work, viz.: "The knowledge of books, library management, and the art of cataloguing." Such a use cannot be commended, and it is symptomatic of a want of qualification in the author for the task he has undertaken. He is neither a master of language nor a clever condenser, nor, in such moot questions as are involved in the origin of printing, a judicious or cautious reporter of what is really known. For any of the topics just enumerated American readers can better consult domestic authorities. The most surprising thing is, that while Mr. Rogers disclaims any originality for his compilation, he nowhere acknowledges the source of his thirty-seven illustrations, which are, with one exception, taken over (we presume, by arrangement) from Bouchot's 'The Book.' It is not enough to find this work at the head of section ii. of his list of books of reference, or the subject of the sole advertisement in the volume.

'The Old Meeting-House, and Vacation Papers, Humorous and Other,' edited for the Rev. A. M. Colton by his brother, consists of the lighter sort of contributions to religious newspapers, occasional addresses, sermons. The more valuable portion lies in boyish reminiscences of country life in Vermont; but among the very miscellaneous contents one comes unexpectedly upon a leaf of travel which involves a visit to the "martyr Torrey" in his fatal prison-cell at Baltimore on April 28, 1846. Torrey was in the last stages of consumption, and his death was hourly expected. The author had been at college with this victim of the Slave Power. If Torrey had been a murderer, the Governor of Maryland is quoted as having said, he might have been allowed to die outside the walls of the jail; "but as it is, . . . this running slaves away has got to be stopped."

Mr. Bellamy's 'Looking Backward' has been translated into Italian as 'L'Avvenire! ? uno sguardo retrospettivo dall' anno 2000 ai nostri giorni.' The publisher speaks of its "immense success in America, England, and Germany."

A 'Junior School Algebra,' by W. S. Beard (Longmans), gives the briefest possible statement of the rules of algebra as far as and including quadratic equations, without demonstrations of any kind except the conviction produced by the solution of large numbers of illustrative examples. Some idea of the vast number of "exercises" the book contains may be obtained from the fact that the "answers"

at the end of the book occupy no less than fifty-six pages. Noteworthy is a collection of twenty-one examination papers actually used in various schools, colleges, school-boards, and in the examination of candidates for positions in the Government civil service. To each of these papers is prefixed the name of the institution, school-board, or other body by whom the paper was used. A 'School Trigonometry' by the Rev. Frederick Sparks, issued by the same publishers, is one of the most admirable text-books we have ever seen. While it is eminently fitted to its title, the title is in no way fitted to express the higher merits of the book, which is alike suited for use in the class-room and as a reference book for the engineer. There is a fulness, neatness, precision, and finish in all the details that renders it worthy of the highest praise.

Under the title, 'Beyging sterkra sagnorda i Islensku' (The Inflection of Strong Verbs in Icelandic), Dr. Jon Thorkelsson, the Rector of the gymnasium in Reykiavik, Iceland, sends out the third annual instalment of what will be, when completed, a most valuable scientific contribution to the detailed history of the Icelandic language. The work contains, as far as it has been possible to cite them, reference places of each form from the old language of the thirteenth, fourteenth, and fifteenth centuries, as contained in both Icelandic and Norse sources. Where, however, it is impossible to refer to older forms, the younger alone are given. The later citations are, for the most part, from the latter half of this century, and besides original Icelandic works are included, among others, translations of the 'Iliad,' Bunyan's 'Pilgrim's Progress,' 'Robinson Crusoe,' and John Stuart Mill 'On Liberty.' The verbs are arranged alphabetically. The present instalment gives, thus far, 240 pages, and brings the whole work down to the verb *hrjoda*.

Following its own precedent, 'Stieler's Hand-Atlas,' in Part 26 of the current edition (B. Westermann & Co.), maps the United States under the rubric 'West Indies, Central America'; but there is an independent return to the subject on a larger scale. On this map, No. 79, we see the new States of the Northwest displayed and the curious *enclave*, Oklahoma Territory—the cancer of civilization in the heart of the Indian Territory. The same Part contains a general map of North America, and another of Greece as a fragment of the Balkan Peninsula. In Part 25, there is a fine new map of Western Canada, with a general map of Europe, and one of Saxony and its neighbor lands.

The address of Mr. H. H. Johnston, on the development of tropical Africa, before the merchants of Liverpool, published in the November *Fortnightly*, is full of suggestion and information given in a bright and entertaining way. He pleads for the establishment of a special school in which the principal African languages, forestry, and natural history shall be taught, and men trained for the African service just as they are for China, Japan, Siam, and the Turkish dominions. A man going out for his first term of service should not be under twenty-one years nor over thirty; and if he is middle-sized and thin, he is more likely to resist the dangers of the climate than if he is tall and stout. Total abstinence from all alcoholic drinks is absolutely essential to the health. If prescribed by a physician, then alcohol should be taken after sundown, for taken during the daytime in Africa, it is "simply poison to the white man." He rapidly reviews the principal products of the vast regions under British influence, as, the palm-oil; rubber, the best of which, bringing £270 a ton, is made from a creeping plant everywhere prevalent; indigo and cotton, which also in their wild state are to be found in great abundance in these parts of the continent. The people he divides into three sections, the Arabs, the Negroids, and the Negroes. The Negroids, under which head he includes the Gallas, Somalis, and Nubians of Eastern Africa, and the Fulahs of the Niger basin, he believes will eventually disappear by absorption into the other two. He augurs hopefully from the extraordinary readiness of the negroes to accept civilization.

The *Scottish Geographical Magazine* for November opens with a paper by the editor on the partition of Africa, accompanied by a large and valuable map. This is followed by the second of Mr. J. G. Bartholomew's lists of the best and most recent maps. Though devoted entirely to Africa, it fills twenty-one pages of the magazine and includes about five hundred maps, the greater part of which have been published within the past ten years. The publisher, price, date, and geographical value of each map are stated, together with a general key map, so colored as to show at a glance the sources from which the maps of the different parts of the continent have been derived, whether from detailed surveys or from travellers' itineraries. Only Algeria, Tunis, and a strip of Egypt, about 200,000 square miles in all, have been thoroughly surveyed, while 3,800,000 square miles, or nearly a third, of Africa still remain "unexplored country."

A supplemental number of *Petermann's Mitteilungen*, just issued, contains an elaborate geographical monograph on the Greek islands Cephalonia and Ithaca, by Dr. Joseph Partsch.

The *Rio News* does not exaggerate the importance of the transfer of the *Jornal do Commercio* of that city from its ownership for sixty-eight years to Messrs. Rodrigues & Co. The *Jornal* is the oldest and most influential journal in the country, but its late proprietor, the Conde de Villeneuve, was a non-resident, whereas Mr. J. C. Rodrigues, who succeeds him, and who will also be the chief editor, has returned to his native land to take part in its regeneration consequent upon the overthrow of slavery and monarchy. Mr. Rodrigues has been for very many years a correspondent of the *Jornal*, latterly in London and formerly in this city, where he founded and conducted almost single-handed an illustrated paper, *O Novo Mundo*, which attained an extraordinary circulation in Brazil, till it was extinguished by a bit of local McKinleyism aimed to protect Brazilian against Portuguese publishers in the reproduction of the Portuguese classics. Mr. Rodrigues is a writer of exceptional ability, as well as of rare liberality and elevation of spirit; and in view of this and of his American and English experience, the *Jornal* under his management must powerfully affect the development of our sister republic.

—Mr. Gladstone has sketched, in a little book entitled 'Landmarks of Homeric Study' (Macmillan & Co.), the outlines of those studies and opinions which are fully presented in the 'Homeric Studies,' the 'Juventus Mundi,' 'Time and Place of Homer,' and more lately in a series of magazine articles. In this summary, Mr. Gladstone shows the same unfailing faith as heretofore in the oneness and indivisibility of Homer, in his Achaian origin, his authorship of both 'Iliad' and 'Odyssey,' and in "the essential unity" of both these poems. Their unity and authenticity, he argues, are shown most clearly by the consistency of the facts, or *Realien*, they contain, in spite of their mass and variety. This consistency holds throughout both 'Iliad' and 'Odyssey'; apparent inconsistencies are explained by the supposition that the former poem represents the "inner zone," the latter the "outer zone" of the poet's experience. The contents are not only a whole, but "a historic whole." The poems were, moreover, written with a conscious aim, viz., "to launch upon the world what we may term the Greek idea—to commemorate and to mould the Achaian race." The style of the poems also proves their unity, in Mr. Gladstone's opinion, though he professes himself not qualified to discuss linguistic questions in detail. The site of Troy he is inclined to place at Hissarlik, and to reject positively the claims of Bunarbashi. It is needless to say that most of these conclusions have been controverted by the highest authorities in scholarship. The book is simply a succession of remarks and propositions stated without much regard to literary form. It is curious to find the author considering it "settled" that the poems were not originally committed to writing; a still more curious notion is, that in Odysseus the poet intended to depict a character resulting from the amalgamation of a Phœnician element (!) with Achaian stock. Is any character more Greek than Themistocles—or more like Odysseus? The following sentence is noteworthy coming from Mr. Gladstone's pen: "So far as I am able to discern, the average Hebrew of the earlier historical Books of Scripture falls short of rather than exceeds in moral stature the Achaian Greek." This, too, is striking: "There is no god of the Poems . . . that is so *good* as the swineherd Eumaios." The last chapter discusses the points of contact between the Assyrian tablets and the Homeric text, with results which, in the present state of research, must be regarded as dubious or untrustworthy.

—It is with a certain sense of relief that we note the final completion of the second edition of that most respectable and most colorless of historical compilations, Georg Weber's 'Weltgeschichte' (Leipzig: W. Engelmann). The second half of the fifteenth volume, which we have before us, comprising the period from 1852 to the present time, has all the characteristic traits of its predecessors, the same general trustworthiness as to facts, the same even flow of narrative, the same tinge of optimistic philistinism, the same absence of strong individual convictions. As the book is meant for German readers, it is natural that German affairs should have absorbed the largest share of the author's attention. And it is only fair to say that the outward events of the great struggle for national consolidation of the German people, especially the conflicts with Austria and France, and the subsequent two decades of the new empire, are correctly and on the whole discriminatingly represented; although it reminds one a little of the naïve tone of mediæval chroniclers to find on p. 532, in the midst of a discussion of the social reform bills, the military septennate, and other momentous subjects of national importance, a notice of the death of the young Prince Waldemar, the wreck of the Hamburg-American steamer *Cimbria*, and the foundering of the German cruiser *Augusta*. One cannot help wondering why the author, if he found space for such almanac gossip, completely ignored the events of the literary and artistic world. The least satisfactory part of the book is the treatment of the rest of Europe and the transatlantic countries. The United States is disposed of in twenty-three pages out of 700; Mr. Blaine is called "ein Mann von irischer Abkunft und ultramontaner Gesinn-

ung": the latter term being, in the mind of the author, identical with satanic maliciousness. The volume is edited by Dr. Friedrich Weber, the son of Georg, who died an octogenarian in 1888, shortly before giving the last touch to the work of his life. His well-executed portrait, which is prefixed to the title-page, shows him in his full, benevolent, and happy manhood.

— The November number of the *Deutsche Rundschau* brings, from the hand of a personal friend of Gotfried Keller's, very interesting reminiscences of the last year of the great Swiss poet's life. It seems that he anticipated his death long before his friends entertained any serious fears for his health. When, in 1889, he heard that the city of Zürich intended to celebrate his seventieth birthday by a public demonstration, he quietly left town, and to a deputation of citizens who presented him with a gold medal, he said: "Das kann ich Ihnen sagen, meine Herren, das ist das Zeichen für das Ende vom Lied." Soon after, he made his will, bequeathing the bulk of his little fortune to the University and the Public Library of Zürich, devoting, however, a part of it to a fund for invalid Swiss soldiers. To this legacy he added: "Since I have never had an opportunity to serve my country as a soldier, I am glad to pay her a small tribute at least in this manner." On his sick-bed his fancy remained wonderfully active almost to the last. At times he seemed much worried that his poetical work was to be left unfinished. "Oh, if I only could leave my head to somebody," he would cry. But then he would comfort himself with humorous conceptions. "They ought to put my ashes," he would say, "into a vessel and give them to the students to strew in the Limmat; but of course they ought to have a good barrel of wine to celebrate over it." At his funeral all Switzerland paid homage to her great son. When the body was carried away from the Zürich Cathedral, the vast assembly broke out singing Keller's own song, which now seems destined to become the national hymn:

"O mein Schweizerland, all mein Gut und Hab',
Wenn der-Inst mein banges Stündlein kommt,
Ob ich Schwacher dir auch nichts gefrommt,
Nicht verrate mir ein stilles Grab
Werf' ich ab von mir dies mein Staubgewand,
Bet'n will ich dann zu Gott dem Herrn:
Lasse strahlen deinen schönsten Stern
Nieder auf mein heilig Vaterland."

—The *Livre* publishes certain private letters of Mürger, Charles Nodier, and Sainte-Beuve which may be called indiscreet, though their indiscretion is far less wide and deep than some of Mürger's that we have seen before now from time to time in the catalogues of autograph-sellers. Of the present collection Sainte-Beuve's letter is the longest. It shows him in the position of lay confessor to a young woman who has disclosed to him her domestic unhappiness, and her determination at all costs to leave her uncongenial husband. Sainte-Beuve replies that where there are no maternal duties to bind her to a cradle, a woman's first desire would naturally be to fly from a state of moral torment that nothing can relieve or remedy. But a woman must brave the world to do this, and she requires some support—parents if possible, a woman friend; at any rate, somebody. She must learn to disregard what the world says, for, after all, it is more cowardly than it is malicious—and so on, and so on. The letter is, in fact, of a sort to give some satisfaction to the malicious portion of the cowardly world. The amusing part of the whole business is that Sainte-Beuve was in this case simply taken in by an autograph-hunter. The unhappy young woman was a pure mystification. A clever rascal, in quest of autographs, using various pseudonyms, such as Gabriel Vicaire, Soriano, Ludovic Picard, and others, wrote to many of the well-known men of the time asking for counsel or advice or encouragement. Sometimes, as to Sainte-Beuve, he was an unhappy wife, sometimes an *écuyère* of the circus, sometimes a young artist, unsuccessful and tempted to suicide. He made up in this way a quite valuable collection of autographs, which, of course, he sold. It is a satisfaction to know that occasionally he cheated himself. In 1857 he sold an autograph of Proudhon for three or four francs which afterwards brought five hundred at a public sale.

—Apropos of the familiar *mot* of Alphonse Karr's about the abolition of capital punishment—"Que messieurs les assassins commencent"—of which we lately spoke, a correspondent writes to the London *Guardian* to say that the epigram was not of Karr's own minting, but was borrowed by him from the 'Heliotropium' of the German Drexelius (1581-1638). The passage referred to (lib. iv., cap. ii., s. i.) reads: "Quondam fœx hominum, et furum, lavernionum, effractorum ampla societas libellos supplices porrexerunt judicibus, rogaruntque patibula et furcas auferrent. . . . His a judicibus responsum est, siquidem antiquatum cupiant morem patibulandi, prius ipsi consuetudinem abrogent furandi, judices in mora non futuros, quod protinus cruces tollant et patibula, modo ipsi prius cessare jubeant furta." Of course this may be mere coincidence, yet the phrase is one of the two upon which Karr based his hopes of being remembered. After all, the man who revives a forgotten witty saying has some claim upon our gratitude. In an opposite way, every new good thing that is said brings to the mind a subtle suggestion of regret. It limits the field of wit in the future, and diminishes by one the number of good things which it is still possible to say.

—A summary of the four annual reports of the Central Sanitary Bureau of the Japanese Government, from 1884 to 1887, is of interest to other than medical readers. The vital statistics showing the rate of births, 27.28 to every thousand persons in 1881, or 1 to every 36 94 persons in 1887, are given in full. Perhaps they explain the discussion now pervading the Japanese newspapers concerning the threatened overpopulation of the empire. The study of Malthus and of these figures, which are occasionally marshalled by editorial alarmists who have an eye to the sale of their papers, has really frightened some of the conservative Japanese, and a cry for more planting of sweet potatoes has gone up. The virtue of the Satsuma *imo*, or sweet potato, was tried a generation or two ago during famine, and its popularity as compared with "Dutch" or Java potatoes is vastly greater. Cholera, which rarely touches foreigners, exceeds all other epidemics as a reducer of population. In 1887, of 154,780 patients, 101,944 died. The Japanese vulgar derivation of the word *ko-rori* (cholera) makes it a compound of the names of three ravenous beasts of prey. Typhoid fever comes next in devastating power, dysentery, diphtheria, typhus fever, and small-pox following in relative order. The terrible floods of this and last year have had much to do with the prevalent dysentery, but the abominable sewerage and the general infiltration of the soil by liquid manure which never suggests "*sweet* fields . . . arrayed in living green," are the prime and chronic causes of disease. The long-argued question of licensing female physicians was settled in 1884, when five applicants for examination for registration as medical practitioners in Tokio presented themselves, only one being successful. In reality the Japanese, in licensing women doctors, are but reviving a mediæval custom. None but duly licensed and certificated dentists (old name, "tooth carpenters") and bone-setters are now allowed to practise their craft. A national Pharmacopœia, compiled by a large staff of native and foreign physicians and scholars, has been published by order of the Government, and the drug business is carefully regulated for the protection of life. Opium is the monopoly of the Government, incessant vigilance being used to guard against its abuse by smoking and otherwise. A Sanitary Museum Library, Medical Botanical Garden, and Hygienic Laboratory have been established in Tokio. Since the physicians were, as a class, the leaders of science and civilization in old Japan before the fall of the military despotism which for centuries cramped the Japanese intellect, this splendid showing of medical science in Japan seems to have something of poetic justice in it, as well as the solid gain of greater security to life. The frank exposure of facts by the native writers contrasts curiously with the rhetoric of sentimental flatterers who have praised the Japanese even in their indolence and foolishness.

RECENT POETRY.

It is a curious fact that the two most interesting and altogether important poetic collections lately published, respectively in England and America, should both be by dead authors. Here, however, the resemblance ends, as the 'Poetical Works' of Thomas Lovell Beddoes (Macmillan) were partially reprinted more than forty years ago; while the 'Poems' by Emily Dickinson (Boston: Roberts Bros.) bear a name that was previously unknown except to a very few friends. The contrast in other respects is as complete; Beddoes being in the last degree objective and dramatic, and Miss Dickinson introspective and subjective—just as his whole life was wandering and wayward, and hers so secluded as to be more than nunlike. They have absolutely nothing in common but the quality of genius, and it is only because that gift does not abound, just now, upon the critic's table, that they are here linked together at all. It may be added, however, that a certain transfusion of blood appears in each; Beddoes being distinctly the last of the Elizabethans, and Emily Dickinson holding distinctly, though unconsciously, to the school of William Blake—if indeed he had any other scholar. Beddoes reminds us of his metrical ancestry not merely in what his editor, Mr. Gosse, describes as "the lost magic of the tragic blank verse of the Elizabethans," but in his extraordinary lyric quality. It is perhaps his misfortune to have fallen into the hands of an editor so uniformly timid, apologetic, and belittling as to leave us in doubt why he consented to employ his mind on stuff which he thinks so inferior; but much of this tone prevails in recent London editing, and Mr. Gosse is not the man to rise above it. Heaven forbid that any one should, on the other hand, make a "cult" of the stormy and wayward Beddoes, born just on the edge of the Shelley and Keats period, and inheriting their sorrows with his own; but surely his strong music, his regal epithets, his unflinching passion deserved a better interpreter. A lyric like the following, for instance, might have come out of Mr. Bullen's recent collection of 'Songs from the Elizabethan Dramatists,' except that there is a very slight flavor of

more modern, and, so to speak, sentimental sympathy (I., 62):

DIRGE.

Let dew the flowers fill;
No need of fell dismair,
Though to the grave you bear
One still of soul—but now too still,
One fair—but now too fair.
For, beneath your feet, the mound,
And the waves that play around,
Have meaning in their grassy, and their watery smiles;
And with a thousand sunny wiles
Each says, as he rep oves,
Death's arrow oft is Love's.

Or this Jonson-like epitaph (I., 63):

EPITAPH.

The form's divinity, the heart's best grace,
Where are they? Have they their immortal throne
Upon thy maiden's thought and peerless face,
Thou cool-eyed reader? Yet, beneath this stone
Dust lies, were a grow, and this is the remain
Of one best union of that deathless twain.

Of the tragedies we can give no impression by citation; their very titles show their motives and their traditions: "The Bride's Tragedy," "Death's Jest-Book, or the Fool's Tragedy," "The Second Brother," "Love's Arrow Poisoned," "The Last Man." All save the first of these are more or less unfinished. Beddoes was born in 1803 and died by his own hand in 1849. Through Miss Zoë King, his cousin, who had what Mr. Gosse rather disparagingly calls "a romantic interest" in Beddoes, but what most people would call a generous cousinly sympathy for him, the papers of the poet were carefully kept together, with all that related to him, in the hands of Mr. T. F. Kelsall, through whom they passed to Robert Browning, whose son now holds them. They are here edited carefully and conscientiously, and the reader would have nothing but gratitude for the editor had he only excluded from the volumes all which bears his own signature.

The poems of Emily Dickinson are not so seriously weighed down by their editors—Mrs. Mabel Loomis Todd and Mr. T. W. Higginson—since they leave her mainly to speak for herself. We learn that she was born in 1830 and died in 1886, living almost always in extreme seclusion in the college town of Amherst, Mass., where her father, a lawyer, held also the responsible position of college treasurer. She resolutely refused to publish her verses, showing them only to a very few friends. As a consequence, she had almost no criticism, and was absolutely untrammelled; so that the verses are sometimes almost formless, while at other times they show great capacity for delicate and sweet melody, suggesting the chance strains of an Æolian harp. But in compass of thought, grasp of feeling, and vigor of epithet, they are simply extraordinary, and strike notes, very often, like those of some deep-toned organ. Take, for instance, this, which fully sustains the Blake-like quality suggested by the editors in their preface (p. 119):

"I died for beauty, but was scarce
Adjusted in the tomb,
When one who died for truth was lain
In an adjoining room.

"He questioned softly why I failed?
'For beauty,' I replied.
'And I for truth,—the two are one;
We brethren are,' he said.

"And so, as kinsmen met a night,
We talked between the rooms,
Until the moss had reached our lips
And covered up our names."

The extraordinary terseness and vigor of that weird conclusion runs through all the poems; in this case it so grasps the ear that you hardly notice the defect in the rhyme. Little cared she for that, provided she uttered her thought. Yet at times she reached with the same sudden grasp a completeness of utterance that was nothing less than lyric—as in the two verses on the opposite page to the above (p. 118):

"A train went through a burial gate;
A bird broke forth and sang,
And trilled, and quivered, and shook his throat
Till all the churchyard rang;

"And then adjusted his little notes
And bowed and sang again,
Doubtless he thought his meed of him
To say good-bye to men."

With all its inequalities and even oddities on its face, there is power enough on many a page of this little book to set up who e volumes of average poetry; and the public will i evitably demand to know more of the thoughts and mental processes of Emily Dickinson.

If there is indeed any one yet living into whom the Elizabethan blood is transfused, though with a difference, it is the (alleged) woman who masquerades under the name of Michael Field. In "The Tragic Mary" she has borrowed Mr. Pater's phrase for Mary Stuart, as given in his essay on Rossetti; and the preface opens with a fine prose passage in which she points out that Edinburgh is as inevitably the city of Mary Stuart as is Troy of Helen: we look in the streets themselves, as at Holyrood, into the very mirror that reflected her features. This dramatic poem is too long, is somewhat confused here and there, and not quite sustained towards the end; but it is, on the whole, the most powerful picture ever given of Mary, of Darnley, and of Bothwell. Perhaps the masterful quality of this rude lover is as well given in Landor's 'Imaginary Conversations'; and there is nothing here so graceful and exquisite as the French songs in Swinburne's 'Chastelard'; but the strength of the royal Stuart quality—so much stronger in Mary than in her descendants—is here. At the crisis of her conflict she turns from Darnley and exclaims (p. 24):

"So much to do, so thick a knot to break!
(*Bending, she writes in her Book of Hours.*)
O, Lord, avenge me of mine enemies.
I set it down: make Thou a bond with me!
Have we not common cause? These hypocrites
Pull down all holy things. My sturdy mood
Rides not the click of rosaries; receive
This sentence writ across the partial psalms,
And levy for me from the ends of heaven
Thy laggard legions: make me, in thy stead,
Victor and sovereign."

It is a long step from Michael Field down to Alfred Austin, whose commonplace muse would probably never have been connected, even by way of suggestion, with the Laureateship but for its devoutly Tory quality. It is, however, pleasant to observe in his volume of 'English Lyrics,' edited by William Watson (Macmillan), something unconventional and affectionate in the love of nature, though there is something almost ludicrous, to an American mind, in attempting to resist by a sonnet the tunnel under the British Channel, as Wordsworth tried to resist railways by similar artillery (p. 25):

"That men who learned to lisp at English knees
Of English fame, to pamper womanish ease
And swell the surfeits of voracious trade
Shall the impregnable breakers undermine,
Take ocean in reverse, and, basely bold,
Burrow beneath the bastions of the brine?"

It is certainly a curious fact that while nobody in France appears to be in the least alarmed at the thought of a tunnel under the Channel, all England should be convulsed with terror at that simple convenience of civilization. Where were our New York poets that they did not rally in squadrons of sonnets to prevent the building of the Brooklyn bridge?

As Mr. Austin surprises us with love of nature, so Lord Lytton surprises us with modesty, and affords us, in his 'Poems of Owen Meredith,' selected by M. Betham-Edwards (London: Walter Scott), a sonnet similar and manly enough to do honor to any man, with a grace and vigor of poetic expression for him unusual (p. 88):

CONSOLATION.

When I perceive how slight and poor appears
(Though with sad care and strong compulsion brought
Down ranged rhymes with strenuous search of thought)
The express'd result of my most assiduous years;
Remembering, too from what divines it hereres
Stoop'd many a starry visitant, and taught
My spirit at her toils—how round her wrought
Strong Raptures, Sorrows, Splendours rich in tears,
My whole heart fails me. Then an inward voice
Replies, "Possess thyself, and be content.
Life's best is so and not by the universe
Of any word, nor may in sound be spent,
To win back echoes out of this low chance,
What thou hast *felt* is thine. If much, rejoice."

Among recent volumes by living Americans, Edith Thomas of course takes the lead, holding as she clearly does, with Gilder, the headship of our younger poets. Her new volume, 'The Inverted Torch' (Houghton, Mifflin & Co.), is a requiem like 'In Memoriam,' but cannot claim, like that, to have absolutely escaped the peril of monotony; yet it has her accustomed elevation and her invariable fineness of perception. She does not touch an emotion with the single and irresistible needle-touch of Emily Dickinson, but her thoughts are always her own, and are uniformly noble. Who, for instance, has surpassed, upon its own ground, this lofty dirge, embodying the successive experience of every human generation as its elders pass away? (p. 23):

"Time takes no toll of thee,
Age spares the soul of thee.
They vex thee no more
Besieging thy door;
Nor without nor within
Shall the vantage win.

"The long years are fled from thee,
The winters are shed from thee
As the snows retire
For Spring's hidden fire,
And the gray of the fields
To the young green yields.

"The long years descend on me,
The winters bend on me
Their gathering might
As when dwindles the light,
And the gray of the fields
To the white drift yields."

This takes rank with Blake's delineation of the Soul and the Body, the old man descending feebly into the tomb, while the freed youth stands in fresh nobleness upon the other side.

Among minor Americans who have won honorable poetic fame must be classed Mr. Christopher Pearse Cranch, whose 'The Bird and the Bell, with Other Poems' (Houghton, Mifflin & Co.) is a collection, which he seems to regard as final, of the productions of his thoughtful and cultivated muse; and Miss Nora Perry, who unites two volumes, still separately paged—a fashion we cannot approve—under the incongruous name of 'After the Ball, and Her Lover's Friend, etc.' (Houghton, Mifflin & Co.). Miss Perry is always careful and conscientious in her work, though always with a flavor of artificiality; and there seems no reason why her publishers should not have altered the paging in the plates of her second volume, and then united the two in a common index. Miss Edna Dean Proctor has also brought her 'Poems' together in a welcome volume (Houghton, Mifflin & Co.), in which the Russian and Oriental flavors are the strongest, although two fine poems on Kearsarge and Monadnock still prove her true to her native heath. Mrs. Mary E. Blake, as yet less widely known than the preceding, gives us, in 'Verses along the Way' (Houghton, Mifflin & Co.), something of that zest and heartiness which the Celtic element is beginning to add to our literature; and her translations, at the end, from Mexican poets, are admirably done, and suggest the attractive paper of Mr. W. H. Hurlbert, written many years ago, on "Spanish American Poetry."

Mr. Eugene Field, in 'A Little Book of Western Verse' (Scribners), has to contend with one formidable and most fatal enemy, himself; he is so comic when he is droll that one reads his most serious performance, for instance his version of Uhland's "Three Cavaliers," without doubting that it is to end with a guffaw. Something of the same drawback exists in the case of 'A Little Brother of the Rich, and Other Verses,' by Edward Sandford Martin (Scribners), but the author more rarely treats himself to the sentimental. We must by

no means neglect to praise 'Seven Sonnets of Sculpture,' by M. Virginia McClurg, which have an unmistakable sculptural dignity and some fine touches of real appreciation, as when, in "The Venus of Melos to Venus Anadyomene," we find a contrast like this (p. 11):

"Thy lips to kiss; mine of imperial mould
Shut love's own secrets all the long years through;
Closer than cæsus binds, real arms will fold:
Thy weak doves fluttered while my eagles flew.
Drift, Foam-Wreath! I to watch and ward am bold—
She who is strong to love must dare and do."

This book (Boston: The Soule Photograph Co.) is a beautifully printed quarto, with seven ample spaces for the insertion of the photographs of sculpture described.

A book of far greater value, however, for those who love the eternal youthfulness of Greek literature and art is 'Fifty Poems of Meleager, with a Translation,' by Walter Headlam (Macmillan). It is one of those charming books for which we must still look almost wholly to England—though Prof. Palmer's 'Odyssey' is an exception—books in which the very soul of antique verse is transfused into English, while the carefully edited original text appears in sumptuous type on each opposing page. The name of Meleager is that of the chief poet and first collector of the ever-delightful "Greek Anthology," which is to Homer and Plato what the Tanagra figurines are to the work of Phidias. We know Greek daily life, Greek trees and flowers, largely through his laughing and always graceful lines and those of his followers; and the very fact of his foreign birth, for he was a Syrian, gives in all its seductive charm the Oriental quality which had already begun to soften the severer classic outlines. Mr. Headlam, in his preface, treats him as being now known chiefly by the chapter on the Anthology in Mr. Symonds's 'Studies of the Greek Poets,' but he is as well known to Americans, perhaps, through the successive essays of Sainte-Beuve and of Saint-Victor ('Hommes et Dieux'), which the present editor does not mention. Mr. Headlam has great gifts as a translator in the combination of ease and literalness, but he surely spoils the grace of Venus amid the waves when he renders διὰ γλαυκοῖο φαρείσα κύματος as "through the green waves sent" (p. 3); and he vulgarizes the sudden appearance of the graceful Helicdora by translating καίτοι κτύπος Ἡλιοδώρας "but that rustle and rattle" (p. 55). There is also a slight tendency to that use of affectedly simple and archaic words, such as "whenas," with which Mr. Andrew Lang has demoralized the present school of English translators. But there are few criticisms to be made upon a book which comes very near being the most delightful product of the season.

Perhaps the most repulsive product, on the other hand, is the volume of 'Shadows and Ideals,' by the late Francis S. Saltus (Albany: Moulton), which seem the morbid and blasted dreams of some poor wretch wrecked on the hard asphalt of Paris, and lost to all his early dreams. A book more grimly insane—tried by all ordinary standards—but more innocently, is 'The Pleroma, a Poem of the Christ,' by the Rev. E. P. Chittenden, A.M. (Putnams)—300 pages of solid geology and theology, where one may happen almost at random on lines like these (p. 189):

"Sing the Lithic ages twain!
Mammoth and the reindeer reign;
Glacial drift and frozen train;
Man contending
And forefending
Heaths 'gainst frozen streams.
Sing brute force and stern recourse
Of Palæolithic and Neolithe
In Quaternary quarries:
Arrow flints and chippen glints,
Strown on mari, crunched in snarl
That bull and cave-bear parries."

The book has many terrific wood-cuts of the early geologic periods, and a glossary of hard biologic and theologic words at the end.

A thoughtful and agreeable English book is 'Wordsworth's Grave, and Other Poems,' by William Watson (London: Unwin). Mr. Watson, although he appears elsewhere as the editor of Alfred Austin, is free from the current London affectations, and gives us a series of strong sonnets called "Ver Tenebrosum," written during the Sudanese war. He has also a kindly quatrain "On Longfellow's Death" (p. 69):

"No puissant singer he, whose silence grieves
To day the great West's tender heart and strong:
No singer vast of voice; yet one who leaves
His native air the sweeter for his song."

'The Religion of Humanity, and Other Poems,' by Annie Matheson (London: Percival), is pure and strong with noble womanly feeling. There is a touching "Song for Women" in which the first part of each verse describes a London seamstress, starving, and the last half carries us to sweet rural scenes. It closes thus (p. 3):

"O God in heaven! shall I, who share
That dying woman's womanhood,
Taste all the summer's bounteous good
Unburdened by her weight of care?
The white moon-daisies star the grass,
The lengthening shadows o'er them pass;
The meadow pool is smooth as glass."

Stuart Sterne (Miss Bloede) gives us another of her vigorous dramatic stories in the narrative poem 'Piero da Castiglione' (Houghton, Mifflin & Co.), and Mr. Hamilton Aïdé offers us only a rather superficial and shallow melody in the third edition of his 'Songs without Music' (Scribner & Welford). Mr. Frank Dempster Sherman, in his 'Lyrics for a Lute' (Houghton, Mifflin & Co.), is almost always graceful, though sometimes a little artificial.

Among recent compilations of miscellaneous verse, the largest place materially, and perhaps historically, must be given to Mr. W. L. Fagan's 'Southern War Songs' (Richardson), a bulky volume containing a vast amount of poor poetry, even the poorest of which has great value as a record of some feeling, some impulse, or some delusion; each having thus some bearing on the as yet unwritten story of our great national contest. It is curious, for instance, how many of these verses recognize slavery as being really the objective point of the whole war, after all. Miss Jessie O'Donnell's 'Love Poems of Three Centuries' (Putnam's "Nuggets" series) form a tolerably commonplace collection, whose grade may be best judged from the fact that the three American poets from whom she extracts most profusely are Mrs. Moulton, Joaquin Miller, and Ella Wheeler Wilcox. 'Musical Moments' (Chicago: McClurg) consists of "short selections in prose and verse for music-lovers," and the choice is made with some discrimination. 'The Painter Poets,' selected and edited by Kineton Parkes (London: Walter Scott, "Canterbury Poets"), is less fortunate, at least in this respect, that it contains so many names of which it is necessary to remind us either that they were painters or that they were poets. In the two cases where the combination is unquestionable—those of Blake and Rossetti—the selections are not peculiarly felicitous. There are, however, some valuable biographical notes at the end; Washington Allston being the only American included, unless we count Mr. W. J. Linton. 'Amherst Memories' (Springfield, Mass., Printing Co.) is a collection of undergraduate verse from the college designated, and is certainly better than such books are wont to be.

The great drawback upon these minor collections of miscellaneous verse is apt to be the carelessness in editing, which so often utterly sacrifices sound or sense by a misread word. Literature has this drawback, as compared with the other arts, that while the art of printing multiplies its products indefinitely, they may at any moment be put thereby in such a shape that the original author may wish that they had never gone into print at all. Thus, for instance, in "Musical Moments," Praed is made to say of his belle of the ball—

"She warbled Handel; it was grand;
She made the Catalina jealous"—

the name of an Italian singer (Catalani) being transformed out of all recognition. Again, when, in Higginson's "Ser-nade by the Sea," the editor of 'Love Poems' changes the couplet—

"Shadowy sloops are gliding in
Safe the harbor-bar within"—

so that the last line reads—

"Safe the harbor to be within"—

one wonders if it is meant for prose or poetry. Again, in Swinburne's graceful melody, "If love were what the rose is," as reprinted in the book just named, the pretty antithesis,

"Blown fields or flowerful closes,"

is utterly muddled by substituting

"Blown fields of flowerful closes,"

which is meaningless. Yet, when we consider that the late Prof. Longfellow, after invoking the aid of a whole Dante Club to correct the proofs of his great translation of the 'Divina Commedia,' was confronted with a misprint on first opening his bound volume at the breakfast table, one learns to be charitable to the young and the inexperienced.

ADAMS'S ADMINISTRATION OF MADISON.—II.

History of the United States of America during the First Administration of James Madison. By Henry Adams. Charles Scribner's Sons. 2 vols. 1890.

In all that Mr. Adams says about the shortcomings of the Eleventh Congress he is undoubtedly right. It does not need the perspective of history to perceive the insufficiencies of that body. It had hardly adjourned before the *National Intelligencer*, the official organ of the Administration, wrote its epitaph, with words of apology indeed, but without a word of eulogy. It held the following language in its issue of March 21, 1811:

"We have mixed up the ingredients of a warlike and a pacific policy into a compound which has proved, in the end, to use a vulgar phrase, neither one thing nor the other. All calculations and experiments have failed. . . . and we have reached an equivocal state that defies definition. There has been all this time no want of spirit either in Congress or the people. If the former have not resorted to war, it has been from the conviction that it was not the interest of their constituents to make that solemn appeal. Until this great question is settled, serious embarrassments will continue to attend our Government."

We note that there is one historical moral which runs through both these volumes, as the *motif* runs through a whole opera. It is that in the practical administration of a government like ours, at least in all critical conjunctures, there is a choice only between the war policy championed by John Adams in 1798 and the peace policy promulged by Jefferson in 1801. This moral is pointed again and again by the historian for the purpose of exposing the inconsistency alike of the Republicans and of the Federalists. The two parties had come, in the drift of events, to change characters and places. From the frequency with which Mr. Adams makes this *rapprochement* between the principles of 1808 and of 1801 (he makes it more than a score of times in these volumes), we judge that the truth of his-

tory seems to him an ample vindication of the Alien and Sedition Laws which brought so much obloquy on the Administration of John Adams.

We observe, too, that John Randolph is used again and again as the Tragic Chorus is used in a Greek drama for the purpose of accentuating the moral lessons of the story as it evolves under the pen of the writer. As we know well enough the small esteem in which Mr. Adams holds the erratic statesman of Roanoke (see Adams's 'Life of Randolph,' *passim*), we are a little puzzled to account for the frequency with which Randolph is cited as an accusing witness against Madison. In his 'Life of Gallatin,' Mr. Adams expresses the opinion that, in 1811, the mind of Randolph, "never strong in common sense, was yielding more and more to those aberrations which marked his later years." Whatever may have been the acrid sayings dropped by Randolph in the stages of that "universal misanthropy" which finally caused his sanity to be suspected, these buzzing gad-flies of the pungent Virginian were hardly worth preserving in the amber of Mr. Adams's classic narrative.

Mr. Adams animadverts on the fact that, in the war message of Madison, as sent in to Congress on the 1st of June, 1812, the order of the American complaints was inverted, and that impressments were put in the forefront of the charges formulated against England, in spite of the fact that the whole stress of the controversy, in its later stages, had turned on the Orders in Council. He even thinks that "England might have fairly complained that she had received no notice of intended war on such a ground." Mr. Adams furnishes a sufficient answer to his own objection. He explains to us, on page 40 of his second volume, how the pinch of the controversy came at last to be narrowed down to the Orders in Council, considered as retaliatory to the Napoleonic Decrees. On page 45, in the same volume, he cites a despatch in which Foster, the British Minister, when he had been in Washington only two weeks, wrote to the London Foreign Office that the American Government meant to settle certain preliminary disputes in the most amicable manner, "provided the Orders in Council were revoked—otherwise to make use of it, *together with all other topics of irritation*, for the purpose of fomenting a spirit of hatred towards England, and thereby strengthening their party." A little later, on page 57, Mr. Adams remarks that if a simple issue with England had been wanted in 1811, it might have been found at once in "the permanent presence of British frigates off Sandy Hook, capturing American vessels and impressing American seamen." "No further protest against it," adds Mr. Adams, "needed to be made, seeing that it had been made the subject of innumerable protests." If the United States might have justly plunged into war with England in 1811, without a protest against impressment, seeing that innumerable protests had been already lodged against the impressment outrage, it does not very clearly appear that England had much right to complain because, a few months later, the subject of impressments was put in its proper chronological and logical place in enumerating the grounds of war.

In the hour and article of the declaration of war against England, neither Madison nor Monroe made any concealment as to the grounds of our just complaint against France. Only two days before the declaration of war was passed, but when its passage was assured, Monroe wrote to Joel Barlow, our Minister at Paris, that propositions to include France in the same denunciation were made in both houses of Congress. The motion failed in the Senate by a vote of seventeen to fifteen. The majority against it in the House of Representatives was proportionally larger, yet still the affirmative vote was respectable. So well founded were our complaints against France that Monroe felt obliged to explain to Barlow how it was that France had been pretermitted. Even Robert Smith, with all his Gallican sympathies, was not able to keep fair weather between Madison and the French Minister Turreau, insomuch that the latter was provoked into writing a hectoring letter which he was compelled to withdraw. Mr. Adams refers to the letter as being found to-day in the French archives at Paris. A translation of it may also be found in the Annals of Congress (Thirteenth Congress, vol. i., p. 922; *cf.* p. 1236).

The author is entirely correct in saying that the declaration of war was passed by an essentially sectional as well as party vote. Of the seventy-nine members who voted for it in the House of Representatives, sixty-two resided south of the river Delaware, which, in the parlance of the day, had come to be called the dividing line between the political North and the political South. Of the nineteen Senators who voted for the measure, fourteen resided south of the same river. The whole number of members of both houses residing north of the Delaware was sixty-eight. Of these only twenty-one voted for the war. We have not verified these figures by our own analysis of the vote, but take them from Sullivan's well-known 'Letters.'

The alternate chill and fever of the war paroxysms had followed each other in such quick succession, and the whole political temperament of the country had become so bad, that Mr. Adams thinks it "no wonder if large masses of good citizens who believed Napoleon to be Antichrist should be disposed to resist, even to the verge of treason, the attempt to use their lives and fortunes in a service they regarded with horror."

In one aspect of the long diplomatic struggle between the United States and England Mr. Adams admits that the United States, even before the war began, had won a triumph which was more complete than any achieved since the Definitive Treaty of Peace in 1783 It is known that on the 16th of June, 1812, and, therefore, two days before the declaration of war by Congress, the Tory leader of the House of Commons rose and proclaimed that the Government had decided to suspend immediately the Orders in Council. The suspension came too late to avert the declaration of war, but, as Mr. Adams observes, "the surrender lacked on England's part no element of defeat." "The British Ministry, like the British people," he adds, "shrank from facing the consequences of their own folly." If the American party leaders, from Madison downwards, may be said, as Mr. Adams thinks, to have thrust the country into a war it dreaded, under the hope that the war itself might create the war spirit which the country lacked, it is plain that the British party leaders must be taxed with pusillanimity at the very time when their courage should have been highest.

We have left ourselves no room for comment on Mr. Adams's account of the war in its preliminary battles on land and sea. After reciting with much precision the blunders and disasters of Hull's surrender, the Niagara campaign, the brilliant exploits by which our infant navy won laurels for American seamanship and American gunnery, and after referring to the preliminary but ineffectual negotiations set on foot to compose the war soon after it began, the author pays the following historical tribute to Madison's courage, unless we are to assume that Madison was building better than he knew, and therefore should not be credited with a result which was not the outcome of any deliberate and rational purpose. However this may be, the words of Mr. Adams deserve citation. Referring to Madison's determination to risk the charge of continuing the war till he should satisfy himself that England could not be forced into an express renunciation of the right of impressment, he says:

"The experiment was worth trying, and, after the timidity of the American Government in past years, was well suited to create national character if it did not destroy the nation; but it was not the less hazardous in the face of sectional passions such as existed in New England, or in the hands of a party which held power by virtue of Jefferson's principles. That the British Government should expressly renounce its claim to impressment was already an idea hardly worth entertaining; but if the war could not produce that result, it might at least develop a Government strong enough to attain the same result at some other time. If a strong Government was desired, any foreign war, without regard to its object, might be good policy, if not good morals; and in that sense President Madison's war was the boldest and most successful of all experiments in American statesmanship, though it was also among the most reckless; but only with difficulty could history offer a better example of its processes than when it showed Madison, Gallatin, Macon, Monroe, and Jefferson joining to create a mercenary army and a great national debt, for no other attainable object than that which had guided Alexander Hamilton and the Federalists towards the establishment of a strong Government fifteen years before."

This passage furnishes food for reflection as well as food for criticism in many directions, but we cannot pursue the inviting topic. We must satisfy ourselves with the simple remark that even here the result of the war which seems clearest and most significant to Mr. Adams is that Madison's war of 1812 vindicated the Federalist men and the Federalist measures of 1798. The late Dr. Francis Wharton, in one of the valuable and sometimes incisive notes with which he has accompanied his 'Digest of the International Law of the United States,' indulges himself with some reflections designed to point what he conceived to be at least one of the moral results achieved by the war of 1812. After reciting the insults so gratuitously and continuously offered to the United States by British Ministers and British diplomatists down to the outbreak of hostilities, he says that "it took the war of 1812 . . . to place the diplomatic relations of the two Powers on that basis of mutual respect and courtesy on which they have ever since remained."

While thanking Mr. Adams for the light he has shed on the transactions of this important epoch in our history and in the history of Europe, we are sorry that he could not find more to approve in the character and conduct of the men and measures here passed under his critical review. It is a just remark of Mr. John Fiske in his latest work, recently reviewed in these columns, that "government, however conducted, is necessarily a cumbrous affair." These volumes might well be studied as a commentary in support and explication of that proposition. History in the making—that is, history in the shape of current politics—is seen to pay a constant tribute to the maxim of Oxenstiern. There are times when, as it seems to us, Mr. Adams fails to make a due allowance for the difficulties of the statesmen whom he criticises. There are also times when he frankly acknowledges the difficulties which beset the rulers of the United States during this long period of stress and storm. "The process by which a scattered democracy

decided its own will, in a matter so serious as a great and perhaps fatal war, was," he says, "new to the world." This remark is so true that it atones for many of his censures, because it cancels them.

We have learned to be cautious in correcting Mr. Adams's spelling of proper names, but in the first of these volumes the German spelling "Helgoland" (p. 277) is hardly preferable to the English spelling Heligoland in the case of what was then (1810) an English island. The celebrated French marshal, otherwise known as the Prince d'Eckmühl, appears in the first volume as "Davout" (pp. 409, 425), and in the second as "Davoust" (p. 251). Both spellings are supported by good authority, but it might be better to adhere to one in the same narrative. "Littleton Walker Tazewell" (vol. i, p. 368) should be Littleton Waller Tazewell.

THE CALVERTS AND OGLETHORPE.

George Calvert and Cecilius Calvert, Barons Baltimore of Baltimore. By Wm. Hand Browne.—*Life of General Oglethorpe.* By Henry Bruce. Dodd, Mead & Co. 1890.

MESSRS. DODD, MEAD & Co. have begun the issue of a new series of books, called "Makers of America." More than twenty biographies are announced, ranging from that of Christopher Columbus to that of the late Prof. Henry of the Smithsonian Institution. We are glad to see among them the name of Robert Morris, Superintendent of Finance under the Continental Congress; a man of great importance in making the United States, who has waited too long for a competent biographer. The appearance of the new series is creditable to the publishers. The print and paper are fair, and the duodecimo volumes pleasant to handle.

Among the first to appear is the account of George and Cecilius Calvert, by Mr. William Hand Browne, who has had the advantage of using papers of the Calvert family recently found in England among the ruins of an old conservatory. Some of these throw new light on the subject, and Mr. Browne has shown wisdom in quoting from them at considerable length. Altogether this is a solid and scholarly performance, well planned and adapted to its subject, with little attempt at description of manners, with few moving accidents, never exciting, but excellently written and readable. It is worth the attention of people interested in the early history of Maryland and of the United States. It has, moreover, the great merit of brevity, containing less than 200 small pages.

George Calvert, first Baron Baltimore, and his son Cecilius, were somewhat colorless persons. Had their characters been more picturesque, they would hardly have occupied the place they do among the makers of America. To found a colony of English Roman Catholics in the seventeenth century required tact, prudence, and moderation; qualities invaluable in life, but hateful to the biographer. George Calvert was a hard-working Secretary of State to King James I.; but we cannot agree with Mr. Browne that his was "a position somewhat resembling that of a modern prime minister." The Principal Secretary of those days was but a secondary personage in politics. Calvert retired with a peerage at about forty-five years of age, and was energetic enough to emigrate from England to Newfoundland, and wise enough, after spending one winter in that island, to transfer his colony to less rugged coasts.

In Cecilius, the second Baron, we have the true founder of the colony of Maryland, which he never visited. The charter was confirmed to him on the 20th of June, 1632, two months after his father's death. The territory was to be held in free and common socage, the feoffee rendering therefor two Indian arrows at the castle of Windsor, yearly, on Tuesday in Easter week, and the fifth part of all the gold and silver found. This charter, which is said to have been the most ample in its privileges ever granted by an English sovereign, erected Maryland into a palatinate. It invested the proprietary and his lineal descendants for ever with the perpetual and hereditary ownership of the soil and the waters. It empowered him to make peace or war, to confer titles and dignities, to erect churches and cause them to be consecrated according to the ecclesiastical laws of England, to make laws with the advice and consent of the freemen, and necessary ordinances not affecting life, limb, or property without that consent; to establish courts of justice and to appoint judges, magistrates, and other civil officers. His laws required no confirmation from King or Parliament; from his courts there was no appeal. Yet the colonists retained the rights and privileges of British subjects, while they were expressly exempted from taxation by the Crown.

It is evident that in giving such rights as these to a Catholic the advisers of King Charles I. intended to provide a place of refuge for the followers of the old religion. Baltimore's head was not turned by his powers. He recognized that, whatever the King might be, the English nation was decidedly, even fanatically, Protestant, and that his own privileges must be used with moderation. While sending out two Jesuits with his first emigrants, and appointing his brother and two other gentlemen, all Catholics, his Deputy Governor and Commissioners, he yet instructed the latter:

"that in their voyage to Mary Land they must be very carefull to preserve unity and peace amongst all the passengers on Shipp-board, and that they suffer no scandall nor offence to be given to any of the Protestants, whereby any just Complaint may hereafter be made by them, in Virginea or in England, and that for that end they Cause all Acts of Romane Catholique Religion to be done as privately as may be, and that they instruct all the Romane Catholiques to be silent upon all occasions of discourse concerning matters of Religion; and that the said Governer and Commissioners treate the Protestants w^th as much mildness and favor as Justice will permitt. And this to be observed at Land as well as at Sea."

Such instructions as these are often given to be disregarded; but Baltimore was in earnest. In him the Englishman was stronger than the Catholic. The Jesuits soon began to give trouble. They complained that no favor was shown to ecclesiastical personages, but that they were treated in all respects like laymen, as if the *jus divinum* had never been heard of. They asked that their churches and houses might be sanctuary, that their servants might be free from taxes and public services, "that though publicly they should allow their causes to be heard and tried by the civil authorities, yet that it should be with the private understanding that these authorities acted but as arbitrators and defenders of the Church, because the ecclesiastical jurisdiction was not yet settled"; "that though they should relinquish the use of many ecclesiastical privileges when they judged it expedient to do so, yet that the determination of that expediency was to be left entirely to their discretion." These demands were supported by some of the most influential Catholic laymen of the province. Yet Baltimore was unshaken. He applied to the Propaganda at Rome and received permission to remove the Jesuits and have secular priests sent in their stead. The order for removal was afterwards rescinded, but only on the submission of the Jesuits to the terms laid down by the Proprietary.

Meanwhile, all manner of persons had settled in the province, and toleration was practised to an extent rare indeed in that age. An act of the Maryland Assembly of 1649 provides penalties for the profanation of "the Sabbath, or Lord's day, called Sunday," for blasphemy against any Person of the Trinity, for reproachful speeches against the Virgin Mary, Apostles, and Evangelists. It also punishes all who shall call others by reviling names such as Puritan, Jesuit, or Papist.

Much discretion was needed on the part of Baltimore in preserving his charter through the time of the Great Rebellion. The Commonwealth and the Protector were not easy to deal with, and the Deputy Governor in Maryland complicated matters by going beyond his powers to proclaim Charles II. as King. That erratic monarch, on the other hand, then a fugitive in Jersey, declared that Baltimore "doth visibly adhere to the rebels of England, and admit all kind of schismatics, and sectaries, and other ill-affected persons into the said plantation of Maryland." Charles, therefore, gave a commission to Sir William Davenant, the poet, to proceed to America, dispossess Baltimore, and take the government on himself. Sir William actually set out on this undertaking, but was captured by a Parliament ship and thrown into prison, whence he barely escaped with his life. Of squabbles in England and riots in America, of the not very eventful history of the young colony, this book gives a careful account. Mr. Browne evidently dislikes Puritans and Quakers. Were it otherwise, he would hardly have written the history of the founders of Maryland.

The Life of General Oglethorpe will be less quoted by the learned than that of Lord Baltimore, and more enjoyed by the frivolous. Its author, Mr. Henry Bruce, is easily tempted away from his subject. On the smallest pretexts, we are given bits of biography and history; quotations in prose and verse, in English, French, German, Latin, Italian; passages from Mr. Bancroft, Pope, and Edgar Poe. Mr. Bruce's admiration for Carlyle would appear to be unbounded. He imitates the style which nothing short of the genius of that great Scotchman can make endurable. Even the quotations in this volume have at times a flavor of Carlyle, as butter kept too near to cheese acquires a pungency. Mrs. Oliphant is known as a writer of graceful English; yet one would think she had dipped her pen in a Chelsea inkstand before she (and who else?) assisted Mr. Bruce to compile the following sentences: "And the poor old futile Pretender had answered, 'Be careful of yourself, my dear boy. I would not lose you for the world!' 'With,' says Mrs. Oliphant, 'one can imagine, what smile and what sigh.'"

We will give one of Mr. Bruce's digressions in full, both because it is characteristic of the slightness of connection observable between his subject and its ornaments, and because it is entertaining enough in itself, as his digressions often are:

"In this year Oglethorpe made himself prominent as a member of the Council of the British Herring Fishery Company, particularly at a great dinner given at Fishmongers' Hall to Frederick, Prince of Wales, who was the President, and who was introduced by Oglethorpe. And in the following year, 1751, Prince Fred died. These lines, says Carlyle, are 'his main monument with posterity':

> "'Here lies Prince Fred,
> Who was alive and is dead.
> Had it been his Father,
> I had much ra'her;
> Had it been his Brother,
> Sooner than any other;

Had it been his Sister,
There's no one would have missed her;
Had it been his whole generation,
Fest of all for the nation.
But since it's only red,
There's no more to be said.'"

Of Oglethorpe we get a tantalizing picture. There must have been much individuality in the soldier of Marlborough and Prince Eugene; the philanthropist who defended duelling, and is said, at the age of ninety-three, to have challenged a neighboring gentleman for trespassing on his manor; the prisoner's friend, and the friend of Johnson, Goldsmith, and Boswell. Perhaps, as Mr. Bruce says, "the true life of Gen. Oglethorpe it is for ever too late to write." We have enough here to make us wish for more. Had Mr. Bruce given less space to Prince Eugene, and Bishop Berkeley, and the death-bed of Pope, at which Oglethorpe was not present, and to half-a-hundred other people and events but remotely connected with his subject, he would perhaps have written a less amusing book, but he might have found space to make clearer to us the behavior of Charles Wesley as the General's secretary, and might even have had room for a little more information than he has chosen to insert about the colony of Georgia and Oglethorpe's campaigns. After all, it was these which checked Spain and defended the English colonies, and it is to them that Oglethorpe owes his place among the Makers of America. *Malheur aux détails!* quotes Mr. Bruce from Voltaire. But surely the details which are accursed are not those which are pertinent to the subject in hand.

Belief in God. Its Origin, Nature, and Basis. By Jacob Gould Schurman, Sage Professor of Philosophy in Cornell University. Charles Scribner's Sons. 1890.

Prof. Schurman's book gets an extrinsic interest from the fact that the lectures of which it is composed were delivered in Andover before the Theological Seminary. They form the sixth course of lectures on the Winkley foundation, which is what our English cousins call an "open trust," being hampered by no conditions whatever—"a rare and surely a fortunate circumstance," remarks Prof. Schurman, "for any theological school." It is to be presumed that the Faculty, in inviting Prof. Schurman, knew what they might expect, and it would be difficult to overrate the significance of such an invitation. It may be there is little in these lectures which has not been implied in the writings of the Andover liberals, but it has not been expressed in those writings; or, if expressed, it has been in a language almost as remote from the vernacular, or from Prof. Schurman's lucid speech, as Hegel's dialectic from the poetry of Burns.

Prof. Schurman, without abusing his liberty, used it with the least possible restraint. There could be no better index to his position than the list of those to whom he expresses special indebtedness in his preface: Lotze, Martineau, Pfleiderer, Robertson Smith, Seeley, Fiske, Réville, and Thiele. Considerable exception is taken to some of Martineau's positions (Prof. Schurman calls him the "angelic doctor" of our time); but it is in the interest of a more radical philosophy. Where Martineau contends that God is transcendent of the universe, Prof. Schurman finds him wholly immanent in its wholeness, and where Martineau contends for a divine choice of possible worlds, Prof. Schurman argues that this world was the only possible. With these variations from a teacher at whose feet he sat in Manchester New College, and whom he so much reveres, it might have been well if he had abandoned his thoroughly gnostic and wooden conception of God as "vacating" the sphere of human freedom, with its sophistical suggestion that man, while included in what God has caused, is excepted from what he is causing.

Some of the more vigorous and rigorous deliverances of the evolutionist school are set aside with a feeble show of orthodox indignation and abhorrence of the infidel; but, in truth, it would be difficult to find a book more completely saturated than is this with the newness of scientific thought. While its method is predominantly metaphysical, it is checked at every turn by scientific tests, being impressed, like most of the more recent philosophizing of our time, with the necessity of making its peace with science and the evolutionists. These are sometimes spoken of in a superior way, but the acceptance of their conclusions is a finer compliment than the most fulsome adulation.

Of the dogmatic spirit there is not a sign in these lectures, nor of such a temper as that of 'Lux Mundi,' resolved on the adjustment of the traditional dogma with the results of modern science. Of the Deity of Christ there remains a shadow of such faintness that the conservative Unitarian might insist on having something more than this: "Nor among these choicest sons of the universal Father [such as Pheidias, Cæsar, Shakspere, Newton] is there any metaphysical impropriety in supposing one to be in some preëminent sense the Son of God." "Oh, how frail to that large utterance of the early" Andoverians! The satisfaction of Divine Justice was the centre of their creed. Prof. Schurman will not predicate justice as an attribute of God. "Justice is a civic virtue, which has too narrow a meaning to predicate of the Christian conception of God." "External punishment is unthinkable of human sins," here or hereafter. In short,

"Modern science is not antagonistic to the religion of Christ, but it is fatal to those confessions of the Christian religion which have been embodied in an antiquated psychology, anthropology, cosmology, and history. The process of readjustment is going on rapidly, and it is much more thorough in the actual beliefs of men than in the revised creeds that are supposed to represent them. Even the new Biblical criticism has won a victory almost as complete as that of astronomy, geology, and zoölogy. The sober and cautious spirit of modern culture has once for all domiciled itself in the realm of theology also."

After this it is remarkable that Prof. Schurman makes a rhetorical escape from the question of miracle by affirming every human soul to be a miracle, and that he succumbs to the temptation to rationalize the ascension of Jesus, loosely confounded with his resurrection, which "is in fact," we read, "an obsolete picture of an eternal truth"—"the fact of continued life with God."

Not only is Prof. Schurman's book without a remnant or a trace of theological dogma, but it does not attempt to obtain for us any certainty of the existence of a beneficent Deity corresponding to the "dead certainty" of the traditional dogma. He does not believe in the possibility of any mathematical demonstration of the existence of God. Our assurance cannot be so positive as the mathematician's. He returns frankly to the much-abused opinion, Probability is the guide of life. Belief in God is an hypothesis as incapable of verification as the hypothesis of a luminiferous ether, but, like that, accounting for admitted facts. In the course of the six lectures in which this argument is worked out, there is much solid ground to walk upon; but in chap. iv. there is a stretch of metaphysics where we are not certain of our steps.

The strength of the book is much more in its negative criticisms of traditional ideas than in its positive results. Some of the former are extremely pertinent and forcible. The scepticism of Hume and Kant is assailed from the standpoint of the new psychology. The impossibility of proving an external, mechanical Creator is ably argued, if not clearly shown. But with the immanence of God in the universe comes the old difficulty of man's "life in himself." It is a difficulty which no argument of Prof. Schurman's wholly dissipates. But for our inexpugnable consciousness of freedom, it is greatly to be feared that we should all be necessarians. Chapter v., "God as Realizing Purpose of the World," is a vigorous onslaught on the old teleology, but the teleology it substitutes is dim and vague, more a matter of feeling than of logic; and Prof. Schurman does not flatter himself that it would have much force with one not otherwise convinced. At the end one is glad of his assurance that the general naïve belief in God is quite independent of philosophical considerations. These are an account of the faith that is in us. However unsatisfactory the general course of his thought may be, his book contains a multitude of pregnant observations, and the whole is presented in a style so fresh and vivid that it holds the attention and compels our interest on every page.

The Pine Tree Coast. By Samuel Adams Drake. Illustrated. Boston: Estes & Lauriat. 1890.

Mr. Drake, who has been a diligent collector of the local traditions of the New England Coast, and a fertile writer on the subject, describes in the present instance a summer journey along the Maine shore. He passes through the old towns and fishing villages, by the beaches, cliffs, and islands, from Kittery to Eastport, and gathers about each spot a story of the early Gorges adventurers or the colonial captains, of Indian and French and English fighting, and of the innumerable wrecks which the great storms have always thrown upon the reefs and rocky headlands of this long coast line. The materials are ample for an interesting narrative; the names of the actors, from Champlain to General Knox, are often well known, or, if the participants were obscure, their deeds were heroic; and frequently the author is able to grace his own account with the verses of the New England poets who have found in these local annals, or in the scenes amid which the events took place, a congenial subject. Mr. Drake does not confine himself, however, to this phase of the country, but describes the landscape with much truthful effect, sketches the inhabitants, and occasionally introduces their conversation, with a realism of phrase and thought which the modern novelist must envy. The principal points are now well known as seaside resorts, but fortunately Mr. Drake has not thought it necessary to dwell upon this aspect of the coast, except very briefly at Bar Harbor. He endeavors rather to photograph the nature of sea and rock, the old look of the old towns, the memorial buildings and places, and the life of the people; and in this attempt he derives much assistance from the illustrations, which appear on almost every page of the volume. Antiquarian notes are added at the end of the chapters. The book shows throughout evidence of being a labor of love, and consequently it is entirely

successful in depicting the scenes and the life which it deals with.

Outings at Odd Times. By Charles C. Abbott, M.D. D. Appleton & Co. 1890.

DR. ABBOTT'S contributions to the literature of out-of-doors are more in the vein of the naturalist and the investigator than of the landscape-lover; and, in particular, he attends most to the common things that are not commonly known. He combats a number of popular errors, and is fond of illustrating his points by taking examples from the mistakes of the country people with respect to the world about them. In New Jersey, at least, he makes it appear that the winter season is far less one of torpor and silence on the part of outdoor life than is commonly supposed, and several of his short sketches are directed to the proof of the activity of the inhabitants of the ponds and the gathering of the birds in sheltered places and their keeping in voice through the frost. Even on the coldest days and in tempestuous weather he succeeds in finding nature still alive, and in waylaying the small animals, the blue jays, and others of the stay-at-homes. He has a special curiosity, also, for the neglected side of the way, for the mudfish in the disused ditches, the creatures that come to his pond by night, the field-mice, owls, and, in the vegetable world, the "carrion-flower." Consequently, his little volume is distinguished from others of its kind by freshness in the subject, by an individual point of view, and by attention to what seems exceptional in the open book of the fields and woods. This interest, pertaining more particularly to the naturalist, is reinforced by the author's knowledge of the relics of primitive man found in his region, of which he gives some account, and by such episodes as his description of the results of the attempt to naturalize the Egyptian lotus in the Jersey waters. Occasionally, too, as is the wont of such writers, he goes back to the farm-house of his boyhood, to the Quaker Christmas and the old haymow, to lend a certain sentiment to the papers. Altogether the brief essays are well varied and make the most agreeable of wayside reading; but we must regard the winter scenes and adventures, the explorations under the mud and by night, as the most successful parts of his work.

Dyspepsia
HORSFORD'S
ACID PHOSPHATE.
In dyspepsia the stomach fails to assimilate the food. The Acid Phosphate assists the weakened stomach, making the process of digestion natural and easy.

Dr. R. S. McCOMB, Philadelphia, says: "Used it in nervous dyspepsia, with success."

Dr. W. S. LEONARD, Hinsdale, N. H., says: "The best remedy for dyspepsia that has ever come under my notice."

Dr. T. H. ANDREWS, Jefferson Medical College, Philadelphia, says: "A wonderful remedy, which gave me most gratifying results in the worst forms of dyspepsia."

Descriptive pamphlet free.

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.
CAUTION: Be sure the word "Horsford's" is printed on the label. All others are spurious. Never sold in bulk.

E. F. BONAVENTURE,
BOOKS AND PRINTS,
WEST 31ST STREET, COR. B'WAY, NEW YORK.
Catalogues mailed on receipt of 10 cents.

SCRIBNER'S NEW BOOKS FOR THE HOLIDAYS.

The Life of John Ericsson.

By WILLIAM C. CHURCH. With 50 illustrations. 2 vols., 8vo, $6.00.

"A faithful and well-written history of Ericsson. Col. Church undertook the work at the special request of Mr. Ericsson, who left him all his private papers and documents, including his private correspondence."—*N. Y. Herald.*

"One of the most important of recent additions to the literature of biography."—*N. Y. Sun.*

How the Other Half Live.

Studies among the Tenements of New York. By JACOB A. RIIS. With 40 illustrations from photographs taken by the author. 8vo, $2.50.

"It is not only valuable, but interesting. It shows with picturesqueness, and always with truth, the life of the slums and tenements, and it is written with a perfect knowledge of all that is said."—*N. Y. Sun.*

Electricity in Daily Life.

A Popular Account of the Application of Electricity to Every-day Uses. With 120 Illustrations. 8vo, $3.00.

"It is written by those most conversant with the topics discussed. The volume will appeal to the popular mind as well as the scientific. The illustrations add much to the interest."—*Boston Times.*

In Scripture Lands.

New Views of Sacred Places. By EDWARD L. WILSON. With 150 original illustrations engraved from photographs taken by the author. Large 8vo, $3.50.

"We may best differentiate Mr. Wilson's work from that of his predecessors by saying that it is pictorial. He gives the reader a view of the localities which previous students and explorers or traditions have identified. His pen seems to have caught something of the spirit of his art, and to be almost as photographic in its realistic portraiture as his camera."—DR. LYMAN ABBOTT.

In the Footprints of Charles Lamb.

By BENJAMIN E. MARTIN. Illustrated by HERBERT RAILTON and JOHN FULLEYLOVE. With a biography by E. D. North. 8vo, $2.50.

In addition to following Lamb, in his wanderings and describing his haunts, Mr. Martin sketches him "as he moved in the crowd, among his friends, by his sister's side, and alone."

In the Valley.

By HAROLD FREDERIC. With 16 full-page Illustrations by HOWARD PYLE. 12mo, $1.50.

"It is uncommonly well written, and the whole *mise en scène* has verity and importance, for the valley of the Hudson, at the moment before the Revolution broke out, is new to romance, and it is certainly picturesque."—W. D. HOWELLS, *in Harper's Magazine.*

The Pacific Coast Scenic Tour.

From Southern California to Alaska.—The Yosemite.—The Canadian Pacific Railway.—Yellowstone Park and the Grand Cañon. By HENRY T. FINCK. With 20 full-page illustrations. 8vo, $2.50.

"It will prove a revelation to readers ignorant of the Pacific. It is a far more definite and detailed picture than has been drawn by any one else, and of exceptional interest and value."—*Brooklyn Times.*

"In point of readableness and interest, this narrative leaves nothing to be desired. It is surprising to find so much conveyed in so compact and agreeable a form."—*The Nation.*

Famous Women of the French Court.

Translated from the French of IMBERT DE SAINT-AMAND by THOMAS SERGEANT PERRY. Six volumes now ready. Others in preparation. Each with Portrait. 12mo, $1.25.

MARIE ANTOINETTE AND THE END OF THE OLD RÉGIME.
CITIZENESS BONAPARTE. THE WIFE OF THE FIRST CONSUL.
THE COURT OF THE EMPRESS JOSEPHINE.
THE HAPPY DAYS OF THE EMPRESS MARIE LOUISE.
MARIE LOUISE AND THE DECADENCE OF THE EMPIRE.

"M. de Saint-Amand writes an entertaining book. He has a picturesque and lively fancy, and a fertile imagination. His style is animated and pleasing, and his historical judgments well taken."—*N. Y. Times.*

*** SEND TEN CENTS FOR THE CHRISTMAS BOOK-BUYER, containing a handsome engraved portrait of Sir EDWIN ARNOLD, with a sketch by R. H. STODDARD, special articles by FRANK R. STOCKTON, HARRIET PRESCOTT SPOFFORD, Dr. LYMAN ABBOTT, Mrs. BURTON HARRISON, NOAH BROOKS, and other popular writers, reviews of the holiday books, literary letters, and over 60 illustrations, many of them in colors.

Dainty Books for Holiday Gifts.

Cameo Edition.

Two new volumes have just been issued in this tasteful edition; Cable's OLD CREOLE DAYS and Page's IN OLE VIRGINIA, uniform with Donald G. Mitchell's 'Reveries of a Bachelor' and 'Dream Life,' issued last year. Each volume with frontispiece etching, 16mo, $1.25.

Eugene Field.

Exquisitely printed and bound, the writings of this popular author, A LITTLE BOOK OF WESTERN VERSE and A LITTLE BOOK OF PROFITABLE TALES, are contributions of genuine value to American literature. Each 16mo, $1.25.

"These handsome volumes are examples of a wit, humor, and pathos quaint and rare."—*N. Y. Tribune.*

Ballads.

By ROBERT LOUIS STEVENSON. 16mo, $1.00.

Five narrative pieces in Mr. Stevenson's vivid and picturesque verse, the most important embodying Polynesian legends, and published for the first time.

The Lion's Cub,

And other Verses. By R. H. STODDARD. 16mo, $1.25.

A beautiful little volume containing the more recent poems of this popular poet.

DELIGHTFUL NEW JUVENILES.

Little Saint Elizabeth,

And other Stories. By FRANCES HODGSON BURNETT. With 12 full-page illustrations by R. B. BIRCH. 8vo, uniform with 'Little Lord Fauntleroy.' $1.50.

"Delightful juvenile fiction, as full of charm for the older people as for the youngest. In this volume Mrs. Burnett's gifts are developed in their affluence."—*Boston Saturday Evening Gazette.*

Against Heavy Odds.

A Tale of Norse Heroism. By HJALMAR HJORTH BOYESEN. With 13 illustrations by W. L. TAYLOR. 12mo, $1.00.

"The scene, laid in a little fishing village, is attractive for its novelty and instructive for its customs. The story is brisk and inspiring."—*Boston Journal.*

American Boy's Handy Book.

By DANIEL C. BEARD.

American Girl's Handy Book.

By LINA and ADELIA B. BEARD. Each, profusely illustrated. 8vo, $2.00.

"I have put it down in my list of good and useful books for young people."

SOME OF

BRENTANO'S

New Publications

FOR 1890-91.

An Interest Fac Simile Reproduction of the Original Manuscript of

"DICKENS' CHRISTMAS CAROL."

With an Introduction by F. G. KITTON, Author of 'Dickensiana.'

Of all the Christmas tales written by Charles Dickens, none have been so generally popular as the "CHRISTMAS CAROL"; and deservedly so, for in none are there to be found such true pathos, bright humor, and healthy sentiment, so well and artistically balanced.

Such a unique MS., possessing, as it does, so much interes both for the bibliographer and collector, as well as for the admirer of Dickens, seems suitable for reproduction in the form in which it left the the author's hands; it is in the belief that it will be generally acceptable that an accurate fac simile is now produced as Dickens left it, with all his changes and corrections.

Imperial quarto (only 250 copies), printed on paper similar to that used by Charles Dickens when writing his stories. Preceded by an Introduction by Mr. F. G. Kitton, in which a very complete account is given of the writing, printing, and publishing of the book, and also some very interesting particulars of the MS. itself.

Bound in half vellum, each copy signed and numbered by the publishers, $5.00.

WHAT AILS THE BABY?

A practical and concise treatise on the care of the baby during the first year of life. A book of inestimable value to young mothers; for, while excellent treatises exist on the raising of horses, dogs, and almost every living creature, there is scarcely one treating on the "raising of the baby" which is free from technical phrases and published at a reasonable price.

1 vol., 16mo, tastefully bound in cloth, 50 cents.

*** This is the first volume of the "Red Cross" Series of Health Hand-books.

GEORGE MANVILLE FENN'S NEW BOOK FOR BOYS.

CUTLASS AND CUDGEL.

A tale of the Old South Coast of England, describing a boy's adventures aboard a Government cutter in pursuit of smugglers on the Dorset coast, where the towering cliffs and well hidden caverns formed the strongholds of the restless men who set the laws at defiance in the days when George II. was King. Illustrated profusely by H. Schonberg.

Large crown, 8vo, cloth, gilt, $1.50.

*** Undoubtedly the best thing Fenn has done in the way of literature for boys; and, while exciting and intensely interesting, the story is healthy, and teaches a valuable lesson.

TERRIBLE TALES FROM THE FRENCH, GERMAN, ITALIAN, SPANISH.

The four volumes, bound in brown buckram cloth, gilt tops, boxed, $8.00.

Same, bound in half-polished morocco by Riviere, gilt tops, boxed, $7.00.

*** The above are a collection of carefully selected short stories, very many of which have never before appeared in English. For ordinary humanity the terrible will always possess a fascination, and these tales are told by masters of the art of story-telling, and are such as must prove interesting to all.

COLLOQUIAL FRENCH FOR TRAVELLERS AND STUDENTS.

By H. Swan. This is the first volume of a series of hand-books destined to supplant all the Phrase-books and Conversation Manuals now in circulation, and which has two aims:

One, to give a careful analysis, for students, of the sounds employed in speaking various languages, as compared with English, with an explanation of the differences in easily-understood terms; and the other to be thoroughly useful phrase-books for travellers. For example, under the head of

"USEFUL PHRASES: FOR THOSE WHO DO NOT SPEAK MUCH FRENCH," the arrangement is as follows, viz:

ENGLISH FORM.	FRENCH FORM.	PRONOUNCED.
I do not speak } English.	Je ne parle pas } Français.	(Zhen parrl pah— Fron-sè.
Do they speak } English here.	Parle-t-on l'Ang- } lais ici?	Parrl-tohn — lon- } gla-eesee?

Handy sized 16mo; tastefully bound in cloth, 50c.

FOUR GREAT ANNUALS.

CHATTERBOX FOR 1890.

This name, a household word in every home in the land, has become endeared in the hearts of two generations, and the readers of the early volumes are now men and women, who know that no books will delight their children more, or instruct them to a greater extent, than these dear old annual volumes, whose sales have long since mounted above the million mark. *The* King of Juveniles. 1 vol., quarto, illuminated board covers, $1.25.

LITTLE ONES ANNUAL FOR 1890.

Illustrated Stories and Poems for the Little Ones. Edited by OLIVER OPTIC, and embellished with 370 entirely original illustrations by the most celebrated book illustrators in America. 1 vol., quarto, illuminated covers, $1.75.

OLIVER OPTIC'S ANNUAL, 1890.

A volume edited by OLIVER OPTIC appeals at once to the heart of every boy and girl, with all of whom, his name is a synonym for everything bright and entertaining in juvenile literature. This is the leading book of its kind of the year, with original illustrations. 1 vol., royal octavo, illuminated covers, $1.50.

THE NURSERY—S.

For 25 years the Nursery has been welcomed in thousands of families as the favorite picture book for our little folks, and the best of it is it improves in quality every year. It is now enlarged in size and crowded with charming stories and original artistic illustrations. Edited by OLIVER OPTIC. 1 vol., royal octavo, illuminated covers, $1.25.

BOSTON.

ESTABLISHED 1879.

THE HUMBOLDT LIBRARY OF SCIENCE

is the only publication of its kind,—the only one containing popular scientific works at low prices. For the most part it contains only works of acknowledged excellence, by authors of the first rank in the world of science. Such works are landmarks destined to stand forever in the history of Mind. In this series are well represented the writings of

Darwin, Huxley, Spencer, Tyndall, Proctor, Clifford, Clodd, Bagehot, Bain, Bates, Wallace, Trench, Romanes, Grant Allen, Balfour Stewart, Geikie, Hinton, Sully, Flammarion, Picton, Williams, Wilson,

and other leaders of thought in our time.

There are 140 numbers in the Library now, to which two new numbers are added monthly. The price of the several numbers is fifteen cents each (double numbers thirty cents). Subscription price, $3 00 per year, for 24 numbers. Catalogues free.

Correspondence with French Professors and Teachers invited.
D. C. HEATH & CO., Publishers, 5 Somerset St., Boston.

By author of 'The Anglomaniacs.'

Flower de Hundred.

The Story of a Virginia Plantation.

By MRS. BURTON HARRISON, author of 'The Anglomaniacs,' etc. 1 vol., 12mo, extra cloth, $1.00.

The story deals with the peaceful times before the war, of the great struggle itself and of the tragedies and comedies of the life that came after it. Mrs. Harrison is a Southern woman and was intimately associated with many of the scenes she describes. Indeed, there is foundation in fact for all the book contains.

The Novel of the Year.

The Anglomaniacs.

A STORY OF NEW YORK SOCIETY OF TO-DAY.

1 vol., 12mo, extra cloth, price, $1.00.

"There has been no such picture of New York social life painted within the memory of the present generation."

"The success of the season."—*The Tribune, N. Y.*

"The story is brilliant."—*New York Herald.*

"Read this book and see human nature."—*Norristown Herald.*

"The brightest, keenest short story of American life that has appeared in a long time."—*Buffalo Express.*

Cæsar Cascabel.

By JULES VERNE. Profusely illustrated from the original plates, and published by special arrangement with the author. 1 vol., 8vo, $2.50.

Jules Verne has never written a book that appeals so strongly to an American audience as this, for the scene of more than half of the story is laid in America. It tells of the thrilling adventures of Cæsar Cascabel and his miniature circus in traveling overland with their van from California to France.

Good Children and Bad.

A Book for Both. With illustrations in color by M. B. DE MONVEL. 1 vol., oblong, extra cloth, $2.50.

This is, without doubt, the most delightful "juvenile" that has appeared in many a long day, and, by its originality, it is calculated to work a revolution in the illustration of juvenile literature.

London Street Arabs.

By MRS. H. M. STANLEY (Dorothy Tennant). Containing a Collection of Pictures from Original Drawings. With borders in tints.

Crown 4to, cloth, gilt, price, $2.00.

A collection of Characteristic Sketches of London Street Life. Mrs. Stanley relates some experiences of "Arab" life, and gives the mode adopted in making her sketches, and various anecdotes respecting her models.

The Shadow of Roger Laroque.

Translated from the French of JULES MARY. Paper, 50 cents; cloth, 75 cents.

This is the novel from which that powerful drama, "Roger Le Honte," was taken. A more ingenious plot, a more thrilling story, has seldom, if ever, been written.

FOR SALE BY ALL BOOKSELLERS.

Cassell Publishing Co.,

104 and 106 Fourth Avenue, New York.

READY NEXT WEEK:

Curtin's Russian Folk Tales.

MYTHS AND FOLK TALES OF THE RUSSIANS, WESTERN SLAVS, AND MAGYARS. By Jeremiah Curtin. Crown 8vo, cloth, gilt top, $2.00.

UNIFORM WITH THIS VOLUME. MYTHS AND FOLK LORE OF IRELAND. By Jeremiah Curtin. Crown 8vo, cloth, gilt top, $2.00.

"Certainly the most considerable achievement in the field of Gaelic myths since the publication, thirty years ago, of Campbell's Tales of the West Highlands."—*Prof. John Fiske, in the Atlantic Monthly.*

Professor Toy's Judaism and Christianity.

JUDAISM AND CHRISTIANITY. A sketch of the progress of thought from Old Testament to New Testament. By C. H. Toy, Professor in Harvard University. Author of 'Quotations in the New Testament,' etc. 8vo, cloth, $3.00.

With Fire and Sword.

The great historical novel by Henryk Sienkiewicz, translated by Jeremiah Curtin.

A NEW LIBRARY EDITION,

printed on choice paper, *with portrait* of the author. 2 vols., 12mo, cloth, gilt top, $3.00. Also in one volume. Crown 8vo, cloth, $2.00. The scene—Poland and Russia; time—1648–1651.

"The only modern romance with which it can be compared for fire, sprightliness, rapidity of action, swift changes, and absorbing interest, is 'Three Musketeers' of Dumas."—*New York Tribune.*

IN PREPARATION.

Dictionary of Greek and Roman Antiquities.

By DR. WM. SMITH. An entirely new, thoroughly revised, and almost wholly rewritten edition, enlarged to two volumes, 8vo, with numerous illustrations. Price per vol., cloth, $7.00 net; half calf, $9.00 net. Vol. I. ready in December.

The period since this great work was last revised has been one of exceptional importance in regard to the antiquities of Greece and Rome, and in view of the discoveries which have been made, the deciphering of inscriptions, the excavations of prehistoric sites, and the rewriting of the history of Greece and Rome, knowledge upon the subject may be said to have been completely revolutionized. The present edition will contain 800 additional pages, including 200 new articles, many of which are of considerable length and importance, together with 450 additional illustrations.

THE FORUM.

Among the features of The Forum for next year will be:

RESULTS OF THE CENSUS, a series of articles by Gen. FRANCIS A. WALKER.

RESULTS OF THE LATEST RESEARCH and of the most recent *Achievements* in all *Important Lines of Work*, in *Science and in Industry*, by specialists; for example, Dr. AUSTIN FLINT will write on "Dr. Koch's Discovery"; Dr. RICHARD J. GATLING on "The Development of Firearms"; FRANK H. CUSHING on "The Hemenway Expedition"; GASTON TISSANDIER, the French scientist, on "Dirigeable Balloons"; Dr. FRITHJOF NANSEN of Norway on "Polar Exploration."

POLITICAL DISCUSSIONS. By the leaders of opinions of both parties in the United States and by foreign statesmen.

SHIBBOLETHS OF THE TIME. A Series of Critical Examinations of Popular Opinions. By W. S. LILLY, the British essayist.

AUTOBIOGRAPHICAL ESSAYS. A series to which some of the most noted men of the time, American and British, have already contributed.

DISCUSSIONS OF SOCIAL AND RELIGIOUS PROBLEMS IN THE UNITED STATES.

LITERARY ARTICLES, discussing the tendencies of literary work along all directions of activity by the foremost critical writers.

CONTENTS FOR DECEMBER:

THE GOVERNMENT OF AMERICAN CITIES. ANDREW D. WHITE. A comparison, in detail, of municipal government in the United States and in Europe; why European cities are better governed than ours; the danger-place in our political system and the remedy.

CITY GROWTH AND PARTY POLITICS. WILLIAM M. SPRINGER. The increase of urban over rural population as shown by the census (including some census information not before published); how this increase is advantageous to the Democrats.

THE STABILITY OF THE FRENCH REPUBLIC. JULES SIMON of the French Senate—A comprehensive review of the domestic and foreign influences favorable and unfavorable to the Republic; a hopeful outlook.

FAMILY STOCKS IN A DEMOCRACY. PRESIDENT C. W. ELIOT of Harvard—Why Democratic society is favorable to the perpetuation of family stocks; a study of American conditions for perpetuating them.

DOES CHINA MENACE THE WORLD? PRESIDENT W. A. P. MARTIN of the Imperial Tung Weng College, China—Why the historic tendency of Chinese life forbids fear of Chinese competition with Western nations.

THE HUMANITIES. MAJOR J. W. POWELL—The first of a series of articles to show that the theory of biological evolution fails when applied to sociology.

FORMATIVE INFLUENCES. Archdeacon F. W. FARRAR. An Autobiographical essay, following similar ones by Prof. John Tyndall, W. E. H. Lecky, Frederic Harrison, and other noted men of the time.

SPEED IN RAILWAY TRAVEL. Prof. R. H. THURSTON. The possibility of 200 miles an hour with steam; why electricity is likely to supersede steam.

ARMOR FOR WAR SHIPS. Commander F. M. BARBER of the U. S. Navy.

NOTES ON GHOSTS. ANDREW LANG.

PITY, GENUINE AND SPURIOUS. FRANCES POWER COBBE.

THE FORUM, NEW YORK.

50 cents a copy. $5 a year.

All dealers and booksellers.

SCRIBNER'S MAGAZINE FOR 1891.

EACH article in the December number is illustrated by a single artist who has worked in close association with the author.

HOLIDAY NUMBER.

"Japonica." Sir EDWIN ARNOLD'S first paper upon Japan and the Japanese. Illustrated by Robert Blum.

A Unique Series of Full-Page Drawings by HOWARD PYLE. "A Pastoral without Words," telling their story without the aid of text.

The True Story of Amy Robsart, a new commentary on Scott's 'Kenilworth,' by W. H. RIDING, with illustrations made for the Magazine at Kenilworth Castle and in its neighborhood by W. L. Taylor.

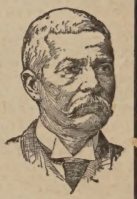
"Christie's," the London Picture Salesroom, by HUMPHRY WARD, art critic of the London *Times*; an account of the famous auction room and its frequenters for many years, with illustrations by Harry Furniss, the well-known artist of *Punch*.

A Paper on Italian Art by A. F. JACASSY, devoted especially to the Neapolitan painter Morelli; with illustration from his works and by the author.

Complete Stories by OCTAVE THANET (with illustrations by Metcalf), RICHARD HARDING DAVIS (with illustrations by C. D. Gibson), and GEORGE A. HIBBARD.

The continuation of the novel "JERRY," Poems, etc., etc.

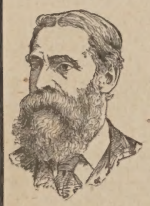
IT is with pleasure that the publishers of SCRIBNER'S MAGAZINE announce what they believe to be a particularly strong and interesting prospectus for the coming year. In this space but a few of the leading features can be mentioned, but among its general articles it is expected that the standard of the contents will not only be maintained, but increased in interest and importance.



H. M. STANLEY.

Mr. Henry M. Stanley will contribute to the January number an article upon "The Pigmies of the Great African Forest" giving a most interesting and complete account (with illustrations) of these strange dwarfs.

Prof. James Bryce, M. P., has arranged to write four articles on India, which will be welcomed by the many readers of his book, 'The American Commonwealth.'

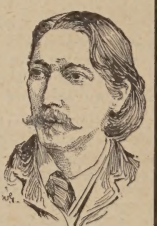


PROF. JAMES BRYCE, M. P.

Sir Edwin Arnold's papers entitled "Japonica," and begun in the December number, will be continued through the spring. They form an unusually striking series upon Japan and Japanese life, and **Mr. Robert Blum's** illustrations are of peculiar interest, as he went to Japan for the express purpose of collaborating with the author. Other articles upon the new Japanese Government, by Prof. John H. Wigmore of Tokio, are also in preparation, for which Mr. Blum will furnish the drawings.

SIR EDWIN ARNOLD.

Mr. Robert Louis Stevenson has written, in collaboration with Mr. Lloyd Osbourne, a serial story of the present day entitled **The Wrecker,** which will be begun upon the completion of the present remarkable serial, **Jerry,** and continued through the year.



ROBERT LOUIS STEVENSON.

The Great Streets of the World is the title of an attractive series; **Ocean Steamships,** upon the lines of the successful Railroad Articles; **The Seashore,** by Prof. N. S. Shaler; the latest **Explorations of Dr. Carl Lumholtz** in Mexico, will be features, all abundantly illustrated.

Short Stories will be of unusual interest in the new volume, and among the writers are **Frank R. Stockton, Thomas Nelson Page, Octave Thanet,** and several new writers.

D. Appleton & Co.'s Holiday List of Books.

FICTION SERIES FOR YOUNG READERS.

A series of Stories elaborately illustrated, which includes

CROWDED OUT O' CROFIELD.

By WILLIAM O. STODDARD. Illustrated by C. T. HILL. How a plucky country boy made his way. One of the most successful of this popular author's stories.

KING TOM AND THE RUNAWAYS.

By LOUIS PENDLETON. Illustrated by E. W. KEMBLE. The strange experiences of two boys in the forests and swamps of Georgia.

THE LOG SCHOOL-HOUSE ON THE COLUMBIA.

A Tale of the Pioneers of the Great Northwest. By HEZEKIAH BUTTERWORTH, author of 'Zigzag Journeys.' Illustrated. In a story romantic, exciting, and instructive as well, the author introduces his readers to a new field which will prove to be one of absorbing interest.

Also stories by OCTAVE THANET, RICHARD MALCOLM JOHNSTON, and other well-known authors, which will be published shortly.

The series, bound in cloth, with specially designed uniform cover. Per vol., $1.50.

FIRST VOLUME IN THE SERIES OF THE YOUNG HEROES OF OUR NAVY:

LITTLE JARVIS.

By MOLLY ELLIOT SEAWELL. Illustrated by J. O. DAVIDSON and GEORGE WHARTON EDWARDS. The story of the heroic midshipman of the frigate *Constellation*. The second of the *Youth's Companion* prize stories. Bound in cloth, with specially designed cover. 8vo. $1.00.

THE LIFE OF AN ARTIST.

A charming autobiography. By JULES BRETON. With Portrait. Translated by Mrs. MARY J. SERRANO. 12mo. Cloth, $1.50.

'The Life of an Artist' is a work of much personal charm and interest, written with an entire absence of reserve. It contains recollections of the Barbizon painters and others of world-wide reputation.

THROUGH MAGIC GLASSES.

Sequel to 'The Fairy-Land of Science.' By ARABELLA B. BUCKLEY, author of 'A World of Wonders,' etc. 12mo. Cloth, $1.50.

THE STORY OF MY HOUSE.

By GEORGE H. ELLWANGER, author of 'The Garden's Story.' With Frontispiece etched by SIDNEY L. SMITH, head and tail pieces, uncut edges, gilt top, and special binding. 12mo. Cloth, $1.50.

A graceful style, fine taste, a knowledge of art, wide reading, and a close observation of Nature characterize Mr. Ellwanger's suggestive essays on the house and home.

"A CHEERY, WITTY, DECOROUS, CHARMING BOOK."—*New York Herald.*

A SOCIAL DEPARTURE:

'How Orthodocia and I went round the World by Ourselves.' By SARA JEANNETTE DUNCAN. With One Hundred and Twelve Illustrations. 12mo. Cloth, $1.75.

"For sparkling wit, irresistibly contagious fun, keen observation, absolutely poetic appreciation of natural beauty, and vivid descriptiveness, it has no recent rival."—From Mrs. P. T. BARNUM'S Letter to the *New York Tribune.*

"'A Social Departure' . . . is a book to be read by everybody."—*Journal of Commerce.*

"One of the most charming books of travel of the year. . . ."—*Detroit Free Press.*

"'A Social Departure' is by far the wittiest book of travel we have ever read."—*Christian Advocate.*

OUTINGS AT ODD TIMES.

By Dr. CHARLES C. ABBOTT, author of 'Days Out of Doors' and 'A Naturalist's Rambles about Home.' 16mo. Cloth, gilt top, $1·25.

Messrs. D. APPLETON & CO. have the pleasure of announcing

WIDOW GUTHRIE.

A NOVEL.

By RICHARD MALCOLM JOHNSTON. Illustrated by E. W. KEMBLE. 12mo, bound in cloth, $1.50.

"It is understood that Colonel Johnston regards 'Widow Guthrie' as his strongest work."

In this charming picture of life in the Georgia of sixty years ago Colonel Johnston shows a mastery of effects and a power of character-drawing which will surprise even his admirers. No other writer has an equal knowledge of the phases of American life which he delineates with such fidelity, force, and delightful humor.

A WASHINGTON BIBLE-CLASS.

By GAIL HAMILTON. Large 12mo. Cloth, $1.50.

A year ago this brilliant author's interpretations of the Bible gathered about her the most distinguished representatives of official life in Washington. In this book, prepared at the special request of the eminent members of the class, Gail Hamilton offers her incisive, lucid "Bible talks" to a larger audience.

TWO NOTABLE BOOKS OF TRAVEL.

BY FRANK VINCENT,

Author of 'The Land of the White Elephant.'

I.

AROUND AND ABOUT SOUTH AMERICA.

Twenty Months of Quest and Query. With Maps, Plans, and 54 full-page Illustrations. 8vo. Cloth, $5.00.

BANCROFT'S HISTORY OF THE UNITED STATES,

From the Discovery of the Continent to the Establishment of the Constitution in 1789. By GEORGE BANCROFT. Complete in six volumes, 8vo. Cloth, uncut, gilt top, per set, $15.00; half calf or half morocco, $27.00; full morocco, $30.00.

HISTORY OF THE PEOPLE OF THE UNITED STATES,

From the Revolution to the Civil War. By JOHN BACH MCMASTER. To be completed in five volumes. Volumes I. and II. are now ready, and Volume III. will be published this winter. 8vo. Cloth, gilt top, $2.50 each.

For sale by all booksellers; or any volume sent by mail on receipt of price.

D. APPLETON & CO., Publishers, 1, 3, and 5 Bond Street, New York.

A. C. ARMSTRONG & SON

HAVE NOW READY:

The Book-Worm: 3d Series.

An Illustrated Treasury of Old-Time Literature. Tastefully printed in old style, on antique paper, with numerous illustrations and ornamental embellishments, octavo, cloth, $3.

It is a treasury of knowledge on old-time literature, and presents its readers with stores of wisdom on subjects which are attractive to the book-lover, giving him in a readable form much out-of-the-way and little-known information on the literature of the past. In its pages will be found chapters on Scarce Books, the works of Special Presses, First Editions, and Unique Copies, and their former and present value; Remarkable Dedications, Bookselling Reminiscences, Americana, Elizabethan Literature, Great Libraries, Collectors' whims, etc., and nearly every other conceivable topic relating to books and their surroundings; Early Book Auctions and old Catalogues; Ancient Bookbinding and old Printing Presses, etc.

New Vol., being 12th of the Book-Lovers' Library.

Studies in Jocular Literature.

A Popular Subject More Closely Considered. By W. C. HAZLITT. 12mo, cloth, uncut edges. $1.25.

In this new volume of the Book-Lovers' Library, Mr. Hazlitt has treated jocular literature from the point of view of the philosopher and the student. He points out the real use of the term, and traces the origin of the literature of humor from the earliest of times, showing its dependence on the vary ng conditions of society in which it was originated. The various forms of epigram, skit, pun, retort, ballads, nursery-rhymes, etc., are all noted and commented upon in their places more or less fully.

Through Abyssinia.

An Envoy's Ride to the King of Zion. By T. H. SMITH, Royal Navy. With illustrations. Cr. 8vo, cloth, $2.

"A narrative of daring adventure and great coolness under the most difficult circumstances. The illustrations are varied and remarkable, and the subject is fresh and entertaining."—*N. Y. Observer.*

Rev. Dr. Wm. M. Taylor's New Work.

THE MIRACLES OF OUR SAVIOUR. Expounded and Illustrated. Uniform with same author's 'Parables of Our Saviour.' Crown, 8vo, cloth, $1.75.

The success of Dr. Taylor's work on the Parables, now in its Fourth Thousand, has led him to accede to the publishers' request to prepare this companion volume.

Alexander Mackay of Uganda.

A LIFE. By his Sister. With portrait and colored map, nearly 500 pages. 12mo, $1.50.

"She has suffered the story, for the most part, to tell itself in the letters and journals of the dead. But these are arranged with the deft grace of a woman's fingers, and the image before one as the book is closed witnesses to her success. The picture shines and lives. This is one of the best and most inspiring of missionary biographies—fit to rank with John G. Paton's marvellous story. If we have not the burning flames that go leaping through Paton's book, there is a still, intense glow of feeling which becomes more and more impressive as the narrative proceeds."—*British Weekly.*

A New Book for Young Men.

A GOOD START; A Book for Young Men. By J. Thain Davidson. Uniform with same author's 'Talks with Young Men,' etc. 12mo, cloth, $1.25.

"Another of this popular series by one who is *facile princeps* as counsellor and guide to young men. We trust that these pages, at once winning and stimulating, will be perused by thousands of our young men."—*London Christian.*

Rev. Dr. R. W. Dale's New Work.

THE LIVING CHRIST AND THE FOUR GOSPELS. 12mo, cloth, $1.50.

"An unanswerable argument for the verity of the Christian religion. The book meets a definite need as a popular statement of the warrant of faith. . . . We cordially commend the volume as calculated to deepen faith in the living Christ, and strengthen confidence in the historical trustworthiness of the story of his earthly ministry as set forth in the four Gospels."—*The London Christian.*

*** These books sent, postpaid, on receipt of price, by*

A. C. ARMSTRONG & SON,

714 Broadway, New York.

Longmans, Green & Co.

PUBLISH:

The Philosophy of Fiction in Literature.

By DANIEL GREENLEAF THOMPSON. Crown 8vo, cloth, gilt top, $1.50.

*** Most of the recent abundant discussion of the art of fiction has been about details. Mr. Thompson treats the subject with philosophic thoroughness, inquiring into the principles of the art and into its scientific, moral, and æsthetic value.

The System of the Stars.

By AGNES M. CLERKE, author of 'A Popular History of Astronomy During the Nineteenth Century.' 8vo, with Photographic Chart, 444 pages, $7.00.

"Sidereal science has a great future before it. The prospects of its advance are incalculable; the possibilities of its development virtually infinite. No other branch of knowledge attracts efforts for its promotion at once so widespread, so varied, and so enthusiastic; and in no other is anticipation so continually outrun by the brilliant significance of the results achieved. For the due appreciation, however, of these results, some preliminary knowledge is required, and is possessed by few. To bring it within the reach of many is the object aimed at in the publication of the present volume."—*Extract from Author's Preface.*

An Elementary Manual of Geology.

By CHARLES BIRD, B.A., Mathematical School, Rochester. (LONGMANS' ELEMENTARY SCIENCE MANUALS.) With 247 Illustrations and Colored Geological Map of the British Isles. Crown 8vo, 256 pages, 80 cents.

"A small but admirable treatise. . . . We are not surprised to learn that a class of thirty-two boys all passed the South Kensington Elementary Examination after such clear, forcible, and interesting teaching."—*Saturday Review.*

The Harpur Euclid.

An Edition of Euclid's Elements, revised in accordance with the Reports of the Cambridge Board of Mathematical Studies and the Oxford Board of the Faculty of Natural Science. By E. M. LANGLEY, Senior Mathematical Master, The Modern School, Bedford, and W. S. PHILLIPS, M.A., Senior Mathematical Master at Bedford Grammar School. Crown 8vo.

From Letters to the Author:

F. Max Muller: "I have read the specimen which you sent me of your introduction to Vedic Literature with much pleasure."

F. Petrie, Hon. Secretary Victoria Institute, London: "In looking over the MS. of 'The Ancient Books of India' I have been much struck by the careful manner in which the subject has been treated."

Samuel Fallows, Bishop of Reformed Episcopal Church, Chicago: "Mrs. Reed has been singularly successful in giving, out of the great mass of material which she has so thoroughly sifted, a succinct and intelligible view of the principles and personages of India, that wonderland of the East."

Civilization: An Historical Review

OF ITS ELEMENTS. By CHARLES MORRIS, author of 'Aryan Race: Its Origin and Its Achievements.' 2 vols., 12mo, over 1,000 pages. Price, $4.00.

In this work the author departs from the narrative style of treatment and adopts a method of grouping historical events so as to bring out their philosophical significance. He traces the evolutionary steps by which the human race has passed upward from primitive savagery to modern enlightenment, and using the facts of history mainly to illustrate and embellish the discussion, seeks to discover the principles which underlie man's progress in civilization.

"His work is an admirable one, full enough to give readers an outline of the general story, and everywhere presenting an intelligent philosophy of the motive forces of civilization."—*The Times, Chicago.*

The Aryan Race: Its Origin and Its Achievements.

By CHARLES MORRIS, author of 'A Manual of Classical Literature.' 1 vol., 12mo. Price, $1.50.

"It almost approaches a history of mankind. It is comprehensive, clear, and written in pleasing style. It will be highly prized by students of ethnology, while the general reader will find in it both entertainment and profit."—*Boston Sunday Times.*

A Digest of English and American Literature.

By Prof. ALFRED H. WELSH, A.M. Large 12mo, 384 pages. Price, $1.50.

"Its system and arrangement are exceedingly felicitous, presenting as they do in parallel columns the events, the characteristics, the writers, and the writings of each literary period. The work fills a place that is occupied by no other book of its kind."—*Saturday Evening Gazette, Boston.*

"The plan is of great convenience in studying the literature of any given period, and it is needless to say has been admirably carried out by Prof. Welsh, the well-known author of the 'Development of English Literature and Language.' As a book of reference this Digest will be of great value."—*Lutheran Observer, Philadelphia.*

The Development of English Literature and Language.

By Prof. A. H. WELSH, A.M. 2 vols., crown octavo, 1,100 pages. Price, $4.00.

"Destined to take a permanent place in the literature of the nineteenth century."—*The Critic.*

The World Energy and Its Conservation.

SELF-CONSERVATION. By WILLIAM M. BRYANT, author of 'Philosophy of Art,' etc. 12mo, cloth. Price $1.50.

"The fairness with which opposing claims are estimated is of the highest value in stimulating independent thought."—*The Scotsman, Edinburgh.*

Semitic Philosophy: Showing the Ultimate Social and Scientific Outcome of Original Christianity in its Conflict with Surviving Ancient Heathenism.

By PHILIP C. FRIESE. 12mo, cloth. Price $1.00.

"The author has gone into his task with commendable minuteness, and has presented a work full of sound information."—*Publishers' Circular, London.*

"Ingenious and interesting in its ecclesiastical and social applications."—*Christian Union.*

S. C. GRIGGS & CO.,

PUBLISHERS,

87 and 89 Wabash Ave., Chicago.

Johns Hopkins Press,

BALTIMORE.

RECENT PUBLICATIONS:

Description of The Johns Hopkins Hospital.

By JOHN S. BILLINGS, M.D., LL.D.

Containing 56 large quarto plates, phototypes, and lithographs, with views, plans, and detailed drawings of all the buildings and their interior arrangement—also woodcuts of apparatus and fixtures; also 116 pages of letterpress describing the plans followed in the construction, and giving full details of heating apparatus, ventilation, sewerage, and plumbing.

Bound in half-morocco, $9.00; bound in cloth, $7.50; bound in light boards, $5.50. In the copies bound in half-morocco and cloth the plates are separately mounted on guards. The edition is limited to 750 copies.

The Supreme Court of the United States:

Its History and Influence in Our Constitutional System.

By W. W. WILLOUGHBY.

124 pp. 8vo, cloth, price $1.25.

The Intercourse Between the U. S. and Japan:

An Historical Sketch.

By INAZO (OTA) NITOBE,

Ph.D. (Halle), Associate Professor, Sapporo, Japan.

193 pp. 8vo, cloth, price $1.25.

Seminary Notes on Recent Historical Literature.

By HERBERT B. ADAMS and others.

[No. 11-12 of Volume VIII. of Studies in History and Politics.] Paper, 50 cents.

Contributions to Assyriology and Comparative Semitic Philology.

Edited by Professor DELITZSCH of Leipzig and Professor HAUPT of Baltimore.

Volume I., Part II., nearly ready.

Essays and Studies.

By BASIL L. GILDERSLEEVE,

Professor of Greek in the Johns Hopkins University and Editor of *The American Journal of Philology.*

520 pp. Small quarto, bound in cloth, price $3.50.

Studies in History and Politics.

Series VIII. (1890) now complete. 600 pp. 8vo, cloth, $3.50.

The set of eight volumes of "Studies in History and Politics" is now offered, bound in cloth, for library use, at $24.00.

The eight volumes, with seven extra volumes, 'New Haven,' 'Baltimore,' 'Philadelphia,' 'Local Constitutional History,' Vol I., 'Negro in Maryland,' 'U. S. Supreme Court,' and 'U. S. and Japan,' altogether fifteen volumes, in cloth, as above, for $33.00.

Scribner & Welford's

NEW BOOKS.

Richard Wagner's Letters

TO HIS DRESDEN FRIENDS: Theodore Uhlig, Wilhelm Fischer, and Ferdinand Heine. Translated into English, with a Preface, by J. S. SHEDLOCK, and an etching of Wagner by C. W. Sherborne. 1 vol., handsome cloth, with gilt stamp, uncut edges, gilt top, $3.50.

Correspondence Between Wagner and Liszt (1841-1861).

Translated from the German by Dr. FRANCIS HUEFFER. 2 vols. large crown 8vo, cloth, $5.00.

The Influence of Greek Ideas and Usages upon the Christian Church.

Hibbert Lectures. By the late EDWIN HATCH, D.D. Edited by A. M. Fairbairn, D.D. 8vo, cloth, $3.75.

CONTENTS:—Greek Education. Greek and Christian Exegesis. Greek and Christian Rhetoric—Ethics—Theology. Christianity and Greek Philosophy, etc., etc.

The Life and Times of Girolamo Savonarola.

By Prof. PASQUALE VILLARI. Translated by Linda Villari. Portraits and Illustrations. New and cheaper edition, revised and enlarged. 2 vols., 8vo, $6.00.

The War in the Crimea.

By General Sir EDWARD HAMLEY, K.C.B. With five Maps and Plans, and four Portraits on Copper, namely: *The Emperor Nicholas, Lord Raglan, General Todleben, Council of War.* 8vo, cloth, $1.75.

*** The opening volume of "*Events of Our Own Time.*" *A series of Volumes on the most important Events of the last half century.*

"Gen. Sir Edward Hamley, who perhaps knows as much as any one now living of the theme, has written a small volume concerning 'The War in the Crimea.' This volume will find a hearty welcome from all who wish to learn the facts, and have but little time to devote to the study."—*Journal of Commerce.*

NEARLY READY.

By H. R. H. PRINCESS BEATRICE.

Adventures in the Life of

Count George Albert of Erbach

A TRUE STORY. Including His Sojourn with the Knights of Malta, and His Capture by the Barbary Corsairs and Imprisonment in Algiers. Translated from the German of Dr. EMIL KRAUS by Beatrice, Princess Henry of Battenberg. With Portraits and Woodcuts. Crown 8vo.

*** *The above books for sale by all booksellers, or sent upon receipt of advertised price. New Catalogue of Rare Books ready, and sent on application. Holiday Catalogue ready.*

Charles Scribner's Sons'

New Books for the Holidays.

LIFE OF JOHN ERICSSON.

By Col. WILLIAM C. CHURCH. With 50 Illustrations. 2 vols., 8vo, $6.00.

"This careful, exhaustive, and highly satisfactory record has been written by the man into whose hands the great inventor wished the work might fall, and the result must gratify those who are looking for the most thorough narrative of Ericsson's life."—*Brooklyn Times.*

HOW THE OTHER HALF LIVES.

Studies among the Tenements of New York. By JACOB A. RIIS. With 40 Illustrations from Photographs by the author. 8vo, $2.50.

"Mr. Riis has performed his self-appointed task admirably, and has done a good work. It deserves to be carefully studied not only in New York, but in other large cities. It should be widely read and deeply pondered."—*Boston Sat. Eve. Gazette.*

IN SCRIPTURE LANDS.

New Views of Sacred Places. By EDWARD L. WILSON. With 150 Illustrations from Photographs by the author. Large 8vo, $3.50.

"Aside from its value as an aid in the study of the Scriptures, the book has intrinsic merits which commend it to the general reader. Every pastor's library would be enriched by it, and for Sunday-school teachers there has not been a better gift-book this year."—*N. Y. Observer.*

ELECTRICITY IN DAILY LIFE

A Popular Account of the Application of Electricity to Every-day Uses. With 120 Illustrations. 8vo, $3.00.

"Written by those most conversant with the topics discussed, and the result is the very best obtainable. The volume will appeal to the popular mind as well as to the scientific. The illustrations add much to the interest."—*Boston Times.*

THE PACIFIC COAST SCENIC TOUR.

From Southern California to Alaska—The Yosemite—Oregon and Washington—The Canadian Pacific Railway—Yellowstone Park and the Grand Cañon. By HENRY T. FINCK. With 20 full-page Illustrations. 8vo, $2.50.

"In point of readableness it leaves nothing to be desired. Mr. Finck is a close and many-sided observer. It is surprising to find so much detail in so compact and agreeable form."—*Nation.*

IN THE FOOTPRINTS OF CHARLES LAMB.

By BENJAMIN ELLIS MARTIN. Illustrated by JOHN FULLEYLOVE and HERBERT RAILTON. With Bibliography by E. D. North. 8vo, $2.50.

Mr. Martin's book may be called a topographical biography of Lamb, and as such fills a vacant place in the literature pertaining to the essayist. He describes Lamb's haunts, and draws an intimate and realistic yet sympathetic portrait of the man.

R. H. STODDARD'S NEW BOOK.

THE LION'S CUB, and Other Verse. By R. H. STODDARD. With Portrait, 16mo, $1.25.

The rare qualities of Mr. Stoddard's verse—its broad view of life, its profound thought, and its graceful and melodious form—are admirably reflected in this new book of poems.

*** *Send TEN CENTS for the CHRISTMAS BOOK-BUYER, containing a handsome engraved portrait of SIR EDWIN ARNOLD, with a sketch by R. H. STODDARD, special articles by FRANK R. STOCKTON, HARRIET PRESCOTT SPOFFORD, Dr. LYMAN ABBOTT, Mrs. BURTON HARRISON, NOAH BROOKS, and other popular writers, reviews of the holiday books, literary letters, and over 60 illustrations, many of them in colors.*

*** *Sold by all booksellers, or sent, postpaid, by*

Published by HARPER & BROTHERS, New York.

For sale by all booksellers, or will be sent by the publishers, postage prepaid, to any part of the United States, Canada, or Mexico, on receipt of the price.

The Nation.

NEW YORK, THURSDAY, DECEMBER 4, 1890.

The Week.

THE President says in his message that "American legislation should conserve and defend American trade and the wages of American workmen," and then, a few sentences further on, expresses satisfaction because the McKinley tariff has not had the "prohibitory effect upon importations" imputed to it. If importations have not been lessened, while duties upon them have been raised, it necessarily follows that prices are higher than they were. The American people, including American workmen, are paying more for what they buy, therefore, than they paid before the McKinley Law went into effect. But it was the purpose of the law to have a "prohibitory effect upon importations," and by thus increasing the demand for American manufactured products to increase the wages of American workmen. Why does the President rejoice because this has not been accomplished? Even he has heard that prices have been raised because of the new tariff, but has he or any one else heard of *wages* being raised because of it? If so, will he or any one else give us the particulars? If wages have not been raised, while prices have, can it be said truthfully that the McKinley tariff "conserves and defends American wages"?

The report of the Secretary of the Treasury shows a probable surplus of current receipts over expenditures for the year ending June 30, 1891, of $52,000,000. Allowance is made in this estimate for a net loss of $9,000,000 in the receipts from customs duties, the repeal of the duty on raw sugar not taking place until the first of April. The increased allowance for pensions as compared with the previous year is $27,000,000, which seems to be rather under the mark. But there is not much doubt that the Treasury will start on the 1st of next July with a balance of $50,000,000. The estimated revenues for the year 1892 from ordinary sources are $373,000,000, and the expenditures, not including the sinking fund, $357,852,209. The sinking fund calls for $49,224,928, so that there is a deficiency of $34,000,000 in prospect at the end of the fiscal year 1892, which can only be made good out of the reserves left over by the previous Administration, plus the National Bank redemption fund. Exclusive of the sinking fund, the receipts are expected to be about $15,000,000 in excess of the revenues. That this is an optimistic estimate is made clear by the fact that only $36,676,000 is allowed for a full year's increase of pensions, whereas the Commissioner of Pensions calls for $33,000,000 as a deficiency on the present year. It will be remembered, too, that Senator Davis, Chairman of the Committee on Pensions, estimated the new call for pensions at $44,000,000 the first full year, while this was considered much too small by other members of the Committee. In fact, the Secretary's estimates on the subject of pensions are hardly intelligible.

There is a delightful passage in the Postmaster-General's report on what he calls "a delicate question," namely, whether inspectors' reports about postmasters and "other confidential papers" touching appointments and removals should be "accessible to persons more or less interested in special cases." Here is the more enjoyable part of Mr. Wanamaker's reflections:

> "I do not agree with your predecessor that these papers should be denied to a committee of the Senate; for, as I am informed, a request of this nature from a committee of the Senate was once denied by him. The Senate has a constitutional right to inquire about appointments. An investigating committee of the House deserves, as I beg to submit, a similar courtesy. The same would be true of a court of law. Perhaps it might be said to be the right, rather than the privilege, of the court of law to have the papers. Beyond this category of Senators and members, however, the confidential papers must not go. Rather must the Department, if necessary, suffer the odium of appearing to remove a person without cause. The confidential reasons which compel the Department to act must not be disclosed, first, because communities might in some instances be involved in strife and bitterness, and families might be subjected to disgrace and ruin.'

That Wanamaker "does not agree" with Cleveland on a constitutional question is serious enough, but, before disagreeing with him, our pious friend should have informed himself fully about the controversy between Mr. Cleveland and the Senate. If he had done so, he would have discovered that the Senate has no constitutional right to ascertain the grounds on which the President nominates for office, any more than the President has the right to ascertain the grounds on which each Senator votes for confirmation, and that when the President refused to give his grounds, the Senate dropped the matter. He would have discovered, too, that the Senate did not make the inquiry for the purpose of improving the civil service, but avowedly for the purpose of proving that Cleveland was a hypocrite, and the Constitution does not provide for Senatorial examinations of the moral condition of the Presidential heart. Whether the President ought or ought not to make such papers public as a matter of duty to the country and to the civil service, is another question. We think he ought.

The Postmaster-General's notions of constitutionality, however, seem rather confused, for he calls "the constitutional right" of the Senate a "courtesy," which the House "deserves," as also courts of law. He is even willing to admit that a court of law may "have the right rather than the privilege" to demand the papers. But whenever a court of law wants the papers, it will not take Mr. Wanamaker's opinion on the matter of rights. It will send for them, on its own view of the matter, and, if he refuses to furnish them, will send him, good as he is, to the county jail. That he is in dead earnest about this question, however, and approaches it in the spirit of a martyr, is shown by his willingness, sooner than surrender the papers, to be suspected publicly of dismissing officers without cause — that is, without proper cause. Willingness to submit to suspicion of this kind, after all that has happened, sooner than do wrong, shows that in John Wanamaker Philadelphia and the Union have really one of "Plutarch's men." He has evidently the firmness of an old Roman ennobled by Christian motives, and is, taken altogether, the most amusing and impudent of contemporaneous humbugs.

Much has been made by Mr. McKinley's friends of the fact that he made an extraordinarily good run in his district, and came near overcoming the normal Democratic majority. Unfortunately for Mr. McKinley's reputation, however, it appears clear that intimidation was one of the elements employed to secure the large vote which was cast for him. Remarkable revelations have just been made by a citizens' committee at Massillon, Ohio. Russell & Co., manufacturers of that town, employ more than 600 men. The members of the firm are Republicans and warm friends of Mr. McKinley. Immediately after his defeat, charges were made of the revenge which they had taken upon some of their workmen who had supported the Democratic candidate, and a mass-meeting of citizens was held, which appointed a committee to investigate the matter. This committee consisted of a member of the State Senate, one of the clergymen of the place, and three other citizens, and they are unanimous in their report that the charges were well grounded. It appears that for years every position in the company's shops in which a man has any control over his fellows has been held by a Republican; that in the last campaign, as well as in previous ones, Republican foremen were active in electioneering in all parts of the shop at all hours of the day, and that bulletin boards were placarded with epithets denunciatory of Democratic candidates and principles; that, if Republican meetings were held at other points in the district, these foremen distributed the tickets advising Democrats that it would be to their interest to go; and that foremen have called the men of their departments together to advise them how to vote. Immediately after Mr. McKinley's defeat, between thirty and forty workmen who had voted against him were notified that their wages were to be cut down one-third; this notice of reduction being intended as a request to quit. Many of the men thus punished were among the oldest employees, having worked 7, 10, 15, 20, and even, in one case, 26 years, and they are perfectly respectable citizens.

The only defence made by the firm was the complaint that the Democratic workmen thus punished had been offensive in the expression of their political views.

There is evidence coming from Paris that the Government of France will have very serious representations to make at Washington if this country perseveres in the attempt to require of French shippers of goods to the United States a written statement to our consuls of the cost of producing articles shipped by the French producers. Possibly France may not concern itself with American shippers overhauled in France by our consuls, but when Frenchmen are, under the McKinley Law, unduly nagged and worried within French territory, France will not stand mute. The acts complained of by France are done under the "Customs Administrative Law," which is quite as iniquitous as the McKinley Tariff Law, and with the latter should be instantly repealed. Each is incapable of amendment, so interlaced are its deviltries. Nobody denies that the United States can offer any conditions they please, consistent with existing treaties, to the importation of foreign goods, if the conditions and examinations are to be and are enforced in our own territory. France, however, denies that our executive officers can enforce *in France* all possible examinations of Frenchmen. The *place* of examination of shippers is the turning-point of the controversy. Our Tariff Law requires that an importation of goods sent hither from France by a French producer (who is not a *buyer* of them ready made) shall be accompanied by an invoice declaring the *market value in France*, and that the invoice must be *verified* by an American consul at the place where the shipment begins. Market value was formerly required, and only market value. But the McKinley administrative deviltry enacts that, as *evidence* of that market value, the American consuls in France shall, before a verification of the invoice, require the French shipper to disclose to them the details of the cost of production. France denies that, either by treaty or public law, American consuls in France can demand such facts from French shippers as a condition of verifying an invoice, or sending it forward to the port of destination of the merchandise. When a French shipper has declared his opinion of the market value of his shipment, he has done, says France, all that should be exacted of him *in France*. Would not the United States say the same were French consuls to endeavor thus to interrogate in Massachusetts our manufacturers?

American manufacturers who have no export trade, though they would like one, may take a hint from the present attitude of French manufacturers, who have a large foreign trade but are in danger of losing it. The rising tide of protectionism in France, with its proposal to lay taxes on raw materials, has alarmed the great manufacturers and exporters of Lyons, Bordeaux, Roubaix, Marseilles, and other industrial cities, and they have begun an agitation in defence of their own interests. In each of those cities a league or union has been formed to protest against the enactment of laws which will close factories and throw workingmen out of employment through making it impossible for French exporters to compete with England in foreign markets. Now these separate organizations have been merged into a national "Union for Free Raw Materials and the Defence of the Export Trade." This consolidation was effected in Paris on November 5, delegates being present from all the principal manufacturing centres. The aim is to present a united front in opposition to the proposed taxes on raw materials, in the name both of the French consumer and the French workingman. The agitation, however, is thought to have begun too late to stop the threatened mischief. It deserves to be noticed, together with the Swiss "League against Higher Prices for the Necessaries of Life," as a sign that the protectionist folly is not blinding all minds in Europe. The American people formed their corresponding league on November 4.

The full Congressional vote in New Jersey is as significant of what is going on in the public mind about the tariff as the votes of other States have been shown to be. In 1888 the Republicans elected four of the seven Congressmen, and had a majority of over 1,400 on the total Congressional vote. This year the Democrats have elected five of the seven Congressmen and have a majority of nearly 14,000 on the total Congressional vote. The total vote this year is, in round numbers, 243,000, against 290,000 in 1888. The Republican vote this year is over 31,000 smaller than in 1888, while the Democratic vote is less than 16,000 smaller. In other words, two-thirds of the total falling off of 47,000 votes from the vote in the Presidential year belongs to the Republicans. They have lost heavily in every one of the seven districts—nearly 6,000 votes in the First, nearly 5,000 in the Second, nearly 5,000 in the Third, nearly 4,000 in the Fourth, nearly 5,000 in the Fifth, over 4,000 in the Sixth, and over 3,000 in the Seventh. The First District contains Gloucester County, with large glass-manufacturing industries; the Second contains Trenton, with its iron and pottery industries; the Fifth contains Paterson, with its silk, iron, and other large industries; and the Sixth consists of the city of Newark, which is one of the largest manufacturing cities of the country. The great gains by the Democrats in all these districts furnish most significant evidence of the verdict of the laboring classes upon the McKinley Bill and McKinley prices, for in every one of these districts the Democrats have made large gains on their vote of the last "off year," namely, that of 1886. Their total vote this year is 128,617, while in 1886 it was only 98,562. Here is a total gain of over 30,000. The Republican total vote of 1886 was 105,468, and this year it is 114,808, a gain of only 9,000. The largest Democratic gains over 1886 have been made in the Third District, where the gain exceeds 6,000, and in the Sixth, or Newark, where it exceeds 10,000, being more than 23,000 this year, as against 13,000 in 1886.

The new Ballot Law of Vermont, which was approved on November 25, is an excellent application of the Australian system, being in all essential respects similar to the Massachusetts and Rhode Island laws, and the other most desirable laws thus far enacted. It provides for the use of exclusive official ballots and for the printing of the names of all candidates upon a single blanket ballot, the names to be grouped under the various offices to be filled at the election, and each name to be followed by the candidate's place of residence and his political designation. The voters are to indicate their choice by making an X after the name of the candidates for whom they wish to vote. There is no provision forbidding electioneering within the immediate vicinity of the polling-places, but it is forbidden to interfere with or endeavor to induce any voter to vote for any particular candidate inside the polling-place under penalty of $50 fine.

The enactment of this law in Vermont increases the number of States which have adopted reform election methods to fifteen. Not all of these are thoroughgoing reform measures, but all are steps in the right direction. The poorest laws are those of New York, New Jersey, Connecticut, and Michigan. The Michigan law, of which we have not hitherto given a synopsis, is in many respects unique. It provides, like the Connecticut law, for the printing of all ballots upon the same kind of paper, to be furnished by the Secretary of State, and requires that all ballots shall be uniform in size and appearance, with no distinguishing mark upon the outside. Each party can, however, have a vignette or device of its own choosing placed at the head of its list of candidates upon the face of the ballot. Ballots are printed by the State for regular party organizations only, there being no provision for nominations by petition, and are furnished in advance of the election. They are therefore distributed, as in Connecticut and New Jersey, in and out of the polling-places on election day. The voter is required to go into a booth to prepare his ballot, and must fold it in such a way that its contents cannot be seen. It was noticeable at the first trial of the law at the last election, that while the peddling of ballots about the polls was not forbidden, the managers of all political parties in many parts of the State, including some of the largest cities, put all the ballots in the booths, and allowed the voters to choose their own. The law worked to the satisfaction of all parties, and, whatever its shortcomings, secured for the first time a practically secret ballot.

Mr. Herbert Welsh says the critical condition of affairs in the Dakotas is due principally to the fact that both the Pine Ridge and the Cheyenne River Agencies are in the charge of new and inexperienced men, placed there not because of their expe-

rience and knowledge, but as an outcome of spoils politics. "As to the Cheyenne River Agency," says Mr. Welsh, "the former agent, Dr. McChesney, who was one of the most capable men in the service, was recently removed against the most earnest protests of the Indian Rights Association. At the Pine Ridge Agency the former agent, Major Gallagher, was removed without our knowledge, so that it was not possible for us to act in the matter." Indians are, in many respects, like children in their management. When their confidence is once gained they can be easily controlled; but, placed in charge of persons they distrust, they are at once suspicious and obstinate. The "Messiah craze" appeals strongly to the Indians' imaginative nature, and an Indian can in such a case be persuaded that he is wrong only by a person in whose wisdom he has implicit confidence. Hence the misfortune of having two great agencies at this time in charge of men whom the Indians do not know, and whose displacement of their old friends, the former agents, is very likely to be in itself a cause of their distrust. If there should be an Indian outbreak in Dakota, with the loss of many lives, it might add a most impressive object-lesson of the heinous character of the Harrisonian spoils doctrine.

The fact is now coming to be confessed by the newspapers of Kansas and Nebraska that the western portions of those States are incapable of supporting a farming population—unless some system of irrigation shall be introduced. When the "boom" in those States was at its height a few years ago, settlers rushed into the regions in question, and for a while it appeared as though the rainfall might suffice to raise good crops. But for two or three years past the western part of Kansas has had almost no rain, and the settlers have been forced to abandon it, until now a Topeka journal does not hesitate to speak of "the desolate and arid lands which irrigation alone can render productive." The emigration has been so great that it has more than counterbalanced the immigration into the eastern and central parts of the State, and the total population, according to the recent Federal census and censuses taken by the State Board of Agriculture in previous years, is less in 1890 than in 1889, and was less in 1889 than in 1888. Nebraska has not suffered to the same extent, only because the western part of the State was not so generally settled; but the destitution in several counties this year is so great that an appeal for aid had to be made recently to the more prosperous regions of the State.

The Methodist churches throughout the country are voting on the question of admitting women as lay delegates to the General Conference of the denomination. The Burlington *Free Press* makes some interesting comments upon the results of the poll in Vermont. The church in Barton having voted unanimously in the affirmative, the Burlington newspaper remarks that this is the first instance of the kind that it has noticed in the State. As a general rule, it says, the question has been considered by very thinly attended gatherings, the votes have been as often or oftener in the negative than in the affirmative, and in all cases the vote has been absurdly out of proportion to the membership of the churches voting. These facts, in the opinion of the *Free Press*, "tend to show how very weak is the hold of what used to be known as the 'woman's rights' idea on the people of this State. One would naturally look for interest on this subject in the Methodist Church if anywhere, where the greatest liberty is given to the women, both in the matter of 'speaking in meeting,' and in taking an active interest and an active part in the management of church affairs generally. But apathy regarding the matter seems to be more marked here than elsewhere. In a word, it would seem that the women of the Methodist churches of the State do not care whether or not they are admitted to the General Conference of the Church." It is much the same way in regard to the question of voting in the State as in the Church. The hardest argument for the advocates of woman suffrage at the recent session of the Legislature to answer was the fact that very few women seemed to care anything about having the suffrage. "General Apathy," says the *Free Press*, "seems to be the officer in command of the women of the State just now in matters relating to an extension of their privilege in either Church or State."

An Iowa newspaper, the Keokuk *Gate City*, notes some instructive facts regarding the vote on the same question in a Western State. Interest in the matter would seem to be far livelier in Iowa than in Vermont, and the feeling much more one-sided, except among a certain class of Methodists. Thus the vote in a Burlington church showed a total of 166, all but 16 of which were in the affirmative; and a church in Mt. Pleasant cast 134 votes, of which all but 15 were in favor of admission, while in Sioux City and in many other places there was not a vote against the proposed change. The exception to this general rule is found among Methodist churches composed of people of foreign birth. For example, the Swedish Methodist church in Burlington cast only two votes for the women and fifty against, while the German Methodist Church in the same city was unanimously against the change.

A more discreditable document than Mr. Parnell's manifesto has not been issued by a public man in any country for many a day. In avoiding all mention of the real question—whether his continued leadership of his party will not, under existing circumstances, seriously injure the Home Rule cause—and talking at considerable length about something else, he adopts one of the worst tricks of "journalism," which may possibly be forgiven a man who is fighting for his life. But his revelation of his consultations with Mr. Gladstone and Mr. Morley looks like a piece of pure malignity, and will, of course, prevent any public man on the English side from ever entering into confidential relations with him again. In truth, it seems the desperate act of one who was indifferent to everything but some sort of vengeance on people who were annoying him. The English Liberal leaders, and especially the two we have named, have made great sacrifices, both political and personal, for the Irish cause. They have had literally to educate their own party in England not only into political sympathy with but into common humanity towards the Irish Catholics, and they have done it untiringly, unstintingly, and through much evil report. It was natural and proper that they should communicate to Mr. Parnell the full extent of their hopes and fears, and their full estimate of their powers, which naturally varied from month to month and almost from day to day. That he should now give it all to the world with a sneer, and with the deliberate purpose evidently of breaking up the alliance between the Irish Nationalists and the English Liberals, shows that the estimate of his character held by so many of his enemies was not wholly mistaken. He has done a base and treacherous thing—a false thing, in view of Mr. Gladstone's and Mr. Morley's denials—to save himself from the natural and inevitable consequence of a piece of deliberate folly.

The Irish cause has never, in all its long and dreary history, had so much need, not only of common sense, but American "horse sense," as at the present crisis, and we are glad to see there appears to be a sufficient supply of it among the members of the Irish Parliamentary party to prevent Parnell's inflicting on it the greatest of its many disasters. The great majority of the members refuse to follow him in his crazy course, and the delegates now in this country have sent a long despatch full of the wisdom which the occasion calls for, dissociating themselves from him. The Catholic clergy, too, have declared themselves against him, and his following in Parliament will probably drop at once to a score or so of those most dependent on him pecuniarily—for he is the chief custodian of the fund out of which the salaries of the poor men are paid. The folly of Parnell's course must in charity be ascribed to some failure of his mental powers. If he had promptly acquiesced in the view generally taken of the situation in which the judgment of the divorce court placed him, and withdrawn at once from the leadership of the party, if not from his seat in the House, there is little question that six months of retirement would have expiated his fault in the public eye sufficiently to enable him to reappear. People forgive sins such as his readily enough if not accompanied by gross duplicity or cruelty, and he was armed against too much English indignation by at least one notorious case of condonation on the part of the whole Tory and Liberal-Unionist party. It is the Nonconformists he had to fear, and he has, through his base defence, made forgiveness from them impossible, and doubtless greatly reduced the majority at the coming election, on which the Liberals had good reason to count.

GAIN AND LOSS IN PUBLIC INDEBTEDNESS.

THE census bulletins already published give the amount of the entire public indebtedness, Federal, State, and local, except that of the school districts, townships, and smaller towns and villages. In 1880 the aggregate amount of the net indebtedness of these excepted places was $117,112,862. It is not possible to separate the amount of their debt in 1870 from that of the other municipalities and quasi-municipalities of the country. In the preparation of the following table, it has been arbitrarily estimated that their debt in 1870 was about $90,000,000. The figures published by the Census Office, it is distinctly stated, are merely preliminary, and are subject to revision.

Subject to the above-mentioned qualifications, the following table will give for 1870, 1880, and 1890 the net Federal, State, and local indebtedness, except that of school districts, townships, and the smaller towns and villages, together with the increase or decrease in each kind of indebtedness during each decade, and the percentage of such increase or decrease:

AMOUNT OF INDEBTEDNESS.

Nature of indebtedness.	1870.	1880.	1890.
Federal ...	$2,331,169,956	$1,919,326,748	$623,376,119
State.....	352,866,698	226,597,594	132,336,639
Local.....	425,810,060	704,373,585	738,287,576
Total.....	3,109,846,714	2,850,297,927	1,794,000,334

INCREASE OR DECREASE—AMOUNT.

Nature of Indebtedness.	From 1870-1880.	From 1880-1890.	Percentage	
			From 1870 to '80.	From 1880 to '90.
Federal.	—$411,843,208	—$895,950,629	—17	—52
State....	—126,269,104	—94,260,905	—35	—42
Local...	+278,563,525	+33,913,991	+65	+5
Total...	—259,548,787	—1,056,297,543	—8	—37

The reduction in the aggregate amount of public indebtedness of all sorts has thus been more than four times as great during the last decade as it was during the decade extending from 1870 to 1880, and the fact that in ten years more than one thousand millions of the public debt have been paid off is a striking demonstration of the enormous and apparently constantly accelerating growth of wealth. The annual outlay for the payment of the principal of the debt, in fact, exceeds the total annual revenues of the Government during any year prior to 1863. It is more than twice as great as those revenues were in any year before 1853. The reduction during the decade was more than eight times as great as was the national debt at any time prior to the civil war, and about thirteen times as great as it was after Hamilton had carried through Congress the bill for the assumption of the State debts. It was about twice as great as was the total national debt of Great Britain when Hume affirmed that "the ruinous effects of it are now apparent and threaten the very existence of the nation," and twice as great as the sum Walpole declared would exceed the ability of England to stand under. It was more than sixteen times the amount of the English debt at the close of the seventeenth century, when that debt appeared to so competent an authority as Davenant so great that he asserted that the country could never flourish in trade or manufactures until the greater part of it was liquidated.

Of the total reduction, nine-tenths has taken place in the Federal debt, which is now less than one-half what it was ten years ago. The aggregate amount of State indebtedness has also during the decade been reduced nearly one-half. Unfortunately, some part of this reduction has been brought about either by absolute repudiation or by various sorts of partial repudiation, euphemistically styled scaling, readjusting, or the like. The genuine reductions by payment have nevertheless been considerable, and there are now, outside the South, no States whose net indebtedness is at all important, while there are six States absolutely without any bonded debt, and no less than eighteen in which the cash and funds on hand, according to the census returns, exceed the total combined amount of the bonded and floating indebtedness. It may be stated that in the above table the figures for the net State indebtedness in 1880 are those of the tenth census, and not those given by the bulletin of the eleventh census. There are a number of serious and largely unexplained differences between the figures given by this bulletin for the debts of many of the States in 1880 and those furnished by the census of that year.

The most interesting and most important portions of the statistics relating to indebtedness thus far made public are those which show the amount of local indebtedness. During the two decades from 1860 to 1880 the sum total of this indebtedness increased by leaps and bounds. It is probable that in 1860 it was not great, and yet when in 1870 it was first made the subject of census inquiry, it amounted, including that of the school districts, etc., to $515,810,060, and by 1880 this had risen to $821,486,447, an increase of 59 per cent. Public opinion took alarm none too soon, and, by constitutional provisions in many States requiring popular ratification of every new loan, or restricting the aggregate amount of indebtedness which a municipality might lawfully contract, to a certain percentage of the assessed valuation, attempts were made to prevent further reckless borrowing. The preliminary census figures seem to show that the efforts thus made have been measurably successful. It is true that there has been no reduction in the aggregate amount of the local indebtedness, but, on the other hand, the increase indicated is so small when compared with that of the previous decade (being relatively but one-twelfth as great) as to indicate a most important and satisfactory progress in the right direction. While our cities and towns are growing as rapidly as the census shows they are, it is inevitable that they will have to be large borrowers in order to supply themselves with the expensive necessaries of urban existence. If under such circumstances the aggregate amount borrowed but slightly exceeds the amount paid off, we are doubtless doing, if not as well as we might hope, or as well as we should if more honesty and intelligence and less politics and jobbery were found in our municipal boards, still quite as well as we have, under existing conditions, any reason to expect.

The reduction in the annual interest charge has doubtless been proportionately still greater than in the principal of the public indebtedness, although the information thus far published by the Census Office is not as complete with reference to the changes in the interest as it is with respect to the principal. It seems probable, however, that the annual outlay for interest on all kinds of public indebtedness is now between $60,000,000 and $70,000,000 less than it was ten years ago. This reduction is in itself more than eight times all the revenue received in any one year of Washington's Administration.

If attention be confined to what is ordinarily called public indebtedness, it thus appears that, both in the principal and the annual interest charge, there has been a very great reduction in the last decade. If by the charge of the public debt, however, we, as it would seem we should, include all the payments we shall be called upon to make in return for or in consequence of services rendered long since, the comparison with ten years ago is not so satisfactory. Pensions are nothing but annuities granted by the Government for past services, real or supposed, and as such are in fact part of the public debt. They are, moreover, a form of public indebtedness which cannot be made, as Government stocks can be, a convenience in the business and financial operations of the country. The expenditure for pensions in the fiscal year ending June 30, 1880, was $57,273,536, and in 1890 $106,493,890, an increase of $49,220,354; and yet in the expenditures for 1890 are not included any of the dependent pensions authorized by the act of June 27, 1890. Within three months after the passage of this act 460,000 claims for pensions under it had been filed. The increase from 1880 to 1891 in the expenditures for pensions will, therefore, exceed the amount by which the interest charge on the public debt—Federal, State, and local—has been reduced during the same time. In spite, therefore, of all the sacrifices which in the meantime have been made to reduce the indebtedness of the country, the annual outlay for debt and pensions combined will soon be greater than it was ten years ago.

DELIBERATIVE BODIES.

IT is not improbable that the present Speaker of the House of Representatives will cease to be a very influential person after his term of office has expired; but that is no reason for ignoring the service that he has done the country. That service might be described concretely as the same as that of the drunken temperance orator—furnishing a horrible warning; or, more scientifically, as exhibit-

ing clearly the pernicious results of certain theories of government. Mr Reed is not a hypocrite, and his frankness, although perhaps somewhat brutal, renders his principles unmistakable. They are summed up in the earnest expression of his gratitude that the body over which he presided was no longer a deliberative body, and it will be profitable to consider what is necessarily implied in this proposition.

The most obvious corollary is, that if there is to be no deliberation in Congress over the laws that are to be enacted there, deliberation must be had elsewhere. Laws are frequently not what they purport to be, but they are always the result of design. It is impossible to throw off a statute like an epigram, and most legislation requires an immense amount of preparation. In the view of the framers of our Constitution, this deliberation was the proper function of the representatives of the people. The *Federalist* is full of this theory, and its importance in the development of the English Constitution is well known. But if this is not the true theory, there is only one other that is possible in a popular government—the theory that a representative is a mere delegate, a mouthpiece of the *vox populi*; and that the people deliberate and employ their servants to frame the results of their deliberations into decrees. This is the theory which Mr. Reed has got hold of, and, as we have said, he has rendered an important service not only to the country, but also to political science, by showing experimentally how the theory works in practice.

For it cannot be denied that *a priori* the theory is defensible. The people, it is said, are the rulers; those who are called rulers have only to ascertain what is the popular will, and then carry it out. But when we come to practical considerations, we find that it is impossible in advance of action to ascertain the popular will, and impossible for the whole people to deliberate. From the very conditions of human existence no very great number of men can be gathered at one time to engage in deliberation, while the actual participants must be very few. Even here, the idea of representation reappears; the audience, by the clashing of swords upon shields, or some modern equivalent, showing what leader they approve. And again we must inquire whether this audience is itself representative of other audiences and of the people who have not formed a part of any audience. In short, unless every individual is asked his opinion of every legislative question, the principle of representation must be recognized; and if the regularly chosen representatives of the people do not deliberate, they must accept the deliberations of those persons whom they consider to be most representative.

The fatal difficulty with this course is that of all it requires the most deliberation. How is it possible, without the most careful investigation, to determine what men hold representative opinions? Is it the party managers, the political "bosses," the men who foreordain the nominations of caucuses, and construct the party platforms? Or is it the men of substance who furnish the sinews of war? These are shrewd men. They can tell what legislation will be satisfactory to the business interests which they represent, and they can report the feeling prevalent among their henchmen. But their views are often discordant, and they rather perplex than aid deliberation when they disagree. After their opinions have been ascertained, it is still necessary to consider whether these opinions will prove to be those of the people.

Moreover, deliberation of this kind must be secret. Discussion is transferred from the legislative chamber to the lobbies and committee-rooms, to hotels and bar-rooms and private apartments. While much valuable information is gathered in this way, it is unavoidably fragmentary, and frequently misleading. It lacks the corrective criticisms of debate, and, more than all, it is of a character to excite popular suspicion and jealousy. The American democracy is easy-going, but it is at the same time high-spirited. It indicates the main outlines of a policy that it will approve, but it is suspicious of all secret influences that affect details. If it sees that its representatives are framing legislation in secret, determining important matters without public discussion, registering the requirements of mysterious interests, its wrath is excited. It is a patient people, but there is one thing that its patience will not stand—the spectacle of its representatives entering into private arrangements under pretence of carrying out the popular will. This is in our Government the crime of *læsæ majestatis*.

No doubt Mr. Reed and his followers would laugh derisively at the mention of Pericles as an authority upon government, but there is some suggestiveness in his observation that the Athenians regarded as the great impediment to action not discussion, but the want of that knowledge which is gained by discussion preparatory to action. The appalling disorder that has befallen the Republican party is enough, at all events, to prove that action without public deliberation, even if in obedience to privately received intimations and manifestations of the popular will, is not a policy that is secure against miscarriage.

Action after prolonged deliberation, during which the representatives of the people sincerely try to ascertain what, in the light of reason and experience, appears to be for the good of the people, not concerning themselves with surreptitious inquiries as to what the people want, is a policy that is also not free from danger. But the danger of miscarriage in the latter case cannot, in the light of recent events, be regarded as so serious as in the former, and it has a great many advantages that the non-deliberative method has not. Among them is the possibility that the people may be convinced, being themselves rational beings, by the arguments which have convinced their representatives; in which case their representatives would enjoy the honorable pride of genuine leadership, a pleasure of a much higher order than the somewhat mercantile complacency over a cleverly anticipated popular want. When Mr. Cleveland reverted to the old theory of representative government, and declared in his celebrated tariff message what he thought the country needed, not what he thought the people wanted, Senator Edmunds is said to have exclaimed: "The Lord has delivered him into our hands!" But if there is any public man who can contemplate his standing with the people with more serene satisfaction than Mr. Cleveland to-day, his reflections and the reasons for them ought to be communicated to the world.

SENATOR HOAR'S EXPLANATIONS.

Senator Hoar has added his explanation of the Republican defeat to those of McKinley and Reed. "The three weeks' discussion of this great statute [the McKinley Bill]," he says, "was insufficient to convey to the American people an adequate understanding of its beneficent provisions." In this diagnosis, the nine months' discussion in Congress and the press that preceded the three weeks' discussion on the stump, counts for nothing. It is non-existent in the mind of the Massachusetts Senator. So, too, is the discussion which preceded the last session of Congress, and which took the form in his own State of a house-to-house canvass of the iron industries, leading to the presentation of the most formidable petition for lower duties that has been sent up since 1857. Of this petition, headed by ex-Gov. Ames, and bearing the signatures of such leading Republicans as Mr. Tobey and Mr. McFarlin, he has no recollection, or none that he thinks worthy of mention. The State was lost and the country was lost for want of time to prove to those iron-men, as well as others, that all industries would have been benefited by that "great statute," the McKinley Bill.

At this point the Senator enables us to take an inventory of his mental equipment as relates to the tariff question in general. He does not seem to be aware that we had a tariff anterior to the McKinley Bill, a tariff averaging 47 per cent. on dutiable goods, and reaching 58 per cent. on pig-iron, as to which Massachusetts had expressed some particular irritation. For all that we learn from him we might suppose that the country was on a free-trade basis, and was just embarking upon the experiment of a protective tariff. "There never was a bill framed," he says, "with more anxious, careful, conscientious study than the tariff of 1890." Indeed! But was not the tariff of 1883 framed with equally anxious, careful, and conscientious study? What was the matter with that tariff? What was the matter with the fourteen or fifteen other tariffs that the Republican party has passed since it came into power? We are not wholly without an answer to this question, and it is here that we discern the make-up of Senator Hoar's mind on tariffs in general. "It [the McKinley Bill] is framed," he goes on to say, "upon a principle which has been discussed from a time long before the foundation of the Government of the United States. This principle has gained steadily in public confidence with every discussion." Which means that

in his view, if the first Congress, that of 1789, passed a protective tariff averaging 8½ per cent., all subsequent Congresses ought to add something to that figure, as pious travellers add stones to a cairn, in order to show their attachment to the principle. They ought to go right along piling up duties to the end of time. This is a conception of the protective theory that has not found its way into the text-books, although it has been frequently imputed to the advocates of the system by its adversaries. Stated shortly, it means that trade restrictions ought never to cease, but on the contrary ought to be multiplied and augmented continually. It is the Chinese-wall doctrine without any disguise or qualification.

This being Senator Hoar's frame of mind on the tariff question, why does he put so much stress on the "careful and conscientious study" of it? Why not make one job of it by passing a bill prohibiting the importation of anything that can be produced in this country? It is true that even this kind of a bill would leave room for dispute as to what things can and what things cannot be produced in this country. There would still be scope for "careful and conscientious study" to determine whether carpet-wool, for example, can be produced in this country or not, and here we should look for some fun in a joint debate between Mr. William Whitman and Mr. Columbus Delano, with Senator Hoar as an impartial judge inclining to support Delano on broad grounds. Looking strictly to the "principle which has been discussed from a long time before the foundation of the Government of the United States," we should expect him to solve all doubts in favor of the wool-growers. There is certainly no reason why the duties on iron ore and coal should not be made prohibitory at once, since it is acknowledged that we can and do produce these articles in abundance. It would save a deal of time and talk to adopt the Chinese wall forthwith, instead of approaching it by successive bills, as in the recent disastrous McKinley experiment.

That there may have been some errors of detail in the McKinley Bill, Senator Hoar allows; but these were unintentional. "Experience may *perhaps* show," he says doubtfully, "that this adjustment was in some particulars unwise. But it was made under the recommendation of an able, wise, and faithful committee, who had nothing but the general interest *at heart*." Here we have another chart of the Senator's phrenology. So long as your heart is in the right place, you are not to be blamed for shutting up half of the carpet-mills of the country, or for compelling the sewing women to pay three prices for pearl buttons, or for adding five cents to the cost of a dozen eggs and twenty-five cents to the price of a bushel of potatoes. Think, dear laboring man, think of McKinley's *motives* when you approach the ballot-box. He may have made a mistake when he put the potato tax on you, but his heart beat true all the same. He may have overdone it when he put a new tax on the tools of your trade, but his intentions were of the most excellent description. He may have erred in handing part of the contents of your dinner-pail over to some would-be worker of tin plate, but he meant well. Whatever he did, he is a good man. And so are all of *us*, who followed his lead and voted for his bill, without knowing very much about it. The terms of the Senator's endorsement of the bill show that he would have voted for any other with equal alacrity if convinced that the Committee had "the general interest *at heart*." So it comes about that if tin plate and eggs and potatoes had been put on the free list, instead of being taxed 50, 60, or 70 per cent., as the case may be, Senator Hoar would have been equally gratified, provided he were sure that McKinley was a good man. But surely the Senator must have had some doubts as to the state of McKinley's heart when the latter was changing so rapidly on the subject of hides.

Evidently Mr. Hoar took protection as a bolus when he was young, and never made any inquiries about it. Anything that comes to him with that label is *Thus saith the Lord*. He has spent his growing years on other subjects, and as to these he can give a reason, good or bad, when occasion calls. But as to the tariff he can give none except that he has confidence in the good intentions of the Committee. The State of Massachusetts has been studying the tariff question while Mr. Hoar has been studying the other things. While he has been satisfying himself of the rectitude of McKinley, the State has been considering the simpler problems of each man's right to his own earnings. As to the good intentions of the Committee, or of Mr. Hoar himself, for that matter, the State has voted practically that there is a hot place paved with such, or at all events that their intentions are of no account.

PARNELL—QUAY.

PARNELL's address to his Parliamentary followers on Monday shows that he is determined to continue the work of demolishing his own reputation in the eyes of the civilized world. He is fighting hard against political extinction, and using every weapon that comes to hand. He abuses and ridicules all his late English allies, including Gladstone and Harcourt, as well as the ablest of his own followers, and is apparently determined to seek a "vindication" by some sort of popular vote in Ireland. His notion is, that if he can keep his men together in the House of Commons under his lead, he can, by holding, as he does hold, the balance of power between the two English parties, extract concessions from each in turn, which will eventually restore his old prestige. In order to attain this he is apparently willing to sacrifice utterly his reputation for honesty, fidelity, truthfulness, and fair dealing.

What is most interesting in his present attitude, however, is its resemblance to the old-fashioned American modes of getting a "vindication." That he has studied the system of our political malefactors with care and profit is plainly to be seen, and the likeness between his methods and Quay's is worth attention. For example, one of the first rules of this system is to avoid making an issue on the real question, and to keep up the defensive fight by starting new subjects of controversy. If the accusation, for instance, be fraud or falsehood, the practitioners answer by an attack on unchastity. If the charge is embezzlement, they show up the possible evils of free trade. If the charge is literary piracy, they show that some one of the accusers is also a pirate. In fact, they take the utmost pains to prevent any debate over the real facts of the case. All through the recent canvass in Pennsylvania it was impossible to engage any Republican in a discussion of the question whether Quay had or had not twice robbed the State Treasury. No matter how pointedly or circumstantially the charge was made, the answer of Quay's editors always was that you were attacking the American tariff in the interest of Great Britain. In truth, dexterity in this sort of evasion is actually taught to young men in the offices of party newspapers, and excites their admiration more than any other branch of the journalistic art. It cannot be practised successfully, however, as bald and simple evasion. It has to be enveloped in clouds of rhetoric and accompanied with prodigious noise. It does not do, when A is accused of lying and corruption, to answer simply that B has been unchaste and is a free-trader. The evasion has to be wrapped up in an essay on the enormous evils of unchastity, or in a narrative showing the terrible condition of the working classes in free-trade countries.

Parnell is, in truth, managing his affairs with the hand of a "trained journalist." There has really been little condemnation of him, everything considered, among English Liberal politicians on account of the O'Shea affair, bad as the evidence has shown that to be. His persistent duplicity in it has probably disgusted far more of them than his licentiousness. But what they say—what Mr. Gladstone has said, and Mr. Morley has said, and they all, in fact, have said—is that they do not undertake to sit in judgment on Parnell's private character, but that the judgment of the divorce court in the O'Shea case has, in their opinion, so prejudiced a large body of English voters against Parnell that they would consider the success of the Home-Rule cause, either in this Parliament or the next, impossible if he remained in the leadership of the Irish party. They therefore ask him to retire, at least until after the election. A proper human answer to this view from Parnell would be, either (1) that he had a good defence to O'Shea's charges, but did not produce it in court for such and such reasons; or (2) that although the O'Shea charge was true, it would not have the effect on English voters which Mr. Gladstone and Mr. Morley supposed; or (3) that even if it did have the effect on English Liberals that they anticipated, he had good reason to believe that he could extract Home Rule from the Tories. In any of these answers, however, the O'Shea case would have occupied the leading place.

Instead of this human answer, Parnell,

like Quay, makes a journalistic answer. He has actually ruled the O'Shea case wholly out of the discussion as irrelevant. He made not the slightest mention of it in his manifesto. He forbade all allusion to it as chairman of the meeting of his Parliamentary followers. What he says is, that Mr. Gladstone and Mr. John Morley are traitors to the Irish cause; that both of them made him dishonorable proposals about Home Rule in private and confidential interviews, and that they undoubtedly intend to betray the Irish when they again come to legislate about Home Rule; and he intimates that English assistance is of no consequence to Home Rule. Why he did not produce these startling facts sooner, he does not explain. Nor does he account for his continuing to act with the Liberals so long without discovering their treachery; nor does he say whether he would have exposed them if Capt. O'Shea had not exposed him. In fact, he answers the charge of unchastity by a counter charge of deceit.

The coolness of his demeanor and his good humor and even jollity through all this trying crisis, on which all the correspondents dwell, constitute another striking point of resemblance to Quay. The worse Quay's situation in Pennsylvania seemed to be in the eyes of decent people, the more jovial he seemed to grow, and when final defeat came he went to Florida in high spirits. But it must be said for Quay that he had no such advisers or allies as Gladstone and John Morley to bid him get out of sight for a while, as the only way of allaying public disgust. He had to rely on his own instincts and experience for the proprieties of the occasion, and they taught him nothing except that when in trouble the best course is to brazen it out. Parnell has sinned against greater light, and has, therefore, done more damage. He has inflicted injury on the Irish cause, the full extent of which cannot now be estimated, but it is probably very great, if not irreparable. The discovery of his protracted intrigue gave the cause a severe blow, and he is now apparently bent on saving himself from one of the natural consequences, which he must have all along foreseen, by involving as many friends as possible in his own ruin.

PRISONS AND PRISONERS.

THE condition of prisoners has been in all ages so wretched as to call for the prayers and the labors of the benevolent, but it is only in recent years that the treatment of this unhappy class has become the subject of scientific study. John Howard and his followers compelled recognition of the fact that convicts were men, and therefore entitled to humane treatment; and though their aim was not to establish a science of penology, their agitation was the remote cause of that result. Recent as this science is, it has attained an unusual degree of perfection, and its principles have been already to a considerable extent adopted in practice. These principles are set forth with admirable clearness and succinctness in an essay by Mr. Eugene Smith, long Secretary of the Prison Association of New York, which is just published by the Society for Political Education.

Mr. Smith points out that the vindictive theory of punishment has been superseded by the view that the sole end of a penal system is the protection of society. This end, however, is not secured by the temporary incarceration of criminals, because it has been found by experience that after their discharge they may be more dangerous than before. The management of many prisons is such as to stimulate the criminal tendencies of their inmates. After some misunderstanding a substantial agreement has been reached upon the proposition that the reformation of the prisoner is the controlling aim of prison discipline. This is not upon any theory of paternalism or charitable agency, but because it is the best way of protecting society. The criminal is not to be reformed for his own sake, but for the sake of others. He has no special claim upon the Government, but by treating him as if he had the common safety is promoted.

The term reformation, however, as applied to criminals, has a technical meaning. It does not mean, as most people not unnaturally suppose, a regeneration of the spiritual nature of the criminal. He may be as bad a man after he is reformed as before, but he is changed in one important respect: he will not violate the law. A story from the Elmira Reformatory throws more light upon the meaning of this term as well as upon the nature of the criminal than will be derived from much explanation. At an examination of the class in "Practical Ethics," the question was put, "Is it better to beg or to steal?" One prisoner replied: "A hundred years ago the question presented no difficulty; it would have been better then to beg than to steal. But *now*, when such great progress has been made in prison reform, it would be better to steal than to beg; for the thief, being imprisoned, would enjoy all the benefits of a reformatory training, which would enable him on his discharge to take care of himself so well that he would never afterwards have occasion either to beg or to steal."

On account of the existence of this distorted and morbid standard of morality among criminals, it is indispensable that the prison regimen should be severe. The disgrace of imprisonment is a sufficient deterrent to most men, but for the typical criminal this is not sufficient, and a painful discipline must be added. The convict must be made to dread the thought of a renewal of his sentence. Subject to this fundamental requirement, the general principle governing the treatment of convicts is laid down by Mr. Smith as follows: "Those methods of prison management are the best calculated to reform the prisoner which assimilate his condition to that of the free workman outside, which cultivate in him the same habits, appeal to the same motives, awaken the same ambitions, develop the same views of life, and subject him to the same temptations that belong to the free community of which he is fitted to become a member."

The convict, therefore, ought to be made to feel, with the honest man, that he must earn his living. The Government deprives him of his liberty, and it must, therefore, furnish him with the opportunity of labor. Only in this sense does it owe him any support. The convict, therefore, should be paid wages—low wages, if his labor is of little value, high wages if his labor justifies them. Out of these wages he should pay for his living, and if he earns more than will pay for the scanty fare of the prison, he should be permitted to accumulate the surplus. In this way the habit of industry and the habit of self-support are formed, and the fundamental maxim of political economy, that capital is the result of saving, is inculcated. Upon this point the generally admirable statute of the State of New York known as the Fassett Act is obnoxious to some criticism. That act provides that meritorious prisoners may receive ten per cent. of the earnings of the prison as compensation —compensation, apparently, for good behavior. While good conduct deserves recognition, it is undesirable that it should be paid for in money. Pecuniary recompense should be reserved for labor alone.

Another fundamental principle of prison science is "the individual treatment of convicts." The inmates of a prison cannot be reformed *en masse* by the application of the same influences. "As well might the patients in a general hospital, afflicted with divers diseases, be all cured by one universal and unbending regimen." It is obvious that this system of treatment implies a high order of ability on the part of the governors of prisons; no legislation will avail against weakness here. "The whole administration must be pervaded by the *personality* of a warden who shall possess keen insight, broad human sympathies, and a strong and masterful nature; and that personality must be brought into separate and direct contact with each prisoner."

If it be once admitted that a criminal should not be discharged from prison unless he is reformed, *i. e.*, unless a reasonable probability exists that upon his regaining liberty he will not violate the law, the indeterminate sentence is a logical necessity. It is absurd to turn loose upon society a man who will immediately renew his attacks upon it. "It is just as irrational," Mr. Smith observes, "to send a lunatic to an insane asylum for the predetermined period of two years as it is to sentence a felon to two years' imprisonment, decreeing in advance that when the two years are up both shall go scot free. Both should be confined until they have become so far *cured* that they may be set at large without danger to the community." Theoretically, therefore, there should be no predetermined limit to imprisonment for crime. But practically the New York statute goes as far as is at present desirable, in providing that the imprisonment shall not be shorter than the minimum term nor longer than the maximum term for which, under existing laws, the convict may be sentenced.

It is not encouraging, although under our system of nominating the judiciary by

"halls" and party conventions, it is not surprising that no judge has yet pronounced an indeterminate sentence. On the other hand, it is very encouraging that the efforts of a small body of disinterested citizens to reform our prison system should, in the face of tremendous opposition, have attained so great success as is marked by the enactment of the Fassett Bill. This result is enough to convince all sincere reformers that no good cause is hopeless. Those who desire to learn how reason and experience may triumph over prejudice and ignorance, can do no better than study Mr. Smith's little tract. It might be well in case, as we hope, another edition should be required, to print with it the enlightened statute by which the penal system of New York is now regulated.

THE LEGAL CHARACTER OF AFRICAN EXPEDITIONS.

THE answer of Mr. Smith, the English Ministerial leader in the House of Commons, to the question, the other day, whether the Government would issue a commission of inquiry into the doings of Stanley and his officers in Africa, was a decided negative. He said the Government was "in no sense responsible for the selection of Stanley's staff," which means, of course, that the expedition was a private affair. It does not, indeed, seem to have been the expedition even of the [illegible] Company. It was, in truth, [illegible] of Commit- [illegible] philanthropic organization [illegible] to accomplish the rescue of [illegible] who was supposed to be [illegible] very anxious, therefore, to [illegible]

This has given a distinctly new turn to the controversy over "the rear-guard" and its troubles. The English public is at last waking up to the fact that the dispute concerns not simply Stanley and his officers, but the reputation of the English Government and people. The last issue of the *Spectator* gives expression most effectively to the thought that is now rising in the minds of most educated men over this miserable business, and to which Mr. Smith's answer will give increased impetus. It says:

> "This kind of thing is not endurable, and must be stopped, even if Parliament has to interfere with enterprise by a strong restrictive law. We are not going to conquer Africa as the Spaniards conquered Peru, or to degrade the national reputation and impair the national character for the sake either of tropical trade or widely extended dominion. The English claim to rule the dark races consists in this, that their rule is at once lenient and vivifying; and their acts of invasion in Africa, if these two claims are to be disregarded, become nothing better than grand dacoities. We have dealt elsewhere with the horrible personalties now being exchanged among the African explorers and their friends; and though we see reason to believe that the two men most bespattered with charges were either in part innocent or morally irresponsible, we are none the less convinced that the general position assumed by explorers, and revealed in this disgraceful controversy, is perfectly intolerable. They obviously consider themselves released in Africa from all laws, and at liberty to act, either, as an insane officer did at Yambuya, with cruelty which shocked even negroes, or with the relentless but calculated and purposeful severity which we take Mr. Stanley to have displayed, or with the large humanity and tolerance which undoubtedly marked the irresolute Emin Pasha, and which appear, as far as we can read him, to have distinguished the conduct of Mr. Jephson, according, not to principle, but to individual temperament. They are all Czars, Ivans or Alexanders, as may happen, but all Czars. The men are 'released from law,' as the Romans used to say, and give sentences of death or torture, or protect or pardon suppliants at their own discretion, irresponsible either to civilized States or, in many instances, to their own inner consciences. They care nothing about opinion, for there is no opinion—at least, so they consider—in Africa; and they are themselves, as a rule, the reporters to Europe of their own deeds. That position is the position of slaveholders, which demoralizes even the best; and it is aggravated by the fact that the explorers are slaveholders whose slaves may rise at any moment, and are, till drilled into soldiers, always on the verge of that irritating form of mutiny, desertion *en masse*."

That is to say, at the close of the nineteenth century, and not the close of the seventeenth, when Christian missionaries are swarming all over the world, and no man can get more than a month in distance away from the strong arm of his own government, England allows private individuals to fit out expeditions which are, in the eye of public law, however praiseworthy their aims may be, distinctly piratical. The commander carries no commission from any lawful government; he selects his own subordinates, he enlists armed parties, and places them under military discipline, and then starts across the African continent, making private war on the way. He seizes from peaceable natives such supplies as he may need, takes to himself the power of life and death over everybody with whom he comes in contact, delegates this same power to such subordinates as he may [illegible] on special duty, [illegible] ravages the territory of [illegible] local potentate [illegible] as may resist him, hangs, shoots, and flogs as many men as he occasions seem to him to require, reports to nobody but himself, and then sells the [illegible] acknowledging no responsibility to anybody in particular for any of his doings.

It appears clearly enough in the rear-guard controversy that the subalterns have no idea of responsibility to anybody but their chief when they are dealing with the natives. The great guilt of Barttelot's atrocities seems to have lain in the fact that he was endangering the success of the expedition and disobeying his chief's orders, not that he was committing murder under the law of nations. The truth is that, from the legal point of view, no such expeditions as Stanley's have been permitted or fitted out since the days of the Buccaneers on the Spanish Main. As the *Spectator* well says, if these men had chartered a ship and simply ravaged the African coasts, they would, when they got home, have been brought to trial without any doubt for the slaughter which they acknowledged they had committed. The captain and owner of an English brig was tried in Australia some years ago for simply carrying a war party of natives against their enemies, as an accessory to murder. In fact, we feel little doubt that if an expedition like Stanley's had been on shipboard and had sent home accounts of its doings as it proceeded, a man-of-war would have been despatched for its capture. Why are things permitted on shore which would be peremptorily stopped on the sea?

This is the question which the British public is now beginning to ask itself, and with good reason. The question is asked with all the more force because we are nearly all afflicted just now with a mania for civilizing Africa. Every newspaper tells us that the great obstacle in the way of this beneficent work is the raids of the Arab slave-dealers. They carry on private war against the unfortunate natives. They kill the tribes who oppose them and burn their villages just as we do. True, the end they have in view is nefarious, and the end of our expeditions is beneficent. But what do the natives think or know about the difference? We do not carry off the people into slavery, but we act as if such was our design. How many of those who encountered Stanley's army fully understood that he was going to rescue Emin, and open up darkest Africa to the Bible, the sickle, and the ploughshare? What is more to the purpose, how many knew that he really had not as much authority in the eye of the law or usage of Christian nations to shoot one of his enemies or "give a dozen" to a mutineer, as Tippu Tib or any other slave-dealing chief? The whole business of exploration in Africa calls for a thorough overhauling at the hands of the Government, as the *Spectator* suggests. If the deeds which Stanley and his rear-guard have done in Africa are necessary, and have any wise purpose in view, then in God's name let them be done under a lawful flag, a public commission, and the articles of war, and make the perpetrators report to the constituted authorities of some civilized Power, or answer before some [illegible] of their acts as

JEANNE D'ARC—THE RUSSIAN ALLIANCE

PARIS, November 12, 1890.

THE French have at the present moment two fixed ideas—two things on the brain, if I may use the expression; one is Jeanne d'Arc, the other is the Russian alliance. The two things seem at first sight to be different, but they nevertheless are the expression of the same preoccupation, of the same thought—one of those thoughts which Sainte-Beuve well defined when he called them the thoughts *de derrière le cerveau* (from behind the brain).

The revival of Jeanne d'Arc's cult is a distinct form of patriotism: she saved France at the time of the English invasion; she took her young King to Reims and saw him crowned. She certainly is one of the most fascinating and poetical figures in history; but the French nation has not always looked upon her with the same eyes as it does now. Voltaire did not offend the national sentiment when he wrote 'La Pucelle.' The philosophers of the eighteenth century would certainly not have burned the "bonne Lorraine," but they looked upon her as an hysterical fanatic. The Roman Church has never been willing to beatify Jeanne d'Arc and to give her a place among the saints. The reasons for this opposition are obvious: Jeanne was condemned by an ecclesiastical tribunal, and, even after centuries, the Church has no desire to protest against the decisions of such a tribunal.

Jeanne d'Arc has now a statue in front of the Tuileries. This equestrian statue,

which is not without merit, was made some years ago by Frémiet; the same sculptor has since made a sort of duplicate of it, with very slight changes, and has made a present of it to the birthplace of Jeanne d'Arc. Our greatest modern sculptor, Paul Dubois, who has achieved a world-wide reputation by his magnificent monument to Lamoricière (bearing at its four corners four statues, two of which, "Charity" and "Military Courage," are comparable to the best works of the Italian Renaissance), has been haunted for many years by a desire to make a Jeanne d'Arc. I have seen him at work at it in his studio, never contented with himself, always longing for something better. He has at last consented to exhibit his equestrian statue to the public. The horse is magnificent, full of life. Dubois has kept a horse in his stable, studied every bone in the horse's skeleton, and has succeeded in making a true horse, which, however, does not look like a common horse, and is in some degree idealized. As for Jeanne, she is in full armor, but her armor is so made that you feel all the movements and sinuosities of the body under it. She is sword in hand, and, with a most noble and graceful gesture, she makes a salute with her sword—keeping her head slightly backward, in an attitude of respect, and reining in her horse. These details will be all the more striking when the statue is placed in front of the Cathedral of Reims, which is its future site. Jeanne will then stand before the church in an attitude at the same time of triumph and of humility, having accomplished what she meant to accomplish, but feeling that her work was the work of God, and that she was only his instrument.

Lately we have had a Jeanne d'Arc on the stage; and who would and could play the rôle if not Sarah Bernhardt? Jules Barbier, the author of the play, told me that she was completely engrossed with her part, for a time at least; that she could talk and think of nothing else. Alas! Jeanne d'Arc had soon to give way to Cleopatra, and the versatile Sarah entered as easily into the skin (as we say in French) of the dissolute Queen of Egypt as she had done into that of the Maid of Orleans. I do not speak of a Jeanne d'Arc represented at the Hippodrome: it was a great show, and one of the attractions was the burning of Jeanne at a real stake, surrounded with real flames, by some sort of artifice which I don't pretend to explain.

You see that I was not mistaken when I said that Jeanne d'Arc has become the most popular historical figure of the time in the people's mind. She means revenge, deliverance of Alsace-Lorraine. Our English neighbors know very well that this instinctive movement is not directed against them; the French have never been more Anglomaniac than they are at the present moment. You meet almost as many Englishmen as you do Frenchmen in some quarters of Paris. Chantilly has become a second Newmarket; the races (which are run nearly every day in the year) have their public, which is Anglo-French; our literature is invaded by English expressions; all our clothes are English; even our ladies patronize English tailors. I know a man who has his linen washed in London! Our diplomats may keep up old quarrels about Egypt, write more or less angry notes about our influence in the valley of the Nile; the nation cares little for it, and it may be said that the traditional hostility towards England is completely on the wane.

The cult of Jeanne d'Arc is universal; you will find her equally worshipped by the royalist and by the republican. The royalist speaks in glowing terms of the girl who took her King to Reims and saw him crowned; the republican makes phrases about the peasant girl, the "bonne Lorraine," who saved the country when King and Princes could not do it. In fact, she embodies at present, and, it must be said, in the most touching form, the national instinct; she is the image of France—she gives us hope of a miraculous succor.

Russia represents the terrestrial hope; and it is for this reason that I said that the cult of Jeanne d'Arc and the faith in a Russian alliance are parts of the same sentiment. The diplomats will tell you that there is no treaty of alliance, such as exists between Prussia, Austria-Hungary, and Italy; that the Emperor of Russia cannot bind himself to a country whose Ministers are constantly changing; that, being the Czar Autocrat, he has no sympathy for republican institutions; that he is the most pacific of sovereigns, and that his policy is simply a masterly inactivity; that he is satisfied with reorganizing the administration, with improving the finances of his vast empire; that he is the most Russian of Russians, and means to have as little as possible to do with the affairs of the west of Europe—all such talk is vain, and people will respond that there is no need of written treaties when a community of interests demands united action. There is a widespread, a universal belief that if Russia were engaged in a war with the Powers of the Triple Alliance, France would immediately seize her opportunity and pounce upon Germany; that if France were obliged to draw the sword first, Russia could not allow the Powers of middle Europe to crush her, and would immediately attack Germany in the rear. This belief, instinctive, unreasoning, has entered into the mind of every man, woman, and child. The minor details of politics are neglected; the main point is never forgotten: France and Russia must, sooner or later, be engaged in a common struggle with Germany.

In this situation, the position of a Russian Ambassador becomes very pleasant—so pleasant that at times it becomes almost painful. In "Cinna," *Augustus* says to *Cinna*, after having pardoned him and reminded him of all the good things he had given him:

"Je t'en avais comblé; je t'en veux accabler."

We also sometimes seem to overpower the Russian Ambassador with our flatteries and courtesy. Baron Mohrenheim was sent to Paris at a difficult time; he had to replace Prince Orloff, who was a grand seigneur, universally popular, a handsome man, though he wore a band of black silk over one eye (everybody knew that he had been almost killed by sabre cuts at the siege of a Turkish town); he was a hero, a great favorite of his Emperor, and his immense fortune allowed him to live in splendid style. Baron Mohrenheim was Russian Minister at Copenhagen at the time of the marriage of the present Emperor to a Danish princess; he himself married a Danish lady, and her acquaintance with the Empress contributes to his advancement. He was sent to Paris at a time when Russia merely wished to be well informed of all the intricacies of French politics, and when republican institutions still seemed not to be assured. He was an intelligent witness; he knows French to perfection, and is well versed in all our literature, and he rapidly extended his acquaintance in the literary and even journalistic world.

The first symptoms of what may almost be called the Russian fever had not escaped him; Russian literature was becoming very popular: the names of Turgeneff, Tolstoi, Dostoievsky were in all mouths.. This literary *engouement* was a clear indication, and he was not long in seizing it. His position in the diplomatic world soon became almost unique. A certain sort of courtesy is always, in a polite country like France, proffered to every member of the diplomatic body. Baron Mohrenheim became the object of a peculiar courtesy—he was *persona grata*, *persona gratissima*.

Not long ago his daughter married a French officer, M. de Sèze, who belongs to a good French family, and this event assumed extraordinary proportions. A love match (for the marriage was one of those which we call *mariages d'inclination*) was treated in our newspapers as a political event. People had a vision of the marriage of the French army with the Russian army, of a second triple alliance of France, Russia, and Denmark. Distinct allusion to the hoped-for Franco-Russian alliance was made at the Mairie, where the civil marriage took place before the religious marriage; and, by the by, it must be noted that our mayors, instead of celebrating the marriage, as the law requires, merely reading some articles of the *Code Civil*, have formed the habit—at least when they marry people whom they think important—of making speeches which they think eloquent. It did not use to be so, in old times, and this habit ought, in my opinion, to be deprecated, as you never know what a mayor may say, and the reading of the articles of the Code is quite sufficient.

I have only referred to this little episode in order to show the current of public opinion. It is no use to deny it: we are determined to be friends with Russia, whether the Russians are demonstrative or not. We have no doubts on the subject of their sentiments; we have forgotten Poland and the Poles, and don't mean ever to remember them. We try to be as anti-Semitic as the Russians themselves; we console ourselves for all our woes with the idea that some day Russia and France together will dictate terms to the world in arms. I do not discuss this state of things, I note it; for in politics, as in science, you must deal first with facts.

ENGLISH TALK AND FRENCH WORK.

LONDON, November 12, 1890.

THE National Association for the Advancement of Art and its Application to Industry has just held its third annual Congress at Birmingham. More remarkable than its proceedings has been the complete indifference of the general public. But one or two men of note, or notoriety, joined in this year's discussion and speechmaking; there were no socialist artists, except Mr. Holliday, who kept in the background, to give the meetings that element of sensation which has heretofore distinguished them; there was no attraction such as Mr. Alfred Gilbert's pleading of Mr. Stirling Lee's case proved two years ago at Liverpool. As a natural consequence, the Congress has been all but ignored by the press. The *Times*, of course, printed a report, and architectural papers have found space for matter of technical interest to their readers, but most of the other dailies and weeklies have been content to dispose of the whole performance in a short paragraph. And, finally, it has been asked whether, after all, there is any use in holding such meetings at so short an interval as a year.

Had the Congress been one of jockeys or publicans, half the country would have rushed to Birmingham. But still the prevailing apathy is due not solely to British indifference to art, but in a measure to the Association itself.

For its special subject this year was the art education of the people at large, and therefore one that concerns every payer of rates and taxes. The South Kensington and all the schools run by the Science and Art Department are State-supported; many others throughout the country are municipal institutions. Almost every good citizen is more sensitive to a demand upon his purse than to an appeal to his æsthetic sense, and hence one might have thought the discussion of that education for which the public has to pay would have secured at least its attention. But the truth is, the members of the Association in the treatment of their problem have added the crime of incompetency to that of dulness. Beyond platitudes few seem able to go. Again, this year, we have heard of the brutalizing influence upon the workman of "lines of ugly, undecorated, unpicturesque buildings, cubes of glass and iron for shops, hideous squalid rows of brick boxes for houses"; again we have been reminded of the "soulless character of machine work" and the moral degradation wrought by the "miserable sky sign," or bill-poster. We have heard the old story of the beauty of the artisan's life in the golden days of Italy, and of the superiority of the Japanese system of apprenticeship. The names of the great Renaissance designers have been quoted with the usual parade of knowledge; the artistic foibles of the modern lover of blue china have been laughed at with the usual laugh of pity.

Even when the subject was approached in more serious fashion, there was no genuine effort to treat it sensibly or practically. No sooner had Mr. Rathbone, a modern Liverpool version of the Medicean art patron, placed all his hopes in South Kensington, of which he said we had every reason to be proud, than Mr. Hodgson, the President, who is known to a few, perhaps, as R. A., to none as painter, denounced South Kensington and all its ways. No sooner had Mr. Orrock repeated his favorite abuse of the National Gallery for its partiality to "golden-gloried, squint-eyed, triangular Byzantine saints," than Mr. Conway declared such talk "absolute folly." The one man who really pointed out an easy remedy for existing difficulties was Mr. Brett, R. A., whose simple and ingenious solution was the doing away with all art education. Technical education in the sense of practical training by artists, he asserted, was not necessary; it has already done more harm than good; and, anyhow, if it were wanted, it could not now be had. The only practical business of the Congress was the report of a visit to a school of jewelry lately established in Birmingham. I regret that I myself could not go to see it, for, if report is to be trusted, it more nearly realizes the ideal of a good technical school than anything of the kind yet started in England.

The failure of the Congress to cope with its subject is all the more deplorable since the need of good technical education in this country is so great. But few doubt the necessity of technical schools, save Mr. Brett; few agree with Mr. Rathbone that those in existence are satisfactory. The fact that a commission, of which this very Mr. Rathbone was a member, was appointed to inquire into the French system of popular instruction in art, shows that Englishmen begin to realize the fallacy of the South Kensington creed, that all art is theory to be learned by passing different grade examinations; the absurdity of Mr. Morris's doctrine that all art is play; and the inefficiency of polytechnic and people's-palace methods, which give chief prominence to the mechanical side of work, and which have brought down upon them the derision of even Toynbee-Hall "love-workers." The results of its inquiry, however, the Commission does not seem willing to share with the public, though Mr. Rathbone has admitted that the French method of instruction in schools of decorative art appears admirably adapted to form the good decorative artisans who are in demand, rather than the indifferent artists who, thanks to South Kensington, are already a drug in the English market. But it remains to be seen whether the Commission has grasped the real reason for the superiority of the French school. This it could not have failed to do had its members visited none other but the École du Livre, opened very recently in Paris, but destined to become famous before many months have passed. Apparently, the Commissioners, together with all other Englishmen and most Americans, are still ignorant of its existence, and yet it is a perfect model of what a technical school, giving both artistic and mechanical training, ought to be. It furnishes the very best solution of the problem which at the Birmingham meetings was left unsolved.

While in all art matters Englishmen talk and make a great noise, Frenchmen hold their peace and go actively to work. The École du Livre came into being unhelped by art congresses or the liberality of city companies eager to curry favor with a suspicious public, or of individual philanthropists with bank accounts larger than their art knowledge. It needed no sensational novel to give it a start, no fashionable fad to support it. It was founded by the city of Paris at the instigation of M. Hovelacque, well known in the French political as in the scientific world, and after M. Magnuski, its present manager, had devoted years of study and research to the subject, travelling to every European country except England, where he knew he should find little or nothing to learn, and examining above all the municipal typographical school of Barcelona, the wonderful photo-engraving school of Vienna, and the Plantin Museum at Antwerp. As the name implies, the object of the École du Livre is to instruct pupils in everything that relates to the making of books, from the casting of type to the drawing of illustrations. Intended for boys from the age of twelve, it does not neglect their scholastic education, but continues this from the point where they left off at the primary schools. However, even here the main object of the institution is not forgotten, everything being done to make the instruction in science and letters increase interest in the profession or trade which pupils are ultimately to adopt. These classes, while due attention is paid to them, are subordinated to the more essential studies—chemistry to its practical application by engraver or photographer, for example, general history to the particular history of art and printing, and so on with all other branches; the school is meant to turn out intelligent and well-educated workmen, and not clerks or literary hacks.

These essential studies are seventeen in all, without counting subdivisions. The principal are type-founding, type-setting, and printing, the workrooms being supplied with every possible necessity which the practical printer would require; engraving, lithography, and photography, now so important in reproduction (and not only are pupils trained in the use of the necessary tools for these arts, but also in the necessary chemical and mechanical processes); modelling and drawing, artistic as well as geometrical—for though artisans rather than artists in the usual sense of the word are to be developed, the illustrator will have every opportunity to perfect himself; and book-binding in its highest and simplest forms. In fact, all the many arts and industries exercised in the making of a book, with the exception of the manufacture of paper, are actively represented.

Not only this; there are workshops in which once every fifteen days the boys spend three hours in acquiring the use of tools and learning something of carpentering and practical mechanics, not that they may become mechanics any more than artists or scholars, but that they may understand their own mechanical needs—that they may be able to use the chisel or the hammer, should an emergency arise. While still more importance is given to the artistic—theoretic if you choose—side of the bookmaker's training, the boy who is to become printer or engraver, type-founder or compositor, is in every possible way to be reminded that his special work is not a mere trade, but an art. Already a museum has been founded in the school; it is to contain examples of everything connected with books and the making of them—histories and handbooks of the art of printing, as well as beautiful specimens of the printer's work both past and present, so that the latter-day printer can learn something of the possible beauty of type and page; old and new presses, matrices and casts to help the inventor; drawings and engravings and lithographs by the masters in these arts. In a certain way, of course, no new museum can pretend to rival the wonderful Plantin Museum in Antwerp; but for merely practical purposes that attached to the school hopes eventually to surpass it. This is a brief outline of the scope of the École du Livre.

Its great advantage over the average technical school is easily seen. The pupil will acquire not simply a mechanical knowledge of his trade (all that can, as a rule, be obtained in polytechnics), but a scientific and artistic understanding of it as well. It is true that no man can be taught to be an artist. Thousands take lessons in drawing; the Vierges and Abbeys are the exception. We have to-day a multitude of wood-engravers, but the Kruells and Coles are in the minority. But a right artistic feeling, an appreciation of what is good in everything pertaining to his trade, is a distinct gain even to the man who finds he cannot engrave on wood, and takes instead to preparing the block for the engraver; to the man who realizes that he cannot draw, and devotes himself, therefore, to the mechanical reproduction of the draughtsman's work. And in the same manner, the lithographer or photo-engraver may not want to prepare his own inks and acids, but it is to his own interest to be able to do so in time of need; the compositor or printer may not make his own press or tools, but he, and his employer also, can but profit by his ability, in case of accident, to repair them himself. The minor importance attached to the manufacture of tools and appliances is shown by the very small portion of time set aside for the purpose; the value ascribed to artistic training is manifested in the time, care, and money expended upon the Museum.

The first year, pupils pass through all the workshops and studies; they are then distributed, each according to the aptitude he has shown in the various departments, this distribution being managed by the directors of the school. A boy, instead of having no choice, and being forced to devote himself to engraving, printing, or illustration from the first, can test his talents for each; his ultimate profession, or trade, thus depending upon his own desires and inclinations. It is worth noting that this is really the scheme suggested by a well-known

American illustrator, before the school was opened, in an article in the *Contemporary Review* last spring—a suggestion which was laughed to scorn as visionary and impracticable by the proprietor of the *Graphic*, who has himself started a school of illustration after his own narrow and primarily commercial ideas, which so far has borne but indifferent fruit even as an economic feeder for his own paper.

A few other facts in connection with the École du Livre, though of less significance in the present consideration, are of no less interest. In the first place, it is a full day-school for French boys residing in Paris, their admission depending upon their success in passing certain competitive examinations. The hours are from eight in the morning until six in the evening, and the dinner and *goûter*, or afternoon lunch, for the boys are as free as their classes; this arrangement having been made from wholly matter-of-fact motives, *i. e.*, to keep the boys on the premises and to save time, and without any of the hysterical socialism which characterized the London School Board's advocacy of free meals. The appointment of professors was also the result of examinations, the competitors having themselves named their jury. Some of the most eminent men in their respective professions, Palmaker, Demangeat, Mouchon, for instance, were among the successful candidates. To show how thoroughly the well-being of pupils is studied, I cannot but mention that the course of instruction includes gymnastics and military exercises. There are night classes for men. An enormous building is now being put up in the Rue Vauquelin for the school, which at present is occupying temporary premises near the Panthéon. Already its advantages have been well appreciated: only 100 pupils could be admitted its first year; there were over 300 applications.

Of course, the Paris École du Livre has nothing to do with the arts of design in their application to household decoration; but it can at least show how these also could be grouped together, and how instruction in them could be made at once mechanical and artistic. The technical school is needed to-day to counteract the narrowing influence of modern methods of work, when what used to be a task for one man is divided among many, and the individual workman spends years in producing over and over again an infinitesimal part of some great whole. Thus the man who goes into a machine-shop may devote his life to making cylinders, and yet never know how to make a piston-rod or a boiler. The artisan from the École du Livre would probably pass all his years either at the compositor's desk or the press, either engraving on wood or binding books, for even the socialist or fourteenth-century maniac cannot get rid of the modern exigencies of work; but there is no doubt that even if he were but of average ability, he would work with an intelligence and an appreciation of everything relating to his trade not often found in the ordinary printer's apprentice. This intelligence is exactly what is needed in every modern industry. And so long as industrial conditions remain unchanged, only by the establishment of schools upon the same basis can it be developed. It is not enough to master the tools of a trade; they should be used with clear and intelligent understanding of their scientific and artistic relations. When this fact is recognized in England, and not before, will the problem of technical education be satisfactorily disposed of. Art congresses held every year, or every month, will never accomplish what has been quietly done by M. Magnuski and the authorities of Paris and the Department of the Seine.

Correspondence.

THE INDIAN MESSIAH.

To the Editor of The Nation:

Sir: The recent excitement at the Sioux agencies on account of the "Ghost" or "Messiah" dances must have become a matter of grave consideration to every reflecting mind within our boundaries. The settler seeking for lands upon which to plant his home; the capitalist on the look-out for new investments; and the taxpayer who will be called upon to foot the bill for the hurried massing of troops or the accumulation of supplies at the points supposed to be menaced by the concentration of excited dancers, will all feel a very natural desire to know what it all means. There have been numerous reasons assigned for the holding of the Messiah dance, but to none of them do I care to refer in this letter, which is written merely to call your attention to the immense influence still exerted upon the minds of the aborigines by the medicine-men, and to start the inquiry, Are there no means by which such influence can be lessened or destroyed?

The medicine-man of the American tribes is not the fraud and charlatan many people affect to consider him; he is, indeed, the repository of all the lore of the savage, the possessor of knowledge, not of the present world alone, but of the world to come as well. At any moment he can commune with the spirits of the departed; he can turn himself into any animal at will; all diseases are subject to his incantations; to him the enemy must yield on the war-path; without the potent aid of his drum and rattle and song no hunt is undertaken; from the cradle to the grave the destinies of the tribe are subject to his whim.

I could fortify my own observations with the remarks of such men as Sahagun, Landa, Boscana, and others who passed their lives among the tribes to the south of us, and who recognized the fact that the life of the Indian rested upon his religion, and that the medicine-man was the one individual in the tribe whose actions and motives must be understood and frustrated. But nothing that I could say, nothing that any one could say, would change the national indifference to all that relates to the inner life of our interesting savages. Well did Francis Parkman say that Spanish civilization crushed the Indian, English civilization *ignored* and *despised* him, French civilization embraced him. We know very little, if any, more about our Indians to-day than the Dutch did in New York when, on account of a senseless scare, they massacred a lot of peaceable Indians near Du Fauw's Ferry several centuries ago.

These medicine-men, doctors, priests, or wise men—by whatever name they may be called—are of great importance to the aborigines. If a horse has been stolen, they consult the medicine-man; if a raid has been threatened by a hostile band, the medicine-man can sing and prevent it; have the rains failed, the medicine-man can make more; has scarlet fever carried off any of the children, has whooping-cough swept down upon young and old, has the measles seized upon infant boys and girls, the medicine-man knows the song, the charm, the amount of singing and bathing and painting and dancing requisite for driving them away—or, if his incantations cannot drive them away, then he can point out the wrinkled old crone who has rendered them all abortive, and whose death must expiate the crime of being a witch. He can talk in the depths of his stomach, he knows all the tricks of jugglery similar to those at which the heathen priests of Rome laughed in their sleeves in the first years of the Christian dispensation; he knows everything.

We may shrug our shoulders and talk about quackery and lament the superstition of deluded men and women and children, but that will not bring the problem any nearer solution. We must break down the power of the medicine-men, and no effort is too great or too small to effect this. We must do just as the French were obliged to do with their tribes in Algeria, when they sent Houdin, the wizard, to work among them, and show that the medicine-men of the French could do more even than those of the Kabyles boasted of being able to do. Such a thing has already been done with excellent results among the Sioux themselves at their Sun Dance, in 1881, but as it was done by a volunteer and not under Government auspices, perhaps the experiment did not meet with the fullest success. There was a strolling "magician" who asked me to allow him to go with me to the Sun Dance at that time, as he thought it would do the Sioux good to see what a white "medicine-man" was capable of performing. It is hardly worth while to say that when the Sioux warriors saw their biggest medicine-men smacked with full force on one cheek and a ten-dollar gold piece knocked out of the other—or saw a great warrior, like "Little Big Man," wrenched violently by the nose and another gold piece pulled out of that important organ—they were amazed, and began asking themselves the question, Why couldn't their medicine-men do the same and make all the tribe rich?

The remedy suggests itself that we should take up the whole matter of the medicine-men with earnestness and intelligence, and do our utmost to remedy the mental condition which permits their existence, whether as a premeditated or an unintentional menace to the frontier. At Carlisle and Hampton there should be introduced an elementary course which, if it did no more, should give an inkling of the advances made in electricity, chemistry, the use of the solar spectrum, microscope, telescope, and other instruments, the power of steam, and other forces which the white man has harnessed to do his bidding. For the more capable scholars, there should be a supplementary course in rudimentary therapeutics, or household medicine, so as to render them independent of the medicine-men of their own tribe. When a scholar returns from one of our Indian schools, he at present finds himself instructed in some handicraft, and able to read and write pretty well, but he is still no match for the vaunted pretensions of the medicine-men, who leave to him the knowledge of the material world, but retain for themselves the mysteries of the supernatural.

Wherever the tribe is found to be so deeply rooted in its old ideas that its members will insist upon sacrificing chickens, sheep, and horses upon the death of great chiefs or medicine-men, or upon the appearance of epidemics,* let care be taken to supply them with little figures of paper representing such animals, and they will soon learn to regard the symbol to be of as much value sacrificially as the live creature, and very soon the symbol itself will disappear; but, whether it does or not, the In-

* When an epidemic of scarlet fever proved fatal to many of the Apache children some years ago, the medicine-men advised that sacrifices be made over the graves, and not less than two thousand sheep were killed by the infatuated survivors.

dian will still hold his property and be on the road to wealth, which means conservatism, peace, and prosperity. The use of symbolic or substitutive figures in sacrifice has prevailed, and does still prevail, in many parts of the world—among Chinese, Thibetans, Mongols, negroes, and others. The Abbé Huc gave a very interesting description of what he saw of this sort in the snow-clad peaks of the Himalayas in 1844.—Very respectfully, your obedient servant,

JOHN G. BOURKE,
Captain Third Cavalry, U. S. A.

NOVEMBER 28, 1890.

A HOUSE DIVIDED AGAINST ITSELF.

TO THE EDITOR OF THE NATION:

SIR: Within twenty-four hours of each other two pamphlets have reached my table from the Department of Agriculture—the Second Annual Report of Secretary Rusk and the Statistician's Report on the Yield of Crops per Acre.

The Secretary deems it his first duty "to congratulate you [the President] and the country at large upon the generally improved outlook in agricultural matters." After referring to the agricultural depression at the opening of the Harrison Administration and the attention given to the matter by Congress, he announces with fervid eloquence that "The cloud which seemed to rest gloomily upon American agriculture has been lightened, while the wise, economic legislation already secured holds out still brighter promise for the future." He then gives a comparative table showing the increase in price of a number of agricultural products, which he attributes largely to the increased tariff rates recommended in a former report.

So much for the Secretary. I open the other pamphlet, and am told on the very first page that the average yield of corn for the current year is the lowest ever reported, except in 1881, and that the yield in 1889, the year chosen by the Secretary for comparison, *was nearly one half larger*. The shortage for this year, it is said, is principally "in the corn-surplus States." Reports from the corn-growing States tell the disastrous story in detail. In one county the crop has suffered "all possible drawbacks"; in another are "half-filled ears, soft and unmerchantable"; in another, "damaged by excessive rains"; elsewhere "by midsummer drought"; elsewhere, "by frost"; elsewhere, "by worms"; here, "by hot winds"; there, "by hailstorms in August," etc., etc., for almost five dreary pages.

We turn to the report on potatoes, and find the lowest average, with two exceptions, ever reported, with an acreage so small as to make the actual supply per capita "smaller than in any recent year." These facts, in the opinion of the statistician, "amply warrant the advance in prices now ruling in all markets." He thinks, also, that the recent change in customs duties may check the large importation which these facts would prognosticate; which means, thanks to McKinley, that the poor will go hungry for potatoes, their staple dish, with no gain, either, to the masses of the farmers who have none to sell. The mind of the thinking man will go back to the time of the Corn-Law agitation, and draw a few interesting conclusions.

But to return to the statistician: "The season has been the worst for fruit that this Department has ever reported"; tobacco shows "a return somewhat below the average for the last decade"; buckwheat is lower than last year, and sorghum "reports a poor yield" in "its favored region." For hay, "the season was in the main favorable," while of cane-sugar alone it is said that "the crop will be a large one."

Is it simply "the irony of fate" that the Secretary's Report should be followed so closely by so crushing a refutation from one of his own subordinates? Or is it a terrible scheme against the "American system," concocted by the fiendish emissaries of the Cobden Club? Has it come to this, that a part of an Administration supposed to be devoted to the most rock-ribbed protectionism ever known has been bribed by British gold to betray American institutions? A Congressional investigation of the Department of Agriculture should be moved by McKinley, seconded by Cannon, and passed by the Speaker on the very first day of the approaching session.

AGRICOLA.

NOVEMBER 28, 1890.

MORE MISUNDERSTANDING OF THE TARIFF.

TO THE EDITOR OF THE NATION:

SIR: The country weekly press is still copying the report of the interview with Mr. Chauncey M. Depew sent out by the Associated Press on the day after the recent election. Mr. Depew endeavored to explain the causes of the political cyclone, and, as usual, had a little story to relate, but his story evidences that he is only familiar with the title of the McKinley Bill and not with its contents.

He tells us that, "all over the country, prices are going up or going to go up because of the McKinley Bill, and generally on articles which were not affected by that measure." Now comes the story: Some friends of his went to New York to buy a piano, and were told that they had better buy one at once, as pianos were going to increase $100 in price because of the McKinley Bill, "*though as a matter of fact pianos were not in the new tariff.*" Mr. Depew has probably never read or heard of the famous section 215 of the new law, which reads: "Manufactures, articles, or wares, not specially enumerated or provided for in this act, composed wholly or in part of iron, steel, lead, copper, nickel, zinc, gold, silver, platinum, aluminum, or any other metal, and whether partly or wholly manufactured, 45 per cent. ad valorem." The fact that one very seldom hears of any other pianos but those of American make does not correct Mr. Depew's error.

I notice a request by Mr. Thos. W. Smith in last week's *Nation* for the names of Republican firms announcing the rise in prices since October 6. It would be easy to fill a column with names. I shall only state that the Central Stamping Co. of New York, the largest manufacturers of tinware in the world, whose president is an ardent Republican and protectionist, has repeatedly advanced its prices since October 6, so that its present schedule is more than 40 per cent. higher than it was before the Tariff Law was passed.

Apropos of Mr. Smith's inquiry concerning pearl buttons. A salesman recently told a retail merchant, evidently a "dyed-in-the-wool" Republican, that next season certain kinds of over-shirts used by workingmen and farmers would have vegetable-ivory buttons in place of pearl buttons as heretofore. "Don't let me hear any more of that nonsense," was the reply; "if they don't like the buttons, let them do without the shirts." S.

ST. PAUL, MINN., November 22, 1890.

A PROBLEM IN McKINLEYISM.

TO THE EDITOR OF THE NATION:

SIR: After reading your remarks on the "Republicans and Science" in No. 1325, I am reminded of a proverb which provides for the giving of his due to the power not ourselves which does not make for righteousness; his name being excluded from respectable journals. The McKinley Bill, for some reason or other, has helped science by allowing books published in languages other than English to be imported without tax. Why was this provision made? If your remarks are correct, there could have been no intentional provision for poor scholars. Two solutions occur to me, but both may be incorrect. Perhaps the American language is to be protected from the English, so that we may build up a language of our own. This cannot be adequate, for there is no money to be made in manufacturing an American language. But why cannot we see a bid for the Chinese and Italian votes here? Will not the un-Americanized foreigner see a delicate compliment to his native land in this provision? Who can tell or who can explain? M.

MIAMI UNIVERSITY, November 22, 1890.

PARTISAN USE OF CENSUS EMPLOYEES.

TO THE EDITOR OF THE NATION:

SIR: That the appointments of census-enumerators were made by Republican politicians for the benefit of the Republican party, is of course generally understood; but the shameless way in which these men, while doing census work, were also required to do party work, is perhaps not so well known. I am informed by men high in Republican councils that the State of Indiana was polled for the Republican State Central Committee by the census-enumerators when they took the census. Each one carried a special polling-book, and he was nominated by the chairman of the county committee with especial reference to that work, "though, of course, good men were always named." Presumably this was done in all the States, but I am sure only with regard to this one. This poll of the States at Government expense, one would think, should have lessened somewhat the need for assessments of Government officials.

In another case that has come to my knowledge, the use of the public funds was even more direct. A subordinate officer in the Census Bureau at Washington, who did not feel able to pay the expenses of a trip of 2,000 miles or more, home and back, to vote, was assigned work in the field and given tickets, properly enough, at the expense of the Government, to his new field of labor. He was expected to stop on his way thither and vote, and did so. To enable him to do this, however, the route followed in going to his new position was no more direct than to go from Washington to Indianapolis via Boston, with a halt for a day or two with old friends at some village in northern New Hampshire.

This carrying of polling-books by enumerators, and the devious ways by which they reached their fields of work, are enough, I think, to explain the curious returns without charging poor Superintendent Porter, who has a good many very hard things to explain, with deliberately issuing orders to make the returns in Democratic strongholds small. J.

INDIANA, November 24, 1890.

ANOTHER EFFECT OF PENSION LAWS.

TO THE EDITOR OF THE NATION:

SIR: Permit me to mention another "effect of pension laws." In a small town in the State of Indiana lives an old soldier who, for some

years, has made a living by selling candy and sweet stuff at a street corner, and, as a general thing, was fairly sober. Under the new pension law he was allowed, as back pay, some three thousand dollars, which he gayly proceeded to drink up among like-minded friends and old soldiers enjoying similar windfalls. After leading a merry life for some months, the money ran out, and our friend is now in much the same state as of old, with nothing to show for his "back pay" except an increased love for strong waters. B. G.

PITTSBURGH, PA., November 24, 1890.

TO THE EDITOR OF THE NATION:

SIR: As a depreciatory outcome of pension legislation, your correspondent, "E. A. B." of Washington, Ga., cites the case of a woman in his section, the widow of a soldier in the war of 1812, who receives a pension on account of her deceased husband, and is now living with a man to whom she is not married, and who gives as a reason for her conduct that, if she was married to the man with whom she is living, it would discontinue her pension. The recent extravagant pension legislation of Congress is exceedingly objectionable, but there is no remedy for it in indiscriminate criticism. Section 2 of the amendment to section 4702 of the Revised Statutes, passed August 7, 1882, provides that "the open and notorious adulterous cohabitation of a widow who is a pensioner shall operate to terminate her pension from the commencement of such cohabitation." The amendment referred to applies alone to widows of Union soldiers in the War of the Rebellion. E. W. BAGBY.

PADUCAH, KY., November 25, 1890.

MASSACHUSETTS IN THE LAST ELECTIONS.

TO THE EDITOR OF THE NATION:

SIR: In your editorial of this week on "The Popular Voice in the Elections," you say: "But the vote at the Congressional election of 1886 cannot be taken as a basis for comparison with the vote of 1890, for the reason that the tariff issue played a very small part in that contest." This is undoubtedly true of the election of 1886 in New York and the West, but in Massachusetts the tariff was made the most important issue in that election, and four Democratic Congressmen were elected, as against one in the election of 1884. The tariff fight was notably vigorous in the Third District, where Ranney, who had been elected in 1884 by four or five thousand Republican majority, but on a tariff-reform platform, and who had voted against the consideration even of the Morrison Bill, was defeated by Leopold Morse by a majority of over two thousand.

A comparison of the Congressional vote of Massachusetts in 1886 and in 1890 will show, I believe, that the Republican stay-at-home vote this year was not abnormally large, and that in Massachusetts, as in Iowa and Illinois, many Republicans have burned their bridges and have voted for Democratic Congressmen on the tariff issue. MUGWUMP.

BOSTON, November 29, 1890.

FRANCE AND ITALY.

TO THE EDITOR OF THE NATION:

SIR: Your Roman correspondent writes, in his letter of October 17 (*Nation*, p. 340): "It is a fact well known in official circles, though denied with derision by the French journals, that two years ago France had planned an attack on Italy, etc. . . . I have sufficient information from the highest official sources to leave no doubt of its reality."

I can only wonder that such absurd talk can have found its way into your columns. Saying this, I do not mean in any way to put in doubt the insight and good faith of your correspondent, but only to call attention to the atmosphere of misrepresentations and extravagant fancies which seems to be that of certain political circles in Italy. I showed the passage of "W. J. S.'s" letter to a well-informed statesman, who simply shrugged his shoulders in reply, and I hardly believe that any competent judge of our foreign policy would answer in another manner. There is no more foolish idea than the belief that France, with her present Government and Constitution, can wage war at a day's notice to surprise an unprepared neighbor. A war against Italy, if it were not wholly defensive, would be so unsupported by public opinion in France that a minister who should take *one* step towards that result would not hold his portfolio for a week.

I must add that the very unfriendly tone of your correspondent's letter with regard to France, whose natural sympathy for Italy and love for peace he deliberately ignores, can only affect an unprejudiced looker-on as the echo of hostile feelings which, prevailing in Italian official circles, have fortunately not yet spread over the Italian people at large.

Truly yours, SALOMON REINACH.

CLEOPATRA'S COMPLEXION.

TO THE EDITOR OF THE NATION:

SIR: I see that Mme. Bernhardt is playing *Cleopatra* in a mahogany-red wig, with her skin stained copper color (*your* correspondent says "auburn" as to hair and "brown" as to skin). I suppose this is in accordance with the rule that *Othello*, a *Moor*, must wear wool, instead of hair, and smutch to the blackness of the negro. Cleopatra was, as you know, a Greek by blood, descended in the eighth degree from Ptolemy I. (Soter), the reputed son of Philip of Macedon, the honored and trusted half-brother of Alexander the Great; hence, although an Egyptian queen, she was not of the Egyptian race. While she may have worn royal Egyptian robes, she herself, physically, must have possessed the characteristics of the Aryan—at least a *white* skin, and, possibly, blue eyes and golden hair. Now, under these circumstances, will not one of the several "Cleopatras" at present about give us the Queen in all the splendor of *Aryan* beauty?

C.

Notes.

ESTES & LAURIAT have in press, in connection with the Browning Society of London, Robert Browning's 'Prose Life of Strafford,' with an introduction by S. B. Firth and preface by F. J. Furnivall.

A former secretary to Mr. Ruskin, Mr. W. G. Collingwood, has been allowed to compile, edit, and publish as much of the former's poetic productions as may be deemed worthy of preservation. The sole volume of 1850 will be nearly doubled in size, and a chronological arrangement will be observed. Twenty-five plates from unpublished drawings by Mr. Ruskin will be inserted. Three editions will meet a variety of tastes.

W. S. Gottsberger & Co. publish directly 'The Elixir, and Other Tales,' by Georg Ebers, translated by Mrs. Edward Hamilton Bell—an authorized edition with the author's portrait.

D. Appleton & Co. have nearly ready 'The Story of My House,' by George H. Ellwanger.

'The Heart of the Golden Roan' is the title of a poem of action which D. Lothrop Co. will shortly bring out. It is by O. C. Auringer, author of 'Scythe and Sword,' who is engaged upon a story of the navy entitled 'The Enchanted Marine.'

'How to be a Pastor' is the title given to a practical work by the Rev. Theodore L. Cuyler, now in the press of the Baker & Taylor Company.

Fords, Howard & Hulbert are about to issue a paper-covered edition of 'An Appeal to Pharaoh,' a fantastic "solution" of the Southern problem, which, we are now told, was written by Mr. Carlyle McKinley, one of the editors of the Charleston *News and Courier*.

The J. G. Cupples Company, Boston, will soon issue 'Aunty's Elfin Land,' a fairy tale, by Mrs. Maria Hildreth Parker, sister-in-law of Gen. B. F. Butler.

Ginn & Co. have assumed publication of a little work hitherto issued by another Boston firm, changing the title ('Bedside Poetry') to 'Good-night Poetry,' as being unambiguous. This anthology is offered as a "parents' assistant in moral discipline" and as an aid to the cultivation of the literary taste in children, the selections having purposely been restricted to a high grade of verse. Its present publishers think its usefulness not limited to the home circle, and accordingly recommend it to teachers and the class-room.

A sixth edition of the 'Mikado's Empire' is being issued by Harper & Bros. Dr. Griffis's work has held its own during fourteen years, and has been a quarry for most bookmakers in the same field since it first appeared. It has now three supplementary chapters, on Japan in 1883, 1886, and 1890, the history being brought down to August in this memorable year of the trial of parliamentary government. Thus renewed, the work enters upon a fresh career of popularity at home and abroad.

The author of 'Vice Versa' and 'The Tinted Venus' has a secure place among English humorists, but his longer efforts have not escaped a certain monotony and even tedium. In the character of an overhearer and reporter of public conversations, Mr. Anstey, as the columns of *Punch* have demonstrated, is at his best. The collection he has just made under the title 'Voces Populi' (Longmans) is capable of affording lasting amusement, and some of these mirth-provoking scenes and dialogues are well adapted to being acted on the private stage. Such, for example, is "Third Class—Parliamentary," which takes place in a smoking compartment between a suburban tradesman and a "seedy but burly Stranger," or the unsurpassable discourse of guides at show places. Political satire finds a subject in "Trafalgar Square" and "Sunday Afternoon in Hyde Park"; social satire in "At a French Play," "Picture Sunday," "At a Wedding," "Choosing Christmas Cards," and in many other of these two dozen snatches; while the British tourist is hit off to the life in "At a Highland Table d'Hôte," "At a North British Hydropathic," "On a Trip to Staffa and Iona," etc. Mr. Anstey has been particularly fortunate in his illustrator, Mr. J. Bernard Partridge, who has a genuine eye for types of man and womankind. The book is beautifully made.

Mr. John Ashton's forte lies in the selection of antiquarian topics fit for some one to make a book out of. His native ability to work up his own material is very inconsiderable, and there is hardly one of the many expensive volumes he has brought out which is not open

to censure for its literary execution. His lack of orderliness, of scholarly precision, of a good English style, is very apparent in the latest, 'Curious Creatures in Zoölogy' (Cassell Publishing Co.). It is a handsome volume, with a great store of illustrations, and confusedly deals with real and with mythical curiosities, with giants and pigmies, Amazons, tailed men, cyclops, chimæras, krakens, leviathans, harpies, sphinxes, pelicans, salamanders, the barnacle goose, etc., etc. All sorts of authorities, from Darwin to Marco Polo, Pliny, Herodotus, and Homer are drawn upon with very great indifference to particularity of reference. The odd figures are also very imperfectly accredited, and Mr. Ashton resorts to his favorite practice of tracing from the original instead of giving a photographic facsimile and retaining the character of the copied drawings. Such a medley may afford a certain degree of amusement or mental dissipation if taken piecemeal; otherwise it is well calculated to excite either fatigue or irritation.

A Berlin journal which, like the *Nation*, has just celebrated its quarter-century, has made an interesting souvenir of its career, 'Zum fünfundzwanzigjährigen Bestehen der *Modenwelt*' (New York: International News Co.). This fashion magazine attained in ten years a circulation of 30,000 copies (since swelled to 165,000), began at once to be printed in three languages in as many countries, and is now issued in fifteen. All this is related, together with details and cost of production, titles of works published in connection with the magazine, and an account of a Pension, Widows' and Orphan Fund established by the founder, Mr. Franz Lipperheide and his wife, for the benefit of their employees. Facsimiles of the several editions of the *Modenwelt* and of a century of fashion plates are succeeded by a bibliography of fashion journals 1798–1865.

Present-day interest in Brazil is scarcely ministered to by the doing into English, at this late day, of Mme. Toussaint-Samson's 'A Parisian in Brazil' (Boston: James H. Earle). The narrative is vivacious, however, and bears the stamp of sincerity in its account of a state of things now past. The funny French-English of the translation—the translator is Mme. Toussaint-Samson's daughter—is put forth in the most serious good faith, but almost deserves classification with "English as she is wrote."

Dodd, Mead & Co. publish, for the holiday season, 'A Marriage for Love,' by Ludovic Halévy, translated by Frank Hunter Potter, and profusely illustrated by Wilson De Meza. The story is charming, the translation capable, and the illustrations clever and pleasing. The decorations of the printed page are noticeably good, but the same ones should not have been repeated throughout. The book is in paper, but is provided with an outer cover in old figured silk as well as with the regulation box. It would make a pretty Christmas gift or a still prettier wedding present.

Mr. Stanley Lane-Poole, whose 'Life of Lord Stratford de Redcliffe' appeared two years ago in two volumes, and was reviewed by us at the time, has considerably cut down the bulk of the work, "chiefly by the omission of the longer despatches and memoranda," and without sacrifice of anything of general interest. Thus reduced, and compressed also in the printing, the Life makes a single volume of a "Popular Edition" just issued in good style by Longmans, Green & Co. Less than four hundred pages are advantageously substituted for the thousand that could only be read by skipping.

We are requested to state that the privately printed 'Memoir of Algernon Sydney Sullivan' has, in response to numerous requests, been put on sale at Brentano's, No. 5 Union Square, at the price of one dollar. It contains portraits of Mr. Sullivan, and, besides a sketch of his life, the tributes, civic, legal, and clerical, to our late well-known fellow-citizen.

"The Whole World Kin" is the sub-title appropriately given to a biography of the late Rev. Nathan Brown, D.D., one of the scholarly American missionaries who in two countries of Asia have reflected lustre upon the country from which they were sent. Descended from the same ancestral stock as John Brown of Kansas and Harper's Ferry fame, and reared on a New Hampshire farm, Mr. Brown went out in 1833 to Burma as a Baptist missionary. Quickly learning the language of the country watered by the Irawadi and the Brahmaputra, he became a pioneer in Assam, building up schools, translating the Bible, furnishing the elements of a Christian vernacular literature, and serving in the itinerancy and pastorate as a missionary and factotum, until 1855. His linguistic work in grammar, lexicography, and translation has been generously acknowledged by Max Müller. Though his general methods are now looked upon as old-fashioned, if not obsolete, yet much of what he did remains as solid foundation upon which others have built and may build. From 1856 to 1872 he was editor of the *American Baptist*. Under appointment of the American Baptist Missionary Union, with restored health, and having remarried, the veteran sailed for Japan January 6, 1873, and in Yokohama at once began the mastery of the Japanese language. His knowledge of Sanskrit and the southern Asiatic languages gave him an immense advantage, and at his death on January 1, 1886, he had, with native assistance, translated the entire New Testament, and seen the formation of eight churches with 800 members. His version of the New Testament in Japanese is far from being invulnerable to just criticism, especially in his employment of supposed equivalents for the demonology of the Bible. Nevertheless, his work has distinctive merits of its own, and is of permanent value. He had a robust common sense that served him well at all times. The biographical volume prepared by his daughter is an octavo of 606 pages, with portraits, but without index (Philadelphia: Hubbard Bros.).

Reprinted from the New York *Ledger*, with revision, condensation, and manifest improvement, Mr. W. C. Kitchin's story of Portuguese Christianity in Japan in the seventeenth century now appears in book form from the press of Robert Bonner's Sons. Mr. Kitchin is a Harvard graduate who spent three years, from 1882 to 1885, at Nagasaki, within sight or easy reach of the scenes made memorable by the great insurrection of 1637. Accurate as a rule in historical and geographical perspective and detail, the author's plot is light, and the treatment of character is scarcely more than upon the surface. The use of modern words such as *tempo*, a brass coin first struck in 1830 and named after the chronological period then inaugurated, and of *sampan*, the "pidgin" English term for boat, is anachronistic. The author never saw a Japanese crucifixion in which bamboo, ropes, and impaling spears, without nails, constituted the apparatus of torture. There are several other decidedly un-Japanese conceptions and phrases attributed to the native Christians and pagans, but on the whole the author has made a story that is full of brisk movement and perhaps well suited to his *Ledger* readers. In revising it, however, the name has been changed to 'Paoli, the Last of the Missionaries.' In its improved form, it is well worthy of a place in the libraries as illustrating a stirring phase of the contact between European and Asiatic civilization in the seventeenth century. The numerous illustrations are interesting, not as works of art, but as the attempts of Occidental draughtsmen to represent the far-Oriental visage, dress, motions, and scenery. Naturally, the features emphasized and even exaggerated are those in which native Japanese artists would proceed to the opposite extreme.

It was worth while to collect from Roman Catholic newspapers of the last forty years the reports of speeches, and addresses, and replies of Cardinal Newman on various occasions, as is done in 'Sayings of Cardinal Newman' (Catholic Publication Society). Some of them are so good that they must have been taken down verbatim, or have followed a manuscript, but they are very unequal, the first, "About Poetry," being one of the best, and "Accepting First Praise" being one of the worst, mean-spirited in its harsh contempt for the Church from which Newman had seceded, and false in asserting that never before 1851 had he received any praise. "On the Pleasant Care of Boys" is such a happy title that what follows disappoints. There are others "On What a Cardinal Ought to Be," his literary standing, his trepidation as an author, and so on, thirty-three items in all. There is a frontispiece, from a photograph taken shortly before Newman's death, and pathetic in its sorrowful senility.

The edition of Dr. Edersheim's 'Jesus the Messiah' which now appears in holiday dress (A. D. F. Randolph & Co.), is considerably abridged from the two-volume edition of 1883, and Dr. Sanday frankly confesses in his preface that "much has been lost which constituted the peculiar and unrivalled excellence of the larger work." This was its collection of materials illustrating Jewish life and belief in the time of Jesus. The scholar, therefore, will still go to the first edition, checking the author with Hausrath's admirable book and the exhaustive five volumes of Schürer. As a life of Jesus the book is a harmonistic combination of the Gospels, and its apologetic method allows but few concessions to the criticisms of contemporary scholars. The attempt to make a beautiful Christmas volume is only partly successful. The paper is so thin that the print shows through, and the illustrations, photographic reproductions in the main, are generally the least admirable in the case of famous pictures.

The writings of James Russell Lowell (Houghton, Mifflin & Co.) are now completed with vol. v., Political Essays, and vol. vi., Literary and Political Addresses. They will be not the least prized of the ten. Earliest in point of time is the ineffaceable judgment of the American Tract Society (1858) for its subserviency to slavery. The Rebellion and Reconstruction and the Seward-Johnson Reaction conclude vol. v.; vol. vi. opens with the sage and optimistic defence of Democracy delivered in 1884, to English auditors. This is followed by other utterances abroad, mostly literary, and then by those addresses in America revisited which earned Mr. Lowell the cordial hatred of the Republican Machine—the Harvard Anniversary address, in President Cleveland's presence and to his honor; the hardly less signal Boston Tariff-Reform address; and the New York address on the Independent in Politics. These are permanent contributions to the political high thinking of the age; and they link Mr. Lowell with Emerson as poets whose prose could hardly less well be

spared than their verse, and who have no American superiors in either.

The *Andover Review* for December prints the first of two papers entitled "The Preludes of Harper's Ferry," based upon note-books of John Brown in the possession of the writer. The earlier note-book covers the period 1838-1845, when John Brown was, as he styled himself, a "Practical Shepherd" in Ohio. Examination of its contents is accompanied by constant reference to Sanborn's Life of Brown; and the discussion tends to disprove negatively the legend propagated by that work as to Brown's having conceived at a very early period his plan of attacking slavery by force, and having shaped all his adult life towards it. In fact, it would not be incorrect to say that in this paper John Brown is made to sit in judgment on his own biographer.

The January number of the *New England Historical and Genealogical Register* will be awaited with interest, as it tells of a happy discovery by Mr. John Ward Dean of the name of the lady who rejected Roger Williams's suit, before he came to America. She was, it appears, Jane Whalley, a sister of the regicide who took refuge in Connecticut, and a first cousin both of Oliver Cromwell and of John Hampden. She afterwards married the Rev. William Hook, and came to New England, residing in Taunton, not far from Williams in Providence.

We have received the first two numbers of the *Salem Press Historical and Genealogical Record*, July, October, which we commend to all who are interested in Essex County, Mass., its history and its families. It has no novel features, but it seems to have a good excuse for existence.

The October number of the *Asiatic Quarterly Review* contained a very interesting article on Semitic eschatology by Dr. Édouard Montet. Though the author is better known among us by his exhaustive researches in Waldensian literature, he is Professor of Oriental Languages in the University of Geneva, and his true vocation is as an Orientalist. By a comparison of texts he establishes the virtual identity of the Assyrian Arâ'û with the Hebrew Sheôl (the limbo of darkness), where the Ékimmu, or Rephâim (the shades of the dead) exist, but do not live. The only Phœnician inscriptions throwing light on the subject indicate a similar belief in that branch of the Semites. The development of the theory of a future life and retribution Dr. Montet does not ascribe to Mazdean influence, but to Hellenic—the Platonic doctrine of the soul being adopted and modified by the Semitic idea of the dependence of the soul on the body, resulting in the evolution of the dogma of the resurrection. Through Judaism and Christianity belief in immortality was transmitted to the Arabs and was adopted by Mohammed, thus disseminating the Greek idea throughout the world. It is not likely that the last word has been said on a topic so suggestive of discussion, and on which new light may be thrown any day by the discovery of additional inscriptions; but Dr. Montet's familiarity with all existing sources and his careful balancing of probabilities render his thoughtful paper an exceedingly valuable contribution to the literature of the subject.

—In the Christmas *Harper's* the series of Abbey's designs for "As You Like It" is not in accordance with the common imagination of lovers of Shakspere—of this there can be little doubt; but they are not therefore deprived of their interest or in some instances of attractiveness. The picturing of Shakspere is not unlike the acting of the plays, in that each cultivated reader has, as Mr. Lang says of himself, "a vision of his own," and hence is unsatisfied with the interpretation of others, though he may learn from them and must tolerate them. Mr. Abbey's *Adam* and *Jaques* are not to our mind, but to say why would take us into dramatic criticism. Mr. Lang, in his comment, is unusually felicitous, and writes with a certain abandon to his own love for the play, and with an absence of his merely clever vein, which makes his eulogy wholly charming, while he touches always with good taste and excellent judgment upon many of the points raised or suggested by Mr. Furness's recent Variorum edition. Besides this Shakspere series of cuts there are several others, the most important of which are the Californian scenes in connection with Mr. Warner's text, the Rossetti and Burne-Jones pictures, and the house-interiors in connection with Mr. Child's account of the London mansion of Mr. Leyland, and the Japanese illustrations to Pierre Loti's paper on "Japanese Women." All of these are noticeably excellent in one or another way, and the reproductions of the works of the "Pre-Raphaelites" have a more permanent value. The criticism of Mr. Child is of the slightest, but he succeeds in giving a more exact account of the two painters whom he deals with than is usual, as to both their temperament and genius; and the interest of his article lies much more in this than in his catalogue of the decorative pieces and furnishings of this noted London house. This number, as is commonly the case at this season, is largely occupied with short stories of several varieties, but with a tendency to the homespun. There is but one poem, by Mrs. Fields, and this is not a Christmas ballad.

—The December *Atlantic* brings to an end the interesting series of papers upon the translation of the greatest foreign poets in Greek, Italian, and German, with Mr. Andrews's discussion of English versions of 'Faust.' A final note upon each article also appears in the "Contributors' Club." The example of Goethe, in the present paper, is treated with less fulness than is desirable, and calls for no comment. The three articles are, taken together, noticeable for the width of the subject, inasmuch as the hexameter, *terza rima*, and broken rhyming chorus, none of which have flourished in native English verse, are all included. The impracticability of translation is the one thing which is brought out in each case, though none of the writers has insisted upon this or assigned reasons for it with any clearness. The inferiority of the translator to the original author in power of expression is, of course, the sufficient reason for failure by itself, but beyond this the great distinction between them, in that the poet is preoccupied with the ideas and the translator with the form, makes an insuperable difficulty. The poet is not hampered or confined or compelled by the form, he is its master; the translator is, on the contrary, its slave. In other words, the power of translation is the inverse of that of creation, and success is not to be expected; it is not unlike the habit of writing imitative verse after some reigning poet, such as Tennyson, with the added difficulty of using another's fixed thought. The result never rises above minor poetry, so far as expression is concerned; and unless the translator be himself a poet, and puts his own voice and melody into the work, the result is usually minor poetry of a particularly insignificant kind. The story, the intellectual contents, may be given; the expression of the original, the art, cannot be transferred to the new work except that sometimes enough may shine through to show us the "archangel ruined." This would be still more apparent if the authors selected had been those whose sense of form was most refined, such as Virgil or Petrarch. The proof is perhaps most evident in the fact that translations do not make the appeal to the mind that the originals do; they are read not for themselves, but for their fame. In the rest of the number we cordially recommend to our readers Capt. Mahan's thoughtful and comprehensive article on the world-relations of this country.

—*Scribner's* presents us with a novelty in the shape of a "Pastoral without Words," a series of twelve drawings by Howard Pyle, in which a complete story is told with grace and effect, with just that touch of unreality that belongs to the pastoral, and which is perhaps more easily achieved by the artist than by the poet or romancer in our time. It makes a delightful innovation in the resources of magazine illustration, and is the more pleasing because it has no superfluous verses tagged at the bottom of the page. The main paper is that which opens the number, the first of Sir Edwin Arnold's promised contributions upon his journey in Japan. We have had much writing in the magazines of late upon this theme, but each new author seems to find his own peculiar freshness of inspiration, unlike and yet the same with one another's, and here we have, as in the recent sketches of La-Farge, an individualized and poetical view, a eulogy of the softer aspects of social life and childlike qualities of the race, and a vigorous account of the landscape. The writer begins with a very full description of the place held in the nation's taste by flowers and of the art of arranging them, the associations attached to them separately, the courtesies springing out of their charm for the people; and in general he sets before us this single trait of the country as if he would make of it a note in which to pitch his whole work. He then attends to the landscape and climate, and gradually winds into the ordinary road of travellers. Kenilworth and Warwick Castle are made the occasion of a commonplace article by Mr. Rideing, and the auction-room of "Christie's" is employed in the same way, but with the advantage of more novelty in the matter and better handling by the writer. A more noticeable paper is the sketch, by A. F. Jacassy, of the works and career of the Neapolitan artist Morelli, who is little known, but whose place in the "new Italy" is so conspicuous that knowledge of him will be very welcome. The illustrations to this article do not seem to us up to the mark which is to be justly required in such a case.

—The *Century* opens with a generous instalment of early Californian history—a chapter on the period before the gold discovery, by Gen. John Bidwell, one upon the "Ranch and Mission Days in Alta California," by Guadalupe Vallejo, and two minor notes on American Trading and the Yosemite, making in all a very solid block of reading; but the romantic and half-foreign interest inherent in the theme relieves it from tedium, and the reminiscences of Gen. Bidwell, in particular, have that mild flavor of the early rude time of the first occupation which never tires the student of human life. Another American article takes up the story of our navy in its first brilliant era, and treats it with more minute and thorough consideration than it has hitherto received, not without gain to our knowledge and useful correction of misconception or of British error. The cuts illustrating this article are very

striking, and show the remarkable power of our magazines in handling designs on the page. The second article upon Thibet takes the reader across the Chinese border into a strange land, and, notwithstanding the novel scenes about Tankar and the religious seat of Kumbum, gives promise of still greater interest in the unknown country lying before. Of the remaining papers, the most curious is that entitled "The Record of Virtue," in which the ideas of some boys who had not been under the best conditions of life, are set forth in their own language and spelling, and in some instances their own chirography, upon the subject of the greatest or the kindest actions of which they had heard. Salvini contributes his support to the theory of acting which requires the actor to feel the emotion he assumes, and he gives very briefly his own method of studying his impersonations. The moral article is by Dr. Lyman Abbott, in advocacy of the doctrine that though a State must not have a church, a nation must have a religion. His way to the paradox lies through an identification of religious with moral life.

—A correspondent writes to us:

"Your reviewer of 'Modern Ghosts' does not mention the extraordinary awkwardness of some of the translations, and especially of those executed by Charles Flint McClumpha. Such phrases as 'thoroughly affrighted,' 'eyes staringly fixed,' 'or culled from the dish one of the choice fruits or little bonbons,' are not calculated to give pleasure to the reader; but when it comes to 'you dare not' (meaning you must not), p. 212, 'soon after *that* she had vanished in such a mysterious way, the bridegroom went below,' and 'he [Leb Narr] approached the miserable mother, and in a tone least becoming his general manner inquired' (meaning in a tone as little as possible in accordance with his usual manner), one cannot help wondering what hodge-podge of languages this may be. The fact that the translator bears the name of an instructor in a well-known college makes his incompetence for his task all the more remarkable."

—Under the auspices of the Department of Agriculture, Dr. C. Hart Merriam, Chief of the Division of Ornithology and Mammalogy, made a biological survey of the San Francisco Mountain region of Arizona in the summer of 1889. The results of his explorations are published in a bulletin entitled "North American Fauna, No. 3," which, in addition to the scientific descriptions of many new species of animals, contains interesting accounts of the physical features of that remarkable district. The summit of the mountain, a great volcanic cone rising to an altitude of 12,794 feet above sea-level and about six thousand feet over the desert plateau, possesses a well-marked Alpine flora, including, strange to say, no less than nine species of plants identical with forms brought by Greely from Lady Franklin Bay, in latitude 81 degrees north. The seven faunal and floral zones which Dr. Merriam recognizes on the mountain are neatly illustrated on several maps. His graphic account of one of the peculiarities of the storms and streams of that region is worth presenting to our readers. "Following the course of a gully or 'wash' across the Painted Desert, we saw a heavy rain-storm raging over the high mesas to the north and east during the entire afternoon of August 14, though not a cloud came between us and the parching sun. Before dark, a furious wind, the vehicle of a sand-blast, swept down the wash between the row of cliffs which mark its course, abating as night came on. About ten o'clock we were startled by a loud roaring in the North, which at first gave the impression that a severe storm was advancing upon us, but not a cloud could be seen, and the stars shone brightly in every direction. The roaring increased and came nearer until it was evident that something was coming down the bed of the wash; and in a moment a great wave of thick mud rushed past, with a tremendous roar, accompanied by a fetid stench. The first wave was about five feet high, but it soon rose to eight feet, where it remained for an hour, and then slowly subsided."

WOODBERRY'S ESSAYS.

Studies in Letters and Life. By George Edward Woodberry. Boston: Houghton, Mifflin & Co. 1890.

It is well for the public that these remarkable essays have been rescued from the periodicals in which they first appeared, and presented in a more permanent and accessible shape; it would be the greatest pity if, in the rush and glitter of publication that floods the season, they should be swept aside into some nook or corner of temporary oblivion. Brief as they are, there is nothing ephemeral either in their matter or their form. The beauty and distinction of their style, the wisdom and rightness of the opinions they express, entitle them to a longer lifetime than the allotted span of critical work. There was a time when the reviewer wielded a bludgeon like Polyphemus, and, like him, "cared not for strangers nor for the immortals." Mr. Woodberry does not belong to this ruthless race. The author of "Agathon" has a right to discourse of poetry, because he has shown a rare and refined gift of poetry; the author of that conscientious and painstaking piece of work, the 'Life of Poe,' in the "American Men of Letters" series, shows that he has the insight, the culture, the sympathetic spirit, the patient research which are necessary to the man of letters and the critic.

The range of Mr. Woodberry's interests and appreciation is remarkable. Spenser and Shelley and Keats are in the direct line of his poetic ancestry; and he writes of them with the complete and subtle understanding which might be expected of a spiritual descendant who has some strain of their blood running in his veins. But he also discusses with justice and discrimination the work of craftsmen so opposed in style as Landor and Crabbe; he can mention Scott without aversion; he treats of Mr. Pater's 'Marius' and the Pergamon Marbles, and of Darwin's Life; and, in a sympathetic sketch of the training and experience of Bunyan, he makes the origin of his gifts intelligible, and successfully combats a characteristic opinion of the late Mr. Arnold, who described the author of 'Pilgrim's Progress' as a "Philistine of genius." These widely diverse studies and appreciations are unified by the point of view of the author. At a time when realism is everywhere the mode, he has the courage to be an idealist; and at a time when we are urged to pursue art for art's sake only, he points us to the fact that nothing has endured in art and poetry which is not rooted in the soul of man and in his highest aspirations. How wholesome it is just now, for example, when so many ardent ladies, under the guidance of Mr. Gladstone, have been admiring without measure the journal of Marie Bashkirtseff, with its precocious talent, its selfishness, its inhumanity, its insatiable lust of fame, and its pathetic close, pointing nowhere, to be reminded of this sentence of Keats: "Women must want imagination, and they may thank God for it; and so may we, that a delicate being can feel happy without any sense of crime." Keats also, that English avatar of the Platonic spirit, had the artistic temperament in the highest measure, like this unhappy young girl whose fate resembled his; but his fame has in it the salt of a human and moral purpose which all her aims and aspirations lacked. As Mr. Woodberry finely remarks: "To other men beauty has been a passion, but to him it was a faith; it was the substance of things hoped for, the evidence of things unseen—*a shadow of the reality to come.* . . . But although to Keats the worship of beauty in all things was the essence of his life, and the delight that sprang from it the essence of his joy, he did not find in these the whole of life." The critic reminds us once more that this Platonic soul, with his transcendental faith, could write in his later letters: "I find earlier days are gone by, . . . I find I can have no enjoyment in the world but continual drinking of knowledge. I find there is no worthy pursuit but the idea of doing some good to the world." "In this constant expansion of his view and faithful laying of his experience to heart; in the wisdom of his interpretation of what came within his scope; in a word, in his teachableness as well as in his steadier enthusiasm, his uncloyed sensibility, his finer spirituality," Mr. Woodberry discovers the promise of Keats; and, in the remarks we have quoted, reveals something of his own artistic doctrine and method of thought.

We find it impossible to resist further illustration of these, because nowhere of late have we seen distinctions so clearly expressed in a region where vague notions flourish and lead to endless hazy controversy. If we ask, for example, how Landor differed from the great poets, what better answer could be given than this?—"He did not bind his work together by the laws of his own mind; he did not root it in the truth, as he saw the truth; he did not interpenetrate and permeate it with his own beliefs, as the great masters have always done. . . . And so he became hardly more than a mirror of beauty and an Æolian harp of thought; if the vision came, if the wind breathed, he responded." If we ask, again, what constitutes the "classical" in literature, and what the "romantic," wherein did they differ, wherein did they excel, we are told with a clearness which illuminates the whole subject:

> "This self-effacement [of Landor's], this impersonality, as it is called, in literature, is much praised. It is said to be classical, and there is an impression in some minds that such an abdication of the individual's prerogatives is the distinctive mark of classicism. There is no more misleading and confusing error in criticism. *Not impersonality, but universality, is that mark;* and this is by no means the same thing differently stated. In any age, the first, although not the sole characteristic of classical work is, that it deals with universal truth, of interest to all men; and hence the poet is required to keep to himself his idiosyncrasies, his hobbies, all that is simply his own; . . . but the statement that Shakspere or Swift obliterated themselves from their works need only to be made to be laughed at. The faith of Æschylus, the wisdom of Sophocles, are in all their dramas: Anacreon is in all his songs, Horace in all his odes. . . . The classical poet usually perceives the object by his intellect, and makes his appeal to the mind; the romantic poet seizes on the object with his imagination, and makes his appeal to the heart."

The complete truth of all such definitions depends on the limitations with which they are presented, limitations which we must necessarily omit; but we are tempted to add one more gnome or maxim, not merely because it is perfectly expressed, but because it contains for the author the statement of a creed: "Art is, in a sense, a world removed from the actual and present life, and beauty is the sole title that admits any work within its limits. Of this there is no question. But that world, how-

ever far from what is peculiar to any one age, has its eternal foundations in universal life, and that beauty has its enduring power because it is the incarnation of universal life."

From such a declaration of faith it is natural to turn to Shelley, of whom Mr. Woodberry writes with his usual critical perception, warmed by the eloquence of a disciple as well as an admirer. The author of the "North Shore Watch" will hardly disclaim this attitude entirely. He is far from being bound to the formula of any master; yet his poetic creed undoubtedly approaches that of Shelley; and it is no disparagement to say that stanzas of the "North Shore Watch" in music and in sentiment reflect gleams of the "Adonais." Under these circumstances, it is natural that he, too, should feel "the charm which fascinated Shelley's familiar friends," and that his remarks should leave the poet's memory invested with a halo. For ourselves the halo is broken and dimmed by those artless letters of Harriet Shelley published more than a year ago in the *Nation*. Who that has observed the successful inequalities of marriage, and the impossibility of mating genius, can deny that, to all appearance, Shelley began better than Heine and Goethe ended? Who can maintain that a little good sense and decision would not have routed the household foe, if Mary Godwin had not made her appearance? But such conjectures are perhaps endless and idle. Our point is different, and it is this. It is not proved that the first marriage was necessarily unsuitable or necessarily a misfortune. It is far from proved that Harriet Shelley was unfaithful, though it is not unfair to say that Shelley made haste to believe her guilt, and, in doing so, let his passion steer him to his conclusions. It appears, too, that long after her death he was willing to repeat insinuations against his unfortunate wife, though, as far as can be discovered, his suspicions were unfounded. We grant that if allowance is made for Shelley's temperament and organization, almost any vagaries and errors may be excused in him. If he is canonized, he must be judged by ordinary standards. With all its reservations, Mr. Woodberry's estimate borders on canonization. We, too, are admirers, ready to be votaries, and awaiting full conviction. But we are troubled with scruples.

The brief appreciation of Browning is an interesting example of sound and penetrating judgment, pronounced while we were still in the thick of Browning circles and societies, and unsafe within the wind of their commotion. But our readers can turn back to it, and we need not dwell upon it.

In commenting on Darwin's Life with great fairness, acuteness, and good sense, Mr. Woodberry notes the curious deadening of the æsthetic tastes which the great man himself confesses—the gradual fading of his interest in poetry, in art, in landscape, and of his belief in religious subjects; and he inquires, not how much we have lost in Darwin through this, but how much Darwin himself lost. "Darwin's was a character," he observes, "which might well spare the humanities. The fact remains that he did spare them. What he lost was culture." The world at large will not regret this; and a genius so definite, so predestined, one may say, might well be permitted to narrow and concentrate its work and its faculties in the interest of science and of mankind. But the personal results of this narrowing process were so marked that they may serve as a beacon and a warning against the natural effects of exclusively scientific education upon the ordinary mind. The average mind is, on the whole, that with which education deals and with which it is concerned. The average intellect cannot expect to work the wonders in observation and generalization which were achieved by Darwin, but it may count on the same narrowing influence which he underwent from his special studies.

We cannot pursue these illustrations of idealism, and we can only allude to the survey of Italian Renaissance literature, which discloses a perfect understanding of the Italian race and a delicate perception of their national genius. *Ex pede Herculem* hardly holds in works of art; and we have no excuse for our extended quotations, except that they show the thoughtfulness of the critic, his openness of mind, how straight he goes to the heart of things, how unerringly "he strikes his finger on the place." With all this, Mr. Woodberry joins something more—the Puritan conscience and some grains of the mystic's faith. He refers us to certain old enduring standards—he still listens to those high voices of the spirit, "mächtig und gelind," which inspired all that survives in literature and art, but which are growing confused and distant to many of us in an earthy and "faithless generation."

WEBSTER'S INTERNATIONAL DICTIONARY.

Webster's International Dictionary of the English Language; being the authentic edition of Webster's Unabridged Dictionary, comprising the issues of 1864, 1879, and 1884, now thoroughly revised and enlarged under the supervision of Noah Porter, D.D., LL.D., of Yale University. With a voluminous appendix. Springfield, Mass.: G. & C. Merriam & Co. 1890. Pp. 2,118, royal 4to.

THE many columns we have felt constrained to devote of late to notices, more or less elaborate, of different dictionaries of the English language, either completed or in course of publication, show how much of the literary activity of the day is employed in this direction, and how keen is the rivalry between the various competitors for public favor. The latest is this new edition of a well-known and popular work which requires no introduction at our hands. We shall, accordingly, only attempt to indicate, at no very great length, some of the particulars in which such an extended examination as we have been able to give to it has led us to regard it as a very decided improvement upon the earlier editions. The matter of orthography, unfortunately, is not to be counted in this category; and its fantastic method of spelling, which from the outset has been its chief blemish, has been retained. In all other respects it seems to us to record the standard usage of our language.

This substantial volume is a dictionary intended for popular use, rather than for the scientific student of words; and still less could the merits of an encyclopædia be claimed for it. But accurate scholarship at all points is evident throughout it, and fulness of illustration is nowhere wanting. In saying that it is intended for popular use we only mean to declare that in nine cases out of ten in which a dictionary is consulted, unless as a spelling-book, it is to learn the definition of a word. For this purpose convenience in use is essential, and therefore a single-volume dictionary must always possess a great advantage over those of larger bulk. Then the style of printing, shown in the typographical arrangement of the subject-matter, must be such as to facilitate a rapid mastery of the contents of each article. But something more than facility in handling and clearness of typography is needed for the ideal dictionary for popular use; and we venture to assert that in the four chief requisites of such a work, *completeness*, *accuracy*, *terseness*, and *perspicuity* in its definitions, 'Webster's International Dictionary' is equal, if not superior, to any similar work in the English language. All departments of knowledge, including etymology, in which the work has hitherto been admittedly defective, have been intrusted to competent hands. Illustrative wood-cuts have been introduced in abundance, and we have been struck by the good judgment displayed in their selection, and by the very decided improvement in this respect manifested in this new edition. It is clear that great pains have been taken to correct errors of definition that have been detected in the earlier editions, and to keep up with the multitude of new words that the advance of science, or other causes, are constantly introducing into our language.

The following are some instances we have noticed of improvements of this character: Under *academy*, the employment of this term for "a school, or seminary of learning holding a rank between a college and a common school," has been pointed out as a popular rather than a correct usage. *To sell bargains* is now defined as "to make saucy (usually indelicate) repartees,' instead of restricting its signification to the latter only. Mr. Trumbull's derivation of *caucus* from the Indian languages has been adopted instead of the former one, which regarded it as a corruption of *calkers'* [meetings]. Under *explode*, as an intransitive verb, the figurative signification of the word has been admitted, as, "his wrath exploded." *Grisette* is no longer restricted to "a young working-woman who is fond of gallantry," and the character of a large and deserving class is thus cleared from an unmerited slur. Under *lithophyte* the singular blunder of the insertion of a woodcut representing *Petricola pholadiformis*, as an illustration of its meaning, has been corrected. *Majolica* is now properly defined, and *phantomnation* has disappeared from the scene. We find the proper etymology of *rum*, from *rumbullion*, duly chronicled; as well as the technical significance of the word *signature*, used by printers. To *stale*, as an intransitive verb, is no longer marked as obsolete; in fact, we remember that Motley used the word in his 'Dutch Republic.' The erroneous definition of *tomahawk*, copied from Palfrey's 'History of New England,' has been set right. Finally, we notice that *bonanza*, *boodle*, *boycott*, and *mugwump* all duly appear in their proper places, adequately explained.

The following terms, however, in common use by writers upon archæology, are not to be found: *labret*, *terremare*, and *scarab*, all of which, we think, ought to be inserted in the next appendix that appears. We present also *Bowdlerize*, *heteroclital*, *puntpole*, and *to pull up stakes*, as deserving candidates for admission. We notice that the verb *disinteress* has been dropped from the new edition; but a word used by Bacon may have a claim to retain its place in the history of the language. It can be found in his 'History of King Henry VII.' (Spedding & Ellis, American edition, vol. xi., p. 120): "the higher bond . . . doth *disinteress* him of these obligations of gratitude." So, also, with regard to the expression *vale water*, as employed by Ralph Lane, in Hakluyt, vol. iii., p. 313, "the current runneth as strong . . . as at London Bridge upon a *vale water*." This is explained by the Rev. Edward E. Hale to mean "a tide running with the current of the stream," and it was long ago pointed out by

him as not recognized in the popular dictionaries ('Archæologia Americana,' vol. iv., p. 30).

Of recent coinage we would suggest for adoption *saugrenu*, which Matthew Arnold, in his essay on Joubert, calls "a rather vulgar French word, but, like many other vulgar words, very expressive; used as an epithet for judgment, it means something like *impudently absurd*." So, too, with the term *horse-breaker*, which is defined in the 'Imperial Dictionary' as "a female of the demi-monde; generally accompanied by the epithet pretty." If the editors desire any authority for its use, we would refer them to an epigram by the late Richard Grant White, "Horse-Breaker and Grey Mare," to be found in a note to the edition edited by him of Burton's 'Book Hunter,' p. 292, which begins as follows:

> "Aurelia, prettiest of horse-breakers,
> Caught Nobleigh, lord of many acres," etc.

One of the most useful of the many valuable appendixes to the work, which, we are informed, has been "carefully elaborated" and enlarged, is the Dictionary of Noted Names of Fiction, compiled by the late William A. Wheeler. Although, of course, it is impossible to define accurately what such a list should, or should not, include, we venture to suggest that *Dunciad* and *Laura Matilda* certainly ought to be found there, and we think that *Widow Bedott*, *Marquis Posas*, and *The Sacred Band* might very well be allowed a place. *George Dandin* is said to be the name of a mock judge, in Rabelais. But his name is actually Pierre (book iii., chap. xii, 38).

We will conclude this notice by pointing out the very few defects we have met with in the course of a somewhat extended examination of the work. *Amphitheatre* is defined as "an oval or circular building." This we consider misleading, and should prefer *elliptical* for *oval*, although *oval* is defined as "a body or figure in the shape of an egg, or of an ellipse," while *ellipse* is called "an oval or oblong figure." We are told that the *bronze age* is "characterized by the use of implements of copper or brass." Now the composition of copper and zinc, called brass, was unknown in the bronze age, but used in classic times; hence it is clear that *bronze*, which is an alloy of copper and tin, should be substituted for *brass*. Under *clam* a citation is made from William Wood's 'New England's Prospect,' but a wrong date is given to it, 1684 instead of 1634. The assertion that to *claim*, used in the sense of "to assert, to maintain," is only colloquial, cannot stand; the usage is common among good writers on both sides of the water. It is stated that *continent*, "that which contains anything," is obsolete; but it is found in Shelley, in "Epipsychidion":

> "True love never yet
> Was thus constrained; it overleaps all fence:
> Like lightning, with invisible violence
> Piercing its *continents*."

So too of *discretion*, in its original sense of *separation*; but it is used by Sir William Jones in his noble translation of Alcæus's ode, "The Fiend *Discretion*."

If it is thought best to insert *horn*, "the emblem of a cuckold," the use of the term should be traced as far back as possible. It can be found in the 'Oneirocriticon,' of Apollodorus, Lib. ii., chap. xii. Standing is allowed to the expression *the lay of the land*, although no authority is cited for it and no reference is made to naval usage; the English locution *the lie of the land* is also given. Under *namby-pamby* it ought to be stated that the name was originally given to Ambrose Philips by Henry Carey, as Mr Gosse relates in his account of Philips, contributed to Ward's 'English Poets.' It should also be stated that *nom de plume* is not a good French phrase. Both under *pander* and *Pandarus*, Chryscis is improperly substituted for Cressida. *Pentacle* is defined as "a figure composed of two equilateral triangles intersecting so as to form a six-pointed star." The derivation of the word shows that it could not have *six* points. Its true figure is given under *pentalpha*, of which it is a synonym. The illustration inserted for the word *prow* (of an ancient galley) is wrong, if by *ancient* is meant what was used by the Greeks and Romans. We have also noticed upon the page of illustrations to *Archæology—Stone and Bronze Periods* (which, by the way, are copied from Warsaæ's 'Nordiske Oldsager'), that what are there called *coronet of bronze*, *bronze breast-pin*, and *ax of deer-horn* would not be so denominated in the light of present knowledge. Under the word *rare*, in the quotation from Dryden, *with* should read *which*. We would call attention to a new derivation of *shanty*, proposed by Dr. Boudinot, in the *Scotch Review* (April, 1887): he says it is a corruption of *chantier*, used by the French Canadians. Under the word *stone* we find it asserted that *bowing-stone* is "the same as Cromlech. Encyc. Brit." No such statement can be found in the last edition of that work, and there is no authority for it. Finally, *sumptuosity* is said to be obsolete; but Froude uses it in the second chapter of 'The Two Chiefs of Dunboy.'

These are all the blemishes we have noticed in this noble volume, which, both in its design and its execution, reflects the highest credit upon all who have been concerned in its production.

A Russian Journey. By Edna Dean Proctor. Boston: Houghton, Mifflin & Co.

The Tsar and his People. Harper & Bros.

It is to be regretted that Miss Proctor's book was not subjected to a thorough revision before this second edition was issued. The illustrations cannot be regarded as satisfactory or first-class now, whatever they may have been considered twenty years ago; and the one which purports to represent the Assumption Cathedral in the Moscow Kremlin is, in reality, a very poor picture of a church on the Pokrovka, a mile away from the Coronation Cathedral in space, and equally distant in architecture. Amendments in the text would improve it. Each flight of steps at St. Isaac's Cathedral is not composed of a single stone; people do not kiss the ground when they bow low in church; in St. Petersburg the summer sun is not like a late afternoon sun in an American November; the Kremlin Palace is not built of marble; the nurse's costume and court-dress for ladies are not the same; kumys is not made as described. These are some of the changes we would suggest for the third edition. The book still possesses interest as a record of the manner in which things were done at a recent date, which has been rendered antiquity by Russia's progress, and it is written in an easy style, which makes it agreeable for light reading.

Equally agreeable reading and more satisfactory illustrations are furnished by the handsome volume entitled 'The Tsar and his People.' It is made up from the articles on Russia by various authors which have appeared in *Harper's Magazine* during the past three years. It is a pity that one of the most competent—that on the Russian Army—should not have been included. Incomparably the best part of the book is that furnished by the Vicomte de Vogüé on Social Life. He knows his subject; yet his memory betrays him occasionally, as it does in his work on Russian literature. For example, the Tsar who founded the Romanoff family, Mikhail Feodorovitch, is not buried in the Peter-Paul Fortress Cathedral, but in St. Michael's Cathedral in Moscow; priests must be married before ordination, not after, as here stated; and the picture on page 89, labelled "Officiating Priest," represents a Bishop, a personage who belongs to another order of clergy from the priests, and who wears very different vestments.

Mr. Child's contributions to the volume offer a good, superficial traveller's sketch of the prominent external points of country and people, over a limited area of observation. Naturally, it is the unpleasant features which are most apparent in Russia, as in other countries, to the hasty traveller. He has added some matter to the articles as they originally appeared, and has corrected some errors. Other errors have been overlooked. It is to be doubted, for example, whether he ever saw a gas-jet under a samovar; or men ringing church-bells with hammers; or only four horses to the carriage of the Iversky Virgin; or an image in every room of the palaces. He deplores the new look of everything, and the lavish use of the whitewash-bucket, being ignorant of the action of the climate on the stucco walls to which they are compelled to resort in the absence of stone, and the beneficial effects of whitewash and cleanliness upon health, which is sensibly preferred to picturesque antiquity in Russia. It is difficult to understand what Mr. Child means by "the semi-barbarous mistrustfulness of the existing regulations of the Hermitage," as opposed to "the liberal traditions of European museums." Entrance is as freely accorded to every one above the rank of an unwashed beggar as it is elsewhere in Europe. Peasants in their sheepskins may be encountered in the galleries, and the "court flunkies," far from dogging even these peasants, slumber tranquilly on their chairs, as a rule. Mr. Child evidently visited the Hermitage during the period in summer when it is closed to the public, but when foreigners are courteously admitted, and one attendant was held to a vacation responsibility which is divided among scores in the season.

Equally mistaken is Mr. Child's belief (p. 194) that the Tsar's movements are never announced in advance. The anticipated imperial presence at launches and reviews is frequently announced several days beforehand in the morning papers; the day and hour of all the Court ceremonies is not only known by every one, but is announced regularly, and throngs assemble to see the Emperor and Empress pass. If a great officer of the Court dies, every one knows when and where to watch for them at the prayers and funeral. The celebration which Mr. Child describes, where he saw the Tsar, furnishes an illustration: the Tsar's presence was announced long beforehand. Mr. Child's imagination, which caused him to see a peculiarity in the Empress's attitude in the carriage, misled him in this particular also. It is her usual attitude with whomsoever she drives—the Shah of Persia, the King of Greece, or her husband—and is assumed for the purpose of responding to salutes. The visit to the Caucasian provinces which Mr. Child states to have been "indefinitely delayed," was begun while he was still in the country, or just after he left it, if he made the usual four weeks' stay. It was well known for many months before that it would take place, and when it would take place,

Mr. Child was also misinformed in regard to the "six modest rooms" at Gatchina. On p. 270 the waiters who brought in the mutton are stated to be Tatars; but the picture on the next page represents four pure-blooded Russians. On p. 332, the "Imperial gates" in the ikonostas are designated as "the altar." The picture by Répine on p. 352 represents the Emperor receiving congratulations after his coronation at the Petrovsky Palace, on the outskirts of Moscow, not in St. Petersburg.

It would, perhaps, be unfair to criticise Mr. Child for believing implicitly all the stories which were told him. He had no time to investigate them, nor any knowledge of the language and people, which was indispensable. But we may state briefly that the sensational tale about Count Tolstoi's treatment of Loris Melikoff is apocryphal, since the two men never met; and that the still more exciting narrative relating to the plague is more curious than veracious. There was no plague. There was a scare, a learned opinion was given by a court physician (now dead), which subjected him to great ridicule; and the mysterious sickness was promptly cured by smashing the windows of the unventilated houses where it prevailed, and admitting fresh air. If we have dwelt at length on some details which may seem trivial to the general reader, it is because, in spite of their smallness in comparison with the good in the articles, they are precisely of the sort which are eagerly seized upon by prejudiced persons, to fortify their preconceived notions as to the land which it is the present fashion to abuse. On the whole, Mr. Child does justice to Russian painters and sculptors, somewhat neglecting the promise of Posen, however, in the latter category, while his hearty praise of Répine must be cordially endorsed by every one who is acquainted with the paintings here described and illustrated, and with the remarkable productions which he was engaged upon during Mr. Child's visit to Russia, but which the latter, evidently, did not see.

Mr. Clarence Cook's article on Russian bronzes is a clever résumé of a branch of Russian art with which the American public is probably more familiar than any other. We may add to his knowledge of his subject that Gentzburg is an Israelite, as well as Antokol-ky. It is a pity that he is not acquainted with some more of Gentzburg's spirited clays and bronzes, and with a certain dashing work by Posen of recent date.

Last of all comes the painter Vassili Verestchagin's delightful sketch of some points in the life of a Russian village. One can only regret that it is so brief. As it is, much reading between the lines can be done by one familiar with the subject, just as there can in the case of his paintings.

One word must be devoted to the illustrations. They are capital; but it seems as though acknowledgment ought to be made when, as in the majority of cases, they are drawn from photographs of places, or from photographed paintings by Russian artists, dealing with scenes which the illustrator could not have seen himself. These photographs are well selected, with the exception of the one entitled "Peterhof Palace." Of the palace, little but the church at one end is visible, the buildings in the foreground being merely the quarters of the suite. The volume is exquisitely got up in every detail of paper, binding, print, and general style, and will, no doubt, rank high in favor among the holiday books of the year.

Wild Beasts and their Ways. By Sir Samuel W. Baker. Macmillan & Co. 1890. Pp. xvi, 455, 8vo, with 28 illustrations.

To those who are not acquainted with the reputation of the author as a sportsman, the title of this book might be a little misleading, and Sir Samuel Baker in his preface makes haste to inform us that "the wild beasts are to be killed, and that we must thoroughly understand their ways before we can undertake their killing"; thus involving a practical study of natural history in a most interesting form. Naturalists and sportsmen alike will heartily applaud the opinion which is expressed in the following paragraph:

"It should be distinctly understood that a vast gulf separates the true sportsman from the merciless gunner. The former studies nature with keen enjoyment, and shoots his game with judgment and forbearance upon the principles of fair play, sparing the lives of all females should the animals be harmless; he never seeks the vainglory of a heavy game list. The gunner is the curse of the nineteenth century; his one idea is to use his gun, his love is slaughter indiscriminate and boundless, to swell the long account which is his boast and pride. Such a man may be an expert as a gunner, but he is not a sportsman, and he should be universally condemned."

The author begins by a retrospect, from his own experience, of the arms necessary for the destruction of wild animals, and the progress shown in their development during the last half century. He is a strong advocate, in the case of large and dangerous animals, of a heavy rifle carrying a two or three-ounce solid bullet of hardened alloy, or pure soft lead, according to the circumstances, propelled by nearly half an ounce of powder. We think he makes his contention good, though there is something amusing in the way in which this same bore of the gun and the weight of the charge is unfailingly specified on nearly every page, often in the very midst of the most exciting narrative. The work covers nearly all the large animals which form the prey of the sportsman in almost every part of the world. The classification of the animals is that of a sportsman, and not of a naturalist, as is shown in the comprehension of nearly all the larger cats, after the lion and tiger, under the head of leopards or panthers, and also in the treatment of the Cervidæ. On the other hand, there is never any difficulty in determining, in any special instance, what the species is that is under discussion.

As might be expected of such a veteran sportsman, the book fairly teems with anecdote, and the experiences recounted are often dramatic in the extreme. Literary style there is none except that inherent in straightforward narrative, with here and there a touch of rather grim humor. There is no taint of exaggeration, of self-glorification, or attempt at "writing up" the situations involved. If the writer errs at all, it is on the side of brevity and laconicism. The military manner pervades it all. In dealing with his chosen topic we regard this as an extraordinary virtue, for it alone preserves so large a collection of hunter's stories from the tediousness which is the inevitable result of the continuous use of superlatives.

The book is not only very interesting for the general reader if taken in moderate doses, but contains a vast number of facts which the student of wild animals will prize as a contribution of real value to the biography of the creatures referred to. Especially is this the case with the less-known animals, such as the hippopotamus and the Indian buffalo. We think no naturalist will lay the book down without learning something new to him and much that he could have learned in no other way. The rapid disappearance of the majority of large game, even in Africa, lends another element of value to Sir Samuel's original observations.

The illustrations by H. Dixon are hardly worthy of the book, either in design or engraving. The boar in the tailpiece at the end appears to have been copied from a mould in ice-cream. In other respects, however, the manufacture is in keeping with the reputation of the publishers.

Longmans' School Geography for North America. London and New York: Longmans & Co.

THIS is one of a series of geographic books which the London house is publishing. It was written by Chisholm for use in England in 1886, and has been revised and rearranged by Leete for use in this country. It is in octavo form, without maps, which will be presented in 'Longmans' New Atlas,' now in preparation. The closing paragraph of the prospectus is much closer to the opinion of the reviewer than such paragraphs usually are: "This text-book adapts itself to pupils of intelligence, and will be highly appreciated by all teachers imbued with a spirit for teaching real geography, not attempting to supersede their functions by dictating the length of the daily tasks or the questions that shall be asked, but furnishing a body of material so selected, arranged, and presented that its perusal is at once pleasurable, suggestive, and of substantial value." This is perfectly true. The description of the United States is novel in omitting special accounts of the several States, and taking together regions of more natural boundaries instead; and the plan works well, although it involves the previous use of a geography especially prepared for the student's own State. The student who uses the book is assumed to be already well acquainted with the State boundaries and the chief towns; he is therefore prepared to consider the actual relations of the natural subdivisions of our country, as here presented. Especial attention is given to the reasons for the location of towns and cities. Local peculiarities characteristic of districts and towns are well selected, and are not so dry as is too often the case in school-books. Thus, of New Orleans, it is said that the streets are four feet lower than high water in the Mississippi, and hence the drainage leads away from the river and not into it; for the same reason the cemeteries there are unique in having no graves, but tombs of stone or brick instead, built above the surface. Scranton and Wilkes-Barre are in a valley so rich in coal that six great railways have forced their way into it. Various styles of type are employed to emphasize the difference between headings and details; population is indicated partly by size of type, and also by numbers in parentheses giving the round thousands, according to recent censuses.

The book opens with fifty pages of physical geography, from and to which frequent references are made by foot-notes. There are, indeed, too many such notes. The introduction is good, but it is more distinctly English than the rest, and it is clearly not the special province of the authors, being more open to criticism than the remainder of the book. For example, there is a vagueness about the treatment of certain topics which one may always use as tests in geography: neap tides are described as "very low tides," which every scholar must misunderstand; the belt of high atmospheric pressure around the tropics is in-

correctly ascribed to the crowding of the equatorial overflow on the converging meridians; and the effect of the earth's rotation in deflecting the winds is very imperfectly explained. This, with more of the same kind, shows a less critical acquaintance with physical than with descriptive geography. The illustrations are varied and generally well selected; but some of the geological diagrams are much below the general standard of the book, and nearly all the wood-cuts show signs of age. There is a very good index, filling thirteen pages.

As to the adaptation of the book to our schools, there seem to be slight traces of foreign origin that could be removed to advantage. In the physical introduction, the examples might be more often American. London has an undue prominence in the latitude diagrams. Slight lapses from complete accuracy occasionally appear in the long chapter on the physical features of the United States: the folded beds of Pennsylvania are said to be mostly of the carboniferous period; Niagara is said to plunge over the northern edge of the Appalachian plateau, and a curious confusion of geological dates is found in the association of the glacial confluence of our great lakes with the vastly more ancient submergence that furnished the salt deposits of Michigan and New York; but these, again, are aside from the directly geographical topics. On the whole, the book is remarkably successful—the most successful attempt that we have seen to prepare a geography for our schools on the basis of a foreign original, and much better adapted to use in this country than some of the other publications by the same house.

From Yellowstone Park to Alaska. By Francis C. Sessions. Welch, Fracker Co. 1890. 8vo, 186, ix. pp.

From the Land of the Midnight Sun to the Volga. By Francis C. Sessions. Welch, Fracker Co. 1890. 8vo, 167, xi. pp.

The Wonders of Alaska. By Alexander Badlam. San Francisco: The Bancroft Co. 1890. 2d ed. 8vo, x., 148 pp.

MR. SESSIONS'S books appear to be the private notes or correspondence of an average traveller, printed without proper editing, and with an astonishing number of typographical errors of the most obvious kind. Their interest can hardly extend beyond the circle of the author's family and friends, and in matters of fact inaccuracies are too numerous to be specified. A serious review of such publications is hardly called for, and they may be dismissed with the remark that the value of the contents is in inverse ratio to the elegance of the printing and binding.

Mr. Badlam's volume is evidently intended for the use of the summer tourist on the now fashionable Alaskan excursions. For this it is well fitted. The illustrations are excellent—nothing equal to them has appeared in any of the recent publications on the Territory; and the subjects selected for illustration are fresh and unhackneyed. The text contains nothing novel, but is a fairly interesting presentation of the data required for such a guide-book, and it is provided with an excellent series of small maps covering the route of the steamers. For the entertainment of his readers Mr. Badlam has included some stories, such as the account of the apocryphal "Silent City" and other visions alleged to have been detected in the mirages about the Muir Glacier, as well as certain references to living mammoths in the interior of the country, which as hoaxes are hardly amusing enough to have been embodied in a book, while it is not within the range of probability that any one should take them seriously.

Notas de Viaje. (Colombia y Estados Unidos de América). Por Salvador Camacho Roldan. Bogotá: Librería Colombiana. 1890.

IT is not often that we are called upon to see ourselves as we appear in the Spanish-American mirror. Guillermo Prieto has written at length of his travels in the United States, and more recently a volume has appeared from the pen of Ireneo Paz on the same subject; if there have been other works of the sort lately issued by a South American publisher, the total lack of literary commerce between the two halves of our hemisphere has prevented any notice of them in this country. Now comes Señor Camacho Roldan with a substantial addition to the meagre list, a book of 900 pages, more than one-third of which, however, is taken up with his journeyings in Colombia and the Isthmus. His route in the United States led him from New Orleans to Chicago, St. Louis, Cincinnati, Pittsburgh, New York, and Washington. His chapters are very largely filled with an account of his itinerary, historical matter drawn from the most obvious sources, a mass of commercial and industrial statistics, together with some remarks on our larger questions of the day. The whole betrays more the commendable industry of a compiler and reader of our daily press than serious study and close observation. Our social life, our public and private manners, our municipal governments, our literature, are matters scarcely touched upon. The author, it is true, faithfully serves notice in his preface that his book will be found to contain only superficial and random notes, so that it would not be fair to judge him by too high a standard. What he writes about us is conceived in all too admiring a spirit, and the fear will lurk in the breast of the judicious reader that if he had known us better, he would not have praised us at just the points he did.

As bearing on questions at present much discussed, we may cite his opinion that our manufacturers who are seeking a market in South America are indulging in a "false hope" if they think they will be given a sentimental preference over their European competitors. The author also believes that the Pan-American Congress principally served to emphasize the blindly selfish nature of our public policy. In Pittsburgh he was shown articles of glassware the price of which seemed to him very high; some months afterwards he saw the same things in Paris, exhibited as American products, and priced at surprisingly lower figures. This may perhaps be written in Spanish without being called a "lie" or a "conspiracy."

Far West Sketches. By Jessie Benton Frémont. Boston: D. Lothrop Co. 1890.

MRS. FRÉMONT'S vivacious and familiar sketches of incidents in her strange life have hitherto been welcomed, and in the present little volume she does not fall at all short of the first requisite in books of the sort, the power to be entertaining. Here she has collected a few incidents of California life when she was living near a mine which her husband had charge of, in the days before civilization had been established in the region. The most exciting adventure is that in which "the League" attempted to "jump" the Colonel's mine, but were foiled by a young English boy staying with the family, who stole away on his pony over the mountains and brought help from a neighboring community and established communication with the Governor. In this the element of disorder and danger is vividly and simply brought out; but more pleasing sketches illustrate the womanly character of the author, who made a home in that wild country which was a source of benevolence and an example to all about. Her accounts of the Christmas feast, of the camping out, with the warning from the friendly Indian chief of immediate danger, or the escape from the Chinese village on the gallop; and in particular the power with which Mrs. Frémont seizes the salient traits of individuals and photographs them on the page—are excellent. The poor whites, the wild Kentuckian, the faithful servant, the whole varied human nature that gathered into every eddy of the first invasion of California, are set before us as they were in a single typical settlement.

The truth of such plain and unpretending reminiscences is worth much to the reader who would know something of the ways of Western life, and Mrs. Frémont is herself an example of what hold a woman had on the heart and respect of the poor women and rough men. The whole volume, though small, is a large chapter out of real life on new and most interesting terms. Perhaps we should add that students of "thought transference" will find a case here in which Mrs. Frémont believes she had a message from her husband at a critical moment of his career, when he was thousands of miles away.

BOOKS OF THE WEEK.

Adams, C. F. Richard Henry Dana. 2 vols. Boston: Houghton, Mifflin & Co. $4.
American Sonnets, Selected and Edited by T. W. Higginson and E. H. Bigelow. Boston: Houghton, Mifflin & Co. $1.25.
Anstey, F. Voces Populi. Longmans, Green & Co. $1.75.
Atkins, F. A. Moral Muscle. Fleming H. Revell. 50 cents.
Austin, Jane G. Dr. Le Baron and His Daughters. Boston: Houghton, Mifflin & Co. $1.25.
Balch, Elizabeth. Glimpses of Old English Homes. Macmillan & Co. $3.50.
Bissell, Mary Taylor. Household Hygiene. N. D. C. Hodges.
Bonvet, Marguerite. Sweet William. Chicago: A. C. McClurg & Co. $1.50.
Brackett, J. R. The Negro in Maryland. Baltimore: N. Murray.
Breton, J. The Life of an Artist: An Autobiography. D. Appleton & Co. $1.50.
Century Magazine (May-October), 1890. The Century Co.
Clark, Prof. W. Savonarola: His Life and Times. Chicago: A. C. McClurg & Co. $1.50.
Cleveland, Cynthia E. His Honor; or, Fate's Mysteries. The American News Co. $1.50.
Coffin, C. C. Freedom Triumphant. Harper & Bros.
Cordner, Elizabeth P. Christmas Stories and March Violets. Boston: George H. Ellis.
Cunningham, H. S. Wheat and Tares. Macmillan & Co. $1.25.

JUST READY:

PERRY'S HISTORY OF GREEK LITERATURE.

By THOMAS SERGEANT PERRY, author of 'English Literature in the XVIIIth Century,' etc.

Beautifully illustrated. Sq. 8vo, $7.50.

A philosophical account of the growth of Greek literature, and of its relations to the physical surroundings and political and social history of the people. In this setting appear the outlines of the great masterpieces, with English translations of their more interesting or representative passages.

It is believed that the man who knows little or no Greek may by this book put himself in closer contact with the spirit of Greek literature than most students of the language have obtained; and also that the college-bred man who got from his study of these classics in the original but faint and distorted views of their beauties will here find assistance in extending and organizing his knowledge.

Games and Sports,

Young Folks' Cyclopædia of.

By JOHN D. CHAMPLIN, JR., and ARTHUR E. BOSTWICK. 12mo, $2.50.

This book, forming a third volume of the well-known "Young Folks' Cyclopædia" series, is intended to be a compendium of all kinds of recreations, including indoor and outdoor games, athletic sports, simple chemical and mechanical amusements, and every similar thing that can interest a wide-awake boy or girl. Where standard rules are accessible, they have been given word for word, thus making the book valuable as a work of reference for adults in case of dispute. Other features are the introduction of a brief historical sketch at the end of each article, the description of some foreign varieties of many of the games, and the attempt at a thorough system of etymology and derivation of all technical terms, as in the preceding volumes of the series.

New and cheaper edition of

Famous Single and Fugitive Poems.

Dyspepsia

HORSFORD'S

ACID PHOSPHATE.

In dyspepsia the stomach fails to assimilate the food. The Acid Phosphate assists the weakened stomach, making the process of digestion natural and easy.

Dr. R. S. McCOMB, Philadelphia, says: "Used it in nervous dyspepsia, with success."

Dr. W. S. LEONARD, Hinsdale, N. H., says: "The best remedy for dyspepsia that has ever come under my notice."

Dr. T. H. ANDREWS, Jefferson Medical College, Philadelphia, says: "A wonderful remedy, which gave me most gratifying results in the worst forms of dyspepsia."

Descriptive pamphlet free.

Seashore Lands.

ON THE MAINE COAST AND OTHER PARTS OF THE NEW ENGLAND SHORE. Having made a specialty of these lands for over ten years, I act as agent for purchase and sale. A number of beautiful shore, island, and peninsula properties on Penobscot Bay, on the "Camden Shore," at "Islesboro," the Fox Islands, and the other principal points now being rapidly developed. These lands generally range in acreage from parcels of 10 acres to 300 acres, have beautiful rocks, trees, beaches, and harbors, and comprise some of the few remaining tracts now purchasable at prices approximating farm values, and offer variously some of the best opportunities for gentlemen wishing independent estates for summer occupancy or for investment. For details, circulars, photographs, and particulars address

J. Murray Howe, 27 School St., Boston, Mass.

Coast of Maine.

CAPE ROSIER.

The lands of the "Cape Rosier Associates" on Penobscot Bay, 50 miles nearer Boston and the West than Bar Harbor, Mt. Desert, are offered for sale in parcels of five and ten acres and upwards. These lands comprise over ten miles of almost continuous shore-frontage in one of the boldest and most beautiful sections on the coast, twelve hours' journey from Boston. They front upon five harbors, have beautiful rocky shores, beaches, woods, and mountain views. The drives along the shores and among the hills are very varied and beautiful. New wharves have been built, and new connections with daily trains and steamboats established. In these lands is offered an exceptional opportunity to purchase for very small sums fine and perfectly protected seashore estates. The lands will not be sold for speculation or in small lots.

BOOK, STATIONERY, AND ART STORE,

31 West Twenty-third Street, New York.

CHOICE BOOKS AND NOVELTIES.

VIGNETTE SERIES.

The publishers have spared neither pains nor expense to render the volumes in this remarkable series the most beautiful editions in existence of the works selected for publication.

Lucile. OWEN MEREDITH.

Illustrated by FRANK M. GREGORY.

The Princess and Other Poems. TENNYSON.

Illustrated by CHARLES HOWARD JOHNSON.

Faust. GOETHE.

Anster's Translation: Illustrated by FREDERICK J. BOSTON.

Lalla Rookh. MOORE.

Illustrated by THOMAS MCELVAINE.

Each is a remarkably beautiful 12mo volume, most profusely illustrated by new half-tone engravings after original designs made especially for the work. Many of the illustrations are full page, and the remainder are of various sizes and odd shapes, and are set in the text in the French style.

Half cloth, orchid and full cloth bindings, each, $1.50.

Also offered in a variety of more costly and attractive bindings, for a full description of which send for catalogue.

A LOYAL LITTLE RED-COAT.

A Story of Child-life in New York in 1783 and 1784.

By RUTH OGDEN.

With more than sixty vignette illustrations after original designs by HARRY A. OGDEN, the well-known delineator of American life in colonial times.

Illustrated in a profuse and beautiful manner, such as has not been attempted previously in any similar book for young people.

1 vol., 4to, in a most beautiful and unique binding, cloth, with frame inclosing white panel, on which appear the figures of the "Little Red-Coat" and a soldier in full uniform. $2.00.

HANDY VOLUME EDITIONS.

The following standard works have been added to this popular series. A complete list of the volumes published previously—nearly 200 in number—can be had by referring to the regular catalogue:

SELECT WORKS OF FREEMAN: "The English Constitution"; "Select Historical Essays." 2 vols. Marryat's Famous Tales: "Midshipman Easy"; "Jacob Faithful"; "Japhet in Search of his Father"; "Peter Simple." 4 vols. Dickens's Christmas Tales: "Christmas Stories"; "A Christmas Carol." 2 vols. "Tom Jones." By Henry Fielding. 2 vols. "Poetical Works of Sir Walter Scott." 2 vols. "Sermons," By Frederick W. Robertson. 4 vols. "Complete Works of Thackeray." 36 vols. "Poetical Works of Tennyson." 11 vols. Select Works of Amelia E. Edwards: "Untrodden Peaks." 1 vol. "On the Borders of the Black Forest." 1 vol. "Up the Nile." 2 vols., 16mo. Half cloth. Price per volume, $1.00.

Half calf, French style. Price per volume, $2.00. Half crushed levant, French Style. Per volume, $2.25.

BABY SWEETHEARTS.

New verses of child-life by Helen Gray Cone. Illustrated by fac-simile of very large sketches in colors and in outline by Maud Humphrey, the artist of "Babes of the Nations."

A most attractive work and a great advance over anything of its kind previously published. It contains 12 full page illustrations by MAUD HUMPHREY, in many colors, representing children in picturesque groups or scenes. Each one of these paces is accompanied by a separate page, with original verses printed in connection with novel outline sketches of children, flowers, etc., by Miss HUMPHREY.

Large folio (size of page, 11x14 inches). Boards, $3.00.

With the 24 leaves in an exquisite portfolio in a box, $4.00.

SOME AMERICAN PAINTERS IN WATER-COLORS.

A companion to the remarkably successful collection entitled "Facsimiles of Aquarelles by American Artists."

Collections of water-color paintings by various prominent artists have been reproduced in almost perfect facsimile.

Each one of the reproductions is well worthy of framing, and when framed could hardly be distinguished from a water color.

Text by RIPLEY HITCHCOCK, author of "Etching in America," "Madonnas by Old Masters," etc., etc. Size of page, 15x20 inches.

The following Artists are represented:

WILLIAM T. SMEDLEY, ROSINA EMMET SHERWOOD, MRS. J. PAULINE SUNTER, LEON MORAN, WALTER L. PALMER, JAMES M. BARNSLEY, J. L. GEROME FERRIS, MAUD HUMPHREY.

The text accompanying each facsimile is beautifully printed in connection with a portrait of the artist, and a reproduction of a black and white sketch by the artist in each case.

Edition de Luxe.

First impressions from the original stones, with remarque in colors, and the signature of the artist, in each case forming an artist-proof edition.

In a panel on the front cover is a part of one of the facsimiles in colors.

This edition is strictly limited to 250 copies, each of which is signed and numbered. Price $35.00.

Regular Edition.

Regular impressions, without remarque or artist's signature. $12.50.

In portfolio, $15.00.

TWO LOYAL LOVERS.

By ELIZABETH WINTHROP JOHNSON.

An interesting, clever, and well-constructed story of war times, by the author of 'The Studio Arts.' Paper covers, 50 cents; Cloth, $1.00.

XXIV. BITS OF SOCIETY VERSE.

A collection of selections of society verse from DOBSON, LOCKER, LEARNED, PECK, SUCKLING, PRAED, and others of the best poets of England and America. Illustrated by 12 fac-similes of water-color designs by H. W. MCVICKAR. With portrait of MCVICKAR, and several vignette illustrations by various artists. 1 vol. 4to. Dark or white cloth, $3.00; silk, in a box, $3.50.

THE GOOD THINGS OF LIFE.

SEVENTH SERIES.

"The new volumes for the year 1890 in this popular and successful series of collections of the best illustrations, accompanied by witty, humorous, and satirical sayings, form the brightest American publication of its class."—[Life.

1 vol. oblong 4to. Bevelled boards, $2.00.

The other numbers of this series can each now be had at the same popular price of $2.00.

GOOD FORM SERIES.

Two new volumes in this popular series.

Manners, Good and Bad.

By the author of "Good Form Dinners."

This little book contains a wealth of useful hints as to what people ought to avoid in social life.

Letter Writing, its Ethics and Etiquette.

By the Rev. ARTHUR WENTWORTH EATON.

A thorough treatise upon the subject by an entirely competent authority.

Each 1 vol., 16mo, cloth. Price, each, 75 cents.

WATER-COLOR FAC-SIMILES

A most remarkable line of these well-executed copies, done in a manner that cannot be excelled.

The following subjects by MAUD HUMPHREY can be had at prices varying from $1.00 to $7 50, according to the style of mat, or whether they are prints or signed proofs: "Dandelion Time," "Little Folk Wide Awake," "Little Folk in Dreamland," and "Four Little Women." The Publishers also offer fac-similes of water-colors by such well-known artists as W. T. SMEDLEY, H. W. MCVICKAR, PERCY MORAN, ROSINA EMMET SHERWOOD, and J. L. GEROME FERRIS.

There are two humorous subjects, the "Mokeville Tennis-Match" and the "Mokeville Hunt," in the same style as the popular "Mokeville Babies."

A fac-simile that will interest all Yale and Harvard men is one representing their annual race on the Thames.

FROM BEGINNING TO END.

Comments on the life of Christ, written by ten of the most prominent clergymen of America: DR. JOHN HALL, DAVID SWING, R. HEBER NEWTON, BISHOP NEWMAN, GEORGE C. LORIMER, WILLIAM W. BOYD, ARTHUR T. PIERSON, HIRAM W. THOMAS, JOSEPH COOK, and T. DE WITT TALMAGE.

Illustrated by large photogravures after paintings by the great artists of the Christian era, including Gérôme, Doré, Da Vinci, Scheffer, Jalabert, Hunt, etc.

With heavy cloth cover. Size, 18x12 inches. In a box. $7.50.

GAMES, MANUALS OF.

Five new volumes by BERKELEY have been added to this attractive and popular series, as follows:

"Dominoes and Solitaire." "Bézique and Cribbage." "Écarté and Euchre." "Round Games, including Poker, Loo, Vingt-et-un, Newmarket, Rouge-et-Noir, Pope Joan, Speculation, etc." "Reversi and Go-Bang." Price each, 50 cents.

CALENDARS FOR 1891.

An unusually varied and attractive line of Calendars, ranging in price from 25 cents to $2.50.

Among the most noteworthy of them are:

The McVickar Calendar.

With 12 fac-similes of drawings of Society Life. By H. W. MCVICKAR.

The Child Life, Bonnie Babies' and Sweetheart's Calendars.

With designs by MAUD HUMPHREY.

Cupid's Calendar.

With designs by Mrs. J. PAULINE SUNTER, and Flora's Calendar.

With designs by LAURA C. HILLS.

Flora's Calendar can also be had with the copies of Miss HILL'S designs hand-painted in water-colors on Whatmore boards of various delicate tints.

Among the more moderate priced calendars are:

The Four Little Women Calendar.

A facsimile of a drawing by MAUD HUMPHREY, representing four little girls standing in a row and emblematic of the different seasons. In colors, on heavy cardboard, cut out in shape and scored so that it will stand on any desk conveniently. Price 50 cents.

(This novelty can be had without dates, but with Christmas mottoes, as a CHRISTMAS CARD, or with birthday mottoes, as a BIRTHDAY CARD. Price 50 cents, in either style.)

FLORA'S KINGDOM.

A remarkable novelty in the shape of a handsome portfolio, containing 12 sketches of living or per-onified flowers, etc., PAINTED BY HAND IN WATER-COLORS, on white water color cardboard of fine quality. Beautifully executed and remarkably low in price for work done by hand. Tied with white silk cord at top, bottom, and sides. Size 7x9½ inches.

Price, each in a neat box, $3.00.

"BONNIE LITTLE PEOPLE" AND "TINY TODDLERS."

Each of these is made up in exactly the same manner as "Baby Sweethearts," and with only half the illustrations. Price, boards, $1.75.

In portfolio, $2.50.

Send for NEW CATALOGUE containing full descriptions of many ART and HOLIDAY PUBLICATIONS. Mention THE NATION. On receipt of 10 cents, this catalogue and TWO COLORED PLATES or a CALENDAR will be sent to any address. Any of the above can be had of your bookseller, or will be sent to any address (at publisher's expense) on receipt of advertised price.

A NEW EMERSON BOOK.

TALKS WITH
RALPH WALDO EMERSON
WITH
A HITHERTO UNPUBLISHED PORTRAIT.

By CHARLES J. WOODBURY.
12mo, half white binding, gilt top, $1.25.

"No lover of Emerson can afford to overlook this book. He pervades it. The man himself is there."—*New York Sun.*

"Disciples of Emerson will welcome without reserve this new and very genuine addition to Emersonian literature."—*Boston Transcript.*

"The book is very handsomely made, and is daintily bound in red and white and gold."—*Louisville Courier-Journal.*

"Nothing at all comparable with these 'Talks' has yet been published by Mr. Emerson's friends. Mr. Woodbury is the one man who has caught Emerson as Boswell caught Johnson."—*Chicago Interior.*

"It is a volume which every Emersonian will feel obliged to own. It takes us as near Emerson as any one ever got."—*Christian Union.*

"As helping to complete a just estimate of Emerson as a thinker, all around the horizon, Mr. Woodbury's volume is valuable."—*Literary World.*

ROUTLEDGE'S NEW BOOKS.

A STIRRING TALE FOR BOYS.
A ROUGH SHAKING.

By GEORGE MACDONALD. With full-page illustrations by W. Parkinson. 12mo, cloth, $1.50.

Narrates the adventures and sufferings of an English lad who lost his parents in an earthquake in Italy, and who possessed a very unusual control over animals, both wild and tame.

By the author of "Pinafore."

SONGS OF A SAVOYARD.

By W. S. GILBERT. With 50 illustrations from designs by the author. 4to, cloth, $2.50.

A collection of the most popular songs from Gilbert and Sullivan's favorite operas.

A superb edition of Bulwer's masterpiece.

THE LAST DAYS OF POMPEII. By BULWER-LYTTON. With 35 full-page illustrations from designs by Frank Kirchbach and others. 8vo, cloth, $3.00.

Beautifully printed from new type on fine paper, splendidly illustrated and handsomely bound.

"*A right royal book.*"—Independent.

CHIVALRY. By LÉON GAUTIER. Translated by Henry Frith. With numerous illustrations. 8vo, cloth, $2.50.

A graphic account of the origin, customs, and peculiarities of this romantic institution, interspersed with numerous amusing anecdotes.

Defoe's immortal classic with colored illustrations.

ROBINSON CRUSOE.

By DANIEL DEFOE. With 100 illustrations by J. D. Watson and 12 full-page plates printed in colors by Ernest Nister. 8vo, cloth, $2.50.

Uniform with Andersen, Grimm, Arabian Nights, and Swiss Family Robinson previously issued in this series; the finest edition of these classics in the market.

Uniform with the Tartarin books.

KINGS IN EXILE. By ALPHONSE DAUDET. Translated by Laura Ensor and E. Bartow. With 104 illustrations from designs by Bieler, Conconi, and Myrbach. 12mo, paper, $1.25; half leather, $2.25.

"*The sureness, lightness, and deftness of Daudet's art, his constant and exquisite sympathy with nature . . . make his writings the source of a pleasure that must express itself at all, in enthusiastic hyperbole.*"—Boston Advertiser.

Uniform with the Illustrated Edition of Daudet's Writings.

DISILLUSION; or, THE STORY OF AMEDEE'S YOUTH. (*Toute une Jeunesse.*) By FRANÇOIS COPPÉE. Translated by E. P. Robbins. With 74 illustrations from designs by Emile Bayard. 12mo, paper, $1.50; half leather, $2.25.

"*Equally fascinating in its story and in the way it is told. . . . Coppée is a delightful writer. . . . This book presents him at his very best.*"—Saturday Evening Gazette, Boston.

Uniform with the above.

SISTER PHILOMENE. By EDMOND and JULES DE GONCOURT. Translated by Laura Ensor. With 70 illustrations from designs by Bieler. 12mo, paper, $1.50; half leather, $2.25.

"*A profoundly simple, profoundly pathetic tragedy, exquisitely drawn and shaded.*"—Chicago Times.

SOME OF

BRENTANO'S

New Publications

FOR 1890-91.

An Interesting Facsimile Reproduction of the Original Manuscript of

"DICKENS' CHRISTMAS CAROL."

With an Introduction by F. G. KITTON, Author of 'Dickensiana.'

Of all the Christmas tales written by Charles Dickens, none have been so generally popular as the 'CHRISTMAS CAROL'; and deservedly so, for in none are there to be found such true pathos, bright humor, and healthy sentiment, so well and artistically balanced.

Such a unique MS., possessing, as it does, so much interest both for the bibliographer and collector, as well as for the admirer of Dickens, seems suitable for reproduction in the form in which it left the author's hands; it is in the belief that it will be generally acceptable that an accurate facsimile is now produced as Dickens left it, with all his changes and corrections.

Imperial quarto (only 250 copies), printed on paper similar to that used by Charles Dickens when writing his stories. Preceded by an Introduction by Mr. F. G. Kitton, in which a very complete account is given of the writing, printing, and publishing of the book, and also some very interesting particulars of the MS. itself.

Bound in half vellum, each copy signed and numbered by the publishers, $5.00.

TERRIBLE TALES FROM THE FRENCH, GERMAN, ITALIAN, SPANISH.

The four volumes, bound in brown buckram cloth, gilt tops, boxed, $3.00.

Same, bound in half-polished morocco by Riviere, gilt tops, boxed, $7.00.

** The above are a collection of carefully selected short stories, very many of which have never before appeared in English. For ordinary humanity the terrible will always possess a fascination, and these tales are told by masters of the craft of story-telling, and are such as must prove interesting to all.

GEORGE MANVILLE FENN'S NEW BOOK FOR BOYS.

CUTLASS AND CUDGEL.

A tale of the Old South Coast of England, describing a boy's adventures aboard a Government cutter in pursuit of smugglers on the Dorset Coast, where the towering cliffs and well hidden caverns formed the strongholds of the restless men who set the laws at defiance in the days when George II. was King. Illustrated profusely by H. Schonberg.

Large crown 8vo, cloth, gilt, $1.50.

** Undoubtedly the best thing Fenn has done in the way of literature for boys; and, while exciting and intensely interesting, the story is healthy, and teaches a valuable lesson.

THE SECRETE LOG-BOKE OF CHRISTOPHER COLUMBUS.

Noted and written by himself in the years 1492-1493.

Columbus's diary of the Discovery of America, thrown overboard by him on the homeward voyage, and fished up on the 14th day of August, 1890. With reproductions of drawings by Columbus, illustrating the countries and peoples visited by him on his voyage of discovery.

With the autograph letter from Isabella of Spain to Columbus, with the royal seal attached.

Appropriate cover, in box, $3.50.

For sale by all booksellers or by the publishers,

BRENTANO'S,

5 Union Square, New York.

Littell's Living Age.

In 1891 THE LIVING AGE enters upon its forty-eighth year. It has met with constant commendation and success.

A WEEKLY MAGAZINE,

it gives more than THREE AND A QUARTER THOUSAND double-column octavo pages of reading-matter yearly. It presents in an inexpensive form, considering its great amount of matter, with freshness, owing to its weekly issue, and with a completeness nowhere else attempted,

The best Essays, Reviews, Criticisms, Tales, Sketches of Travel and Discovery, Poetry, Scientific, Biographical, Historical, and Political information, from the entire body of Foreign Periodical Literature, and from the pens of the

FOREMOST LIVING WRITERS.

THE ABLEST AND MOST CULTIVATED INTELLECTS, in every department of Literature, Science, Politics, and Art, find expression in the Periodical Literature of Europe, and especially of Great Britain.

THE LIVING AGE, *forming four large volumes a year*, furnishes, from the great and generally inaccessible mass of this literature, the only compilation that, while within the reach of all, is satisfactory in the COMPLETENESS with which it embraces whatever is of immediate interest, or of solid, permanent value.

IT IS THEREFORE INDISPENSABLE to every one who wishes to keep pace with the events or intellectual progress of the time, or to cultivate in himself or his family general intelligence and literary taste.

OPINIONS.

"It is nearly half a century since the first volume of this sterling publication came from the press, and today it stands the most perfect publication of its kind in the world. There is but one LIVING AGE, though many have essayed imitations. While their intent has no doubt been worthy, they have lacked that rare discriminating judgment, that fineness of acumen, and that keen appreciation of what constitutes true excellence, which make LITTELL'S LIVING AGE the incomparable publication that it is."—*Christian at Work, New York.*

"It is indispensable to intelligent people in this busy day."—*New York Evangelist.*

"Indeed it may well be doubted whether there exists any more essential aid to cultivation of the mind among English-speaking people. . . . No one knows its value so well as the busy man who, without it, might well despair of keeping in any way posted as to the trend of modern thought in this day of immense activity."—*Episcopal Recorder, Philadelphia.*

"It is incomparably the finest literary production of modern times. . . . It embraces within its scope the matured thoughts, on all subjects, of the truest authors and ripest scholars in Europe."—*Herald and Presbyter, Cincinnati.*

"Biography, fiction, science, criticism, history, poetry, travels, whatever men are interested in, all are found here."—*The Watchman, Boston.*

"The reader who very little that is important in the periodical domain."—*Boston Journal.*

"It may be truthfully and cordially said that it never offers a dry or va ueless page."—*New York Tribune.*

"To read it is itself an education in the course of modern thought and literature."—*Buffalo Commercial Advertiser.*

"Coming weekly, it has a great advantage over the monthly magazines and reviews."—*San Francisco Chronicle.*

"For the amount of reading matter contained the subscription is extremely low."—*Christian Advocate, Nashville.*

"It contains nearly all the good literature of the time."—*The Churchman, New York.*

"I would be cheap at twice the price."—*California Christian Advocate, San Francisco.*

"For the man who tries to be truly conversant with the very best literature of this and other countries, it is indispensable."—*Central Baptist, St. Louis.*

"In it the reader finds all that is worth knowing in the realm of current literature."—*Canada Presbyterian, Toronto.*

Published WEEKLY at $8.00 a year, free of postage.

TO NEW SUBSCRIBERS for the year 1891, remitting before Jan. 1st, the numbers of 1890 issued after the receipt of their subscriptions will be sent *gratis.*

Club Prices for the best Home and Foreign Literature

"Possessed of THE LIVING AGE and one or other of our vivacious American monthlies, a subscriber will find himself *in command of the whole situation.*"—*Philadelphia Ev. Bulletin.*

For $10.50, THE LIVING AGE and any one of the American $4 monthlies (or *Harper's Weekly* or *Bazar*) will be sent for a year, postpaid; or, for $9.50, THE LIVING AGE and *Scribner's Magazine* or the *St. Nicholas.*

Rates for clubbing more than one other periodical with one copy of THE LIVING AGE will be sent on application. Address *LITTELL & CO., Boston.*

"The most beautiful in design and brightest in selection of any Calendar yet issued."

KRUELL'S CONTEMPORARY PORTRAIT-GALLERY.

"The Nation."

1865-1890.

In commemoration of the 25th anniversary of this journal, Mr. Kruell has engraved on wood, in the highest style of the art, after a recent photograph by G. C. Cox, a portrait of the founder and present editor of the *Nation*.

Edwin Lawrence Godkin.

"*It is an admirable portrait, and the head might stand for that of one of Velasques's hidalgos.*"—Prof. Charles Eliot Norton.

The size of the block is 9x6 inches; the impression is on Japan paper, under the personal supervision of the artist, and is loosely mounted. *Only one hundred proofs* will be offered for sale, and each will be signed and numbered. Price, Ten Dollars, carriage prepaid. Address GUSTAV KRUELL, East Orange, N. J.

** Mr. Kruell offers at the same price, and in the same style, proof portraits of CHARLES DARWIN (one in his prime, one in old age), ASA GRAY, WILLIAM LLOYD GARRISON, and WENDELL PHILLIPS. The edition in these cases is limited to 200 copies for all except Gray (100).

"*Certainly we may look in vain among other graphic arts for anything comparable with these portraits.*"—The Nation, January 23, 1890.

Soule Photograph Company, Publishers,
338 Washington St., Boston, Mass.

Please mention the *Nation*.

Mr. Gladstone,

Prof. Huxley, Prof. Tyndall, Herbert Spencer, Sir Morell Mackenzie, Prof. F. Max Müller, Prof. Freeman, Cardinal Manning, Duke of Argyll, Prof. Romanes, Count Tolstoi, Rt. Hon. John Morley, Prince Kropotkin, W. S. Lilly, Archdeacon Farrar, Justin McCarthy, Prof. Bryce, Andrew Lang, and many others are among the regular contributors to the

Nineteenth Century, Fortnightly Review, Contemporary Review.

These magazines will bring you into direct contact with the master minds of the day. The list of contributors includes every writer of eminence in Europe and America, and they afford the best means of coming in touch with the best thought of the time.

They form a continuous contemporary record of modern progress, touching on all subjects of living importance, with articles by experts in special fields, and by writers qualified to carry the weight of authority with their utterances.

They are indispensable to all who would keep abreast of the best thought of the time and who would be in harmony with the most progressive ideas. They are, in fact,

Invaluable Periodicals.

"To say that these are the most valuable periodicals published in the English language is only to say what every reader knows. A man cannot keep abreast of the times as a reader, abreast of the current of historic research and review, of scientific achievement and discussion, of literary effort and criticism, of political movement and debate, of religious inquiry, progress, revision, and development, unless he is a careful reader of these publications: and they give all that the general reader can attend to, or, as a rule, desires."—*Buffalo Commercial.*

"In these Reviews the leading questions are considered by the greatest living essayists in academic completeness. There is plenty of leeroom afforded. They are profoundly interesting, especially to earnest and cultivated readers, who are in touch with the commanding issues of the day."—*The Living Church.*

"No person who has a taste for reading at all should fail to read carefully these sterling publications."—*Bankers' Magazine.*

We issue and furnish the original English edition—not reprints—printed in England and published by us by authority of the English publishers. Our prices are nearly 50 per cent. less than those of the foreign copies.

We will send sample copies and circulars with tables of contents to all mentioning the *Nation.*

PUBLISHED MONTHLY.

"*Should go in every Christmas stocking.*"

WIDE AWAKE

Beginning with the Christmas (Dec.) Number is permanently enlarged to 100 pages.

THE DECEMBER NUMBER

is a treasury of complete stories, articles, and poems, and full departments. The remarkable group of short stories include "Dudley," by Emma Sherwood Chester; "A Royal Exile," by Sally Pratt McLean Greene, with half-a-dozen pictures by W. L. Taylor; "Jasper Dowling's Legacy," by Rev. George White; "Sister Agnes's Basket," by Charlotte M. Vaile.

"*A Holiday Gift-book for* 20 Cts."

A *facsimile* reproduction of the MS. of Mrs. Hemans's "Landing of the Pilgrims," with portrait, etc., is alone worth securing and preserving.

Other entertaining articles are "Gypsies and Gypsying," by Elizabeth Robins Pennell, with the curious frontispiece portrait of Charlotte Stanley, the Gypsy Princess, from an old water-color; some beautiful "Swedish Legends"; the Hungarian folk-lore tale of "The Celestial Army."

Charming poems are headed by Graham R. Tomson's ballad, "Kevin the Fisher," with exquisite pictures by Edmund H. Garrett.

The opening serials, "Five Little Peppers Grown Up," by Margaret Sidney, "Cab and Caboose," by Kirk Munroe, and the Italian autobiography of Marietta Ambrosi, round out one of the best Holiday Magazines ever issued.

ART GIFT BOOKS.

ROMOLA.

By GEORGE ELIOT. This great historic story of Florentine life is produced in magnificent style, with SIXTY FINE PHOTOGRAVURE illustrations from photographs selected by the publishers in Florence. The paper, presswork, and binding are of the highest artistic quality. 2 vols., crown 8vo, white vellum, cloth, red and gold, gilt tops, $6.00.

A few copies only remain unsold of the édition de luxe, limited to 250 copies, bound in full vellum, 2 vols., $15.00.

HANS OF ICELAND.

Limited to 500 copies.

By VICTOR HUGO. A new translation by A. L. Alger. It is exquisitely illustrated with etchings, photogravures, and half-tone plates from designs by eminent French artists. 1 vol., crown 8vo, half Rox., gilt tops, $5.00.

NIGHT SONG.

By CHARLES REINICK, illustrated by Henry Sandham. This song or poem is unique, from the fact that each and every line suggests a separate picture to the artist's mind. These illustrations, 16 in number, are reproduced by our own celebrated photogravure process from paintings by Mr. Sandham, together with an equal number of fine pen and ink sketches accompanying the text of the song. 1 volume, royal quarto, cloth, $7.50.

DREAMS OF THE SEA.

A fine holiday souvenir, appropriate alike for old and young, consisting of choice selections from the most celebrated writers, including Longfellow, Whittier, etc., with unique illustrations printed in delicate tints. An exquisite novelty, combining high artistic merit with a fine religious sentiment. 1 vol., oblong quarto (14 1-2x8 inches), $2.50.

THE PINE TREE COAST,

By SAMUEL ADAMS DRAKE, author of 'Nooks and Corners of the New England Coast,' describes and illustrates the unrivalled story, quaint outdoor life, and romantic scenery of the more than 2,000 miles of Maine seaboard. Thoroughly illustrated. 1 vol., 8vo, cloth, gilt, $3.00; half Rox., $3.50.

For sale by all booksellers, or sent, postpaid, on receipt of price by the publishers,

BENJ. R. TUCKER,

P. O. Box 3366, Boston, Mass.,
Has just published

"A novel that has no equivalent in the literature of this century."—CHARLES MONSELET.

MY UNCLE BENJAMIN

A Humorous, Satirical, and Philosophical Novel.
BY CLAUDE TILLIER.
Translated from the French by Benj. R. Tucker. With a Sketch of the Author's Life and Works by Ludwig Pfau.

This novel, though it has enjoyed the honor of three translations into German, has never before been translated into English. It is one of the most delightfully witty works ever written. Almost every sentence excites a laugh. It is thoroughly realistic, but not at all repulsive. Its satirical treatment of humanity's foibles and its jovial but profound philosophy have won its author the title of "the modern Rabelais."

312 Pages.

Price: In cloth, $1.00; in paper, 50 cents.

MR. TUCKER ALSO PUBLISHES:

THE KREUTZER SONATA. By COUNT LEO TOLSTOI. With an appendix containing the author's defence of his work. Cloth, $1.00; paper, 50 cents.

THE RAG-PICKER OF PARIS. By FELIX PYAT. 325 pages. Cloth, $1.00; paper, 50 cents.

WHAT'S TO BE DONE? By N. G. TCHERNYCHEWSKY. A Nihilistic romance written in prison. 328 pages. Cloth, $1.00; paper, 35 cents.

For sale by all booksellers; or any book mailed by publisher on receipt of price.
MENTION THIS PAPER.

HER GREAT AMBITION; A Story. By ANNE RICHARDSON EARLE. 16mo, cloth. Price $1.00.

LOUISA M. ALCOTT; HER LIFE, LETTERS, AND JOURNALS. Edited by EDNAH D. CHENEY. With portraits and views of the Alcott home in Concord. One volume, 16mo, uniform with 'Little Women.' Price $1.50.

"Even those most familiar with Miss Alcott's later life will find this fascinating new biography of her a revelation. She was more than a clever, brilliant writer—she was one of the noblest women of her time. Her life is one long story of self-sacrifice, of unswerving devotion to her family."—*Transcript.*

Books of Poems.

IN THE GARDEN OF DREAMS; LYRICS AND SONNETS. By LOUISE CHANDLER MOULTON. With illustrations by H. Winthrop Pierce. 16mo, uniquely bound in white and green cloth, gold-stamped. Price $1.50.

Says the *Congregationalist:* "Open the book at random, almost, and you are struck by the dignity of the thought, even at the gayest, and by the sustained grace of its phrasings. Some of these individual poems are actual gems, and the book is a credit to American literature."

POEMS. By EMILY DICKINSON. Edited by Mabel Loomis Todd and T. W. Higginson. 16mo. Bound in drab and white cloth, with gilt designs, gilt top. Price $1.50.

"It is believed that the thoughtful reader will find in these pages a quality more suggestive of the poetry of William Blake than of anything to be elsewhere found—flashes of wholly original and profound insight into nature and life; words and phrases exhibiting an extraordinary vividness of descriptive and imaginative power."

HELEN JACKSON'S COMPLETE POEMS. Including "Verses" and "Sonnets and Lyrics" in one volume. 16mo. Price $1.50; white cloth, gilt edge, $1.75; calf, padded, $4.00; morocco, padded, $3.50.

"They have the rare merit of thought and expression."—*R. W. Emerson.*

VERSES. A FEW MORE VERSES. By "SUSAN COOLIDGE." Square 16mo, cloth, $1.00 each.

"Many of the sweet and tender poems which make up the contents of the little volume of 'Verses' have already found lodgment in the hearts of a multitude of readers."—*Transcript.*

For Daily Thought.

THE DAY'S MESSAGE. A brief selection of Prose and Verse for each day in the year. Chosen by SUSAN COOLIDGE. 16mo, white and green cloth, price $1.00; full gilt, price $1.25; padded calf, price $3.50; padded morocco, price $3.00.

The busy days of life are not so busy but that there is time in each for the reading of one compact little sentence of wisdom or comfort, and none need such a little, well-selected morsel as much as those who have no time to choose it for themselves.

DAILY STRENGTH FOR DAILY NEEDS. "As thy days so shall thy strength be." A selection for every day in the year. Selected by the editor of 'Quiet Hours.' 18mo, price $1.00; white cloth, gilt, $1.25; calf, padded, $3.50; morocco, padded, $3.00.

For the Young Folk.

ROBERTS BROTHERS, BOSTON.

BEAUTIFUL BOOKS

SUMMERLAND

By MARGARET MACDONALD PULLMAN.

With 63 Original Illustrations, engraved on wood by Andrew. Size 9½ x 13¼ inches. Oblong quarto. Artistic Cover of two colored cloths, beautifully ornamented, full gilt, $3.75. Turkey morocco, $9; tree calf, $10; English seal style, $7.

A beautiful collection of wood engravings, interpreting in a poetic and artistic way the delights of summer. Each picture is prefaced by a sentiment, and the whole book is a fine example of refined taste admirably expressed.—*N. Y. Observer.*

DAYS SERENE

Original illustrations of verses from the poets, by MARGARET MACDONALD PULLMAN. Engraved on wood by Andrew. Oblong quarto. Emblematic cover designs. Twenty-six full-page original illustrations. Full gilt. Size 10½ x 14½. Cloth, $5; Turkey morocco. $12.50; tree calf, $12.50; English seal style, $9.00.

Miss Jerome's Exquisite Art Books

FROM AN OLD LOVE LETTER

Designed and illuminated by IRENE E. JEROME, Antique covers, tied with silk, boxed, $1.00.

Miss Jerome's latest is truly a gem of the first water. She has chosen a new field for her efforts, and produced effects as novel as they are beautiful. Each page contains an apt quotation from the New Testament, in decorative lettering surrounded by an original design, illuminated like the leaves of an antique missal in colors and gold. No more appropriate Christmas gift could be devised.—*Peterson's Magazine.*

NEW EDITIONS OF

In a Fair Country. Gold cloth, $6.00.

Nature's Hallelujah. Gold Cloth, $6.00.

One Year's Sketch Book. Gold cloth, $6.00.

A Bunch of Violets. Gold cloth, $3.75.

Message of the Bluebird. Blue and white cloth, $2.00; Palatine boards, $1.00.

The Wooing of Grandmother Grey

By KATE TANNATT WOODS.

Illustrated by Copeland, engraved by Andrew. Oblong 4to. Gold cloth, $2.00.

"The poem and pictures combine to form one of the sweetest and most effective things we have seen for a long time. The reminiscences of Grandmother Grey stand out in a form strongly real, and the old, old story gains new beauty from her dear old face and the sweet, lingering accents of her tender words."

BABY'S KINGDOM

Wherein may be chronicled, as memories for grown-up days, the Mother's Story of the Progress of the Baby. Designed and illustrated by Annie F. Cox. Oblong. Gold Cloth, $3.75. Turkey Morocco, $9.00.

'Baby's Kingdom' is rich in illustrations, texts appropriate to the growing years, poems and quotations from favorite authors, and dainty designs that are artistic in the extreme. In addition to its beautiful exterior and interior, its usefulness will be recognized by every fond mother—and what mother is not fond? — *Boston Times.*

ALL AROUND THE YEAR—1891

Lee & Shepard's New Calendar

Designed in Sepiatint and Color by J. Pauline Sunter. Printed on heavy cardboard, gilt edges, with chain, tassels, and rings. Size, 4¼ x 5½ inches. 50 cents.

Nothing more dainty, more artistically beautiful was ever conceived of by even these publishers, who excel in all such work. Let those who are looking for something that is perfect put 'All Around the Year' at the head of their list.—*Christian at Work.*

Sold by all booksellers, and sent by mail, postpaid, on receipt of price.

Illustrated Descriptive Catalogue mailed free.

Lee & Shepard, Publishers,

BOSTON.

G. P. Putnam's Sons,

27 and 29 West 23d St., N. Y.,

PUBLISH THIS WEEK:

A Young Macedonian in the Army OF ALEXANDER THE GREAT. By the Rev. ALFRED J. CHURCH, M.A., author of 'To the Lions,' etc., etc. 12mo, cloth, with 16 illustrations, printed in colors, $1.25.

"The historical characters, as well as the imaginary personages of the story, are brought before us with all the skill of a scholar who is perfectly familiar with the history and literature of the period with which he deals."—*London Spectator.*

Rose Brake Poems. By DANSKE DANDRIDGE, author of 'Joy and Other Poems.' 16mo, cloth, 75 cents.

RECENTLY PUBLISHED;

Where We Went and What We SAW. A flying trip through Egypt, Syria, and the Ægean Islands. By CHARLES MCCORMICK REEVE. Octavo, cloth, $1.75. *(Nearly ready.)*

Under Orders; The Story of a YOUNG REPORTER. By KIRK MUNROE author of 'The Flamingo Feather,' 'Derrick Sterling,' 'Derrymates,' 'Campmates,' etc. Illustrated, $1.25.

Lorna Doone. A Romance of Exmoor. By R. D. BLACKMORE, author of 'Cradock Nowell,' etc. Authorized American issue; with new Preface specially written by the author for this edition. The Exmoor Edition, 3 vols., 16mo, $3.75.

"This 'Lorna' visits you not by force of savage ravishers, but under escort of gentlemen, fair knights of the order of Copyright. And if you ask her how it is—when so many better tales are told, and die upon the fitful wind—that her simple story still has life and buoyancy on the lips of men, she answers not, but drops her eyes, and wonders more than you do."—*Extract from Author's Preface.*

Holland and Its People. Vandyke Edition. By EDMONDO DE AMICIS. Translated from the Italian by Caroline Tilton. New, revised edition, printed from new plates with 84 illustrations, gilt top, $2.25.

Gustavus Adolphus and the STRUGGLE OF PROTESTANTISM FOR EXISTENCE. By C. R. L. FLETCHER, M.A. (No. 11 in the *Heroes of the Nations* series, uniform with Clark Russell's 'Nelson.') Large 12mo, fully illustrated, cloth, $1.50; half morocco, $1.75.

Literary Gems: A series of literary productions, complete in small compass, which have been accepted as classics of their kind, and which are entitled to the most attractive form that can be given to them. Each "Gem" is presented in a separate volume, tastefully printed in 32mo, and attractively buund in full morocco, gilt top, with a frontispiece in photogravure. Per volume, 75 cents. Six volumes, in box, $4.50.

SECOND SERIES.

1. THE NIBELUNGEN LIED. By Thomas Carlyle. 2. THE KING OF THE GOLDEN RIVER. By John Ruskin. 3. THE SCIENCE OF HISTORY. By James Anthony Froude. 4. SONNETS FROM THE PORTUGUESE. By Elizabeth B. Browning. 5. THE SCHOOL FOR SCANDAL. By Richard Brinsley Sheridan. 6. NOTHING TO WEAR. By William Allen Butler.

"The Putnams, who are always devising charming surprises in the way of delicate bindings, have just issued their 'Literary Gems,' which rival the now familiar 'Knickerbocker Nuggets' in daintiness."—*Springfield Republican.*

Epithalamium. A Wedding Hymn. By MARY MATHEWS BARNES. Small quarto, with eight full-page illustrations from designs by Dora Wheeler. Handsomely bound in vellum. $5.00.

Fra Lippo Lippi. A Romance of Florence in the 15th Century. By MARGARET VERE FARRINGTON, author of 'Tales of King Arthur,' etc. With 14 full-page illustrations in photogravure. 8vo, cloth extra, gilt top, $2.50.

*** *List of illustrated books for young people, catalogue of holiday publications, Catalogue No. 7, of Old and Rare English Books, and prospectus of the Nuggets, Heroes, and Nations Series sent on application.*

E. P. DUTTON & CO.,

PUBLISHERS,

31 West Twenty-third Street, New York.

RECENT ADDITIONS TO

WARD, LOCK & CO.'S LIST

New edition of

Malthus on Population: An Essay on the Principle of Population, and its Effects on Human Happiness. By the Rev. Dr. Malthus. With full analysis and critical introduction, etc. 8vo, cloth, $2.00.

This edition will be found to be the best, as it is the cheapest, ever offered to the public.

A Dead Man's Diary: Written after his Decease. With an Introduction by G. T. Bettany, M.A. 12mo, cloth. $1.00.

"Strong and beautiful is 'A Dead Man's Diary.' The spiritual vision is lofty, and the moral tone sound, sweet, and pure throughout. . . . Very vivid and fearful is the chapter on 'The dead who die.'"—*The (New York) Christian Union.*

"The story is at times brought up to an almost unendurable pitch of interest. . . ."—*The (London) Christian World.*

"One of the most striking books of the class to which we are referring is 'A Dead Man's Diary. . . . It shows clearly how a lost soul may be purified and recovered, and the style in which the book is couched is at once simple and effective."—*Daily Chronicle.*

A New Volume of Drawing-Room Plays.

Short Plays for Drawing-Room Performance. Specially written for amateurs by F. C. Burnand, R. André, F. C. Broughton, Sir Gilbert Campbell, and other popular authors. With illustrations by R. André, Matt Stretch, etc. Crown 8vo, cloth gilt, $1.00.

Smartly and agreeably written, with crisp, telling dialogue and good "situations," these short plays are just the thing to make a Christmas or birthday party go off agreeably; and as they require no great preparation in the way of costume, and are pretty independent of scenery, they are exactly suited to the requirements of a company of amateurs.

Our National Cathedrals: Their History and Architecture from the Earliest Records to the Present Time; with Special Accounts of Modern Restorations. With 189 steel plates and 150 wood engravings in the text. Very handsomely and strongly bound in three-quarters leather, extra cloth, gilt sides and gilt tops. 3 volumes, 4to, $15.00.

The Publishers in issuing this work desire to point out that it contains, in addition to over one hundred and fifty illustrations in the text, the beautiful series of steel engravings originally executed for "Winkles' Cathedrals." The description of the Cathedrals is, therefore, quite unique in the number and variety of the representations of their various aspects during the present century. It is also the only work of its kind which includes, in addition to the new English cathedrals, an account of the scotch and irish cathedrals. The narrative of the modern transformations, improvements, or in some cases injuries, which have taken place in the cathedrals, are also a very distinctive feature of the work.

An Inexpensive Library of Indispensable Books.

THE MINERVA LIBRARY

OF FAMOUS BOOKS.

Describing the Emblems, Thoughts, and Subjects, common to the Japanese.

BY

JAMES L. BOWES,

Honorary Consul for Japan at Liverpool; Author of "Japanese Marks and Seals," "Japanese Enamels," and joint author of "Keramic Art of Japan," &c.

A history of Japanese Pottery, with a descriptive Catalogue of over 1,000 classified specimens in the Bowes Museum, with the whole of the Marks and Seals in facsimile. Copiously illustrated with appropriate subjects. This edition, limited to 500 copies, contains one colored and 15 autotype plates, with 300 engravings, and 500 Marks and Seals. Price £2 12s. 6d. net.

A Special Edition, on Japanese paper, containing 67 plates, 23 of them in colors and gold; of the latter, some, necessary to complete the sequence, are printed from stones used for "Keramic Art of Japan." This edition, limited to 150 copies, £6 6s. net.

ENGLISH PRESS NOTICES.

"In paper, type, illustrations, binding and treatment, his volume is worthy of its subject and its author—we could scarcely give it higher praise."—*The Times.*

"Compiled regardless of cost . . . remarkably free from mistakes. For a long time to come will stand as the most sumptuous catalogue of the most extensive Japanese Collection in England, if not in the world."—*The Art Journal.*

"Not only one of the most beautiful, but one of the most useful and rational books upon Japanese work which has been published in England."—*Builder.*

"It must always remain an indispensable authority."—*The Academy.*

"Let us repeat our admiration for this beautiful and enticing volume."—*Saturday Revi w.*

"The volumes have not been surpassed in the history of amateurism . . . the outcome of additional opportunities for debating about styles with native connoisseurs. As such it is unique."—*Architect.*

"Mr. Bowes gives another proof that he knows more about Japanese ware than any other European does. A book of first authority."—*Scotsman.*

"A text book to suggest new ideas to our designers. Mr. Bowes's latest book takes its place as a standard work in the English language."—*Liverpool Mercury.*

"Mr. Bowes's work is second only to his Collection in importance as a complete illustration of the beauty, diversity, and historic value of Japanese Art."—*Pottery Gazette.*

"Mr. Bowes—'Japanese Bowes,' as he is called by reason of his Consulship and his wonderful Collection—takes high rank. A contribution of the utmost value to the collector and the student."—*Graphic.*

"So thoroughly well known in the Japanese world of art that it is with pleasure the connoisseur hears that he has added to his former popular and admirable works. Collectors outside Japan have done better than those on the spot. The Notes are positively delightful, and the reader revels in them."—*China Telegraph.*

"A work alike beautiful and interesting. Apart from its obvious qualities, I rejoice in all that tends to spread the knowledge and elevate further the justly high reputation of Japan in England."—The Right Hon. W. E. Gladstone.

"Mr. Bowes, who has already done more to spread an accurate knowledge of Japanese art than any living Englishman, has rendered another notable service to connoisseurs by this beautiful and scholarly book."—*Manchester Guardian.*

"Nowhere can be found such a complete collection of masterpieces in pottery as that of which Mr. Bowes is the fortunate possessor, and which he describes with a profound knowledge of the subject. The volume is one in which connoisseurs will delight."—*St. James's Gazette.*

"Abounding in entertaining, curious, and instructive desultoriness."—*Liverpool Courier.*

"They are as beautiful as they are diverse; the book, with its sumptuous reproductions, can scarcely fail to charm both the connoisseur and the student of Eastern art."—*Review of Reviews.*

"Invaluable for the purposes of identification and classification."—*Birmingham Post.*

"Mr. Bowes has had opportunities which very few possess. Of the utmost value to the student of Japanese pottery."—*Building News.*

"The great service which Mr. Bowes has rendered to the art of Japan is that he has distinguished between the false and the true."—*Liverpool Post.*

SIMPKIN, MARSHALL & CO., London.

EDWARD HOWELL, Liverpool.

Houghton, Mifflin & Co.'s New Books.

The Song of Hiawatha.

Illustrated with 22 full-page Photogravures, and about 400 text Illustrations of Indians, Indian costumes, arms, etc., by Frederic Remington, and a Portrait. Bound in buckskin. 8vo, $6.00.

Our Old Home.

From new plates, with 31 Photogravures of English scenery, churches, etc., and a Portrait of Hawthorne. 2 vols., 16mo, gilt top, $4.00; half calf, $7.00; polished calf, $9.00.

The Vision of Sir Launfal.

An entirely New Edition. With Photogravure Illustrations by Garrett, and a Portrait of Mr. Lowell. Tastefully bound, $1.50.

Over the Teacups.

By Oliver Wendell Holmes. 12mo, uniform with Holmes's Works, gilt top, $1.50; also in fancy style, $1.50.

BIOGRAPHY.

Richard Henry Dana.

By Charles Francis Adams. With Portraits. 2 vols. crown 8vo, $4.00.

Dorothea Lynde Dix.

By Francis Tiffany. With a Steel Portrait. Crown 8vo, $1.50.

Cardinal Newman.

By Richard H. Hutton, editor of *The Spectator*, London. Crown 8vo, $1.00.

HISTORY.

The Genesis of the United States.

A Narrative of the Movement in England, 1605–1616, which resulted in the Plantation of North America by Englishmen, disclosing the contest between England and Spain for the possession of the soil now occupied by the United States of America. By Alexander Brown. With a Map, 100 Portraits, etc. 2 vols. 8vo, $15.00.

Economic and Social History of New England, 1620-1789.

With an Appendix of Prices. By William B. Weeden. 2 vols. crown 8vo, $4 50.

Origin and Growth of the English Constitution.

An Historical Treatise in which is drawn out, by the Light of the most Recent Researches, the Gradual Development of the English Constitutional System, and the Growth out of that System of the Federal Republic of the United States. By Hannis Taylor. *Second Edition.* 8vo, gilt top, $4.50.

For sale by all booksellers. Sent, postpaid, on receipt of price by the Publishers.

Houghton, Mifflin & Co., Boston.

11 East Seventeenth St., New York.

MACMILLAN & Co.'s NEW BOOKS.

Just Published. Mrs. Oliphant's New Book. Profusely Illustrated.

ROYAL EDINBURGH.

HER SAINTS, KINGS, AND SCHOLARS.

By MRS. OLIPHANT,

Author of 'Makers of Florence,' 'Makers of Venice,' etc.

With Illustrations by GEORGE REID, R.S.A.

In one volume, crown 8vo, $3.00.

Édition de Luxe. Super royal 8vo; price to be obtained from the booksellers on application.

With 150 Illustrations by Hugh Thomson. 12mo, cloth gilt, $2.00.

THE VICAR OF WAKEFIELD.

By OLIVER GOLDSMITH.

With 150 Illustrations by HUGH THOMSON, and a Preface by AUSTIN DOBSON.

12mo, cloth extra, gilt, gilt edges, $2.00.

Also a limited edition on large paper.

*** Uniform with the Randolph Caldecott edition of Washington Irving's 'Bracebridge Hall' and 'Old Christmas.'

Now ready, with numerous illustrations, 4to, $3.50.

GLIMPSES OF OLD ENGLISH HOMES.

By ELIZABETH BALCH, author of an 'Author's Love.' With numerous illustrations. 4to, cloth extra, gilt, $3.50.

"There are some fifty illustrations, including views, portraits, and copies after famous pictures, the whole forming a handsome and beautifully printed volume, which by reason of its chattiness and the mass of out-of-the-way information it conveys is thoroughly and delightfully readable."—*Boston Saturday Evening Gazette.*

Just Published. Sir Samuel W. Baker's New Book. Cloth extra, gilt, $3.50.

WILD BEASTS AND THEIR WAYS.

IN ASIA, AFRICA, AND AMERICA. By Sir SAMUEL W. BAKER, F.R.S., etc., author of 'Albert Nyanza,' etc. With numerous illustrations. Large 12mo, cloth extra, gilt, $3.50.

"A book which is destined not only to serve as a chart and compass for every hunter of big game, but which is likewise a valuable study of natural history, placed before the public in a practical and interesting form."—*New York Tribune.*

Uniform with 'Stratford-on-Avon,' by Andrew Lang. 12mo, cloth, $2.00.

THE RUINED ABBEYS OF YORKSHIRE.

By W. C. LEFROY. With numerous Illustrations by A. BRUNET DESAINES and H. TOUSSAINT. 12mo, cloth extra, $2.00.

New Book by the Rev. Prof. Mahaffy.

THE GREEK WORLD UNDER ROMAN SWAY.

Forming a sequel to 'Greek Life and Thought.' By the Rev. J. P. MAHAFFY, D.D., Professor of Ancient History in Trinity College, Dublin. 12mo, $3.00.

Illustrated by Joseph Pennell. 4to. $7.50.

CHARING CROSS TO ST. PAUL'S.

By JUSTIN HUNTLEY MCCARTHY. With twelve Photogravure Plates and numerous illustrations in the text by Joseph Pennell, author of 'Pen Drawing and Pen Draughtsmen.' 4to. $7.50.

NEW EDITIONS.

A TOUR IN HOLLAND AND GERMANY.

By the Rev. J. P. MAHAFFY, D.D.

Author of 'The Greek World Under Roman Sway,' etc. With illustrations by J. E. ROGERS.

New and Cheaper Edition, 12mo, cloth, extra, $2.00.

THE TREASURY OF SACRED SONG.

Selected from the English Lyrical Poetry of Four Centuries. With Notes, Explanatory and Biographical, by FRANCIS T. PALGRAVE, Professor of Poetry in the University of Oxford. An edition printed on the Oxford India paper, cloth, $3.00; the same bound in full Russia, $5.00.

"A more delightful collection it would be difficult to conceive; and the fascination of infinite variety carries us forward from page to page. Mr. Palgrave's anthology is a triumphant vindication of sacred poetry."—*Times.*

ROMAN LITERATURE IN RELATION TO ROMAN ART.

By the Rev. ROBERT BURN, M.A., LL.D.

With numerous illustrations, 8vo, $2.25.

New and Complete Edition, 12mo, $1.75.

POETICAL WORKS OF MATTHEW ARNOLD.

With Portrait, 12mo, $1.75.

*** This edition is uniform with the one-volume complete editions of Tennyson and Wordsworth.

"Lovers of Matthew Arnold's poetry—and there are many such among intellectual readers—will welcome with delight the new one-volume edition of the poems. The present collection fills five hundred pages, beautifully printed, serviceably bound, and remarkably cheap."—*Critic.*

Standard Books for Holiday Presents.

BARTHOLOMEW. The Library Reference Atlas of the World.

A complete series of eighty-four modern Maps. By JOHN BARTHOLOMEW, F.R.G.S. With Geographical Index to 100,000 places. Folio, bound in half morocco, gilt edges, $18.00.

"A special word of praise is due to maps devoted to the North American Continent, and particularly to the admirable series . . . given to the United States."—*Daily News.*

Temple Library. New Volumes.

BEDDOES. The Poetical Works

OF THOMAS LOVELL BEDDOES. Edited, with a Memoir, by EDMUND GOSSE. With Etchings by Herbert Railton. 2 vols., cloth, $4.00. Large-paper Edition, post 8vo, $7.00.

Small foolscap 8vo, bound in half cloth, cut or uncut edges, 40 cents.

BROWNING. Pocket Volume

of Selections from THE POETICAL WORKS OF ROBERT BROWNING. Small foolscap 8vo, 40 cents.

Mr. Bryce's Great Work on the American Commonwealth.

BRYCE. The American Commonwealth.

By JAMES BRYCE, D.C.L., M.P. New and Revised Edition. 2 vols., large 12mo, $6.00.

New Uniform Edition, in 5 volumes, sold in Sets only, $25.00.

GROVE. A Dictionary of Music

AND MUSICIANS (A. D. 1450–1889). By Eminent Writers, English and Foreign. Edited by Sir GEORGE GROVE, D.C.L. With Illustrations and Woodcuts. New Uniform Edition, 5 volumes, 8vo, sold in sets only, $25.00; volumes 1 to 4 sold separately, $6.00 each; Index, $2.50.

A magnificent volume with 200 illustrations, 4to, $20.00.

PENNELL. Pen Drawing and

PEN DRAUGHTSMEN. Their Work and Their Methods. A study of the art to-day, with technical suggestions. By JOSEPH PENNELL. With Photogravures and nearly 200 illustrations. 4to, $20.00.

Illustrated by Hugh Thomson and Herbert Railton.

TRISTRAM. Coaching Days

AND COACHING WAYS. By W. OUTRAM TRISTRAM. With numerous illustrations by HERBERT RAILTON and HUGH THOMSON. Small 4to, cloth, gilt, $6.00.

The New Library Wordsworth.

WORDSWORTH. The Poetical

WORKS OF WILLIAM WORDSWORTH. Chronologically arranged with the author's various readings, and many new MSS. hitherto unpublished. Edited by WILLIAM KNIGHT, LL.D. Illustrated with etchings by C. O. MURRAY, from original drawings. 8 volumes, 8vo. $25.00.

Also, uniform with the above:

WORDSWORTH. The Life of

WILLIAM WORDSWORTH. By WILLIAM KNIGHT, LL.D., Professor of Moral Philosophy, St. Andrew's. Illustrated with an Etched Portrait from the picture by Haydon. 3 volumes, 8vo, $10.00.

*** The 11 volumes, in box, $35.00.

*** *Macmillan & Co.'s New Illustrated Holiday Catalogue will be sent free by mail to any address on application.*

MACMILLAN & Co., 112 Fourth Avenue, New York.

The Nation.

NEW YORK, THURSDAY, DECEMBER 11, 1890.

The Week.

THE passage by the House of the Copyright Bill by a good majority shows, as the passage of the Civil-Service Law had already shown, the folly of despairing of the triumph of a good cause. The passage of the bill in the Senate is, of course, not absolutely certain, but it is almost certain. The Copyright League are entitled to high praise and hearty congratulations on this result of their courage and persistence in the face of all kinds of discouragement. The debates have been very interesting in bringing to light the curious ideas which prevail in some parts of the country about literary property, but they are ideas which one naturally expects to meet with among those who have never known anybody who possessed literary property, or made any money out of it. The notion that there can be property in the expression of ideas, has owed its acceptance in every country to familiarity with the spectacle of authors receiving money from publishers. People who are not familiar with this spectacle are to this day puzzled by the author's objection to having his language reproduced and sold by somebody else. Those whose opposition to the bill was based on the fear that international copyright would make foreign books dearer, we feel sure will, two years hence, be unwilling to recall this particular objection. The gain for American fame and moral influence throughout the civilized world through the passage of the bill will be very great.

"Thank heaven, the Senate is still a deliberative body!" Such must be the exclamation of every thoughtful person who follows the discussion of the Force Bill which has just been opened in that body. This extraordinary measure was rushed through the House by "the American Bismarck" at such lightning speed that the public was not permitted to learn all of its outrageous features, and the Senate debate furnishes the first opportunity for that careful consideration which is so imperatively demanded. The feature of Friday's proceedings was a forcible speech from Mr. Gray of Delaware, who laid especial stress upon the domiciliary section, so called. This section provides that a Federal supervisor of elections (to be selected as a "discreet" man) may make a house-to-house visitation to inquire as to names, politics, nationality, etc., of the male inmates. Mr. Gray fitly characterized that official as "this czar that is to be, this satrap of a province;" and said with entire truth that, "in all the measures which provoked and goaded our ancestors to resist the tyranny of the British King, there was none that approached the infamy of this provision." It is astonishing to learn that Mr. Edmunds of Vermont defended such a proposition. Mr. Teller of Colorado admitted that Mr. Gray's denunciation was none too severe, and even Mr. Hoar of Massachusetts seemed to be ashamed of it, and admitted that the Senate Committee had felt constrained to strike it out of the Lodge Bill as "the American Bismarck" sent it over.

The vote of the Convention of the Farmers' Alliance, in session at Ocala, Florida, protesting in decisive language against the passage of the Force Bill, has struck the Republicans in Washington full in the face, and they have begun with one accord to tell each other that the Alliance is an adjunct of the Democratic party, and that the action taken at Ocala was prompted by the Democratic leaders, etc., etc. Looking at it in this light, they say that they shall not abate one jot of their earnestness in pushing the bill through. On the contrary, they will drive it along all the more vigorously. So be it. They will drive to their own destruction all the more rapidly. There is not a scrap of evidence to show that the Alliance is an adjunct of the Democratic party, or that its opposition to the Force Bill has been inspired by Democratic politicians. In the West an influential section of the Republican press is quite as much opposed to the Force Bill as the Alliance itself, and it is quite as fair to say that the latter has been inspired by Republican newspapers in Missouri, Kansas, Nebraska, Minnesota, and Illinois as to say that it has been prompted by Democratic Senators in Washington. But the air of defiance which the followers of Messrs. Lodge and Hoar have set up against the Ocala resolution is "all put on." The action of the Alliance has given them a severe shaking up. The Force Bill is weaker among its pretended friends than it was before. It will encounter pitfalls in unexpected places as it goes along, and if it finally passes it will go a long way to bring about a community of feeling between the Alliance and the Democrats which would not otherwise exist, or certainly not to the same extent.

Senator Gorman on Monday made some excellent remarks, as far as they went, on the financial situation. Although they came in incidentally as a pendant to a speech on the Force Bill, they served a good purpose, first by showing that there is a subject of vastly greater public interest at this moment than any party question, and secondly by stating that the minority party of the Senate would gladly coöperate with the majority in measures for financial relief without seeking to obtain any partisan advantage therefrom. Mr. Hoar, who seems to have eaten of the insane root that takes the reason prisoner, would have nothing of the kind. He insisted that the debate on the Force Bill should go on, and the Senate, in a bewildered way, but with evident reluctance, sustained him. Mr. Gorman referred to the action of the Secretary of the Treasury in offering to buy six millions of bonds, and actually buying eight millions. This, he said, was only a drop in the bucket. The eight millions would disappear as rapidly as the great disgorging of Treasury money last September had disappeared. There are two measures of relief that would not be drops in the bucket, but would be whole buckets well filled, and fortunately neither of these would cost anything. One is to *repeal the Silver Bill*. The other is to amend the National Bank Act so as to save the system from the process of slow decay that has been for years, and is still, withering it away. Repeal of the Silver Bill is the most important, because that will restore confidence in the standard of value. Hoarded gold will then come out of its hiding-places, and with it will come the confidence which represents ninety per cent. of the exchanges which pass daily through the banking institutions of the country. So, and not otherwise, shall we recover the confidence of European capitalists, who have it in their power to send back upon us a perfect avalanche of our securities.

That "fool of a bill," the McKinley tariff, contains a clause (perhaps we should say another clause) which is producing great confusion in business. It is in these words:

> "Sec. 6. On and after March 1, 1891, all articles of foreign manufacture such as are usually or ordinarily marked, stamped, branded, or labelled, and all packages containing such or other imported articles, shall be plainly marked, stamped, branded, or labelled in legible English words, so as to indicate the country of the origin; and unless so marked, stamped, branded, or labelled they shall not be admitted to entry."

Probably the design of this clause was to prevent American dealers in hardware from selling pocket-knives manufactured abroad bearing their own stamp on the blades as an advertisement. The American manufacturers of pocket cutlery have been pushing for a measure of this kind during several years, but they did not want to show their hand by restricting the provision to their own particular wares. So the clause came out of the Committee in the shape of a general act. And now the dealers in hosiery, for example, want to know whether each pair of stockings must be stamped with the word England, France, Germany, or Switzerland, as the case may be. Stockings are "usually" stamped with the maker's name, but not with the name of the country. Piece goods usually bear a label showing the quality and the number of yards, and containing a blank for the retailer to put his selling price on. Gloves are always marked with a number showing the size. Must all these things, *i. e.*, each separate one, because they are "*usually* marked, branded, stamped, or labelled," bear an additional mark showing the country where they are made? It is customary for the makers of chinaware to put a small device on the bottom of plates and cups and saucers, which buyers recognize as the

trade-mark of Dresden, Worcester, Derby, Sèvres, etc. Must each one of these be stamped with the word Germany or England or France, as the case may be? And must a Jurgensen watch be stamped "Denmark"? Fire brick usually have the maker's name stamped on them for the obvious reason that it carries a guarantee of quality. An importer of fire brick (the duty on which has been largely advanced by the McKinley Bill) recently asked the Treasury Department whether an invoice could be entered without having the name of the country stamped on each brick. He was informed through the Collector of New York that the sixth section of the bill was evidently not intended to apply to rough articles like fire brick. The degree of roughness allowed will constitute one of the delicate questions to be passed upon by the new Board of General Appraisers, but how soon they will get around to it is very doubtful, for the *Dry Goods Economist* tells us that the nine general appraisers appointed for the whole country "are unable to keep pace with the protests filed at New York alone." According to a *Tribune* despatch from Chicago, the Importers' Bureau of that city, numbering 300 members, has forwarded a letter to the Treasury Department asking a construction of the sixth section. To carry out literally the terms of the law, they say, is impossible.

The Collector of the Port has, we are sorry to see, waived the legal McKinley duty of 25 per cent. ad valorem on Koch's lymph. How, he may ask, ascertain the value? Certainly not by cost of production, for the cost of production cannot be got at. Nor can it be ascertained by analysis, for we have no chemist competent to analyze it. The composition is as yet Koch's secret. The value really lies in the effect the lymph produces, and this our Board of Appraisers are entirely competent, under the Customs Administrative Act, to fix for themselves. It seems to us this learned body cannot fix the value too high. We should say $1,000 a grain would not be too high, if the stories told about the curative powers of the lymph are true. At this rate it would either bring in a handsome revenue to our Government, or afford full protection to our domestic bacteriologists. If any one thinks this a low view to take of the matter, we would ask him to explain the object of this section of the McKinley tariff:

"(75.) All medicinal preparations, including proprietary preparations, of which alcohol is not a component part, and not specially provided for in this Act, 25 per cent. ad valorem. Calomel and other mercurial medicinal preparations, 35 per cent. ad valorem."

Now, one of two things is true: either this section was enacted with a thoroughly fiendish desire to prevent or make it difficult for sick and suffering people to procure remedies for their diseases, or it was enacted with the view of protecting domestic compounders of medicinal preparations. Common charity compels us to put the latter construction on it, and if this construction be well founded, the Koch lymph ought to be taxed at such a rate as to enable American bacteriologists to reap the large profits which Koch will reap (or, rather, might reap, were he bent on gain) by the sale of his article in this country. True, we have as yet no American lymph, but we shall have one soon, as good as Koch's, if not better, for surely the tariff will produce it. We cannot doubt this, after what all the great men in Washington tell us. They meant by section 75 not only to protect existing medicinal preparations, but all future preparations, from foreign competition. They meant, in short, to stop or hinder nasty, un-American, cheap cures. No self-respecting American, they maintain, would like to get rid of any disease, however loathsome or dangerous, at small cost.

The McKinley Committee of the French Chamber has agreed upon a schedule of duties on live stock and meat products. On beef the duty is 25 francs per 100 kilos, or $5 per 220 pounds. On salted pork the duty is 20 francs per 100 kilos. These rates are so high that the actual prohibition of American pork may, perhaps, be now removed without any benefit to us or any damage to the French swineherds. If it should turn out otherwise, the French McKinleyites could easily advance the duty, and no doubt would do so. When the new schedule goes into effect and the prohibition is removed, we shall look for some suitable expression of satisfaction on the part of Minister Reid, who contends that it is not high duties on pork that we object to, but the imputation put upon the health of our swine.

The Argentine Republic has gone into the protective-tariff business in a way that must delight the heart of McKinley, if imitation is the sincerest flattery; but it will, we fear, dash the hopes of Benjamin Harrison. The Buenos Ayres *Standard* brings us the text of the new Act, imposing duties on imports, decreed by the legislative body. It is avowedly protective, and largely so, although we have not found any items that match the McKinley duty on pearl buttons. This measure has been enacted by the Argentine Government since our tender of Reciprocity was made in the McKinley Bill. Turning now to President Harrison's message, we read that he considers the reciprocity clause, as it was passed, very skilfully adapted to secure the free admission of our products into countries producing sugar, coffee, tea, and *hides*. The Argentine Republic is a very large producer of hides, and we use more of them probably than any other country in the world. "This reciprocity provision," said the President, "is more than an offer. Our part of the bargain is complete: delivery has been made; and when the countries from which we receive sugar, coffee, tea, and hides have placed on their free lists such of our products as shall be agreed upon, as an equivalent for our concession, a proclamation of that fact completes the transaction, and in the meantime our own people have free sugar, tea, coffee, and hides." Exactly so. Now, about what time shall we expect that the Argentines will relax the provisions of this new protective tariff in order that President Harrison may not feel it incumbent on him to put a duty of one and one-half cent per pound on hides, and by so doing make Massachusetts permanently a Democratic State? This is a problem for the first class in logic.

South America has caught the infection of tariff revision, in the Republican understanding of the term, and higher rates of duty are announced as soon to be put in force in several countries. The Argentine Republic was earliest in the field with its new tariff, which, while based in some of its parts upon the country's need of a greater revenue, is, as we have said, also frankly protectionist. Now comes Brazil, with its rapid and effective way of putting laws in force by decree of the "Generalissimo" Fonseca—how Speaker Reed must envy him!—enacting from the 15th of November an entirely new schedule of customs rates. This new tariff comprises 1,085 articles, and shows in general a great advance of rates all along the line. On manufactures of woollen, cotton, and all clothing in general, the increase in tariff taxation is 20 per cent. Most silk goods, with gloves and manufactures of leather, go up from 10 to 15 per cent. The rates on furniture are augmented by 20 per cent. Flour and corn, potatoes, tea, beer, and many manufactures of iron and steel, remain as in the old tariff. The Government also proposes to revise its export duties, with a view to abolishing them in the end. The present export tax is about 11 per cent. on coffee, although 4 per cent. of this goes to the province where the coffee is grown; thus the central Government could remit only the 7 per cent. falling to its share. Peru, too, is to put a new tariff in force on February 1. It will interest the American hog to know that this tariff will put a prohibitory duty on lard. In general, it is clear that the South American republics are getting into fine position to dicker with Mr. Blaine.

According to the *Tribune*, the real object of King Kalakaua's present visit to the United States is to sell his country to the State Department. It appears that he and his subjects, though loving national independence much, love sugar bounties more. Accordingly, seeing that, under the McKinley Bill, American sugar-growers are to receive two cents a pound bounty on their sugar, the local arithmeticians have calculated what this would bring in to Hawaiian sugar-men were they American citizens, and find it would be about $5,000,000 a year. The people feel, according to the *Tribune's* correspondent, that to refuse such an offer as this for their country would in these hard times be madness, and they have accordingly sent their sovereign here to try to make a sale of the islands and their contents to Mr. Blaine. "It is believed that the Administration will receive Kalakaua's overtures with favor," because it would enable us to cover Hawaii with our tariff, and shut out "the European manufacturing nations." Kalakaua will, it is said, take "a tidy sum down, and

a moderate pension" for his kingdom, and his subjects will be satisfied with the sugar bounty. How they will like the high prices under our tariff when the European manufacturing nations "are shut out" of their market, does not appear. Nor is it yet known how long the sugar bounty will stand. But Hawaii would be a beautiful new State to make "blocks of five" in, and why should not Kalakaua be returned as a Senator to vote under the direction of Mr. George Hoar? As to the high prices, a short stumping tour from Speaker Reed and the Scholar next summer would clear the Hawaiian mind on that topic. With dear American clothes on, their whole nature would be elevated and ennobled.

John Wanamaker called attention in the Philadelphia *Press* of Monday to sundry bargains offered at his counter, and among other things said:

"This Dress Goods stock is the most varied in the world. Put with it the twin fact, *the cheapest*, and the result is that Holiday Dress Goods should be bought here."

The italics are Mr. Wanamaker's own, and they call more pointed attention to his offence against the new code of morals—a code thus summarized by a political economist of Philadelphia, Mr. Henry Carey Baird, on the 16th of October last:

"Cheapness is the fetish of the Englishman. Let us then have done with this cheapness and with its advocacy."

Is the Postmaster-General turning a free-trader?

There has probably never been a greater surprise in the way of bequests to educational institutions than that caused by the revelation that a leather merchant of this city, who died last month and who was entirely unknown to the general public, left more than two million dollars to a score of colleges and universities in different parts of the country; the sum given in most cases being $100,000. Outside of the "Swamp," in which Mr. Daniel Fayerweather passed his business life, his very name was never heard of, and his large wealth not only was unsuspected by people generally, but has proved a surprise to some of those who were long brought into trade relations with him. The discovery that an entirely obscure man has accumulated a fortune which enables him to leave $2,100,000 to educational institutions, and $95,000 more to hospitals, besides making ample provision for his relatives, is a startling illustration in itself of the growth of wealth in this country. In fact, one who notes the record of deaths day by day cannot fail to be struck by the number of millionaires of whom he never heard, no matter how close a reader he may be in these days, when it sometimes seems as though everybody's name got into the newspapers.

Mr. Stanley gave to the public last week, in a connected way, his version of what has come to be known as the Rear-Column Scandal, introducing it with a brief narrative of the Emin Relief Expedition, more particularly described in his book. The official report to the Emin Relief Committee stated merely that the rear column had been wrecked by the irresolution of its officers, the neglect of their promises, and their indifference to written orders. In the book he gives particulars which justify this censure, but he does not go outside of the text of the official report. If the verdict of mankind were to be made up on the matter thus supplied, it would justify Mr. Stanley, perhaps, but with the proviso that he expected too much from men inexperienced in the kind of work put before them, and that he did not exercise good judgment in the choice of a commander of the rear column. On the latter point Mr. Stanley pleads guilty, but gives the reasons which led to his selection of Barttelot—reasons which would probably have controlled most men in his situation. The relatives and friends of Barttelot could not rest satisfied with a censure on that person's want of resolution and his inattention to orders. They must needs make an attack on Stanley, who was hundreds of miles distant during the whole time that intervened between his putting of Barttelot in command of the rear column and the latter's death. So far as the charge of enmity on the part of Stanley against Barttelot goes, this is disproved by the mere fact of separation and isolation. If it was not an act of enmity to put Barttelot in command, the charge falls to the ground, because the two men never saw each other afterwards or held any communication with each other. The attack of Barttelot's friends, however, called for some answer, and it was with evident reluctance that Stanley told in a guarded way what Bonny, the man who succeeded to the command of the rear column, had told him of the causes of the wreck of that column—a tale of cruelty, violence, and inhumanity that has seldom been surpassed in the world's history.

The question arises whether the expedition, on the whole, was not a tremendous mistake. We think that it was. What was its net upshot? Several hundred lives were lost, fearful sufferings were incurred, twenty-one thousand pounds were spent—for what end? To deliver from the Mahdists one irresolute and rather ridiculous European savant, who did not know whether he wanted to be delivered or not, and a few hundred Egyptians, who, according to the best accounts we can get, were not worth so much, man for man, as the Zanzibari slaves who lost their lives toiling through the African jungle to save them. These Egyptian officers and soldiers were robbers by nature and education. They plundered the natives of the country where they had been planted. They mutinied every other day. They imprisoned Emin and Jephson, and they conspired to put Stanley and his men to death in order to get their ammunition and goods. They were as distinctly inferior to the Mahdists who were pressing against them from the north as they were to the Zanzibaris who came with Stanley to their relief. For these despicable creatures all the horrors of the expedition, including the rear-column scandal, were incurred. If civilization has gained, on the other hand, a display of heroism and perseverance under difficulties rare in the world's history, it is seen that even this may be purchased at too dear a price—much too dear when we take into the reckoning the shocking example set by the rear column to the tribes of Equatorial Africa.

The Parnell contest has ended, as it seemed most likely to end from the beginning, in the disruption of the Irish Parliamentary party, 45, or about half, seceding under the leadership of Justin McCarthy, and the remainder adhering to Parnell, who wound up the discussion, in Reed fashion, by refusing to put a motion for his own deposition. The fight will now be transferred to Ireland, by some sort of appeal to the constituencies. How it will end there it is difficult as yet to foresee. There have been some scattering adhesions to Parnell from some public bodies, but the chances are that deliberation and the influence of the Catholic clergy, and a fuller view of the consequences of the strife on English opinion, will in the end complete Parnell's ruin as a leader. The theory that he is suffering from mental unsoundness is not wholly without foundation, and will very likely, before all is over, explain the "magnificent courage" which is now the object of a good deal of rather idiotic admiration. Labouchere's *Truth* tried to defend him in the beginning by describing the attack on him as "a quarrel with the skilled commander of an army in the midst of a battle," and asked:

"Would any one in his senses have suggested that the Duke of Wellington ought to have been cashiered when Napoleon was marching on him in Belgium if some divorce suit had gone against him in England? Would, under similar circumstances, the Germans have insisted on the retirement of Count Moltke when they were besieging Paris and the Army of the Loire was threatening them? The French would never have rendered themselves ridiculous by suggesting this, for all would have known that the advice was not due to any respect for a high moral standard, but designed to injure the enemy."

This is not a good parallel. Nobody has as yet asked Parnell to resign because he has been taken in adultery. He is asked to resign because two-thirds of his army will not fight under his orders. If two-thirds of Wellington's troops at Waterloo had, on discovering that he was philandering with another man's wife at Brussels during the fight, refused any longer to obey his orders, he would have been deposed promptly, not because of his sexual immorality, but because his conduct had made defeat certain if he remained in command. This is Parnell's case. The English Liberals will not serve with him, and the question before the Irish is not whether the English are unreasonable, but whether the Irish can win without their aid. To ask this question is to answer it. Abuse of Gladstone and Morley, under the circumstances, has a drunken air. But we who see an embezzler of public funds retained in the chief management of a great party, in spite of full exposure, must not be too hard on Parnell's benighted adherents.

SUPERINTENDENT PORTER IN SELF-DEFENCE.

MR. ROBERT P. PORTER, Superintendent of the Census, opens his article in the *North American Review*, upon "Partisanship and the Census," with the statement that the "general and current interest just now exhibited in the census is a sufficient reason for considering the subject from a different standpoint" than an "entirely statistical" one. He accordingly devotes some portions of his space to replying in kind to what he styles the "frenzical attacks on the eleventh census," the "broadside after broadside of invective," the "wild crusade," the "unearthing of deep-laid conspiracies," and the "patching together of some hideous monstrosity," which he says have, during the last two months, "strained" the "variegated resources of sensational journalism."

Whether the results of the eleventh census are substantially accurate or not is a question of great and far-reaching importance. Upon those results depends the representation during the next decade of the several States in the lower house of Congress and in the Electoral College. Errors much less extensive than have been charged would be sufficient to reverse the result of a Presidential election as close as that of 1876, or the political complexion of a House of Representatives as evenly divided as was that of the Fifty-first Congress when it was organized. Long after the census of 1900 has corrected any political injustices which mistakes in that of 1890 may have occasioned, those mistakes will render doubtful and uncertain all statistical calculations extending over considerable periods of years. The defective census of 1870 still embarrasses every study of the rates of increase of the population as a whole, of the relative growth of the North and South, and of the comparative fecundity of the white and colored races.

The most serious reason for questioning the truth of the census results is the fact that, to accept them, we must believe that the rate of *natural* increase—that is, of course, the increase due to the excess of births over deaths—has suddenly, during a single decade, and after making proper allowance for the omissions in the census of 1870, dropped nearly or quite one-third. On this question Mr. Porter has not a word to say. He dwells upon an error in these columns, by which we made the average percentage of decennial increase from all causes during the two decades 3.72 per cent. too great, not mentioning the fact that the correction of the error was promptly published. He elaborately discusses the changes in the aggregate rate of increase, but he ignores the fact that immigration added 10.45 per cent. to our population during the decade from 1880 to 1890, as against about 7.50 per cent. per decade during the twenty years preceding. If the gain by immigration be deducted, it appears that the average gain by natural increase per decade during the two decades from 1860 to 1880 was 18.50 per cent., as against 14.40 per cent. in the decade from 1880 to 1890. The average of the two preceding decades was lowered by the waste of life and the diminished birth-rate occasioned by the war, and yet the rate of natural increase was more than one-fourth greater in those decades than, according to the census, it was from 1880 to 1890.

Mr. Porter replies to the criticism based upon the diminished rate of *natural* increase by asking, "Who can explain a variation of 23.96 per cent. between the [aggregate] increase [of Mass.] from 1810 to 1820 (10.85 per cent.) and that from 1840 to 1850 (34.81 per cent.)?" And, after stating that the widest variation in the United States figures is but 13 75 per cent., being between 36.38 per cent. (1800-1810) and 22.63 per cent. (1860-1870), by asking, "Why should certain variations in percentage in the United States figures be taken as presumptive evidence of fraud or incomplete enumeration, when larger variations in the Massachusetts figures have never been assailed by the same critics?" Such a reply shows that Mr. Porter supposes that none of the readers of the *North American Review* are possessed of elementary statistical knowledge. Respect for the Superintendent of the Census and for the President who selected him for that position, forbids us to entertain the only other explanation of this most extraordinary reasoning. To compare the fluctuations of the rate of increase in the population of a State of very restricted area, dependent as those fluctuations are upon the state of trade and industry at different periods, and when no statistics of inter-State migration exist, with like fluctuations in the rate of increase in a continental empire for which approximately accurate records of immigration have long been kept, is to trifle with the intelligence of the public.

No one doubts that, as a rule, the "percentage of increase in population grows smaller as the country grows larger, for the numerical increase becomes a percentage of a constantly increasing number." But the principal reason why this is a rule is, that, as the country becomes more thickly populated, immigration usually declines absolutely, and almost always relatively to the resident population. This reason does not exist in this country at this time, for immigration during the last decade was absolutely nearly twice as great as during any preceding decade, and relatively greater than in any decade except that from 1850 to 1860. We do not for a moment lose sight of the probability, so strong as to approach a certainty, that the birth-rate is decreasing in this country. But it is not possible that the decrease could have been as great and as sudden as the census returns would indicate. The pains at which Mr. Porter has been to evade this, the one criticism which, as it cannot be made a subject for partisan dispute, is the criticism which, if unanswered, will be most damaging, would seem to show that he has nothing to say upon it. The tone in which his article is written, while it may be due in some part to a natural irritation at what he conceives to be the injustice and exaggeration of some of the attacks upon him, shows quite plainly that he is conscious that the Census Office will, on the whole, fare better if the controversy concerning its methods and its results can be carried on as a quarrel rather than as a discussion.

There is abundant reason why he should think so, although it is probable that many unfounded attacks and many ill-informed criticisms have been made upon him and his work. It is doubtless true, as he says, that a deliberate scheme to count down Democratic States could not have been carried out without taking hundreds or thousands of the enumerators into the plot, and thereby infallibly making it public. It is also true that the enumerators were appointed by the supervisors throughout the country, and not by the Superintendent of the Census, and it may be that it would not have been practicable to select them by competitive examination; yet it is also true that when, as was largely the case, active Republican politicians were selected for census supervisors because they were active Republican politicians, and when those active Republican politicians saw that the Superintendent of the Census had declined to permit the employees under him to be selected by the merit instead of the spoils system, it was inevitable that most of them should use their patronage to strengthen the party machine.

Mr. Porter must have known that such would be the case. He must have known that the result of confining the selection of enumerators in most of the supervisors' districts to one party would be to get a class of men inferior, on the average, to those who would have been appointed had the selection been made from the whole body of the people, without respect to party. He must have known that the natural consequence of making in this way the Census Office a part of the Republican Machine would be to make the Democrats throughout the country suspicious of the census, and ready to believe any charges against it which might be made. He must have known that such charges were, in any event, certain to be brought, as in this country every census must disappoint extravagant expectations. He must have had some forebodings then that experience would show, as he very truthfully states experience has shown, that the act of Congress required the enumerators to get too much information, and made inadequate provision for their compensation, and that under such circumstances an appreciable portion of the population would almost certainly be omitted, and ground thus afforded for the criticism which his own course as to appointments would make bitter and determined. That, under such conditions, and with such knowledge, he should still have persisted in refusing to take his office out of politics in the only way he could make the country understand he was taking it out of politics—namely, by including his bureau force in the classified civil service, and by selecting the persons he would recommend to the President for supervisors solely for their statistical and not at all for their political qualifications—is only another proof of how completely American politicians sacrifice their own reputa-

tions and the good of the country to the imperious demands of the office-seekers of their party.

AMENDMENTS TO THE INTER-STATE LAW.

SENATOR CULLOM is reported in a Chicago paper as saying that the Inter-State Commerce Committee of the Senate would be called together soon for the purpose of considering the bill introduced last winter (and favored by the Senator) which permits railways to pool their traffic. This particular bill, known as the Dawes Bill, was framed with care so as to allow railroads to divert freight from one road to another according to some agreed proportions, the details of the agreement having previously been filed with the Inter-State Commerce Commission and approved by it. This, it will be seen, is a physical pool as distinguished from a money pool wherein earnings are divided. If we ought to have something of the nature of pooling, it is much easier to divide gross receipts; yet if any old sentiment is found opposed to this, a division of traffic is better than nothing. It is not impossible that something of the latter kind might be undertaken as the result of closer relations between competitors, whether allowed by law or not. Chairman Walker's idea of a joint agency involves a division of business, and apparently it would be legal; for a warehouseman or a road may apportion the traffic going beyond its terminus among connections in any proportion, as is now, indeed, done every day at large centres where many diverging lines come together. Mr. C. A. Seward a year ago wrote an opinion upon this point for a Western road. It only now needs an agreement to extend the plan to that large part of our traffic which passes over more than one railway or system to reach its destination.

But a matter of important public policy should be fairly discussed and made lawful if right. The real objection to pooling is, not that the traffic will go over one road rather than another, but that the carriers will take advantage of the opportunity and put up their tariffs to extortionate figures. Promises not to do this avail little in the public mind; yet in this case the conditions appear to make such promises safe. Average freight rates are very much lower in the United States than anywhere else in the world; hence advances in a few instances to adjust commodities or localities to each other might be sustained as to their reasonableness by an appeal to other countries, supposing any such advances to be made. But the great gain would be in putting a check upon the present system, all but universal at the West, of giving "cut rates" to favored shippers and cities. One road is reported upon good authority to be charging up its rebates paid to shippers to its maintenance of way account. This account thus may show generous expenditures upon the track which were not so spent. The devices to cover up such back payments are as wide as human ingenuity. The evil is beyond our search, and the only cure is the removal of the cause as far as possible. Not only are the road and the road's owners the sufferers, but the consequent hurt to honest dealing among merchants is also great; for the straightforward shipper is not the most successful. Thus it is true that property in railroads and in trade is unnecessarily and unjustly damaged through the present condition of affairs. Our great water routes will always prevent any general extortion; a fair public policy towards rail carriers can be followed without fear of it. Indeed, it is now the transportation interests of the country which need protection for the general good.

Another section of the act to regulate commerce deserves attention, and that is the section forbidding a higher charge for a shorter haul. The language of the English Railway Act was followed in framing our own, with this conspicuous exception. The objection to this short-haul clause is that it is contrary to the general spirit of the whole act. It declares beforehand that a certain specific discrimination is wrong of itself; whereas, in other sections only a general principle is stated, the matter of right and wrong in a particular case being left, as it should be, to the Commission. Thus, the clause forbidding undue preference clearly and absolutely prohibits the charging of a larger sum for a shorter haul, whenever such a charge is shown to be unjust. Whether such a charge is unjust or not is a matter of evidence the same as in any other complaint. As the matter stands now, with this prohibition in the law, the Commission must at once decide an ordinary short-haul case against the carrier, even when there is a doubt of the justice of the decision. Congress made the law, and it is not for the Commission to explain it away, except in grave cases. Every carrier and every shipper is entitled to a fair trial wherever a larger sum is charged for a shorter haul, but cannot now have it. Undue preference is declared illegal; that covers unjust violations of the short-haul rule without any further enactment.

Nor is the distinction theoretical merely. For example, a repeal of that section would help us to solve one of our most puzzling transportation problems, that of Canadian railroad competition. Business men realize that it is idle to talk now of forbidding Canadian railroads to carry American products. Too many local interests, from New England to the Northwest, are served by the existing Canadian lines for us to think of cutting these off. And, what is equally important, very many of our own American roads would be seriously injured by a severance of their Canadian connections. On the other hand, with our high-tariff protective policy, it is a great injustice to allow cheap Canadian railways to underbid our more costly roads, while protecting the American manufacturer. It is making fish of one and fowl of another. The American lines are right in calling it unfair. Under these complicated and opposing conditions what shall we do? The striking out of the short-haul clause from the Inter-State Law would help us greatly. The American railroads could then quote the same rates as their Canadian rivals at competing points, and, in case of a rate war, would not reduce their local charges, as now bound to do. If a complaint for undue preference should be brought against them, the Commissioners, untrammelled by specific prohibition, could carefully investigate the whole question, and thus be enabled to render an unbiassed opinion. If that opinion should declare that our own lines were rightly entitled to fair conditions of competition against foreign roads, New England, seeing increased rivalry, would not object. Our national sense of justice would undoubtedly approve such a decision, though we can hardly expect it so long as the short-haul condemnation stands in our law. The justice or injustice of a shorter haul at a higher rate is a question which should be settled according to the merits and circumstances of each particular case.

RAISING PRICES BY STATUTE.

ONE by one the eminent Republicans who, upon the accession of Gen. Harrison to the Presidency, conceived the idea of "running the Government of the country upon business principles," mainly for their own private business profit, are becoming involved in serious financial difficulties. The proto-martyr of this band of unfortunates was John F. Plummer, the most intense and the most voluble of them all. Plummer was such an enthusiastic advocate of more tariff, or of the doctrine of raising prices by statute, that, though a man of somewhat vociferous piety, he took the ground boldly during the Harrison campaign that Protection to American Industry was so sacred and necessary a thing in government that forgery and lying in its behalf were not merely justifiable but laudable proceedings. As Chairman of the Republican Dry-Goods Association, he had printed and distributed tons of documents ornamented with the British flag, and containing forged extracts from British journals, long after the forgeries had been exposed. When he was asked to justify his conduct, he was wont to strike his chest with much violence, and say with full voice: "John F. Plummer wears no man's collar. He is responsible solely to Almighty God and his own conscience." When President Harrison had been elected and had entered upon the duties of his office, Plummer was recognized by him and the party at large as one of the chief "powers" responsible for the Republican victory, and he was summoned to Washington repeatedly to give counsel to the President on the proper conduct of the affairs of the nation.

During the first year of President Harrison's Administration, Plummer was one of the greatest men in the United States. He was offered several offices, including the Postmastership of New York, but declined them all, on the ground that his immense business interests demanded all his attention, that he had neglected these in order to save the country and the tariff system, and that he must neglect

them no longer. His sole remaining interest in governmental affairs was to get more tariff on goods in his line of trade. He was a great friend of the McKinley idea, but he could not wait to have it tried in practice. On the 20th of last March the sad news fell upon the country that Plummer was embarrassed. He assured his friends that it was nothing very serious, that it was due chiefly to a "heavy drop in the satinet market," and that all would be well again presently. An examination of his affairs showed, however, that while there were liabilities amounting to over a million dollars, it was extremely difficult to find any assets. Then it was said that the great Plummer had been basely deceived by a wicked partner, and that while he had been devoting his talents to the cause of his country, this partner had completely undermined his business and left him penniless. From that time Plummer disappeared from the public eye.

Closely associated with Plummer in his business views and political methods was Mr. Edward H. Ammidown, President of the American Protective Tariff League, and *ex-officio* director of the League's newspaper, called the *Bulletin*. Even Plummer had not greater faith in forged British extracts than Ammidown had, and as for McKinleyism, in that Ammidown followed step by step with McKinley himself. No sooner did he hear McKinley declare that "cheap and nasty go together," and that "cheap merchandise means cheap men and cheap men mean a cheap country," than Ammidown had the following denunciation of cheapness inserted in his *Bulletin:* "The curse of cheapness! The vulture loves his carrion not more than the free-trader longs for cheapness." McKinley had spoken on October 14, and the issue of the *Bulletin* containing Ammidown's curse appeared on October 17.

Why Ammidown loathed cheapness so bitterly did not appear till a few weeks later. When on Wednesday last it was announced that the Rittenhouse Manufacturing Company, in which Ammidown was a controlling stockholder, had failed, Ammidown himself said that the failure was due to the "depression in values caused by the recent Democratic victory. Nobody wants to buy, and trade is dull generally." But the Philadelphia *Press*, whose owner is a member of the American Protective Tariff League, and whose ability to speak with authority we do not presume to question, said: "It is known that Mr. Ammidown, acting either for himself or the company, put $1,000,000 in wool during the months of June and July, intending to take advantage of a rise in the market following the passage of the new Tariff Bill." This showed, if it were the true version, that the failure was due to the provoking slowness of the American people in understanding the beauties of the McKinley Bill, and in refusing to recognize the cursed nastiness of cheapness as quickly as McKinley and Ammidown had recognized it. If the people had rejoiced over the opportunity Ammidown had given them to buy at higher prices, the million dollars that he "put in wool" would have brought him a fair return instead of a failure. It is very discouraging business to attempt to benefit one's country by raising prices by statute, if the people do not coöperate cordially by buying at the raised prices.

Scarcely had the shock of Ammidown's failure subsided when the news came that Mr. Delamater, who ran as Mr. Quay's candidate for Governor in Pennsylvania last month, but who failed of election through want of proper coöperation on the part of the people, had been obliged to suspend business as a banker. An examination of his affairs showed that $100,000 of the State's funds and $50,000 of county funds, which had been deposited in his bank, had disappeared and left no sign. There were great liabilities and no assets worth mentioning. So bad was the condition of affairs that some of Mr. Delamater's friends are denouncing him as a swindler. If the people of Pennsylvania had consented to support the bank by putting Mr. Delamater into the Governor's chair, it is confidently believed by Mr. Delamater's sympathizing friends that he would have tided over his financial difficulties. Mr. Quay appears to take this view, for in an interview in Washington on Sunday he said: "I cannot understand why Mr. Delamater kept the condition of his financial affairs from his friends. Something might have been done to tide matters over, or at least to break the force of the blow." Mr. Quay speaks from experience, for he "tided over" two much more serious affairs than this while he held State offices, and he did it in both instances by helping himself to the funds in the State Treasury, to the aggregate amount of $660,000.

Now, on the heels of the Delamater misfortune comes the news that a former partner of Col. W. W. Dudley in the banking business has brought suit against him for $52,633, which he declares Dudley obtained by "fraud and deceit" while in business with him. The partner declares of Dudley:

> "He had no capital whatever in the firm, and carried on a system of fraud and deceit for his own benefit and credit, and to the injury of our firm, which he caused very great losses in 1886. He speculated for himself and family, and often entered his transactions in the accounts of many people of prominence in the highest official circles, the Senate and ladies prominent in society, many of whom state that they never gave him orders to buy and sell such stocks. He fraudulently transferred stocks from one account to another for his own benefit, which facts are duly entered in our books, and an expert examination now shows the truth of these statements."

The partner, A. E. Bateman of Wall Street, says further that Dudley confessed verbally and in writing to his deceitful doings, but Dudley denies it all in interviews and says the charges are "outrageously false." Still, he admits that the business was disastrous, which shows that his business views of politics have not brought him success.

We might add to this list of unfortunates the name of the good Mr. Wanamaker, who is credited with such serious losses in railway speculative ventures that he has been obliged to mortgage his house in Washington; but it would convey an erroneous impression to say that he is in danger of business failure, for he emphatically declares that he is not. He, like all the other Republican leaders named, has been paying somewhat heavily for rudimentary knowledge as to the workings of governmental principles.

PENSIONS WHICH ARE NEEDED.

We hope the Commission which is now sitting "for the proposal of amendments to the judiciary articles of the [N. Y.] Constitution" will, before its labors are over, consider seriously the need for some provision in the nature of a pension, at least for such judges as are removed from the bench at the age of seventy by the constitutional limitation, or whose terms expire when they are in the neighborhood of that age.

The judges of the United States Courts are now the only judges in the country who can look forward to old age, or to the failure of their powers while on the bench, with that peace of mind which is absolutely necessary for the proper discharge of judicial duties. In this State the term of the judges of the Court of Appeals is substantially a life tenure. That is to say, the average retention of office under a life tenure does not exceed fourteen years, owing to the generally late period at which a lawyer reaches the bench of the higher courts. But the age limit of seventy years in this State has inevitably great terror for a man who is elected between fifty and sixty, and has no accumulated property, or but very little. The prospect of being turned on the world at any time after seventy is one which no judge who does not possess private fortune can face without great trepidation. It must inevitably, especially if he has women dependent upon him, fill his life during the last half of his term with torturing anxiety. He has, after fourteen years' service on the bench, or still more after twenty-eight, not only lost all practice at the bar, but has lost the habits of mind which make practice easy; and when he attempts to build up a new practice, or recover some shreds of his old one, he has to contend with younger men in his own calling, and seek clients among a younger generation which knows nothing of him as an advocate. Elderly men do sometimes achieve success in such a recurrence to an old pursuit, if they attack the problem before sixty, but the cases are so rare that they will not support any generalization. The rule is, that a lawyer who leaves the bench, after fourteen years' service, between the ages of sixty and seventy, and has no professional connection to fall back on, is left practically without resources.

We do not propose to argue that an old judge in this condition is a great discredit to a civilized State. We think he is, but the sentimental view of the matter is not the strongest one. We say that a judge who has this prospect staring him in the face during the last half of his term of office cannot do his duty properly. It is this prospect which explains, and would, if anything could, excuse, the scandal of judges speculating on the Stock Exchange, of which we have had some recent and melancholy

examples. We do not pretend to have any knowledge of the facts of any of these cases, but we feel very sure that in every one of them the impelling motive was the necessity of making some provision for old age. Stock speculations involve tremendous mental disturbance for a man in any calling, but we do not think there is any which they are likely to affect so prejudicially as the judicial calling. It is not simply that they destroy the intellectual serenity which is one of the first needs of the judicial office, but they create relations and obligations which may ruin judicial impartiality or end in downright corruption. This is all true and deplorable, but we say deliberately that the people of the State of New York would have no right to complain if such cases, now happily rare, were to become very numerous.

Why would they have no right to complain? Simply because all public as well as private service has to be arranged with reference to the wants and weaknesses of human nature. We recognize this in our private business, but, for some inscrutable reason, we shut our eyes to it in our public business. When a private corporation wants the services of a first-rate lawyer, it pays him in such a way as to secure the full exercise of his powers and to raise him above all temptation as long as he remains in its employ. But if the public hires him, it makes such terms with him that it keeps him constantly on the lookout for some means of bettering his condition if he be an energetic, ambitious man, and keeps him in a condition of smouldering anxiety about his own future or that of his family if he be a quiet, studious, sensitive, or phlegmatic man. Either condition impairs seriously the usefulness of a judicial officer.

It may be said, and is said, that a judge should provide for his old age, as other men are expected to do, by saving as he goes along. The answer to this is, that the salaries of judges everywhere except in this city are notoriously inadequate, and have not kept pace either with the increased cost of living or the rise in the incomes of leading men at the bar, or the salaries in other callings. The salaries in this city, $17,500, are not a bit too high, considering what the cost of living in the city is, and considering that we allow a judge to be saddled at the very outset of his career by enormous assessments for the benefit of nominating organizations. That is, we compel, or allow to be compelled, every judge to pay a large sum for the mere chance of being elected. The old rate of $20,000 reduced the salary during the term of fourteen years to about $16,000. A judge cannot save much out of this in New York city in fourteen years, even if he be a saving, careful man. But he may not be a saving, careful man. Judges differ in this matter, just as other men do. Every variety of human nature is to be found among them as among other people, and a great State has to take this into account in making its judicial arrangements. What the State seeks is first-rate judicial service, and it has to take this where it finds it, without looking too nicely into temperaments or dispositions.

There would not have been much use ten years ago in urging these considerations on the attention of the Commission. Even then there lingered in the public mind the old horror of either paying or receiving pensions, with which the early frugal and independent Americans came out of the Revolution. We have got over it bravely. We are now the greatest pension-payers and pensioners in the world. We are rewarding past services to the State with more lavishness and less inquiry than any people has ever displayed. Advantage ought certainly to be taken of this changed view to make better provision for that branch of the public administration on which, far more than on either the army or navy, we are all dependent for life, liberty, and the pursuit of happiness—the judiciary.

A NEW SOVEREIGNTY.

WITH the death of William III., King of the Netherlands and Grand Duke of Luxemburg, the connection between these States is severed, and Luxemburg becomes a separate European sovereignty. The Dutch law of succession makes the late King's ten-year-old daughter, Wilhelmina, Queen of the Netherlands under the regency of the widowed Queen Emma; while a family compact, recognized and confirmed by three European treaties, vests the Luxemburg succession in Adolph, formerly Duke of Nassau.

To all good Tories, nothing could be more satisfactory than the peaceful induction of Duke Adolph into his new sovereignty; for a fuller recognition of princely right and of the power of princely compact to dispose of a land and its inhabitants, is not to be found in the whole course of European history. The relationship between the late King and the new Grand Duke is of the most distant; their nearest common male ancestor died in the thirteenth century. But the elder line of Nassau, of which the new Grand Duke is the head, and the younger line of Nassau-Orange, of which William III. was the last male representative, have always kept alive the consciousness of kinship; and as late as 1783 the two branches of the family concluded an "Erbverein" or treaty of succession, by which, in case of the extinction of the direct male line in either branch, the hereditary possessions of both branches should be united.

At that time the Nassau-Orange prince did not possess the Dutch Kingdom; he was Stadtholder of the Dutch Republic, and his hereditary possessions comprised only four minute German principalities. Luxemburg was not then a Nassau territory, and was not covered by the family compact. But in 1815 the Prince of Nassau-Orange ceded the four little principalities in question to Prussia; the Vienna Congress gave him Luxemburg in their stead; and the Treaty of Vienna expressly subjected Luxemburg to the provisions of the Erbverein of 1783. When, in 1839, the separation of Belgium from Holland was definitively recognized and half the duchy of Luxemburg was ceded to Holland, the treaty of peace confirmed anew the contingent right of the elder line of Nassau in what was left of Luxemburg; and the London treaty of 1867, by which Dutch Luxemburg was neutralized, gave a third endorsement to these claims. Nothing, therefore, could be more legitimate than the succession of the present Grand Duke; and in a century which has witnessed the overthrow of so many thrones and the disallowance of so many hereditary claims, the recognition of the ancient rights of the house of Nassau must be a cheering thing to all good conservatives.

In fact, however, the Grand Duke owes his present position and the Grand Duchy its present independence rather to the mutual jealousy of Luxemburg's two powerful neighbors than to their respect for vested princely rights. In 1867 the Grand Duchy was within an ace of annexation by France. Sadowa had dissolved the old German Confederation, thrust Austria out of Germany, and established a powerful North-German Union under the leadership of an aggrandized Prussia. Schleswig-Holstein, Hanover, Hesse-Cassel, Nassau, and Frankfort had been annexed by Prussia. The French Chambers, the French press, and the French people demanded "compensation," and Napoleon was anxiously in search of some annexable territory. Luxemburg, held by the King of the Netherlands as a personal possession, seemed the most available object. The Duke of Nassau, just expelled from his own duchy by Prussia, seemed little likely to raise any effective protest. The Dutch Parliament had nothing to say in the matter. Napoleon therefore offered to buy Luxemburg from the King of the Netherlands, and the King agreed to sell it. But Germany protested. Luxemburg was historically a German territory. It was not a member of the new North-German Union, but it had been a member of the old Confederation just dissolved; it had joined the Prusso-German Customs Union in 1842; and the fortress of Luxemburg, under the treaties of 1815, was still garrisoned by Prussian troops. For a moment, the dispute seemed likely to lead to an immediate war between Germany and France. Napoleon demanded the withdrawal of the Prussian garrison from Luxemburg, and the Prussian King refused to comply with this demand. But France was not ready to fight, and the dispute was adjusted by a European conference. The London treaty of 1867 left Luxemburg in the hands of the Dutch King; guaranteed the contingent rights of the ex-Duke of Nassau; pronounced Luxemburg a neutral territory, and decreed the razing of the fortifications and the withdrawal of the Prussian garrison. It is this treaty which at present determines the status of Luxemburg.

What is likely to be the future of this new sovereignty? The question is the more pertinent because the new dynasty numbers but three males. The Grand Duke is in his seventy-fourth year, his only son is unmarried, and his only brother is morganatically married, so that a new question of succession is no remote possibility. Strategically, Luxemburg is almost a German enclave. The Prussian Rhine province bounds it on the north and east and the imperial territory of Lorraine on the south. On the west it is

covered by Belgium. It touches France only on the southwest, and only along a stretch of four or five English miles. Without Lorraine and Metz, Luxemburg would be of no use to France. To Germany, on the other hand, Luxemburg would be of considerable strategic value. If the town were again fortified, it would close the western frontier of Germany in the one open place between Lorraine and Belgium.

Historically, and according to the "principle of nationality," Luxemburg belongs to Germany. Since its division and the cession of western Luxemburg to Belgium, its population is almost entirely German. It still forms part of the German Customs Union. Its most important railroad is a part of the Alsace-Lorraine system, and is managed by Alsace-Lorraine officials. Finally, whatever may be the personal feelings of the new Grand Duke, there is no reason why his official relations with Germany should not be friendly. Unlike other German princes who suffered with him in 1866, he promptly made his peace with Prussia, and resigned all claim to his lost sovereignty. In return, the Prussian Government has since that time supported his claims to Luxemburg, which the Dutch Government showed some inclination to contest.

In the way, however, of any closer political union between Luxemburg and Germany stand the stipulations of the London Treaty and the jealousy of France. The admission of Luxemburg to the German federal system, or a military union, or even an alliance, would be an infringement of Luxemburg's neutrality and a *casus belli* for France, as one of the guarantors of that neutrality. For the Luxemburgers the situation is not without its charm. They escape the great military burdens which weigh upon their neighbors. Were Luxemburg a French province or a State of the German Empire, its peace contingent would be about 2,100 men. As it is, its army consists of 300 men and a major. There is no particular reason for enlarging this force, since it suffices to maintain order, while a landsturm of the entire adult male population would not suffice to protect the territory against even a Belgian invasion.

It seems improbable that the status of Luxemburg can be changed without war; but another Franco-German war will probably terminate its independence. If the French regain Metz, they will be able to use Luxemburg to advantage. If France is beaten, no other Power will be likely to burden itself with the defence of Luxemburg's neutrality. As regards England, Lord Stanley declared in Parliament that she had assumed no obligation except to join in concerted action; that if a single one of the signatory Powers should refuse to aid in the maintenance of Luxemburg's neutrality, England's guarantee would cease to bind her.

THE ARGENTINE CREDIT.

PARIS, November 27, 1890.

TOCQUEVILLE'S work 'De la Démocratie en Amérique' created an immense sensation. Tocqueville prophesied the advent of democracy in all civilized countries, and his prophecy has been well justified. France is now a republic, and the right of suffrage is no longer limited. In England the electorate has been twice increased in a lifetime. Germany, though it has still many remains of feudalism, has an electorate large enough to admit even the Socialist element. Among the dangers which Tocqueville signalled for democracy, he did not count the financial. It is, however, every day more evident that democracies have an irresistible tendency to extravagance and prodigality. No more striking example could be shown than the conduct of the Argentine Republic. Prodigality in the Government, a loose morality in financial matters, private as well as public, but especially public—such are undoubtedly the dangers which a democracy must incur.

What may be called the power of imagination has ceased to exist in a purely democratic community; the idols which Bacon called *idola theatri* have been long forgotten; the prestige attached to great names can no longer counterbalance the power of wealth. Democracy is founded upon a perfect equality of man, but, in the struggle for existence, while there may be equal rights, there are never equal forces; and the struggle for existence becomes of necessity a struggle for wealth. In a highly civilized country like America, which has already a past, a history, glorious names and associations, there are some forces which tend to hinder democracy from becoming a plutocracy: the power of literary or scientific genius is recognized, the memory of great services rendered to the State is generously preserved. Still, with all the influences of religion, of literature, of science, of what really constitutes civilization, notwithstanding the high culture of a large part of the community, it is only too clear that the money power is too much felt, that the pursuit of wealth is too ardent and too absorbing, the steady work of labor and of economy is too often interrupted and deranged by the reckless enterprises of speculation.

In a country like Argentina—a country, so to speak, without a past, without tradition, without a literature, without any intellectual capital—the dangers of democracy are becoming terribly evident. I often stopped, during the last great Exposition in Paris, before what was called the Argentine Pavilion, and it seemed to me very emblematic: it had no style—it was neither Greek, nor Gothic, nor modern (if we apply the word modern to the bold and elegant iron constructions of our time); it was an odd structure, covered with gold and glass, glittering, multicolor, a vast toy, a gigantic plaything. The architect had evidently tried to produce the impression of unlimited wealth. And such was the impression people had at the time, when they spoke of the Argentine Republic. Year after year the Republic borrowed large sums from Europe, but we were told that the resources of the country were boundless, that immigration, like a wave, would soon cover the great plains between the Atlantic and the Andes. There was much truth and some exaggeration in the reports which were made to us; a wise and honest Government would have used the advantages of the country without compromising its credit and its future. But there was little wisdom in the central Government or in the provincial governments; and if we may believe half the stories which have come to light since the revolution, there was a sort of organization of corruption such as the world is not yet accustomed to. Responsibility was felt nowhere, and it will always be little felt where it is too much divided. Politics have become a mere way of making rapid fortunes. The reaction came, as might have been expected, from the commercial classes, for in commerce there is and always will be a real responsibility. Honesty will always be the soul of commerce, and people will never bear in private transactions what they are unfortunately too ready to bear in politics. The movement which ended in the overthrow of the clique which had brought Argentina to the verge of ruin, began in the "Civic Club," a club composed of the heads of the first commercial houses in the country. The merchants risked their lives in order to save their country.

People ask themselves now if the remedy has not been applied too late; the financial crisis continues, the premium on gold is again increasing in the most alarming degree. The great houses of Europe which introduced the Argentine loans to the European markets are combining their action in order to facilitate the liquidation of the present situation. At the same time they are thinking of the means of exercising control over the Argentine Government, and here they touch on a difficult political problem.

The power of capital has been felt in the political field in various circumstances. We have seen the beneficent effects of the interference of the European Powers in Egypt when the extravagance of Ismail Pasha had brought about a revolution in that country. Compare for a moment the price of the Egyptian funds when Ismail was obliged to leave Egypt, and their price at the present time, after several years of labor by the mixed European Commission, after the period which was called the *Condominium*, and after the period of the English occupation. Who would have thought, when the Oriental dream of Ismail Pasha had come to an end, that Egypt would borrow money in 1890 at the rate of 3½ per cent.—would be able to effect the conversion of all its old loans on the most favorable terms? Such, however, has been the result of a few years of order, of reform, of peace; the credit of Egypt is actually better than the credit of some of the oldest monarchies in Europe.

The experiment made in Egypt was repeated in another form in Turkey; here also we see a country on the verge of absolute ruin, unable to reform itself, without any administrators or financiers, and obliged to receive external help in the shape of a financial commission. In this case the pressure of Government was not felt as it was in Egypt, it was not so direct; the intervention had a more private character. Turkey had mortgaged successively a great part of her resources, and the holders of these mortgages formed a permanent commission, which by degrees substituted its action for that of the impotent Turkish administration. The result was the same as in Egypt; the commission has a staff of functionaries, of tax collectors; it has introduced as much order in Turkey as a Mussulman country can bear, and the Turkish funds have slowly emerged from the abyss, and are day by day becoming a little more respectable. Some years ago they were purely speculative; some of the Turkish loans are now looked upon as serious investments.

So long as a nation's credit is so good that its loans need no special hypothecation, it can escape external control; but when special revenues are mortgaged, the mortgagee has an obvious right over them, over their collection and administration. Such has been the case in Egypt and in Turkey. Things have not come to this extremity in the Argentine Republic, and those here who speak already of

sending to Buenos Ayres a mixed financial commission are confounding cases which are in reality different. The Argentine Republic has so far made loans solely on the strength of its credit, and its general resources are the only guarantee for the payment of the interest. It is difficult to see what a European commission could do. It could not replace the Argentine administration of the general resources of the country; it could not, in fact, govern the country. The case would be different if some special receipts, such as those of the Custom-house, had been given as a special guarantee for the repayment of a certain loan. In that case there would be a door open to foreign intervention.

So far it seems to us that the Argentine Republic may say, as Italy once said, by the mouth of Charles Albert, "L'Italia farà da se"; but we must remember that after having uttered these proud words, Charles Albert led his troops to Novara, and had to abdicate the crown. It is quite possible that the Argentine Republic, if she wishes to dispense too absolutely with the advice and the interference of Europe, may have her Novara; at the same time her European creditors must be careful not to wound the pride of a young, ambitious, and democratic nation. They have not to deal with an absolute government, with an irresponsible sovereign, with a few powerful ministers who have a solid majority in the Parliament; any arrangement made which might be denounced as an insult to the Argentine people, could probably be easily undone by a popular movement. The men who are now in power, and who seem to be, for all we know, the best men that could be found under the actual circumstances, have, therefore, before them a most arduous task. They are like the captain of a ship who, during a terrible tempest, must throw something overboard. What is there to save first and at all risks? It is the national credit. The central Government, in this crisis, may have to sacrifice the credit of some of the provinces and some private institutions. If the central Government is weak, and if the nation, as a nation, loses all credit, there will be no end to the political and financial troubles of the Republic. The country would soon fall into a sort of anarchy; the central Government and the national credit ought, therefore, to be first sustained.

The question of State rights, which at one time convulsed the American Republic, may therefore soon arise. We confess that we do not see that it is the duty of the Federal Government to sustain, at the public cost, the credit of imprudent or dishonest provinces. The European markets have been loaded with loans made by some of the Argentine provinces which may be unable to fulfil their engagements; the Argentine Republic, in the hour of prosperity, gave no special guarantee to these loans; we do not see why, in the hour of adversity, it should come forward and guarantee them. It would inflict too heavy a burden on the people, at the moment when they find it difficult to carry the national load.

The situation of Argentina involves many political questions, as I have tried to show. Time will prove if in this young and somewhat untrained democracy there will be found men strong enough to save their country not only from financial ruin, but from a premature political decrepitude.

THE ITALIAN ELECTIONS.

LONDON, November 25, 1890.

WE left Italy before the elections commenced, but with a pretty clear idea of how they would end, seeing that, in the presence of one strong, compact party, with a national and international programme, there were four or five factions with either no programme of their own, or one that contradicted that of their quondam colleagues. When, a little more than four years since, the last general elections took place, Cairoli and Baccarini were in the field, Bertani, though he died just as they were commencing, had spent the last weeks, nay months, of his life in organizing the party: his last lines, written the day before his death, entreated Carducci and Aurelio Saffi to accept a seat and retake their position as Radical leaders. Saffi, though he would not again take the oath, was one of the most energetic leaders of the electors in the Romagna, and on the whole the elections went well for the Radicals. Some provinces "went Radical"; all others shared the seats with the Progressists. The programme of Bertani and of men of his stamp, who had spent their lives after 1870 in carrying out the principles they had laid down during the struggle for unity and independence, was the thorough and immediate effectuation of the reforms without which no progress in material and intellectual pursuits could be effected. Why they assailed Depretis was because he, the earliest reformer in the old sub-alpine Chambers (with the one exception of the political Electoral Reform Bill, which was due really to Crispi, Cairoli, and Zanardelli, and which he handicapped with a new "Bill on Oaths"), had not kept his reform pledges, had got into the African muddle, had, in the Triple Alliance, allowed Italy to play third fiddle, and in financial matters had probably made as sad a muddle as it was possible to do, having trusted entirely to Magliani, who held the position of Minister of Finance for ten uninterrupted years. So intense was their anger against him that even when, a few months before his death, Depretis asked Cairoli and Baccarini to join him, they would not.

Crispi and Zanardelli were wiser in their generation. They saw that unless they acceded to his request, the King must appeal to the Conservatives, who had quite other than a reform programme. They knew that the Triple Alliance was renewed; that, after Saati, there was no getting out of Africa, but only a chance of making good the footing *in* Africa. They both went in with the certainty that they could carry the reform bills on which they had set their hearts. They believed that they would be sincerely and thoroughly supported by the large body of Liberals of the different gradations into which the Liberal party has always been broken up, and that only the few anarchists who trade on fishing in troubled waters and the champions of the temporal power would oppose them. In this belief alone they were mistaken. The African policy has been a decided success, and may be regarded as a mission of civilization unmarked by any of the scandals, horrors, and brutalities which have accompanied other nations in "darkest Africa." With regard to Italy's position in the Triple Alliance, no one now disputes her right to be regarded, treated, and consulted as an equal. Nor, despite the dark financial outlook, which no optimism can blink, does any one pretend that a dissolution of the alliance would mend matters, but rather compel Italy to spend more in an isolated position than she now does when her territory is guaranteed by her allies, and when her unwritten alliance with England makes her own naval expenses less heavy to face in the future. Then, in the great matter—the question of commercial treaties with France—the treaties were already denounced, the tariff wars were initiated. Crispi's pledges in this respect for the future are distinct:

"We have already suppressed the differential duties voted in 1888 against France as an answer to a hostile tariff—entirely a defensive measure this. France, nevertheless, maintains her exclusive measures against our exports, and still we do not retaliate, because the suppression of these differential duties confirms the fact that Italy, forced into the economic war, continues to be animated by friendly feelings towards France. It remains to be seen whether we shall attain any material benefit in return."

Precisely! If not, Italy can't go on crying for spilt milk, or howling over the millions lost by the French customs war. She must make the best of it, and that is what she means to do.

Coming to the starting point, the programme of the Liberals—home reforms—it is by that the present Ministry was bound to stand or fall. It was *in* and *on* reform that they counted on Radical support. Well, the total abolition of licensed prostitution should count for something? Then the passage of the Sanitary Code, which, if not all that Bertani would have made it, is a complete, sweeping reform, if properly applied. The Penal Code just passed has been Zanardelli's life-work. The Clericals abuse its every article because it limits their power to undermine the Constitution; but take the article abolishing the punishment of strikes save when accompanied by violence. Put side by side the "little" law enabling the Government to treat directly with bona-fide workingmen's associations, give them contracts for public works not exceeding at present the sum of 100,000 lire, without the intervention of sweater contractors, without the necessity of a security or money deposit, and with fortnightly payments, only 10 per cent. kept back until the whole work is completed. We need not dwell on the reform of the police, which is imperfect, nor on the reform of communal and provincial assemblies, though the clamorers for universal suffrage might say thank you for having quintupled the administrative electors. But the one radical, able, and immediately applicable reform of charitable institutions would have sufficed to form the glory of any ministry. Two milliards of the "patrimony of the poor"—ninety millions of annual income—are now placed under the administration of men to be chosen by the communal councils, *i. e.*, by men chosen by all the electors who can read and write. The Government only retains in its own hands, or in the hands of the prefects, such power as is necessary to control the local assemblies, *i. e.*, the congregations of charity, in cases of alienation and conversion of the old trusts. Hitherto the funds have been chiefly administered by ecclesiastical authorities; it is natural that they should bewail the change. Naturally, also, the Radicals would, it might be supposed, have assisted and spurred on the Government, and applauded it when the work was complete. But in fact they have no part nor lot in the matter.

Maffi is one of the few Radicals left out in the cold whose absence will make itself felt in the House whenever a bill relating to the labor question is under discussion. It is possible that he may get a seat in the bye-elections, of which there will be many as soon as the members elected in two or more colleges shall have made their choice. But we doubt it. The Anarchists will none of him; for the Socialists he is too practical. We fear that the place which has known this modest, genuine, typical Italian

workingman will know him no more in the new Parliament.

The moral of all this is, that Crispi and Zanardelli are what we have always believed them to be—radical reformers whose programme is as broad and large and deep as the country is prepared for at present. There is nothing, moreover, in the Radical programme that they are not prepared to grant within the limits of the Constitution. Had we less faith in their patriotism and their liberali-m, we should say that they are too strong; that their victory is too complete, the opposition too small. But what is the immediate business of Italy and her statesmen to-day? Economy, economy to the backbone, as Sella used to say; and no one more than a ministry who have been behind the scenes for the last three years can understand the absolute necessity of economy in its full extent. It partly depends on home management: the spenders must be put on half rations, for rations in the shape of fresh taxes cannot be counted on. Then, when all is said and seen, France, in the defeat of the Radical leaders whose blarney has so misled her, will realize that the immense majority of the country is with the Government, and that if Italy and Italian commerce are worth anything to France, she must treat with her representatives on a footing of equality.

On the whole, it is well with Italy. The organs of the Vatican are not of this opinion, which confirms its truth. The English papers, Conservative and Liberal, extol Crispi's victory to the skies—not to the point of giving him Kassala, perhaps; but should it be "found necessary" for Italy to enter therein, little or no opposition will be made. I speak of the opinions expressed yesterday morning on the receipt of the Italian electoral news. This evening the excitement on the Gladstone-Parnell leadership business is such as, to an exile of some thirty years from England, seems incomprehensible. The last time we saw English people so excited was over the "English conspiracy bill," after the Orsini bomb-business.

J. W. M.

Correspondence.

"GERMAN LUTHERANS IN POLITICS."

To the Editor of The Nation:

Sir: Your issue of November 20, 1890, contained a correspondence signed "Andover," in which German Lutherans generally, and the Missouri Synod in particular, are "damned with faint praise."

In the guise of a friend and well-wisher of our Synod, "Andover" makes a malicious assault upon it, while attempting to reveal the "causa efficiens" of the Republican defeat in Wisconsin and Illinois. His praise of our Synod in the beginning of his communication would be highly gratifying to us but for the manifest fact that it was intended to serve as a foil more insidiously and effectively to set off at advantage the many severe strictures he makes upon the spirit, doctrines, and practice of that body. The preliminary praise is but the sugar-coating of the bitter pill of detraction beneath. The charges that he makes against the Synod are: "That the entire spirit of the organization [Missouri Synod] is thoroughly un-American, being German, and German, not of the nineteenth but of the sixteenth century; that it is intolerant, full of superstition and fanaticism," and that it is guilty of "fetish-like worship of Luther and his works." How does he support these charges?

In the first place, he censures us for publishing and using Bible histories and school-books in which "the Deity is represented by the artist as an old and rather benevolent-looking gentleman," etc., according to the spirit of the sixteenth century. He does not see fit to tell us in what manner this instance supports any of his charges, and we fail to see anything un-American, intolerant, superstitious, or fanatical in it. If "Andover" finds fault with thus representing the Deity because he shares the Calvinistic view prohibiting the making of any image of the Deity whatsoever, we shall not discuss that matter with him here, but simply remind him of the fact that the great body of Christians do not agree with him. Should he, however, object to the particular manner of the representation of God, then his quarrel is not with us, but with the old masters, Raphael, Michael Angelo, etc., from whom our artist copied.

Furthermore, he criticises our republication of Luther's 'Table Talk.' As to that, permit us to say that this 'Table Talk' or 'Colloquia' has always been an integral part of that edition of Luther's works which we are now republishing, and which has always been considered the best of the various editions of Luther's works. And while it is true that Luther therein occasionally employs homely and rude language in order to forcibly and bluntly express himself in accordance with the manner of his time, no really pure heart and mind stand in danger of being corrupted thereby. He who seeks offence may find it even in Holy Writ. Our "fetish-like worship" of Luther has never carried us so far as to rank even his best and genuine works with any of the books of Scripture, and as to his 'Table Talk,' which is a collection of Luther's small talk, made up by irresponsible parties without Luther's knowledge and consent, we of course value it only in so far as it gives us a fuller acquaintance with a man whose small talk even is worth perpetuating.

"Andover," in order to further sustain his charges, adduces our republication of the 'Altenburger Bibelwerk.' By his remarks thereon it would appear to us that his indignation against said work was aroused rather by the text of the Bible itself, or in particular by such passages thereof as recite divine judgments and punishments that appear too cruel to his "enlightened theology," than by the explanations and applications accompanying these texts. If this be so, his quarrel again is not with us, but with God himself. However, we do not deny that this work, excellent as it is in general, contains in its summaries some of those false notions and peculiar teachings concerning secular authority in church matters, as they prevailed in the established church of the country and the time in which the work was compiled. But is the mere republication of a work containing so many excellent features a justification of any of the charges that he makes against us? Is every one who prints, circulates, and reads similar books therefore to be decried as intolerant and bigoted? Does "Andover" not know what the Puritans did and taught in this respect? Does "Andover" go into convulsions over the actions and teachings of those Pilgrim Fathers in this respect, who even in this "enlightened age" and country are still held up to mankind as examples and ideals to pattern after for all time to come?

"But," "Andover" may say, "if you desire a republication of this work because of its many excellent points, why do you not caution your readers concerning those passages in the summaries which you concede to be erroneous?" Our answer is, we have already done so. Shortly after the appearance of the first edition, these objectionable passages were thoroughly discussed and pointed out in our synodical conferences and publications, and a committee has for some time been at work eliminating such passages for the future editions of this work.

"Andover's" last charge is, that in our teachers' seminary at Addison, Ill., and in some of our official journals until very recently, the doctrine was taught that Christianity and the Copernican system of astronomy are incompatible, and that a genuine belief in the inspiration of Holy Writ required the rejection of the entire science of geology. This statement as made is absurd and untrue. Concerning the Copernican system, we do not condemn it, but do take issue with those who base upon it an argument against the divine inspiration of the Bible. As Christians we plant ourselves upon the words: "It is written," "That we henceforth be no more children, tossed to and fro and carried about with every wind of doctrine by the sleight of men and cunning craftiness" (Eph., 4: 14), and "Avoid profane and vain babblings and oppositions of science, falsely so called" (I Tim., 6: 20); and for that reason we insist upon a radical distinction between philosophy and theology, between human and divine truths: the former is capable of progress—not so with the latter. Divine truth, of course, can and should be better known, understood, and applied; but as to its real nature and essence it cannot be improved—not even in this "enlightened age"—because, being of God, it is immutable as God himself.

We think we have now fully answered all the charges brought against us by "Andover." Permit me now briefly to state the position taken by our Synod as well as that of the Synodical Conference (which embraces the Wisconsin, Minnesota, Missouri, *and one English Lutheran synod*) on the Bennett Law as contained in resolutions passed by said body and which are as follows:

"(1.) Whereas, the Word of God, our rule of life, enjoins upon all Christian parents the duty of bringing up their children in the nurture and admonition of the Lord; therefore, all Christians who educate their children in schools are in duty bound to intrust their children who are not yet confirmed in Christian truth, to such schools only as secure the education of children in the nurture and admonition of the Lord, while at the same time it is with us self-understood that we are willing to make good citizens of our children, to the utmost of our ability, and that we also endeavor to give them the best possible schooling in the use of the English language.

"(2.) Whereas, in the non-religious public schools, wherever they are conducted in the sense of the non-religious State, not only Christian education is excluded, but also, as a rule, things not in harmony with the Word of God are by way of instruction and discipline inculcated on the children, and the spiritual life of Christian children is thus endangered and impaired; therefore, we as Christians are in conscience bound to submit to no law of the State which is directed or may be used towards forcing our children into such public schools.

"(3.) In accordance with our daily prayer, 'Thy kingdom come,' it is our duty to preserve and extend the orthodox Evangelical-Lutheran Church in this our country, and we are, therefore, in conscience bound to combat each and every law which is directed or may be used to the detriment and damage of Lutheran parochial schools, which are effective means of extending and perpetuating the kingdom of God.

"(4.) Forasmuch as our Lord Jesus Christ says, 'My kingdom is not of this world,' and 'Render unto Cæsar the things which are Cæsar's, and unto God the things that are God's,' the separation of Church and State is for all times to be acknowledged as in accordance with the Word of God; and since God has in this country vouchsafed unto us the precious boon of religious liberty, we may not as faithful stewards approve of any legislation which tends toward a confusion of spiritual

and secular affairs and endangers our religious liberty, and we most cordially approve of combating with legitimate means such laws as have to the detriment and damage of our parochial schools been enacted in the States of Wisconsin and Illinois during the past year, while on the other hand we, for the same reason, *condemn all demands upon the public funds for the erection or maintenance of parochial schools.*

"(5.) For all the reasons stated, we must, as Lutheran Christians, grant our cordial approval to the fact that our brethren in the States of Wisconsin and Illinois have, whether in courts of law or at the ballot-box, taken up and hitherto carried on the contest forced upon them against such laws, and we are, furthermore, determined to make most energetic opposition wherever in other States such or similar legislation may be attempted."

I might add that similar resolutions have been adopted by the Synod of the Norwegian Lutheran Church in America, the oldest and largest organization of Norwegians in this country.

Finally, if it be true, as "Andover" says, that the attempt to "translate the Missouri Lutheran views into English has failed," and that "the laity probably lay very little stress upon such theories as are illustrated in the above quotations, and the second generation begins to show that wholesome indifference to dogma which is so characteristic of modern active and enlightened Christianity," then why all this alarm about the Missouri Synod and its doings? "Andover" may rest assured that if the result of the late election in Wisconsin and Illinois be to prevent further interference with our schools, German Lutherans as a body will soon be "out of politics."

Respectfully, H. C. SCHWAN,
President of the German Evang. Luth. Synod of Missouri, Ohio, and other States.

CLEVELAND, O., November 28, 1890.

[We have received a number of replies to "Andover," and are forced to select. The above will probably be recognized as proceeding from the weightiest source. We cannot continue the controversy.—ED. NATION.]

GRACE AT WASHINGTON'S TABLE.

TO THE EDITOR OF THE NATION:

SIR: Owing to absence in Europe, I have only now seen a letter in the *Nation* (September 12, 1890), signed "S. C. C.," concerning an incidental remark of mine that it is known that grace was not said at Washington's table. It is possible that my sentence was not sufficiently guarded, and that at some period Washington may have followed the usage. I have never been able to find any instance of his saying grace recorded by a contemporary; but I have just found this passage in the Rev. E. C. McGuire's 'Religious Opinions and Character of Washington' (1836):

"It may be here added, simply as evidence of his devotional habits, that he always said *grace* at table. On one occasion, from the force of habit, he performed this duty himself when a clergyman was present, an instance of indecorum very unusual with him. Being told, after the clergyman's departure, of the incivility, he expressed his regret at the oversight, but added: 'The reverend gentleman will at least be assured that we are not entirely *graceless* at Mount Vernon.'"

As, however, our dear old Parson McGuire, whom I knew in my school days at Fredericksburg, was credulous, swallowed Weems's cherry-tree and other fables, and followed other uncritical victims of Washington "anecdotage," his story requires verification. The statement in Watson's 'Annals of Philadelphia' ("He always asked a blessing, etc.") cited by "S. C. C." also requires verification, and his "always" modification. In the *Magazine of American History*, June, 1889, is printed a letter from Gov. Roger Griswold to his wife, dated Philadelphia, January 1, 1796, in which, describing a dinner given by the President to the delegations from Connecticut and Maryland, he says: "Six servants in livery attended at the table. We had no grace." A paper read before the American Antiquarian Society in Boston, April 30, 1879, by Hon. Hamilton B. Staples (printed at Worcester) embodies Judge Amariah Frost's diary of a visit to Mount Vernon, June 26, 1797, of himself and Dr. Croker. The four ladies of the family, and young Lafayette and his tutor (Frestal), were the others at dinner. "The President," says Judge Frost, "directed us where to sit (no grace was said)."

McGuire and Watson are therefore inaccurate in saying "always," and I cannot help thinking that even if the custom of saying grace had been usual with Washington, after he became so eminent, more would have been made of it at the time by the many zealous people eager to display every sign of piety in Washington, who in such matters was reserved. We might, for instance, have expected an allusion to it in a letter of Col. Benj. Tallmadge to Rev. Manasseh Cutler (January 11, 1800), on the death of Washington, in which he says, with significant italics:

"Altho' from a long and tolerably intimate acquaintance with him, I have been abundantly convinced of his attachment to the *Christian system*; yet had he been explicit in his profession of *faith in* and *dependence on* the finished *atonement* of our glorious Redeemer for acceptance and pardon, what a conspicuous trait it would have formed in his illustrious character."—*Mag. American Hist., March, 1883.*

That Washington was a religious man I have no doubt whatever; his not saying grace I should attribute to the sensitive reverence which most inclines to shut its closet door when zealots desire to make it "a conspicuous trait."—Respectfully yours,

MONCURE D. CONWAY.

THE CAMPAIGN IN NORTH CAROLINA.

TO THE EDITOR OF THE NATION:

SIR: It may interest some of your readers to know that during the recent campaign quite a number of the more prominent Republicans of this State openly withdrew from their party, most of them alleging as the cause the McKinley Bill and the Lodge Elections Bill. Again, during the election, a certain tool of the Administration, for the purpose of getting material in support of the Lodge Bill, went down to one of the black counties to watch the election, and, having been invited into the polling-place, was free to admit that he could see no unfairness.

It is also interesting to note that the negroes seem to have grown discontented with the control of the white Republican minority, and in some counties nominated tickets of their own, in others did not vote at all, and in others voted the Democratic ticket. In a certain township containing a large number of negroes, only one of them voted the Republican ticket, and he for only one candidate. If this beginning shall result in a more even distribution of the negro vote among the two parties, will it not do more towards settling the negro problem than the Lodge Bill?

Very truly, W. M. LITTLE.

CHAPEL HILL, N. C., December 3, 1890.

AMERICANS IN ENGLISH UNIVERSITIES.

TO THE EDITOR OF THE NATION:

SIR: It has been the occasion of some criticism on the part of our English friends that so many of our college graduates go to the German universities to pursue advanced studies, and so few to Oxford and Cambridge. Recent experience leads me to call attention to one element in this decided preference for Germany over England that is due to the provisions of the existing statutes of the great English universities, and might be readily changed for the better.

The University of Oxford makes no provisions for the admission of graduate students, as such, from any other universities than those of Cambridge and Dublin. The only door open to the American graduate, whatever be his standing and degree, is that into the limbo of non-collegiate students — a limbo which of late years has become less gloomy, but is still subject to all the important restrictions and open to but few of the delights that fall to the lot of those who are members of some college as well as of the university. The American graduate is admitted to an undergraduate status, and a status of this sort only; and the sole distinction made between him and the English boy fresh from the public school is that if the former declares his intention of not proceeding to the baccalaureate degree, and can prove to the proper officers his fitness to pursue a special line of study, he may be excused from the simple entrance examination required of other undergraduates—an examination covering much less ground than that required for admission to our colleges. This is in face of the fact that the standard of the bachelor's degree in arts in a dozen of our best colleges is far higher than that of the pass degree in the English universities, while the B. A. with honors in some special department from any one of a number of our institutions has every opportunity to be the superior in mental equipment of his English brother holding a similar degree. I think the only exception would be perhaps in Greek and Latin "composition."

Under these circumstances, it is not strange that the alumnus of Harvard, or Yale, or Johns Hopkins, especially if he has already made considerable progress in higher studies and has been admitted to an advanced degree, prefers not to submit himself to the awkward and, for him, somewhat humiliating conditions that are the best Oxford has at present to offer him. I am informed that Cambridge is in similar case. It seems that a remedy might readily be found in admitting all B. A.'s and M. A.'s of proved ability to more formal and distinct recognition in the University, even if the recognition be not extended to actual incorporation. The academic hospitality of our own universities might safely serve as a model.

The greater question of the relative advantages otherwise offered by the English and German universities lies without the scope of this observation. E. T. M.

MIDDLETOWN, CONN., December 6, 1890.

Notes.

HARPER & BROS. publish directly 'The Wonderful Adventures of Phra the Phœnician,' by Edwin Lester Arnold, son of Sir Edwin Arnold.

'A Washington Bible-Class,' by Gail Hamilton, is in the press of D. Appleton & Co.

Fords, Howard & Hulbert will issue on January 7, 1891, the delayed new novel by Judge Tourgée entitled 'Murvale Eastman, Christian Socialist.'

Ward, Lock & Co. promise a new and enlarged edition of Mr. Locker-Lampson's 'Lyra Elegantiarum,' as a volume in their "Minerva Library."

Kegan Paul, Trench & Co., London, will bring out 'The Last Colonel of the Irish Brigade,' an historical work, based on family papers, by Mrs. Morgan John O'Connell. The last Colonel was Count O'Connell, an uncle of the "Liberator."

The Clarendon Press, Oxford, is now publishing another volume of the historical geography series. It treats of the British West Indian colonies. This admirable series is edited by Mr. Charles Prestwood Lucas, B.A., of Balliol College, Oxford, one of the staff of the Secretary of State for the Colonies, and who has for some years filled the office of private secretary to Sir Robert Herbert, the Permanent Under-Secretary at the Colonial Office. Apropos of the subject, we may mention that Sampson Low & Co. will shortly publish a second edition, with statistics brought down to date, of Mr. C. Washington Eves's chatty book about the West Indies. The work will be out in time for the Jamaica Exhibition, in the furtherance of which Mr. Eves has rendered very valuable service in his quality as Chairman of the London Committee in connection therewith.

In the fifty-first annual report of the Deputy Keeper of the Public Records, London, it is announced that a handbook to the principal classes of documents in the Record Office is in the press. The work in question has, we understand, been compiled by Mr. S. R. Scargill-Bird, one of the senior clerks of the Department, who has given many years to its compilation. Mr. Scargill-Bird's colleagues speak of its execution with the highest commendation, but, at present, historical students, to whom it is absolutely indispensable, await the pleasure of Mr. Maxwell Lyte's imprimatur before they can make use of this key to one of the greatest treasure-houses of historical documents. To inquirers on both sides of the Atlantic Mr. Lyte would confer a favor by explaining the delay in publication.

The fourth volume of the 'Century Dictionary' has left the binder's hands. It concludes with the letter P, and contains 100 pages more than the largest of its predecessors. The publishers estimate that the total number of pages will be at least 500 in excess of their estimate, or 7,000 (it would have been 7,200 if the first volume had served as a unit). The present instalment is particularly rich in scientific and technical terms. Fulness of definition is signally exemplified in the case of *put*, with its wealth of colloquial, idiomatic expressions; in this respect outrivalling *get* in the previous volume. The literary references are, as from the beginning of the work, precise with chapter and verse; while the illustrations continue to be numerous, clear, and elegant. Amid the monotony of the *mono-* compounds, for example, one comes upon a charming little cut of the Temple of Vesta at Tivoli (monopteron); and the *para-* compounds are similarly lighted up. The two final volumes it is hoped to issue by and before the summer of 1891.

Two small, thin holiday books come with the imprint of the J. B. Lippincott Co. 'Tisáyac of the Yosemite' is one of those extraordinary "poems" by M. B. M. Toland on which this firm annually, or too often, wastes dainty binding, good print and paper, and drawings by our best artists. The principal victim this time is Mr. Dielman, who must shudder to see his good work wedded to such unmitigated trash. There is a charming half-title, printed in colors, by Will H. Low, and the list of victims contains the names of H. Bolton Jones, Henry Sandham, Hermann Simon, René T. de Quelin, and the sculptors John J. Boyle and A. L. R. Van der Berghen. The illustrators of 'Sheridan's Ride,' also issued by this house, have wisely remained anonymous, for they have succeeded in producing as bad a book of its kind as one often sees. The drawings are feeble and tasteless, the wood-engraving is indifferent, and the cover is gaudy.

Mrs. Sarah E. Heald, who has written much and acceptably for the young, has taken a higher if not more ambitious flight in 'The Eagle's Plume: A Story of the Early Days of Vermont' (Philadelphia: Sunshine Publishing Co.). Though apparently designed for adults, it could be read to or by children with unfailing interest, and would usefully fix in their minds some historic dates and episodes on both sides of the Atlantic. The story, which is vouched for as true, is unfolded very naturally, but also skilfully, and with as much regard to the unities as a classic drama. Mrs. Heald's refinement of feeling and language, and her descriptions of natural scenery and of New England customs, lend a peculiar charm to her unpretentious narrative.

Again a mass of new editions of old works has accumulated on our table. Those characteristic productions of "Grace and Philip Wharton" (Mrs. Katherine Thomson and her son John), industrious bookmakers of a past generation, 'Queens of Society' and 'Wits and Beaux of Society,' first saw the light of England just thirty years ago. To the several editions already accessible to the American purchaser Porter & Coates add another, each in two volumes, fairly attractive in print and binding, and with numerous portrait plates of uneven merit. No critic nowadays could speak respectfully of the gossip and chatter and historical superficiality and commonplace reflection which make the contents of these twin compilations; but at any given time there are all classes of readers as there are all grades of civilization in the world. The United States Book Co. has ventured upon new library editions of 'Vanity Fair,' 'Hypatia,' and 'John Halifax, Gentleman,' uniform in size and tastefully bound. 'Vanity Fair,' of course, being compressed into one volume, has a more condensed typography than its companions, but still bold and easy for the eyes, Thackeray's illustrations are reproduced, and they are at least equal to the poor designs with which 'Hypatia' is equipped. Those of 'John Halifax' are somewhat better, but this feature of the series cannot be said to magnify its worth. Ward, Lock & Co. extend their plain, businesslike "Minerva Library" with Lockhart's 'Life of Robert Burns,' edited by John H. Ingram, who, besides a special contribution of foot-notes, increases the bulk of the work one-half by means of appendices. The last two of these consist of Carlyle's and Christopher North's reviews of Lockhart. We have often praised the form and appearance of the "Laurel-Crowned Tales" issued by A. C. McClurg & Co., Chicago, and it is enough to note the titles of the two latest, the 'Vicar of Wakefield' and Moore's 'Epicurean.' In simple elegance they will compare favorably with any popular edition we are acquainted with. It will be long before we shall tire of Richard Jefferies, and Roberts Bros. need no excuses for offering 'The Gamekeeper at Home' once more to the public, with illustrations by Charles Whymper.

'Tales and Prose Phantasies,' beginning with "Murder Considered as One of the Fine Arts," fill out vol. xiii. of Prof. Masson's edition of De Quincey's collected writings (Macmillan). The "Miscellanea" introduced at p. 373 mark the beginning of the end, for they will conclude the next and final volume of this beautifully printed and edited collection.

Mr. William O'Brien's 'When We Were Boys,' published here and in London by Longmans, Green & Co., has been added to the Bibliothèque Charpentier in a French translation made by Mrs. O'Brien, with a preface by M. Burdeau, a Deputy.

Greenough, Hopkins & Cushing, Boston, send us an attractive calendar for 1891, "With Modern Authors," compiled by Alice F. Stevens. Each page is assigned to a single author; thus, January is divided among Mr. R. W. Gilder, Mrs. Rose Hawthorne Lathrop, Dickens, and Mr. Wm. Hunter Birckhead. The compiler's taste is catholic, with a predilection for poets over prose authors.

A card game purporting to form "a quick, easy, and interesting method of learning a language," and called "A Gift of Tongues," has been published for the German by Avery & Co., Orange, N. J. We have our doubts about its utility, but it may very likely furnish innocent amusement, particularly if played in the presence of an arbiter who understands the language.

A new *Educational Review* is announced to be published in this city on January 1 by Henry Holt & Co., under the editorial conduct of Prof. Nicholas Murray Butler of Columbia College, assisted by several heads and superintendents of schools. The magazine will embrace in its scope the primary, secondary, and higher education.

Trinity College, Hartford has issued a new General Catalogue (1827-1890), in which the Latin is employed throughout, contrary to the better example manifested by Harvard this year in its quinquennial catalogue. The number of this year's graduating class, 25, is the same as that of the class of 1842, and was surpassed in 1851 (31) and in 1880, 1882 (26). The very first class, that of 1827, numbered 10; and in this small range during sixty years we seem to read the moral of sectarian colleges.

It is difficult to define in a few words the distinctive character of Clark University at Worcester, Mass., and any one interested to discover it should procure President Stanley Hall's first annual report to the Trustees, just printed. His survey of the need of such an institution and of the study of European systems which led to its foundation, and his brief exposition of the kind of students admitted and instruction given, are followed by department reports of the lines of original investigation pursued at the new University in mathematics, physics, chemistry, biology, and psychology. Perhaps the most notable of these is the effort to find the ultimate unit of length in the establishment of a light-wave, enabling "two observers at opposite ends of the earth, with different instruments and entirely independently, to construct two standards (containing, say, a million light-waves) which shall not differ from each other so much as do the present copies from the original standard."

An ingenious bit of antiquarian reconstruction is given in the April Proceedings of the American Antiquarian Society, in the paper on "The Early College Buildings at Cambridge," by Mr. Andrew McFarland Davis. A few copies have been printed separately.

"K." writes us from Cambridge, apropos of our recent review of Martyn's 'Life of Wen-

dell Phillips,' that the author was correct in stating that Phillips was at one time president of the Hasty-Pudding Club at Harvard, a position which he in fact held for one term, when he was elected orator, but resigned from the club before performing the duties of his new office. We were led into the error of denying this by very recent information on which we placed full reliance, and we regret to have added a single item unjustly to the rather long list of indubitable defects in the work in question.

— In the *Allgemeine Zeitung* of October 30 we find an interesting review of a recent work, 'Kirche und Sklaverei,' by Theodor Brecht (Barmen: Hugo Klein). This author appears to have been inspired by the recent activity of Cardinal Lavigerie for the suppression of the slave trade, and by concurrent Catholic pretensions on behalf of the Church as the great emancipating influence of the Christian era. His thesis is bluntly to the contrary, and he undertakes to show that it is Protestantism and the humanitarian ideas derived from it and the philosophy of the last century which have led to the abolition of slavery. He pictures the Church of the middle ages holding and trading in slaves, making slaves even of freemen; Pope Gregory I. freeing a pair of slaves, yet sending back a fugitive from Otranto; bishops restraining the secular clergy from freeing their bondmen as a waste of Church property; churches owning ten slaves entitled to a separate priest; the canonical law forbidding slaves to make a will, and ordering the offspring of free and bond to follow the lower condition; the pagan slaves of Jews freed under certain conditions, the Church's Christian slaves held fast—the Popes themselves owning Mohammedan slaves, especially for galley service; the Popes, again, with ban and interdict condemning to slavery the entire population of districts and cities opposed to them, as Clement V. in the case of the Venetians in 1309, with no exception of the innocent; finally, the enormous extension given to slavery by papal bulls in the age of discovery, conferring vast unknown lands upon the Catholic Powers behind the adventurers. Herr Brecht's reviewer points out his blind eye to Protestant shortcomings, and adduces among other examples the complicity of the Protestant clergy of the United States with Southern slavery down to the outbreak of the Civil War. To this it could be replied that every Protestant sect save the Episcopalian (which stood wholly aloof from the anti-slavery agitation and threw its weight against it) and the Covenanter (anti-slavery by its constitution) was divided on the subject of slavery, whereas the Catholic clergy were wholly and openly on the side of the Slave Power, and, by means of the Irish and German Catholic vote, prolonged the existence of slavery by maintaining the Democratic party in place from 1848 on. The example of Brazil might also be cited, where emancipation owed nothing to the Church, and where the most that can be said for Catholicism is that it probably ameliorates color prejudice and favors social and political fusion.

— In connection with the receipt at this office of the Sixteenth Annual Report of the Minister of State for Education in Japan for the year 1888, and of the Calendar of the Imperial University of Japan for 1889–'90, there is little to be said in the way of adverse criticism, but much in praise. Both pamphlets are unusually full, and exhibit on every page that desire for accuracy which is so encouraging a trait of the modern Japanese, and which, to a foreigner who remembers the beginning of the second half of this century, stands in favorable contrast to the old days of secrecy and repression. The total number of pupils now enrolled in the empire is 2,927,868, of whom 2,873,759 attend the public, and 54,109 the private schools. While the organized education seems along every line to be progressing healthfully and hopefully, there are also gratifying signs which give a foreigner solid grounds for believing that this education is vitally transforming the Japanese mind. Among such signs is the formation of a society in the University itself for the critical examination of the early annals and later history of Japan, together with a comparison of the native records with those of China and Corea and the West. The application of modern principles to the study of history is one of the sure proofs that the love of truth for its own sake is entering the Japanese mind to possess it. The late Townsend Harris, our first and ablest American Minister to Japan, despite his love for the country and people, seemed, in his diaries and despatches, to use such phrases as "Japan is the land of lies," "The Japanese are the greatest liars on earth," etc., as ordinary punctuation-marks. All this is now changing, and the native ambition seems to be in the direction of realism in truth. Another most hopeful sign, and contrasting notably with the last year's reports, as readers of our Notes may remember, is the revival of interest in Japanese literature and linguistics. The beautiful language of Japan is now being studied as never before by native speakers of it, who make use of western methods. As much of Japanese literature has its classic basis in Chinese, it may be noted also that since the publication of Mr. Suyématsu's handy little book, in which the whole body of Chinese literature was put under review by one critically trained in a European language, this hopeful movement has been stimulated so that it bids fair to be popular.

A BOOK OF PEN DRAWINGS.

Charing Cross to St. Paul's. Notes by Justin McCarthy, M.P., and Plates and Vignettes from Drawings by Joseph Pennell. Macmillan & Co. 1890. 4to, p. 59.

PEN DRAWING, in the hands of a master, is second only to etching, if second, as a delightful means of rendering the picturesque of architecture and street life. It has its own peculiar felicities of touch and manner which differ from those of etching, but its great advantage over any kind of drawing in tone it possesses in common with etching—the facility of leaving out. A tone drawing must, in the nature of things, be pretty equally completed throughout, but the draughtsman with the pen is bound to nothing. He may carry to the utmost completion such parts of his drawing as interest him, and where his interest ceases he may indicate only with a few scratches the presence of such objects as he does not care to draw. The sparkle and beauty of a piece of intricate detail may be enhanced by a great space of white paper which would be felt at once in a drawing in tone as intolerably false, but which, in a drawing making no pretence to complete tonality, is a pleasant relief to the eye. The light and shade is accepted at once as relative and conventional, and the artist may play with it what tricks he pleases. By proper choice and the magic of handling, the commonplace may be glorified until an ordinary London street seems as picturesque as a Venetian canal.

Two things, however, are necessary to this result. The draughtsman must be an artist and a master of his art, and his work, if published, must be properly reproduced. The cheapness of "process" cuts has so filled our periodicals with very ordinary pen drawings very indifferently reproduced that we are in danger of thinking the art a cheap one, unfitted for fine results. A book like this of Mr. Pennell's, where beautiful drawings have been perfectly rendered, is therefore the more welcome as a reminder that there are pen drawings and pen drawings, and that the art at its best is a splendid one indeed.

Nothing but true photogravure will thoroughly and adequately reproduce a pen drawing. In every such drawing there is, whether intentionally or accidentally, a difference in tone in the lines which none of the ordinary processes that produce relief plates suitable for printing with the text, will render. Photogravure will reproduce perfectly the most delicate gray line or the fullest black one. Of course the intelligent artist calculates for this difference, and allows himself much less variety of line when working for "process" than if he could count upon the resources of photogravure; but, after all the sacrifice intentionally made by the artist himself, there is further sacrifice in the reproduction. The finer lines thicken and become heavy, or break and become "rotten," and his drawing, as published, is but a wreck of the work that left his hands. The form and the motive remain intelligible, but the fine flower of the art has disappeared.

In this book of Mr. Pennell's, for example, compare any one of the twelve photogravure plates with any one of the twenty-odd pen-and-ink vignettes in the text. In the latter the artist has, as a rule, attempted much less, but see how much less, even of what he has attempted, he has succeeded in getting. Compare the broken and scratchy look of the distances, the comparative feebleness of the foreground darks, the monotony and lack of effect of the whole in the vignettes, with the delicacy in the lighter portions, the velvety blacks, the sparkling vivacity and fulness of tone which almost justify Mr. McCarthy's blunder in calling the larger plates "etchings," and you will form an adequate notion of the difference between the two methods of reproduction. And yet these "process" cuts are among the best of their kind—far above the average of such work in current publications—the kind of cuts that the unfortunate draughtsman hails with joy when he is fortunate enough to find his work so reproduced.

But the glory of the book is in the photogravure plates, which are altogether admirable. In them one has such reproduction as shows the full range and possibility of the material. And the drawings are worthy of such reproduction. Mr. Pennell is indisputably a master, and is without a rival in his own line. Such brilliant detail, such effect of mass and light got with the simplest of means, such a feeling of the jostle and bustle of crowds, such incisiveness of characterization in the human types sketched with a few lines, no other draughtsman that we know of could give us. It would be difficult to say which are the best of these drawings, but those of "The West Door of St. Paul's," "Fleet Street," and "Exeter Hall" are certainly among the best. Only one falls short: even Mr. Pennell could not make the rigid modern Gothic of the Law Courts look picturesque.

The masterly use of the limitations which are the privileges of the art is shown again and again. Full tone being impossible in pen drawing, one may use partial tone as one

pleases to produce one's effect. Two strongly contrasted drawings will serve as examples. In the drawing of "Exeter Hall" the darkness of the great portal was the thing to be accented. This is secured, largely, by mere elaboration, each shadow in the fluting of the columns or the foliation of the capitals being made out until the repetition of small darks produces one great shade. The buildings on either side, which may or may not have been as dark as the front of Exeter Hall itself, are much more lightly sketched, half their detail being sacrificed to lightness of effect, while the figures in the foreground, probably very dark in nature, are traced in the lightest of outlines, with blank white paper between. The eye accepts this at once as the proper conventionality of line drawing, while the darkness of the doorway is made much more effective by contrast. A delicate touch is the carrying down of the darks by *one* small figure, nearly black, whose presence prevents the artifice from being too apparent, and almost convinces the eye that the full values of nature are present in the work of art. In the other drawing, that of "St. Clement Danes," precisely the opposite effect was to be attained. What was here to be insisted upon was the lightness and whiteness of the spire of the church, rising against the gray London sky. To have attempted the tone of the sky would have produced an inevitable heaviness in the drawing and so have killed it, and the sky is therefore left as pure white paper. But if the sky is left white, how is the tower to be made to look light? The first thing is to restrict the shadows to narrow, dark bands that shall give brilliancy, by contrast, to the broader lights. Still it looks too dark, and the next move is to put in the figures below in uniform masses of nearly pure black, without distinction as to distance or attempt at modelling; to scratch in with heavy black lines the near houses to the left; to indicate the wetness of the day and the darkness of the sky by a wavy trail of reflection below each black figure, and behold! the spire rises light into the murky air. Now, to make the black figures blacker and to make the drawing grow out of the paper and not stop abruptly at the lower edge, two or three nearer figures are sketched in pure outline, and the drawing is done.

Many of the vignettes are very nearly as good as the larger plates, and two in particular, those on pages 20 and 22, are remarkable, as very successful efforts to do that very difficult thing, render a night effect in pen and ink. The book, as a whole, is a most happy demonstration of the thesis which Mr. Pennell sustained a year ago in his book on pen drawing, that that art is entitled to a very high place among the minor arts of design; and, further, it is a demonstration of the very high position that Mr. Pennell himself holds among draughtsmen with the pen. The volume contains, also, two or three wash drawings which show well the peculiar fitness of that material for rendering effects of fog—effects which it would be well-nigh hopeless to attempt with the point.

Mr. Justin McCarthy's text is almost as remarkable, in its way, as the drawings it accompanies, though for very different reasons; for Mr. McCarthy is, in this case, quite a superfluous person. He had nothing in the world to say—the drawings could speak for themselves, and stood in no need of commentary. But, the publishers wishing to bring out Mr. Pennell's sketches of London streets, the exigencies of the trade demanded a text of some sort, and Mr. McCarthy was called upon to supply it. Nobly has he fulfilled his duty! Probably the art of gracefully and pleasantly saying nothing for a long time together was never further pushed. Nothing whatever to say, and fifty-nine of these great pages to say it in!—pages so great that their size appalls the eye—pages that have something of the sea or the desert in their vastness, so that one shudders at the distance to be traversed when one enters one of them that has not an island of illustration in it. But it is not for nothing that one is a veteran novelist. Mr. McCarthy can read a whole romance into the slightly indicated back of a young man having his shoes brushed, and give you the past history and present character of an inch-high manikin drawn with two scratches of a pen. One figure looks as if he might be a literary man, and if so, may he not have known Thackeray and tell anecdotes about him? And this reminds Mr. McCarthy that *he* has an anecdote about Thackeray, which he tells us, and which is a very nice little anecdote indeed. Or the Lyceum Theatre comes into a drawing, and have not Fechter and Mary Anderson and Irving played there, and are not reminiscences of the plays we have seen always charming? And if an old woman is selling newspapers, may we not remark on the quantity of them that litter the streets of Athens, most newspaper-reading of cities, when the cafés close? So it runs on, through paragraphs of astonishing length, lightly, easily, agreeably; but one feels that it must have been hard work, really, and that he must have been very glad when it was done.

The most astonishing of Mr. McCarthy's many inventions, however, is that of Mr. Pennell making his elaborate drawings "on the spot" in the midst of a London crowd! It is perfectly evident to any one acquainted with art, that all that Mr. Pennell did on the spot was to take a photograph, upon which he afterwards at his leisure embroidered his work of art. To make such drawings direct from nature is a physical impossibility.

CHILDREN'S BOOKS.

As the holiday literary output for adults is relatively tame and without distinction this year, so there is nothing of a new kind or otherwise very remarkable in the line of juvenile publications. Beginning with elf-land, we have from Mr. Palmer Cox 'Another Brownie Book,' in which his queer creations disport themselves in the old manner of sport and mischief. That they do not become altogether monotonous, and are still capable of affording amusement, is proof of Mr. Cox's skill with his pencil; and his rhymed accompaniment has the merit of being correct as jingle and good as narrative. The publishers have again made a handsome volume of it. Mr. Andrew Lang, with a change of color, edits the 'Red Fairy Book' (Longmans), laying under contribution the German, the Norse, the Russian, and the French sources, either taken at first-hand in original English versions, or borrowed at second-hand by permission. "Jack and the Beanstalk," "The Golden Branch," "Rapunzel," "Graciosa and Percinet," "The Master Thief," are some of the more familar; but the collection as a whole must be accounted fresh. The book is prettily made, with good illustrations. 'In Poppy Land,' by Mabel Louise Fuller (Boston: De Wolfe, Fiske & Co.), is an agreeable working-over of the old fairy-tale properties, and can be commended as purposely free from the bloody and brutal element of the elder models.

'Santa Claus on a Lark' (The Century Co.) is the pleasantly suggestive title given by Washington Gladden to a collection of Christmas stories, of which the first, and the best, gives its name to the book. This introduces us to a merry-hearted, young-old bachelor, who mystifies and makes happy a whole village, as he drives his fleet ponies through the fast-falling snow on Christmas eve, leaving gifts at each door and giving the startled recipients a flying glimpse of a ruddy-cheeked, white-haired little figure enveloped in furs and plentifully besprinkled with snow. The gleeful abandon of this modern Santa Claus is infectious. The other stories follow well-worn paths without disclosing new beauties, and so obviously point the moral that children will be likely to skip what is so evidently intended for their betterment. In "Santa Claus in the Pulpit" the preachment on the spiritual quality of Christmas gifts is well timed in these days of gift-exchanging, which savors rather too strongly of commerce.

The D. Lothrop Company, Boston, have issued a charmingly illustrated book of 'Rhymes for Little Readers.' We meet with familiar friends in many of the Rhymes, but the delicate coloring in the illustrations is a welcome change from the barbaric splendor of old-time nursery books. The drawing is true and spirited. Miss Adams (from whose original water-colors the illustrations were lithographed) deserves much commendation.

Mrs. Laura E. Richards's 'In My Nursery' (Boston: Roberts Bros.) is a volume of rhymes and jingles of variable quality. Those for very little folks are sweet and wholesome in tone, and will make music in baby ears; but the verses meant for hearers beyond babyhood seem rather overstrained in thought and diction, and lack the indefinable charm of pure nonsense. The author has evidently a genuine love for children. The illustrations, apparently by different artists, are mainly happily conceived and fairly executed.

'Captain January,' another book by Mrs. Richards (Boston: Estes & Lauriat), is the story of an old lighthouse-keeper who saves a baby from a wreck in which its father and mother perish, leaving no trace of the child's connections. The old man's simple yet strong character is well drawn, and his tender and unselfish devotion to the child is full of pathos. The child herself is rather fantastic, but her lonely life in the lighthouse, with imagination fed on "The Tempest" and "Midsummer-Night's Dream" (a volume of Shakspere and the Bible being her only books), to say nothing of the long winter evenings spent with the old captain as sole companion, listening to gruesome tales of shipwreck, would hardly tend to develop a normal child. Her passionate affection for her "Daddy Captain" is dramatically manifested when a seeming chance reveals her to her mother's sister, who naturally wishes to take her to her own home. But we will not by anticipating take the cream of the reader's pleasure in this pretty story.

It may have been intended as a pleasantry, the giving the title 'A Little Book of Profitable Tales' to the collection of short stories by Eugene Field (Charles Scribner's Sons); otherwise the title is incomprehensible, for we question the profit to be derived from reading, for example, the story of "Dock" Stebbins, who was born with an insatiable appetite for playing practical jokes. The jokes are stupid enough, with a touch of cruelty. "The Divell's Chrystmass" may be valuable as a specimen of archaic spelling, but it is worthless for pleasant or profitable reading. The Divell is depicted as engaged in "lashing his ribald legs with his poyson taile." Being overcome, however, by the spirit of Christmas, and wishing to give alms to a beggar child, but

may be the one, he whips out a knife, and, cuts little off the "poyson taile," presents it to the child, when a "sodaine miracle" changes it into a "flowre of gold." Since then the devil has gone tailless. Of the remaining stories, those that were meant to be pathetic are almost wholly lacking in pathos, while the use of such adjectives as "durnedest" and "goll-durned" is scarcely sufficient to brighten the others with humor. Through all there is a straining after effect, and an imitation of a style which only a touch of genius can make successful. In "The Fairies of Festh" there are some delicate touches, but they are not strong enough to constitute a "saving remnant." The tales were written at different intervals during the past five or six years, and probably appeared for the first time in ephemeral publications. We can see no justification for their present form. They are as a whole neither suitable for children nor of interest to older readers.

Col. Knox's 'Boy Travellers in Great Britain and Ireland' (Harper & Bros.) eminently belongs to the class of books that need not have been written. It is beautifully printed, and in the main beautifully illustrated. Indeed, it excites suspicion that much of the letter-press was written rather for the illustrations than that the woodcuts were prepared to illustrate the letter-press. It is an effort to roll into one an itinerary, a guide-book, a history, a gazetteer. There is a want of reality about it. Most readers would prefer to take their information neat, not so combined. It will be pondered over with pleasure by those who have travelled in Great Britain and Ireland, and will recall much that is of interest. It emphasizes many of the differences that exist in ways of life between us and the old country. It could not, however, safely be trusted as a guide in laying out a tour, and it will scarcely be carried as a lamp to the feet on the road. The book is not without lively passages:

"Thus encouraged"—they are travelling in England—"Frank explained to Mrs. Barrett that it was the practice of Fred and himself, while one of them looked to see that the luggage was all right, and properly deposited in the van, the other attended to the guard. A shilling to that worthy at starting, with the promise of another at the end of the ride" (little wonder our countrymen meet with civility abroad) "generally served to adjust matters to the satisfaction of everybody. The travellers were satisfied because they obtained the places that they wanted, the guard was satisfied because he obtained the shillings that he wanted and expected, and the company was satisfied because it had no ocular proof that the rule which forbids its employees to accept gratuities had been violated."

'A Real Robinson Crusoe' (D. Lothrop Co.), edited by J. A. Wilkinson, is a painful story of a party of castaways on an unknown island of the Pacific. The usual ingenuity is shown by the hero in getting food, shelter, and clothing, and in building a boat, but variety is obtained by making his companions excessively heartless and wicked. Though the "editor" vouches for the facts as strictly true, we much prefer to believe that he has been imposed upon by his informant than that such conduct as he describes could be possible under the circumstances. The book has good points, but we cannot praise it. 'The Drifting Island' (Roberts Bros.), by Walter Wentworth, is an African story with enough exciting adventures to satisfy the most exacting boy. An electric battery works great havoc with fish and with slave-hunters, while the drifting island itself is used as a man-of-war, with elephants working a tread-wheel for the motive power to attack a slaver's stronghold. The author is equally wild in his geography, making his heroes reach Lake Tchad in a few days' journey by canoe up one of the branches of the Congo! The moral tone of the book, it is fair to say, is irreproachable. 'The Lion City of Africa' (Boston: D. Lothrop Co.), by W. B. Allen, is an entertaining story in which dwarfs, a ruined city with Roman baths and inhabited by lions, and Mt. Ruwenzori play important parts. The author has succeeded in conveying a very fair idea of certain features of the life and scenery of tropical Africa. In an appendix there is a brief account of Stanley's expedition for the relief of Emin Pasha. The make-up of the book is very attractive. The illustrations of 'Zigzag Journeys in the Great Northwest' (Boston: Estes & Lauriat), by H. Butterworth, are often very good, but many have nothing whatever to do with the subject of the book. The text is of the same heterogeneous character; rhapsodical descriptions of scenery of parts of the Northwest being intermingled with very miscellaneous stories and sketches. This class of books gives one the impression of being compiled with a pitchfork.

Mr. Charles C. Coffin gives the title 'Freedom Triumphant' to the fourth and closing volume of his 'Young Folks' History of the War of the Rebellion' (Harper & Bros.). It begins with September, 1864. Every candid person must think it a good fortune for children that Mr. Coffin has inculcated the true motive of the war—"the establishment of a government founded on the idea that slavery was a beneficent institution, ordained of God for the best welfare of the human race." He has also taken notice of the desperate counsel to which Lee and others were driven of arming the slaves. In point of literary style, Mr. Coffin is still open to the charge of an aversion to conjunctions and relative pronouns, and a fondness for staccato, *e. g.*: "No inducement was held out to the slave to volunteer for the Confederacy. He was to receive no reward. The word *emancipation* was stricken out. Jefferson Davis was authorized to accept from the masters such slaves as they might choose to send into the army. That was all." Mr. Coffin omits, too, even for a line of mention, the dramatic occasion of raising the flag at Fort Sumter in April, 1865, the very seal and symbol of the suppression of the rebellion. Nor, in noticing the melting away of the victorious army after the review at Washington, does he point to the terrible sequelæ of even a just war in the misgovernment of the reconstructed States, the making party capital as long as possible of the war feeling, the open and shameless traffic in patriotism under cover of war pensions, the enhancement of the war tariff and the substitution of the fetish of protection in place of the fetish of the "peculiar institution," ending in the two McKinley Bills, which are a last defiant declaration of war against foreign nations and against civilization itself. Why should the young be deprived of such lessons?

KIPLING'S TALES.

Plain Tales from the Hills. By Rudyard Kipling. Macmillan & Co.—*Indian Tales.* By the same. John W. Lovell Co.—*The Courting of Dinah Shadd.* By the same. Harper & Bros.

OCCASIONALLY an author is so lucky as to capture the public before the critics "get after" him, and one or two in their generation manage to obtain a popular verdict so tremendously favorable that the power even to modify enthusiasm is in their own hands alone. It is doubtful whether they could ever write indifferently enough quite to reverse the first spontaneous judgment. Such is the happy fortune of Mr. Rudyard Kipling, the young Lochinvar of fiction, who about a year ago came out of the East, came unannounced, and came all alone. No herald with brazen trumpet sounded his approach, and no host of friendly spirits, whispering, winking, and nodding through the press, made straight and smooth his path to glory. Since his work has been fairly before us he has had plenty of gratuitous advertising, but he is not to be confused with the weaker brethren who would for ever preserve that obscurity which their work justifies if they had been born in those Arcadian days, of date uncertain, when professed littérateurs struck for fame on the broad highways, and when the phrases, "to pull wires," "to roll logs," had a literal signification only. Simultaneously with Kipling's appearance arose the cry, "A capital raconteur"—in the vulgar, "A rattling good story-teller"—and there, in a phrase, is the truth about what Kipling is: a born story-teller, born in a story-telling land teeming with untold stories. Every one can think of suddenly achieved literary reputations for which, on reflection, no adequate reasons can be found, but no one need poke about with a candle to discover reasons for Kipling's instant success. He is a very obvious young man, standing well in the light—one may say the centre of a noon-tide glare. In every one of his hundred tales, comic, tragic, melodramatic, or wholly frivolous and for idea worthless, there, unmistakably, is the impress of the natural gift with its implied originality and force. Whether he possesses the talent in the highest degree, and whether he can make the best possible use of it, are questions for the future to decide. The presence in his work of many qualities that go to make enduring fame is more conspicuous than the absence of some which every author needs in order to take rank with the great. There is no hesitation, no vacillation, no shadow of self-doubt in him. He is before all things positive, sure of himself, of his facts and his interpretations thereof.

To serious people this positiveness is sometimes ludicrous, sometimes offensive; but it is also the visible sign of a dominant nature, sure to command the salaams of the multitude in whatever form it may be made manifest. He has a compelling energy which is not genius, though no genius who lacks it may ever hope for appreciation, except perhaps from a few, after he is dead. With positiveness and energy go swift and comprehensive observation and keen insight that does the work of deep reflection with much saving of time and labor. No sage ever feels a confidence in his ultimate conclusions equal to Mr. Kipling's, much less utters it, and we may add that many hoary cynics are as credulous babes in comparison. Mr. Kipling's cynicism is apparently very thorough; not detestable, because it is so flagrantly juvenile. The worst of it is, that its assiduous cultivation stunts the growth of sensibility, poetic imagination, spirituality; and these are the qualities in which Mr. Kipling is most evidently deficient, the qualities which he needs most to cultivate if he aspires to greatness.

Moreover, it leads him into flippant impertinences and all sorts of offences against good taste and manners. The tales of that polite Anglo-Indian society which ebbs and flows from the officers' mess-room to the drawing-room, are shockingly ill-mannered, dazzlingly cynical, and presumably the author's maiden efforts. If it were not for the instinctive skill in the selection of incidents and the direct nar-

ration, one would suppose that these tales of the light Mrs. Hawksby and lighter sisters were the chatterings of a professed scandalmonger, quite disreputable, and so venomous that he knew no joy save smirching angels' wings. Though a regiment's mess-room may not be the home of chaste thought and elegant conversation, we have an impression that officers in the Queen's army, who are also gentlemen, occasionally lapse into the ordinary refinements of their mother-tongue, and are none the less brave, honorable, and kind. "Tommy Atkins," too, is doubtless versatile in oaths and profusely coarse of tongue, but neither the fun nor the spirit of Mulvaney's escapades would have suffered by a modification of the language used by him and his familiars in daily intercourse. No author addressing himself to a decent audience is justified in inflicting the slang and filth of the gutter. Mr. Kipling carries that infliction so far that he not only often throws the reader out of sympathy with his characters, but once at least, in "The Drums of the Fore and Aft," fatally disfigures a singularly dramatic and touching incident. This story, with three or four others *about* children, not by any means *for* children, shows a fine sensitiveness to the mysteries of child nature, and is among the best in the collection. The Mulvaney stories are exuberantly farcical, and tragic power not fully developed is clear in such tales as, "The Man Who Was," "The Ride of Morrowbie Jukes," and "The Man Who Would Be King." But the best of all are the tales of native life often put in the mouth of a native. These have least of the swagger of a surprisingly clever and knowing, very modern young man, most of the sobriety, moderation, and true passion of an imaginative artist. They are purely products of the creative faculty, without precedent and absolutely divorced from conventional models. Read consecutively, they present a picture of India very vivid and probably very truthful, yet disappointingly different from the India of imagination and poetry, with its mystical past, its gorgeous color, and Mogul magnificence. It is an arid, parched, dreary India, peopled by servile millions, subtle and weary, ostensibly in harmony with their English masters, but at heart hostile to encroachment, incapable of change, obdurately Oriental. If Mr. Kipling were a poet, we might see another India more beautiful, and perhaps no less real; but he is not a poet, and that is made clear beyond question by the compositions in verse which are scattered among the compositions in undisguised prose.

Of the several editions of Kipling, Harper's contains only seven stories and is distinguished by a portrait of the author and a biographical sketch by Mr. Lang; Lovell's has the most stories and typographical errors; Macmillan's is a good specimen of printer's and binder's work.

THE CRIMEAN WAR.

The War in the Crimea. By Sir Edward Hamley, K.C.B. Scribner & Welford. 1890.

THIS is one of the series of volumes describing, in comparatively brief compass, "events of our own time," and has the great advantage of being written by an actor in the events described. Sir Edward Hamley served, though we presume as a subaltern officer, in the British force in the Crimea, and was an eye-witness of many of the leading incidents of the war; and there is, as Cæsar, and Napier, and Todleben, and Grant have shown, no military historian so good as a soldier who has directed or taken part in the operations which he records. It was high time, too, that any one who saw service in the Crimea, and had the power to write about it, should do so, for the survivors of those famous fields are rapidly diminishing in number, and are reaching the age in which rest is sweet and memory grows dim. The men who held high commands during the siege of Sebastopol have already all passed away, except the Duke of Cambridge, whose service was really that of an amateur. Raglan, Codrington, Brown, Airey, Cathcart, Evans, Burgoyne, Cardigan, Lucan, Campbell, are all gone.

It is true that Kinglake's history of the war is never likely to be improved upon, as far as painstaking accuracy and vivid description go. But his minuteness has swelled his book to a great size, and his singularly unhistoric temper, the violence of his likes and dislikes, and his remarkable capacity for hero-worship, inevitably fill even the most delighted reader with a certain distrust. Somehow, too, we never, in reading him, entirely rid ourselves of the impression that it is not real war he is describing to us, and that Lord Raglan, "the English gentleman" par excellence, and Lord Stratford, "the great Elchi," were the paladins and sages of romance. Sir Edward Hamley's book is, therefore, both from the military and literary point of view, a very valuable contribution to the historic literature of the day. The general reader who has not time for a large work, and yet wishes for a lucid, adequate, and, in places, extremely vivid account of the most picturesque and romantic military episode of the present century, cannot do better than read it. Many things have been cleared up or put in a new light since Mr. Kinglake produced his earlier volumes, by such memoirs as that of Earl Russell, who demolishes the famous story of the war despatch read to the sleeping Cabinet, and of Lord Stratford, whose skill in the management of the Turks does not now seem so plain as it did to an earlier generation, and by Todleben's history of the siege, full as it is of inaccuracies about his opponents. Moreover, the art of war has made such remarkable strides since the Crimean campaign that the military criticisms of the operations have now vastly more value than they could have had when Mr. Kinglake began to collect them.

Well or ill written, the history of the Crimean war will always remain a stirring epic. No war of the past hundred and fifty years has left so few traces behind it. It would not be an exaggeration to say that nothing has resulted from it which merits the attention either of the historian or statesman. It has vanished like a brilliant dissolving view. I s likeness to the first Crusade must strike every reader. There was the same great misconception about the end in view; the same terrible ignorance about the means and cost of attaining it; the same great drafts on popular sentiment and imagination; and the same tremendous plunge of valor and enthusiasm into the abyss. As we now know, its authors were as much mistaken about the importance of saving the Turks from the Russians as the Crusaders about the importance of rescuing the Holy Land from the infidels. Those who went forth to destroy the Russian power in the Crimea knew little more about the Crimea than the Crusaders knew about Jerusalem or Saladin. Every chapter, too, is as crowded with acts of individual heroism as the pages of Froissart or Commines. The battle of the Alma was itself a mediæval fight. The British commander, occupying a secluded and remote height, where he had a good view of the field, but where none of his subordinates could find him; the ge 1328 division attacking in deadly front, ea e pleased, with no plan or concert, driv the enemy from the field by sheer courage; the flank march to Balaclava, the headquarters staff leading the artillery, thirty guns in single file, through the woods, and so near the enemy that Menshikoff struck the procession with his troops, when trying to make his own escape, and was so frightened by the rencontre that he fled in another direction; the aimless but glorious charge of the Heavy and Light Brigades; the fierce fights of scattered groups in the ravines and hollows of Inkerman; the awful winter of cold, hunger, and disease on the plain above; the vast hospital tragedy at Scutari, bringing down a healing angel in the person of Miss Nightingale—all these make a story which seems more like the experiences of Roland or Amadis de Gaul than those of a modern general in command of a modern army.

Not a trace of it all remains now except the graves of the victors and vanquished on the heights which witnessed their exploits and sufferings. Sebastopol has been restored. A new city has arisen on the ruins of the old one. There is another Russian fleet in the harbor, and repaired Russian fortifications on the shore. The treaty which the war produced has vanished into the great lumber-room of diplomacy. The Turks have gone as steadily to ruin as if no brave men had ever died to save them. The Anglo-French Alliance, which did much to bring on the war, is buried in the tomb of the Napoleonic dynasty. It would, indeed, hardly be an exaggeration to say that the only relics of this war of giants are Tennyson's "Charge of the Light Brigade," which seems a permanent contribution to heroic song, and

> "the neglected graves
> Where Valor sleeps, unnamed, forgot."

Annals of the Artists of Spain. By Sir William Stirling-Maxwell, Baronet. A new edition, incorporating the author's own notes, additions, and emendations, with portrait, and twenty-four steel and mezzotint engravings; also numerous engravings on wood. 4 vols. octavo. London: John C. Nimmo; New York: G. P. Putnam's Sons.

THIS new edition of a standard and valuable work will be highly prized by those who shall become its possessors. As, however, only six hundred and forty numbered copies are printed for England, and four hundred for America, the privileged class will be very small indeed, even when account is taken of a large-paper edition. The book is too well known to need notice at length. It contains little criticism, and that little of no great pretensions to technical insight. It is, what its name imports, the story of the artists of Spain, told at considerable length, with abundance of anecdote, in an easy, agreeable, and somewhat garrulous style—the work of a gentleman and man of the world, with abundant leisure and only that knowledge of art which may be supposed to be the acquirement of every gentleman of culture. It shows much research, much special knowledge of Spain and Spanish life and the career of Spanish painters, much thoroughness and painstaking work, and, perhaps, somewhat too ready credulity. It is a mine of information, but Sir William's judgments are of the most conventional sort. He admits, of course, the accepted primacy of Velasquez, but he also subscribes to the enormously exaggerated reputation of Murillo. In his introduction he insists on the "religious" quality of Spanish art. It

may be that some of the Spanish artists who are little known out of Spain had the religious temper, but "religious" as an epithet applied to the Spanish art we know seems singularly misplaced. It is ecclesiastical; but religious, in the sense that the art of Angelico is religious, it certainly is not. He specially mentions Murillo as one of his religious painters, but Murillo, while often religious in subject, is in temper either wholly realistic or prettily worldly. His immensely popular "Immaculate Conceptions" and the like are the glorification of namby-pamby—the realization of the devotional ideal of perfumed court beauties of easy virtue. They are meretricious and tawdry in the extreme, and the great admiration which has been so often expressed for them has been usually felt by the same people who are enraptured by the designs on handkerchief-boxes, and for the same reasons. With all their cleverness, as expressions of religious feeling, they belong with the paper flowers and tinsel that bedizen Spanish altars. Neither does one see how Ribera and Zurbaran and the other painters of bloody martyrdoms and squalid saints can, by any stretch of terms, be called religious painters. All that is best of the art of Spain is frankly realistic, and its highest expression is in portraiture.

The illustrations, though costly, are hardly satisfactory. They consist, largely, of indifferent mezzotints and line engravings after bad portraits of the artists mentioned. In the case of Velasquez alone has any serious effort been made to illustrate the work of the master under consideration, and in this case the effort cannot be called successful. The far cheaper woodcuts of Justi's 'Velasquez' answer the purpose much better.

Mr. Robert Guy, the editor, who has modestly refrained from placing his name upon the title-page, has done his part admirably, adding largely to the already voluminous notes, and bringing the information as to the whereabouts of pictures down to date. He acknowledges his indebtedness both to Prof. Justi and to Mr. Charles B. Curtis of New York, whose "comprehensive and accurate catalogue of the works of Velasquez and Murillo" he has freely drawn upon. (Velazquez is the spelling adopted throughout the volumes except under the portrait facing p. 672, vol. ii., where the more common spelling is given.) In the fulness of its index, appendices, tables of contents, and lists of illustrations the book is a model, while the paper, print, and decorations may fairly be called sumptuous. Everything considered, it is a magnificent monument to the memory of the author.

Chapters from the Religious History of Spain, Connected with the Inquisition. By Henry Charles Lea. Philadelphia: Lea Brothers & Co. 1890. Pp. xii., 522.

THE Lucifer-like fall of Spain from her sixteenth-century pinnacle of greatness has furnished a subject of melancholy reflection to many of her own more thoughtful sons. One of the acutest of them, Juan Valera, says: "I, for my part, am sometimes inclined to think that the colossal nature of our undertakings exhausted our strength; at other times, that through fighting for principles that were about to succumb, we succumbed with them; again, that our tenacious energy of will gave us empire at that propitious moment when the invention of gunpowder and of printing made it possible for mental power to triumph over material brute force—an empire which we speedily lost as soon as another kind of force came to prevail, material also, though less grossly so, namely, the force born of wealth created by intelligent and systematized industry, combined with thrift, in all which we never excelled." This assignment of causes is certainly broad enough, and gives room, in its vague mention of "principles," for almost any theory that has ever been propounded. Doubtless Valera had in mind, in the use of that phrase, something of what Mr. Lea has worked out with so much detail in his History of the Inquisition, and what he now comes further to illustrate by material accumulated in his researches for his greater work.

He puts his weightiest chapter first in his account of the censorship of the press. In the more than 200 pages devoted to this subject, he traces the development of the Spanish practice from the sporadic attempts to regulate the people's reading in the Middle Ages, down through the rudimentary State censorship inaugurated by Ferdinand and Isabella, until we get the Holy Office of Spain, stirred into feverish activity by the ferment of the Reformation, asserting its supremacy over the crown and even its independence of Rome, and finally carrying matters with so high a hand as to excite royal alarm and to become, under the vigorous reign of Carlos III., a practical dependency of the State. Through it all, Mr. Lea brings out the immense talent lavished upon the repression of talent, the defiance of the modern spirit, growing the more haughty with its increasing absurdity, and the blind disregard of true national self-interest in withstanding the application of science to industry. For example, a book on a new method of cultivating rice was too much for Spanish self-complacency, and went promptly into the Index.

The fatal effect of this system for stunting intellectual growth is stoutly asserted by Mr. Lea, and advanced as a leading cause among those which led to Spain's swift and profound decadence. He takes up the almost paradoxical affirmation of the learned critic, Menendez y Pelayo, that the Inquisition had nothing whatever to do with the decay of Spain's literary glory, in proof of which he cites a long roll of names famous in philosophy and literature in the sixteenth century, not one of which appears in the Index. To this Mr. Lea objects that at that time the Inquisition had scarcely got censorship under headway, and had not yet "had time to overcome the fervid and persistent energy of the Spaniards of Charles V. and Philip II." Referring, then, to the barren centuries that followed, he says that "the question only becomes sadder why so brilliant a dawn, in place of developing into a more brilliant noon, should have so speedily ended in the premature mists of twilight." He finds the answer in the "impediments so sedulously imposed on the acquisition of knowledge and the expression of thought," until all originality became dangerous and the ardor of generous spirits was checked. Finally, confirmation of this view is found in the "admirable renascence of Spanish literature within the last two generations," after the shackles that had bound it for two hundred years were removed.

The rest of the volume is taken up with masses of citations from the history of Spanish mysticism, witchcraft, and the vagaries of superstition connected with persecutions of the Jews—all, of course, furnishing matter for the consideration of the Inquisition. There appears to be no doubt that the Holy Office did much to save Spain from the ravages of impostors, and from the evils wrought by self-deceived men and women, even though the work was done roughly and with none of the modern allowance for disease. Perhaps Spain had no more of such cases of hysteria and catalepsy than the rest of the world, but the immense credulity of her people and her rulers gave them an altogether disproportionate public importance.

The Devil's Picture-Books: A History of Playing-Cards. By Mrs. John King Van Rensselaer. Dodd, Mead & Co. 1890.

SINGER'S 'Researches into the History of Playing Cards' was published in 1816; Chatto's 'Facts and Speculations' appeared in 1848; Paul Boiteau's 'Les Cartes à jouer' followed in 1854, and Taylor's 'History of Playing-Cards' (based on Boiteau's book) was issued in 1865. Then came the admirable and authoritative 'Descriptive Catalogue of Playing and Other Cards in the British Museum,' which Mr. Willshire prepared in 1877, and which we duly reviewed at that time. Since then the only books of interest on the subject are "Cavendish's" 'Card-Table Talk' (1879) and Rheinhart's 'Whist-Scores' (1887). With our increasing knowledge of China, Japan, and India, much has of late been learned about the games of those countries; and the time has come when a new history of playing-cards would be welcome if it should embody the learning of its predecessors and bring order out of what is now not a little chaotic. But Mrs. Van Rensselaer's amateurish work does not fill this want. It is at once unliterary and unscientific. Carelessness in trifles is characteristic of an author's habits of mind, and here we find the late "Bibliophile Jacob" called "M. Paul la Croix" (*sic*), and Mr. Willshire's name appears as Wiltshire; while one of Pope's best-known lines is misprinted on page 11 and then credited to Hone's 'Every-Day Book.' The treatment of the vexed question of the origin of playing-cards does not warrant the belief that the authoress has investigated for herself or formed any solid opinion of her own.

But, accepting the 'Devil's Picture-Books' as an uncritical compilation, it is not without interest, and not a few of its illustrations really add to our information. So far as we know, the hundred-year-old geographical pack, belonging to Dr. R. H. Derby, and here figured on a full-page plate, has not hitherto been described or engraved; the illustration shows that the device of sinking a figure or an initial in the corner pip of a card, which might be supposed to be the latest form of the so-called "index," is in reality a century old. In Mr. Rheinhart's 'Whist-Scores' appeared the first engravings of the buckskin cards of the Apaches of Arizona, obviously copied from the contemporary Mexican packs, which are made according to the Spanish tradition, and generally in Spain; in Mrs. Van Rensselaer's book we have now three full-page colored plates reproducing some twoscore of these rude gambling-tools. Even more curious are the gambling-blocks from Queen Charlotte Island and from Alaska, now preserved in the National Museum at Washington and reproduced in the book before us. Worthy of note also are the Japanese pack belonging to the authoress, and the pack from Cashmere owned by Mr. Lockwood de Forest.

Glimpses of Old English Homes. By Elizabeth Balch. Macmillan & Co.

THIS attractive gift-book is a reprint from the *English Illustrated Magazine.* It is disfigured to some extent by occasional misprints, and by less excusable carelessness on the part of the author, who makes use of such phrases as "acquainted *of* a thing," "the Acropolis *at*

Greece," "the history of *she* who gave it," and so forth. Of the eight houses here described the most interesting are Penshurst, Arundel, and Hinchingbrooke. The main buildings of Penshurst are practically unchanged since the days of Edward III., and in the hall is the last example in England of the hearth in the centre of the room with an opening in the roof instead of a chimney. It was the home of that Philip Sidney of whom it was well said that his life had all the nobleness of expiring chivalry without its barbarity, and it has a peculiar interest for Americans in the fact that in later years William Penn spent much time there with his friend Algernon Sidney, and that the Constitution of the State of Pennsylvania was largely the result of their discussions. Would that they could have foreseen and provided against the Quays of these later days! Among the Penshurst pictures one of the most curious is that of Queen Elizabeth dancing with the Spanish Ambassador—not with Leicester, as Miss Balch puts it—and it is a pity this has not been reproduced in the book. In writing of Arundel Castle and the fortunes of the great Catholic family of Howard, Miss Balch betrays the zeal and enthusiasm of a convert, and roundly abuses the son of Philip Howard who turned Protestant in the reign of James I. It was under the ancient trees of Hinchingbrooke that young Oliver Cromwell, son of the brewer who lived near by in Huntingdon, used to play with the young Prince Charles, and it may be that the recollection of early quarrels embittered the fierce struggle of after life. Hinchingbrooke was also the home of that Lord Sandwich, nicknamed "Jemmy Twitcher," whose ministerial industry interfered with his early dinner, and led to the invention of the dry but satisfying substitute which has ever since been called by his name.

The illustrations in this volume are numerous, and quite up to the average of English wood-engraving.

Handbooks of Athletic Sports. [Bohn's Library of Sports and Games.] Edited by Ernest Bell, M.A. Vols. I. and II. Scribner & Welford.

THERE could hardly be a more striking proof of the keen interest felt by the Anglo-Saxon race in athletic sports than the fact that this series of hand-books should be published so soon after the same ground had been elaborately covered by the well-known Badminton series. It is true that these volumes are in every respect less ambitious than their predecessors, and are so much less costly as to be within the reach of a larger circle of readers; but only those who have noted the recent growth of athletics, both in this country and in England, can realize how eager is the demand for such books. It need scarcely be said that no game can be learned from books alone. Much practice is essential, and a good many qualities, mental as well as physical, must be combined in the individual who would achieve success at any game. But the beginner can save himself much time and labor, and avoid falling into bad habits which are difficult to unlearn, by constantly practising in the best *style;* and what that is, in each kind of sport, he can learn from these hand-books.

These two volumes contain treatises by different experts on cricket, lawn-tennis, tennis, racquets, fives, golf, hockey, rowing, sailing, and swimming; and four more volumes in preparation are intended to complete the whole cycle of sports. For the convenience of those whose sporting tastes are limited, the various sections of each volume can be obtained separately at trifling cost.

The Rev. E. Lyttleton's account of cricket is adequate, and, from the beginner's point of view, is probably quite as useful as the more extensive researches of the authors of the Badminton volume. He gives what is undoubtedly the correct explanation of the fact that the bowling of professionals is always better than that of amateurs; namely, that the latter are unwilling to keep up the monotonous practice requisite for success in this department of the game, although always ready for the more enjoyable practice of batting. It is this same bugbear of mechanical and monotonous daily practice which accounts for the wide gulf between the professional singer or billiard-player and the amateur.

Mr. Wilberforce throws no new light on lawn-tennis unless it be in the shape of an incidental explanation of the decay of croquet which we do not remember to have seen before, namely, that it "fostered the ascendency of the curate," and was therefore doomed! He is somewhat ungallant in his estimate of ladies' play. He says, in reference to *mixed doubles*, "unless her partner is extraordinarily bad, he is bound to be better than she is." This may be quite true, but was it kind to print it on the very next page to Mrs. Hillyard's chapter on ladies' tennis? This ex-lady-champion strives to prove that the game is a suitable and safe one for girls, but the weight of evidence is all the other way, and the wise mother will train her daughter in other exercises better adapted to the peculiarities of feminine costume and physique.

Mr. Julian Marshall's historical account of tennis is admirable, but he devotes very little space to the difficulties of the beginner in that most difficult of games, and therefore his contribution is somewhat out of place. On the other hand, the gentlemen who write briefly but to the point on racquets, fives, golf, and hockey have avoided this mistake and have given all necessary information about these games.

Mr. Woodgate's treatise on rowing and sculling is almost as elaborate as his work in the corresponding Badminton book, and there is probably no better statement extant of the many differences between good and bad rowing. A careful study of this book by Harvard oarsmen would solve for them the mystery of the Yale stroke of recent years, and fully account for its success. In regard to training, Mr. Woodgate very truly observes that more harm is done to the constitution by reckless change of habits, from asceticism to license, when training is over, than by all the severities of training itself, and this cannot be too strongly impressed on the minds of the thousands of young men who occasionally go through a course of training.

Mr. Knight's excellent description of small-boat sailing will be read with peculiar interest on this side of the Atlantic, because he has sailed long enough in our waters to have adopted many Yankee ideas. For instance, he considers the cat-rig the best for small boats, he approves of lacing the mainsail to the boom, and he does not disapprove of the adoption by the English Yacht Racing Association of the new rule 8, which allows a centreboard provided manual power only is employed in working it.

Messrs. Cobbett's numerous plates and very complete explanations of the different ways of swimming will be of much assistance to those who can swim a few strokes and would fain swim many. They refer to the odd fact that some men can float easily and others can never learn to do so, the difference being due to the greater weight of bone and smaller amount of adipose tissue in the legs of non-floaters—whether in "blocks of five" or otherwise.

On the whole, these volumes can be recommended as safe guides in the different departments of athletic sports with which they deal.

The Sources of the Law of England: An Historical Introduction to the Study of English Law. By Dr. H. Brunner. Translated from the German, with a Bibliographical Appendix, by W. Hastie. Edinburgh: T. & T. Clark. Pp. x., 63. 8vo.

THERE is no better sketch of the sources of English law than Brunner's 'Quellen des Englischen Rechts,' in vol. i. of Holtzendorff's 'Encyclopädie der Rechtswissenschaft' (fourth edition, 1882). It is very useful to students of constitutional as well as legal history. We are sorry to find that the work of translating this excellent essay has fallen into incompetent hands.

Mr. Hastie is thoroughly acquainted neither with the German language nor with the sources of the law of England. A few examples of his many blunders will clearly demonstrate this fact. *Volksrechte* = folk laws, not popular laws (p. 1); *Gesammtbürgschaft* = mutual suretyship or frankpledge, not corporation (p. 4); *Sätze*=chapters, not positions (p. 6); *Güter*=lands, not goods (p. 7); *genossenschaftliche*=relating to associations (gilds, etc.), not federal (p. 11); *Grundbuch*=register of lands, not the Book of the Land (p. 14); *Rechnungsposten* = items in an account, not accounts of imposts (p. 14). On p. 11 Mr. Hastie says: "The principles of the Franko-Norman Law . . . were here [in England] developed as the 'Feudal System,' and in part to an extreme and pointed form"; but the German of Brunner, correctly translated, says: "The principles of the Franko-Norman Law . . . were developed, as was the feudal system in part, to an extreme and pointed form." The *Breve de recto* is wrongly defined, on p. 12, because Mr. Hastie misapprehends Brunner's application of the word *widrigenfalls*. Nor does Brunner give the ridiculous description or definition of the *Rectitudines singularum personarum* printed on page 7. Mr. Hastie says that William the Conqueror caused the old Anglo-Saxon laws to be enunciated "by twelve sworn representatives" (p. 6); Brunner correctly states that this was done "by twelve sworn representatives *from each county*." On the same page an Anglo-Saxon law is mentioned which regulated intercourse on the frontier between the "West Saxons and the Westphalian race"; for "Westphalian" read "Welsh." For "Klother and Cadric" (p. 3) read "Hlothaere and Eadric"; for "asetnusse" (p. 13) read "asetnisse"; for "eleotionis" (p. 18) read "elections."

The translator attempts to supplement Brunner's sketch of the modern literature of the subject, the additional titles being inserted in brackets. This part of his work is also very unscholarly. The addition of Crabb's 'History of the English Law,' Turner's 'History of the Anglo-Saxons,' and Elton's 'Origins of English History' (p. 8), is unnecessary: they throw little light on the history of Anglo-Saxon law, and hence Brunner omitted them. The two Anglo-French dictionaries which Hastie recommends to law students are Kelham's 'Norman Law Dictionary' and Metivier's 'Dictionnaire Franco-Normand' (p. 31). He does not seem to be aware that Metivier's book deals with the modern language of Guernsey. His additions to Brunner show not merely bad

judgment, but also ignorance of the literature published since 1882. He evidently had not heard of such treatises as Scrutton's 'Influence of Roman Law,' Walter de Gray Birch's 'Cartularium Saxonicum,' Aronius's 'Angelsächsische Urkunden,' Dove's 'Domesday Studies,' the publications of the Pipe-Roll Society, Pollock's 'Land Laws,' the Year Books published in the Rolls Series since 1882, and Liebermann's contributions to Anglo-Saxon law. From Liebermann's essays he could have compiled a valuable note concerning the lost law-book of Henry I.'s reign mentioned on p. 15.

In short, Hastie is a poor translator and displays ignorance of his subject. He is often wrong or obscure where Brunner is correct and clear. But even in this poor English garb Brunner's sketch will be found useful; the translator has succeeded in depriving it of only a part of its utility.

Four Frenchmen. By Austin Dobson. Dodd, Mead & Co.

THESE papers were written by Mr. Austin Dobson apparently some twenty or thirty years ago, and with a 'prentice hand. They are the work of a clever youth who, four times in succession, rose from reading a single volume on a subject new to him, and immediately put his reading into writing. It is a little surprising, even in these days when twice-cooked meats are so excessively the fashion, to find a man of letters, a chef, setting before us dishes of Corday, Roland, Lamballe, and Genlis, prepared with no novelty of treatment, even with no originality of flavor. These are four nice-looking little pies, but when you lift the cover there is not much within but bones and gravy.

The first sketch, that of Charlotte Corday—or Mlle. *de* Corday, or even *Marie* de Corday, as she is here styled in affected alternation—is disfigured by a youthful extravagance of coloring that makes equally impossible any delicate character-drawing or any poetic delineation. This theatrical figure is no true portrait of that eighteenth-century maiden who gave proof of at least as much folly as heroism in her mad deed, and still less is it that pale phantom with the bloody hands which will bear her name for long ages to come, till perhaps at length, blending into one light with Judith the Jewess, they will shine as a double star.

Mme. Roland follows Charlotte Corday, though a more natural arrangement would have put Charlotte Corday later in the volume. These thirty pages were evidently suggested and created by the edition of her 'Memoirs' published in 1864 by M. Dauban. But Mr. Dobson failed to catch and reiterate the truth M. Dauban saw, that it was because Mme. Roland was a peculiarly *womanly* woman that her influence was what it was—an influence widely felt, but not powerful. It was because she was "plus femme que les autres" that she became, as Louis Blanc said, "a great man" so far as she was one.

It is the Princesse de Lamballe (who was womanish, not womanly) whom Mr. Dobson thinks "plus femme"—or, as he has it, "mieux femme"—"que les autres." Mr. Dobson is indebted, it may be inferred, for what he knows about her, to one of the works of M. de Lescure, who published between 1860 and 1870 some dozen volumes concerning some half-dozen of his countrywomen — prolix, romantic, and inaccurate books, but rich mines of material for other writers who are not students and who do not care for more recent and more trustworthy historical research. The English writer has accepted, without questioning, the Frenchman's very questionable point of view, and gives us a Princesse de Lamballe who, in Mr. Dobson's words, "stands before us like a realization of the noble old motto of devotion, Tender and True."

The last of these papers, that on Mme. de Genlis, was written with the assistance of that lady herself. Why it should be worth while to give us a simple résumé of 'Mémoires' which, ever since their publication in 1824, have been read by every one who had the least desire to study the eighteenth century, can only be explained in terms of pounds, shillings, and pence.

A Social Departure. By Sara Jeannette Duncan. D. Appleton & Co.

DURING the autumn and winter of 1889, the Anglo-Asiatic newspapers were busy in reprinting for their readers lively extracts, descriptive of their respective localities, from an English ladies' magazine. These had to do with the adventures of two ladies, one English, the other Canadian, who had gone round the world in unconventional fashion. One chapter, descriptive of the Japanese newspaper reporter, was, by Prof. Basil Hall Chamberlain, considered to be "not only cleverly written," but so "true to the life" that he transferred the whole reprint to the pages of his excellent little cyclopædia of 'Things Japanese.' Widely read and praised on both sides of the Atlantic and Pacific, the diary is now republished in New York, with scores of illustrations which fit the text exactly and show the mind of artist and writer in unison. The author, a bright Canadian lady, has evidently intended to amuse especially "the British public, up in its Henry James." It is more than probable, however, that many of her best points will be invisible to the bold Briton, who is so often taken in by the wily Yankee or Canuck, by such a book as 'Democracy.' We have in mind a great English etcher and artist who, on shipboard, heard an American girl make repartee that, in our climate, electricity was so easily generated that the gas could be lighted not only by the young ladies' finger-tips, but even by their conversation. After two weeks' meditation upon that remark, the eminent man solemnly declared at a dinner-table that he had come to the conclusion that the young lady was joking.

Miss Duncan dedicates her "authorized edition" to Mrs. Grundy, as "a humble mark of profound esteem" and as "a slight tribute to the omnipotence of her opinion." She proceeds to picture Miss Orthodocia arriving at Montreal from England with the usual luggage so dear and sacred to the Briton. Orthodocia confronts the "customs surveillance in America by waving a red-flannel petticoat at the man in buttons, and, after compelling on his visage a terracotta-colored blush, comforts him with a shilling." The adventures of the English and the Canadian damsel as they travel through Canada in "sleepers" and ordinary cars, are narrated on pages crammed with laughter-provoking sentences. The two girls ride on a cowcatcher, and between what they imagine and what they say, there is fun enough. Arriving at Yokohama, after the ocean voyage, they are interviewed by a spectacled native reporter. The chapter describing this event is wonderfully accurate in details, and, what is still more remarkable, the Chinese characters on luggage label, interviewer's card, and newspaper extract are not upside down, as they usually are in American books, newspapers, and on theatrical posters. Nearly a hundred and fifty pages are devoted to Japan; and as these journalistic ladies have incredible powers of observation and entrance into unusual and difficult places, we have a fascinating chapter of Japanese life to date, as seen by foreigners with the eyes of women.

Only a single chapter is devoted to China. Ceylon, India, and Egypt are visited in succession, and the men, women, and animals of these countries are utilized to make witty paragraphs. Old civilizations, religions, customs, and people exist only for the paragrapher's jests; and, oblivious of solemn guide-books and tiresome writers and book-makers, these ladies of the note-book give us the antipodes in style and method of the ordinary globe-trotter's narrations. More than four hundred pages of the same sort of fun, monotonous despite its surface variety, become tiresome before the end is reached; otherwise the book may be warmly recommended as one good for the diaphragm and digestion, as well as for the head and mind.

Among the Moths and Butterflies. By Julia P. Ballard. G. P. Putnam's Sons. 1890. Pp. xxxvi, 237. 8vo. Illustrated.

IN this book, which is an enlarged and revised form of a work by Mrs. Ballard originally entitled 'Insect Lives,' the author has gathered numerous interesting and curious facts about the more remarkable American species of insects in question. Especial attention has been given to the rearing of the mature insect from the cocoon, the characteristics of the chrysalides, and the distinctive manners and habits of the various caterpillars and their parasites. The illustrations are exceptionally fine, and the appearance of the book in every way reflects credit on those concerned in its preparation. Mrs. Ballard successfully avoids technicalities on the one hand, and the trashy style affected by some so-called "popular" writers for the young on the other. We do not know of any recent book better fitted to interest well-grown boys and girls in the insect life about them; and the instances selected are, as they should be, a part of the history of American insects, illustrated by original and well-executed figures and clear diagrams.

BOOKS OF THE WEEK.

JUST READY:

PERRY'S HISTORY OF GREEK LITERATURE.

By THOMAS SERGEANT PERRY, author of 'English Literature in the XVIIIth Century,' etc.

Beautifully illustrated. Sq. 8vo, $7.50.

A philosophical account of the growth of Greek literature, and of its relations to the physical surroundings and political and social history of the people. In this setting appear the outlines of the great masterpieces, with English translations of their more interesting or representative passages.

It is believed that the man who knows little or no Greek may by this book put himself in closer contact with the spirit of Greek literature than most students of the language have obtained; and also that the college-bred man who got from his study of these classics in the original but faint and distorted views of their beauties will here find assistance in extending and organizing his knowledge.

THE NEW VOLUME OF

Champlin's Young Folks' Cyclopædia

ON

Games and Sports,

By JOHN D. CHAMPLIN, JR., and ARTHUR E. BOSTWICK. 12mo, $2.50.

This book, forming a third volume of the well-known "Young Folks' Cyclopædia" series, is intended to be a compendium of all kinds of recreations, including indoor and outdoor games, athletic sports, simple chemical and mechanical amusements, and every similar thing that can interest a wideawake boy or girl. Where standard rules are accessible, they have been given word for word, thus making the book valuable as a work of refereace for adults in case of disputes. Other features are the introduction of a brief historical sketch at the end of each article, the description of some foreign varieties of many of the games, and the attempt at a thorough system of etymology and derivation of all technical terms, as in the preceding volumes of the series.

New and Cheaper Edition of

Famous Single and Fugitive Poems.

Collected and edited by ROSSITER JOHNSON. 12mo, $1.25.

Dyspepsia

HORSFORD'S

ACID PHOSPHATE.

In dyspepsia the stomach fails to assimilate the food. The Acid Phosphate assists the weakened stomach, making the process of digestion natural and easy.

Dr. R. S. McCOMB, Philadelphia, says: "Used it in nervous dyspepsia, with success."

Dr. W. S. LEONARD, Hinsdale, N. H., says: "The best remedy for dyspepsia that has ever come under my notice."

Dr. T. H. ANDREWS, Jefferson Medical College, Philadelphia, says: "A wonderful remedy, which gave me most gratifying results in the worst forms of dyspepsia."

Descriptive pamphlet free.

Seashore Lands.

ON THE MAINE COAST AND OTHER PARTS OF THE NEW ENGLAND SHORE. Having made a specialty of these lands for over ten years, I act as agent for purchase and sale. A number of beautiful shore, island, and peninsula properties on Penobscot Bay, on the "Camden Shore," at "Islesboro," the Fox Islands, and the other principal points now being rapidly developed. These lands generally range in acreage from parcels of 10 acres to 300 acres, have beautiful rocks, trees, beaches, and harbors, and comprise some of the few remaining tracts now purchasable at prices approximating farm values, and offer variously some of the best opportunities for gentlemen wishing independent estates for summer occupancy or for investment. For details, circulars, photographs, and particulars address

J. Murray Howe, 27 School St., Boston, Mass.

Coast of Maine.

CAPE ROSIER.

The lands of the "Cape Rosier Associates" on Penobscot Bay, 50 miles nearer Boston and the West than Bar Harbor, Mt. Desert, are offered for sale in parcels of five and ten acres and upwards. These lands comprise over ten miles of almost continuous shore-frontage in one of the boldest and most beautiful sections on the coast, twelve hours' journey from Boston. They front upon fine harbors, have beautiful rocky shores, beaches, woods, and mountain views. The drives along the shores and among the hills are very varied and beautiful. New wharves have been built, and new connections with daily trains and steamboats established. In these lands is offered an exceptional opportunity to purchase for very small sums fine and perfectly protected seashore estates. The lands will not be sold for speculation or in small lots.

IN THE FOOTPRINTS OF CHARLES LAMB.

By BENJAMIN ELLIS MARTIN. Illustrated by JOHN FULLEYLOVE and HERBERT RAILTON. With Bibliography by E. D. North. 8vo, $2.50.

"By all odds the most truthful, comprehensive, and sympathetic study of 'the gentle Elia' yet given to the world."—*Boston Beacon.*

ELECTRICITY IN DAILY LIFE

A Popular Account of the Application of Electricity to Every-day Uses. With 120 Illustrations. 8vo, $3.00.

"This complete and comprehensive work is the joint production of ten practical electricians. It is altogether better than any on the subject that has appeared."—*Philadelphia Inquirer.*

THE PACIFIC COAST SCENIC TOUR.

From Southern California to Alaska—The Yosemite—Oregon and Washington—The Canadian Pacific Railway — Yellowstone Park and the Grand Cañon. By HENRY T. FINCK. With 20 full-page Illustrations. 8vo, $2.50.

"In point of readableness it leaves nothing to be desired. Mr. Finck is a close and many-sided observer. It is surprising to find so much detail in so compact and agreeable form."—*Nation.*

R. H. STODDARD'S NEW BOOK

THE LION'S CUB, and Other Verse. By R. H. STODDARD. With Portrait. 16mo, $1.25.

"There is a depth and charm in these verses that are peculiar to Mr Stoddard's genius. No one who cares for real poetry can afford to omit this volume."—*Julian Hawthorne.*

ROBERT LOUIS STEVENSON'S NEW BOOK.

Ballads. 16mo, $1.25.

Five narrative pieces in Mr. Stevenson's vivid and picturesque verse, the most important embodying Polynesian legends, and published for the first time.

JUST PUBLISHED:

INSECTA. (Guides for Science Teaching, No. 8.) By ALPHEUS HYATT and J. M. ARMS. This Guide is a series of replies to questions which have arisen in the minds of its authors while teaching. The plan of the book is such as to lead teachers and scholars to recognize the fact that science is infinite, and demands from its votaries a modest acknowledgment of the fact, and that they should work as companions learning from each other's observations, than as teacher and pupil, as would be done were the subject one which could be taught by a written treatise. Small 16mo, 234 pp., with 223 illustrations, including 13 folded plates. Cloth, retail price, $1.00.

D. C. HEATH & CO., Pubs., Boston, New York, Chicago

THACKERAY'S WORKS.

4. *Illustrated Prospectus of the Heroes of the Nations Series.*
5. *Recent Importations of Rare Books.*
6. *List of a Few Choice Books in Rich Bindings.*

Any of the above lists mailed on application.

G. P. PUTNAM'S SONS,

27 & 29 WEST 23D ST., NEW YORK.

GUDRUN:

A Mediæval Epic. Translated from the Middle High German by MARY PICKERING NICHOLS. $2.50.

"*The whole story is delightful in fresh purity, in strong feeling, in many a naïf and natural touch; and the light thrown on mediæval habits and ideals is of real value.*"—Literary World.

Houghton, Mifflin & Co., Boston.

11 East 17th St., New York.

One of Cleopatra's Nights, and Other Stories.

With Photogravure Illustrations. 1 vol., cloth, $1.00; paper, 50 cents.

Exquisite short tales, full of color and melody, as perfect as the world has ever seen, retaining the subtle charm of the French style, light, brilliant, and sparkling.

WORTHINGTON CO., 747 B'way, N. Y.

*RARE AND STANDARD SECOND-*hand Books. Books purchased for cash. Catalogues issued. E. W. JOHNSON, 1336 B'way, N. Y. City

THE BERMUDA ISLANDS.

THE SCENERY, PHYSICAL HISTORY, AND ZOÖLOGY OF THE SOMERS ARCHIPELAGO. By Professor ANGELO HEILPRIN. 8vo, cloth, largely illustrated, $8.50.

"With this volume for a field-book, one with even the rudiments of delight in the miracles of continuous creation could spend a happy season in this summer land."—*The Critic.*

"Two of the most important of scientific questions of the day are discussed in a manner charmingly clear and simple."—*Christian Union.*

Sent postpaid on receipt of price.

ACADEMY OF NATURAL SCIENCES OF PHILADELPHIA.

Cassell Publishing Co.'s
NEW BOOKS.

A WOMAN'S TRIP TO ALASKA.

Being an account of a voyage through the inland seas of the Sitkan Archipelago in 1890. By SEPTIMA M. COLLIS (Mrs. General C. H. T. Collis), with numerous illustrations, many of them in colors. Introduction by General W. T. SHERMAN, U. S. A. 1 vol., octavo, extra cloth, $2.50.

By author of 'The Anglomaniacs.'

FLOWER DE HUNDRED.

The Story of a Virginia Plantation. By Mrs. BURTON HARRISON, author of 'The Anglomaniacs,' etc. 1 vol., 12mo, extra cloth, $1.00.

The story deals with the peaceful times before the war, of the great struggle itself, and of the tragedies and comedies of the life that came after it. Mrs. Harrison is a Southern woman and was intimately associated with many of the scenes she describes. Indeed, there is foundation in fact for all the book contains.

THE ANGLOMANIACS.

A Story of New York Society of to-day. 1 vol., 12mo, extra cloth, price, $1.00.

"The success of the season."—*The Tribune, N. Y.*

"The story is brilliant."—*New York Herald.*

"The brightest, keenest story of American life that has appeared in a long time."—*Buffalo Express.*

CÆSAR CASCABEL.

A Story of America, etc. By JULES VERNE. Profusely illustrated from the original plates and published by special arrangement with the author. 1 vol., 8vo, $2.50.

Jules Verne has never written a book that appeals so strongly to an American audience as this, for the scene of more than half of the story is laid in America. It tells of the thrilling adventures of Cæsar Cascabel and his miniature circus in travelling overland with their van from California to France.

GOOD CHILDREN AND BAD.

A Book for Both. With illustrations in color by M. B. DE MONVEL. 1 vol., oblong, extra cloth, $2.50.

This is, without doubt, the most delightful "juvenile" that has appeared in many a long day, and, by its originality, it is calculated to work a revolution in the illustration of juvenile literature.

LONDON STREET ARABS.

By Mrs. H. M. STANLEY (Dorothy Tennant). Containing a Collection of Pictures from Original Drawings. With borders in tints. Crown 4to, cloth gilt, price, $2.00.

A collection of Characteristic Sketches of London Street Life. Mrs. Stanley relates some experiences of "Arab" life, and gives the mode adopted in making her sketches, and various anecdotes respecting her models.

THE CHOUANS.

By H. DE BALZAC. With 100 engravings on wood by LEVEILLE from drawings by JULIEN LE BLANT. Newly translated into English by GEORGE SAINTSBURY. Edition limited to 500 copies. 1 vol., large octavo, extra cloth, $7.50.

A CHRONICLE OF THE REIGN OF CHARLES IX.

By PROSPER MÉRIMÉE. With 110 engravings on wood from drawings by EDWARD TOUDOUZE. Newly translated into English by GEORGE SAINTSBURY. Edition limited to 500 copies. 1 vol., large octavo, extra cloth, $7.50.

Illustrated Catalogue of Holiday Books free to any address.

Cassell Publishing Co.,
104 and 106 Fourth Avenue, New York.

SENSIBLE GIFT BOOKS.

GOODYEAR'S HISTORY OF ART. Édition de Luxe. 8vo, 314 pages. $5.00.

A choice edition of this attractive and valuable work. No more suitable present for one inclined to the study of art. Replete with handsome illustrations.

HISTORY CITY OF NEW YORK. By Mrs. MARTHA J. LAMB, editor *Magazine American History.* 2 vols., cloth, 1,600 pages, $20.00.

The most complete, reliable, and entertaining record of the social and material development of the metropolis from the settlement of Manhattan Island to the present day. Profusely and elegantly illustrated.

POPULAR HISTORY OF THE UNITED STATES. 1 royal octavo vol., cloth, 672 pages, $3.50.

This is a work to be taken up and read—not one to occupy a shelf simply for reference. It is replete with salient facts, lively anecdote, and appropriate illustrations. Large, clear type. Suitable present for youth or adult. It should be in every family. Revised and brought up to date, and all statements may be relied upon.

HISTORY OF THREE GERMANYS. By THEODORE S. FAY, ex-Minister to Berlin. 2 vols., 8vo, 1,300 pages, illustrated, $7.00.

"A highly interesting book. No work in English affords as clear and succinct an account of the rise of the New Germany, and the connection between the past and the present Empires."—*New York Tribune.*

"The reader is carried along in almost breathless suspense, so sparkling is the diction, so incessant the sequence of action. The virile force of the aged diplomat and historian is truly marvellous."—*New York Observer.*

SCHOOL AND FAMILY ATLAS OF THE WORLD. By JAMES MONTEITH. Large 4to, half leather, 200 pages, $3.50.

The last work by the veteran geographer. Contains, besides the eighty-six pages of full and double-page maps, forty pages of text, descriptive, historical, and statistical. The maps are printed from the best copper plates, beautifully colored, and are fully up to date, containing the new States recently admitted to the Union.

Any of above sent prepaid on receipt of price.

A. S. BARNES & CO., Publishers, 751 Broadway, New York.

"The best book of its kind the century has produced."—THE CRITIC.

THE AUTOBIOGRAPHY OF JOSEPH JEFFERSON

THE WHIST CALENDAR.

Compiled by ROBERT FULLER. Printed in thirteen colors from a design by IPSEN. Price, $1.00,

W. B. CLARKE & CO.,
340 Washington Street, Boston.

KRUELL'S CONTEMPORARY PORTRAIT-GALLERY.

"The Nation."

1865-1890.

In commemoration of the 25th anniversary of this journal, Mr. Kruell has engraved on wood, in the highest style of the art, after a recent photograph by G. C. COX, a portrait of the founder and present editor of the *Nation*.

Edwin Lawrence Godkin.

"*It is an admirable portrait, and the head might stand for that of one of Velasquez's hidalgos.*"—Prof. Charles Eliot Norton.

The size of the block is 9x6 inches; the impression is on Japan paper, under the personal supervision of the artist, and is loosely mounted. *Only one hundred proofs* will be offered for sale, and each will be signed and numbered. Price, Ten Dollars, carriage prepaid. Address GUSTAV KRUELL, East Orange, N. J.

*** Mr. Kruell offers at the same price, and in the same style, proof portraits of CHARLES DARWIN (one in his prime, one in old age), ASA GRAY, WILLIAM LLOYD GARRISON, and WENDELL PHILLIPS. The edition in these cases is limited to 200 copies for all except Gray (100).

"*Certainly we may look in vain among other graphic arts for anything comparable with these portraits.*"—The Nation, January 23, 1890.

THE NO NAME MAGAZINE. Baltimore, accepts articles on their merits, but from PAID SUBSCRIBERS only. $1.00 a year; 10c. a copy. NO FREE COPIES. Advertisements, 10c. a line.

BACK NUMBERS, VOLUMES, OR sets of leading and scarce magazines, etc., for sale by H. WILLIAMS, 195 W. 10th St., N. Y.

SPECIAL FOOD FOR BRAIN AND NERVES.

CROSBY'S VITALIZED PHOSPHITES.

PREPARED ACCORDING TO THE FORMULA OF PROFES OR PERCY.

From the *Vital* principle of the *Brain* of the *Ox* and the *Embryo* of the *Wheat* and *Oat*.

For more than twenty years Physicians have used and recommended this *Brain* principle, as the best restorer of *vigor* and impaired *vitality*. Thousands of the world's best *Brain* workers, *college students*, and those engaged in *athletic sports*, have maintained their *bodily* and *mental* activity by its use.

It is *not* a "Patent Medicine"; the formula is on every label.
It is a *vital nutrient* PHOSPHITE, not a Laboratory PHOSPHATE.
Descriptive pamphlet, with testimonials, free.

F. CROSBY CO., 56 W. 25th St., N. Y. Druggists, or sent by mail, $1.00.

Fine Illustrated Gift Books.

The following books are beautifully printed from new electrotype plates especially made for this edition on extra-fine super-calendered paper, with original illustrations. Bound in English vellum cloth, stamped in silver and gold, with gold tops, or fine half calf. Each book in a box.

HYPATIA. By Rev. CHARLES KINGSLEY. 40 Illustrations by Philip Goater. Cloth, $2.50.

JOHN HALIFAX, GENTLEMAN. By DINAH MULOCK CRAIK. With 40 Illustrations by G. A. Travers. Cloth, $2.50.

VANITY FAIR. By WILLIAM MAKEPEACE THACKERAY. With 287 Illustrations from originals by the author. Cloth, $2.50.

LIBRARY EDITIONS OF STANDARD AUTHORS

IN LITERATURE, HISTORY, POETRY, AND FICTION,

In which the greatest care has been taken by the Publishers in the presswork, binding, paper, and illustrations, especially designed for persons wishing fine editions for the library. All are printed on extra super-calendered paper. Fully illustrated. Bound in either vellum cloth, leather tities and gilt tops, or finest half calf with gilt tops. Including works of BROWNING, CARLYLE, COOPER, DICKENS, ELIOT, FIELDING, HUME, LYTTON, RUSKIN, STRICKLAND, SWINBURNE, THACKERAY, SCOTT.

Send for special Catalogue of these Sets.

Indian Tales. By RUDYARD KIPLING. 1 vol., 12mo, cloth, gilt top, 771 pages, $1.50.
This is the only edition of 'Plain Tales from the Hills,' 'Soldiers Three and Other Stories,' 'The Story of the Gadsbys,' 'Phantom 'Mickshaw,' issued in America with the sanction of the author.

Lux Mundi. *Second American Edition. Ten Editions in England.* Edited by Rev. CHARLES GORE, M.A. (Principal of Pusey House and Fellow of Trinity College, Oxford). 1 vol., 12mo, cloth, gilt top, $1.75.
The great theological sensation of the day in England. A series of studies in the religion of the incarnation.
"We care now only to say so much as shall induce those who read this notice to go at once to the book, and to persuade them not to be deterred by what may seem a dry, theological title from the enjoyment of a work which we have read with an interest and absorption which few books, indeed, of the present day have been able to produce."—*The Churchman.*

Verses. By GERTRUDE HALL. 1 vol., 12mo, cloth, gilt, $1.00.
A little volume of verses from the pen of Gertrude Hall, a young English writer of promise, has just been issued. The English papers, in commenting upon this little volume, dwell particularly upon the unaffected sweetness and naturalness of the sentiment, and the smoothness of metrical diction. In all probability a second edition will be demanded, on the strength of the impressions created by the too-limited number just issued.

Departmental Ditties, Barrack-Room Ballads, and Other Verses. By RUDYARD KIPLING. 1 vol., 12mo, cloth, gilt, $1.25.
We have just issued, under the authorization of Rudyard Kipling, a volume of poems, which contains "Departmental Ditties," "Barrack-Room Ballads," and a collection of Kipling's fugitive verses, which he has recently arranged for this volume. This will be the first edition of Kipling's poetical writings issued in this country. The press universally praise his poetical work, the style of which is crisp, terse, witty, and entertaining.

The Gentle Art of Making Enemies. By J. McNeill Whistler. A gift most acceptable to any artist. Being a collection of his writings edited by himself. 12mo, cloth, with cover specially designed by Mr. Whistler, $2.00. An *Édition de Luxe*, limited to 300 copies, issued on hand-made paper, each copy numbered and signed by Mr. Whistler, $10.00.
The first edition of this remarkable book was exhausted in a few days, and the second edition is selling rapidly, while only a few of the *Édition de Luxe* are left.

George Meredith, Novelist and Poet, Some Characteristics. By Richard Le Gallienne. Author of 'My Ladies' Sonnets,' 'Volumes in Folio,' etc. With a bibliography by John Lane and a note by W. Morton Fullerton on the reception of George Meredith's works in America. Regular edition, price, $2.00; American *Édition de Luxe*, limited to 25 copies, $10.00. With an illustration of the novelist's *chalet* from a pen and-ink-sketch by his son, Mr. W. M. Meredith, and a portrait.
"My whole attempt is that of a lover of the works to give expression to the faith that is in him."—*Extract from Preface.*

The King's Daughters. By Mrs. ELLEN E. Dickinson. 1 vol., small 4to, cloth, silver and gilt, $1.25. Illustrated with numerous half-tone plates, from original designs for this work, by E. J. Austin.

History of My Pets. Stories of My Childhood. By GRACE GREENWOOD (Mrs. Lippincott). 12mo, cloth, gilt. Price $1.00 per volume. Beautifully illustrated from new designs made expressly for these volumes.
"It is like hearing that an old friend is about to visit us that I learn that new editions of Mrs. Lippincott's delightful books are soon to be published."—*J. G. Whittier.*

Letters to Living Authors. By J. A. STEUART. Cloth, $2.00. Illustrated with portraits of the different authors. An *Édition de Luxe*, limited to 25 copies, printed on hand-made paper and tastefully bound, $5.00.

BRENTANO'S

Holiday Display.

Our stock for the approaching holidays, comprehending absolutely everything new and desirable in standard and current literature appropriate for gift books, is now fully displayed.

Our own establishments in London and Paris give us facilities, of which we have most excellently availed ourselves, for the special importation of many exclusive books, both in respect of authors and bindings.

French Books and German Books in our foreign department have been more carefully selected than even in past seasons, so that we may confidently call attention to a splendid assortment in special bindings of writers in these two languages.

Goods can be selected now for the holidays and delivered on any date desired.

Brentano's Best Books—a special catalogue —sent upon application.

BRENTANO'S

STATIONERY DEPARTMENT.

Attention is particularly directed to our novel and tasteful display of Leather Goods, Writing Paraphernalia for private correspondence, and our special and exclusive designs in Menu, Dinner Cards, and Calendars.

Our assortment of WRITING PAPERS embraces the production of all the leading domestic and foreign manufacturers, enabling us to offer a selection unusually attractive.

English and German Whist Packs.

BRENTANO'S London Exchequer Black Ink is a superior ink, writing black at once. Especially adapted for ladies' use.

Sample books of writing paper sent upon request to any address postpaid.

Card engraving, wedding invitations, reception, at home, and cards for special ceremonies engraved in appropriate and correct style. Monograms.

Address dies, ciphers, and crests cut, paper illuminated stamping in single colors.

To the end that no delay may occur in the punctual delivery of engraving of visiting cards, "at home," or other ceremonial cards requisite or desired at this season, we request patrons contemplating giving such orders to place their orders now.

☞ All orders are finished and delivered when promised. Orders through the mail receive prompt attention.

5 Union Square, New York.

The Nation

VOL. LI.—NO. 1329 THURSDAY, DECEMBER 18, 1890. PRICE 10 CENTS

WORTHINGTON COMPANY'S NEW SETS OF BOOKS.

Wharton's Wits and Beaux of Society. With preface by Justin H. McCarthy, M.P. Illustrations by H. K. Browne and James Godwin. In 2 vols., 8vo, English edition, 1890, $5.00.

An inexhaustible mine of anecdotes about Gramont, Chesterfield, St. Simon, Walpole, Selwyn, Duke of Buckingham, and others.

Wharton's The Queens of Society. With preface by Justin H. McCarthy, M.P. Illustrations by C. A. Doyle. In 2 vols., 8vo, English Edition, 1890, $5.00.

Anecdotes and gossip about Lady Montague, Mme. de Sévigné, Mme. Récamier, Mme. de Staël, La Marquise de Maintenon, and many others.

Wilson's Noctes Ambrosianæ. By Prof. Wilson. With steel portraits and memoirs of the authors, by R. Shelton Mackenzie, D.C.L. 6 vols., 8vo including "Christopher North," a memoir of Prof. Wilson, from family papers and other sources, by his daughter, Mrs. Gordon. Cloth, $9.00.

Most singular and delightful outpouring of criticism, politics and descriptions of feeling, character and scenery, of verse and prose, of eloquence and especially of wild fun.

Napoleon. Memoirs of Life, Exile and Conversations of the Emperor Napoleon. By the Count de Las Cases, with eight steel portraits, maps and illustrations. 4 vols., 8vo, cloth, $6.00.

Napoleon in Exile; or, A Voice from St. Helena. Opinions and Reflections of Napoleon on the Most Important Events in his Life and Government, in his own words. By Barry E. O'Meara, his late Surgeon. Portrait of Napoleon, after Delaroche, and a view of St. Helena, on steel. 2 vols., 8vo, cloth, $3.00.

Napier's Peninsular War. By W. F. P. Napier. With fifty-five maps, plans of battles and five portraits on steel. 5 vols., 8vo, $7.50.

The most valuable record of that war which England waged against the power of Napoleon.

Gray. The Works of Thomas Gray, in Prose and Verse. Edited by Edmund Gosse. With portraits, facsimiles, etc. 4 vols., 8vo, cloth, gilt top, $6.00.

"Every lover of English literature will welcome the works of Gray from the hands of an editor so accomplished as Mr. Gosse."—*London Athenæum.*

Don Quixote de la Mancha. Translated from the Spanish of Miguel de Cervantes Saavedra by Motteux. With copious notes (including the Spanish Ballads), and an essay on the Life and Writings of Cervantes by John G. Lockhart. Preceded by a Short Notice of the Life and Works of Peter Anthony Motteux by Henri Van Laun. Illustrated with 16 original etchings by R. de Los Rios. 4 vols., 8vo, cloth, $6.00.

Gil Blas of Santillane. Translated from the French of Le Sage by Tobias Smollett. With biographical and critical notice of Le Sage by George Saintsbury. New edition, carefully revised. Illustrated with twelve original etchings by R. de Los Rios. 3 vols., 8vo, cloth, $4.50.

Taine (H. A.). History of English Literature. Translated by H. Van Laun, with introductory essay and notes by R. H. Stoddard, and steel and photogravure portraits by eminent engravers and artists. 4 handsome octavo volumes, cloth, white labels, $7.50. The same in 2 volumes, cloth, white label, $3.75.

Browning (Elizabeth Barrett). Poems. The most satisfactory American edition issued, printed from excellent type on paper of superior quality; with introductory essay by Henry T. Tuckerman. 3 vols., 8vo., gilt tops, $5.25.

Rotteck (Chas. Von, LL.D.). The History OF THE WORLD. A general history of all nations in all times. New edition revised. Illustrated with numerous full-page engravings. 4 vols., large 8vo, cloth, gilt extra, $7.50, half morocco or half calf, $15.00.

W. Heimburg's Novels. New uniform edition. With photogravure illustrations, 8 vols., half morocco, $16.00.

Lazarillo de Tormes. By Don Diego Mendoza. Translated by Thomas Roscoe. And GUZMAN D'ALFARACHE. By Mateo Aleman. Translated by Brady. Illustrated with 8 original etchings by R. de Los Rios. 2 vols., 8vo, cloth, $3.00.

Picturesque Ireland. Descriptive and Historical. With fifty full-page engravings on steel from drawings by W. H. Bartlett, and an account of its cities, towns, mountains, waters, ancient monuments, and modern structures, by Markfield Addey. 2 vols., 4to, cloth extra, gilt edges, $10.00.

These two handsome volumes will make the reader better acquainted with the picturesque features of the "Emerald Isle" than any work that has ever preceded it.

Cyclopædia of the Arts and Sciences. Botany, Zoölogy, Mineralogy, Geology, Astronomy, Geometry, Mathematics, Mechanics, Electricity, Chemistry, etc., etc. Illustrated with over 3,000 wood engravings. 1 vol., 4to, cloth extra, $6.00; sheep, $7.50; or in half morocco extra, $10.00.

This Encyclopædia is more than a first-class book of reference; it is a library of popular scientific treatises, each one complete in itself.

Old Spanish Romances. *English Edition,* including Don Quixote, 4 vols.; Gil Blas, 3 vols.; Lazarillo de Tormes, 2 vols.; Asmodius, Bachelor of Salamanca, Gonzales, in all 12 vols., 8vo, cloth, $21.00. The same 12 vols. in half rox., gilt top, $24.00.

"This prettily printed and prettily illustrated collection of Spanish romances deserve their welcome from all students of seventeenth century literature."—*The Times.*

NEW AND SPECIAL EDITION OF THACKERAY.

Thackeray's Complete Works. New edition, printed from new type. Edition de Luxe, with upwards of 1,500 illustrations, printed on India paper. 20 handsome vols., 8vo, cloth, paper title, edges uncut, $70.00.

Payne's Arabian Knights. 9 vols., vellum, English edition, $67.50.

—— **Arabic Tales.** 3 vols., vellum, English edition, $22.50.

—— **Alaeddin.** 1 vol., 8vo, vellum, $7.50.

Any of the above books sent postpaid on receipt of price.

WORTHINGTON CO., 747 BROADWAY, N. Y.

For the Holidays.

ROMOLA.

In placing on the market this superb two-volume holiday edition of George Eliot's masterpiece, containing sixty etchings and photo-etchings printed in a variety of delicate tints, we feel that we have attempted and succeeded in giving the public the finest edition of this great historic story of Florentine life ever produced in any form.

2 vols., white vellum cloth, red and gold, $6.00.

ROMOLA. ÉDITION DE LUXE.

Limited to two hundred and fifty copies.

This large-paper edition, containing sixty-two plates printed on Imperial Japanese paper, is bound in full vellum, illuminated in gold and colors. 2 vols., full vellum, red, blue, and gold, $15.00.

Owing to the limited number published, all orders should be sent in as early as possible, as the edition will be exhausted before the holidays.

ESTES & LAURIAT,
PUBLISHERS,
BOSTON, MASS.

No book for the Young People equals **An Adirondack Cabin,** by MARGARET SIDNEY, in beauty of illustration or make-up. Its charm of style and intense interest show the author of 'Five Little Peppers' at her very best. Quarto, $1.75.

THE **Lion City of Africa,** by WILLIS BOYD ALLEN, is a book the boys go crazy over; yet it is based on fact, and presents the wonders of Central Africa in the most realistic way. Quarto, $2.25.

THE two Gift Books for Adults that excel all others in value of matter and beauty of illustration are **Our Early Presidents,** their **Wives and Children,** by HARRIET TAYLOR UPTON ($4.00), and **The Poet's Year,** by OSCAR FAY ADAMS ($6.00).

Ask your Bookseller to show you these. Or send price to D. LOTHROP COMPANY, BOSTON, and you will receive them carriage free.

Send postal for Catalogue of *One Thousand* other charming Holiday Books.

"A LITTLE NONSENSE."
In My Nursery.

Rhymes, Chimes, and Jingles for Children. By LAURA E. RICHARDS, author of 'The Joyous Story of Toto' and 'Toto's Merry Winter.' Profusely illustrated. One volume small 4to, cloth, price $1.25.

"Here are songs in many keys, a taking variety of rhyme and measure of subject and treatment; sketches of Wonderland, mirthful nonsense, fancies quaint and pleasing, hints on behavior, patriotic and other useful lessons in attractive guise, blessed mingling of real and ideal. A book of charming verses and pictures."—*Unity.*

Sold everywhere. Mailed, postpaid, by the Publishers on receipt of price.

*AN EXPERIENCED COLLEGE IN-*structor will take charge of two or three young men for six months' travel and study in Europe, starting February 15. Address R. A., care of Registrar Columbia College, New York.

*HOLMES HINKLEY, A.M., 11 EVE-*rett St., Cambridge, Mass., will prepare boys for the fall examinations, and make tutoring engagements for the winter.

*CHARLES W. STONE, Tutor for Har-*vard, 68 Chestnut Street, Boston.

School Agencies.

*AMERICAN AND FOREIGN TEACH-*ers' Agency supplies Professors, Teachers, Tutors, Governesses, etc., to Colleges, Schools, and Families. Apply to
MRS. M. J. YOUNG-FULTON, 23 Union Square, New York.

THE FISK TEACHERS' AGENCIES, 7 Tremont Place, Boston, Mass., 6 Clinton Place, N. Y., 106 Wabash Ave., Chicago, Ill., and 1203½ South Spring Street, Los Angeles, Cal. 100-paged Agency Manual free. EVERETT O. FISK & Co.

AMERICAN AND FOREIGN Professors, tutors, governesses, teachers, etc., supplied to colleges, schools, and families. French, German, and Spanish spoken. MIRIAM COYRIERE, 150 5th Av., cor. 20th St.

SCHERMERHORN'S TEACHERS' Agency. Oldest and best known in U. S. Established 1855. 3 East 14th St., N. Y.

*EUROPEAN WINTER AND SUM-*mer Resort, University town of Innsbruck, Tirol Austria; 1,900 feet above the sea, with dry, bracing climate. Hotel Tirol, open all the year, Carl Landen, Proprietor. Large, airy, sunny rooms, well furnished. Elevator. Superior cuisine (table d'hôte or à la carte). Reduced rates in winter. Carriages and sledges at low rates. Charming excursions made from the hotel at all seasons. Unusual advantages for securing teachers of the languages, history, science, art, music, etc., at very moderate terms. Eminent medical care and skilled nurses if desired. Best English and American references. Illustrated pamphlets sent on application.

Oliver Optic's New Story

ON THE BLOCKADE

Emblematic dies. Cloth, two colors. Illustrated. $1.50.

Oliver Optic is a prince of story tellers, and everybody, young and old, will be interested in these stories. They are not history, but are historical pictures. We shall wait with interest for the next in the series.—*Religious Herald.*

THE BLUE AND THE GRAY SERIES

3 volumes. Illustrated. Boxed. Per volume, $1.50.

Taken by the Enemy *On the Blockade*
Within the Enemy's Lines

THE KELP-GATHERERS

By J. T. TROWBRIDGE. Illustrated. Cloth, $1.00.

Boys all like the stories of J. T. Trowbridge. They deal with boy nature as it is. His boys are hearty, healthy boys who work their way under difficulties, and generally have a knowledge or instinct as to the right, but for all that are not young angels with their wings tucked away under their jackets.—*Plain Dealer.*

THE START IN LIFE SERIES

3 vols. Illustrated. Boxed, per volume, $1.00.

The Start in Life *Biding His Time*
The Kelp-Gatherers

LITTLE GIANT BOAB
And His Talking Raven Tabib

By INGERSOLL LOCKWOOD, author of 'Travels and Adventures of Little Baron Trump and His Wonderful Dog Bulger,' etc. Profusely illustrated by Clifton Johnson. Quarto, cloth, $2.00.

It is full of genuine fun, dealing with distinctively Spanish scenes. The boys and girls, and grown people as well, cannot fail to extract a great deal of amusement from it.—*Union and Advertiser.*

PARDS *A Story of Two Homeless Boys*

By EFFIE W. MERRIMAN, editor of *The Housekeeper*, Minneapolis. Cloth, Illustrated. $1.00.

It is a beautiful story, brightly told, pointing the truth that no poverty nor misfortune can conceal the noble spirit. Every one, whether boy or girl, man or woman, will enjoy 'Pards.' —*Baltimore Telegram.*

The Marvellous Country, or Three Years in Arizona and New Mexico.

By SAMUEL WOODWORTH COZZENS. Price, $2.00.

This is a grand book for the lovers of adventure, and the boys will gloat over it. It discusses the Apaches, the natural features of that comparatively remote region, and a variety of things of interest connected with it. The illustrations are numerous and striking, and there are also maps.

DOROTHY'S EXPERIENCE

By ADELINE TRAFTON, author of 'An American Girl Abroad.' Two colors. Cloth, $1.00.

"Dorothy's spiritual experience, and the efforts she made to elevate and reform others by self-sacrificing labors, and her desire to establish in the hearts of all Christ-like principles, are told with telling effect."

A LOST JEWEL

By HARRIET PRESCOTT SPOFFORD. Illus. $1.00.

Children will be fascinated with this bright story, the incidents and happenings of which are so natural and amusing. The author's name is a sufficient guarantee that it is well told.

The Log of the Maryland

By DOUGLAS FRAZAR, author of 'Perseverance Island.' Cloth. Illustrated. $1.50.

A sailor's story of an eventful voyage, told in a clear and entertaining style, and detailing the scenes and incidents as well as the adventures of Jack Tar's life at sea, and the various countries visited.

Sold by all booksellers, and sent by mail, postpaid, on receipt of price.

Illustrated Descriptive Catalogue mailed free.

BRENTANO'S
Holiday Display.

Our stock for the approaching holidays, comprehending absolutely everything new and desirable in standard and current literature appropriate for gift books, is now fully displayed.

Our own establishments in London and Paris give us facilities, of which we have most excellently availed ourselves, for the special importation of many exclusive books, both in respect of authors and bindings.

French Books and German Books in our foreign department have been more carefully selected than even in past seasons, so that we may confidently call attention to a splendid assortment in special bindings of writers in these two languages.

Goods can be selected now for the holidays and delivered on any date desired.

Brentano's Best Books—a special catalogue —sent upon application.

BRENTANO'S
STATIONERY DEPARTMENT.

Attention is particularly directed to our novel and tasteful display of Leather Goods, Writing Paraphernalia for private correspondence, and our special and exclusive designs in Menu, Dinner Cards, and Calendars.

Our assortment of WRITING PAPERS embraces the production of all the leading domestic and foreign manufacturers, enabling us to offer a selection unusually attractive.

English and German Whist Packs.

BRENTANO'S London Exchequer Black Ink is a superior ink, writing black at once. Especially adapted for ladies' use.

Sample books of writing paper sent upon request to any address postpaid.

Card engraving, wedding invitations, reception, at home, and cards for special ceremonies engraved in appropriate and correct style. Monograms.

Address dies, ciphers, and crests cut, paper illuminated stamping in single colors.

To the end that no delay may occur in the punctual delivery of engraving of visiting cards, "at home," or other ceremonial cards requisite or desired at this season, we request patrons contemplating giving such orders to place their orders now.

☞ All orders are finished and delivered when promised. Orders through the mail receive prompt attention.

BRENTANO'S,

JAPANESE POTTERY,

WITH

NOTES,

DESCRIBING THE EMBLEMS, THOUGHTS, AND SUBJECTS, COMMON TO THE JAPANESE.

BY

JAMES L. BOWES,

Honorary Consul for Japan at Liverpool; Author of "Japanese Marks and Seals," "Japanese Enamels," and joint author of "Keramic Art of Japan," &c.

A history of Japanese Pottery, with a descriptive Catalogue of over 1,000 classified specimens in the Bowes Museum, with the whole of the Marks and Seals in facsimile. Copiously illustrated with appropriate subjects. This edition, limited to 500 copies, contains one colored and 15 autotype plates, with 300 engravings, and 500 Marks and Seals. Price £2 12s. 6d. net.

A SPECIAL EDITION, on Japanese paper, containing 67 plates, 23 of them in colors and gold; of the latter, some, necessary to complete the sequence, are printed from stones used for "Keramic Art of Japan." This edition, limited to 150 copies, £6 6s. net.

ENGLISH PRESS NOTICES.

"In paper, type, illustrations, binding and treatment, his volume is worthy of its subject and its author—we could scarcely give it higher praise."—*The Times.*

"Compiled regardless of cost . . . remarkably free from mistakes. For a long time to come will stand as the most sumptuous catalogue of the most extensive Japanese Collection in England, if not in the world."—*The Art Journal.*

"Not only one of the most beautiful, but one of the most useful and rational books upon Japanese work which has been published in England."—*Builder.*

"It must always remain an indispensable authority."—*The Academy.*

"Let us repeat our admiration for this beautiful and enticing volume."—*Saturday Revi w.*

"The volumes have not been surpassed in the history of amateurism . . . the outcome of additional opportunities for debating about styles with native connoisseurs. As such it is unique."—*Architect.*

"Mr. Bowes gives another proof that he knows more about Japanese ware than any other European does. A book of first authority."—*Scotsman.*

"A text book to suggest new ideas to our designers. Mr. Bowes's latest book takes its place as a standard work in the English language."—*Liverpool Mercury.*

"Mr. Bowes's work is second only to his Collection in importance as a complete illustration of the beauty, diversity, and historic value of Japanese Art."—*Pottery Gazette.*

"Mr. Bowes—'Japanese Bowes,' as he is called by reason of his Consulship and his wonderful Collection—takes high rank. A contribution of the utmost value to the collector, the student."—*Graphic.*

"So thoroughly well known in the Japanese world of art that it is with pleasure the connoisseur hears that he has added to his former popular and admirable works. Collectors outside Japan have done better than those on the spot. The Notes are positively delightful, and the reader revels in them."—*China Telegraph.*

"A work alike beautiful and interesting. Apart from its obvious qualities, I rejoice in all that tends to spread the knowledge and elevate further the justly high reputation of Japan in England."—THE RIGHT HON. WM. E. GLADSTONE.

"Mr. Bowes, who has already done more to spread an accurate knowledge of Japanese art than any living Englishman, has rendered another notable service to connoisseurs by this beautiful and scholarly book."—*Manchester Guardian.*

"Nowhere can be found such a complete collection of masterpieces in pottery as that of which Mr. Bowes is the fortunate possessor, and which he describes with a profound knowledge of the subject. The volume is one in which connoisseurs will delight."—*St. James's Gazette.*

"Abounding in entertaining, curious, and instructive descriptions."—*Liverpool Courier.*

"They are as beautiful as they are diverse; the book, with its sumptuous reproductions, can scarcely fail to charm both the connoisseur and the student of Eastern art."—*Review of Reviews.*

"Invaluable for the purposes of identification and classification."—*Birmingham Post.*

"Mr. Bowes has had opportunities which very few possess. Of the utmost value to the student of Japanese pottery."—*Building News.*

"The great service which Mr. Bowes has rendered to the art of Japan is that he has distinguished between the false and the true."—*Liverpool Post.*

SIMPKIN, MARSHALL & CO., LONDON.

EDWARD HOWELL, LIVERPOOL.

Another Flock of Girls.

Small 4to, cloth. Illustrated, $1.75,

By NORA PERRY, is one of the brightest and most attractive juveniles of the season. It receives tributes without number. For example: "Freshly and graphically written."—*Mail and Express, N Y.* "A volume of bright stories by Nora Perry, whose *charming juvenile literature is known and read by every child in the land,*" says the *Detroit Tribune.* "The many charming stories she has written *place her on the same level with the much-loved Louisa Alcott.*"—*Baltimore American.* "*Her new book will be warmly welcomed* by those who made the acquaintance with the original flock a season or two ago."—*The Boston Transcript.* "*A live girl's book all through.*"—*The Chicago Inter-Ocean.*

With Fire and Sword.

The great Historical novel by Henryk Sienkiewicz, translated by Jeremiah Curtin.

A NEW LIBRARY EDITION,

Printed on choice paper, with Portrait of the author. 2 vols., 12mo, cloth, gilt top, $3.00. Also in one volume, crown 8vo, cloth, $2.00. The scene—Poland and Russia; time—1648-1651.

"The only modern romance with which it can be compared for fire, sprightliness, rapidity of action, swift changes, and absorbing interest, is 'Three Musketeers' of Dumas."—*New York Tribune.*

Rubinstein's Autobiography.

Autobiography of Anton Rubinstein, 1829-1889. Translated by Aline Delano. 16mo, Cloth, gilt top, with photogravure portrait, $1.00.

Although from time to time various articles and criticisms on the life and works of the famous musician have been published, the biographical details, often inaccurate, possessed little or no value. The present publication, however, was dictated by Rubinstein himself in Russia last year, and is now first translated.

An altogether charming little book.—The Beacon. *Of deep and pathetic interest.*—Boston Home Journal. *Full of interesting comments and suggestions*—The Nation. *One gains from it a true estimate of Rubinstein as composer and pianist.*—Boston Advertiser.

The Blind Musician.

Translated from the Russian of Vladimir Korolenko, by Aline Delano. With Introduction by George Kennan, and Illustrations by Edmund H. Garrett. 16mo. Cloth, gilt top, $1.25.

This charming volume receives many tributes. The Boston *Transcript* says—"Though told in prose, it is in essence a poem; and its closeness to nature is as beautiful and rare as its fidelity to denied and shadowed light. The volume is an *édition de luxe*, with dainty and charming bits of vignette illustration, and a perfection of finish which gives a refined pleasure to the touch as well as to the eye."

A New Dumas Series.

THE MARIE ANTOINETTE ROMANCES, comprising the following famous stories:

The Memoirs of a Physician, 3 vols., $4 50; The Queen's Necklace, 2 vols., $3.00; Ange Pitou, 2 vols., $3 00; La Comtesse de Charny, 4 vols., $6.00; Chevalier de Maison Rouge, 1 vol., $1.50. In all 12 vols., 12mo, cloth extra, gilt top, with 12 historical portraits and plates, $18.00.

The Nation.

NEW YORK, THURSDAY, DECEMBER 18, 1890.

The Week.

THE present Silver Law, coupled with a possible excess of Treasury disbursements over receipts in the coming fiscal year, threatens to upset the gold standard without any free-coinage attachment at all. The Secretary of the Treasury shows an apparent surplus of fifteen millions on the 1st of July, 1892, after eating all the cake left over for him by his predecessor in office. In order to figure out this surplus, he reckons on 373 millions of revenue after deducting the sugar duties that have been repealed. But experience has shown that every period of commercial disorder is followed by a heavy shrinkage of the revenue. Thus, the total revenue of 1872 was 374 millions. In the following year it fell to 333 millions, and it continued to shrink until 1878, when it was as low as 257 millions. Again, after the disturbances of 1883-'4 it sank from 398 millions to 323 millions. It was in consequence of this shrinkage that Secretary McCulloch was under the necessity of conferring with the banks respecting silver payments. And it was owing to that conference that some gold was hoarded and some sent abroad at that time. Fortunately there is a surplus in the Treasury now, but it is a surplus that can be used only once. Whenever, from any cause, the surplus and the current receipts are overtaken by current disbursements, the silver standard will be upon us, whether we have free coinage or not. Therefore it is not sufficient to pat the silver-men on the head and coax them not to do anything worse than they have already done. Confidence will not be restored by any such means.

It is impossible to suppose that Secretary Windom really believes that the buying up of all the silver bullion in sight by the Government and issuing Treasury notes on it will relieve the monetary stringency. The only stringency that would be relieved by such a measure would be that of the present owners of the bullion. They would "come out ahead," no doubt. Everybody else would be left in the rear. What the community needs and is suffering for is not more bits of paper, but more confidence in the goodness of what we now have. Restore this confidence, and we shall not want more silver, or more gold, or more paper. The Government has been "holding silver up by the tail" ever since 1878. The more it buys, the heavier the load becomes. If it now buys $13,000,000 worth in addition to the regular monthly purchase, it will have to drop the load so much the sooner. Probably the Secretary is trying to head off the free-coinage men by offering them a new compromise. But ever such compromise convinces them that they have been right all the time. They will get what is offered them now as an instalment, and call for the remainder the next day. If Mr. Windom would leave a reputation behind him worth having, let him set his face sternly against every silver proposition, great or small.

The Republican Senate caucus on Monday evening did not reach any definite conclusion respecting the financial measure to be adopted, but did nevertheless indicate the drift of sentiment in the party. Free coinage of silver was voted down by 30 to 13. This is not absolutely conclusive of the action of the Senate, but it probably settles that question for the present Congress. The project for buying all the silver in the market and issuing legal-tender notes on the basis of the purchase was considered, but not adopted. According to the reports in the newspapers, the consideration of this branch of the subject was postponed. On the other hand, the coinage into standard dollars of the surplus silver now in the Treasury (the trade dollars and the subsidiary coins) was apparently agreed to. This feature of the bill is nugatory, since it adds nothing to the disbursements of the Government. It makes available a dead capital of about twenty-five millions. This sum can be paid out in the form of certificates, but since the whole financial question hinges on gold payments at the Treasury, the promised relief is more apparent than real. The Secretary can take his idle silver and issue legal-tender notes against it on condition of redeeming the notes in gold; but Congress could authorize him to issue the notes on the same conditions without any silver at all. It appears that Mr. Windom's interconvertible-bond scheme did not meet with favor, and that Mr. Sherman's new Legal-Tender Bill was not agreed to in the shape in which he presented it, but it may come up again.

The Cleveland *Leader* is very much cast down because Special Treasury-Agent Tingle has furnished so much ammunition to Sir Julian Pauncefote in his Bering Sea correspondence with "the greatest statesman of the age"—*i. e.*, James G. Blaine. The greatest statesman had insisted that the fur seal was rapidly approaching extermination in consequence of poaching and marauding—two phrases which have been frequently used lately in place of fishing and sealing. Sir Julian, on the other hand, favored Mr. Blaine with copies of two official reports from the special agent of our Treasury, Mr. George R. Tingle, one of these reports being as late as last year, affirming that in spite of poaching and marauding and regular killing on the islands, the number of seals has doubled in sixteen years, and is now larger than it has ever been since we acquired Alaska. This is certainly very embarrassing. It illustrates once more the need, even for the greatest statesman of the age, that he should not leave his correspondents in doubt as to the facts—as he left Senator Frye, last year, on the subject of reciprocity. But after all, this is only a side issue in the Bering Sea correspondence. If there were only one pair of seals left in Bering Sea, the right of any British, or Russian, or German, or Japanese sailor to capture them, outside the three-mile limit, could not be gainsaid under international law.

The official canvass of the Iowa vote, which has just been completed, brings out very clearly what is really the most striking feature of all the recent elections. This is the fact that the political revolution which gave the Democrats six, instead of one, of the eleven Congressmen, was the result of a remarkably full vote. Ordinarily, the election for Congressmen two years after a President was chosen shows a heavy falling off in the poll, but this year the total vote for Congressmen, 389,167, fell only about 13,000 short of the unprecedented total of 402,526 in 1888. There was only one district, the Eleventh, in which the Farmers' Alliance ran a candidate, and the 4,658 votes which he received were obviously drawn chiefly from the Republican side. Excluding these from consideration, the totals of the two parties in 1888 and 1890 stand:

	Republican.	Democratic.
1888	215,084	184,378
1890	185,781	194,902

In other words, almost as many men having gone to the polls in 1890 as in 1888, the Democrats poll above 10,000 votes more now than then. Still further, there were two districts in which the vote for Congressmen this year was actually larger than two years ago, and two others in which it was but a trifle short, and in these districts the Republican loss was most pronounced, as the following figures show:

	1888.		1890.	
	Rep.	Dem.	Rep.	Dem.
Third	21,457	16,872	19,089	19,491
Fifth	19,447	16,937	17,800	18,153

Republican editors who have been claiming that their party's defeat was due to a light vote, and that McKinleyism would have won if people had gone to the polls as in a Presidential year, will find food for reflection in these Iowa figures.

The Chicago *Tribune* (Rep.) pointed out sharply a few days ago the effect at the last election on the "smokers' vote" of the increased McKinley duty on tobacco wrappers for cigars. The *Tribune* stated truly that the new and vexatious tax was intended chiefly to catch the votes of Democratic tobacco-growers in Connecticut, and it might have added that the foremost promoters in Congress of the higher tax were Senators Platt and Hawley and Representative Simonds, whose district includes Hartford County, in which is the most prolific tobacco-raising region in the State. Mr. Simonds took the stump on this tobacco "issue" in his district, and both he and the Hartford *Courant*, partly owned by Senator Hawley, loudly trumpeted the alleged benefits of the

tax for the tobacco farmers. For the response to their exertions, let us take the official Congressional pluralities at the last two elections in thirteen towns of Hartford County, which a voluminous history of that county, printed four years ago, mentions as tobacco towns. These towns in 1888 gave a net Republican plurality of 594 votes, and at the last election a net plurality for the same party of 538 votes, showing a Democratic gain of 56. Included in the list is the town of Suffield, which some years ago is stated to have contained 316 farms, on all but 24 of which tobacco was raised. This town gave at the last election a gain of only 4 Republican votes, and, on the vote for Governor, it polled a Democratic gain of 7 votes in a total vote cast last month by both parties of 638. The Congressional district contains other tobacco-towns besides the above, yet it changed a plurality for Mr. Simonds of 813 in 1888 into a plurality of 692 for his Democratic opponent, plunging the *Courant* into the lowest depths of pathos, and prompting it, a day or two after election, to upbraid the tobacco-farmers as ungrateful. The figures show strikingly the vigor of the revolt against the McKinleyites in a tobacco district which they had chosen for special favor, yet in which their candidate for Congress was smoked out.

Mr. Clarkson's paper, the *Iowa State Register*, being in trouble about the advance in the price of carpets, tells its readers that it cannot be due to an advance in the price of wool, because wool has not advanced since the McKinley Bill went into effect. This is what Congressman Dingley said to Editor Dingley a short time ago, deceiving the latter and causing him to make a mistake in his newspaper, the Lewiston *Journal*. We have been at pains to inquire the prices of *carpet wool* before and since the McKinley Bill went into operation, and we find them to be as follows:

	May, 1890.	Nov., 1890.
Combing Donskoi	23	26
East India, Kandahar	24	27
Cordova	15¼	16¼
Syrian, unwashed	12½	14
Camel's hair	10	15

The advance in the prices of carpet wool would have been greater but for the extreme stringency in the money market. The exceptional advance in camel's hair is due to the fact that it was formerly on the free list but is now taxed 32 per cent. ad valorem—for what reason, only heaven and McKinley know, seeing that we have no home camels to protect. But neither have we any home Donskoi sheep to protect. Probably Clarkson and Dingley thought that carpets were made of XX Ohio fleece, the price of which has not advanced, but on the contrary has declined a trifle since the McKinley Bill went into operation, as the astute organ of the Manufacturers' Club of Philadelphia predicted that it would. It may be that the price of XX Ohio fleece will decline so much that the carpet-manufacturers can afford to use it instead of Donskoi, East Indian, Cordova, etc.; but it has not reached that point yet.

An embryo political economist has been "trying his hand" on the Canadian turkey aspect of the McKinley tariff problem through the medium of a Boston despatch to the *Tribune*. His text was a telegram from Ottawa saying that seventeen car-loads of turkeys were on their way to Boston from the former city, and that their total duties, at the McKinley rate of five cents a pound, would amount to $15,000. A Boston newspaper, presumably in the pay of the Cobden Club, had put a "big headline" over the telegram, declaring that the "new tariff added $15,000 to the cost of Boston turkeys." The *Tribune's* correspondent cites the opinions of a thoughtful poultry-dealer to show the "absurdity" of this headline. The dealer's first position is that "turkeys will not be a cent higher because of the duty on Canadian poultry," for the reason that the "$15,000 of duties will not be paid by the consumer. The birds will come upon the street at the usual price, but the Canadian farmers lose five cents per pound upon their birds. The $15,000 of duties comes out of them." Without pausing to explain how it "comes out of them," the dealer goes on to say:

"The duty of five cents per pound on Canadian poultry is one of the best things that ever happened to New England. The Canadians will send no more poultry here, and there is nothing to prevent our farmers raising poultry at a profit again in New England. The whole thing is as simple as can be. Instead of the Canadians making us pay $15,000 more for their poultry, as is falsely asserted, they are, in fact, paying our Government $15,000 for the privilege of selling poultry here. That, however, is not profitable for them, and they had not intended to send poultry here this year, nor will they again."

The whole thing is, indeed, "as simple as can be," and the dealer makes all further elucidation of the problem unnecessary when he says that the stopping of the importation of Canadian poultry will enable New England farmers to raise "poultry at a profit *again*." That means that they will get a higher price for it, does it not? It means, also, that the consumer, and not the Canadian farmers, will pay the five cents per pound duty in the end, does it not? Else of what use is the duty?

Senator Quay has gone to Pennsylvania to assist his late candidate, Delamater, in settling his financial embarrassments. It should be a cause for great rejoicing among the Republicans of the State that this settlement will be made openly with Mr. Delamater as a private citizen rather than secretly with him as the Governor of Pennsylvania. Mr. Delamater has among his liabilities as a banker $100,000 of State funds and about $50,000 as county funds. If he had been elected Governor, and Quay had been his adviser about the proper way to "tide over" such troubles as that, we have undisputed precedent for the method which Quay would favor. He would say: "Take it, and whatever else you may need to make you easy, from the State Treasury, and trust to getting the money back there again in some way or other." This, of course, cannot be done now, as Mr. Delamater is not at the head of the State Government.

Nothing shows more clearly the remarkable wisdom which governed Mr. Fayerweather's munificent gifts to the cause of education than his bequest of $100,000 to the Hampton (Va.) Normal and Agricultural Institute, for it is safe to say that there is no place in the country where $100,000 can be used to better advantage. The report of the Institute for the school year ending last June has just been published, and shows that the work of education in which it is engaged was never in a more hopeful condition—as also never more in need of liberal endowment, by reason of its steadily widening opportunities for usefulness. The number of negro pupils now exceeds 500, besides whom there are about 130 youths from the Indian country; and the great majority of the graduates become at once teachers in the colored schools, where trained teachers are so much needed. The Institute long since passed beyond that experimental stage in which it might have been thought dependent upon the remarkable personality of its founder and present principal, Gen. Armstrong, and its permanent success is now assured with such an endowment fund as it should have. This fund amounted to about $200,000 last June, and should be at least a million. It is to be hoped that other wealthy men contemplating educational bequests will show as wise discrimination in selecting the objects of their beneficence as the late Mr. Fayerweather.

It has been very difficult to get at, through the despatches, the exact state of affairs in Ireland. The Conservative press in England and Ireland, and the news agencies which serve it, are naturally interested in making Parnell's success with the voters appear as complete as possible. Every Tory and anti-Gladstonian is filled with delight by Parnell's course, and "always knew" the Irish trouble would end in this way—that is, that Parnell would be taken in adultery and refuse to resign his leadership. To make the prognostication complete and effective, however, the Irish have now to be made to stand by him to a man and throw his opponents overboard. It is impossible to tell as yet how much support he is receiving. His opponents have been naturally reluctant to speak out as long as accommodation seemed possible, so that the more ignorant and noisy have had things their own way. But there is even in Ireland sober second thought, and the influence of the Catholic clergy is a tremendous force in Irish politics, although it works silently. The reluctance of Irishmen to repudiate Parnell is natural and by no means wholly discreditable. In claims on Irish gratitude he has had only two equals—Grattan and O'Connell. On the gratitude of

the Catholic population his claims are far higher than those of Grattan. He has wrung from both English parties within the last ten years legislation which one year before his appearance seemed absolutely hopeless. He is, too, the most accomplished parliamentarian in the House of Commons, not excepting Gladstone. No people worthy of any able man's service gets rid of such a leader in the twinkling of an eye. The English would not, nor would Americans: witness the nomination of Mr. Blaine, after the most thorough exposure of character any public man had ever received, and the support Quay has received in Pennsylvania simply for achieving success. It is the height of folly, under all the circumstances, to try to save Parnell, but it is folly which has some traces of wisdom in it. The baseness and meanness in the whole business are to be found in Parnell himself.

Trenchant criticism of one aspect of Gen. Booth's great scheme for redeeming "darkest England" has been uttered by Prof. Huxley. The same number of the London *Times* which contained it contained also a very destructive letter from Mr. Loch, the Secretary of the London Charity Organization Society, the counterpart of the society we have in New York. Mr. Loch first attacks the General's statistics regarding the numbers of the helpless poor in England, showing that he has taken the figures from his authority, Mr. Charles Booth's 'Labor and Life of the People,' with at least great carelessness. He includes in the mass he is to take care of in his colonies 124,000 "casual laborers," such as the dock companies employ, and yet he wants $5,000,000 "earnest money" to begin his experiment with. The experience of the East and West India Dock Companies in dealing with only a small number of these same "casuals," as stated in their last annual report, is that their expenditures were increased by $350,000 last year "in consequence of the increase of wages and decrease in the efficiency of their laborers." If $350,000 go in this way in a single year, dealing with one small fraction of Gen. Booth's paupers in an established industry, how far would $5,000,000 go in dealing with the whole mass in concerns in which there was no attempt to make ends meet? The most forcible part of the letter is, however, that in which Mr. Loch points out the immense amount of talent, energy, and humanity in connection with churches and with charitable associations now devoted to the relief of the London poor—a hundred-fold greater than Gen. Booth could command, and doing the work with an attention to individual and local peculiarities which it would be impossible for him or his workers to undertake. What is most needed in dealing with city pauperism and vice in our day in England and America, is, as Mr. Loch says, a concentration of effort on the part of the churches and leaders of charities in a common, "systematic, and unflinching attack on courts and alleys, usually well known in a district, which harbor groups of degraded men and women."

Belgium, Italy, and Spain and Austria and England still retain a property qualification for the exercise of the Parliamentary franchise. It is small in all of them, but larger in Belgium than in any other, and excludes a larger proportion of the male population. This has long been one of the grievances of the Belgian workingmen, who of late years have been the most turbulent in Europe, and the most reckless in striking. The Chamber of Deputies has now at last consented to take into consideration the propriety of modifying or repealing the forty-seventh article of the Constitution, which confines the election of representatives to voters paying fifty francs annually in taxes. Last year this gave the franchise to only one in thirteen of the adult male population. The abolition of this qualification has formed part of the programme of the advanced Radicals almost ever since the monarchy was founded and the Constitution adopted, sixty years ago; but it has been steadily and successfully resisted both by Conservatives and Liberals, owing to the dread of the Clericals on the one hand and of the Socialists on the other. In the country districts the influence of the clergy on the working class is very great, while the cities and the mining districts swarm with Communists and Anarchists. In that interval both France and Germany have gone over to universal suffrage, but the Belgians have remained firm, in spite of great discontent and numerous disorders. The bulk of the Chamber seems to be at last convinced that universal suffrage is the best sort of safety-valve, and that anyhow it is the fate of all modern nations, which it is useless to try to resist. When the Conservatives gave in to railways and public schools, the day was lost for the old order. So the Chamber has unanimously voted the consideration of a change, but the two-thirds vote would be necessary to decide what the change should be, if any.

One of the most interesting signs of the times in France is the gradual adhesion of the Church to the Republicans. There have been indications for some time back that the higher clergy were disposed to come over, but none of them had publicly given up the monarchy as a lost cause until Cardinal Lavigerie led the way a few weeks ago. The collapse of Boulangism, and the exposure of the Royalist alliance with it, coming close on the triumph of the Republic at the election, has undoubtedly precipitated the surrender of the Church, for such we may consider it. Cardinal Lavigerie's position has received the public adhesion of the Bishop of Annecy in an interesting letter, in which he discusses with great clearness, though in brief terms, the condition and prospects of the monarchical idea in French politics, in answer to the question, Is monarchy still possible in France? "It is possible," he says, "if the monarchical spirit still exists in France." But what is the "monarchical spirit"? It is the feeling that there ought to be in the country a sovereignty, and that this sovereignty belongs to one family, as a house might belong to it, and that the conditions of the sovereignty and of its transmission are exactly the same as those of private property. This monarchical spirit once existed in France, and had a strength such, perhaps, as it has never had in any other European country. Does it exist in France now? By no means; there is not a trace of it left. In its absence is it possible to restore monarchy? If a king were again set up in France, how long could he be kept on the throne? What would be the use of a king whose tenure of office was precarious, seeing that the chief political value of a monarchy lies in its permanence? Finally, if monarchy be not possible in France, what is the use of discussing its merits as a form of government? These questions of the Bishop are all posers. To ask them is to answer them. But he does not conclude by offering the alliance of the Church to the Republicans now in power. He declares himself a Republican, but says that religious men must try for a better sort of official Republicans than those who now rule France.

A good deal of a flurry has been caused in Spanish politics in connection with the enrolment of voters under the new law extending the suffrage. A central commission had the work in charge in general, while provincial committees had the immediate oversight of the labor of making up the lists in their respective localities. The Central Commission was made up of representatives of all parties—even Ruiz Zorrilla being invited home from his exile in Paris to take part in its deliberations—and it contained rather more Liberals than Conservatives. In the course of business, it became necessary to set aside certain actions of the Provincial Committee of Coruña, on the ground of illegality, and it fell to the lot of the Conservative Minister, Señor Silvela, to communicate to the latter the decision of the Commission. He did so in terms which were regarded as highly offensive by his colleagues in that body, since he told the Coruña committee that they could do as they pleased about obeying the mandate sent them from Madrid. The Liberals and Republicans jumped at the chance to make a point against their opponents, Sagasta hurrying back from his stumping tour in Catalonia to bring in some resolutions hotly denouncing the disrespect shown the Central Commission, and calling the attention of the Cortes to the way the Conservatives were disregarding the authority expressly conferred upon it by law. It was even proposed, at one time, to demand of the Queen Regent a decree calling together the Cortes to pass upon the matter, but this was dropped as impracticable. One serious result of the agitation has been the decision of Cánovas and Silvela to have nothing more to do with the Commission, on the ground that they have been insulted by it. This will make almost impossible a non-partisan execution of the new suffrage law.

THE MONEY QUESTION.

MR. EDWARD ATKINSON has drawn attention, in two timely articles in *Bradstreet's*, to the difference between what is called the circulating medium and the circulation. The circulating medium is money, *i. e.*, gold and silver coin, greenbacks, national-bank notes, gold and silver certificates, and Treasury notes. The circulation includes all these and a great deal more. It embraces checks, drafts, bills of exchange, and bank clearings. These last-mentioned instruments carry on the wholesale trade of the country. In the cities, where the wholesale trade is chiefly done, they are vastly in excess of the circulating medium. Some fresh information on this subject has been supplied by the Comptroller of the Currency in his recent annual report. Following the example of his predecessor, Mr. Knox, he called for statements from all the national banks of their handlings of all kinds of money and of other circulation, *i. e.*, checks, drafts, etc., on the 1st day of July and on the 17th day of September, 1890. The results of the "turnover" of these two days are as follows:

	July 1.		September 17.	
	Money. Per cent.	Other circul'n. Per cent.	Money. Per cent.	Other circul'n, Per cent.
New York city	3.96	96.04	4.36	95.64
Other reserve cities.....	6.32	93.68	7.73	92.27
All other banks	15.91	84.09	17.09	82.91
United States..	7.50	92.50	8.96	91.04

These tables deal with bank deposits. They show what the banks took in on the particular days and held in their vaults, subject to the checks of the depositors, and forming, with their own capital, the basis of their loans and discounts.

The law requires that the banks shall keep 25 per cent. of their deposits in the form of "lawful money." Technically this phrase includes only coin and greenbacks, but since any bank can get gold coin for any kind of money it may have on hand, the distinction is not important. We see that, so far as the banks are concerned, there may always be (and there generally is) four dollars of *circulation* to every dollar of *circulating medium*.

But this is not all. The *circulation* is more active than the *circulating medium*. It transacts more business, dollar for dollar. The New York banks meet every working day and swap checks to the average amount of one hundred and forty million dollars. In the month of November the swappings amounted to more than three thousand million dollars, while those of all the clearing-houses in the nation in the same month amounted to upwards of five thousand millions. The whole amount of circulating medium in the country was a little less than fifteen hundred millions. That the circulation is more efficient than the circulating medium is shown by the fact that checks, drafts, etc, are always on the move, while money in one's pocket, or in his old stocking, or his safe, may remain there for weeks, or months, or even years.

Enough has been said to show that the circulating medium is an inconsiderable part of the instruments of exchange in this country, and hence that when people clamor for more silver or more greenbacks, they have very little conception of what is needed to "relieve the money market." And here we remark that of all the subjects ever brought to the decision of town-meetings, those of currency and finance are least suited to that mode of solution. In all other civilized countries such subjects are left to the decision of the trained intellects. Men who, by the process of natural selection, have come to the front as experts and economists, are everywhere, except in the United States, intrusted with the exclusive management of the public finances. We could easily pick out a dozen such men, now or lately in public life, who would be perfectly competent to manage the job, provided they could carry out their plans without danger of losing their places. Senators Sherman and Allison, Secretary Windom, and ex-Secretaries Fairchild and McCulloch, Comptroller Lacey and ex-Comptrollers Knox and Trenholm (not to mention men of equal or greater eminence as thinkers and publicists who have not yet held office) would be quite as fit to lay out and execute a plan of finance, safe, durable, and beneficent, as Mr. Gladstone, Mr. Goschen, or M. Léon Say, provided that they were not obliged to wrestle with a mass of turbulent and pretentious ignorance at home. The town-meeting management of the national finances is the chief danger of the country, and we are all suffering from it severely to-day.

For example, only four months ago there was a general pæan of rejoicing over the passage of the new Silver Bill, which, according to a popular conception, echoed by several backboneless statesmen who knew better, was to make money plenty and relieve a stringency which did not then exist. The bill had hardly got in operation when a real stringency came on, which has been hardening ever since, and is now more severe and widespread than any that the country has experienced since the panic of 1873. We took occasion to point out when this bill was passed that it could not possibly make money more plentiful, but must have rather the reverse effect, since it would abstract from our foreign exchanges —*i. e.*, our exportable surplus—thirty million dollars' worth of property per year, and because also no man could get one of the new silver dollars without paying 100 cents gold value for it. By paying 100 cents gold value he could, and can to-day, get a gold dollar.

But another effect has been produced which we did not look for so soon. The Silver Bill has weakened confidence in our standard of value both at home and abroad. That it has led to the hoarding of gold is evident from the following official figures:

	July, 1890.	Dec., 1890.
Net gold in U. S. Treasury.	$184,092,000	$165,560,000
Specie in New York banks.	80,367,000	67,838,000
	$264,459,000	$233,398,000
Decrease in visible supply of gold.....		$31,061,000

It is certain that if the holders of capital here and in Europe were of the opinion that ere long their money would be subject to a shrinkage of 25 per cent., or 10 per cent., or any per cent., they would withdraw it from the dangerous neighborhood as fast as possible. *Free coinage of silver means the demonetization of gold.* It will not be accomplished in this country without the most tremendous financial crash that the world has ever seen. Before a free-coinage bill could get into operation there would be poured back upon us from Europe hundreds of millions of securities to be sold for what they would bring. Although we might buy these securities for less than their value, it would be at the expense of breaking the "debtor class" utterly, of plunging into bankruptcy hundreds and thousands of otherwise solvent men and industries, and throwing out of employment temporarily millions of workingmen and women. We have seen what ravages can be committed upon us by the selling of American securities by European capitalists to fortify themselves against an Argentine crisis. That is but a zephyr in comparison with the cyclone that will strike our industrial fabric whenever the world of finance shall become convinced that we mean to lower our standard of value.

And let it be observed that it is not Europe alone that is going to take the alarm and snatch its money out of danger. Our own capitalists will be even more alert, because they will be better informed. They will know how to save their 25 per cent. just as well as Englishmen, or Germans, or Dutchmen, and will be just as ready to do so. Safe deposits were hired to hoard gold in during the early months of 1885, when it was feared that the Treasury would be forced by a shortage of revenue to "pay out silver." Sterling exchange was bought at that time for no other purpose than to transfer gold to London. That danger was slight, and it soon passed away. But let it come again, and the instinct of self-preservation will come with it. The Treasury will be gutted of its gold in a trice, and the circulating medium will be depleted not merely of all the gold now in it, but of all the fiduciary circulation that rests upon it. Eventually there will be a rebuilding—slow and rickety—on the silver basis, but it will be over the ruins of whatever exists now. Most people who owe anything will have been wiped out, and those who owe nothing will be richer than before, because they will have been the only ones able to buy property at the slaughter. As a political issue, we would rather be responsible for ten McKinley bills than for one free-coinage-of-silver bill after the people had once had a taste of it.

SENATOR SHERMAN'S PLAN.

SENATOR SHERMAN'S bill "to prevent contraction of the currency and for other purposes" has one feature distinguishing it from all other plans that have been brought forward at Washington, in that it does not call for any more silver. Instead of this, it provides for more greenbacks. Apparently the additional greenbacks are intended to take the place of the national-bank notes to be hereafter retired, but they

will perform a more important office. There is no provision in the bill prescribing any particular disposition to be made of the new greenbacks. Therefore they may be used for current expenses of the Government, and of course would be so used in case of a shortage of revenue. The bill says that they shall be issued and reissued. The only way to issue a note is to pay it out for something. The Secretary is not inhibited from paying out the new notes for bonds, but he is not restricted to that employment. Under the conditions of specie redemption, the point which we are considering is not very important, but it is worth noting that the bill, if it should pass, would put a new resource into the Secretary's hands, and that, if he should avail himself of it, it would be tantamount to borrowing money to pay current expenses. It would also be obtaining money by forced loan in time of peace, and without paying interest for it—a method of raising the wind that would have been popular a few years ago, and would perhaps be so now if it had not been superseded by a new species of folly.

The new folly is the silver craze. Both have their origin in the Legal-Tender Act of 1862. That ill-starred and slovenly measure first put the notion in people's heads that the Government could make money. Up to that time the opinion had been held universally that the office and function of government with respect to money was limited to a certification of the purity and weight of the metal contained in it. Bank notes were looked upon as promises to pay money—sometimes good and sometimes bad promises, but never as the money itself. These correct ideas were upset by the Legal-Tender Act in the minds of uninstructed people, and it came to be understood by such persons that anything which the Government should choose to call money would be money. This misconception was helped on and confirmed by successive decisions of the Supreme Court, the last one affirming the power of Congress to issue legal-tender notes at any time, and in any amount, at its sole discretion, whether the notes were redeemable or not. Mr. H. C. Adams has shown very clearly that the cost of the war to the taxpayers was increased 800 millions more than was necessary by the Legal-Tender Act. It would have been fortunate for the country if the mischief had ended there. But the false notions that it bred were even more deleterious, nor have we seen the end of them yet.

Senator Sherman is not the victim of any delusions on the subject of legal tender, but his bill will make fresh victims whether it passes or not, because he will be quoted as an authority in support of the idea that the Government can make money. If the Government can make money, why should any of us work for a living? Why should we have national banks? Aye, there's the rub! The war against the banks had its origin in the Legal-Tender Act. That crusade is supported and carried on to-day by the wrong notion that the Government can make money. If the Government can do that, people ask, why should we have banks to do the same thing? This is a specious question. The conclusion is only too plausible that the banks are usurping a governmental function, whereas the Government is really usurping a bank function, to the injury of itself and of the banks and of the whole community. It is for the interest of every man, woman, and child in the United States that the national-banking system, note issue and all, should be preserved, extended, and fortified, and so it would be but for the bad education that the Legal-Tender Act has diffused throughout the land.

Another section of Mr. Sherman's bill provides for the issue of one hundred millions of 2 per cent. bonds, redeemable at the pleasure of the United States, of the denomination of $50, or some multiple thereof, the proceeds to be used for the redemption or purchase of any bonds now outstanding. About sixty millions of 4½ per cents, which fall due next September, were outstanding on the 1st of the present month. Some have been bought since. Probably Mr. Sherman has in contemplation the payment of these maturing bonds without trenching on the existing surplus or the current receipts of the Treasury. If this is the design, the making of the new bonds of a denomination low enough to attract savings depositors is a good idea. It is not at all unlikely that $100,000,000 could be secured in that way at 2 per cent. interest. But why $100,000,000 should be asked for when less than $60,000,000 of the old bonds are to be redeemed is not apparent. None of this money could, by the terms of the bill, be applied to the payment of current expenses. Although we must pronounce Mr. Sherman's plan of issuing more greenbacks mischievous, we consider it better than any silver bill whatsoever, since it keeps the standard of value unchanged. Even if it should lead to a temporary suspension of specie payments—and this would not happen if the limitations of the bill are preserved—the gold standard would be returned to after a little, and would be easily regained by a country as rich as ours. Nor would a temporary suspension produce so great confusion and disaster as a change to the silver standard. It will be objected to Mr. Sherman's bill that it does not deal with the present stringency at all. The issue of new greenbacks cannot exceed three millions per month under existing laws and will probably be less. But, if it does not promise any relief, it does not threaten to make matters worse than they are now, as every silver bill does.

A NEW MUNICIPAL SOCIETY WANTED.

WHAT this city stands in great need of is a Society for the Systematic and Continuous Prodding of Delinquent Officials. It should be the purpose of such a society to follow up Tammany officials, like Mr. Beattie for example, with specific complaints of his daily neglect of duty, and to follow up his replies to these complaints with specific demonstrations of their evasive and unsatisfactory character. All this prodding work should be done with the largest amount of publicity possible. We think that the People's Municipal League could not perform a more valuable public service than to establish a society of this kind as a department of its own work. The women of the city, who are eager to contribute their time and energy to the cause of municipal reform, would be invaluable aids in such a department.

There is nothing which officials of the Beattie type have more reason to fear than persistent publicity of their shortcomings. They do not mind occasional attacks in the newspapers, no matter how specific these may be, for they are confident that these will not continue long, and that the popular dissatisfaction which they may arouse will soon blow over. Then, too, the curious composition of the journalistic nature renders it almost certain that the more specific and damaging the attack which one newspaper may make upon an official is, the less will be the likelihood of any other city newspaper joining in the exposure and helping to bring the delinquent to justice, or secure his removal or a reform in his methods. The likelihood is far greater, in fact, that a damaging exposure will bring rival newspapers to his defence. The usual result is a division of public sentiment, a general conclusion that the attack was more or less inspired by political motives, that after all there is something to be said on both sides, and that the attacked official was not so black as he was painted. If we had a non-partisan society, composed of ladies and gentlemen who were known to have no other object than the welfare of the city at heart, which should make these attacks, and which should sustain them with evidence of its own collecting, a far more serious impression might be produced. In the first place, all the newspapers would be, from the necessity of the case, forced to publish the evidence simultaneously. No element of journalistic rivalry could enter into the publication unless the Society's managers should be so preposterously indiscreet as to give one newspaper the benefit of a "beat." If there were any rivalry, the chances are very much in favor of the supposition that it would be in the direction of zeal in support of the Society's work.

The advantages of such systematic following up of an official like Mr. Beattie are so obvious that it is scarcely necessary to point them out. He contents himself, whenever he is attacked, with general excuses of inadequate funds and with general denials of specific instances of neglect of duty. The only way by which the evasive nature of his defence can be exposed is by specific evidence of its untruthfulness. A good illustration of the effectiveness of the specific method was furnished on Thursday when a reporter submitted to the President of the Health Board Mr. Beattie's assertion, taken down a few moments before, that the "streets were never in a fairer condition than they are now." The President, who had just received the report of a specific inquiry instituted by himself, at once responded with a list of ten streets on the east side whose condition convicted Mr. Beattie of either ignorance or falsehood.

If something like this could be done every day in all the newspapers of the city; if Mr. Beattie could be forced to make answers daily upon a formal collection of complaints, and the complaints and answers, with subsequent exposures of the truth or falsehood of the answers, were all to be published in the newspapers, we venture to say that there would be an improvement in the condition of our streets within a very short period, or Mr. Beattie would have a successor.

What a Prodding Society could do with Mr. Beattie it could do with all other officials of his kind. It could follow up the Commissioner of Public Works and see how he was executing his paving and other contracts, calling him to account for suspected delinquencies and publishing the documentary evidence on both sides. If eternal vigilance be the price of liberty, it is certainly also the price of decent government in this city. The work which we suggest would require thorough organization, intelligence of high order, indomitable perseverance, and funds, but we believe that all these would be forthcoming if the work were to be undertaken by the League's managers. That excellent organization the City Reform Club has pointed the way, and has demonstrated conclusively that success is not unattainable. Its persistent efforts to have members of the Tammany Excise Board compelled by the courts to perform their simple sworn duty, furnish a model upon which to found the Society of Prodders which we suggest.

None of our city officials is more in need of frequent and sharp prodding than the Mayor himself. He demanded Mr. Coleman's removal from the Street-Cleaning Department because he said in the Mayor's presence that the streets were clean. The Mayor refused to "discredit the evidence of his own senses" that they were not clean. He declared in his annual message at that time that it was the "firm purpose of the municipal government to secure clean streets," that "no excuse would be accepted for dirty thoroughfares," and that "to plead the existence of difficulties is a confession of inefficiency." This was on January 6, 1890. Since that time the condition of our streets has been growing steadily worse, chiefly because of the Mayor's conduct in putting such men as "Eddie" Hagan and Hans Beattie in charge of the Street-Cleaning Bureau. The Mayor has modified his views of the work to meet partially, but not wholly, the manner in which his appointees have performed it, for he said in his last annual message that "no effective system of street cleaning was possible" with the old method of pavements, but that "when the new pavements shall have been completed it is perfectly safe to assert that, while the cost of this branch of the public service will be largely decreased, its efficiency will be more than doubled." He must modify this view to meet Mr. Beattie's utter failure to clean the "new pavement" as well as the old, and his demand for increased rather than decreased expenditures. Public daily prodding would be a valuable aid to a Mayor of this character.

THE IRISH CRISIS.

By far the most interesting feature in the struggle now going on in Ireland between the Parnellites and the anti-Parnellites lies in the fact that it is the first time in Irish history in which the voters have been called on to settle by their votes, or other expression of opinion, a question seriously affecting their welfare. Every other question of vital importance to Ireland, since the Union, has been settled by the votes of Englishmen and Scotchmen, with but little if any regard to Irish opinion. Catholic Emancipation was delayed for forty years through fear of offending English and Scotch prejudices, although there was during the whole period some fear that the delay might lead to an Irish rebellion. The recent pacificatory legislation—such as the disestablishment of the Anglican Church and the various land bills—was all carried because an English and Scotch majority approved of it, and with little or no regard to the wishes or feelings of the Irish. It has been universally assumed in all legislation for Ireland, until the Gladstonian alliance with the Home-Rulers, that Englishmen and Scotchmen knew better what was good for the Irish than the Irish knew themselves, and that it was foolish, if not disreputable, to consult the Irish members about Irish bills. The Home-Rule agitation has, even if it end now in failure, done the very great service of calling English attention to the absurdity of giving the Irish a large representation in the House of Commons, and then treating it as a mere formality—a *vox et præterea nihil*.

The result has been that though the Irish Catholics have now had the Parliamentary franchise for nearly a century, it has given them no proper sense of political responsibility. No Irish legislation has been originated by Irish members. No Irish question has been decided in Parliament by their votes. No Irishman has, since the Union, ever voted for a member of Parliament knowing or believing that the election of that member would have an important influence on Irish affairs, or that his conduct in Parliament would seriously affect the interests of his constituents. Irish members elected by the popular party have, therefore, been elected rather as agitators than as legislators. It was not necessary to consider their capacity as men of business, or drafters of bills, or as economists or lawyers. The one qualification required of them, and the only one there was any use in requiring of them, was that they should be good brawlers; that they should "make it hot" for the Government, and keep Englishmen and Scotchmen reminded that they represented a discontented, seditious, and implacable community. No Irish voter was ever able to call them to account when they came home for the success or failure of any bill, for the imposition of any tax, or for the shelving of any grievance. Every one of them had a ready and complete answer to all charges of neglect or incompetency in the fact that he had no influence, good, bad, or indifferent, on Irish legislation. Under these circumstances, no sense of political responsibility could possibly be developed on the part of either the voter or the representative.

The first break in this evil tradition was made when Gladstone and other members of the Liberal party began to consult the Irish members about Irish legislation, and when they announced that no settlement of the Irish question could or would be considered satisfactory which was not approved of and accepted by the Irish members. It was then, and not till then—that is, ten years ago—that real representative government was established in Ireland. But how novel and repulsive the idea still is to a large body of even the more intelligent Englishmen, is shown by the fact that one of the charges against Gladstone, which many of them seriously make as showing his recklessness if not his depravity, is that he has been detected in consulting with the Irish, and in listening to their secret proposals touching Irish legislation. Sydney Smith, if he were living, would get even more fun out of this than he used to get out of the opposition to Catholic Emancipation.

The novelty and peculiarity of the present situation is, that the Irish party in the House of Commons and Parnell as its leader have at last been charged with an immense political responsibility—namely, the maintenance of the alliance with the English Liberals, with a view to certain Irish legislation concerning which they have been consulted and of which they approve. For the first time in Irish Parliamentary history, they have been engaged in a political transaction of immense importance to Ireland, for the conduct of which they can be called to account by the Irish people. Parnell and his colleagues have differed not about the best mode of carrying on an agitation, but about the merits and demerits of their mode of managing Irish Parliamentary business. The alliance with the English and Scotch Liberals is an arrangement which is necessary to the carrying out of the most important piece of Irish legislation since the Act of Union. The question how important it is—and, if important, who has put it in peril—is the most serious and the first serious question ever submitted to Irish voters.

What we are witnessing in Ireland is, in truth, something in the nature of a referendum, addressed to a people who are only just beginning their political training, and who are called on for the first time in their history to pass on the wisdom and capacity, as well as on the loyalty of their legislators. That such an occurrence in national history should be accompanied by extraordinary excitement, and even violence, is not very surprising considering the excitability of the national character, and especially considering the fact that the great lesson of their dismal political history has been the propriety of relying on a single leader for any amelioration of their unhappy lot, and the great advantage of supporting his efforts by violence and outrage as the only agencies likely to affect Eng-

lish opinion seriously. The leading event in this history since the Union has been Catholic Emancipation, which was won by the courage and vigor of one man, Daniel O'Connell, so that it is not surprising that the Irish should be slow to repudiate another leader who has brought them so near to success in an enterprise which proved far beyond O'Connell's powers, viz., the bestowal on Ireland of local self-government. That the disorders and extravagances accompanying the canvass now in process should affect English opinion very unfavorably touching Irish political capacity, is natural enough; but if we here, who are accustomed to the most grotesque exhibitions of political and judicial folly in many of the States of the Union, should look on them as properly fatal to the Home-Rule cause, it would show that our hold on the fundamental principles of popular government was very slender indeed.

THE WILLS OF COL. JOHN WASHINGTON (IMMIGRANT) AND HIS SON LAWRENCE.

NEW YORK, December 10, 1890.

THE will of Gen. Washington's great-grandfather, Col. John Washington, has long been searched for, and at last is found. While editing Washington's letters for the Long Island Historical Society, I visited Westmoreland County to search for this paper (albeit my lamented friend, Dr. Philip Slaughter, told me it would be in vain), and failed at the time, though I did find the will of Lawrence, Col. John's son. However, the search has been continued, and both the original will and the record have been brought to light. They are in a sadly mutilated condition, but I think it better, at present, not to supply conjectural words at the illegible parts. While recently in London, I was accorded, by Mr. George E. Cokayne, the privilege of examining the extensive Washington notes of the late Col. Chester, and found various indications of his effort to find the will of Col. John Washington, and of his hope that it might cast some light on the ancestral enigma to which he devoted many years.

A brief account of the provisions of the will of Lawrence, the eldest son of Col. John, was given in my book, but the whole will be found of interest. There has been discovered also a power of attorney, signed by the widow of Col. John. Although no seal has been found with either of these documents, I found an impression of the seal on the title to the estate on which General Washington was born (when purchased by his grandfather, Lawrence Washington, 1695), now owned by John E. Wilson, Esq., who married a Washington. I will only add here that the old records of Westmoreland County show that Col. John Washington was for a long time one of Charles the Second's justices in the said county.

COL. JOHN WASHINGTON'S WILL.

In ye name of God amen, I John Washington of Washington Prish in ye County of Westmorld in Virga Gent being of good & perfect memory thankes be unto God Allmighty for it & calling to remembrance ye uncertaine estate of this transitory life yt all flesh must yield unto death when it shall please God for to call; doe make constitue ordaine and declеare this my last will & testament no other & first being hartily sorry from ye bottome of my heart for my sinns past most humbly desireing forgiveness of ye same from ye Allmighty God, my saviour and redeemer in whome & by ye merrits of Jesus Christ I trust & believe assuredly to be saved to have full remission & forgivenesse of all my sins & yt my soule wth my body at ye generall day of ressurrection shall arise again wth joy through ye merrits of Christs death and passion possesse & inherit ye Kingdom of heaven prepared for his ellect & chosen & my body to be buried one ye plantacõn where I now live by ye side of my wife yt is allready . . . -ed & two childrен of mine & now for ye setling of my temporall estate & such goods & chattles & Debts as it hath please God far above my desarts to bestow upon me. I doe order . . . disposse ye same in manner & forme following . . . will yt all those debts and duties yt I owe in right or Conscience . . . manner of pson or psons wtsoever shall be well and . . . & payd or ordained to be paid by my Executors . . . Imprs I give & bequeath unto my Eldest Sonne . . . Washington yt seat of land whereon Henry Flagg . . . John Watts & Robert Hedges being by patten . . . being by my father pope made over to me . . . -tten of my body. Itim I give unto my Sonne Lawrence Washington . . . wth all appurtenances & Land belonging . . . Rosiers Creeke to him & his heires forever res . . . her thirds dureing her life. Itim I give unto my Sonne . . . Washington yt seat of Land wch I bought of Mr. Len . . . about two hundred & fifty acres at ye mouth of . . . one ye North west side wth all ye housеing there . . . to him and his heires forever resurveing to my . . . dureing her life. Itim I give unto my sonne Law . . . yt seat of land at upper Machotick wch I bought of Anthony Bridges & Mr. John Rosier being about nine hund- . . . him & his heires forever resurveing to my wife her thirds dureing her life. Item I give unto my Sonne John Washington yt plantacõn whereon I now li- . . . wch I bought of David Andrewson, yt plantacõn next Mr. . . . Foxhall yt I bought wch was Ric: Stills to him and his heires forever & yt seat of Land of about fouer hundred acres wch lys upon ye head of Rappa:Creeke adjoyneing upon David Norvie orphants land ye Land being formerly John Whistons . . . to me to him and his heires forever resurveing to my wife her . . . of ye aforesd Land dureing her life. Itim I give unto my Son . . . John Washington yt seate of Land wch Robert Foster now . . . one being about three hundred acres to him and his . . . likewise I give unto my sd Sonne John Washington yt seate . . . wch Robert Richard liveth on wch I had of my Bro:Lawr . . . being about three hundred & fifty acres to him & his . . . resurveing to my wife her thirds of ye two said tracts . . . dureing her life. Itim I give & bequeath unto . . . Ann Washington yt seat of Land yt tract of Land . . . now liveth one being about twellve hundred her heires forever. likewise I give & . . . Daughter yt tract of Land wch John . . . being about fouerteen hundred . . . hath his quantity . . . it to her & . . . Daughter wch was her mothers desire & my . . . wch was in ye new palour & ye dimond Ring & her . . . ye white quilte & ye white curtains & vallians & as for . . . my personall estate after my debts & dues are satisfied . . . should be satisfied out of my cropps wch I doe not . . . will be fare more then I doe owe, thankes be unto God . . . fore it is my desire yt my estate should not come to . . . but I doe order & bequeath as followeth yt is to . . . shall be a just inventory & list taken of my psonall . . . possessed of & for to be divided in quantity & . . . by those men of judgemt wch I request ye Court to . . . -ate, into fouer parts to be equall & proportionable divided in quantity & quality, ye one fouerth parte I give to my loveing wife in Kind in Lew of her Dower or claime & one fouerth part to my Sonne Lawrence Washington in Kinde & one fouerth part to my Sonne John Washington in kind & one fouerth parte to my Daughter Anne Washington in Kind to them & either of them severally & theire heires forever, & it is my will yt if either of my above said children should happen to die before they doe attain ye age of one and twenty yeares or daye of marriadge then ye Land of yt Child yt dieth to be ye eldest Sonne then Liveing, if both my Sonnes should die then ye Land to be my Daughter Anne, & as fore ye psonall estate, if any of my three children should happen to die before they come of age or day of marriage then it is my will yt ye two surviveing children should equally divide . . . personall estate, of yt Child yt is dead betwixt them & theirs . . . ever. Itim I give and bequeath after all my Legacies payd out . . . money I shall have in England to my Sonne Lawrence Washington. Itim my desire is yt there may be a funerall sermon . . . at ye church and yt there be noe other funerall Keept . . . fouer thousand pounds of tobo: Itim I give unto . . . Church of Washington Parish ye teene commandements . . . armes wch is my desire should be sent for out of wt . . . in England. Itim it is my desire yt wt estate I . . . possessed should be Keept wthout dividing untill . . . be paid & satisfied. Itim I give unto my Bro: . . . -hington fouer thousand pounds of Tobo:& . . . nephew John Washington my Godson . . . Lawrence Washington one younge. . . . Itim it is my designe yt when- . . . quallit- . . . into fouer equall partes and yt my wife hath taken . . . then every Childs part should be putt . . . or plantacõns there for to be manadged so yt . . . bringing up and Educating each child according . . . childrens share. Itim it is my desire yt my wife . . . bringing up of my Daughter Ann Washington . . . Lawrence comes to age or her day of marri- . . . for to have ye manadgement of her part to my Daug- . . . Itim I doe give unto my Bro: Tho: pope teen pounds . . . I have in England. Itim I doe give unto my Sister Martha . . . gton teen pounds out yt money I have in England . . . ever ells she shall be oweing to me for transporting herselfe into this Country & a yeares accomodacon after her comim and fouer thousand pound Tobacco and caske. Itim it is my desire yt my Bro; Mr. Tho: pope have ye bringing up of my Sonne John Washington & for to have ye manadgemt of his estate . . . Sonnes best advantage untill he be of age of one & twenty yeares or day of marriage. finally I doe ordaine & appoint . . . Bro: Mr. Lawrence Washington & my Sonne Lawrence . . . & my loveing wife Mrs. Ann Washington my whole & soule Executors of this my last will & testament. As Witnesse my hand and seale this 21st of 7 ber 1675.

JOHN WASHINGTON—seale.

Signed Sealed in ye presence of us. } JOHN LORD. JOHN APPLETON.

Ye 10th Jana: 1677.

Then this will was proved by ye oath of . . . Lord, Capa: John Appleton . . . recorded in ye County Court records of WestmorLd.

THE WILL OF LAWRENCE WASHINGTON.

In The Name of God amen I Lawrence Washington of Washington Parish in the County of Westmoreland in Virginia, Gentleman, being of Good and perfect memory, thanks be unto Almighty God for it & calling to mind the uncertain Estate of this Transitory life & that all Flesh must yield unto death when it shall please God to call me doe make constitue, ordain & Declare this my last will and Testament in manner and form following, revoking and annuling by these presents all and every Testament and Testaments, will or wills heretofore by me made and declared either by word or writing & this to be taken only for my last will and Testament and none other, and first being heartily sorry from the bottom of my heart for my sins, most humbly desireing forgiveness of the same from the Almighty God my saviour & Redeemer, in whome by the merits of Jesus Christ, I Trust and believe assuredly to be saved and to have full

remission & forgiveness of all my sins and that my soal with my body at the General day of Resurrection shall rise again with Joy, and through the Merits of Christs Death and passion, possess & Inherit the Kingdom of Heaven prepared for his Elect & chosen and my body to be buried if please God I depart in this County of Westmoreland, by the side of my Father and Mother & neare my Brothers & Sisters & my children, and now for the setling of my Temporal Estate and such goods, Chattles and debts as it hath pleased God far above my desarts to bestow upon me I doe ordain give and bequath the same in manner and form following: Imprimis I that all those Debts and dues that I owe in right or Concience to any manner of Person or Persons whatsoever shall be well contented & paid or ordained or demanded to be paid by my Executors or Extx: hereafter named. Item I give and bequath to my well beloved friends Mr. William Thompson clk & Mr. Samuel Thompson each of them a mourning Ring of Thirty shillings value each ring: Item I give and bequath to my Godson Lawrence Butler one young mare & two cows: Item I give and bequath to my sister Anne Writts children one man servant a piece of four or five years to serve or Three Thousand pounds of Tobacco to purchase the same, to be delivered or paid to them when they arrive to the age of Twenty years old: Item I give and bequath to my sister Lewis a morning Wring of forty shillings price: Item I give to my Cuz: John Washington Sen: of Stafford County all my wearing apparel: Item I give unto my Cozen John Washingtons Eldest son Lawrence Washington my Godson one man servant of four or five years to serve or Three Thousand pounds of Tobacco to purchase the same; to be paid him when he comes to the age of Twenty one yeare old: Item I give to my godsons Lawrence Butler & Lewis Nicholas that Tract of Land joining upon Meridah Edwards and Daniel White, being Two hundred and seventy five acres of Land to be equally divided between them and their heirs forever: Item I give to the upper and Lower Churches of Washington parish each of them a Pulpett cloth & cushion: Item it is my will to have a Funeral sermon at the church, and to have none other Funeral to exceed Three Thousand pounds of Tobacco. Item it is will after my Debts & Legacies paid, that my personal Estate be equally divided into four parts: my loving Wife Mildred Washington to have one part, my son John Washington to have another part, my son Augustin Washington to have anotner Part, and my Daughter Mildred Washington to have the other part: to be delivered to them in specie when they shall come to the age of Twenty one years old. Item I give to my son Washington this seat of Land where I now live, and that whole tract of Land Lying from the mouth of Machodack extending to a place called the round hills, with the addition I have thereunto made of William Webb and William Rush to him and heirs forever. Item I give and bequath unto my Son Augustin Washington all the dividend of Land that I bought of Mr. Robert Lisson's Children in England Lying in Mattox, between my Brother & Mr. Bairidges Land, where Mr. Daniel Lisson formerly lived, by Estimation 400 acres to him and his heirs forever, as Likewise that Land that was Richard Hills: Item I give and bequath unto my said Son Augustine Washington, all that Tract of Land where Mr. Lewis Markham now lives after the said Markhams & his now wife's decease, by estimation 700 acres more or less to him and his heirs forever; Item I give and bequath my Daughter Mildred Washington all my Land in Stafford County, Lying upon hunting Creek where Mrs. Elizabeth Minton & Mrs. Williams now lives by Estimation 2500 acres to her and her heirs forever. Item I give my water mill to my son John Washington to him and his heirs forever: Item it is my will and desire if either of my children should die before they come to age or day of marriage, his or her personal estate be equally divided between the two survivors and their Mother: Item it is my will and desire if all my Children should die before they come of age or day of Marriage, that my Brothers children shall enjoy all their Estate real, Except that Land that I bought of Mr. Robert Lisson's children, which I give to my loving wife and her heirs forever, and the rest as aforesaid to them and their heirs forever: Item I give my personall Estate in case of all my childrens death as abovesaid, to be equally divided between my Wife and Brothers children, my wife to have the one-half: Item I give that Land which I bought of my Brother Francis Wright, being 200 acres lying near Storkes Quarter, to my son John Washington and his heirs forever: Item it is my desire that my should not be appraised but kept intire and delivered them as above given according to time & my Children to continue under the care & Tution of their Mother, till they come of age or day of marriage, and she to have the profits of their Estates towards the bringing of them up and Keeping them at School: Item I doe ordain and appoint my Cozen John Washington of Stafford and my friend Mr. Samuel Thompson my Executors, and my loving wife Mildred Washington my Executrix of this my last Will & Testament. In Witness whereof I have hereunto set my hand and seale this 11th day of March Anno Dom 169$\frac{9}{8}$.

LAURENCE WASHINGTON. [SEAL].

The above Letter of attorney was proved by the oaths of the Witnesses thereto subscribed and ordered to be recorded. Teste

JAMES WESTCOMB C. W. C.

In Col. John Washington's will he speaks of "my three children," and names them as Lawrence, John, and Ann. His son Lawrence bequeaths "to my sister Lewis," etc. Sparks has given Col. John a second daughter, ". . . wife of . . . Lewis," giving no first name. In this case she would have been born after the testator's death. But the "sister Lewis" of whom Lawrence speaks is, no doubt, his wife's sister, Elizabeth Warner, who married John Lewis, grandfather of Col. Fielding Lewis who married Gen. Washington's sister ('George Washington and Mount Vernon,' xlix.).

The "half share of five thousand acres of land in Stafford," etc., bequeathed by Col. John to his son Lawrence, is the tract now known as Mount Vernon. It was granted to the Colonel for importing a hundred laborers into the colony. It is the 2,500 acres on Hunting Creek bequeathed in Lawrence's will.

The discoveries of Mr. Henry F. Waters are supplemented by Col. John's mention of his sister Martha. She is named in the will of Andrew Knowling (Waters, p. 9), with John, Lawrence, William, Elizabeth, and Margarett, "children of Amphilis Washington."

The "400 acres" "bought of Mr. Robert Lisson's children in England," bequeathed by Lawrence to his "son Augustin" (the General's father) is the estate on which George Washington was born, Wakefield, and remains in the family. On its title I found the old seal with the Washington arms and eagle crest, engraved in the L. I. Hist. Society's volume.

MONCURE D. CONWAY.

THE "ION" AT CAMBRIDGE.

CAMBRIDGE, Eng., Nov. 26, 1890.

THE first of five performances of the "Ion" of Euripides took place yesterday evening, November 25, at the Theatre Royal in Cambridge, and was welcomed with the same interest that always attends these now familiar academic representations. The costuming of the play, even after what has been done for previous plays at Cambridge and elsewhere, was a remarkable triumph of good taste. All concerned owe a debt of gratitude for its exceptional harmonies and beauties of color to the stage manager, Mr. J. W. Clark.

In the difficult part of *Queen Creüsa*, Mr. Newton of King's was embarrassed now and again by an insufficiently treble voice, but in spite of it the audience was thrilled by his self-forgetful dramatic power. This was especially marked at the point where *Creüsa*, flinging shamefaced secrecy to the winds, bursts out with bitter reproaches against *Apollo*. This moment of all in the play was most adequately presented. On the other hand, the subtler justification of the god, which a different stage-setting and an altered conception of various situations would have given, was almost entirely missed. A more even but less interesting impersonation of the part of *Ion* was given by the Hon. Stephen Powys of Trinity, who sang the opening song with much charm. Good works may well be expected in the future from Mr. Woods, the rising young composer of the musical setting, where this song of *Ion* was by no means the best number. Under Prof. Stanford's direction, the instrumental score was excellently rendered, while the chorus of young men acquitted themselves with great spirit and precision of attack.

The necessary use of male voices, and the consequent transformation of the chorus from young maidens into young men, involved a bold departure from the original, and made necessary a further innovation—the assignment to a *First* and *Second Maiden* of various utterances given by Euripides to his chorus. Such a dichotomy of the chorus has never before been tried, although the device of a *First* and *Second Maiden* originated at the Théâtre-Français in the "Œdipe Roi." There the chorus of Theban elders was merged in the populace of Thebes, and the choral odes were somewhat unsatisfactorily left for declamation by the two maidens. Perhaps this French plan

would have suited the "Ion" better than it did the "Œdipus." Certainly the comings and goings of a singing chorus of men, not contemplated by Euripides in composing the play, were a source of many perplexities to the audience at Cambridge. It was difficult to understand who they were and what they had to do with the action. The more delicately appropriate presence of a sympathetic group of maidens called for by Euripides was constantly missed, and the presence of men in their stead brought out latent harshnesses in various situations. This was especially true in the scene towards the close, where *Ion* so long and with such exquisitely human pathos examines the cradle and the wrappings in which, years ago, he had been carried to Apollo's Delphian shrine. The interested presence at such a moment of a troop of young men did much to shatter the exquisitely adjusted harmonies of the poet's conception, and left little save an unquickening and needlessly prolonged inspection of baby-clothes.

In the treatment of the chorus there might possibly have been a gain in following more closely the precedent established by the Théâtre-Français. An instance where this precedent was followed too far at Cambridge was the scene newly painted by Mr. Helmsley. The pervasive presence, in his temple alike and his precinct, of Apollo the beautiful and dread is the necessary spiritual background for the whole action of the "Ion." Its scene is laid at the Delphian temple of Apollo, and the attention alike of spectators and performers should never exclude but be always immovably centred upon the holy place at Delphi. Unfortunately the pleasant and not sufficiently distant prospect of sea and mountains which formed the centre of Mr. Helmsley's scene was a constant incitement to forget the temple, a corner only of which—six columns and the beginning of their entablature—was visible at the extreme right. Worse than this, the outlook upon the sea was such as entirely to suppress the Crissæan plain, and to bring Delphi itself and Apollo's shrine down from the inaccessible heights of Parnassus.

And yet ample explanation is at hand for this harshening and levelling treatment at Cambridge of the subtleties and mysteries of the play of "Ion." The very existence in it of a lofty and delicate religious tone is apparently denied by some of the promoters of its performance there. Hence we read in the preface to the libretto published by the Committee that "the 'Ion' is the most remarkable of those Euripidean plays whose purpose is to discredit the character and very existence of the gods." No wonder, then, that the temple of Apollo at Delphi should be made as little prominent as possible, no wonder that the most effective point made in the performance at Cambridge should be *Creüsa's* magnificently passionate arraignment of the Delphian god. With less innovation as to essentials upon the original manner of its production, and a more justly conceived idea of the proportion of one part to another, it would have been difficult to embody in its performance so one-sided a view of the poet's aim in writing it.

Indeed, if this view be the true one, it is little short of miraculous that Socrates, Euripides, or Plato should ever have so much as conformed outwardly—let alone a profession of adherence or faith—to a religion so weak and self-stultifying that in its very services could be incorporated a nihilistic attack upon the gods of its worship. For the "Ion" was a part of the service of Dionysus at Athens, and Dr. Verrall, who wrote the sentence above quoted from the libretto, says in the introduction to his edition of the "Ion" (just prepared at the request of the syndicate of the Pitt Press) that the "Ion" is *an attack upon Delphi*—the italics are Dr. Verrall's.

After all, the "Ion" is not by the younger Dumas, nor by Ibsen, neither can any of its passages be profitably treated as magazine articles. Not the longest of its speeches should be interpreted as a nihilist pronunciamiento. Surely the "Ion" is none of these things, and my own firm conviction is that it is not an attack upon Delphi. But this is almost as difficult to prove as it is impossible to clear the honor of the Pythian priestess from ungallant aspersions and innuendoes most entertainingly indulged in at her expense by Dr. Verrall in the introduction above alluded to.

Perhaps some of the absurdities and contradictions in the "Ion" set forth so plentifully and pointedly by Dr. Verrall might disappear, or at least appear less unaccountable, if a view essentially at variance with his were taken of its general import. Let it, at least for a moment, be regarded as an attempt to weave into the story of Apollo's incarnation in the fabled ancestor of the Ionian and Athenian race, in *Ion*, a more human pathos, and a morality higher than could easily attach to the time-honored Athenian tradition. If this view be found applicable to the case, incongruities and roughnesses of treatment will be natural in so new and difficult an undertaking, and through these the story itself may fall into some discredit, but surely not Apollo, and surely not Euripides, for, in spite of certain harshnesses, the poet has informed the ancient tale with a genuinely religious spirit, combining old traditions, wherein gods were as irresponsible as the forces of nature, with a new sense of beauty and a new demand that the highest standards of right conduct be lived up to, not by righteous men only, but especially by the gods. The central point of the play is not the burden of *Creüsa's* wrongs and woes inflicted by Apollo, but the recognition that Apollo must right them, and the pious assurance that all the powers of heaven—Hermes, Athena—are in righteous league, willing and able to clear Apollo of guilt and to justify his ways to men. It may freely be granted that Euripides has shown little happiness of invention in wedding together the various scenes; he has, if you please, misconstructed the plot of the "Ion." But, for all that, his work requires and deserves to be judged by the unmistakable spirit of piety that moves in it throughout, and nothing can be gained by applying to it laws of construction and rules of delicately veiled and really vulgar intrigue which chiefly exist that they may be applied to one branch of the contemporary French drama.

The great religious boon conferred by Euripides in the "Ion" was that he left the great Patroan Apollo on a higher pinnacle than Athenians had been taught to place him. In Greek religion the elder day of darkness and of elemental fatalism was past. Time was when *Creüsa's* wrongs and sufferings—like those of *Io* in the Æschylean "Prometheus"—would have counted as little or nothing in the plans of heaven. In the theology of Euripides, which is at once more divine and more human, Apollo assumes responsibility for the means by which he linked to his own immortality the earthly destinies of all the sons of *Ion*. Because this responsibility is new, he wears it at first—as in the "Ion"—with an awkward grace, but it is his for ever more, thanks to the pious inspiration of his loyal poet, Euripides.

LOUIS DYER.

Correspondence.

AN EARLY BACTERIOLOGIST.

TO THE EDITOR OF THE NATION:

SIR: I do not know that attention has been called to the following passage from a treatise on worms (1668) by Dr. William Ramsay. It seems to contain the germ, to say the least, of the modern germ-theory of disease:

"Again, *they* [the vermin] *may have their origination from certain animated effluviums or vermicular atome-like Corpuscules or Ferments which flow out of gross, corrupted bodies capable of and fitted to receive such impressions, and so by their evil and venemous ferment are inserted;* which many times so lurk in the blood and humours (as I shall shew beneath) that they occasion strange diseases & symptoms, and that such as few *Physitians* take notice of, but, ascribing them to other Causes, cause the destruction of their *Patients* as commonly as may be, when if they did but consider the strange Fermental power of the animated Atoms or vermicular Corpuscules, how they by little and little, when once desseminated, infest, first the whole mass of Blood, next, the Bowels, and afterwards the inmost fibers of the whole man, altering the Constitution and converting both blood and humours into their own bad temper and nature, they might do much more good." (Fp. 9, 10.)

The italics are the author's. He shortly after specifies dysenteries, measles, smallpox, convulsions in children, and fevers as instances noted in his own practice of diseases caused by these "animated Effluviums."

I owe my first knowledge of this book (which is very rare) to my friend Dr. T. W. Parsons, who lent it me more than forty years ago. I am under deeper obligations to him, as we all are, but I am glad to acknowledge the special kindness which made me acquainted with a volume so full of unconscious humor as this of Dr. Ramsay.—Faithfully yours,

J. R. LOWELL.

ELMWOOD, December 8, 1890.

THE ILLUSTRATIONS TO THE 'TSAR AND HIS PEOPLE.'

TO THE EDITOR OF THE NATION:

SIR: In speaking of the illustrations of Mr. Theodore Child's book, 'The Tsar and His People,' you say in a recent issue: "It seems as though acknowledgment ought to be made when, as in the majority of cases, they are drawn from photographs of places, or from photographed paintings by Russian artists, dealing with scenes which the illustrator could not have seen himself." Your notice conveys the mistaken impression that the illustrations of the book are at second hand. I went to Russia and accompanied Mr. Child throughout his entire trip, and the illustrations for his portion of the book are from sketches made by me on the spot, though of course use was made of photographs for the illustration of works of art, portraits, and architecture.—Yours truly,

T. DE THULSTRUP.

NEW YORK, December 11, 1890.

[We will set aside the six pictures in M. de Vogüé's chapter, "Through the Caucasus," which are signed by Mr. de Thulstrup, although he does not claim that he was in that part of the country; and the fifteen sketches in Mr. Child's chapter, "The Fair at Nijni-Novgorod," which he probably did make for himself. This leaves forty-nine illustrations with his signature for consideration. It is stated that writer and sketcher visited Russia in July. Consequently, the eight views of Court ball, sledge races on the

Neva, troïka party to Cronstadt (which is from a painting), the winter views of the Nevsky Prospekt and the Court Quay, "The Sunday Parade in a Riding School," and "The Spring Review on the Champs de Mars," are not strictly original. The "Tcheremisse Girl" and the "Carriage of Madame la Générale" are from parts of the country not visited by the travellers. Other illustrations are doubtful, for these and for other reasons. "On the Canal, St. Isaac's in the Distance," is undoubtedly original, since nothing but a gifted imagination could see a steamer on the Moïka, or catch a glimpse, round a corner, from the Blue Bridge, of the Cathedral. "Service in St. Isaac's" and "The Point at the Islands" are original; so are some of the figure pieces in the chapter on Moscow. But there are at least twenty where Mr. de Thulstrup's share seems to have been confined to "adapting" photographs, by drawing in figures to render the foreground pleasing and characteristic. This applies to every one of the numerous architectural illustrations in the St. Petersburg and Moscow chapters, except the view of bell-ringing, which is original, bells not being rung in that manner. There are some extraordinary details about the additions to the photographs, but it is not worth while to enter into particulars. We will only add to the list of erroneous labellings already mentioned "The Empress's Carriage," on page 32. It is not the Empress's carriage, and does not even house royalty.—Ed. Nation.]

THE MISSOURI SYNOD AND THE COPERNICAN SYSTEM.

To the Editor of The Nation:

Sir: I take notice of your warning to the disputants over "German Lutherans in Politics" that they must not make any further demands on your space. Nevertheless, I hope you will allow me to touch on an incidental allegation by "Andover" which has nothing to do with politics, but has something to do with morality if the official denial of its accuracy is to pass unchallenged.

Dr. Schwan writes:

"'Andover's' last charge is, that in our Teachers' Seminary at Addison, Ill., and in some of our official journals until very recently, the doctrine was taught that Christianity and the Copernican system of astronomy are incompatible, and that a genuine belief in the inspiration of Holy Writ required the rejection of the entire science of geology. This statement as made is absurd and untrue."

The good Doctor then remarks most affably, "Concerning the Copernican system *we do not condemn it*"; which may recall to many of your readers Mr. Oscar Wilde's mild approval of the Atlantic Ocean.

It would be trespassing too much upon your space to consider the present attitude of the Missouri Synod towards astronomy and geology as outlined in Dr. Schwan's letter. The Missouri Synod's publication house in St. Louis is official in so far as it is the property of the Synod, and that no book would ever be published there which conflicted with the Synod in doctrine. I have before me a pamphlet, published thus officially, written by Prof. J. C. W. Lindemann, late President of the Teachers' Seminary at Addison, Ill., entitled 'Astronomische Unterredung zwischen einem Liebhaber der Astronomie und mehreren berühmten Astronomen der Neuzeit.' It consists of an imaginary conversation between the author and several leading German astronomers, the questions being sarcastic, and the answers being quotations from astronomical text-books. The whole is intended to show that the Copernican system cannot be proved to be correct and is condemned by divine authority; and that of modern astronomers it might be said, "Professing themselves to be wise, they became fools"—which verse is the motto of the book. On page iv. the author says of the question as to the truth of Copernicus's theory: "*Because it involves the truth of the Holy Scriptures*, the above question is to me of the greatest importance"; and, further on, reference is made to those benighted persons who "lean upon the miserable reed that God teaches only the order of Salvation, not the order of the Universe." Dr. Schwan cannot deny that Prof. Lindemann taught this doctrine in the Teachers' Seminary up to the time of his death, and the volumes of the *Ev. Luth. Schulblatt*, an official organ of the Synod, from 1874 to 1880 are replete with articles of like tenor from the same facile pen. Did space permit, it would be easy to multiply quotations, some of them highly amusing; but enough has been shown to corroborate "Andover."

As to geology, a former member of the Synod, Rev. P. Eirich, has written a book, brimful of learning and unconscious humor, entitled 'Das Hexaemeron und die Geologie.' Although the author is no longer a member of the Synod, his work still appears on the official catalogue of publications, and on its appearance the late Dr. Walther, Dr. Schwan's predecessor, greeted it with a review which would have made Sir Charles Lyell blush with shame, if not with hilarity. Mr. Eirich boldly contends that the world was made of nothing in six days of twenty-four hours each—presumably standard time—and that every other view is wrong, irreligious, and, of course, un-Christian.—Very respectfully, Gettysburg.

December 13, 1890.

A GEM OF MISTRANSLATION.

To the Editor of The Nation:

Sir: Among the curiosities of mistranslation the following, from Ashworth's version of Ranke's 'Geschichten der romanischen und germanischen Völker von 1494 bis 1514,' p. 47, can hardly be surpassed. Ranke states, somewhat blindly and inaccurately, the agreement of Ferdinand and Isabella with the King of Portugal to the line of demarcation between their respective fields of discovery as established by Alexander VI.: "Sie dangen lang mit einander und bestimmten endlich ein Mark, 370 Leguas von den Canarischen Inseln; von da nach Osten Portugal, nach Westen Castilien entdecken sollte." Mr. Ashworth translates: "They bargained long together, and finally offered a prize to him who starting 370 leagues from the Canary Islands should discover Portugal towards the east, and Castile towards the west"! ('Ranke's Latin and Teutonic Nations,' p. 69). One wonders that Mr. Ashworth's curiosity was not aroused by so extraordinary an offer to try to find whether there were any attempts made to win that prize. After that, it is not surprising to find the Spanish word Alcalde rendered by the coined adjective Alcaldian, or the names of French and Italian personages appearing everywhere in German disguises. It may be well to remark that Ranke should have said Cape de Verde Islands. E. G. B.

Adelbert College, Cleveland.

WOMEN AT THE UNIVERSITY OF LEIPZIG.

To the Editor of The Nation:

Sir: As repeated inquiries come to us from America in regard to the advantages offered to women for higher study in Germany, it has occurred to the writer that it may interest some of your readers to learn what facilities are afforded women for university study here in Leipzig.

The fact that in Germany more antiquated notions prevail in regard to the higher education of women than in almost any other country of western Europe, is too well known to need here more than a passing notice. Theoretically, indeed, many a learned German looks not ungraciously upon the movement of women in different parts of the world to obtain a more thorough and liberal culture. But few German fathers would be willing that their daughters should overstep the barriers raised by custom and general sentiment, and enter upon the same course of study which their sons pursue. And the girls themselves are not often desirous of branding themselves with the stigma *blue-stocking*, and of thus curtailing their opportunities for an eligible marriage.

The German mind works slowly, and innovation does not here make such rapid strides as in France, Italy, England, and America. This probably accounts for the fact that not a university upon German soil has as yet thrown open its doors to women. The University of Leipzig has approached the nearest to this, as it is here a possible thing for women to attend many of the lectures. Some years ago, they were allowed to study on the same footing as the young men, except that they were not granted the two important privileges of matriculation and of receiving degrees. Unfortunately, however, the conduct of a few of these female students was far from exemplary. A decree was therefore issued by the Ministry of Instruction to the effect that the original plan and purpose of the University—the education of men—should be kept in view, and that no woman should be admitted without special permission. This permission is seldom, if ever, given, so that now it is only through the courtesy of the professors that access can be had to the lectures. No professor has, of course, the right to grant a regular permission, but he can promise not to see the person if she is present. This the professors in many of the faculties will agree to do, and with a heartiness which is a stimulus to the student, and an encouragement to her to believe that the time is not so very far distant when the members of her sex will enter these halls on equal terms with the young men.

This readiness of the professor to help earnest and studious women is, however, mainly shown only to foreigners. Two ambitious Leipzig girls, who had by means of private instruction prepared themselves for university work, were refused such admission, and must go to Zürich for higher study. Since the writer came here a year ago, but two instances have occurred where permission has been refused a woman from any other country to attend any lectures. One of these refusals was given by a member of the medical faculty who experienced much trouble several years ago, when a number of women were in attendance at his lectures. Dr. Zarncke, so famous in Germanic philology, has endeared himself especially to the Americans by his willingness to allow them a seat in his lecture hall and by his many kind offers of aid. It was the privilege of the writer, in company with two of her country women, to attend the lectures

given by Dr. Maurenbrecher last winter, upon the History of the Revolutionary Period. At the conclusion of the course, in thanking the students for their regular attendance and close attention, the eminent historian acknowledged also the presence of his other hearers.

And what is the feeling of the regular students in regard to this matter—of the German youths, few of whom have ever sat in the classroom with a girl, and who have been trained to believe that a woman's province is the kitchen only, or the narrow circle of her home? To many of them it is highly amusing to see members of the other sex within the sacred precincts of their lecture halls. Some are greatly indignant that women should seek to usurp their privileges, and some are utterly indifferent. Whatever or however various their different feelings may be, they all find expression in the same extreme politeness of demeanor. The little band of women students here in Leipzig at present consists of an Armenian, a Russian, and half-a-dozen Americans, and no one of them can complain of an impoliteness, whether of word or action, from any student. Among the more than 3,000 German students there are many, too, who sympathize thoroughly with the higher strivings of women, and who hope that the emancipation of their own sisters and friends from the shackles of narrow prejudice may be effected through the efforts of those from other lands.

It is often humiliating when we think that we come here with as good preparation as our brothers, and with a much better knowledge of the language than they, but cannot be enrolled upon the registry of the University as regular students, nor participate in the privileges of the same. Still, we are thankful for the ground already gained, and that it is permitted us in so many of the lecture halls to note down the same words of wisdom which fall upon the ears of those more highly favored individuals, the "Herren Studenten."

ISABELLE BRONK.

LEIPZIG, November 24, 1890.

Notes.

TICKNOR & Co., Boston, invite subscriptions to an important work in six parts, folio, with numerous plates, 'Architecture of the Renaissance in England,' by J. Alfred Gotch and W. Talbot Brown. Publication is to be begun immediately.

Charles Scribner's Sons announce 'Principles of Political Economy,' by Prof. A. L. Perry of Williams College.

D. Appleton & Co. have in press 'Brazil: Its Condition and Prospects,' by C. C. Andrews, ex-Consul-General to Brazil; 'Socialism, Old and New,' by Prof. W. G. Sumner; 'The Journal of William Maclay, United States Senator 1789-1791,' edited by Edgar S. Maclay; 'Ring Riding,' by H. W. Struss; 'The Log Schoolhouse on the Columbia,' by Hezekiah Butterworth; 'A Fluttered Dovecote,' by Geo. Manville Fenn; and 'The Nugents of Carriconna,' an Irish novel, by Tighe Hopkins.

The Messrs. Longman will be the publishers of Dr. Fridtjof Nansen's account of his adventurous journey across the inland ice-sea of Greenland.

'Socialism and the American Spirit' is the title of a new work on which is engaged Mr. Nicholas P. Gilman, author of 'Profit-Sharing between Employer and Employee.'

The Universalist Publishing House, Boston, have nearly ready 'Christian Types of Heroism: A Study of the Heroic Spirit under Christianity,' by John Coleman Adams, D.D.

Prof. Addison Hogue of the University of Mississippi is at work on an index to the verb in Isocrates. Compounds will be given under their simples (as in his 'Irregular Verbs of Attic Prose'), so as to bring together in one place everything that belongs to any given verb. Each compound, however, will appear (with a cross-reference to the simple verb) in its own alphabetical place, so as to exhibit all the verbs compounded with any given preposition. Furthermore, in most cases, enough of the context will be given to show the construction—a feature of the work that will greatly increase its usefulness to investigators.

The announcement is made from Leyden of the publication, if warranted by a sufficient number of subscribers, of a complete collection of Old Saxon texts, under the editorship of Prof. Gallée of the University of Utrecht. The whole will be contained in one large folio volume. Facsimiles of each MS., including some hitherto unknown, will be given, together with a description of the MS., its history, palæographical peculiarities, and dialect. The texts, exclusive of the 'Heliand,' which will be transliterated only in so far as it is given in facsimile, are to be reproduced in full. The price is £1 15s. to subscribers.

The process of "boiling down" the results of archæological investigations and discoveries goes on apace. We had supposed the limit of usefulness in this direction had been reached, for the present at least, in the excellent manuals of MM. Maspero, Babelon, and Paris, on the subjects of Egyptian, Oriental, and Greek art respectively; but now comes Mr. Talfourd Ely with his 'Manual of Archæology' (Putnams), who attempts to cover all the periods that they have described, and something more besides, in a duodecimo volume of 272 pages, not a little of which is taken up by the 114 illustrations with which the book is embellished. Precisely what class of readers is benefited by a book of this kind we are at a loss to imagine. For the beginner the descriptions are far too slender and cursory to create any satisfactory impression—the whole subject of Greek sculpture, for example, being covered in sixty-two pages, in which are included twenty-nine illustrations—while the more advanced student will find nothing that he does not know already. The list of lecturers under whom Mr. Ely announces that he has studied is certainly a strong one, and it seems a pity that he did not put the fruit of their teaching to better use, by expending the care which he has evidently given to the preparation of his book upon the popular exposition of some special branch or topic of his subject, which might have been handled within his limits.

Prof. William Clark's 'Savonarola, his Life and Times' (Chicago: A. C. McClurg & Co.) is one of those amateurish books of which it is difficult to divine the *raison d'être*. To all English-speaking people Signora Villari's translation of her husband's classical work affords all the information which the most diligent research could accumulate, and elucidates it with a philosophical breadth of view and a minute acquaintance with both Florentine and Italian history. To this Prof. Clark's volume offers an unfortunate contrast. He has read Villari and Perrens, with some of the more accessible contemporary sources, and a portion of Savonarola's writings, and this slender equipment is backed by no general historical knowledge of the period or of its antecedents. It has a queer look in these days to quote Dean Milman as an authority for the Italy of the fifteenth century, and to discuss the influence of Savonarola on the Florentine populace without a reference to the 'Diario' of Luca Landucci. There is no evidence of historical insight to compensate for lack of research, and the style is singularly untrained and confused.

Capt. Charles King, now well known as a writer of military tales, has republished certain accounts of field life on the frontier and several short sketches having a military substructure. These originally appeared in newspapers and magazines, and now are gathered as 'Campaigning with Crook and Stories of Army Life' (Harpers), with illustrations. In the imminent hostilities with the fierce Sioux of Dakota, these accounts of what has been undergone only a few years back in contest with the same nation, and in a degree with the same individuals, have a special interest, and at any time should prove instructive and attractive to the peaceful citizen who wonders what the army does. The peril in Indian action is grave, but the hardship of exposure, want, and fatigue in observation and pursuit, make greater inroads upon health and life. Mr. Finerty's 'Warpath and Bivouac,' which we recently noticed, goes over much of the same ground; but, whether Finerty or King, it is well worth rereading as sober fact, and not as romance. The appended fiction is light in design and execution.

'Around the World with the Blue Jackets' (Boston: D. Lothrop Co.), by Lieut. H. E. Rhoades, U. S. N., is a thoroughly entertaining account of a three years' cruise in an American sloop-of-war. Though the majority of the places visited were naturally those in the beaten track of the globe-trotter, this does not detract from the interest of the book. It is to be regretted that the author did not devote more space in the chapters upon Japan to the revolution of 1868, during which the Tycoon took refuge on his vessel, the *Iroquois*, and was carried to Yokohama. On his return from the East, Lieut. Rhoades sailed down the western coast of South America, touching at all the important ports, as well as passing through the very rarely used Smyth's Channel. This is a narrow and tortuous waterway between the mainland of southern Chili and the outlying islands, dangerous for vessels, but having magnificent perpendicular cliffs and deep ravines from which pour cascades and glaciers. The first American vessel to navigate it, according to Lieut. Rhoades, was the *Hassler* in 1872, having Prof. Agassiz and other scientific men as passengers. The four closing chapters give an interesting account of a cruise in the Arctic regions, whither the author was sent in search of the survivors of the *Polaris*. The book is fully illustrated and presents a very attractive appearance. We have noted a few errors in the names of places, and in some instances the information given is not brought down to date.

A book on a subject of perennial interest, and therefore not demanding immediate notice, but not on that account delayed, has lain before us nearly a year. 'The Drink Question,' by Dr. Kate Mitchell (London: Swan Sonnenschein & Co.), discusses alcohol in its social and medical aspects with much enthusiasm, but with less system than a formal treatise, and with more technical minutiæ than a popular paper. With no index, and with a meagre table of contents, it fails as a book of reference, but it is a fair contribution to popular information regarding the economic and physical advantages of abstinence. We have found no distinct misstatement, other than the one (pp. 80-1) that describes carbonic acid, passing into a receiving vessel from a fermenting liquid, as "a very poisonous vapor or gas"; which, if it were true, would be bad for soda-water and Apollinaris drinkers. The book re-

states many truths which it would be well for lawmakers, and especially for those who drink, be it never so little, to remember and to act upon.

The broad traits of the bound volume of the *Century Magazine* for May to October are the beginnings of the series of illustrated articles, historical and other, on California; Mr. Lafarge's letters from Japan; the conclusion of Joseph Jefferson's autobiography, since reproduced in book form; and the portrait series of Women of the French Salons. There are some echoes of the Lincoln biography as of the papers on the Civil War. Topics of the hour are the Washingtoniana and the short account of Marie Bashkirtseff. The fiction serial which has excited most attention has been "The Anglomaniacs." Mr. Cole's engravings after the old masters still lead the illustrations, and at the opposite extreme we are inclined to place the cuts of fowls, so far beneath the art of Bewick in plumage.

In the two volumes of *St. Nicholas* for 1890 Mrs. Ritchie's account of the boyhood of Thackeray is quite the literary gem. Boys have their meed of attention in Mr. Walter Camp's four articles on inter-collegiate football and five on base-ball. In the geographical field Mr. Glave's Congo papers should be mentioned, the writer being one of Stanley's lieutenants; but in the nature of the case his narrative would hardly have been different if intended for adults. There is a short paper also on the hurricane disaster to the war-ships at Samoa. Mr. Palmer Cox's Brownies disport themselves through both volumes. The illustrated paper, "Through a Detective Camera," is childish chiefly in its pictures, which are interesting and afford a legitimate employment of process engraving.

Mr. Howells's "Boy's Town" is perhaps the main feature of *Harper's Young People* for 1890, and we have already spoken of that. In the useful line of science we notice Mr. Felix Oswald's "Home Studies in Natural History" and Mr. Wm. Hamilton Gibson's kindred papers on familiar insects. There is an authoritative account of the Naval Academy at Annapolis, and the school-days of our Presidents have furnished a topic which will be sure to attract all ambitious boys, who ought, perhaps, to be reminded that had certain of our Presidents been cut off in their school-days, the country would have been the better for it. Mrs. Burton has done a natural and very proper thing in dramatizing 'Alice in Wonderland' in three acts. This volume shows a steady encroachment of process upon wood-engraving.

We despair of analyzing the miscellany of the *Boys' Own Paper* (or *Boys' Own Annual*, as the bound twelfth volume reads on the cover), published by the London Religious Tract Society (New York: Fleming H. Revell). A comparison of it with *Harper's Young People*, which nearly resembles it in size, would be as interesting as it would be laborious. The American magazine is content with one colored plate for the year, but the English gives one to each number, usually after well-known oil paintings. The wood engravings are relatively crude. There is a great deal of useful information packed away in these 824 pages.

Again we have to record a number of new editions of works which need no fresh praise. Mr. William Henry Goodyear's 'History of Art' (A. S. Barnes & Co.) has a special pertinence to the holiday season in its dress—a brilliant binding without, and multicolor plates within, besides the fair text which addresses itself to classes, art students, and tourists in Europe. From Macmillan & Co. we have a charming embodiment of the 'Vicar of Wakefield,' with a preface by Austin Dobson, who takes as his theme the history of this tale, as illustrated in England, America, and on the Continent of Europe by successive generations of artists from 1780 to the present attempt by Hugh Thomson. One may enjoy Mr. Thomson's sketchy designs, especially his initial letters, and head and tail-pieces, and still agree with Mr. Dobson that, foreign artists apart, "Goldsmith has not hitherto found his fitting pictorial interpreter." The same firm puts forth, after eight years, a second edition of W. C. Lefroy's 'Ruined Abbeys of Yorkshire,' a series of papers which we think originally appeared in the *Portfolio*, accompanied, as here, by drawings by A. Brunet-Debaines and H. Toussaint. Mr. Lefroy writes for the popular intelligence, and invests his discourse with literary grace and a feeling of veneration. The book is a good preparation for or souvenir of travel in Yorkshire. The "Laurel-Crowned Tales" of A. C. McClurg & Co., Chicago, are continued with 'Picciola'; and a companion series of "Laurel-Crowned Letters," of which much may be made by a wise choice, is begun with 'The Best Letters of Lord Chesterfield' and 'The Best Letters of Horace Walpole.' The typographical conception and execution of these volumes are admirable.

Mr. J. G. Rosengarten's valuable work on 'The German Soldier in the Wars of the United States' first took the shape of lectures, then of a small pamphlet, then of a book (1886), and now, in an enlarged second edition, fills nearly 300 pages (Philadelphia: J. B. Lippincott Co.). As it has commendably been wholly reset, we cannot well indicate the latest additions, nor is it necessary in the case of the sole monograph on the subject of it. There is a full index of names. This historical study is in a way a companion to G. Körner's important review of the German element in this country ('Das Deutsche Element in den Vereinigten Staaten von Nordamerika 1818-1848'), of which a second edition appeared in 1884 (New York: E. Steiger). Mr. Körner's chapter on New York, by the way, opens with the late August Belmont, emphasizing his political influence, which of recent years has quite passed away even from common remembrance.

Mr. W. S. Gilbert's 'Songs of a Savoyard' (Geo. Routledge & Sons) are so many plums from his several comic operas, duly accredited in the table of contents, and illustrated by his pencil with much individuality of humor. In fact, we have here a more refined 'Hood's Own,' and there is no predicting how many homes in which these lyrics are familiar and ready to be resung will desire this pretty volume when they learn of its existence.

The periodical called *Travel*, which Mr. W. M. Griswold issues at Cambridge, Mass., editing it with a selection and abridgment of approved narratives of personal visits to places famous for natural beauty and historical association, now rounds out two volumes. Their field is almost wholly European. The editor's name is an assurance that there is an index.

Mr. William R. Thayer has had reprinted his 'Historical Sketch of Harvard University from the Foundation to May, 1890.' It contains an account of the material and corporate growth of the college; of the progress of education; of student life, including Commons, Prayers, Discipline, Athletics, Secret Societies and Clubs, and College Customs. Copies may be had by forwarding fifty cents to the author at 15 Ware Street, Cambridge, Mass.

Scribner & Welford send us the first number of the quarterly *Critical Review of Theological and Philosophical Literature*, edited by Prof. S. D. Salmond, D.D., and published in Edinburgh by T. & T. Clark. It opens with a review of Martineau's 'Seat of Authority in Religion.' The projectors have felt the need in English of journals such as Germany can point to in this kind. The get-up of the magazine has been well devised.

A committee of the American Society of Naturalists on science-teaching in the schools have prepared an address to college faculties with a view to securing some work in natural or physical science as a requirement for admission. They recommend the selection of phænogamic botany, human physiology, and physical geography, but would allow preparatory schools to suit their own convenience and equipment, at least for the present. No one can doubt the desirability of such a reform if it can be accomplished. The chairman of the committee is Prof. Samuel F. Clarke of Williams College.

The fourth annual meeting of the American Economic Association has been appointed for December 26-30, at Washington, in the hall of the Columbian University, with headquarters at the Arlington Hotel. The last evening session will be held jointly with the American Forestry Association at the National Museum.

The eighth annual Convention of the Modern Language Association of America will be held in University Hall, Vanderbilt University, Nashville, Tenn., on December 29, 30, and 31. On the evening of the 29th an address will be delivered before the Association by Landon C. Garland, A.M., LL.D., Chancellor of Vanderbilt University. At the subsequent sessions of the Convention papers will be presented by Professors E. H. Babbitt, New York; W. M. Baskervill, Vanderbilt University; Calvin S. Brown, Vanderbilt University; R. F. Butler, Woman's College, Baltimore; Albert S. Cook, Yale University; Charles Davidson, Belmont, Cal.; Alcée Fortier, Tulane University; John Phelps Fruit, Bethel College; James M. Garnett, University of Virginia; Frederick M. Page, University of the South; Hugo Albert Rennert, University of Pennsylvania; Henry E. Shepherd, College of Charleston; and Miss L. M. McLean, University of California.

—Two collections of sonnets, published simultaneously by Houghton, Mifflin & Co., Boston, attempt to show what America has accomplished in this province of literature. Col. Higginson and Mrs. E. H. Bigelow edit the smaller one, 'American Sonnets,' in which about 150 authors are represented by 250 sonnets, the largest allowance to any one writer being four examples; Mr. C. H. Crandall edits the other, 'Representative Sonnets by American Poets,' and gives 445 sonnets distributed among about 225 authors, with a maximum allowance of seven to any one writer. Mr. Crandall accompanies his collection with a long essay upon the history of the sonnet, with many examples from foreign sources; and although he is deficient in critical faculty and is not free from faults of taste, his paper is a painstaking monograph, and contains much information of real value to the student of the sonnet. The two collections necessarily cross each other, but less than would be expected. The very slight degree of merit required for admission is shown by the fact that although Mr. Crandall includes nearly seventy-five more writers than Col. Higginson, the latter finds room in his smaller volume for fifty writers whom Mr. Crandall ignores. The quality of choiceness in poetry is not to be looked for in either, and both seem to have aimed at representing the host of minor poets.

On this ground the palm must be given to Mr. Crandall, whose book does not lose more by the omission of the fifty whom Col. Higginson has temporarily saved from oblivion than it gains by his own larger charity in the same direction. His selection of examples from the better known poets, such as Lowell, also seems to us better in most instances; and he has not passed by any notable single sonnet. Both editors rank American contemporary sonnets higher than the same work of English writers, as did Mr. Sharpe in his recent collection similar to these; and certainly our minor poets reach a higher general average in the sonnet than in other forms of poetry. Whether this is a sign of strength or of weakness may be doubted. Either of the two collections is ample enough to satisfy a moderate appetite in sonnet-lovers. Each is fully supplied with indexes, and while Mr. Crandall adds a biographical dictionary of the authors, Col. Higginson is at pains to give the source of each piece with great particularity. The smaller volume is the more dainty in its manufacture.

—Some measure of the eagerness of mankind to get hold of Dr. Koch's lymph is afforded by the article Phthisis in the eleventh volume of Dr. Billings's great 'Index-Catalogue of the Library of the Surgeon-General's Office, U.S.A.' It fills 78 pages in large and small type, and the allied rubrics of Pleura and Pneumonia fill 26 and 60 pages respectively. The diseases of the lungs, therefore, which fall within this portion of the alphabet (Phæ-Reg) require one-seventh of the 1,102 quarto pages. A near approach to this proportion is made by Pregnancy (67) and Puerperal (76), to say nothing of the brief entries under Quadruplets and Quintuplets. Among miscellaneous titles, Pharmacy and its kindred fill 62 pages, of which 8 are devoted to a very valuable conspectus of legislation on the subject, arranged by countries; Physiology, 41; Psychology, 15. There are 22 pages given to Physicians, mostly addresses to the profession; and 8 pages to Quacks and Quackery. In the materia medica, Quinine leads with 14 pages, followed by Potassium with 12 and Phosphorus with 10. The relation of medical science to our social evils is shown by the entries under Police, Poor, Population and Overpopulation, Prisons and Prisoners (19 pages), Prostitution (13 pages), Quarantine (17 pages), etc. The Phonograph already has a place, for has not a writer treated of its use in physical diagnosis? Photography, of course, is represented, though somewhat meagrely. Dr. Billings can refer to an article of his own on composite photography as applied to craniology. The Railroad, with its accidents and diseases, also cuts a figure. Among the personal titles one meets even with Rabelais, and we notice a 'Physical Dictionary,' published in London in 1657 by J. Garfield. There is a Garfield Road (Lavender Hill) to this day in London, but it may be a new designation taken from our President of that name. Female physicians will be dealt with under Women in a later volume, but a venerated pioneer in Philadelphia, the late Dr. Ann Preston, is recorded with her work.

—The humors of a catalogue like this are not inconsiderable when one seeks for them among the long-winded titles of an earlier century. We might cite that London tract of Philander Misaurus's (1735) on "The Honor of the Gout; or, a rational discourse, demonstrating that the gout is one of the greatest blessings which can befall mortal man; that all gentlemen who are weary of it are their own enemies; that those practitioners who offer at the cure are the vainest and most mischievous cheats in nature," etc. But not to delay over these, we have been struck with the tale told by the six pages given to Phrenology. They remind us of a fought-out battlefield. The first shot was fired by Gall in a Dutch edition of 1806, and the last survivor of his literary followers emptied his rifle about 1852. In these forty-six years the doctrine undoubtedly received its quietus; but one has only to con the works here designated to recognize the fact that phrenology had a mission which it triumphantly fulfilled. It was a great leaven. Classed by its assailants with materialism and atheism, its friends affirmed "the harmony between phrenology and revelation," declared it "not opposed to the principles of religion, nor to the precepts of Christianity," were led by it into "considerations respecting the recognition of friends in another world, on the affirmed descent of Jesus Christ into hell, on phrenology in connexion with the soul, and on the existence of a soul in brutes." But also, following George Combe, they discussed "human responsibility as affected by phrenology"; got new light on the moral bearings of heredity and of marriage; found in phrenology a scientific basis of education and even of medicine, and linked it to the cause of temperance and total abstinence. In all these directions the ferment continued long after the doctrine had lost fashion, credit, and propagators, loosening the bands of the old theology, and paving the way for the acceptance of Darwinism. It is interesting to observe in this catalogue how the earlier "science" of Physiognomy worked in parallel lines. A translation in 1635 of Adamantius's 'Physiognomicon' (1544) treated "des indices que la nature a mis au corps humain par où l'on peut découvrir les mœurs et les inclinations d'un chacun." Fitta's 'Treatise on the Influence of Climate on the Human Species, and on the Varieties of Men resulting from It' (1812), included "an account of the criteria of intelligence which the form of the head presents; and a sketch of a rational system of physiognomy as founded on physiology." An undated work issued by E. Benson at Leipzig seems to be a caricaturist's manual for hitting off "die Aehnlichkeit von Menschen mit gewissen Thieren." The colophon of Michael Scotus's 'Liber Phisionomiæ' (*circa* 1500) styles the work "de procreatione et hominis phisionomia opus."

—The way in which the interests of a whole nation are sometimes sacrificed in order to put more money into the purses of a few capitalists, has never been better illustrated than by the fate of the bill to enlarge the boundaries of the Yellowstone Park, to which *Garden and Forest* devotes a timely and forcible article in its issue of December 10. Eight years ago a bill was placed before Congress proposing the inclusion within the Park reservation of a large area of forest-covered mountains to the south and west. These lands are useless for grazing or agricultural purposes, while it is of the utmost importance that the forests should be preserved from fires and lumbermen. Their disappearance would diminish a needed water supply, and would seriously impair the scenic features to which this Park chiefly owes its international fame—the geysers, hot springs, and waterfalls. Moreover, the country south of the Park is a favorite breeding-place of the elk and other animals, which cannot be really protected in the Park as long as they are allowed to be slaughtered in vast numbers every year in its immediate neighborhood. Secretaries Lamar, Vilas, and Noble have in their annual reports recommended the passage of such a bill, and the Senate has passed it four times, but it has always been lost in the House, owing to the tactics of a small lobby who oppose its passage unless the exclusive privilege is granted to a railway company to lay fifty or sixty miles of track in order to reach the small mining camp of Cooke, just outside the northeastern corner of the Park. An effort has been made to compromise matters by making the Yellowstone River the northeastern boundary, which would not abandon any important scenic features, and would allow the Montana Mineral Railway Company or any one else to build to the mines. But this is precisely what the Montana Mineral Railway Company does not want, aiming as it does at a monopoly of the right to build, and to build in the Park. This, as *Garden and Forest* remarks, would be the beginning of the end.

—Prof. Theodor Kolde of Erlangen, the painstaking and faithful biographer of Luther, has done the cause of historical truth a service by refuting, in a little pamphlet entitled 'Luther's Selbstmord' (Leipzig: Deichert), the alleged discovery by Dr. Paul Majunke that Luther committed suicide. The manner in which this discovery was accomplished is characteristic of the unscrupulousness of the recent Ultramontane historians of the Janssen school, which is beginning to become a serious danger to the reputation of German historiography. We have a large number of authentic statements of eye-witnesses regarding the peaceful end of the great reformer, some of them written the very night of Luther's death, in which not the slightest intimation of a suicidal end occurs. This evidence, however, does not trouble Dr. Majunke very much. In a pamphlet of an obscure Italian writer of the year 1593 he finds the assertion of an anonymous servant of Luther's, that on the morning of February 18, 1546, his master had been found hanging to the post of his bed, and upon this belated and groundless rumor Majunke builds his startling discovery, which has been heralded by the Ultramontane press of Germany as a great masterpiece of historical research. It is to be hoped, though hardly to be expected, that Prof. Kolde's pamphlet will put an end to this disgraceful matter.

—After the lapse of nearly a century, the publishing house of J. G. Cotta in Stuttgart has revived the *Musenalmanach*, which played such a prominent part in German literature during the latter half of the eighteenth century. The first German *Musenalmanach* was issued at Göttingen in 1770 by Boie & Gotter, in imitation of the *Almanach des Muses*, which had met with such signal success in Paris five years before. A little later in the same year (1770), a similar work appeared at Leipzig, and in a short time annuals and anthologies of this kind sprang up like mushrooms in all parts of Germany and Austria as the organs of literary cliques; but the original enterprise, under the skilful management of Boie, held its own pecuniarily as well as poetically against all competitors. It numbered among its contributors some of the most eminent authors of that day, and was conducted by Voss from 1776 till 1800, when it quietly expired. A rival *Musenalmanach* was started at Göttingen in 1776, under the patronage of Bürger, and led a rather precarious existence till 1805. The *Musenalmanach* for 1891, edited by Dr. Otto Braun of the Munich *Allgemeine Zeitung*, is altogether an attractive volume, beautifully printed and elegantly bound in rococo style, with original designs by some of the best Munich artists.

LECKY'S IRISH HISTORY.—I.

A History of England in the Eighteenth Century. By William Edward Hartpole Lecky. Vols. VII. and VIII. D. Appleton & Co. 1890.

WITH these two volumes, forming the seventh and eighth of the whole work, Mr. Lecky's 'History of England during the Eighteenth Century' comes to a close. They are occupied entirely with Irish affairs during the memorable years from 1795 to 1800, and constitute by far the fullest account of the events of those years which has yet been given to the world. Their fulness and minuteness are quite out of proportion to the treatment of English affairs during any period of corresponding length; but this is not a defect, for the period is one of supreme importance, and needed elucidation more than any other of the topics with which the whole treatise deals. It is entitled to a similarly careful examination at our hands.

Several critics of Mr. Lecky's book have remarked with truth that the Irish parts of it are the best done and the most likely to be permanently valuable. That this should be the case is due not merely to the fact that Mr. Lecky, as an Irishman, is specially interested in the annals of his country, and that those annals have received inadequate treatment from his predecessors, but also to the character of his own mind and method. He is rather an historical essayist than an historian in the old sense of the term. He wants either the will to paint, or the special talent for painting, a large canvas, such as may bring under the eye many scenes and many groups simultaneously acting their respective parts in the vast drama of English movement and progress. His book is, therefore, much less a narrative, telling a connected story and covering the whole of a large field, than a series of studies dealing with detached points or problems in the political and social history of the century.

This defect of method is less felt when the field to be covered is comparatively small; and thus Mr. Lecky succeeds much better, especially in the department of politics, in giving us a satisfactory and comprehensive view of the lesser island than he does of the greater. The English parts of his book do not contain an adequate account either of the constitutional changes and political struggles that went on during the reigns of the first three Georges, or of the part played by Britain in Europe and the world during that time. Such an account is still much needed. Hallam and May, Lord Stanhope and Mr. Massey, do not, taken together, give it to us; nor has Mr. Lecky added much to the work they have performed in the region of politics. But his Irish chapters, which begin with Elizabeth and carry the story down to 1800, constitute by far the best consecutive history of Ireland during the two centuries from the Tudor conquest—in a sense the first real conquest—till the Union to be found in our language. We feel this so strongly as to hope that the author will publish these chapters in a separate book, prefixing to them a sketch of the earlier history of the island, but not carrying, for a reason we shall subsequently state, his narrative below the year 1800. Such a book would deserve to be read, and would be read with profit, by many who will not open an eight-volume history of England during one century.

The two purely Irish volumes that are now before us possess several conspicuous merits. Not to dwell upon their agreeable style, for Mr. Lecky always writes easily and clearly, they bear witness to a careful and prolonged research into original documents which must have involved years of labor. A vast collection of official but confidential papers at Dublin Castle, to which, until recently, all access of students was debarred, and several collections of private letters preserved in England, have been examined by him, with the result of throwing a flood of new light upon the more obscure episodes of these years, and especially on the secret information which the Government received of the plans of the Irish conspirators. The merit of this great service to historical truth is enhanced by the spirit in which Mr. Lecky seems to have performed it. He inspires us with the most absolute confidence in his integrity. We are not speaking of verbal accuracy, for that is a matter on which only a person who should follow and verify his citations would be qualified to pronounce. But what he has given us bears the stamp of a scrupulous fairness and honesty in endeavoring to ascertain the real facts and present the exact impression which those facts make; a task whose difficulty those who have attempted to extract the truth from the contradictory accounts of Irish writers are best fitted to appreciate. This fairness is not less apparent in his descriptions than in his selections from illustrative letters and documents. He is obviously anxious to let every fact that can bear upon the questions in hand be fully stated and have its due effect upon the reader's mind.

Mr. Lecky's moral instincts are sound, and do not suffer him to attempt to gloze over ferocity and falsehood, after the fashion of the detestable book in which Mr. Froude has seemed to enjoy and almost to applaud the cruelties perpetrated by those who provoked and suppressed the insurrection of 1798. Some of the comments he interposes are, indeed, such as one scarcely expects from the writer who has seen the facts so clearly and set them forth with such unswerving fidelity. Mr. Lecky seems unable to rid himself of the notion that governments, however foolish and wicked, are nevertheless entitled to obedience and to what is called "loyalty" from their unhappy subjects; and hence, while he is describing the follies and crimes of the junto who ruled Ireland at the end of last century, he continues to be shocked by the "treason" of those who were endeavoring to overthrow them. He does not seem to see that grossly illegal conduct and acts of wanton cruelty are far more to be condemned when practised by a government than when resorted to by men whom oppression has driven wild. In one passage at the end of the book the partisanship of an Irish politician unhappily gets possession of him, and has dictated a passage which all who are not partisans will read with unfeigned regret. But we must repeat that although there is enough, even without that unlucky passage, to show what his political attitude is, our confidence in his fairness as an investigator and narrator remains unshaken, and disposes us to believe that no subsequent examination of the same sources will produce results substantially different from those which are here so fully and lucidly set forth.

The best parts of the book are, to our thinking, those which analyze the currents of opinion and summarize the motives of classes and individuals; the least successful those in which events are narrated. Mr. Lecky, as has been already remarked, is rather an historical essayist than an historian. He does not enjoy the process of telling a story, and makes comparatively little use of the opportunities for dramatic description which his subject offers. Compare his account of the rising in Wexford, or of the short campaign of General Humbert in Mayo, with Macaulay's account of the fight at Sedgmoor, and the difference in graphic force is surprising. So Mr. Lecky's description of the capture of Lord Edward Fitzgerald in Thomas Street, in Dublin, is less telling than Mr. Froude's account of the same incident. No doubt we believe Mr. Lecky's story, and read Mr. Froude's only as a piece of clever writing to which fancy may have contributed many details and carelessness altered others. If the choice is between want of color and want of accuracy, we prefer the former. Still, it is a pity that Mr. Lecky should not have tried to vary the monotonous gloom of his picture of Irish affairs by throwing somewhat more spirit and variety into his narrative.

How gloomy and monotonous that picture is, no one will adequately realize till he has read right through these volumes. From beginning to end the clouds never part to let one ray of sunlight through. Pitt's Government in England, Lord Camden (or rather the junto which ruled in his name) in Ireland, pass from one blunder or crime to another with as fatal a persistency as though their object had been to ruin the country and sow the largest crop of future evils. Lord Fitzwilliam comes on the scene for a few weeks as the messenger of peace and freedom, but is speedily removed. Lord Cornwallis attempts to mitigate the horrors which accompanied the repression of the rising of 1798, but his pleas for clemency are disregarded, and bring down on him the wrath of the "loyal" party. He is commissioned to bring about a union with England, and is himself convinced that the measure is a necessary one; but the corruption and intrigues by which he is obliged to push it through revolt him, and deepen, while they reveal, the turpitude of the system he has been sent to administer. Among those who surround these three Lord Lieutenants there are some men of marked talent, such as Fitzgibbon and Castlereagh, but not one whose character inspires us with respect. The single wise and humane figure that flits past is that of the Scotch soldier, Sir Ralph Abercromby, and he is speedily forced by the clamors of the dominant faction to withdraw from a part in which humanity and respect for law were disqualifications.

Nor do our spirits rise when we turn from the Government and their supporters to the popular party. The leaders are, no doubt, less personally repellent. Grattan is always brilliant, upright, dignified; and though Mr. Lecky calls his speeches "violent," they will not appear to American readers to go one word beyond what the circumstances of the time needed. Wolfe Tone impresses us by his tenacity, his clear-sightedness, his unselfish devotion to the cause he had embraced, his courage, not quailing in the presence of defeat and at the approach of an ignominious death. (Mr. Lecky's generous recognition of the merits of one whose politics excite his horror, contrasts well with the virulent acerbity of the Duke of Argyll's recent magazine attacks upon Tone's memory.) Arthur O'Connor, Lord E. Fitzgerald, Hamilton Rowan, and some of the minor rebel chiefs deserve the sympathy which we give to honesty and fortitude. But the profusion among the conspirators of persons ready to sell information to the Government, together with the ignorance, and in too many cases the ferocity, of the Roman Catholic peasantry who rose in rebellion, throw dark shades over the popular movement. However strongly one may condemn the Government, one can hardly wish success to the insurrection. And through the whole story of these six years one has the painful

her der

sense that things are getting steadily worse; that the wisdom of the few wise men, and the justice of the few just men, are being steadily overborne by the torrent of passion and hatred which had risen till it covered the island; that the miseries of these years were not to be redeemed by any brighter days to follow. It is above all this reflection that makes the book such unspeakably melancholy reading.

In a second article we shall advert to some of the chief points of controversy with which Mr. Lecky deals. To wind up these general remarks on his work, it is only necessary to add that his references to general history—European and American—are usually correct. Here and there an American reader will note some small error, as in the remark on "the close connection that subsisted between the north of Ireland and New England" (vol. ii., p. 122), whereas New England was that part of the United States which had received the smallest proportion of Ulster settlers; and as in the observations on the American and British Constitutions (vol. ii., p. 321, sq.), which indicate an imperfect grasp of the legal character of these two systems. Such small blemishes as these, however, may well be pardoned to a writer who has rendered the history of a most difficult period services so eminent as those we have sought to appraise.

CHILDREN'S BOOKS.—II.

If happiness depends upon games—and they have doubtless something to do with it—the young people of the present day ought to be happier than any of their predecessors; for in 'The Young Folks' Cyclopædia of Games and Sports' (Henry Holt & Co.) they can learn something about every game known to civilized life, and certainly no such collection has ever appeared before. Moreover, the natural tendency of boys, when not engaged in active out-door exercise, to test the various forces of nature, is fostered by a number of chemical and mechanical experiments, which it is to be hoped are not as dangerous as they look. A few years ago the literature of games was exclusively of English origin, but here is a book which is obviously American from "All Fours" clear through to "Yachting"; and in view of the wide range of subjects, it is pleasant to be able to report that a careful examination has failed to reveal any inaccuracies. The account of whist gives all the recent additions to the "American leads," now so generally adopted; the records of athletic contests are brought down to the present year; the official rules of football and other sports are given in full; and, in fact, everything seems to have been done to make the book complete and convenient for reference. The illustrations are numerous, and, besides elucidating the text, add not a little to the attractiveness of the volume.

Col. T. W. Knox's 'Horse Stories and Stories of Other Animals' (Cassell Publishing Co.) is an excellent book to give to an intelligent boy or girl. That part of it which relates to horses is as good in its way as 'Black Beauty,' and marks, as that admirable book does, the beneficent results of the work and teaching of Mr. Bergh's society. There has been a great improvement during recent years in the treatment of all kinds of horses, and the wide circulation of such books is a fruitful source of good. Any one who loves horses will appreciate these stories told about them, and at the same time will get many useful hints as to the best way of managing them. Very interesting, also, are the stories told by Col. Knox of a number of other animals, some of which are familiar and others very strange, like the long-nosed monkey of Borneo. The natives say of these monkeys that they are a race of men who have fled to the forest in order to avoid the payment of taxes; but a careful examination of the picture of the animal at page 174 fails to show a resemblance to any of our well-known tax-evading citizens, and the theory is probably devoid of scientific truth. The illustrations, by the way, are very good, and the only objection to the book is the introduction of a father and two sons as pegs on which to hang the stories. This produces a 'Sanford and Merton' flavor which may possibly pall even on a youthful appetite.

'A Yacht Voyage around England' (London: The Religious Tract Society; New York: Fleming H. Revell), by the late William H. G. Kingston, is an excellent book of its kind. A party of schoolboys spend the summer in visiting the principal English seaports, one of the number being the historian. While the style is generally marked by a boyish simplicity, considerable descriptive power is shown, the author's well-known familiarity with the sea being constantly evident. Especially good is the account of the rescue of a shipwrecked crew by a life-boat. Much historical information is given of the places visited, together with descriptions of dockyards, harbors, lighthouses, life-saving apparatus, fishing fleets, and in fact nearly everything which would be seen on such a voyage, including the resuscitation of a half-drowned person. There are numerous well-chosen pictures, which, though not very new, give the book an attractive appearance.

We have found 'The Knockabout Club in North Africa' (Boston: Estes & Lauriat), by Fred. A. Ober, very hard reading. There are numerous long quotations from various unnamed authors, and the passages which link them together are written in a dry, lifeless way not calculated to interest the young. One of the stories which form the padding to the volume is entirely out of place in a work of this character, and shows a singular lapse of judgment in the compiler. The illustrations are abundant and taking.

The modest preface to 'A Loyal Little Red-Coat,' by Ruth Ogden (Frederick A. Stokes Co.), at once disarms criticism. The heroine of this historical story, Hazel Boniface, is a stanch adherent of King George III., although the Revolutionary war is over and America no longer under monarchical rule. But Hazel's father had, with great personal loss, followed his honest convictions, and his little daughter loyally followed him. Her interview with Alexander Hamilton, and the fearlessness and naïve simplicity with which she gives her opinion on a case which the great lawyer had defended, is one of the best chapters in the book. The Van Vleet tea-party has a genuine colonial flavor that is appetizing. We would suggest, however, that with such a spirited heroine and in such stirring times the action of the story should have been more animated; but it is hindered not so much by historical movements as by rather long moral digressions, the truths of which should have been left a component part of the characters, needing no further demonstration. There are sixty original illustrations by H. A. Ogden, which show much skill in the faithful portrayal of the scenes and characters of the book.

Cassell & Co. have issued a new children's book by Maggie Browne, entitled 'Wanted—a King.' The sense of justice inherent in all children will, we think, be gratified by this story of how the wrongs of the Rhyme People were righted by a little girl who resolutely set about it. The wickedness of Grunter Grim, with whom we are all too well acquainted, in depriving Nurseryland of a king, is set at naught by this small child's perseverance in the use of a certain magic couplet. How Master Dicky Bird, with the four-and-twenty blackbirds, helped to circumvent the goblin, and how the Rhyme-Fairy found the missing rhyme, which was the key to the whole situation, is cleverly told. The whole is a delightful bit of nonsense, permeated by sweet lessons of content and good temper. The style is crisp, and keeps one's interest unflagging. The illustrations, by Harry Furness, are in keeping with the story.

In 'Dollikins and the Miser' (Boston: D. Lothrop Co.), Miss Frances Eaton has drawn a fine and spirited character. Dollikins is a brave and generous girl, battling against sharp poverty with a spirit as buoyant as the waves she makes her confidants and companions. She is not too good, either, for human nature's daily food, but has her ups and downs as a strong but undeveloped character would. Her influence upon the old miser is salutary, and while he does not learn to be "wasteful," as Dollikins earnestly desires him to be, his hand is gradually relaxing its clutch upon the hoarded dollars before death finally claims him. It is a pity that more care should not have been exercised in drawing the other characters, so that the book might take the rank which would otherwise have belonged to it.

The effort to lead children into the world of animal life and make them familiar there is a praiseworthy one; but children are sharp-sighted, and unless boldly taken into fairyland are inclined to question if too great a strain is put upon their credulity, and so the object aimed at is frustrated. In 'Mrs. Muff and her Friends,' by Mary Lee Etheredge (Boston: De Wolfe, Fiske & Co.), we think the author has made this mistake. Some of Mrs. Muff's (the family cat's) gossip is amusing, but we do not believe her stories will serve to bring children into more intimate relations with her friends.

Mrs. Molesworth, in her 'Children of the Castle' (Macmillan), deals with the supernatural in generous fashion. The grim old castle, standing on sea-washed cliffs, affords unusual opportunities for the visits of those mysterious folk who are said to have the power of reading our thoughts even better than we ourselves; and so, as occasion offers, the children of the castle (Ruby and Mavis, with a boy cousin, who comes to visit them) receive visits from a certain princess belonging to Mystery Land who aids them in overcoming their faults. The analogy between the awakening of the conscience, or moral vision, and natural sight is true enough, and there can be no doubt about the beauties that are revealed when the former is cleared of cobwebs. But we could wish that the author had not the habit of taking us so suddenly in and out of the supernatural world. This must be confusing to children and have a tendency to weaken the effect of the story. The illustrations are by Walter Crane.

We bespeak a welcome for "Grace Greenwood's" 'History of My Pets' and 'Stories of My Childhood' (United States Book Co.), now reissued many years after their first appearance, but comparing favorably with the major part of our juvenile literature in interest and in literary style. They have the pre-eminent merit, almost lost sight of in the too conscious productions of the present day, of being written with an eye single to the children who are invited to read them. Hence clearness, directness, simplicity in the narra-

tive, with nothing for adults to read between the lines.

Mr. Cabot Lodge, though now identified with the Force Bill, has shown a tender side for children in his collection of 'Ballads and Lyrics,' of a less ambitious time. In like manner, his late political antagonist, Mr. William Everett, has addressed himself to the young in 'Double Play' and 'Changing Base,' stories now ten or a dozen years old; and this season he writes a sequel to the latter story, called 'Thine, Not Mine,' an attempt to develop a character whose prime weakness is unconscious selfishness. Dr. Everett has a very intimate acquaintance with boy nature, and the action and speech he attributes to his dramatis personæ are natural and probable. The episode of "David Porter's Boys" is true to the life, and the peril of gangs of boys subservient to a bullying leader is usefully suggested and not in the least overdrawn. For all that, we would not have had this young ruffian horsewhipped on the street by the passionate father of one of his victims, even if Dr. Everett should contend that Mr. Rice was merely behaving consistently with his own nature. There are other things which we would have omitted, because in writing for children we think selection a duty. The story will be found interesting, with much wholesome morality openly and implicitly contained in it. Its rank as a sequel, about which the author appears to entertain some doubt, remembering the usual fate of sequels, may be safely left to the readers of 'Changing Base.'

THREE ILLUSTRATED NOVELS.

Port Tarascon. By Alphonse Daudet. Translated by Henry James. Illustrated. Harper & Bros.

The Aztec Treasure-House. By Thomas A. Janvier. Illustrated. Harper & Bros.

The Begum's Daughter. By Edwin Lassetter Bynner. Illustrated. Boston: Little, Brown & Co.

THE adventures of the illustrious Tartarin are brought to a close in the third volume, entitled 'Port Tarascon.' The hero of Algeria and the Alps is seen as the victim of a tremendous practical joke which entails ruin on the Tarasconians and brings about his own downfall. The spectacle of human folly is here exaggerated beyond the limits of even transient belief, and, to the English mind at least, is excessively strained, unnatural, and tiresome. The spirit of the Tartarin extravagances is Gallic to the last degree, the style in which they are written is French to the finger tips, and both spirit and style are so thoroughly un-English that he who knows Tartarin only through an English version must be utterly bewildered in trying to account for his widespread fame. Even in the original, he is puzzling, rather meaningless, and very dull to the reader who is not about as French as a born Frenchman. Caricature is always a poor sort of amusement for those unfamiliar with its original or foundation, and few indeed are the Englishmen so intimately acquainted with the vainglorious, romancing Frenchman of the *Midi* that they can enjoy Tartarin as heartily as they enjoy Pickwick, to whom the Tarasconian is much more nearly related than to the author's favorite comparative figure, Don Quixote.

It is hardly necessary to say that the most and best that can be done for "Port Tarascon" in English has been done by Mr. James; and if we cannot agree with his appreciative introduction, it is doubtless because we cannot so readily and completely adopt the French point of view. The book is very finely printed and bound, and nothing except eyes irrespective of nationality is needed to enjoy the illustrations.

Story-tellers apparently never tire of the fabled city built by a primitive people in the least accessible locality, the home of an heroic race and the storehouse of vast treasure. The search for such a city is the subject of Mr. Janvier's 'Aztec Treasure-House.' It is a much more reasonable and readable story than most of its kind, and as exciting and marvellous as any. The opening chapters are perhaps a little too serious to catch the attention of young readers, but, once the expedition to the heart of the Mexican Mountains is started, the spirit never flags and the interest increases steadily. The men who make up the party of exploration are well chosen and characterized with great distinctness. Dr. Palgrave never forgets his mistress, Science, nor the saintly Fray Antonio his longing for the martyr's crown of thorns; the Yankee engineer and railway-man keep the promised treasure steadily in view; the Indian boy Pablo and his donkey, the Wise One, are delightful figures, indispensable both to point the moral and adorn the tale. Altogether, the 'Aztec Treasure-House' is a most admirable book for youngsters, since it satisfies the healthy craving for adventure, and never degenerates into wild, stupid sensationalism.

The beginning of the 'Begum's Daughter' is discouraging. One despairs of finding a leading thread in the categorical description of New Amsterdam of the year 1689, or in the plentiful, disconnected gossip of the hucksters on market-day. The clandestine love-affair of the young aristocrat, Van Dorn, with Hester Leisler arouses a mild interest, but not until he begins to develop the character of Jacob Leisler and his political ambitions does the author show his strength. No single episode in any modern historical novel is better told than is this of the Leisler insurrection in the city of New York; and the construction, from the bare facts of history, of a living, breathing Leisler is simply masterly. In the end we are permitted to see the coarse, fanatical, brutal Leisler, as he saw himself when brought face to face with a shameful death—a death in which legal justice was not identical with human justice. History may not justify Leisler, but Mr. Bynner, in his finishing touches, rouses a sympathy for him which puts history to scorn.

These days are full of effort to popularize history, to make it palatable for the mature and entertaining for the young. Mr. Bynner's contribution to the movement is not pretentious, but it is very successful. Any one who may read 'The Begum's Daughter' will retain a clear memory of the events which brought about the Leisler insurrection, and a fair impression of all the people conspicuously engaged in it.

Marie Antoinette and the End of the Old Régime, etc., etc., etc. By Imbert St.-Amand. Translated by Thomas Sergeant Perry. 6 vols. Charles Scribner's Sons. 1890.

IN these translations of the interesting series of sketches by M. Imbert St.-Amand of court life in France under the Old Régime, the Consulate, and the First Empire, we have found an unexpected amount of pleasure and profit. The writer assumes that his readers are acquainted with the main facts; he therefore addresses himself simply to the task of illustration, and it must be confessed that he performs this function in a very agreeable fashion. He cites for us passages from forgotten diaries, hitherto unearthed letters, extracts from public proceedings, and the like, and contrives to combine and arrange his material so as to make a great many very vivid and pleasing pictures. Nor is this all. The material he lays before us is of real value, and much, if not most of it, must be unknown save to the special students of the period. There is accordingly abundant opportunity afforded the reader to draw from these contemporary records other lessons and inferences than those presented in the text, if he chooses so to do. We found ourselves, during our perusal of these volumes, while in the main willingly following the author's lead, yet continually tempted to wander off in other trains of thought, to indulge in other reflections, to draw other conclusions. And this is as it should be in an historical work. No historical writer can expect to exhaust the subject of which he treats. He can only hope to present those aspects, those conclusions, which seem to him to be the most important. His work will be all the more valuable if he furnishes his readers with material of which they also can make their own individual use.

The series begins with a book entitled 'Marie Antoinette and the End of the Old Régime.' The writer is a strong royalist, a sincere Catholic, and an ardent admirer of the Queen. He dwells with evident pleasure on the gay times before the storm broke. "No one," said Chateaubriand, "has seen anything who has not seen the pomp of Versailles." "No one," said Talleyrand, "who did not live before 1789 has any idea of the charm of life." We have not space here, of course, for details, but we may say that the famous story of the diamond necklace is extremely well told in these pages.

Then follow five volumes on the Napoleonic period—'Citizeness Bonaparte,' 'The Wife of the First Consul,' 'The Court of the Empress Josephine,' 'The Happy Days of the Empress Marie Louise,' and 'Marie Louise and the Decadence of the Empire.' In these narratives, or pictures as they might fairly be called, the author takes us behind the scenes of the great Napoleonic drama. He shows us the human interests that lay behind the attitudes, the speeches, the actions of the great players. Notwithstanding that he comes to the task of narrating this epoch in the history of his country with the convictions and prejudices of a royalist, his treatment of it is very just, very moderate, and, let us say, very human. To him Napoleon is no prodigy, no monster, no deity; there is no call either for unqualified admiration or for utter abhorrence. With the aid of the copious extracts from his correspondence given by M. St.-Amand, one may, it seems to us, get a sufficiently clear notion of the man Napoleon; one may watch and intelligently study the development of his character from first to last. It is needless to say, therefore, that our author does not occupy the standpoint which is to-day so much in fashion; Napoleon is not to him an unaccountable prodigy, as he is to Taine, nor is he the embodiment of unscrupulous selfishness, as he appears to Lanfrey. Our author has taken pains to be fair, to be just, to be considerate, and to try to put himself in Napoleon's place; and we have risen from a perusal of these books, which are the work of a man whose fundamental views of public policy array him among the opponents of Napoleon, with a feeling that a considerable advance has been made in the historical treatment of an epoch which has hitherto been practically abandoned to the bitterest of parti-

san writers. It is something, certainly, when a French royalist can write calmly and in a fair and candid way about the great Emperor, when he shows us by these books of his that he freely allows the rightfulness of according a large place in French history to the grand and tragical events of the First Empire. We do not mean to imply that M. St.-Amand has written a history, or has thrown new light on the important questions of that period; but merely that in his sketches of the history of that time (for that is really all his books are) he has dealt with his subject in the right spirit.

We can, therefore, cordially commend these books to the attention of our readers. They will find them attractive in their arrangement, never dull, with much variety of scene and incident, and admirably translated by Mr. Perry. We suspect, though we do not know it, that he has availed himself fully of his privileges as a translator in giving to his version a purely English construction and flavor; but his work is all the better for that.

London Letters, and Some Others. By George W. Smalley. Harper & Bros. 1890. 2 vols.

It is not often the case that contributions to the daily press will bear reproduction in the form of a book. They are necessarily brief, almost necessarily disconnected, and generally possess but a transitory interest. To say that the letters here selected from Mr. Smalley's voluminous correspondence with the New York *Tribune* endure this test upon the whole very well, is, therefore, to award them high praise. The collection might have been made smaller with improvement to its quality, but it could no doubt have been made much larger without deterioration. As it is, there is a sufficient range of topics for all tastes, and at the same time there is enough upon each topic.

For nearly a generation Mr. Smalley has devoted himself to summarizing contemporary history, with an inevitable increase in the suggestiveness of his matter. He knows the recent past continuously and not in spots. His letters, if published in full, would tell very nearly what the ordinary American wanted to know and has known concerning the course of events in Europe, or at least in Great Britain. Upon this account we apprehend that he has made a mistake in disregarding the chronological order. The sense of progress and development is lost unless the reader picks out the letters in the order in which they were written, which is something that few of us will have the patience to do. By reading last what was written first, confusion is frequently produced, and what the author would naturally leave as the final impression is effaced by that which he had intended to precede it.

It is true that for most of what Mr. Smalley writes, chronology is not very important. He knows that what his readers want is gossip, and gossip is what he gives them. Of history in the philosophical sense he has nothing to say; when he discourses of society, it is society as understood by Mrs. Grundy. Current events he notes as they occur; whatever the pocket camera or phonograph can fix, that he reports, but he does not concern himself with causes or with political or social tendencies. It might almost be said that he has no opinions of his own, for he feels it incumbent upon him to give the opinions that he hears, and he thinks it proper to impress his readers with the fact that his information is derived from the very highest sources. "He could an if he would" tell us much more than he does, but he will violate no confidences. He will quote most impressively a remark in itself sufficiently commonplace, and add regretfully that he must not name the man who made it, but he will say that he was one of the first three statesmen of England—as if it made any difference. He visits Lord Aberdeen at Dublin Castle, and he reports: "One of the oldest residents in Dublin, a man distinguished in the University and in society, told me that during his forty years' experience he had never known so much accomplished in the way of entertaining at the Castle as by Lord and Lady Aberdeen." In the name of the Prophet—figs!

But it is wrong to shoot at the performer when he is doing his best. Is not the world, after all, most interested in unimportant things and in unimportant aspects of important things? And is it not the business of the newspaper correspondent to tell the world what will most interest it? In this view Mr. Smalley's letters deserve the highest praise. It should be said of him, also, that even if he loves gossip—as who does not?—and magnifies his own position, he is no tale-bearer or scandal-monger. Without doubt he must have suppressed many a racy anecdote, many a fascinating revelation, from the honest conviction that his American readers would be better without such knowledge; and, for a man of the world not devoid of conceit in his worldliness, this is no small sacrifice.

We find Mr. Smalley at his poorest when he undertakes the social essay. He is not endowed with humor, and his touch is not light. He takes himself much too seriously, and it is sometimes painful to observe the weight which he attaches to his own utterances. Social distinctions oppress him grievously, and the requirements of etiquette are as severe to him as the Levitical law to the Pharisees. Much better are the personal sketches; superficial generally, but often clever and interesting, containing the details that can be obtained only through personal observation. The account of Carlyle is particularly pleasing. But it is in the description of spectacles of broad human interest that Mr. Smalley really excels. The letters on Mr. Gladstone's "Midlothian Campaigns" have a swing to them that carries the reader away, and the impression they create is often so vivid that for most people it would be almost better to read the account than to behold the spectacle that occasioned it. In some of the descriptions of pageants there is a little too strong a suggestion of the trial of Warren Hastings, but there are touches of unquestionable originality, as where we are told, in an account of the opening of Parliament, that the Queen wears a better fitting dress than she did upon a like occasion six years before.

Strolls by Starlight and Sunshine. By W. Hamilton Gibson. Harper & Brothers. 1890. 8vo, 194 pp., with sixty-two illustrations by the author.

To the facile pencil and artistic insight of the author of this dainty volume we have been indebted in the past, as on the present occasion, for the adequate illustration of minor bits of nature. The leaves and petals of his woodland posies wave or droop with absolute fidelity to the manner of their originals. No stuffed birds sat as models for him, nor are these cabinet butterflies on patent invisible pins. The charm inherent in unsophisticated nature has deftly been transferred in black and white. For some of us a delightful reminiscence, for others, doubtless, a revelation is thus conveyed. It is difficult to imagine any great advance in quality over the best of these illustrations as possible in this direction. Some of the engraving, such as that by F. French; the block entitled "Night Witchery," by John P. Davis; and a delightful bit of woods by E. S. King, is worthy of special mention. The "process-work" by which some of the sketches are rendered directly from the artist's original, is more delicately and successfully printed than any we remember to have seen hitherto in an American book.

Nor is the text unworthy of its setting. In a "Midnight Ramble" and "Night Witchery," Mr. Gibson gives us the true aroma of the woods; in "Bird Notes" and "Bird Cradles" the feathered tribe seem almost to speak for themselves; while those who know the woods will hardly fail to glow responsive to the author's enthusiasm for his "Wild Garden." Lovers of beauty and of nature will, we think, be glad to possess this book, especially since so much of it as has already appeared in print has been immersed in the more or less incongruous matter of the monthly magazine.

The Art of Book-Binding: A Practical Treatise. By Joseph W. Zaehnsdorf. With plates and diagrams. 2d edition, revised and enlarged. London: George Bell & Sons; New York: Scribner & Welford. 1890.

The first edition of Mr. Zaehnsdorf's book was published ten years ago; it contained more colored plates than the present edition, and it had the advantage of a larger page. Otherwise there is little difference in the later issue from its predecessor except that the more recent machinery finds mention—in so far, that is, as it may have been introduced into England. We doubt, for instance, if the machinery exists in England to-day to do work like the gilt-stamped leather covers of the new 'Century Dictionary.' The fact is that publisher's binding in leather like that of the dictionary just mentioned, the Remington 'Hiawatha,' Mr. Joseph Jefferson's 'Autobiography,' and certain other recent books, is much better done on this side of the Atlantic than on the other; and the finer *reliure de luxe* is far better done in France than in England. Mr. Zaehnsdorf nowhere shows any consciousness of the fact that Great Britain has done little or nothing for the art of the binder. Roger Payne was the greatest of British bookbinders, before Mr. Cobden-Sanderson showed how beautifully a modern book might be decorated; but Payne is not worthy of mention beside any one of half-a-dozen great French binders, and his influence on the development of the art has been unimportant. Perhaps as typical as anything of the merely imitative condition of the art in England to-day—always excepting the work done by Mr. Cobden-Sanderson—is the fact that there is not really an original design in either edition of Mr. Zaehnsdorf's book. It is to be noted, also, as not without significance, that the plates here reproduced as bindings by "Gascon" (*sic*) and "Derome," by "Grolier" and "Maioli," are some of them (and we think all of them) not original buildings by these artists or for these amateurs, but modern reproductions or imitations of their styles, presumably by Mr. Zaehnsdorf himself. The specimen of the style of Le Gascon, for example, offered in the third plate of this edition, cannot be other than a modern work, since the title of the book is given, 'Troupe de Voltaire,' a comparatively recent collection of portraits and biographies of actors at the Théâtre-Français. We may further remark that, although Mr. Zaehnsdorf must know, and no doubt does know, that Grolier and Maioli were not themselves binders, he

speaks of them two or three times very much as though they were.

The chief value of the present book is in its exact account of the technical processes now in use in England. There are lovers of bookbinding who think that the handicraft of bookbinding is as well understood in England as in France, and perhaps better, although, of course, no one could doubt the enormous artistic superiority of the French. English "forwarding" at its best is solid, and the workmanship is honest and thorough. It is only in the "finishing" that the inferiority of British art appears. It is pleasant to observe that Mr. Zaehnsdorf himself likes his own work better than the foreigner's. "I cannot agree," he says (p. 116), "that one must go to France now to have a book bound properly. The method of bookbinding is quite differently managed and worked there than (*sic*) it is here. I have witnessed both methods, and prefer the English one as being more substantial."

History of the Dominion of Canada. By the Rev. William Parr Greswell, M.A. (Oxon.), F.R.C.I. Oxford: Clarendon Press; New York: Macmillan. 1890. Pp. 339.

This book is stated in the preface to be the first of a series designed to illustrate the progress of England's three great self-governing groups of colonies in North America, South Africa, and Australasia, and to be primarily intended for educational purposes in the higher classes of public schools. In the plan and treatment of its subject it bears evidence of the didactical purpose for which it was composed. It is very full, though cursory, in its statement of facts, and, while narrating events, does little to explain their causes. It exhibits industry rather than philosophy.

In its treatment of questions that involve the relations of the United States and Great Britain, it exhibits, not unnaturally, considerable bias, and is far from satisfactory. As illustrations we may take two important incidents: the war of 1812 and the abrogation of the reciprocity treaty of 1854. In both cases the impression of the author appears to be that the dominant motive of the United States was a desire for the annexation of Canada. It is true that he mentions the British Orders in Council, by which American commerce was made a vicarious sacrifice in England's conflict with Napoleon, and the claim to search American vessels on the high seas and take out British subjects, as causes of the war of 1812. But he refers to these things rather as causes of "irritation," to which the people of the United States were especially susceptible because of the "large heritage of hatred and prejudice" which the war of Independence left behind, and declares in the end that "the war [of 1812] was a popular one, and the conquest of Canada appeared a simple matter."

So, when he relates the termination of the reciprocity treaty of 1854, he says: "The United States closed the treaty themselves in 1864, hoping to ruin Canada and cause her to ask for annexation." It may be affirmed that the author's impression on these points is not well founded, and that in neither case was the idea of conquest an appreciable motive. In reality, the reciprocity treaty was terminated in 1866; and if the author, when he stated that it was brought to an end in 1864, had recollected that in the latter year a civil war was raging in the United States, he could hardly have attributed to our statesmen the folly of acting at such a time upon the supposition that, as the result of their course, Canada would ask to be admitted into the Union. The discussions of the time show that the principal causes of the abrogation of the treaty were the disadvantages under which the United States labored in consequence of our then very extensive system of internal-revenue taxation, and, though in less degree, the dissatisfaction felt at the course of the authorities in Canada during our civil war. So far as the author relies upon the invasion of Canada during the war of 1812 as evidence of a desire for conquest, it is only necessary to point out that in any conflict of arms between the United States and Great Britain, Canada, for purely military reasons, would inevitably be an object of attack.

Translations into Greek and Latin Verse. By C. H. St. L. Russell, M.A. London: Percival & Co. 1890.

This book contains Greek and Latin metrical versions of passages from Shakspere, Milton, Tennyson, Matthew Arnold, and others. The selections are well chosen, and the translator shows evidence of having profited by the ordinary training in prosody which has always played an important part in classical education in England. We have purposely used the word "ordinary" because it is well suited to these translations. Some consideration of Mr. Russell's Latin verses (he is better in Greek iambics) will illustrate our meaning. For instance, we should have been surprised to find a false quantity in them, or a spondee in the second half of a pentameter, or a monosyllable at the end of a hexameter, or a polysyllable forming two complete feet. One may avoid all this, and yet be like the man in Persius:

> "Scit tendere versum
> Hand secus ac si oculo rubricam derigat uno."

These are the very A B C of the art, and he who has not mastered its minuter details and its more delicate shades of color only makes us shudder at his rule-of-thumb productions.

We speak not now of a certain sense of the fitness of things. Only lack of this would permit a man, within the compass of a few pages, to put into the same metre Tennyson's "Peace; come away," and Dobson's rondeau to the English girl. It is no excuse, we think, to point to the fact that the Romans under the Empire so abused the elegiac as to employ it for all sorts of compositions. Such an abuse was made of the Heroic stanza in English literature, but fancy putting into Heroics the two songs by these living masters of metre! Horace would have afforded Mr. Russell variety enough. But his only attempt in logaœdics is another example of the fault to which we have called attention. Tennyson's "Fair ship," from 'In Memoriam,' suggested "Navis, quae tibi creditum," and into this metre was put the beautiful lament, without a thought that Horace never employed it for such a purpose, but almost entirely for songs of revelry and love ditties.

Again, we might speak of the patchwork style of writing Latin and Greek verses; wherein one searches the old poets for thoughts resembling the ones to be rendered, and bodily makes "copy" of them. This is much as if, having to put "Exegi monumentum" into English metre, one should begin with Shakspere—

> "Not marble nor the gilded monuments
> Of princes shall outlive this powerful rhyme"—

and, having reached "sume superbiam," should go on with Milton—

> "——reign for ever and assume
> Thy merits."

But we leave these more general matters, and, coming to particulars of language and structure, would point out to Mr. Russell that such a phrase as "Pleiadum praeëunt" is an awkward alliteration and as jarring as "adnixi infixis" or "tuis isto"; that we find no such words in Latin as "exivit" or "sente"; that the Roman ear objected to a monosyllable at the end of the first half of a pentameter; that, in the best poets, each elegiac distich contained a single thought which was not carried over to the next distich; that the same word should not be used in both its literal and its metaphorical sense within three lines; that the trick of sigmatism was criticised as early as the time of Euripides. Further, Mr. Russell seems not to have taken to heart the great truth that if in a Latin hexameter the word accents and the verse accents coincide, we have what is in fact little more than prose. Of course we do not mean that there should never be such correspondence. In fact, they are almost always found in the fifth and sixth feet. But in the other four, variety was easily obtained, and the reverse soon becomes tiresome. The very first line of the 'Aeneid' shows us how Virgil avoided coincidence of accent and ictus in the fourth foot; it is in this foot that Mr. Russell most often offends.

We have, perhaps, said enough to show why we called these verses ordinary. While they give proof generally of a pretty taste enough, and of not a little ingenuity, we find no evidence in them that the author is acquainted with the finer means by which poetical effects in Latin poetry were obtained. We should think that he does not belong to that party (happily growing) in the English universities, which has begun to realise the necessity of acquaintance with German methods of investigation and with the results of their research.

The Trees of North Eastern America. Illustrated from Original Sketches, by Charles S. Newhall. G. P. Putnam's Sons. 1890. 8vo, pp. 250.

This is an attempt to provide an inexpensive book which shall so describe the trees of the older Northern States that any one without botanical knowledge can readily learn the names of the trees he meets with. Each kind of tree is described in language which avoids the usual technical terms as far as possible, and for each there is a drawing of a leaf or two, and sometimes a sketch of the fruit. In avoiding the old technical language the author has now and then coined a new expression which, while derived from English words, is perhaps as technical as the rejected term. Thus, "odd-feathered" is not much better than *odd-pinnate*, and "reverse-egg-shaped" is certainly no improvement on *obovate*. In spite of these superfluous neologisms, the book will prove to be of considerable value to those persons who desire to learn something about trees without having studied botany; and even one who knows trees fairly well already may learn something from it—for instance, that Rafinesque's name *Hicoria* is derived from a Greek word signifying "round," an origin much more classic than the *pawcohiccora* of the Virginia Indians, from which word came *hickory*, according to Dr. Trumbull. Then, too, we learn that the tulip-tree was known to "the ancients," and that "in some of their festivals they are said to have honored it by pouring over its roots libations of wine." As this tree was unknown in Europe until the seventeenth century, it may be wondered what ancients these were, or did the ancients send their libations to America by the Phœnician packets?

BOOKS OF THE WEEK.

Dyspepsia

HORSFORD'S
ACID PHOSPHATE.

In dyspepsia the stomach fails to assimilate the food. The Acid Phosphate assists the weakened stomach, making the process of digestion natural and easy.

Dr. R. S. McCOMB, Philadelphia, says: "Used it in nervous dyspepsia, with success."

Dr. W. S. LEONARD, Hinsdale, N. H., says: "The best remedy for dyspepsia that has ever come under my notice."

Dr. T. H. ANDREWS, Jefferson Medical College, Philadelphia, says: "A wonderful remedy, which gave me most gratifying results in the worst forms of dyspepsia."

Descriptive pamphlet free.

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

CAUTION: Be sure the word "Horsford's" is printed on the label. All others are spurious. Never sold in bulk.

HAVE YOU A COPY?

Mr. Henry G. Taylor, Newtown, writes us: "That is a wonderfully useful little book—

Books of the Bible Analyzed,

you are offering to the world. I hope you are selling it by the myriad."

At all bookstores, or sent by publisher on receipt of 21 cents.

Seashore Lands.

ON THE MAINE COAST AND OTHER PARTS OF THE NEW ENGLAND SHORE. Having made a specialty of these lands for over ten years, I act as agent for purchase and sale. A number of beautiful shore, island, and peninsula properties on Penobscot Bay, on the "Camden Shore," at "Islesboro," the Fox Islands, and the other principal points now being rapidly developed. These lands generally range in acreage from parcels of 10 acres to 300 acres, have beautiful rocks, trees, beaches, and harbors, and comprise some of the few remaining tracts now purchasable at prices approximating farm values, and offer variously some of the best opportunities for gentlemen wishing independent estates for summer occupancy or for investment. For details, circulars, photographs, and particulars address

J. Murray Howe, 27 School St., Boston, Mass.

Coast of Maine.

CAPE ROSIER.

The lands of the "Cape Rosier Associates" on Penobscot Bay, 50 miles nearer Boston and the West than Bar Harbor, Mt. Desert, are offered for sale in parcels of five and ten acres and upwards. These lands comprise over ten miles of almost continuous shore-frontage in one of the boldest and most beautiful sections on the coast, twelve hours' journey from Boston. They front upon fine harbors, have beautiful rocky shores, beaches, woods, and mountain views. The drives along the shores and among the hills are very varied and beautiful. New wharves have been built, and new connections with daily trains and steamboats established. In these lands is offered an exceptional opportunity to purchase for very small sums fine and perfectly protected seashore estates. The lands will not be sold for speculation or in small lots.

KRUELL'S CONTEMPORARY PORTRAIT-GALLERY.

"The Nation."

1865-1890.

In commemoration of the 25th anniversary of this journal, Mr. Kruell has engraved on wood, in the highest style of the art, after a recent photograph by G. C. Cox, a portrait of the founder and present editor of the *Nation*.

Edwin Lawrence Godkin.

"*It is an admirable portrait, and the head might stand for that of one of Velasques's hidalgos.*"—Prof. Charles Eliot Norton.

The size of the block is 9x6 inches; the impression is on Japan paper, under the personal supervision of the artist, and is loosely mounted. *Only one hundred proofs* will be offered for sale, and each will be signed and numbered. Price, Ten Dollars, carriage prepaid. Address GUSTAV KRUELL, East Orange, N. J.

*** Mr. Kruell offers at the same price, and in the same style, proof portraits of CHARLES DARWIN (one in his prime, one in old age), ASA GRAY, WILLIAM LLOYD GARRISON, and WENDELL PHILLIPS. The edition in these cases is limited to 200 copies for all except Gray (100).

"*Certainly we may look in vain among other graphic arts for anything comparable with these portraits.*"—The Nation, January 23, 1890.

through dealers, postmasters, or the publishers, for the coming year of

THE CENTURY MAGAZINE

or arrange with your newsdealer to have it delivered each month as issued. The new volume just beginning contains a great number of interesting serial features.

November number contains opening papers in "The Gold Hunters of California," "An American in Tibet," "The Government of Cities," etc., and first chapters of that delightful illustrated novelette, "Col. Carter of Cartersville."

December contains *complete stories* by Elizabeth Stuart Phelps, Richard Harding Davis, Joel Chandler Harris, and Maurice Thompson, with the beginniug of James Lane Allen's novelette of convent life in Kentucky, "Sister Dolorosa."

January will contain the first installment of important extracts from the famous TALLEYRAND MEMOIRS—to be published in THE CENTURY in advance of the appearance of the book in any country.

February will contain the first chapters of Edward Eggleston's great novel of New York life, "The Faith Doctor," Talleyrand's narrative of his personal relations with Napoleon Bonaparte, etc., etc.

Interesting travel articles, a series on Mountain Climbing, papers on Indian Fights and Fighters, articles on American Newspapers by well-known journalists, narratives of the Adventures of War Prisoners, Present-Day Papers by Bishop Potter and others, with stories by leading writers, papers on timely subjects, etc., etc., are coming in early numbers.

This is the subscription season. Price $4.00 a year, 35 cents a number. Send for our "miniature CENTURY" *(free); and, if you are interested in the best literature for children, our "miniature* ST. NICHOLAS."

VALUABLE AND ATTRACTIVE

HOLIDAY BOOKS

PUBLISHED BY GINN & CO.

NEW BOOKS.

Open Sesame. Poetry and Prose for School-days. Edited by BLANCHE WILDER BELLAMY and MAUD WILDER GOODWIN. In three volumes. Illustrated. Vol. I., for children from four to twelve years; Vol. II., for children from ten to fourteen years old; Vol. III., for older readers. Cloth; about 350 pages each. Price of each volume by mail, postpaid, 90 cents.

This is believed to be superior to any other collection of the kind.

"The book is a handsome specimen of the arts of typography and binding, while the selections and their arrangement speak well for the judgment and taste of the editors."—*Charles W. Cole, Superintendent of Schools, Albany, N. Y.*

Good-Night Poetry (Bedside Poetry). Compiled by W. P. GARRISON. Cloth, 160 pp. By mail, postpaid, 75 cents.

A volume of choice selections in verse designed to assist in the moral and intellectual training of children.

"The selections have been made with singularly good judgment, and the little book will be a source of happiness in many homes."—*Tribune, New York.*

The Historic Schools of Painting. A handbook prepared by DERISTHE L. HOYT of the Massachusetts Normal Art School. Cloth, 210 pp. By mail, postpaid, $1.

This gives in the most available form just the points that every well-informed person desires to know.

"A gem it is. Not only does it present its condensed stores within convenient reach of students of art, but mere lookers-on are enabled to penetrate many a corner before dark to them."—*Rev. A. A. Miner, D.D., Chairman Board of Visitors Mass. Normal Art School.*

Kindergarten Stories and Morning Talks. By SARA E. WILTSE, author of Stories for Kindergartens and Primary Schools. Cloth; x+212 pp. By mail, postpaid, 85 cents.

A large collection of rare good stories for children.

"It seems to me that her stories are selected with much tact and told with infinite good taste. It will surely be welcomed by all thoughtful kindergartners."—*W. N. Hailmann, Superintendent of Schools, Laporte, Ind.*

The Nine Worlds. Illustrated. By MARY E. LITCHFIELD. Cloth; vii.+163 pp. By mail, postpaid, 60 cents.

Stories of Norse Mythology told in a way to interest and instruct both children and their elders.

"This is a successful attempt to retell for children of all growths the story of the old Norse gods. . . . The author has well succeeded in reincarnating for us these very human deities, in the midst of their characteristic northern environment."—*The Nation, New York.*

English Prose from Elizabeth to Victoria. Edited by Prof. JAMES M. GARNETT of the University of Virginia. Cloth; ix.+701 pp. By mail, postpaid, $1.65.

Characteristic pieces, so far as possible complete ones, from the great authors.

"I find in it that critical discrimination and keen literary insight which I expected to find in a work from Prof. Garnett."—*Prof. T. W. Hunt, Princeton College.*

From Colony to Commonwealth. Illustrated. By NINA MOORE TIFFANY, author of 'Pilgrims and Puritans.' Cloth; 170 pp. To be published December 20.

True stories of the early history of Massachusetts.

Best Elizabethan Plays. Edited by W. R. THAYER. Cloth; 611 pp. By mail, postpaid, $1.40.

This includes "The Jew of Malta," by Marlowe; "The Alchemist," by Ben Jonson; "Philaster," by Beaumont and Fletcher; "The Two Noble Kinsmen," by Fletcher and Shakspere; and "The Duchess of Malfi," by Webster.

"One can nowhere else find the same masterpieces, or so large a number of equally fine ones, in so cheap, convenient, and well-printed a volume, undisfigured by the coarseness of expression which occasionally sullied the pages of the original editions."—*Prof. A. S. Cook, Yale College.*

Heroic Ballads. With Poems of War and Patriotism. Edited, with Notes, by D. H. MONTGOMERY, in the series of Classics for Children. vii.+319 pp. By mail, postpaid, boards, 50 cents; cloth, 60 cents.

This includes sixty-eight noble poems. The series of Classics for Children now contains thirty-four volumes of choice literature, judiciously annotated, well printed and bound, and sold at reasonable prices. Send for a circular.

STANDARD BOOKS.

Hudson's Harvard Shakespeare. In ten and twenty volumes, at $20 and $25 respectively. Be sure to ask for *our edition*, as there is an old, disavowed edition, bearing Hudson's name, in the market.

Hudson's Life, Art, and Characters of SHAKESPEARE. Two volumes, $4.

Dante Handbook. By SCARTAZZINI and DAVIDSON. Cloth, xii.+315 pp.; prices by mail, postpaid, $1.25.

Introduction to the Poetry of Robert BROWNING. By W. J. Alexander. Cloth. v.+212 pp. Price by mail, postpaid, $1.

Footprints of Travel. By M. M. Ballou. Illustrated. 370 pp. By mail, postpaid, cloth $1.10, boards 80 cents.

THE FIRST CROSSING OF GREENLAND.

By Dr. FRIDTJOF NANSEN.

Translated from the Norwegian by HUBERT MAJENDIE GEPP, B.A., Lecturer at the University of Upsala. With Maps and very numerous Illustrations, and a Preface by J. SCOTT KELTIE, Librarian of the Royal Geographical Society. 2 vols., 8vo, $10.50.

*** "The most salient event of the year has been the daring journey of Dr. Fridtjof Nansen and his little party of Norwegians and Lapps across the inland ice of Greenland."—*Extract from the 1889 Address of the President of the Royal Geographical Society.*

THE CHRIST THE SON OF GOD.

A Life of our Lord and Saviour Jesus Christ.

BY THE ABBÉ CONSTANT FOUARD,

Honorary Cathedral Canon; Professor of the Faculty of Theology at Rouen, etc., etc.

Translated from the Fifth Edition, with the Author's sanction, by GEORGE F. X. GRIFFITH. With an Introduction by Cardinal Manning. In two volumes, with Maps. small 8vo, gilt top, $4.00. [In a few days.]

THE PHILOSOPHY OF FICTION IN LITERATURE.

BY DANIEL GREENLEAF THOMPSON,

Author of 'A System of Psychology,' 'The Problem of Evil,' etc., etc. 12mo, cloth, gilt top, $1.50.

*** Most of the recent abundant discussion of the art of fiction has been about details. Mr. Thompson treats the subject with philosophic thoroughness, inquiring into the principles of the art and into its scientific, moral, and esthetic value.

POLITICAL AMERICANISMS.

A Glossary of Terms and Phrases Current at Different Periods in American Politics.

By CHARLES LEDYARD NORTON.

12mo, ornamental cloth cover, $1.00.

THE LIFE OF Lord Stratford de Redcliffe, K.G.

BY STANLEY-LANE POOLE. (Popular Edition.) With three Portraits. Crown 8vo, $2.50.

*** The present edition is condensed from the Library Edition, published in two volumes in 1888, chiefly by the omission of the larger despatches and memoranda. While nothing of general interest has been sacrificed, reference must be made to the larger work for such detailed explanations and authenticating references as are necessarily excluded from a volume of this scope.

For sale by all booksellers. Sent on receipt of price, by the publishers

LONGMANS, GREEN & CO., 15 East 16th Street, New York.

A NEW EMERSON BOOK.

TALKS WITH RALPH WALDO EMERSON,

WITH A HITHERTO UNPUBLISHED PORTRAIT.

By CHARLES J. WOODBURY. 12mo, half white binding, gilt top, $1.25.

"No lover of Emerson can afford to overlook this book. He pervades it. The man himself is there."—*New York Sun.*

"Disciples of Emerson will welcome without reserve this new and very genuine addition to Emersonian literature."—*Boston Transcript.*

"The book is very hand omely made, and is daintily bound in red and white and gold."—*Louisville Courier-Journal.*

"No one who loves Emerson can afford to leave out of his library this charming and colorful picture of the dear old philosopher of Concord."—*Bookbuyer.*

"Nothing at all comparable with these 'Talks' has yet been published by Mr. Emerson's friends. Mr. Woodbury is the one man who has caught Emerson as Boswell caught Johnson."—*Chicago Interior.*

"It is a volume which every Emersonian will feel obliged to own. It takes us as near Emerson as any one ever got."—*Christian Union.*

"As helping to complete a just estimate of Emerson as a thinker, all around the horizon, Mr. Woodbury's volume is valuable."—*Literary World.*

THE LEADING PERIODICALS.

"To say that these are the most valuable periodicals published in the English language, is only to say what every reader knows. A man cannot keep abreast of the times, abreast of the current of historic research and review, of scientific achievement and discussion, of literary effort and criticism, of political movement and debate, of religious inquiry, progress, revision, and development, unless he is a careful reader of these publications."—*Buffalo Commercial.*

These are the only periodicals that issue no prospectus, prepare no programme, make no promises for stated articles. Each month they contain the best papers on the most important questions by the best writers. The reader is not kept waiting for months for the preparation of articles, but each month is supplied with timely papers on the living topics of the day.

Every reader must keep abreast of many subjects, be well up in current literature, be familiar with the progress of social questions, of matters of educational interest, of religious criticism, the most recent advances in science, politics, and art, know what is going on in distant countries; in a word, keep track of a multitude of subjects, each one requiring a lifetime to master. These Reviews give this knowledge at small expense and in convenient form.

These Reviews bring the reader into direct contact with the master minds of the day. The list of contributors includes every writer of eminence in Europe and America, and they afford the only means of coming in touch with the best thought of the time. They are indispensable to all who would keep abreast of modern progress, and who would be in harmony with the most progressive ideas.

"For examples of the best types of the most finished English now written as well as for the foremost thought the leading English reviews are looked to as preëminent. It has become the custom of the great thinkers and best writers in command of the English language to offer their ideas for publication in these magazines. With their mine of fresh and strong thought pertaining to every interest it would seem that every American might read them with great increase in breadth of thought, culture, and information."—*Public Opinion.*

VOL. LI.—NO. 1330. THURSDAY, DECEMBER 25, 1890. PRICE 10 CENTS

HARPER'S MAGAZINE.

JANUARY, 1891.

In this number CHARLES DUDLEY WARNER, in a paper of great practical value, describes **"The Outlook in Southern California."** Many illustrations of scenery and interesting objects in the fruit-growing regions of California accompany the paper. The very popular series of illustrated articles on **South America** is resumed by MR. CHILD in this number, giving his **"Impressions of Peru."** F. ANSTEY contributes an article on **"London Music Halls,"** which is illustrated from a number of drawings by JOSEPH PENNELL. In **"Another Chapter of My Memoirs,"** M. DE BLOWITZ tells how he became a journalist, and relates some interesting reminiscences of the Franco-Prussian War and the days of the Paris Commune. The chief place in fiction is given to the opening chapters of **Charles Egbert Craddock's** new novel, "In the 'Stranger People's' Country," illustrated by W. T. SMEDLEY. "At the 'Casa Napoleon'" is a story of **Life in the Spanish Quarter of New York City,** written by THOMAS A. JANVIER, and illustrated by SMEDLEY. "A Modern Legend" is a beautiful short story by VIDA D. SCUDDER. **"Saint Anthony—a Christmas Eve Ballad,"** by MRS. E. W. LATIMER, is accompanied by three striking illustrations from drawings by C. S. REINHART. Several other choice poems are included. The usual variety of subjects is discussed in the Editorial Departments, conducted by GEORGE WILLIAM CURTIS, WILLIAM DEAN HOWELLS, and CHARLES DUDLEY WARNER.

COLLEGE NEWS

IN THE

EVENING POST.

THE EVENING POST has for many years given much space to news from the colleges, and to editorial discussions and important correspondence on educational subjects. The system of special letters from the colleges, published once a week in this paper during several years last past, has met so cordial a reception among students and graduates as to justify its continuance and extension. This feature will appear throughout the coming college year in each Friday's edition of THE EVENING POST, and every means will be used to make these columns a trustworthy source of information on the current topics of educational work and student life. They will contain not only letters from correspondents who have access to the best sources of information in the leading institutions, but also special articles on the intellectual, social, and athletic activities of the college world.

Subscriptions will be received for Friday's edition of THE EVENING POST at $1.50 per year. Reduced rate for clubs. Address

THE EVENING POST, NEW YORK.

Littell's Living Age.

Jan. 1, 1891, THE LIVING AGE enters upon its 188th Volume.

It has met with constant commendation and success.

A WEEKLY MAGAZINE,

It gives more than
Three and a Quarter Thousand
double-column octavo pages of reading-matter yearly. It presents in an inexpensive form, considering its great amount of matter, with freshness, owing to its weekly issue, and with a completeness nowhere else attempted,

The best Essays, Reviews, Criticisms, Tales, Sketches of Travel and Discovery, Poetry, Scientific, Biographical, Historical, and Political Information, from the entire body of Foreign Periodical Literature.

It is therefore invaluable to every American reader, as the only satisfactorily fresh and COMPLETE compilation of an indispensable current literature—indispensable because it embraces the productions of the

ABLEST LIVING WRITERS

in all branches of Literature, Science, Politics, and Art.

OPINIONS.

"It is nearly half a century since the first volume of this sterling publication came from the press, and today it stands the most perfect publication of its kind in the world. There is but one LIVING AGE, though many have essayed imitations. While their intent has no doubt been worthy, they have lacked that rare discriminating judgment, that fineness of acumen, and that keen appreciation of what constitutes true excellence, which make LITTELL'S LIVING AGE the incomparable publication that it is."—*Christian at Work, New York.*

"It is indispensable to intelligent people in this busy day."—*New York Evangelist.*

"Certain it is that no other magazine can take its place in enabling the busy reader to keep up with current literature."—*Episcopal Recorder, Philadelphia.*

"It is incomparably the finest literary production of modern times. . . . It embraces within its scope the matured thoughts, on all subjects, of the greatest authors and ripest scholars in Europe."—*Herald and Presbyter, Cincinnati.*

"Biography, fiction, science, criticism, history, poetry, travels, whatever men are interested in, all are found here."—*The Watchman, Boston.*

"The readers miss very little that is important in the periodical domain."—*Boston Journal.*

"It may be truthfully and cordially said that it never offers a dry or valueless page."—*New York Tribune.*

"To read it is itself an education in the course of modern thought and literature."—*Buffalo Commercial Advertiser.*

"Coming weekly, it has a great advantage over the monthly magazines and reviews."—*San Francisco Chronicle.*

"For the amount of reading-matter contained, the subscription is extremely low."—*Christian Advocate, Nashville.*

"It contains nearly all the good literature of the time."—*The Churchman, New York.*

"For the man who tries to be truly conversant with the very best literature of this and other countries, it is indispensable."—*Central Baptist, St. Louis.*

"In it the reader finds all that is worth knowing in the realm of current literature."—*Canada Presbyterian, Toronto.*

Published WEEKLY at $8.00 a year, free of postage; or for $10.50, THE LIVING AGE and any one of the American $4 monthlies (or *Harper's Weekly* or *Bazar*) will be sent for a year, postpaid; or for $9.50, THE LIVING AGE and *Scribner's Magazine* or the *St. Nicholas.*

Rates for clubbing more than one other periodical with one copy of THE LIVING AGE will be sent on application.

Now is the time to subscribe, beginning with the New Year. Address, *LITTELL & CO., Boston.*

SILVER, BURDETT & CO.,

PUBLISHERS,

6 HANCOCK AVENUE, BOSTON.

History, Prophecy, and Gospel. A series of Expositions of the International S. S. Lessons for 1891. Edited by President ANDREWS of Brown University. Cloth, 500 pp. English 4to, elegantly printed, $1.75.

THE LEADING PERIODICALS.

As the time is drawing near for the revision of one's subscription list to current periodicals for another year, it will not be amiss to consider the claims of the various foreign reviews brought out in this country from the original sheets and at greatly reduced prices by the Leonard Scott Publication Company, 29 Park Row, New York. These reviews represent almost every distinct and important phase in the thought of the day, and from them one may be confident of getting a thoroughly comprehensive opinion of what is taking place in the world of discovery, science, art, literature, religion, and politics. Writers of recognized authority are called upon incessantly to give in their pages prompt, decisive, trustworthy analyses of all the great questions as they arise, and the reader who follows them from interval to interval is qualified—and he alone—to judge fairly and honestly of the merits of the many schemes nowadays unfolded for the possible material, intellectual, and moral advancement of humanity. Of these reviews the *Nineteenth Century*, the *Contemporary*, and the *Fortnightly* are the leaders in radical discussion, edited by straightforward, fearless men, who wield an immense influence over a host of cultivated readers. The *Westminster*, accepting the doctrines of the Spencerian philosophy, is yet liberal in tone and allows ample room to the opinions of dissidents, what ver their individual faith. The *Scottish Review* is conservative in the better sense of the word; its articles are marked by rare literary ability. Back of these sharpshooters stand the two heavy guns, the *Edinburgh* and the *Quarterly*, whose verdicts, not too long delayed, yet carefully considered, have the weight that properly belongs to profound logic and inexhaustible erudition. To these one must add, by way of representing the field of belles lettres, *Blackwood's Magazine*, as well edited now as at any period in its long and honorable existence, which appeals to the tastes of refined readers everywhere. These periodicals are offered at prices within the reach of nearly every person of literary tastes. Not to include at least one of them in a well-ordered subscription list would be to neglect a golden opportunity for the furtherance of individual culture.—*Beacon (Boston).*

Specimen copies free to all mentioning the *Nation.*

TERMS TO SUBSCRIBERS.

MONTHLY PUBLICATIONS: NINETEENTH CENTURY, CONTEMPORARY REVIEW, FORTNIGHTLY REVIEW, each $4.50 per year; any two to one address, $8.50 per year; all three to one address, $12.00; single copies, 40 cents. WESTMINSTER REVIEW, $4.00 per year; single copies, 40 cents. BLACKWOOD'S MAGAZINE, $3.00 per year; single copies 30 cents.

QUARTERLY PUBLICATIONS: EDINBURGH REVIEW, QUARTERLY REVIEW, SCOTTISH REVIEW, each $4.00 per year; any two to one address, $7.50; all three to one address, $10.50 per year; single copies, $1.25; BLACKWOOD'S and one quarterly, $6.50, with two $10.00, with all three $13.00 (to one address). SHAKESPEARIANA, $2.00 per year; single copies, 50 cents.

JAPANESE POTTERY,

WITH

NOTES,

DESCRIBING THE EMBLEMS, THOUGHTS, AND SUBJECTS, COMMON TO THE JAPANESE.

BY

JAMES L. BOWES,

Honorary Consul for Japan at Liverpool; Author of 'Japanese Marks and Seals,' 'Japanese Enamels,' and joint author of 'Keramic Art of Japan,' etc.

A history of Japanese Pottery, with a descriptive Catalogue of over 1,000 classified specimens in the Bowes Museum, with the whole of the Marks and Seals in facsimile. Copiously illustrated with appropriate subjects. This edition, limited to 500 copies, contains one colored and 15 autotype plates, with 300 engravings, and 500 Marks and Seals. Price £2 12s. 6d. net.

A SPECIAL EDITION, on Japanese paper, containing 67 plates, 23 of them in colors and gold; of the latter, some necessary to complete the sequence, are printed from stones used for "Keramic Art of Japan." This edition, limited to 150 copies, £6 6s. net.

ENGLISH PRESS NOTICES.

"In paper, type, illustrations, binding, and treatment, his volume is worthy of its subject and its author—we could scarcely give it higher praise."—*The Times.*

"Compiled regardless of cost . . . remarkably free from mistakes. For a long time to come will stand as the most sumptuous catalogue of the most extensive Japanese Collection in England, if not in the world."—*The Art Journal.*

"Not only one of the most beautiful, but one of the most useful and rational books upon Japanese work which has been published in England."—*Builder.*

"It must always remain an indispensable authority."—*The Academy.*

"Let us repeat our admiration for this beautiful and enticing volume."—*Saturday Review.*

"The volumes have not been surpassed in the history of amateurism. . . . the outcome of additional opportunities for debating about styles with native connoisseurs. As such it is unique."—*Architect.*

"Mr. Bowes gives another proof that he knows more about Japanese ware than any other European does. A book of first authority."—*Scotsman.*

"A text book to suggest new ideas to our designers. Mr. Bowes's latest book takes its place as a standard work in the English language."—*Liverpool Mercury.*

"Mr. Bowes's work is second only to his Collection in importance as a complete illustration of the beauty, diversity, and historic value of Japanese art."—*Pottery Gazette.*

"Mr. Bowes—'Japanese Bowes,' as he is called by reason of his Consulship and his wonderful Collection—takes high rank. A contribution of the utmost value to the collector and the student."—*Graphic.*

"So thoroughly well known in the Japanese world of art that it is with pleasure the connoisseur hears that he has added to his former popular and admirable works. Collectors outside Japan have done better than those on the spot. The Notes are positively delightful, and the reader revels in them."—*China Telegraph.*

"A work alike beautiful and interesting. Apart from its obvious qualities, I rejoice in all that tends to spread the knowledge and elevate further the justly high reputation of Japan in England."—THE RIGHT HON. WM. E. GLADSTONE.

"Mr. Bowes, who has already done more to spread an accurate knowledge of Japanese art than any living Englishman, has rendered another notable service to connoisseurs by this beautiful and scholarly book."—*Manchester Guardian.*

"Nowhere can be found such a complete collection of Masterpieces in pottery as that of which Mr. Bowes is the fortunate possessor, and which he describes with a profound knowledge of the subject. The volume is one in which connoisseurs will delight."—*St. James's Gazette.*

"Abounding in entertaining, curious, and instructive descriptions."—*Liverpool Courier.*

"They are as beautiful as they are diverse; the book, with its sumptuous reproductions, can scarcely fail to charm both the connoisseur and the student of Eastern art."—*Review of Reviews.*

"Invaluable for the purposes of identification and classification."—*Birmingham Post.*

"Mr. Bowes has had opportunities which very few possess. Of the utmost value to the student of Japanese pottery."—*Building News.*

"The great service which Mr. Bowes has rendered to the art of Japan is that he has distinguished between the false and the true."—*Liverpool Post.*

SIMPKIN, MARSHALL & CO., LONDON.
EDWARD HOWELL, LIVERPOOL.

The Nation.

NEW YORK, THURSDAY, DECEMBER 25, 1890.

The Week.

THE Republican Senate caucus agreed last week to a bill to add 12,000,000 ounces of silver bullion to the holdings of the Government, in addition to the regular purchase of 4,500,000 ounces per month. These extra purchases are to be made during the year 1891, but not more than 3,000,000 ounces of the extra 12,000,000 are to be purchased in any one month. For the bullion so bought legal-tender Treasury notes are to be issued. In addition to this, the bill provided that all national-bank notes hereafter retired shall be replaced by silver-bullion Treasury notes, if silver bullion is "offered" at the market price. If no silver bullion is offered at the market price, then the Secretary is to issue a corresponding amount of legal-tender Treasury notes without purchasing bullion. The Finance Committee on Tuesday reported the bill shorn of this latter provision. If the action of the caucus is expected to bind those who have hitherto stood manfully for sound principles of finance, then the outlook is melancholy indeed, since this bill is a step, and a long step, toward the silver standard. The free-coinage men can well afford to accept such a measure, since it hastens the time when the Treasury will be unable to keep silver on a par with gold, as the act of July 14, 1890, contemplates. The amount of silver to be purchased in the coming year, if this bill passes Congress, will be sixty-six million ounces. Now our entire production of silver last year, including that which was obtained from Mexican and Canadian ores smelted in our furnaces, was only 60,000,000 ounces; therefore the minimum amount to be purchased under this bill will require the purchase of 6,000,000 ounces of foreign silver. Very likely Austria will part with a portion of her stock if we bid high enough for it, as she is very anxious to adopt the gold standard. The bill is about as bad as it can be. There must be a remnant of believers in the gold standard left in the Senate. We hope that they will fight against this measure and vote against it at all hazards, even at the risk of a free-coinage bill afterwards.

The *American Grocer* asks us to explain how "we are going to get rid of gold" in case free coinage of silver is enacted by Congress. There is either great ingenuity or great simplicity in such a question. We have never said we were going to get rid of gold, but merely that gold would cease to be used as money and would become a commodity, just as it was during the war. We did not get rid of gold during that period. It was bought and sold freely. Anybody who wanted it and could pay for it, could get it without resort to foreign sources of supply. So it will be under free coinage of silver. Gold will no longer be money, because gold dollars will be more valuable than silver dollars. The transition from gold values to silver values will be the dead-point of danger, because it will be accompanied by a disastrous lock-up of money. The holders of gold—and this means all persons who have command of ready money—will seek to save the difference in value between gold and silver. They will not wait till the silver standard actually comes. They will take time by the forelock. They will anticipate the event by withdrawing their deposits from the banks, and putting them where they will not be subject to a shrinkage of value. It is not necessary to send gold abroad to secure this result, but the effect upon business will be the same. We have said that free coinage of silver means the demonetization of gold. If anybody thinks that gold can be demonetized without producing a fearful crisis in the grocery trade as well as in other trades, he will not need more than one experiment to convince him of his error.

The discussion of the Force Bill took on a new aspect on Friday when a vigorous speech against the measure was delivered by a Republican Senator, Mr. Stewart of Nevada. His argument was based on the impregnable position that the attempt to execute such a law "would be disastrous to both races," and especially to the negroes in whose behalf it is urged. He made a strong point by recalling the opposition to the Force Bill of 1875 on the part of Mr. Hoar, Gen. Garfield, Gen. Hawley, and other prominent Republicans then in the House. Gen. Hawley, he said, was very strenuous in his opposition, declaring that there could be no genuine protection of the negro in the South under legislative enactment. Mr. Stewart might also have quoted much more recent deliverances from the Connecticut Senator against the policy which underlies the present Force Bill. Gen. Hawley was always one of the most earnest opponents of a Federal School Law, such as was proposed in the "Bill to Promote Mendicancy"—a measure which, like the Force Bill, was urged on the ground that the interference of the Federal Government was needed by the negroes of the South. Gen. Hawley insisted that the negroes would fare better in the long run if the matter were left to the States.

The author of the McKinley Bill and his followers told us after the election that that measure would advance wages and make the country so prosperous that the Republican party would regain all the ground it had lost, and that the voters who had buried the new tariff under their execrations in November, would be led in sheer gratitude for the abounding prosperity heaped upon them to reverse their verdict in 1892, etc. Well, we have had nearly three months of McKinleyism, and what have we witnessed? Failures of woollen-mills of a very disastrous kind, reductions of wages in the iron trade, the closing of carpet-factories, and a general advance in the prices of goods, accompanied, of course, by a reduction of sales and great difficulty in making collections. The condition of trade has not been so bad since the period immediately following the panic of 1873. We do not affirm that the McKinley Bill has been the sole cause of the trouble, but it has contributed its quota. Certainly it has not prevented hard times, as McKinley and his deluded followers said that it would. If it has had any effect upon wages, it has reduced them. If it has had any effect upon wool-manufacturing, it has crippled it. We know that it has caused an advance in prices, because the dealers are advertising this fact in the newspapers and in circulars every day. That it has curtailed sales and shortened trade, every merchant's ledger will show.

The Jaeger Sanitary Woollen System Company, which has acquired great popularity in this country and an extensive sale of its underclothing, has issued a circular stating that it will be compelled after the first of January to advance the prices of its goods on account of the increased duties of the McKinley tariff. These knit goods are classified as wearing apparel, and the rates of duty under the old and the new tariff are as follows:

	Old rate.	New rate.
Value not over 30c. per lb.	33c. per lb. and 40 per cent.	49½c. per lb. and 60 per cent.
Value 30c. and not over 40c	38½c. per lb. and 40 per cent.	49½c. per lb. and 60 per cent.
Value 40c. and over	44c. per lb. and 50 per cent.	49½c. per lb. and 60 per cent.

A few examples will suffice to show how the McKinley Bill enhances the cost of keeping one's self warm in the wintry weather which is now upon us:

	Former price.	McKinley price.
Undershirts, winter quality:		
32 inches	$2.45	$3.00
34 "	2.55	3.15
36 "	2.65	3.30
40 "	2.85	3.65
50 "	3.75	4.75
Drawers, winter quality, A:		
28 inches in waist	2.50	3.00
30 " "	2.65	3.15
32 " "	2.75	3.30
40 " "	3.20	4.10
50 " "	4.25	5.00

These are examples, merely, object-lessons of the McKinley benefactions. The same advance runs through the whole list. And yet the Republican newspapers tell us that the advance of prices was a Democratic device to win votes, and that it has all disappeared since the election. Let anybody who thinks it has disappeared apply for one of the Jaeger catalogues, or let him try to buy one of the Jaeger undershirts after the first of January.

Why the manufacturers refuse orders at old prices, and why dealers must soon advance their prices for crockery and glassware, is clearly shown by an article in the Boston *Herald*, giving the figures of

a recent importation of table glassware of the medium kind, which arrived a few days ago from Antwerp. The foreign cost of this shipment was $1,775. Under the old tariff law the duty upon this importation would have been $742 30; under the present tariff law the duty assessed and paid was $1,065, of which $48 was for duty on the cost of the straw and cases required for the proper shipment of the goods. In other words, there was an increase in duty of $322.70, which is equivalent to a little more than 43 per cent. of the old duty. The reason for the advance in duties on glassware was the wish of Mr. McKinley to benefit the glass-manufacturers of his Congressional district, who wanted the price of foreign-made glassware advanced, for the purpose of enabling them to obtain higher prices for goods of their own manufacture.

Supt. Porter will hardly accuse the editor of *Nature* of partisanship in American affairs. *Nature* is recognized everywhere as the foremost scientific journal, of a general character, in the world. If Mr. Porter will read its leading editorial in the issue of November 27, he will find cold comfort in it; and his pain will doubtless be greatly increased by the total absence of anything that even he would call "frenzical" in the tone of the article. The editor is evidently moved much more by sorrow than by anger; the sorrow being largely due to the fact that, if our census is defective, "the whole world sustains a loss in being deprived of comparisons of many kinds with so remarkable a progress as that of the United States." The principal reason which drives *Nature* to the conclusion "that there is a huge blunder, or worse, somewhere," lies in the fact that the rate of increase for the total population shows a falling-off in spite of the vastly augmented immigration of the decade. The writer points out that even if we were to make the extreme allowance suggested by Mr. Porter, that the census of 1870 was deficient by 1,500,000, the increase of population between 1870 and 1880, after deducting the immigration figures, would still be 7,500,000; so that

> "we should still be confronted by the fact that, starting from a larger population and with a larger immigration, the excess of births over deaths in 1880-90 would [presumably] have been from 25 to 30 per cent. more than in the previous decade, or at least 9,500,000, whereas it appears to be under 7,000,000. The figures of the census of 1890 are, therefore, quite incredible."

And *Nature* does not omit to point out that the Superintendent of the Census in his defence fails to make any mention of the immigration statistics. By an American who is in the habit of reading *Nature*, its expressions of distrust in regard to our census, and of regret that "for purposes of comparison every census in the world is thrown out" by it, will be the more keenly felt on account of the abundant and generous recognition which *Nature* always accords to the work of the scientific departments of our Government. We do not believe that as adequate notice or as frequent praise of the work of the Coast Survey and similar American scientific enterprises is to be found in any American publication. The strictures of *Nature* are entitled to all the weight which is due to the criticism of a friend.

Mr. A. C. Richardson of Buffalo has conceived the idea of an improved blanket-ballot to take the place of the separate party ballots now required by the New York law. He arranges the names of all candidates in alphabetical order under each office, and places after each name an emblem or device to indicate the politics as well as the party name itself. Thus, he indicates all Republican candidates with a star and the name Republican, all Democratic candidates with an eagle and the name Democrat, all Prohibition candidates with a glass of water and the name Prohibition, and so on. Each voter is to mark with a cross the name of each candidate of his choice. In order to have this ballot adopted in place of the separate ballots, the law would have to be amended in several respects, and the long-standing provision against the use of any device or name to indicate the politics of the candidates would have to be repealed. If this were done, it might be as well to have the method of the Indiana law followed, which prints the names in party groups upon a blanket-ballot, and puts a device or name at the head of each group.

A bill making an appropriation for a proper topographical survey of the Territory of Alaska was reported in September by the House Committee on Military Affairs. This Territory contains 600,000 square miles. It has been in possession of the United States for twenty-three years, and yet it is a positive fact that little or nothing is known of the interior. The rivers have been ascended to a certain distance, and the sea-coast has been surveyed, but beyond this the United States Government is very ignorant of the nature and contents of the property; of its capacity as a field of production, nobody is able to speak. This is, to put the matter on the lowest ground, a discreditable state of things for a Power with an overflowing Treasury. The whole region should be surveyed and mapped, and its resources of every kind ascertained. The explorations hitherto made along the rivers have been very hasty and imperfect, and have little or no value either for the geographer, or farmer, or miner, or lumberman. The proposal in the House Bill 12,111 is to send a properly equipped party up the Yukon River to a central point, there establish a United States post, and thence run the explorations in every direction. One hundred thousand dollars is all that is asked for this purpose, and we sincerely hope it may be possible to pass the bill in this Congress, so that the work may be begun in the spring.

It is encouraging to see that nearly all the members of the Legislature to whom the City Reform Club sent its queries for opinions upon separate municipal elections, have felt the necessity of making some kind of a reply. Most of them, as was to have been expected, are against any change, but this does not mean that the outlook is hopeless. A similar inquiry, sent out a few years ago in regard to ballot-reform legislation, would have met with no more encouragement. Separate elections will not find many friends among the politicians until the interest of the people is attracted; after that the project will have all the support it needs. We trust that the Club will not let cold water from any source have the slightest effect in checking its exertions. It has taken hold of a most important reform, and it is certain to carry it to success if it will agitate without ceasing. An interesting fact about the recent election in Boston has just come to hand, which conclusively answers the plea that the voters cannot be aroused to sufficient interest in a municipal election which comes close upon the heels of a State or national election. The State and Congressional election in Boston was held on November 4, and the city election just five weeks later, yet there were only 330 less votes cast in the latter than there had been in the former. Commenting upon this fact, the Boston *Record* says:

> "This is remarkable, considering the dulness of the campaign. Under the old system of voting, with a campaign so uninteresting, such a vote would not have been possible. People will vote under the secret-ballot system for no other reason than that it is convenient."

We must not be too hard on the Mayor about "Paddy" Divver's elevation to the judicial bench for a term of ten years at a salary of $8,000. The people of this city at the last election gave him leave to do such things to any extent he might deem necessary and the law would allow. To expect men like the Tammany managers not to appoint men like Divver to high-salaried positions, and to expect men like Divver not to take them when they can get them, is to be very unreasonable. We do not say this sarcastically, or ironically, or humorously. We say it in all seriousness. There is no city or country in the world in which the class to which Mayor Grant and his colleagues belong would not do the same thing if they got a chance. There are tens of thousands of them now in London, Paris, Vienna, and Berlin eager for mayoralties and commissionerships and police magistrateships; and the sole reason they do not get them is that their decent and industrious fellow-citizens will not let them have them. They have, therefore, in lieu of them, to accept positions as laborers, keepers of beer saloons and gambling-houses and brothels, subject, however, to a good deal of persecution at the hands of the police and of public authorities generally. Moreover, Mayor Grant submitted the whole question of his fitness to make appointments to the voters of New York in November. Neither he nor his friends, we must do them the justice to say, practised any deception. He pointed to his record during his present term as a

sample of what his policy would be in the future, and that record was full of Divvers. His own career, too, as well as that of his leading supporters, was laid before the public with an accuracy which was never successfully questioned. In fact, in no fight with municipal evil-doers since the city got its first charter, was the issue submitted to the voters with such fulness, candor, and correctness as at the last election.

The responsibility for all this shame and damage really lies among the "highest order of citizenship the county affords"—the well-to-do, intelligent, and industrious class, 30,000 strong, who condemn Tammany's works and ways, but, knowing them well, stayed away from the polls on the 4th of November. Their reasons for this abstention would discredit the character and intelligence of an orator at an Anarchist meeting. Some were willing to see Grant made Mayor because they wanted a Democratic majority in Congress; some because they wanted a Democratic President in 1892; some because they disliked William R. Grace; others because they disliked "Tom" Platt; others because they disliked Father Ducey; others because they disliked ministers; others because they had never voted for a Democrat; others because they had fought in the war. One might search in vain the ratiocinative processes of the least political races of the world for a parallel to these modes of reaching the conclusion that Grant would do for the chief magistracy of a great commercial city. "Paddy" Divver, respectable brethren, is *your* man; so will "Eddie" Hagan be. These ornaments of the bench are the products of your logic and your conscience. Others like them are waiting their turn to share the good things you have provided for them.

Mayor Grant has, in a sheepish way, published some of the "testimonials" which "Paddy" Divver produced to support his application for the police justiceship. Of course, every one knows that the testimonials had nothing whatever to do with the appointment: all these arrangements are made beforehand. When "the deal" is closed, if the appointment is an unusually bad one, the appointee sallies out in search of references which will in some degree shield the party of the first part, and he never has any difficulty in getting them. There is nothing an average New York business man signs so readily as a testimonial, especially if he is approached in business hours. There is no name, however, of the half-dozen "Paddy" Divver succeeded in getting, except Recorder Smyth's, which is calculated to surprise the political observer. We must say that Mr. J. J. O'Donohue's rapturous delight in having an opportunity to recommend "Paddy" for a judicial office throws a curious back-light on the talk of him (Mr. O'Donohue) as a reform candidate for the Mayoralty in which some people indulged at one time. What is most diverting in the testimonials is the way some of them try to dignify "Paddy" Divver with titles. To Mr. F. B. Thurber he is "the Hon. Patrick Divver," to Recorder Smyth he is "Patrick Divver, Esq." We have no doubt whatever that "Fatty" Walsh could to-day get a testimonial signed by a score of eminent citizens, recommending him, under the style of "Pinguis Walsh, Esq.," or "the Hon. Pinguis Walsh," for any office he himself chose to select.

The Parnellites have suffered a heavy defeat at Kilkenny, Hennessy's majority being 2,527 to 1,356. This election was by general consent a crucial test of the relative strength of the two parties, and practically seals Parnell's fate as a leader. It is not likely, however, that he will in his present mood give up the fight. He will contests in other places, but his prestige is broken, and if he fights on, he will fight with steadily diminishing strength. Much of his talk continues to indicate a loss of mental balance. The election has been remarkable, as we said last week, as the first Irish election since the Union which had any practical bearing on politics—that is, which decided anything in which the Irish had a direct interest. The Clare election in 1829, which sent O'Connell to demand admission to the House of Commons in spite of his disqualification as a Catholic, had, it is true, important results, but few or none of O'Connell's supporters expected that it would have any such results when they ran him as a candidate. What they sought was to make a sensation in England, but by a stroke of unexpected good luck they precipitated Catholic emancipation. The Kilkenny election, on the other hand, has been fought out with the knowledge on both sides that the result would not only exert an important influence on the fortunes of Home Rule, but probably decide which English party should carry on Government in the next Parliament. With such tremendous issues at stake, the wonder is, considering the bellicose nature of the constituency, that there has not been more disorder.

The election may fairly be called the most important current event in the European world. The Continental press seems to take nearly as much interest in the crisis as the British press, but, as a general rule, is very hostile to Parnell. In fact, one has only to look at the European newspapers to-day to be astonished at the large place which the Irish question has taken in European politics. The English newspapers contain little beyond articles on Parnell and reports of the speeches of the two factions. In all this, it is but just to say, no paper appears, as a public journal, to greater advantage than the London *Times*. The editorial articles about the Irish are as furious and unfair as usual, but the reporting of all Irish meetings and speeches is a splendid example of first-class journalism — no burlesquing, no unfair summarizing, no ridicule. Every word and incident is given as fairly and fully as it might be done by stenographers hired by the Irish themselves. In fact, in the exclusion of editoral passions and prejudices from its news columns, the *Times* has probably rendered more service to journalism as a profession than any other newspaper in the world. Moreover, no man is denied a hearing in its columns, and a hearing, too, proportioned to his prominence or conspicuousness, no matter how much the editor hates or despises him. All this, which is now a tradition of long standing, of course only makes the part of the *Times* in the Pigott affair all the more inscrutable. It shows, however, what passionate hatred of the Irish at that time filled all the Unionist breasts, and how much the Unionists were willing to risk in order to discredit the Irish party in the House of Commons, and through them Gladstone. Whatever now happens to Parnell, he must always have the credit of having given the Irish question its present prominence, and made an Irish election an event of world-wide interest, and he did it by forming the Irish vote in the House into a solid phalanx which could not be shaken or disorganized, and which threw itself on one side or the other in English politics with a weight which broke up the old parties, and has, in fact, for the present, made the maintenance of the old party lines impossible

---

The controversy over the treatment of the Jews in Russia which has been raging in England with considerable virulence, has brought the leading English Rabbi, Mr. Adler, into the field with some new facts. In answer to the charge that the Jews eat up the Russian peasantry by usurious loans, he says that usury and usurers flourish in the greatest degree in those *gubernia* in which Jews are not permitted to dwell, and that in those places usurers are more rapacious than the Jewish money-lenders in the pale of settlement where, owing to competition, the rate of interest charged is far less than in Russia proper. He further says that in the provinces outside the pale of Jewish settlement, where there are no Jewish money-lenders, the usurers are retired shopkeepers, retired or dismissed officials, and sometimes even clergymen. He adds that the trade of money-lending is disappearing among the Jews in those countries in which other trades and professions are open to them; that they engage in it so largely in Russia because they are not allowed to do anything else. But behind the controversy there lies the notorious fact that nothing in any country keeps poor men from borrowing at usurious rates except the absence of security for the loan. In all countries of small peasant proprietors and leaseholders, the usurer follows the farmer, and keeps him in his clutches, because the farmer, unlike most other poor men, has something to pledge. The more ignorant or impulsive or drunken the farmer is, the more the usurer preys on him. For these reasons the money-lender of any race is a greater affliction in Russia than elsewhere—that is, the Russian peasant is probably the most ignorant and thoughtless borrower in the world.

MONEY AND BANKING.

THE return of a certain amount of hoarded gold to the bank deposits, as disclosed in the last weekly statement, is at once a sign and a cause of returning confidence. The opinion has gained ground in the last few days that there will be no more silver legislation by the present Congress, although a very ominous bill has issued from the Republican Senate caucus. It is too early to affirm anything as to the fate of this measure. The business community evidently thinks that it will not pass, and *à fortiori* that a free-silver-coinage bill will not pass. If this opinion is correct, it betokens that Congressmen have found out at last that it is not want of money, but want of confidence, that has throttled trade during the past few weeks. We showed last week from official statistics how small a proportion of the trade of the country is carried on by means of money, and how large a proportion by means of credit instruments—the ratio being about 1 to 9—and how much more potent for producing mischief is a loss of credit than a shortage of currency, if any such shortage could be shown to exist. Probably these facts have found lodgment in the minds of some influential persons suffering from the silver craze. At all events, the craze seems to be less rampant now than it was when Congress came together.

The common opinion now is, that Congress will do nothing and let the crisis work itself out. This is not the best thing it can do, but it is the best that it is likely to do. Congress might repeal the Silver Bill and improve the national-banking system so that the latter might expand with the needs of the community instead of shrinking and tightening as the country grows. These two measures would restore confidence in a wonderful degree. They would operate upon the nine parts of credit in our commercial system, and then the one part of money would take care of itself. But if Congress will do neither of these things, its best course is to do nothing.

Mr. Edward Atkinson has advanced a plan, in the columns of *Bradstreet's*, for providing an elastic circulating medium through bank agency. He proposes, in brief, to make a new currency of clearing-house certificates—the certificates to be issued in small denominations by a group of banks in specified districts having a large aggregate capital, and to be based upon securities approved by a clearing-house committee, substantially as such certificates of large denominations are issued and retired by the New York Clearing-house at the present time. The details are worked out scientifically, but there is a serious objection, as we conceive, to such a plan, in the fact that it adds another kind of currency to the many and diverse forms now in use. We have at the present time gold coin, standard silver dollars, gold certificates, silver certificates, greenbacks, national-bank notes, and Treasury notes based on silver bullion. Instead of adding a new variety, we ought to eliminate all of these except gold and national-bank notes, although gold certificates might properly be retained for convenience in settling balances between different banks and different cities. The heterogeneousness of the currency is a bad education, teaching the people all the time that anything the Government chooses to put out is good money. The efforts of public teachers ought to be directed to simplifying the currency, not to making it more complex. Mr. Atkinson has rendered good service in this particular in time past.

The national-banking system, as it exists, if not the best banking system in the world, is certainly the best for us. It is better for us than any other could be, because we understand it, are used to it, have become familiar with all its strong and weak points, and can predict what will happen in reference to it in any given case. We now have statistics which give us a law of averages as certain as the actuaries' tables upon which life insurance is founded. We know how many banks in the system will fail in a given number of years, and how their assets will turn out. We have all the information that we ever can have upon which to base a system of bank-note issues which shall be safe and beneficial, and which shall answer the requirements of seed-time and harvest.

The discussions of the past few years, since the bond security of the national-bank note began to grow scarce and the notes themselves began to dwindle, have established in the minds of the best thinkers a belief, amounting to a conviction, that it is entirely feasible to save the system even after all the bonds shall have been paid. The only difficulty now is to get a public sentiment favorable to the banks. It may be said upon this subject with entire truth that where there is a will there is a way. The desire to save the system does not now exist, or, at all events, does not show itself in Congress. Instead of it we have all sorts of crazy projects for issuing greenbacks on landed security, or on country produce stored in Government warehouses, or on nothing at all and for no explainable purpose.

Perhaps it will be necessary to have a recurrence of cramps like the present to direct the public mind to this important subject, and to put the subject in the right light. Of course the first and indispensable thing is to have the standard of value settled. So long as there is doubt whether it is to be silver or gold, no system of banking will serve the public well We shall have cramps and side stitches regularly, and perhaps panics and crashes to boot, until silver is exorcised. When that deliverance is effected, the question will come up, How shall we devise a currency that shall expand when expansion is needful, and contract when contraction is needful, and be at par with gold at all times? There will never be found or imagined a better system than the one we now have, provided only that security for the note issues can be devised to take the place of the vanishing bonds. Such security can be found unquestionably without going into the doubtful field of State and city bonds, or the more doubtful field of the securities of private corporations. The bill prepared by ex-Comptroller Knox last year and introduced by Senator Sherman was a safe plan. The only questionable feature of it was the admission of silver bullion into the list of securities. Unless silver is to be the monetary standard, there is no more reason for accepting that metal as a basis for bank-note issues than for accepting lead, copper, or zinc. That feature of Mr. Knox's bill was probably a concession to popular prejudice. Any plan for saving the national banking system ought to be sound from the beginning and sound to the core.

An alternative to the national-bank system would be the Scotch system of large banks in the cities with branches in the smaller towns. Of this system we had examples in the old State banks of Ohio and Indiana. In the event that the national system dies out with the disappearance of the bond security (as it will if Congress does nothing affirmatively to save it), that system would most likely grow up in place of it. The necessity of having a bank-note issue of some sort would eventually lead to the repeal of the discriminating tax on State bank-notes. But such a step is to be deprecated for many reasons. The nation has been familiarized with the existing system. It has proved its soundness. A quarter of a century at least would be required to gain equal experience of any other. No other would possess the incalculable advantage of uniformity in all parts of the country. All attempts to make an elastic and serviceable currency to be operated by Government officers, whether greenbacks, or interconvertible bonds, or any mixture of the two, will fail miserably. The advantage of bank-notes, provided they be actually and certainly redeemable (and no others should ever be thought of), is that they move automatically, thermometrically, and instantaneously. A money spasm might come and go before the interconvertible bond-greenback apparatus could get itself in motion at all.

CHEAP MONEY, DEAR GOODS, AND THE "DEBTOR CLASS."

THE discussion of the McKinley Bill and experience of the McKinley Act have fixed the attention of the American people in a very wholesome—and, as the elections proved, a very fruitful—way upon the nature of the effects produced by legislation directed towards the raising of prices. It would be a fortunate thing for the country if the lesson thus learned could be made useful in another direction. If the great mass of the people could be made to understand how directly opposed to their interests a descent to the silver standard would be, the specious arguments of those who advocate measures leading to such a step would be of no avail. The case of high tariff is fairly well understood, thanks to the campaign of education begun in December, 1887, and in the plain man's mind that case stands thus: Higher tariff means higher prices for protected articles; and if I am not on the list of the favored, it means no higher income for me; hence it is to me an instrument of oppression.

Shall we have time for a campaign of education on the silver issue? On the answer to

JOHN BROWN'S FAMILY COMPACT.

To the Editor of The Nation:

Sir: I observe in your issue of December 4 a reference to an article in the December number of the *Andover Review*, entitled "John Brown, Practical Shepherd," attending to disprove the early origin of John Brown's plan to attack slavery by force of arms as set forth in my 'Life and Letters of John Brown.' Having sent a copy of this article to John Brown, jr., I received a reply from which I will thank you to insert the following extracts:

"It is, of course, impossible for me to say when such idea and plan first entered his [John Brown's] mind and became a purpose; but I can say with certainty that he first informed his family that he entertained such purpose while we were yet living in Franklin, O. (now called Kent), and before he went to Virginia, in 1840, to survey the lands which had been donated by Arthur Tappan to Oberlin College; and this was certainly as early as 1839. The place and the circumstances where he first informed us of that purpose are as perfectly in my memory as any other event in my life. Father, mother, Jason, Owen, and I were, late in the evening, seated around the fire in the open fire-place of the kitchen, in the old Haymaker house where we then lived; and there he first informed us of his determination to make war on slavery—not such war as Mr. Garrison informs us 'was equally the purpose of the non-resistant abolitionists,' but war by force and arms. He said that he had long entertained such a purpose—that he believed it his duty to devote his life, if need be, to this object, which he made us fully to understand. After spending considerable time in setting forth in most impressive language the hopeless condition of the slave, he asked who of us were willing to make common cause with him in doing all in our power to 'break the jaws of the wicked and pluck the spoil out of his teeth'? Naming each of us in succession, 'Are you, Marv, John, Jason, and Owen'? Receiving an affirmative answer from each, he kneeled in prayer, and all did the same. This posture in prayer impressed me greatly as it was the first time I had ever known him to assume it. After prayer he asked us to raise our right hands, and he then administered to us an oath, the exact terms of which I cannot recall, but in substance it bound us to secrecy and devotion to the purpose of fighting slavery by force and arms to the extent of our ability. According to Jason's recollections, Mr. Fayette, a colored theological student at Western Reserve College (Hudson, Ohio), was with us at the time; but of this I am not certain. He was often at our house. As to the others, I know they were present, and if my affidavit could add any strength to my statement I am ready to make it any time. At that time Jason was about sixteen years old, Owen, between fourteen and fifteen; and I was between eighteen and nineteen years of age.

"If there had not afterwards been an opening for slavery in Kansas, it is possible his attack upon it in the States would have been longer delayed; but he was not the man to abandon the most deeply cherished purpose of his life. He would have played his hand even if he played it alone."

I may add that these statements were made to me, some years before the publication of my book, by John Br[illegible] similar ones by Mrs. Mary Brown [illegible] Brown.

[illegible] ries [illegible] ng shi[illegible] peting railways fr[illegible] n [illegible] body or a com[illegible] lor Fitzge[illegible] keeping of an a[illegible] e is able, Mr[illegible] Maj. Washin[illegible] should be expect[illegible] ort next Mrs. Wash[illegible] of traffic too small [illegible] ed upon me to ask [illegible] en the cloth was [illegible] d thanks him [illegible] said: is doubtful. [illegible] o the influence of "argy."

Nor s[illegible] understood the blessings of a high [illegible], but whose opposition to the McKinley Act will cease when they come to know it better. Unfortunately for this hope, the act is so full of surprises, of new and startling invasions of the familiar order of things, that by the time indignation over one feature has subsided, it flashes out again at some other unexpected freak of the taxing power, and one may doubt if women are at all likely to be reconciled to it in a hurry.

Take, for instance, the wearing-apparel clause in the free list. Under the old law, as construed in Astor v. Merritt, 111 U. S. 202, Americans returning from abroad could bring in for their own use free of duty all the clothes they were likely to need for some time to come; but this very sensible recognition of the importance of dress in feminine eyes was, to the austere and frivolity-hating McKinley, to connive at a taking of the accursed thing, and in future the exemption "shall not be held to include articles not actually in use and necessary and appropriate for the use of such persons *for the purposes of their journey* and present comfort and convenience." Certainly a majority of the many thousand Americans who cross the Atlantic from time to time are women, and most of the men (such is the domestic character of our people) are accompanied by their womenfolk. Nine-tenths of all the tourists, probably, are interested directly or indirectly in bringing over the productions of the dress-makers and milliners of Paris and London. Imagine the heart-rending scenes at the wharves next autumn, when the returning tide of travel is at its height—the lamentations, the lacerated feelings, the rage, the horrors of the women, and the "curses not loud but deep" of the men, when these treasures from the Bon Marché and the Louvre, from Louise, and Redfern, and Marshal and Snelgrove, are unpacked, tumbled about, and taxed by the obdurate and McKinley-hearted inspector. Imagine what it will be the following autumn, when the women come back who have been trying to make up, by shopping abroad, for two years of McKinley prices at home; and just before election, too!

It will not do for the fashion-scorning McKinley to say that these are the rich and pampered, who ought of right to be taxed for the benefit of our starving monopolists and necessitous but deserving Trusts. The habit of foreign travel is national, and people in modest circumstances form the majority of those who go abroad as well as of those who stay at home. Whatever the length of the purse, the love of foreign fashions is the same, and the school-teacher who is mulcted on her few new dresses will hate McKinley even more than the millionairess.

Then there is another thing that appeals most strongly to women — embroidery and other decorations for churches; articles which the Old World can as yet supply much better than the New. Under the liberal construction of the old law, the church "regalia" of the free list included almost everything for the adornment of a church or for use in the services, but now, filled evidently with contempt for everything bordering on ritualism, the masculine and high-priced McKinley has strictly limited "regalia" to "such insignia of rank or office or emblems as may be worn upon the person or borne in the hand during public exercises of the society or institution." Armed with new powers, the Custom-house will henceforth lay its profane hand on the altar-cloths, the dosels, the frontels, the antependia, the stained glass, and all that gratifies the religious and artistic senses. Imagine the feelings of the parish guild when the English altar-cloth, bought with the fruits of so much pious toil and consecrated to the highest uses, is made to pay tribute to Cæsar! Imagine the guild's male relatives voting to continue this iconoclasm!

"Whether the fair one sinner it or saint it," McKinley is equally her foe; but, to judge by last month's work at least, the contest would seem to be one in which the women would not come off second best.

Charles C. Binney.

Philadelphia, December 18, 1890.

CENSUS-TAKING IN GERMANY.

To the Editor of The Nation:

Sir: It may not be uninteresting to some of your readers to learn the manner in which the German Government has so systematically and simultaneously conducted its census during the last twelve hours. And it may also afford some amusement to observers of the late American census, to make comparisons between the two. That the truth, whole and intact, can be ascertained concerning some forty-odd millions in this short space of time may seem an impossibility. Yet such is the task which these lovers of statistics are understood to have accomplished between 12 P. M. November 30, and 12 A. M. December 1.

The Government asked persons willingly and without hope of compensation to collect the facts necessary for the compilation of the census. Each single house was expected to furnish its volunteer for the task, and it was his duty to see that every question was carefully answered. Two days before the close of November the census questions were handed to every member of the household. Between midnight of November 30 and noon of December 1, these questions were to be answered in writing, and soon after twelve A. M. of December 1 they were to be collected and confided to the several appointed officials in the different districts. Such was the programme for ascertaining the exact number of persons, irrespective of nationality, living in Germany in the twelve hours already named.

The following questions were asked:

Document A had especial reference to the resident inhabitant, and an attachment dealt particularly with the infants, concerning whom the inquisitiveness was exceedingly pointed. The parent was expected to tell whether the child had been nourished by its mother's milk or by a nurse or by the milk of animals, and since when the child had received other nourishment than milk.

Next came a form of questions headed B, with reference to the house, the number of rooms, the number of stories, what windows faced the street, what rooms were heated in winter or not, and other questions of a like order. Attached to this paper were queries as to the movements of the family from house to house during its residence in Berlin.

The religious views of the people were considered especially essential to perfect the record. The citizen was carefully instructed not to answer the question, "What is your religion?" by the simple answer, "Evangelical, Catholic," etc., but to state precisely his religious principles. The Government desires to know whether one belongs to the old or the separated Lutherans, to the Baptists, the Presbyterians, the Methodists, as well as the Jewish Church; but there was left no alternative for the atheist—at least, none but religious answers were called for. Some comment is made upon this rigid questioning concerning religious convictions as an attempt on the part of the Government to learn about the anti-Semitic tendencies in Germany.

The answers called for concerning those members of the family occupied with military service were not remarkably stringent. Yet if a member of a household should be in the marine or military service, it was necessary to

Italian radical Republican, self-exiled and naturalized in France from hatred of the monarchy and the Piedmontese, sent 100,000 francs for the support of the Radical candidates and to break up the Triple Alliance. When one knows the intense jealousy that the Italian feels of any foreign interference and even criticism of the affairs of his country, he can easily imagine the rage that burst out on the publication of Cernuschi's letter. The Radicals were defeated even in Milan, which no one dreamed of being possible, and Cavallotti, their chief, who was at the head of the poll last election, came next the foot of it this time, and three Government candidates were elected. Venice went almost solid for the Government. Rome elected its candidates, and the minority candidate alone was carried by the Opposition, consisting of all the discontented, with the addition of the Jews, he being a Jew. Naples gave a majority of official deputies; and out of nearly 150 Radical candidates, only about 40 have been sent to Montecitorio, about a dozen of the most prominent having been defeated, with Napodano, an ultra-Conservative late deputy. Bonghi of the *Perseveranza* came in at the foot of his list. In fact, it has been the minority representation which has been the saving of many of the Radicals and some of the Conservatives who are elected, the elections being by the *scrutin de liste*, and no one being allowed to vote for the full number of deputies for the circumscription. Thus in Rome, in the first district there are five deputies, and if five names are contained on any ticket, the last is struck out when the votes are counted, the minority getting the fifth. In this way Barzilai came in for the minority in Rome, while but for this provision he would have had no chance of election. At Palermo, which is the district of Crispi, he ran ahead of his ticket three thousand votes, and he was elected in three or four other localities in Sicily. At Forlì, which is one of the foci of radicalism, Fortis, one of the late deputies and a warm personal friend of Crispi, and lately his Under Secretary for the Interior, was excommunicated by his party, and came in at the head of the list by a large advance; and, generally, the men who had made themselves prominent by their attacks on Crispi in the Chamber lost heavily on their vote, even if returned. This trims the plumage of many elected deputies.

If any hope was entertained of seeing the Triple Alliance dissolved in 1892 by any interested party, it may now be dismissed, and we may anticipate a steady pressure, probably increased by new adhesions to the Alliance, in favor of peace in Europe, or, what is always the possible alternative, the sudden precipitation of hostilities to anticipate the further strengthening of it. The Vatican, too, must now be convinced of the futility of making war on a minister who has the immense majority of Italians in his favor, and on whom its hostility has not had the least effect. If Crispi were a younger man, and not so hardened as he is to the vicissitudes of political life, there might be some apprehension that his majority would run away with him and carry him into measures which would cause a revolt; but he has been toughened by years of exile and opposition, with attacks on his personal character such as few Italians have had to endure. He does not hide his republican convictions, though he regards the House of Savoy as the strongest bond of Italian unity in the present stage of the national development; and he has been in the Radical ranks long enough to see that a Radical ascendency would mean the introduction of chaos in the Government, and that to govern with a Radical majority would be impossible, not merely on account of the country being in general of conservative inclinations, but because the Radicals could not unite in office. His evolution from the extreme Left, where I saw him for the first time in the Chamber on the wild day of the Dogali discussion, the only calm and self-possessed member in that sector of the Chamber, to his present position among the moderates and supported in his measures by most of the sound intellect of Italy, is due to the fact that his experience had taught him that it was a hopeless undertaking to attempt to organize the Radicals. There is a certain tendency in a portion of the Italian population, and especially in that part of it which has been so effective in the revolutionary stage of the making of Italy, to revolt against discipline and exalt individuality and refractoriness as virtues of the highest quality; and this temper, bred in the period of arbitrary government, breaking out into constant revolt and conspiracy, has been prolonged in its existence into a time when it has ceased to be a civic virtue, and is now in the service of the Radical party—a force grown into a disease. Crispi was, till the unity of Italy was attained, one of these revolters, and the habits and associations of forty years (for he began in 1848) do not easily release a man. Nothing better shows his force of character than this evolution in politics, accomplished in the face of hostility of every kind, and the feat of winning the enthusiastic confidence of the entire nation, in spite, too, of sectional animosities which it was supposed would always prevent a Sicilian and a Piedmontese working in harmony in the Cabinet. Bismarck's success was far easier, for Crispi had not only the country to win over, but the King, who looked on this Sicilian firebrand with a certain apprehension, due to his former political associations; and I remember that a diplomatic friend said to me when there was first question of his coming into the Ministry, four or five years ago, that, speaking to the King on the subject and intimating that Crispi might be an unwelcome Minister, the King replied, "We had better have him with us than against us." I believe it is a matter of common knowledge that Crispi now enjoys the confidence of the sovereign completely. The elections have shown that he has won that of the country in all sections. Bismarck governed a king, and Crispi governs a country. X

Correspondence.

SO MUCH THE BETTER FOR THE ART.

To the Editor of The Nation:

Sir: Will you kindly correct the statement, on page 464 of the *Nation*, made by your reviewer, that I used photos for the drawings in 'From Charing Cross to St. Paul's'? The drawings were made, every line of them, as Mr. McCarthy says, "on the spot," in the midst of a London crowd, without any photographic aids whatever.

Your respectfully, Joseph Pennell.

The Art Club of Philadelphia, Dec. 16, 1890.

[We hasten to apologize for what proves to have been a rash judgment. It seemed incredible to us that drawings so elaborate could have been done under the conditions indicated by Mr. McCarthy. That they were so done proves that Mr. Pennell is even more clever as an artist than we thought him.—Ed. Nation.]

THE WASHINGTON WILLS.

To the Editor of The Nation:

Sir: I must point out an error in my introduction to the old Washington Wills (*Nation*, December 18). The power of attorney is obviously not "signed by the widow of Col. John Washington," but of "Capt." John Washington. This was probably the son of the immigrant John; for though both of the immigrants had sons named John, it will be seen by Lawrence's will that his cousin John was living in Stafford County. I have seen no account of Col. John's second son, of whom we now learn that his wife was named Ann; also that he died about the close of 1697, his children being remembered (as will be observed) in the will of Lawrence, who was probably his half-brother. The title given him, "Captain," suggests that he may be referred to in the following, sent by Mr. I. J. Greenwood to the *N. E. Hist. and Gen. Register*, Jan., 1890: "1686, Aug. 2. John Washington, master of the sloop *Two Sisters*, having imported some brandy which had not been landed in England, had informa lodged against him in Co. of Adm. for viola[illegible] of navigation laws."—Col. Doc. of N. Y. xxxiv. p. 40.

Moncure D. Conway.

New York, December 18, 1890.

GRACE AT WASHINGTON'S TABLE.

To the Editor of The Nation:

Sir: It gives me pleasure to be able to throw some light upon the subject of Washington's custom in the matter of saying grace at table, about which Mr. Moncure D. Conway and "S. C. C." are at odds. The former, in a letter to the *Nation* (December 12, 1890), expresses doubt as to the story told by the Rev. E. C. McGuire in his 'Religious Opinions and Character of Washington' (1836), that Washington once asked a blessing at table when a clergyman was present. That story is true. The clergyman was the Rev. William McWhir, who at one time had the charge of a school at Alexandria of which Washington was a trustee. Dr. McWhir had, as pupils at his school, two nephews of Washington, about whom he carried on a correspondence with the General. One of the letters of the General to the Doctor is printed in full in Sparks's 'Writings of Washington,' vol. x., p. 37. Dr. McWhir was my great step-grandfather, having married my grandmother, Mary Baker, the widow of Col. John Baker, a Revolutionary soldier, of Liberty County, in this State. He visited Washington at Mount Vernon frequently, and wrote an account of the incidents mentioned by McGuire. Here is an extract from it:

"A few days after Gen. Wa[illegible] silver stand[illegible] to Mt. Vernon, I visited him [illegible]ents of those who ac[illegible] a countryman of mine, Col. [illegible]g to such a step would [illegible] Washington's aids. At the [illegible] ington sat at the head, and [illegible] case of high tariff is [illegible] at the foot; the General sat[illegible]d, thanks to the cam[illegible]ington on her left. He calle[illegible]gun in December, 1887, [illegible] a blessing before meat. [illegible] mind that case [illegible]self. Mrs. Washington, with a sm[illegible]eans higher [illegible] 'My dear, you forgot that you had a cl[illegible] man dining with you to-day.' With equan[illegible]m not [illegible] pleasantness he replied: 'My dear, I wish clergymen, and all men, to know that I am not a *graceless* man.'"

Respectfully, Wm. Harden,
Librarian Ga. Hist. Society.

Savannah, Ga., December 13, 1890.

that of any man in the House, and Mr. Sexton. It looks as if the majority were not absolutely certain of their ground in Ireland. That illustrates the vice of the situation hitherto existing in Ireland, under which one man has had almost the whole representation of the country in his pocket. It may be hoped that current events will lead to a radical change. Also, it would almost seem to be a trait of Irish character that long trust in and obedience to a leader should constrain able and courageous men to permit themselves to be dominated by him even when they are attacking him.

Meanwhile, the proposal to open a new negotiation with Mr. Gladstone, in order to see whether his views are satisfactory, has excited some jealousy among Liberals. The least objection is that there is no ground or occasion for such a demand at present. On the one hand, there is no shadow of ground for insinuating that Mr. Gladstone is disposed to pare down the principles of the bill of 1886. Secondly, Mr. Parnell was satisfied with Mr. Gladstone's views as expressed at Hawarden, whatever they were. That cannot be denied. Thirdly, on the points mentioned there is really no room for serious disagreement. The Tories are in the meantime taking in hand the settlement of the land question, with the aid of Nationalist votes. The judiciary would certainly be placed under the Irish Government, and the constabulary, or civic forces, the same as in this island, would be given to the local authorities. But what Liberals object to is this, that when Mr. Gladstone was obliged to say that if Mr. Parnell was retained, he could not lead the party to victory with a policy of home rule, the Irish party, at Mr. Parnell's instance, reply by asking him for fresh assurances. It was freely said Saturday that he ought to decline to negotiate. But if there is one matter more than another in which his party may trust Mr. Gladstone, it is a matter of this kind. Even his desire to settle the Irish question is not greater than his diplomatic skill, and that is not greater than his courage and tenacity. The honor of the Liberal party is very safe in his hands.

While Mr. Gladstone was unquestionably in hearty sympathy with the verdict of the country on Mr. Parnell's leadership, to which he gave expression—even slander has never suggested the contrary—I have no doubt that he regards the loss of Mr. Parnell as a serious misfortune. While the latter now seeks to save himself by appealing to the extreme and unreasonable prejudices of a portion of his countrymen, he was, on his own showing, the advocate of a moderate and practicable settlement. He was at once the most reasonable and by far the most authoritative person with whom the Liberal leaders could treat. Therefore his loss is great. But if any English Liberals at first regretted the necessity of his disappearance, they are thoroughly alienated and revolted by his betrayal of confidence and his attempt to sacrifice his country to his personal pride.

The Tories are naturally jubilant. And in peting railways from Lord Salisbury, who body or a comjority "a base pack," down keeping of an a is visible an indecent effort should be expect[ort] to Mr. Parnell for the of traffic too small[he] cause of Ireland. But is doubtful. [roubles] good may be ex[ome] good in any case; much

Nor [Irish] majority stand firm to their [ow]n. In the first place, the confidence of the people of this country in the Irish policy of Mr. Gladstone, and in his leadership generally, will be increased and cemented, and many doubts of a kind to which I have already referred will be removed. Secondly, if the Irish majority remains firm and is supported, as there seems good reason to hope, by their countrymen, the Irish Parliamentary party will be reconstructed on a new basis—absolutely independent of and separate from English parties, as it must continue to be, but representing Irish constituencies more truly than when so many were nominated by Mr. Parnell; reconstituted in the daylight, on a basis which the British elector can see round, and with no associations that are otherwise than honorable and patriotic.

The almost continual absence of the Nationalist party in a committee-room up stairs when the House was occupied chiefly with Irish measures, and the concentration of all interest on these proceedings, have enabled the Government to make extraordinary progress with their bills. The programme of work to be done before Christmas is already finished, and the House will probably rise on Monday, after sitting less than a fortnight. The bills dealt with in this short period have been important; but space does not permit me to comment upon them in this letter. C. D.

ANOTHER VIEW OF THE ITALIAN ELECTIONS.

ROME, November 28, 1890.

THE recent Italian general elections have turned out a surprise even to those who had most clearly measured the moral value of the position of the President of the Council, and were best acquainted with the tone of feeling among the Italian population. The most favorable estimate I had heard of the probable majority the Government could depend on, was about 100. The Radicals had been incessant in their attacks on Crispi for what they stigmatized as his servility towards Austria in the matter of the repression of the "Fro Patria," a redentist society in Trieste, and simi[lar] measures, and hatred of Austria has [bee]n the red rag in the eyes of all ardent Ital[ians]; so that when the Prime Minister, in his Florence speech, boldly declared his faith in the *entente* with the hereditary enemy, and his determination to repress all demonstration of hostility to the alliance with her, and dismissed the Finance Minister in an exceptionally summary manner on account of his having taken part in a redentist banquet where a toast was offered of a tone strongly hostile to the Austrian Government, there was a very general feeling that the public opinion would be seriously affected by this attitude. The ultra-Conservatives were opposed to him from an apprehension of his dictatorial tendencies, and on every side the general depression of business and the heavy expenses of the Government were expected to favor an opposition of any kind. And all the hostility was for Crispi personally, none of the other ministers being called in question—it was Crispi against the field.

The result has been to show that the Italian constituencies have justified the opinion that there is a strong fund of common sense in the nation; that the people like a firm Government, and that the Triple Alliance is founded on the deliberate preference of the nation, for Crispi had in his Florence speech distinctly indicated that he meant to renew the Triple Alliance if he remained in power, and while he promised to impose no new taxes, he held out no hope that the present burthens necessary to enable the nation to fulfil the obligations the Alliance imposed on it, would be removed. The Radical, and even a portion of the Conservative, organs attacked him as if he had proclaimed himself dictator, and there were not wanting sincere friends who apprehended disaster from his bold manner of grasping a thorny problem.

It is now demonstrated that Crispi had correctly estimated the character of the Italian people, who had not been blinded by the appeals to momentary interests, and had correctly calculated the national advantage deriving from the Triple Alliance. Besides the hazards from the pending question of national policy and economy, Crispi had the double disadvantage of his former connection with the Radicals and withdrawal from them in the course of his official headship. This had enraged them to the highest degree, and their denunciations of him as a time-server and turncoat were only less bitter than the attacks of the clerical papers, and but little more hostile than those of the old Conservatives, like the *Perseveranza*. The combination left him dependent on the common sense of the mass of non-partisan Italians for the approbation of his action and programme for the future. Probably no statesman of his importance was ever placed in so apparently perilous a position, for he was on both wings outflanked and assailed by the two parties which happen to be those most convinced in their political faith, most energetic and best organized, the Radicals and the Clericals. Though the proclamation of *non expedit* from the Vatican did not permit the Clericals to enter into the lists as a party, or take any open part in the election, their canvassing against Crispi was very energetic, and it is certain that many did vote, considering, as do the Irish, that they are under no obligation to take their politics from the Vatican. Crispi, replying with no conciliatory language or measures to the attacks of either side, addressed himself to the moderate masses of the nation, made a clear programme, so that no questions should lie concealed in the future, and his victory exceeds all expectation. The Government has carried, according to the full returns this morning, 400 seats out of 508.

This settles the question of Crispi's popularity, which his enemies, sincere and insincere, have steadily represented as decreasing since he came to power, for the battle has been fought on personal lines throughout, the private character and morality of the premier having been as vigorously assailed as if he had been a candidate for President of the United States. The public measures of the Government have played a secondary part in the contest, and the other members of the Cabinet have hardly received the compliment of a word of abuse, and in no case have been arraigned as responsible for the disasters which were laid on the head of Crispi—the African expedition, the Triple Alliance, the military expenses, the suspension of trade with France by the rupture of the commercial conventions, etc.; all these measures having been imposed on the country for good or ill before Crispi's accession to power. There was serious apprehension of a strong show of Radical force in Milan and the Romagna with a solid vote against the Ministry in Naples, where the peremptory measures adopted by Crispi a[gainst] the defaulting municipality and the peculations in the Bank of Naples had excited intense hostility in certain quarters. The suspension of the Roman municipality, too, had caused much irritation at the time and was expected to influence the Roman elections.

Fortunately for the Government, the French politicians had the fatuity to take an active part in the canvass and pronounce against Crispi, and put out a programme for a monument to Garibaldi, as if this would make the Italians forget Rome and Mentana. Moreover, to wind up the list of follies, Cernuschi, the

societies to-day the public is disposed either to resent attempts at privacy, either of mind or body, or turn them into ridicule. There is nothing democratic societies dislike so much to-day as anything which looks like what is called "exclusiveness," and all regard for or precautions about privacy are apt to be considered signs of exclusiveness. A man going into court, therefore, in defence of his privacy, would very rarely be an object of sympathy on the part either of a jury or the public. And then "privacy" has a different meaning to different classes or categories of persons; it is, for instance, one thing to a man who has always lived in his own house, and another to a man who has always lived in a boarding-house.

Moreover, a very large proportion of every community nowadays dislike privacy so much for themselves that they are very unlikely to help other people to secure it. It has to struggle against the passion for notoriety on the part of obscure people—one of the strongest of social forces to-day. And it has to contend above all against the great commercial demand for scandal and gossip. In fact, the very greatest and most rapid commercial successes of our day have been made in this market. The newspapers which supply this demand most plentifully are notoriously among the most valuable properties in the United States. Some of the most intelligent and respectable people in the country read them regularly, and put or leave them in the hands of their children. They form almost the only literature of hundreds of thousands of our youths, of both sexes, who leave our public schools every year. We fear there is no lymph in either common or statute law for this most deplorable form of moral tuberculosis.

ON THE EVE OF PARNELL'S DEPOSITION.

LONDON, December 6 1890.

THE crisis which has arisen within the Irish Nationalist party and in their relations to the Liberal party on the question of Mr. Parnell's leadership, is still the absorbing topic of interest, and is the most singular and dramatic political event which has taken place within the present generation. Each stage of the proceeding has undoubtedly been watched and noted as closely on the other side of the Atlantic as on this. Long before this letter reaches you, the constantly shifting scene may have changed many times, and the issue, now entirely uncertain, may have become more clear, and may be already within the knowledge of your readers.

For the moment, at least, the prospects of the Nationalist cause and of the Liberal party are sensibly obscured. The stability of the alliance between the Liberals and the Irish has been subjected to a sudden, premature, violent, and unexpected strain, and the triumph of a home-rule policy at the next election, which a little while ago seemed assured, again runs the risk of indefinite postponement. The Liberal party are not discouraged. They are confident that they are in the right, and stimulated by the proof of the absolute unity and solidity of the party throughout Great Britain. The action of Mr. Gladstone is enthusiastically backed by the country and warmly endorsed by nearly all his Parliamentary followers. It is believed that at the very worst the situation will have some results of permanent benefit and value. But it cannot be denied that to-day a black cloud overhangs the Home-Rulers which may be big with temporary political disaster.

How has this happened? It may safely be assumed that the average political observer did not foresee or fully estimate the momentous consequences of the disclosures in the O'Shea divorce case. Apart from details, the result was not unexpected in political circles, or in society in the widest acceptation of that word. To the mass of the English and Scotch electors it evidently was unexpected, and, through the sympathetic voice of their leader, they have pronounced their judgment in a sense which the most worldly members of the party admit to be politically wise no less than morally sound. To the mass of the people in Great Britain, as well as in Ireland, Mr. Parnell was the incarnation of the Nationalist cause. To have fought for it in the person of a man who was disgraced would have been to court certain defeat. From the outset the cause had every possible prejudice and prepossession to encounter. The appeal had to be made to the highest considerations of generosity and justice. A high moral enthusiasm had to be evoked in the masses, who are much more readily susceptible of it than their betters. It never could have been evoked or sustained except by a political leader whose power is largely due to the elevation of his character; and it would certainly have ebbed away from a cause impersonated by a man whose private character it was impossible to respect. As an elector said to me, they could not divide him into water-tight compartments. If ever a political issue was decided by the prompt, spontaneous, and harmonious voice of the people themselves, this issue was so decided.

Before this feeling found expression, there was one consideration on the other side which weighed with some sound Liberals, and probably still weighs with many Irishmen. It was said, "The Irish have the right to choose their own leader. Our connection with them is an alliance, not a fusion. We have a common object in view, but we are in no way responsible for the character of their leader." That was a very plausible view, and the Irish members, when, influenced by motives worthy of a generous origin, they rushed together to condone Mr. Parnell's offence, appear to have expected that it would be accepted and acted upon. But in this expectation a consideration was overlooked which must be plainly stated. The most formidable difficulty, if any one were to be singled out, which the advocates of home rule in this country have had to surmount, has been a misgiving on the part of the electors with respect to the character of the men who would be the rulers of Ireland. Calumny directed its shafts skilfully against this vulnerable place. While the accusations of the *Times* were made broadcast against the Irish party, the Pigott forgeries, levelled against Mr. Parnell, unfortunately made his personal character the crucial question in the eyes of the multitude. When these forgeries were exposed, many Liberals who felt sympathy for their victim, still viewed with some alarm the incense which was indiscriminately offered to a man of whose character very little was known. The suspicions of the average respectable citizen whose vote turns elections, of course extended beyond Mr. Parnell to the Nationalist party generally. It was felt that this was still the party of the 1880 Parliament, which had not been so forward as it might have been to disavow and denounce crime. There was an uneasy fear that here was a descending chain, with patriotism in Parliament at the top, but with Fenianism at the bottom, and with no clear break between the links.

While the Parnell Commission was in the main a victory for those who were put on their defence, it revived the memory of an agitation which, after making all allowances, had many characteristics which were repugnant to honest men. Every effort was made to combat these prepossessions. Leaving out of view Mr. Parnell, who kept aloof and whose position and ways were exceptional, English and Scottish members had confidence in the leading men among their Irish colleagues. No longer shunned and distrusted, as they were in former Parliaments—a most demoralizing position—they appeared in their true colors. They were invited to platforms all over the country to plead their own cause. Men, almost without exception, of transparent character, their eloquence, their sincerity and kindliness made a favorable impression. All was going well. But the element of character was vital to the success of the home-rule cause. If, by a sudden revelation, it was found to be tainted with blackguardism after all, the cause was and is lost. It is for that reason that Mr. Parnell's retirement is essential, and Irishmen in every part of the world will do well to note the unanimous judgment of their most ardent friends and well-wishers in this country.

Under these circumstances, what has been the conduct of the Irish members? On the whole, it has been much to their credit, and among Liberals I have heard no harsh judgment passed, even on those early proceedings which have embarrassed the situation. The party rush to the Dublin meeting at which Mr. Parnell's conduct was condoned in a manner so effusive as to make its condemnation by the same men afterwards impossible, has had serious effects; but it was due to a generous impulse of personal loyalty and gratitude to a leader who had done his country great service. Since then the action of the majority of the members, including the American delegates, has attracted the sympathy and often the admiration of their Liberal colleagues. While the political wisdom of the course they have taken is demonstrable, it is also the first fruits of the improved relations between the two countries. It is a tremendous wrench for Irish members to oppose and renounce Mr. Parnell, but they also feel bound to the honest alliance of the Liberal party. The situation is a trying one for the Irish patriotic party, as it is called—perhaps the name may continue—and their English colleagues have been careful not to say a word that could make it more difficult.

At the same time the extreme prolongation of the debate as to Mr. Parnell's leadership and the acquiescence of the majority in his strategy have caused disappointment. The absence of Mr. Dillon and Mr. William O'Brien from the conclaves is a misfortune, and still more their inability [illegible] Ireland, where their voices would have [illegible] of those [illegible] of rousing enthusiasm perhaps [illegible] such a step would that of Mr. Parnell himself [illegible] of high tariff is surprised that, after a week's [illegible] anks to the cam- majority did not depose Mr. [illegible] n December, 1887, they permitted a wholly [illegible] mind that case issue to be raised, which might lead [illegible] higher was obviously intended to lead, to fres[illegible] not ficulties with the Liberal party and its leaders. It has appeared inexplicable how the majority could permit themselves to be outwitted and overborne, having among their number at least two men of exceptional ability in Mr. Healy, whose acuteness is probably not excelled by

in any division some road or roads must be greatly disappointed. For a company which is doing a fair business, it is no doubt true that deliberate rate-cutting to increase tonnage is very bad policy. The general lowering of all tariffs thus brought about causes more shrinkage in profit than the loss of the carriage of a few tons of freight; and such a company is usually willing to maintain rates. But what to do with those railroads which under stable rates would not get a supposed fair share of the traffic, is the problem.

The Chicago, St. Paul and Kansas City refused to sign the resolutions. In the cases of other roads similarly situated, experience has shown that the demands of their business were too strong for their officers, even after signing an agreement. The road mentioned has funded its interest charges for three years. Having comparatively little to earn beyond operating expenses during that time, it must meanwhile take advantage of the situation to build up its business. Can this company, with an eye to future fixed charges, agree to accept a permanent percentage on the basis of its present traffic? What is here suggested about Mr. Stickney's road may be true, the details being changed, for other roads. Clearly the division of 100 per cent. of traffic among these rival lines is a most serious problem. One road now is carrying about a third of the whole Kansas City-Chicago tonnage.

In spite of great difficulties, there is a hopeful feeling. The majority of the officers, having the possible future losses in mind, are now more willing to compromise than before; and, for a while at least, agreements to maintain rates and turn cars over to each other will be kept. But, unless there is something behind the resolutions stronger than the mere fear of losses in net earnings for the immediate future, such an agreement will before long be in danger. The legalizing of pooling contracts—if there be any likelihood of such a thing—would help greatly, but even then there would be a destructive war before certain railroads would bind themselves legally to accept a small percentage. The simple permission to divide earnings or tonnage would help somewhat, and in time there will be business enough to give a reasonable amount of tonnage to each of the competing roads. Meanwhile, however much we may wish permanent success to any agreement entered into by nine independent railways, the utmost that can be said is that the immediate prospects are favorable. Apparently we have as yet no body of capitalists few enough to act together, and powerful enough to exercise control by force over a majority of the competing railways. Whether, without such a body or a combination of small holders, the keeping of an agreement such as the above should be expected in the face of a volume of traffic too small to satisfy all the carriers, is doubtful.

Nor should our railway presidents be too quickly blamed for these doubts. Presidents are human, and each naturally thinks that he is intrusted with a responsibility for his own road which he cannot throw upon a board composed of men having no financial interest in his property. There is, too, the legality of a complete transfer of authority to be considered. If any president, by agreeing to maintain rates, and by keeping his word, should thereby allow traffic to be lost to his road, and the earnings to fall below the common expectation, he would be criticised by his directors as well as the stock and bondholders, and his administration called a failure. Nor would the explanation be accepted that such a policy was for the good of all and would turn out best in the end. The Chicago and Alton may not favor remunerative rates between Kansas City and Chicago if thereby it should lose a share of the trans-Missouri traffic. And, to reverse the point of view, the Atchison, after spending millions upon Kansas lines, may not be willing to divide its cis-Missouri traffic, gathered from off its own roads, with the Alton, Wabash, St. Paul, or other railways having no lines west of that river. Not to multiply examples, there seem grave doubts whether any but the lowest rates (whether in the tariffs or not) can be long maintained except by force, if the combined capacity and need of the carriers should be greater than the future volume of traffic offered.

THE RIGHT TO PRIVACY.

An article in the last number of the *Harvard Law Review*, with the above title, by two members of the Boston bar, Messrs. Warren and Brandeis, is an attempt to extract from reported cases a rule of the common law which will protect individuals from the intrusion of the press on their private life. It says, and truly:

"Of the desirability—indeed of the necessity—of some such protection, there can, it is believed, be no doubt. The press is overstepping in every direction the obvious bounds of decency and of propriety. Gossip is no longer the resource of the idle and of the vicious, but has become a profession, which is pursued with industry as well as effrontery. To satisfy a prurient taste, the details of sexual relations are spread broadcast in the columns of the daily papers. To occupy the indolent, column upon column is filled with idle gossip, which can only be procured by intrusion upon the domestic circle. The intensity and complexity of life attendant upon advancing civilization have rendered necessary some retreat from the world, and man, under the refining influence of culture, has become more sensitive to publicity, so that solitude and privacy have become more essential to the individual; but modern enterprise and invention have, through invasions upon his privacy, subjected him to mental pain and distress far greater than could be inflicted by mere bodily injury. Nor is the harm wrought by such invasions confined to the suffering of those who may be made the subjects of journalistic or other enterprise. In this, as in other branches of commerce, the supply creates the demand. Each crop of unseemly gossip, thus harvested, becomes the seed of more, and, in direct proportion to its circulation, results in a lowering of social standards and of morality. Even gossip, apparently harmless, when widely and persistently circulated, is potent for evil. It both belittles and perverts. It belittles by inverting the relative importance of things, and thus dwarfing the thoughts and aspirations of a people. When personal gossip attains the dignity of print, and crowds the space available for matters of real interest to the community, what wonder that the ignorant and thoughtless mistake its relative importance? Easy of comprehension, appealing to that weak side of human nature which is never wholly cast down by the misfortunes and frailties of our neighbors, no one can be surprised that it usurps the place of interest in brains capable of other things. Triviality destroys at once robustness of thought and delicacy of feeling. No enthusiasm can flourish, no generous impulse survive, its blighting influence."

As a basis for their contention, the writers show that the common law defends the individual against offensive odors and noises; against the unauthorized circulation of his portrait; against the unauthorized publication of his thoughts, sentiments, and emotions—however expressed, whether in words, signs, sculpture, or music; sometimes on the ground that the expression is property, but sometimes on the ground that it is a confidential communication. They rely also on the protection given by the courts to private photographs as against the photographer; and to individuals as against secret instantaneous photography; to trade secrets, to private letters, and so on.

The remedies they suggest are "an action of tort for damages in all cases, or, in the absence of special damages, substantial compensation for injury to the feelings, and in some cases an injunction," for invasions of privacy. They also, however, propose a statute making criminally punishable any person "who publishes in any newspaper, journal, or magazine, or other periodical publication, any statement concerning the private life or affairs of another" without his consent, of course with the usual exception of candidates for office and persons in public positions. The statute it is hardly necessary to discuss, for we doubt if any legislature could be got to pass it. The only hope, if hope there be, lies in the courts; but strong as are the arguments of our authors in support of the power of the courts to interfere, we doubt very much whether, even if they were successful in securing such interference, it would have any serious effect on the evil to be remedied, and this for two reasons.

The first is, that the law could not be put in force except on complaint of the persons injured, and this complaint is hardly to be looked for except in very rare cases, owing to the very nature of the injury. The legal remedy would very closely resemble that old-fashioned cure for headache caused by too much intoxicating drink—"the hair of the dog that bit you." That is to say, the man who feels outraged by publicity will, in order to stop or punish it, have to expose himself to a great deal more publicity. In order to bring his persecutors to justice, he will have to go through a process which will result in an exposure of his private affairs tenfold greater than that originally made by the offending article. Over and above this, too, he will have to offer himself for examination or cross-examination to a lawyer paid for turning him and his grievances into ridicule before a crowded court-room—an ordeal from which nearly all men and women who care for privacy would shrink with unutterable repugnance. To make any legal remedy effective, in fact, the procedure would have to be secret, of which, under our law, there is no chance whatever.

The second reason is, that there would be no effective public support or countenance for such proceedings. In all democratic

this question hangs, to an alarming degree, the welfare of this country for many years to come. Shall we have time, before some sort of "cheap money" measure is passed, to get the plain people of the country to see that the transition to cheaper money has the same oppressive character as the transition to higher tariff? That cheap money means dear goods, people can easily be got to understand, and in the present temper of the public this point alone is a great advantage; for, in spite of the new Republican gospel, people do strongly prefer not to have goods dear. Nevertheless, there is a great fascination to the average man about the idea of an abundance of money, and he has a vague feeling that if there is plenty of it about, he will get enough for his share to counterbalance the rise of prices, and more.

If the average man could only be got to fix his mind on the machinery whereby his share of the cheap money will come to him, the country would be safe. Suppose he is a wage-earner—day-laborer, mechanic, clerk, teacher, public officer, or what not—let him picture to himself the day when silver has become the standard of payments. Prices will rise at once; there need be no delay in putting a new label on a piece of dry goods, or crying a new price in the provision-market, when it is plain that the state of trade is going to justify the rise. But any one who has had to deal with an employer knows that the raising of wages or salaries is a slow and painful process; it takes two to make that bargain, and generally it is not the employee who can afford to take the firmer stand in it. This great class of men and women with incomes which cannot be speedily raised, will suffer, some for months, some for years, before their nominal wages will be sufficiently raised to make them equal in actual purchasing power to what they were before the change. To everybody who gets his income in the form of stipulated wages, whether he be a hod-carrier or a justice of the Supreme Court, the descent to a lower standard of payments will be grievously oppressive.

There are other classes to whom the change will be largely indifferent, except in so far as so profound a disturbance of business conditions, so gigantic a stirring-up of daring speculations, may ultimately produce disasters in every direction. But there is one class who will be happy while their fellows are troubled, who will gain while others lose, and for whose sake we shall take this step, if we take it at all. We do not refer to the owners of silver mines, who will profit by the increased vent for the product of their mines. These are undoubtedly very influential, especially in the Senate, and they constitute a formidable element in the problem. But their following would be a mere handful, after all, were it not for the widespread sympathy which is felt by so many amiable persons for the unfortunate class to which we have just alluded, whose burdens will be lightened while those of the rest of us will be made more heavy—the debtor class.

But what is the debtor class? How many of us are there who belong to it? One cannot earn this high privilege by the simple process of incurring a debt. No exact definition of this interesting species has, to our knowledge, ever been laid down; and, while we shall not attempt the task ourselves, it would seem to be both easy and useful to mention some conspicuous instances of kinds of men who do not, and kinds of men who do, belong to the debtor class. It seems clear, then, in the first place, that no man belongs to the debtor class whose debts are insignificant in comparison with his income. And, fortunately, if we leave out the farmer with heavy mortgages on his farm, the great mass of men who are poor or in moderate circumstances are hereby at once excluded from the debtor class. Paradoxical as it may sound at first, the majority of men are too poor to belong to the debtor class; they cannot contract debts of any significance, simply because they have not the credit. How many wage-workers are there who would accept a proposition that would reduce their debts and their wages both 20 per cent.? In most cases 10 per cent. reduction of wages would soon counterbalance 50 per cent. reduction of existing debts. Of course there are workingmen who have mortgages on their little homes, and who may thus stand somewhere in the outer ranks of the debtor class; but is there not an impressive set-off to these in the shape of those whose savings in banks, building associations, etc., place them in the ranks of the hated creditor class? Let each man ask himself whether the excess of his debits over his credits is so important that a general scaling down of debts would compensate him for ever so small a reduction of his income. If a census of the answers could be taken, the debtor class would find itself in a very ridiculous minority.

Of those who do belong to the debtor class, we have already mentioned the farmer whose farm is heavily mortgaged. Whether it is *right* or not for him to ask the Government to relieve him of a portion of his debt, at the expense of those who, in a fair and open bargain, advanced to him money which he needed, we shall not now discuss; that it would be gainful to him, we do not deny. Apart from this contingent, we believe there is but one important body of men in the debtor class, namely, those who own the great industrial enterprises of the country. The great borrowers are those who can do something with capital, those who build railroads and carry on great manufacturing and commercial enterprises. They are not usually men upon whom the philanthropist feels impelled to expend much compassion; they can very well take care of themselves. These men, however rich, are apt to owe great sums of money, and the identification of the great "captains of industry" with the debtor class is strengthened, too, by the nature of their relations to their employees. The employees stand to their employers very much in the relation of creditors; the stipulated wage, while not having the force of a debt, is, as we have said, hard to change, and a lowering of the standard is a lowering of the wage. But while these masters of capital would find their obligations greatly lightened by a lowering of the standard, probably very few of them would favor such a lowering; for they know well the peril to every kind of enterprise which lies in the disappointment of the fair expectations of prudent investors.

Thus we find, leaving out the comparatively small class of heavily mortgaged farms, that the interest of the great mass of the people, and especially of wage-earners, is directly opposed to that of the "debtor class," and that the most important representative of this class is the great employer of labor, who not only does not need, but who dreads, the aid which cheap money might give him. The more the matter is looked into, the more plainly it will be seen that the notions so widely prevalent about the debtor class have no firmer texture than "such stuff as dreams are made of."

THE RAILWAY PROSPECT.

The railway presidents have met and resolved. Of the need of reform in railway practice there is, unfortunately, no question. It has been estimated that the railroad tonnage to be carried next year will fall short of this year's traffic as much, perhaps, as 25 per cent. With the large freighting done in 1890, there has been no proportional increase in net earnings. If, therefore, 1891 should see a large reduction in gross earnings, and if, in addition, the relation of expenses to earnings should remain as now, the question whether the profits would cover fixed charges would be a serious one for some of our Western carriers. Leaving out of view any material advance in the nominal rates as impracticable, it is yet probable that if the present nominal tariffs could be made real by the abolition of rate-cutting, the increase in net profit would for a number of roads mean the continuance of dividend payments which otherwise would be in doubt. The anxiety of all railroad officers for a restoration of remunerative rates is therefore justified.

The resolutions leave the adjustment of details to a board consisting of the President and one Director from each company. To reach a practical result this board (when consented to in each case by the companies separately), at its proposed meeting in January, must face two particular problems. One of these is the division of traffic between the roads in the proportion agreed upon. This does not seem a formidable difficulty. Some good railroad attorneys think that the Inter-State Law forbids a money pool, but not a physical division of freight. There is besides the possibility of so dividing unconsigned tonnage at meeting-points as to even up any losses on local competitive business. But what proportion of the whole tonnage is each road entitled to? In the territory broadly described as between Chicago and the Missouri River, there are nine competing systems. If the president of each of these roads were independently to state what percentage of the traffic his road should have, the sum of the nine proportions might reach 200. To cut each proportion to one-half would not answer, so that

And more than Two Hundred Other Women Prominent in Official and Social Life at the National Capital.

One Volume, Large Octavo.....$1.25
The Same, in Limp Paper Covers..... 1.00

This collection of practical recipes is of unprecedented interest and value. The recipes given are for dishes which have received the enthusiastic commendation of the most critical diners-out. Most of them are specialties upon which the ladies pride themselves, and not a few are the inventions—the "creations" a French *chef de cuisine* would say—of the fair contributors.

KRUELL'S CONTEMPORARY PORTRAIT-GALLERY.

"The Nation."

1865-1890.

In commemoration of the 25th anniversary of this journal, Mr. Kruell has engraved on wood, in the highest style of the art, after a recent photograph by G. C. Cox, a portrait of the founder and present editor of the *Nation*,

Edwin Lawrence Godkin.

"*It is an admirable portrait, and the head might stand for that of one of Velasquez's hidalgos.*"—Prof. Charles Eliot Norton.

The size of the block is 9x6 inches; the impression is on Japan paper, under the personal supervision of the artist, and is loosely mounted. *Only one hundred proofs* will be offered for sale, and each will be signed and numbered. Price, Ten Dollars, carriage prepaid. Address GUSTAV KRUELL, East Orange, N. J.

*** Mr. Kruell offers at the same price, and in the same style, proof portraits of CHARLES DARWIN (one in his prime, one in old age), ASA GRAY, WILLIAM LLOYD GARRISON, and WENDELL PHILLIPS. The edition in these cases is limited to 200 copies for all except Gray (100).

"*Certainly we may look in vain among other graphic arts for anything comparable with these portraits.*"—The Nation, January 23, 1890.

Importer of Foreign Books, Agent for the leading Paris Publishers, Tauchnitz's British Authors, Teubner's Greek and Latin Classics. Catalogues of stock mailed on demand. A large assortment always on hand, and new books received from Paris and Leipzig as soon as issued.

still think that good scientific text-books are much to be preferred to works of this kind, and that thorough teaching is best even for a beginner.

'The Best Letters of Lady Mary Wortley Montagu' is the newest of the "Laurel-Crowned" series of A. C. McClurg & Co., Chicago. "Octave Thanet" supplies a frank biographical sketch, sympathetically giving it the form of a "letter to dead authors." A volume of the same pretty order, and but a shade smaller in size, has been made of Bacon's Essays by the same house. Prof. Melville B. Anderson has edited the text with no little pains after the last edition printed in Bacon's lifetime, taking some liberties with the punctuation and the paragraphing. He also furnishes a bibliographical introduction, with some remarks on Bacon's style and on the crazy identification of him with Shakspere.

Vols. vii. and viii. of *Scribner's Magazine* for the current year contain foretastes of several books, now well known, in the papers on Ericsson, on Electricity, on the Footprints of Charles Lamb, etc. We recall also the valuable series on the Rights of the Citizen and on City, Suburban and Country Houses. Africa received ample consideration in the narratives of Mr. Stanley (with a capital portrait), Mr. Herbert Ward, and Mr. Thomas Stevens. Dr. Wright's article on the wonderful image discovered at Nampa below the lava-beds of Idaho is a landmark in the discussion of the age of the human race and of the formation of this continent. A voyage down the Grand Cañon of the Colorado is another memorable incident, beautifully illustrated. Finally, in these volumes are to be found almost the last writings of the late Eugene Schuyler.

Mr. Horace W. Fuller's "useless but entertaining magazine for lawyers," the *Green Bag*, has survived its second year and bound its second volume (The Boston Book Co.). Its illustrated articles on the leading law schools of the country have been kept up, with the aid of much interesting portraiture, and there has been a parallel series on the courts of final appeal. The *causes célèbres* have been extended from 13 to 21. The obituary column has been well looked after. Facetiæ, legal antiquities, book notices, and the rhymed cases of Mr. Irving Browne and others combine to make up the mélange which seems to receive the suffrages of the profession. This periodical is handsomely printed.

Babyhood, a monthly magazine for mothers, completes its sixth volume (New York: Babyhood Publishing Co.), and maintains its title to the confidence and gratitude of its readers. The table of contents shows a large array of medical talent among the contributors, both male and female. The correspondence is, as usual, of great variety and practical value. Cuts are freely employed in every department of the magazine.

The city authorities of Boston have published from the plates a new (third) edition of the late Mayor Shurtleff's 'Topographical and Historical Description of Boston'; and to Mr. W. H. Whitmore, as Chairman of the Record Commissioners, has been allotted the bringing the work up to date by means of a long prefatory note. The great fire of 1872 in particular made this revision imperative; hence a map of the Burnt District has been inserted, with a new facsimile of Bonner's map of 1722, a facsimile of a hitherto inedited map of 1711, very rare and valuable, a map of the islands in the harbor, and much cartographical information about the old city and its recent annexations. Three views of Boston in 1764, possessing the highest interest and authenticity, are reproduced for the first time. The artist was a grand-uncle of the poet Byron. Mr. Whitmore's survey of the city's growth and embellishment deserves the attention of other municipalities, and we may instance the unparalleled park system, which, as the writer says, has been carried out by successive Commissioners without taint of jobbery of any kind.

We are pleased to find in the *Belletristisches Journal* for December 17 a letter to the editor setting forth the need and field of usefulness of a German Historical Association in this city, signed by well-known names of the younger and the elder generation of German citizens—native Germans and German-Americans. The editor desires that would-be members of such an organization should address him under cover of "Geschichtsverein, P. O. box 1680."

The Paris *Réforme Sociale* for December 1 prints a paper read before the (French) Canadian Society of Social Economy by Father Augier, his theme being "The American Republic, wherein it is admirable, seductive, and dangerous." The writer formed his impressions during a brief journey in the United States, and they are on the whole favorable enough. He notices the clause of the Constitution divorcing the Government from religious establishments, but consoles himself with an imaginary reference to the Sabbath in the second article of that instrument, implying respect for the institution of Sunday, and hence a recognition and acceptance of Christianity. Had he avoided this error and gone a little deeper, he might have made some pregnant observations on our army and navy chaplaincies, which give a natural advantage to the sect possessing a liturgy.

The London *Times* prints a letter from its correspondent with the Mashonaland Expedition of the British South Africa Company, summarizing what it has accomplished. It consisted of some 700 men who have cut a "good, serviceable road" over 400 miles in length, crossing several large streams by substantial "drifts" and smaller ones by corduroy bridges, "without the loss of one single life, either in the hospital or in the field." A fort has been built, a Government and a postal service has been established, and some 300 men are now actively engaged in prospecting for gold. "From all sides reports of the most promising and encouraging nature come in of reefs being struck and shafts being sunk, and applications are made daily for the due registration of claims under the terms of the company's mining laws." It is proposed by the company to send out some thoroughly competent archæologist to examine the remarkable ruins of Zimbabye in the gold region, supposed by some to be of Egyptian origin. Meanwhile, the greatest precautions have been taken to preserve the ruins from injury.

A summary of the scientific results of the Stanley Expedition by Prof. Fried. Ratzel is begun in *Petermann's Mitteilungen* for November, the subjects treated being the mountains, the river courses, and Lake Albert Edward. This is followed by an account of Lake Molveno in the Tyrol and a review of the Arctic voyager Nordenskiöld's 'Facsimile Atlas,' a work on the early history of cartography, containing reproductions of more than one hundred and fifty of the most important maps printed in the fifteenth and sixteenth centuries. There is also a brief notice of the new edition of 'Stieler's Hand-Atlas,' together with an interesting proof-map of the Pacific Coast States, so colored as to show the parts newly engraved, as well as the corrections and additions made since the edition of 1872. Reference is also made to the omission of a great number of places which have ceased to exist, "a more frequent occurrence in the United States than in any other part of the world at the present time." A supplemental number contains an account by Lieut. von Höhnel of Count Teleki's expedition to Lake Rudolf in Eastern Equatorial Africa, the subject most fully treated being the ethnography of the regions traversed. The author separates the natives, according to their languages, into three distinct races, the Bantu, which include the tribes about Kilimanjaro; the Nilotic, of which the Masai are the most important and aggressive representatives; and the Hamitic, which include the Gallas. These are carefully described and their habitat given. Some admirable route maps accompany the monograph.

The *Scottish Geographical Magazine* for December opens with a paper on a "Railway through Southern Persia," by Gen. Sir F. J. Goldsmid. While the development of Persia is one object, the principal aim of the proposed line, which would run from Baghdad through Shustar, Shiraz, and Bandar Abbas to Karachi, is to open communication with India. The significant hint is dropped that the concession of right of way from the seaboard of Syria to the Turko-Persian frontier may be reserved for a *quid pro quo* for the abandonment of Egypt. Mr. W. Pilcher, in an account of a recent trip through Spanish Honduras, predicts a brilliant future for the republic on account of its vast mineral wealth, the rapid increase of its exportations of cattle and fruit, and the suitability of its soil for the profitable cultivation of coffee and the sugar-cane.

The principal article in the December Proceedings of the Royal Geographical Society is an extremely interesting account by Mr. H. H. Johnston of his recent journey to Nyassaland, where he was sent by the Foreign Office to bring to an end the war between the Arabs and the African Lakes Company. He entered the Zambesi by the newly discovered Chinde mouth, upon which he reports favorably, and which is evidently destined to be the main avenue of approach to Central Africa from the eastern coast. On the upper Shire he passed through a district which, though inhabited by nominal Mohammedans and rigidly guarded from all forms of European alcohol, he describes as the "most drunken part of Africa I ever travelled in." With great difficulty and some danger, he made his way to within three or four miles of the shore of Rukwa, a large salt lake of unknown extent lying to the eastward of Tanganyika. He descended to it by means of a ravine, the soil and rocks of which were of a blood-red color, the bed of a once-important river which had only recently dried up. The rain supply, according to the natives, suddenly ceased within the last two or three years. Of a great part of the territory between the two great lakes now under British influence he speaks enthusiastically as well adapted to European colonization. The most desirable portions, rich grazing lands on which now roam innumerable herds of large game, are practically uninhabited.

—"Our Northern Frontier" is the subject of a striking and suggestive article in the November *Journal of the Military Service Institution*. The author, Lieut. A. D. Schenck, has no difficulty in showing our utterly defenceless condition in case of a war with Canada, and the immense advantages which our opponent would have over us in nearly every respect. By the treaty of 1817 we can maintain on the great lakes only four vessels "not exceed-

ing one hundred tons' burden, and armed with one eighteen-pounder cannon," one each on Lakes Ontario and Champlain, and two on the upper lakes. Our only present waterway to these upper lakes is the Erie Canal, through which boats 100 feet long and 225 tons burden can pass, while the Canadian canals permit vessels of 1,500 tons to reach the head of Lake Superior. Our navy would, of course, at the outset be unavailable, while in the English navy there are 111 vessels, three of them armored, which in a fortnight after the declaration of war could take undisputed possession of Lakes Ontario and Erie. And when the great canal system of the Ottawa and French Rivers is completed, the vessels can enter Lake Huron with equal ease. It is hardly necessary to add that this possession of the lakes means the absolute command of the cities on the shores, whatever the land forces gathered to defend them. The author puts the value of destructible property within the reach of a hostile fleet at $1,000,000,000, which does not seem an extravagant estimate. The Canadian militia, which includes all men capable of bearing arms between the ages of eighteen and sixty, number 830,000, or nearly 300,000 in the first class or line. These men would have the inestimable advantage over our militia in that their officers would be mainly taken from the 14,000 trained officers of the English regular army, and for their armament there are now in England "not less than 600,000 stand of approved arms" "in store or packed ready for shipment to any part of the world." "Within ten days from the date of notification, therefore, the arms and ammunition would be at Toronto, London, or the Welland Canal for distribution to the troops, in place of the Snyder rifles." Considering the fact that we are doing absolutely nothing for the defence of this northern frontier, either in building or garrisoning our forts, or in constructing or enlarging our canals, and considering our generally unprepared condition in case of war, and the thorough preparation of our neighbor backed by the army and navy of Great Britain, the author does not put the case too strongly in asserting that "this country is bound over hand and foot and under heavy bonds to keep the peace of nations, even with a neighbor apparently so insignificant as the Dominion of Canada."

—The *Academy* of November 29, 1890, contains a very interesting and important communication from Mr. Theo. G. Pinches, the accomplished Assyriologist of the British Museum. In the collections brought to the museum by Mr. Rassam he has found a clay tablet, with a bilingual inscription, an incantation-text, of the obverse of which he offers a translation "to a certain extent provisional." This turns out to be a new version of the Babylonian creation-history, presenting curious resemblances to the account in Genesis ii. It begins by saying that there was a time when the glorious house of the gods had not been made, nor any plant, tree, brick, beam, house, or city, nor Niffer nor Erech, nor the abyss, nor Eridu; then on a certain day Marduk made Eridu, Esagila within the abyss, Babylon, the gods, the spirits of earth, the glorious city of the gods, earth and water, mankind, wild beasts, the Tigris and the Euphrates, plants, lands and marshes, and domestic animals. The text is unfortunately imperfect, though Mr. Pinches thinks that not much of importance is lost. The creation-texts hitherto published derive all things from the primitive water, and in general follow the line of the account in Genesis i.; the new text, in its outline, reminds us strongly of the very different narrative of Genesis ii., especially in that the creation of man does not follow, but precedes, that of beasts and plants. The "seat of joy of heart" in which the gods are made to dwell, appears to connect itself with the Eden of Genesis. It had been surmised that such a Babylonian creation-history existed, and this inscription may be said to make the surmise a certainty. Whether the story in Genesis ii. is old Hebrew, or is borrowed from Babylonian sources, is a point on which Biblical critics are not at one; but of the close connection between the Babylonian and Hebrew histories there can be no doubt. As to the relation between the two versions (the two Babylonian that correspond to Gen. i. and Gen ii.), Mr. Pinches thinks that the latter belongs to the mystery-loving, incantation-using Akkadians, and the former to the poetic, legend-loving Semitic Babylonians. On this delicate and much-disputed question it might be rash to venture an opinion, but we may hope that new discoveries will without long delay supply material which will make decision easier. All persons interested in the subject will feel grateful to Mr. Pinches for this new contribution to our knowledge. He will no doubt publish the cuneiform text immediately.

—Under the editorship of Prof. A. B. Hart, a series of "Harvard Historical Monographs" has been begun through the publication-house of Ginn & Co. The first of these, by Mr. Edward Campbell Mason, is now before us under the title of 'The Veto Power; Its Origin, Development, and Function in the Government of the United States.' Mr. Mason considers that this power originated as part of the power to make laws, the legislative body having the right either to accept or to reject a proposed enactment. Down to about the time of Edward III., the King legislated as well as administered, but from that period it became customary for him to proclaim laws only when requested to do so by Parliament. For a time the laws granted by the King were not responsive to the petitions, but eventually the Commons hit upon the plan of framing their petition in the language of a bill, so that the King might find it convenient to assent to it in the precise form in which it was presented to him. By the beginning of the sixteenth century this custom had become fixed, so that the positive power of legislation was practically absorbed by the Commons, leaving the King only the negative power of disapproval. This power, too, disappeared as Cabinet government was developed, and "never since 1708 has the signature of the sovereign been refused to a measure which has obtained a majority of both houses of Parliament." Mr. Mason's sketch of this historical process would perhaps gain in clearness if he were to emphasize the existence of two legislative powers, the Council and the King; the former being at times practically deprived by the latter of the negative power of legislation —if not, indeed, of the positive power as well —but gradually reversing the tendency, and absorbing finally both of these powers. But, as Mr. Mason points out, the negative power of the Crown maintained itself in colonial affairs long after it had disappeared in the mother country; and, owing to this fact, as well as to the fact that the disappearance was unobserved by constitutional writers in England, the power was treated by our statesmen as existing in the executive at the time of the separation of the colonies. They regarded it, therefore, as a necessary part of the theory of balanced powers in government, and thus, to sum the matter up in a word, the veto power was introduced into the Constitution of the United States.

—It is to be added that between the King and the Colonial Governors a good deal of positive legislation had taken place on this side of the sea, so that limitations of the executive power were much favored during the Revolutionary period. In the first State governments formed, and under the Articles of Confederation, the veto power was not tolerated; in four of our States it does not now exist, and in several others a majority vote is sufficient to pass a vetoed bill. It would be interesting to inquire into the causes which have made the exercise of this power more popular in recent times, but the limits of Mr. Mason's plan would not admit of an extended discussion of this question. He has preferred to undertake the useful but extremely laborious task of examining and classifying all the vetoes of the Presidents of the United States. They are criticised as affecting the form, or the distribution of the powers, of government, or the exercise of these powers; and chapters are added upon the constitutional procedure as to vetoes, and the political development of the power. Several appendixes and a full index render this monograph extremely serviceable for reference, and it may be especially commended to journalists as affording material wherewith to point their political comparisons.

—By the death of Carl Gustav Helqvist, which occurred at Berchtesgaden, in the Bavarian Highlands, on November 20, Sweden has lost a great historical painter, and a once prominent figure has disappeared for ever from the Scandinavian artist colony in Munich. The deceased was born, the son of a poor shoemaker, December 15, 1851, at Kungsör, on Lake Mälar. In the eleventh year of his age he was sent to Stockholm and apprenticed to the scene-painter Ahlgrenson, and in 1864 entered a class in the Royal Academy for the purpose of perfecting himself in the art of theatrical decoration. Soon, however, his remarkable talents began to reveal themselves through all the imperfections of his early education, and he resolved to become a painter in the artistic sense of the term. By this step he was thrown entirely upon his own resources and obliged to earn his daily bread, while pursuing his studies, by illustrating; his income from this labor was a meagre and precarious pittance, which just served to keep him moving along on the perilous verge of starvation. Meanwhile he painted several pictures of mythological and historical subjects, such as "Asa Thor's Contest with the Giants," "The Finding of Moses," and "The Finding of the Body of Gustavus Adolphus," and in 1875 took the academical prize with his painting, "Gustavus Vasa discovers the Treason of the Bishops," for which he received the great medal and a travelling stipend extending over five years. The first use he made of his freedom and his funds was to wander on foot through Sweden, Norway, and Gothland, filling his sketch-book with materials for future canvases. He then went to Paris, where he came under the influence of the naturalistic and *plein-air* painters, and after visiting the principal cities of Germany, and making thorough studies of the old Hanse towns, settled down in Munich as the pupil of Wilhelm Diez The fruit of a second sojourn in Paris was the *plein-air* painting "Bishop Sumanräder's Entry into Stockholm in 1526," which excited such general interest and provoked so much admiring and adverse criticism at the Munich International Exhibition of 1879. To this style, which he never carried to the excess

of ignoring all gradations and demarcations of light and shade, he adhered in all his subsequent historical paintings, of which he produced one or more nearly every year, besides a great number of genre-pictures, landscapes, portraits, and wonderfully fine aquarels until 1888, when his health began to fail, so that he was obliged to resign his professorship in the Berlin Academy, and retire to the villa of his father-in-law, Prof. Thiersch, at Berchtesgaden. There in the spring of 1889 his mental faculties became obscured, and the darkness of his intellectual night continued to deepen until death came to his release.

LECKY'S IRISH HISTORY: THE REBELLION AND THE UNION.—II.

A History of England in the Eighteenth Century. By William Edward Hartpole Lecky. Vols. VII. and VIII. D. Appleton & Co. 1890.

In a previous article we have discussed the method and characteristics of Mr. Lecky's 'History of the Rebellion and the Union,' for this is the best description of these two volumes. We have now to examine the views he takes of several points in that history, round which controversies of no small moment have raged.

The first of these points is the recall of Lord Fitzwilliam, the Lord Lieutenant who was sent over to Ireland in January, 1795, and forced to return in the following March. In 1794 an important section of the old Whig party joined Pitt, whose foreign policy they found they could approve; and it was agreed that the Irish policy of his Ministry should be modified, and that Fitzwilliam, a leading Whig, should go to Ireland as Viceroy to carry on its government in a liberal and conciliatory spirit. When, however, Fitzwilliam reached Dublin, announced himself in favor of removing the disabilities under which the Roman Catholics still labored, and sought to displace some of the officials who were most hostile to conciliation (and in particular the powerful John Beresford), a storm arose. Pitt refused to support him, and as he could neither satisfy the expectations he had created, nor carry out the policy he deemed essential, nothing remained for him but to submit and return to England. His departure was a triumph for the ultra-Protestant and ultra-repressive faction, headed by Fitzgibbon, then Chancellor, who so misgoverned the country as to bring about, or at least to hasten, the rebellion of 1798.

The motives of Pitt's conduct in the matter have remained obscure and given rise to much discussion. Mr. Lecky's view, which does not substantially differ from that taken by Dr. Sigerson in 'Two Centuries of Irish History' (the last preceding book which has dealt with the same period), is that the personal influence of Fitzgibbon and the Beresfords had more to do with this decisive and indeed fatal step than any considerations of high policy. Pitt knew but little of Ireland and was far from realizing the grave condition of her affairs. He had no personal objection to Catholic emancipation, but no particular interest in it. He conceived himself to be bound to support Fitzgibbon, and he allowed himself to be worked on by the English friends of the Beresfords, who had the ear of the King also, and by those old Tories who disliked Fitzwilliam and the Whig recruits generally. Mr. Lecky thinks that Burke was right when he wrote: "The one object of the Irish clique is to devise security to their own jobbish power. This is the first and the last in the piece. The Catholic question is a mere pretence." And he points out that the English Cabinet omitted to take any notice of the Catholic Bill during many weeks, although its provisions had been sent to them and their opinion pressed for even before Grattan introduced it. They could not allege the danger of Irish opposition, for there was almost complete unanimity in Ireland regarding it in both houses and in the country—a unanimity which never recurred afterwards. It would seem, therefore, that if the question of places had been out of the way, Fitzwilliam would probably have been permitted, as he afterwards insisted that he had originally been told he would be permitted, to assent to Catholic emancipation, and thereby avert not only the struggle of thirty years which ended in O'Connell's triumph in 1829, but the horrors of 1797 and 1798.

We now pass on to those tragic years. It has frequently been charged against the Irish junto which ruled the island in the name of Lord Camden, the feeble viceroy who succeeded Fitzwilliam, that they deliberately provoked the rebellion by the cruelties which they ordered or sanctioned in order that they might use the rebellion as a means of effecting the union of Ireland with England. This accusation, in which some writers have included Pitt himself, was brought very soon after the Union, and was frequently urged by O'Connell. Says Mr. Lecky (vol. vii, p. 285):

"O'Connell explained on this hypothesis the whole Fitzwilliam episode. He dwelt [also] on the fact that the Government for many months before the outbreak of the rebellion had secret information pointing out its most active leaders, and that, in spite of the suspension of the Habeas Corpus Act, those leaders were suffered to remain at large, and he insisted upon the passage from the report of the Secret Committee in which Lord Castlereagh spoke of the measures that had been taken to cause the rebellion to explode. Such an accusation will probably appear to most Englishmen too wildly extravagant to require a lengthened refutation."

Those who read Mr. Lecky's accounts of the behavior of the Government will not think it extravagant as applied to that Government, for Pitt may well be believed to have been ignorant or neglectful of much that went on. On the contrary, it is a plausible charge, for if it assumes shocking wickedness on the part of the ruling junto, it credits them with a foresight and insight and constancy of purpose which on any other hypothesis they must have utterly lacked. Nothing more feeble, as well as more criminal, can be imagined than the behavior of the Irish Executive during the period 1795-'8, if they were not playing for a rebellion. Their conduct is described by Mr. Lecky himself in the following passage:

"The faults of Irish government during the few years before the rebellion of 1798 appear to me to have been enormously great, and a weight of tremendous responsibility rests upon those who conducted it. By habitual corruption and the steady employment of the system of nomination boroughs, they had reduced the Irish Legislature to such a condition of despicable and almost ludicrous subserviency, that a policy which was probably supported by the great majority of educated Irishmen, could not command more than twenty or thirty votes in the House of Commons. They had done this at a time when the French Revolution had made the public mind in the highest degree sensitive to questions of representation; at a time when the burden of the war was imposing extraordinary hardships on the people. They had resisted the very moderate Reform bills of Ponsonby and Grattan, which would have left the overwhelming preponderance of political power in the hands of property, loyalty, and intelligence, as strenuously as the wild democratic schemes of the United Irishmen, and they had thrown into the path of treason a crowd of able and energetic men, who might have been contented by reform. . . .

"The management of the Catholic question had been still more disastrous—disastrous not only in what was denied, but also in much that was granted. The Relief Act of 1793 had deluged the country constituencies with an overwhelming multitude of illiterate Catholic 40s.-freehold voters, who were totally unfit for the exercise of political power; who were certain at some future time to become a great political danger, and whose enfranchisement added enormously to the difficulty and danger of reforming the Parliament, while it still left the Catholics under the brand of inferiority, excluded the Catholic gentry from Parliament, and thus deprived them of political influence at the very period when their services were most needed. At the same time, by the fatal error of not connecting—as might then most easily have been done—the college for the education of the priesthood with the university of the country, they prepared the way for an evil of the most serious kind.

"The recall of Lord Fitzwilliam, under circumstances that were calculated to inflame to the utmost popular passions; the deliberate appeal by the Government to the sectarian spirit among the Protestants, and Pelham's language of eternal proscription against the Catholics, soon completed the work. The loyal and respectable, though unfortunately small and timid, body of Catholic gentry lost all power and influence, and the guidance of the Catholics passed into the hands of seditious demagogues in the towns, who were in close alliance with the United Irishmen. At the same time, the transportation by Lord Carhampton of multitudes of suspected persons to the Fleet without a shadow of legal justification; the act of indemnity, by which the Irish Parliament closed the doors of the law courts against those who sought for redress, and the shameful apathy shown towards the earliest outrages of the Orange banditti in the North, convinced great masses of the poor that they were out of the protection of the law. It is not true that the Government inspired or approved of these outrages; but when it was found that a proclamation which specifically condemned the crimes of the defenders, was silent about those of the Orangemen; that a parliamentary inquiry into these outrages, though repeatedly asked for, was always refused; and that hundreds, and possibly thousands, of Catholics were obliged by terror to fly from their homes, at a time when Ulster was full of English troops, it cannot be wondered at that the Catholics should have come to look on themselves as completely unprotected, and should have been well prepared to receive the seditious teaching which was so abundantly diffused." (Vol. vii., pp. 362-364.)

This passage does not state the whole case against the Irish Government, for it does not mention (and could not, since Mr. Lecky's narrative, to which the passage belongs, had not yet reached that point) their behavior in getting rid of Sir Ralph Abercromby, when that able soldier had endeavored to repress the license and savagery of the troops, and giving military control to Gen. Lake, whose want of ability seems to have been redeemed in their eyes by his still more conspicuous want of humanity. Nevertheless, Mr. Lecky thinks that neither Pitt's Cabinet nor Lord Camden's Executive was mainly actuated from 1795 to 1798 by the wish to carry a Union. He justly remarks that if this had been their purpose, their confidential correspondence could not have failed to furnish evidence against them. He has carefully examined that correspondence, and finds very little pointing in that direction. They were swayed by hatred and fear, the characteristic passions of a caste. They hated liberty and had no respect for legality. They had neither the wish nor the capacity to consider what ultimate effect would be produced on the temper and thoughts of the people by the violent measures they employed. Fitzgibbon, the evil genius of his country during all these years, seems to have loathed and despised it; and his passions clouded his undoubtedly powerful intellect. We do not, therefore, greatly differ from the conclusion at which Mr. Lecky arrives:

"Fluctuating and unskilful policy has often

the effects of calculated malevolence, and the mistakes of the Government both in England and Ireland undoubtedly contributed very largely to the hideous scenes of social and political anarchy, to the religious hatreds and religious panics which alone rendered possible the legislative union. Nor can it, I think, be denied that it is in a high degree probable that a desire to carry a legislative union had a considerable influence in dictating the policy which in fact produced the rebellion, and that there were politicians who were prepared to pursue that policy even at the risk of a rebellion, and who were eager to make use of the rebellion when it broke out, for the purpose of accomplishing their design. The following striking passage from a work which I have often quoted, shows the extreme severity with which the situation was judged by a perfectly loyal writer, who was in general one of the most temperate and most competent then living in Ireland. 'To affirm,' writes Newenham, 'that the government of Ireland facilitated the growth of rebellion for the purpose of effecting the Union, would be to hold language not perhaps sufficiently warranted by facts. But to affirm that the rebellion was kept alive for that purpose, seems perfectly warrantable. The charge was boldly made in the writer's hearing, during one of the debates on the Union, by an honorable gentleman who held a profitable place under the Crown; and to affirm that the measure never would have been carried into effect without the occurrence of a rebellion, similar in respect of its attendant and previous circumstances to that of 1798, is to advance what nineteen in twenty men who were acquainted with the political sentiments of the Irish people at that time, will feel little difficulty in assenting to.'" (Vol. viii., pp. 285-6)

But though Mr. Lecky enables us to acquit the Irish Executive of the blackest guilt they have been charged with, he sets not only the folly but also the ferocity of the ruling clique, and indeed of the greater part of the ruling caste, in an even more odious light than we had expected. No recent historian has treated the horrors of 1798 with such severe impartiality, and in none, therefore, do the cruelties perpetrated by the soldiers, the yeomanry, and the Orangemen appear so frightful. We discount the narratives of partisan writers, but we can trust Mr. Lecky. Cruelties enough there were on both sides; but the cruelties of the insurgents were the work of ignorant peasants, wild with fear and revenge. The insurgent leaders almost invariably tried to restrain their followers; they protected their prisoners, sometimes at the risk of their own lives; they respected Protestant places of worship. No outrages were committed on Protestant women. The forces of the Crown, on the other hand, gave no quarter, and killed in cold blood most of their prisoners. They tortured men, frequently innocent men, without mercy, flogging some to death, with the real or pretended object of extorting evidence, tearing off the hair or scalp of others with pitched caps. Hundreds of persons who had nothing whatever to do with the rebellion were killed, or transported, or pressed into the navy; many hundreds of others had their houses burned and were driven forth homeless. Many women suffered the last indignities. And these atrocities were perpetrated, not merely in Wexford and Wicklow, where the insurgents had been guilty of some savage acts, but to a large extent in counties where there had been no rebellion, as well as in Down and Antrim, where not a single act of cruelty has ever been charged against the insurgents, who rose in arms, but observed all the rules of civilized warfare. What is worst of all, the brutal ferocity of the soldiers and of such a fiend as Flogging Fitzgerald, the Sheriff of Tipperary, were approved or at least condoned by nearly all the heads of the military and civil administration. When Lord Cornwallis tried to stop the wanton slaughter that went on after the rebellion had been suppressed, a cry of rage went up from the dominant faction, and his own officials were among the loudest in complaining of his lenity and weakness.

We come now to the Union, and here also Mr. Lecky's researches show a strong case against the Irish Government. Some partisan writers have lately attempted to clear Castlereagh and his associates from the charge, universally believed at the time, of having forced the act through the Irish Parliament by corrupt means. After the careful examination of the question which we find in these pages, no one is likely to repeat the attempt. Mr. Lecky's summing up is too long for quotation, but it shows beyond doubt that the measure was detested by the large majority of the House of Commons and of the whole class from which the House of Commons came, and was passed by a profuse distribution of peerages and other honors, by the payment of large sums to members to retire and let other members, willing to vote with the Government, take their places, by a certain amount of direct bribery to members who retained their seats, and by large compensations to wealthy borough-mongers in respect of the boroughs which were disfranchised. That the Protestant Episcopalians of all classes were, with few exceptions, hostile to the Union has been generally admitted; but there has been much controversy regarding the attitude of the Northern Presbyterians and the Roman Catholics. Mr. Lecky represents the former as being mostly indifferent, and thinks that among those Catholics who were sufficiently educated to have any opinion there was, if not a majority, yet a considerable body of favoring opinion. The Catholics had little reason to love the Parliament which had just approved the severities of 1798, and their hierarchy had been led to expect that not only Catholic emancipation, but probably also an endowment of the priesthood and a measure of tithe commutation, would immediately follow the Union. This expectation, as every one knows, was cruelly falsified. The evils of the tithe system flourished in full force till 1838. No endowment of the priests was ever proposed to Parliament, nor indeed has there been any moment when it would have been certain to be enacted if proposed. Catholic emancipation might, no doubt, have been promptly passed had Pitt adhered to the pledges which he allowed to be given to the leading Irish Catholics, when the Union was being debated in Ireland, as the price of their support or neutrality. Mr. Lecky points out, as many have pointed out before him, that the failure to pass remedial and conciliatory measures along with the Act of Union destroyed what value the Union itself might then have been expected to possess, and opened the door to a long and lamentable series of agitations and conspiracies.

Nor does he acquit Pitt himself of what is perhaps the gravest charge ever brought against his good faith, and is certainly one of the most unfortunate errors in his long career. "It is impossible," says Mr. Lecky, in summing up a full and instructive account of the intrigues of Lord Loughborough, the obstinate deliverances of the King, the vacillation and tergiversation of the English Cabinet, and the honest efforts of the unfortunate Cornwallis to satisfy the expectations he had raised among the Roman Catholics—"it is impossible by any legitimate argument to justify Pitt's conduct, and it leaves a deep stain upon his character both as a statesman and as a man." (Vol. viii., p. 523).

American readers who can look at the annals of Ireland without that partisanship which seems to obscure the vision of nearly all Englishmen, will find with surprise that an historian who has stated the facts with such conspicuous fairness seems unable to draw from them those conclusions regarding the sources of Irish disaffection in later times, and the character of British rule in Ireland even at the present day, which they will suggest to every unprejudiced person beyond the limits of the United Kingdom. And such readers will observe, not only with surprise, but with regret, the occasional outbursts of petulance and bitterness that disfigure a work which, had some ten or fifteen unlucky pages been omitted, might have been deemed a model of historic impartiality. In one passage—they are but few—Mr. Lecky seems to adopt a position regarding the moral obligation of the Act of Union on long-subsequent legislatures which is not only splenetic but absurd. In another he condescends to a misrepresentation worthy of a second-rate stump orator. Every one of these outbursts—happily they are but few—is so gratuitous and unnecessary to the argument and purpose of the book, every one of them is so wholly at variance with the admirable tone which marks all the narrative and nearly all the reflective passages, that we cannot but hope that they will not be suffered to stand in future editions, testifying to the readers of the next generation how much acridity current controversies can engender even in the most superior minds.

RECENT FICTION.

The Tragic Muse. By Henry James. Macmillan & Co.

Expatriation. By the author of 'Aristocracy.' D. Appleton & Co.

The Anglomaniacs. Cassell & Co.

A Cigarette-Maker's Romance. By F. Marion Crawford. Macmillan & Co.

The House by the Medlar Tree. By Giovanni Verga. Translated by Mary A. Craig. Harper & Bros.

Rarahu. By Pierre Loti. Translated by Clara Bell. W. S. Gottsberger & Co.—*An Iceland Fisherman.* By the same. Translated by Anna Farwell de Koven. Chicago: A. C. McClurg & Co.

A South Sea Lover. By Alfred St. Johnston. Macmillan & Co.

The Miner's Right.—The Squatter's Dream. By Rolf Boldrewood. Macmillan & Co.

Geoffrey Hampstead. By Thomas S. Jarvis. D. Appleton & Co.

If Mr. James were, like his only English rival in the art of fiction, Mr. Stevenson, naturally impelled to write chiefly stories of adventure, he would get more applause than he does for his beautiful manner and exquisite style. Many instinctive censors of literature believe that Stevenson's stories are all action, therefore great; that James's stories are all rest, therefore fine-spun inanity. This sort of comment leads one to suppose that people who are not continually rolling down stairs must not consider the charge of torpidity an aspersion, and that nothing ever is accomplished in life by less violent methods. Most of the people in 'The Tragic Muse' are exceedingly careful of their steps, and yet they achieve a good deal. Nicholas Dormer gives up fine political prospects and a great marriage for the sake of a beggarly art; Peter Sherringham, after much vacillation, is ready to fling over diplomacy and the star of an ambassador for love of the Tragic Muse; the Tragic Muse herself, Miriam Rooth, never dreams of

giving up anything, but holds fast to her one idea, much to her worldly advantage. It is true that the two men and most of the subordinate characters are less interesting for what they do than for what they think, for mental activity preliminary and subsequent to physical. Mr. James is, in fact, guilty of selecting complex creatures—creatures who are centuries away from savage simplicity—and of devoting his greatest energy to the exhibition of the storehouse of their complexities, the mind. He finds an infinite variety of mind, and its tricks are vastly more surprising and entertaining than a conjurer's tricks, which we see but do not in the least understand. There is the dull, ponderous, prejudiced mind of Lady Agnes; the naïve mind of her daughter Biddy, its ingenuousness crossed by inherited worldliness; the worldly mind of Mrs. Dallow, with innumerable shades, refinements, and even contradictions of worldliness; the mind of Peter Sherringham, her brother, very like hers, but the contradictions heightened by greater possibility of passion; the mind of Nicholas Dormer, slow like his mother's, but much less under control, capable of no end of fantastic flights; last, the mind of Gabriel Nash, serenely philosophical, but nebulous, unreliable, elusive.

Nash is nothing but a mind, a sort of incarnation of wisdom gathered through observation, the sharpness and justice of which have never been impaired by feeling. The other minds are only parts of substantial beings—far the most important parts, most subtle and intricate, altogether most worthy of one whose avowed profession is the complete representation of men and women. But Mr. James realizes that approximately primitive people, people who do more and better than they think, are still to be found in the world, often making great bustle and exciting wild curiosity. The Tragic Muse is one of these. Of mixed race, with a not distant Jewish strain, vagabond from her birth, beautiful, polyglot, and poor, she turns instinctively to the stage, where her natural advantages can be most brilliantly utilized and the disadvantages of circumstance most speedily conquered. Enormously vain, with imperturbable self-assurance, showy, hard, not ungenerous, capable of assuming every emotion and incapable of feeling any not connected with public applause and the receipts of the box-office—such is the Tragic Muse, by far the most brilliant and faithful representation of the successful modern actress that has ever been achieved in English fiction.

By way of education in literary art we commend the reading of 'Expatriation' and 'The Anglomaniacs' for purposes of comparison with any of Mr. James's numerous sketches of similar characters placed in similar situations. The American tuft-hunter is for obvious reasons the basest of tuft-hunters. He (more conspicuously, if not more frequently, she) is fair game for the satirist; but to go out after the game with either a club or a feather indicates at least poor judgment in the choice of weapons. The author of 'Expatriation' wields the club, brandishes it, whirls it and whacks with it, bringing down next to nothing. His Americans are literally Anglomaniacs, foaming at the mouth, dangerous. Between the American Brownstones and Van Teutons and the noble English family of which Lord Mayfair is the ignorant and irascible head, there is nothing to choose, for caddishness and vulgarity. In the wonderful and particular unfitness of all to represent any type or class of humanity, or any sane individuals, they are gloriously equal. The author has, indeed, a faint sense of the distinction between legitimate caricature and gross extravagance, showing it in the pompous sophistries whereby Mr. Van Teuton tries to conceal his flunkey soul. The elder Brownstone is not deficient in very crude American humor, and a scene or two in the Mayfair family is no further from nature than is broad farce.

The author of the 'Anglomaniacs' tosses a wisp at her mark. Sometimes it lights where it is aimed, but nothing is hurt. There is more amusement to be had out of the screeching, preposterous toadies than out of the quiet variety, with their fairly decorous persistence; but if one of the two authors is ever to write a telling satire, it will probably be she who is responsible for the 'Anglomaniacs.'

Wherever Mr. Crawford seeks romance he is pretty sure to find it. He is also very careful not to mix his nations up—that is, he gives his people racial or national touches in addition to common human characteristics. He is most successful with those whom Anglo-Saxons call, collectively, "foreigners," perhaps because they are more plastic and have not to be positively dragged and driven into romantic corners. The cigarette-maker and his companions in the little back shop of Herr Fischelowitz of Munich are only less foreign than Turks and Chinese; they are Poles and Russians, and one of them is a tame Cossack. Whatever their vices may be, Mr. Crawford dwells most on their kindness towards a man of superior birth and gentle nature, whom misfortune has made their fellow-workman. The unhappy Count is a pathetic figure and really noble, verifying in his humble life the discredited adage, Blood will tell. The poor Polish girl, Vera, revives another fast vanishing belief—that in the beauty and strength of woman's devotion. Though the happiness which comes to her at last is rarely the reward of the virtuous, it is occasionally, and there is no reason always to ignore the barely possible. There are warmth, sympathy, and sentiment in every chapter, and these things make joy, especially just after one has been mentally dwelling among miserable snobs, the best of whom has but the brain of a midge, a semblance of a human heart, and never suggests the possession of a possibly eternal soul.

In the beginning, there is no family in the Italian fishing village of Trezza so happy and prosperous as the Malavoglia, whose home is 'The House by the Medlar Tree.' There are old Padron 'Ntoni and his son Bastian, and his son's wife, La Longa, with five healthy children, and last, though not least, the *Provvidenza*, the oldest boat in the village and the luckiest. The Malavoglia are honest, industrious, pious, and much more addicted to minding their own business than are their neighbors. In every village you will find at least one family like that, and you will feel that on them the wind of Destiny ought always to blow kindly—but then you will also know that the wind of Destiny bloweth as it listeth, not as it should. In an evil day, to tide over a poor fishing time by a commercial venture, Padron 'Ntoni incurred a debt for a boat-load of lupins. The lupins were rotten, as that old rascal, Uncle Crucifix, well knew when he got them off his hands at a high price and then made a favor of not asking for all his money until Christmas. Trouble would doubtless have come out of the affair, even if the *Provvidenza* had got safely to Riposto, but, as it was, she ran ashore in the storm and night; Bastian was drowned, and 'Ntoni was left with the widow and children to care for, with the *Provvidenza* a battered wreck and that money for the lupins to be paid by Christmas. From that hour Misfortune marked the Malavoglia for her own. They fought a brave fight, but hopeless, oppressively hopeless; one wonders at their patient courage. Sometimes the cloud breaks, only to close again blacker and more threatening. When two of Bastian's children go to the bad, unable, poor things, to bear the endless toil and hardship and dreariness, then old 'Ntoni lies down to die, not having the consolation of knowing how soon his good grandson Alessio is to buy back the dear home by the medlar tree.

The sadness of the story—and what in life could be sadder?—is not mitigated by the manner of its telling. No story could owe more of its worth to the author and seem to owe less. As we read we are not conscious of an author, a person who has selected a scene and a group of people, then proceeded to arrange a number of events in which each shares, and to present all in orderly fashion with more or less regard for effect. For the time, we are actually in the village, an unseen and all-seeing guest, liking or disliking the people who live their lives and are themselves without any reference to us, laughing, gossiping, and wrangling with them, and with an ever-deepening sense of pain for the Malavoglia that barely stops short of heartbreak. For an example of realism in its widest and only true sense, a sincere rendering of reality that is lasting and universal, and of reality that is transient and local, we have nothing in English comparable with 'The House by the Medlar Tree.' In order to surrender one's self as unconditionally to fictitious illusion, one would indeed have to go back to the Vicar of Wakefield and his family and stay there, or make a great leap over time and space to Mr. Howe's 'Story of a Western Town.' Here, if ever, in this plain story of people, common, ignorant, and unambitious, is the good wine that needs no bush, and the utility of Mr. Howells's peremptory hands-up-stand-and-deliver introduction is not clear. All that he has to say is sympathetic and well said, but the very first paragraph excites hostility in the average human breast. Every reader has his prejudices, his preferences and dislikes; he is generally susceptible to gentle leading in the right direction, but he is not often tame enough to be dragooned into interest in this or that, not even if the penalty of obduracy be Mr. Howells's belief that he is a person not worth interesting. Signor Verga has been fortunate in his translator, who has done her work to perfection. For rendering atmosphere and impression she compares with that veteran translator, Clara Bell, and is the more exact of the two.

Mrs. Bell's translation of Pierre Loti's 'Rarahu' hardly gives us the indescribably sweet, melancholy sentiment of the original. The pretty Polynesian idyll is as sad as Verga's story, but the sadness is not in the facts, it is in the temperament through which Loti looks at the world and which tinges everything he sees. It is a poetic temperament, contemplative and sensuous, receiving complete impressions instantaneously, and uttering them in a vivid, penetrating, fragmentary way. In a dozen disconnected passages he conveys perfectly the exotic charm which the islands of the Southern Pacific have for the wandering European. One can hear the ceaseless roar of the ocean breaking on encircling coral reefs, and the sob of the perfumed winds in primeval forests. In the same detached, forceful fashion, we are made to realize the enchanting grace of the Tahitian girl, Rarahu, and the

squalid glitter of the Court of Queen Pomaré, in whose notions of Christianity there is an indissoluble union between the Bible and the pious game of écarté. The glimpses of the Queen provoke both smiles and tears—a reckless old savage squatting on a mat, dressed in a loose flowered yellow gown, smoking cigarettes, chaffing the officers of the ships; a sorrow-stricken old woman, fiercely guarding the waning life of her little granddaughter, the last representative of her royal line; a mistress of court revels, dressed in crimson velvet, sitting "motionless in her great gilt chair, like some gloomy and dissipated idol." The sketch of Rarahu's life after her first young lover, Loti, has sailed away, is cruelly conformable to the logic of circumstances. It is not easy to forget the picture of the young girl, wasted with consumption and debauchery, her ghastly face framed in a wreath of flowers, setting out alone to die in her native island of Bora-Bora, and dragging at her heels her forlorn old cat. The letters of Rarahu to Loti are like Oriental love-songs, a naïve declaration of profound passion revealed in exquisite imagery.

The second English translation of Loti's 'Iceland Fisherman,' the finished flower of his literary work, is better than the first, published about two years ago. The translator has reproduced the marked onomatopoetic quality of Loti's language with singular fidelity and skill.

The author of a 'South Sea Lover' has felt the spell to which Loti abandoned himself, but cannot make others feel it with such intensity. His descriptions are more formal, more conventionally literary, fated to be skipped for the narrative of Christian North's adventures on the Island of Omeo. The scene is laid in the [illegible] of the century, when white men [illegible] inhabited "desert islands" might either be worshipped as gods or incontinently butchered to make a Polynesian holiday. North is taken to Omeo by a chief's son, Soma, who adopts the fair-haired Saxon for his "blood-brother." This relation is considered very sacred, and makes obligatory on each many sacrifices, including that of life if necessary for the sake of the other. The plot turns on this compelling bond, and culminates with Soma's voluntary immolation in the lake of fire, which for ever seethes and glows on the summit of Monoriro. The action is thrilling and dramatic, carried on by a series of incidents picturesque in themselves, and told with considerable spirit. Soma is a combination of a Greek of the heroic ages and a mediæval knight. Study of savage or primitive races would not tend to confirm belief in his existence, but he is nevertheless a sympathetic and attractive figure in a romantic novel.

When a new country has produced a novelist who may stand without shame beside contemporaries of high rank in the old countries, it has filed a claim for consideration in the republic of letters. Australia, the country of golden sands, unlimited wool, and midsummer Christmas, has filed such a claim by presenting to the world Thomas Alexander Brown ("Rolf Boldrewood"), the author of 'The Miner's Right' and 'The Squatter's Dream.' His first novel, 'Robbery under Arms,' attracted much attention in England, and the two later works fully sustain the good reputation of the first. 'The Miner's Right' has the air of a much earlier production than 'The Squatter's Dream.' The plot is wild, rather formless, crowded with theatrical situations enacted by stagey people. This does not imply a charge of artificiality or deliberate sensationalism. In all stories of pioneer and miner's life, noticeably Bret Harte's, the stagey quality is pronounced, and there is no reason to doubt that it is a quality inseparable from that life and the adventurous, more or less Ishmaelitish, folk who make it. The book can be judged most fairly by dwelling on the multitude of separate scenes and character sketches rather than on the erratic construction, the ineffective grouping of the characters, and their highly melodramatic relations with each other.

'The Squatter's Dream,' on the contrary, is a thoroughly well-sustained study of one character and a continued narrative of his hopes, trials, failures, and achievements. Jack Redgrave is a young man who has to learn, through bitter experience, how wise a thing it is to let well enough alone. Having, while still young, arrived at the proprietorship of a moderately large cattle ranch, he becomes infected with the sheep-raising mania, takes to scorning modest comfort, and will be content with nothing except a great "run" and several thousand sheep, every one endowed by his imagination with a golden fleece. The novel is an exhaustive account of Redgrave's experiment, given very plainly, and exciting a great interest in the vicissitudes to which the ambitious sheep-farmer is exposed. Without any effort, the author arouses sympathy for his hero, and a feeling very close to personal distress when, in spite of all his pluck and persistency, he is obliged to accept ruin and to begin life again empty-handed. The accident which restores his fortunes is not out of the natural course of events in an imperfectly explored country. One noticeable difference between Boldrewood's pioneers, miners, and ranchmen and the same class of men in American fiction is, that the Australians do not all, irrespective of birth and previous condition, express themselves in corrupt and vulgar English, and that points in characterization are not made by the invention of linguistic eccentricity.

Great Britain's older colony, Canada, has produced no novelist comparable with Boldrewood. In the first half of the century, there was Judge Haliburton ("Sam Slick"), but he was a Nova Scotian, and would as soon have thought of calling himself a Yankee as a Canadian. Some few Canadians by birth have drifted to London or to the United States and achieved respectability in literature; but those who have stayed at home and attempted to delineate the life of their country have rarely even reached mediocrity. The Canadian author of 'Geoffrey Hampstead,' a story of society in Toronto, makes a distinct gain on his rivals in the field. The book is as readable as are the average English or American society novels, and rather more amusing, because the reader who is not Canadian must perceive plainly the limited worldliness of the provincial "highflyers" at fashion—a limitation of which they are supremely unconscious. The distinguishing provincial note is the prominence of the "bank clerk." The bank manager does not appear to be of any importance, but about the underling there is a mystical supremacy, and it almost seems that he is truly great in proportion to the smallness of his income, the narrowness of his prospects, and the largeness of his debts. Geoffrey Hampstead is the prince of bank clerks, and when we mention that he is introduced adding up three columns of figures at once, anything phenomenal may be expected of him. He is throughout an extravagantly picturesque person and the centre of a plot which towards the catastrophe becomes mysterious and exciting. The last half-dozen chapters are very well done; swift, concise, coherent, they show a decided ability for narration of improbable events, and serve to efface the memory of the pages of puerile talk and platitudinous reflection of which quite two-thirds of the preceding chapters are made up.

GOSSE'S NORTHERN STUDIES.

Northern Studies. By Edmund Gosse. London: Walter Scott; New York: Lovell.

Of the essays contained in this book, a late issue of the Camelot Series, all but one, the second on Henrik Ibsen, appeared originally in book form in 1879 as a part of a volume of 'Studies in the Literature of Northern Europe.' In the earlier book, besides the essays on subjects purely Scandinavian, some phases of Dutch and German literature were also considered. It is an indication of a literary tendency of the time, the direction of which, in England and America, Mr. Gosse has been, to no small degree, instrumental in shaping, that the second issue of these Northern essays is really of more moment than the first. A few years ago, matters literary in the three Scandinavian countries were subjects for investigation by the venturesome few, whose criticisms were then more often read for their own charm of expression than from any active interest in their subject. The reissue of the essays in the present book with the date of their original appearance calls to mind the fact that Mr. Gosse himself was one of these first navigators into almost unknown seas. Now, when many others have followed him, and all the world talks glibly of the things of which he, with no little intrepidity, wrote, it is a matter for curiosity, in not a few instances, to note how true was his early judgment. It is Gosse, indeed, in the essay on Henrik Ibsen published in 1873, who first introduces that writer to an English public, and there prophesies of certain of his dramas that, "sooner or later, they will win for their author the homage of Europe."

The essays, which, with the exception of one descriptive of the Lofoden Islands, off the coast of Norway, are all on literary subjects, concern the three northern lands, Norway, Sweden, and Denmark. Under Sweden, Mr. Gosse writes a warmly appreciative essay on Runeberg, who, he thinks, in 'Fänrik Staals Sägner,' "has presented Swedish literature with the most intimate, glowing, and original poetical work that it possesses." Under Denmark, we are told, in what is in many ways the best essay in the book, of the Danish National Theatre, and of Four Danish Poets, Grundtvig, Bödtcher, Hans Christian Andersen, and Paludan-Müller. By far the greater popular interest, however, in the light of a certain timeliness that they may be said to possess, attaches to the three essays on Norway, Norwegian Poetry since 1814, and the two, written at an interval of sixteen years, on Henrik Ibsen. These three together are, no doubt, from the editor's point of view, the particular *raison d'être* of the present book. Where everything on Ibsen, the man and the book, is eagerly read by a host of ardent and impressionable worshippers, criticism from so well-known a critic as is Mr. Gosse will naturally and justly find an audience ready to receive it. It becomes, accordingly, a question of some little importance as to the attitude here assumed, and the judgment passed on one concerning whose work there has been expressed such a wide diversity of opinion.

The first essay in the book, on Norwegian Poetry since 1814, well and fittingly describes the environment, a knowledge of which neces-

sarily renders more intelligible the present position of literature in Norway, and gives it, as far as may be, a material justification. In spite of Mr. Gosse, the dictum that dates Norwegian literature from the new Norway of 1814 is scarcely to be described as arbitrary, and he himself afterward makes the point that the place of Holberg, Wessel, and the rest of the moderns who wrote before that date, is properly in Danish and not in Norwegian literature. The separation from Denmark in the year mentioned, and the proclamation, on the 17th of May, of Christian as King of Norway, most definitely mark the beginning of a new era, intellectual as well as political, for with the assertion of the new national life came also the unmistakable beginnings of a new national literature as a close concomitant. The poetry of the time, the *Syttendemai-Poesi*, or the poetry of the 17th of May, with its "froth and whirl," is interesting and valuable only as a literary phase. The first real poet of the period was Wergeland, born in 1808. Full of the patriotic enthusiasm of the *Syttendemai*, Wergeland quickly became the poet of the people, and this notwithstanding the fact that his verses were "brimful of tasteless affectations and outrages of rhythm as well as reason." Wergeland is greatest in his latest work. "No poet, save Shelley," says Mr. Gosse, "has decked the bare shell of politics with brighter wreaths than Wergeland." A conservative reaction against the "noisy mock-patriotism" of Wergeland's early period and its inartistic presentation, fortunately for the future of Norwegian poetry, was not long in coming. The leader of this movement, aptly called "the Critical," was Welhaven. Welhaven's first mark of attack was Wergeland himself, who, he writes, is "stained with all the deadly sins of poesy." Later, the controversy took on a national character, but the battle was ultimately to Welhaven and the Critical party. Welhaven's poetry, with the exception of the long polemical poem of "Norges Dæmring" (Norway's Twilight), consists wholly of short lyrics. But one poet of note, Andreas Munch, whose first important work, "Den Eensomme" (The Solitary), appeared in 1846, intervenes between the old political poetry and the new national school. Munch's poetry is characterized by beauty of form rather than by depth of thought. Two of his dramas, "Solomon de Caus" and "Lord William Russell," have attracted attention outside of Scandinavia. A few words will suffice to bring the history of Norwegian poetry, in the main lines of its development, down to the writers of the present day. Hitherto its impressions had been sought without, and although there had been much that was purely local in subject and sentiment, there had been, after all, but little in poetry or prose that was characteristically national. "For all their loud talk about patriotism," writes Mr. Gosse, "Wergeland and the rest had never thought of taking their inspiration from the deep well of national life around them, or from the wealth of old songs and sagas." The zoölogist Asbjörnson, by his collection of the folk-stories of Norway, published in collaboration with Jörgen Moe in 1841, was the pioneer to point out by suggestion the direction of the new literary movement. Moe (when he died, in 1822, Bishop of Christiansand) wrote some exquisite lyrics filled with the very essence of the North.

From the *Syttendemai-Poesi* down to Björnson and Ibsen, the Titans of the present, is a long stride in development, but Mr. Gosse's charming itinerary has made the way most intelligible. Both Björnson and Ibsen have found much, though not all, of their best and most enduring material at home, in their own national life. Of the two, Björnson's genius, like his literary pabulum, is the more Norwegian and less cosmopolite. With a warm heart of his own, he is infinitely nearer the heart of the people. His literary fame rests principally upon his peasant romances and the lyrics with which they are interspersed, and in them modern Norwegian literature has reached, if not its highest significance, indubitably its most beautiful and perfect fruition. As a dramatist, he is undeniably inferior to Ibsen, but Mr. Gosse, apparently, thinks much less of his power than a more extended criticism would warrant.

Ibsen is "the real founder of the Norwegian drama," as he is, thus far, its greatest exponent. In some respects he is one of the most notable figures in contemporary literature, at home or abroad. Björnson fits well into his environment. Ibsen, while he is not necessarily above it, is outside and beyond it. Had he written nothing but the early historical plays on Norse subjects and those incomparable works, 'Peer Gynt' and 'Brand,' he might still have been described as continuing on fairly well, in his distinctive way, the direction of the "Nationalists." It is, however, the later prose dramas that have made his name known throughout the literary world, not as a dramatist merely, but as a dramatic satirist, and in this field he stands absolutely alone in the North. He perpetuates the tendencies of no school, and it is safe to say he will found none. It was "Love's Comedy," a satirical play of contemporary life in verse (which dates from 1862 and not 1863), that first exhibits, in tone, if not in form, the especial bent of Ibsen's genius which, more than aught else, has made him known outside of Scandinavia—Mr. Gosse, however, in his later essay to the contrary, since he sees in the "Young Men's Union," which appeared in 1869, the first trace of the characteristics of the later social dramas. Several historical plays on subjects taken from Norwegian history had preceded it, and one, "The Pretenders," by common consent the most perfect from a dramatic point of view of all of Ibsen's writings, followed it two years later.

Ibsen's career hitherto had been varied. At sixteen he was an apothecary's clerk in the little town of Grimstad, near Skien, his native place. With a desire to study medicine, he prepared himself, in the next few years, for the requisite preliminary examination, which he passed when he was twenty-two. At this time, on the authority of Georg Brandes, in his 'Æsthetiske Studier,' "his circumstances were miserable; for a long time he had not even the means to eat regularly at midday. His youth was rigid and hard. He did not as a lad see life's bright side. His own life, not merely from within, but from without, has been a struggle." In 1851 Ibsen began to study at the University, where he fell in with a group of kindred spirits, among them Björnson. This same year, in collaboration with some of his friends, he published a weekly newspaper, which attained, however, but a short life. The succeeding year, Ibsen was made manager of the new theatre at Bergen, which post he held until 1857, when he became director of the National Theatre at Christiania. Five years later, the date of the appearance of "Love's Comedy," the theatre unfortunately became bankrupt. In 1864 Ibsen left Norway, and since then has lived in Rome, Dresden, and, later, in Munich. At home, according to the critic just quoted, Ibsen seems to have lived continuously on a war footing with his countrymen. After the appearance of the dramatic poem 'Brand,' published in Copenhagen while he was in Rome, the Norwegian Storthing, with a rare magnanimity, voted him an annual stipend. 'Peer Gynt,' a second dramatic poem, was the next work to appear, and with it, according to the verdict of Scandinavia, but not according to the verdict of Mr. Gosse, Ibsen really reached the highest literary altitude that he has attained. Mr. Gosse, indeed, in his first essay, written before the appearance of the seven prose dramas, with which the second essay is principally concerned, calls this his greatest work. Notably, too, it is the last work in verse. "De Unges Forbund" ("The Young Men's Union," or, as Mr. Archer has it in his translation, "The League of Youth"), a political comedy, and the formidable ten-act historical tragedy, "Emperor and Galilean," which alone intervene before the first of the modern social dramas, are both written in prose.

'Brand' and 'Peer Gynt' are satirical dramatic poems—they are not dramas—whose like is not to be found in the modern literature of any nation, so brilliant are they in expression, so caustic in their satire, so splendid in the strength of their invective. 'Brand' is, perhaps, a picture of the Norseman as he should be, earnest in purpose and virtuous beyond the suspicion of stain. 'Peer Gynt' is, as apparently, the Norseman as Ibsen conceives him often to be, selfish, mendacious, and cunning. In both there is the same bewildering exuberance in the use of language, of rhyme, and of rhythm; the same vigor and virility of idea and its presentation. They have had an amazing success in the North: the edition at hand (1885) of 'Brand' is the tenth, of 'Peer Gynt' (1886) the seventh; and in both cases there have doubtless since been others. Unfortunately, beyond isolated passages, neither has been translated into English.

Mr. Gosse, while he grants in his early essay all that has been said by way of praise of the work of this period of Ibsen's productivity, takes, in the light of the later prose dramas, an entirely different standpoint. What has gone before he relegates to comparative unimportance, and regards as Ibsen's particular claim to attention the prose social dramas, in the order of their production: "The Pillars of Society," "A Doll's House," "Ghosts," "An Enemy of the People," "The Wild Duck," "Rosmerholm," "The Lady from the Sea." What Ibsen has set out to do in this series of dramas is, according to Mr. Gosse, to make a diagnosis of the diseases of modern social life, not with a desire to reform society, but with the intention of accurately noting down the symptoms of the disorders under which he considers the modern world to be sinking. Mr Gosse, in short, sees in him, as he says, nothing of the missionary or the philanthropist, but evidently more of the skilled pathologist, although Ibsen differs vitally enough from the latter in that what he writes is polemic rather than descriptive, and is rather to be considered an indignant protest against the life of the present than a notation, however close, of its characteristics. A detailed analysis is given of the dramas, which is now doubly interesting since, with the single exception of "The Lady from the Sea," the entire series has become familiar through English translations.

Whatever be the ultimate outcome of the storm of controversy raised throughout the literary world by this astonishing series of plays, the general fairness of Mr. Gosse's position must be conceded. Ibsen, he admits, is not a poet to the taste of every one.

"Those," he concludes, "to whom the most modern spirit in literature is distasteful, who see nothing but the stitches of the canvas in

the vast pictures of Tolstoï, would reject Ibsen, or would hark back to his old sweet, flute-like lyrics. But others, who believe that literature is alive, and must progress over untrodden ground with unfamiliar steps, will recognize a singular greatness in this series of social dramas, and will not grudge a place for Henrik Ibsen among the foremost European writers of the nineteenth century."

Mr. Gosse is far too acute a critic to be easily misled; and even if there is a difference of opinion as to the relative value of the prose plays in making up an estimate of Ibsen's position in contemporary literature, he is unquestionably to be allotted, on the basis of the whole of his production, the distinguished rank that the critic would give him. If, in these essays on Ibsen, Mr. Gosse were to be charged with a fault, it would be for his optimism. It is in such essays as that on the Danish National Theatre, and others of the kind, that he is really at his best.

Poems, cited in the original in an appendix, have been translated from Wergeland, Moe, Björnson, Ibsen ("Love's Comedy," 'Brand,' 'Peer Gynt'), Arrebo, Runeberg, and Bödtcher. Several of these translations are remarkably felicitous, and notably enhance the value and vividness of the essays which they accompany. As a whole, the 'Northern Studies' is one of the most interesting volumes of literary comment devoted exclusively to Scandinavia that we have had in recent literature.

DEMBITZ'S KENTUCKY JURISPRUDENCE.

Kentucky Jurisprudence. By Lewis N. Dembitz of the Louisville Bar. Louisville: John P. Morton & Co. 1890.

It might be supposed, to judge from the multitude of legal text-books, that a new subject was hardly to be discovered in this department of human labor. The author of this volume, however, has certainly hit upon an idea that is not only novel, but also likely to prove fruitful. The law of all our States, save Louisiana, being derived ultimately from a single source, is in substance identical, but differences in legislation and judicial decision have produced in it variations both numerous and extensive. There is occasion, therefore, for the comparative study of the jurisprudence of the United States, and Mr. Dembitz has inaugurated this s[illegible] with the volume now before us. His aim has [illegible] "to set forth those rules, sometimes forming a whole independent branch of the law, which, in the State of Kentucky, either through statute or judicial decision, have taken a different form as compared with rules followed in all or in many of the other States."

The development of Kentucky law has been in certain directions determined by that of Virginia. In 1776 the county of Fincastle, which included all the western lands of that State, was divided into three counties. One of these was named Kentucky, and became first the District, and in 1792 the State of that name. The treaty of peace with Great Britain, and the cession by Virginia, in 1784, of the territory northwest of the Ohio River to the United States, fixed the north side of that river as part of the northern boundary of that State, and thus it came about that Kentucky is sovereign over the river bed and all the river islands. All titles to land in Kentucky are derived either from that State or from Virginia. In 1776 the Revolutionary Convention of Virginia provided that no further purchases of land from the Indians should be made except upon behalf of the public by authority of the General Assembly. Prior to the separation of Kentucky most of the valuable lands contained within its borders had been disposed of by Virginia, either by land-warrants to the soldiers of the Revolution or to settlers and purchasers. By the "Compact with Virginia," enacted in 1789, it was settled that all rights in lands in the District of Kentucky existing at the time of the separation should be determined by the law as it then was. Hence the Kentucky conveyancer of to-day must be acquainted with the earlier law of Virginia. Owing to the variety of provisions for the acquisition and maintenance of titles, the whole subject has become excessively intricate and difficult. We can only say that Mr. Dembitz appears to have disentangled it in a masterly way.

For another reason the Kentucky practitioner requires to be familiar with Virginia law. That State adopted the common law as it existed in 1607, and the first Constitution of Kentucky declared that all laws at the time in force in Virginia, with immaterial exceptions, should continue in effect. But, as most of the English statutes modifying the common law were re-enacted in Virginia, the period of divergence was in effect postponed. When it arrived, however, it was emphasized, for in 1808 the Kentucky Legislature passed an act providing "That all reports and books containing adjudged cases in the Kingdom of Great Britain, which decisions have taken place since the 4th day of July, 1776, shall not be read nor considered as authority in any of the courts of this commonwealth, any usage or custom to the contrary notwithstanding." Under this act Mr. Clay was once prevented from reading from East's reports an opinion containing a summary of decisions to be found in older books that were clearly good authority. But the statute was soon disregarded by the courts and was eventually repealed. Kentucky reports, however, date back as far as those of New York, and antedate those of Georgia, Delaware, and Rhode Island by more than forty years. In the last-named State, when an official reporter was appointed, the judges told him that they proposed to give him no assistance in his work, and in Kentucky only such opinions are given out by the court as it considers to be of public interest. The manuscript opinions, however, were often hunted up by counsel, and the modern system of unofficial reports of course brings everything to light. As in other States, the earlier reports rank high—partly because judges were then appointed, not elected; partly because the cases were few, and, therefore, better considered, and partly because the difficulty of travelling threw the work of arguing appealed cases into the hands of a few eminent counsel.

Among constitutional provisions there is more in form than in substance that is peculiar, decisions being often influenced by the particular words employed. In the present Constitution we read: "That all freemen" (it is suggestive that the word "freemen" was substituted in 1850 for "men," which was used in the Constitution of 1792), "when they form a social compact, are equal, and that no man or set of men are entitled to exclusive separate public emoluments or privileges from the community but in consideration of public service." Many interesting questions have arisen concerning the meaning of the last phrase, especially in connection with exemptions from taxation and chartered privileges. A highly important political theory is contained in the assertion that "arbitrary power does not exist anywhere in a free government, . . . *not even in the greatest majority.*" This proposition is certainly unusual, and we should be glad to learn the circumstances under which it was adopted. Yet the courts of Kentucky have decided, with those of Kansas, and with the Supreme Court of the United States, that the practical confiscation of property devoted to the liquor traffic by a statute declaring that traffic a nuisance, is a proper exercise of the police power. On the other hand, the Kentucky courts have gone beyond those of other States in holding that arbitrary, unequal, and excessive taxation was a violation of the prohibition of taking private property for public use. Upon the whole, the judicial interpretation of constitutional law seems to have been enlightened and courageous, even in the days of the slave power.

Although Kentucky was undeniably a loyal State, the Court of Appeals held unanimously that the Legislature could not authorize towns to raise taxes and loans for the purpose of freeing themselves from the draft or to aid volunteers. It was pointed out, and we incline to think justly, that such laws did not operate to raise soldiers or to increase the military power of the Government, but to relieve persons liable to draft—that is, to enable some of those subject to military service to escape from it. The benefit, therefore, was not to the public, but to individuals. It can scarcely admit of question that the army of mercenaries raised by legislation of this kind was of comparatively little value and was very expensive.

It is impossible for us to undertake any detailed criticism of the peculiarities of private law in Kentucky, but we may set down a few of the points that we have noted, without any attempt at classification. A check drawn against a bank deposit is an absolute appropriation of its amount, and cannot be withdrawn by the maker. The Kentucky Statute of Frauds does not require a written memorandum of a sale of goods. The words of the statute, "No action shall be brought," etc., do not apply to defences to actions, and the term "signed" does not require a subscription. Purchase-money mortgages are practically unknown, their effect being secured by the application of the principle of the vendor's lien. No preferences are allowed in assignments by debtors. A peculiar rule has been applied in the distribution of partnership and individual assets between partnership and individual creditors. Relief is allowed for mistake of law. Promissory notes are not as a rule negotiable paper. The Statute of Charitable Uses has been held to be law in Kentucky, although the *cy près* doctrine is not recognized. Common carriers have not been allowed to contract themselves out of their common-law liabilities, and the principles of the Inter-State Commerce Act have been adopted by the Legislature. The liability of employers for injuries to their servants caused by the negligence of their fellows is greater than in most other States or in England before the recent statute. Suburban communities are not to be forced against their will to unite with cities. Women are allowed to vote on school taxes, if they own taxable property or have children of school age. But the common-law rule still applies to married women's property, with some statutory modifications.

We have been struck with but one serious omission in this most comprehensive treatise—a clear statement of the law of perpetuities. Apparently land may be rendered inalienable for the whole term allowed by the old English rule, during any number of lives in being and twenty-one years and ten months thereafter. This is far longer than is now practicable in England and in most of our States. Mr. Dembitz dislikes this conservatism, and declares that "the habit of 'settling' lands is far too

prevalent in Kentucky; it has ruined many young men in mind and body." We may add that this is one of the few instances where he offers an opinion of his own, although he is obviously extremely well qualified to discuss general jurisprudence. His work is marked by ability, industry, and scholarship of the highest order, and deserves the recognition of all lawyers who do not look upon their profession merely as a business.

The Gallant Lords of Bois-Doré. By George Sand. Translated by Steven Clovis. Dodd, Mead & Co.

The Chouans. By Honoré de Balzac. Translated by George Saintsbury. Cassell Publishing Co.

THERE is a certain audacity shown in attempting to translate George Sand, because much of the delightfulness of her "profuse strains of unpremeditated art" lies in the charm of her graceful and vigorous style. But Steven Clovis has justified his (or her) audacity by very sufficient success. This rendering, excellent from its intelligence and simplicity, of 'The Gallant Lords of Bois-Doré' ought to find many grateful readers, for the story, of which the scene is laid at the beginning of the seventeenth century, is full of entertainment of the pleasantest kind; while for those who demand something besides entertainment, its lively and accurate pictures of by-gone things and conditions, modes of life, and modes of thought, offers them a royal road to learning. It is to be wished that the translator had exercised a little more thorough care. His work is so good that it might easily have been almost faultless. Two mistakes on p. 32 and one on p. 36 (vol. i.) are instances of the class of errors that he commits too frequently. "Persian shades" should be "chintz curtains"; "quilted silk" should be "raw silk" or "coarse silk"; and "tomber en quenouille" is not the "crumbling" of a fortune, but its passing into the hands of a female heir.

Mr. George Saintsbury, in translating 'The Chouans' of Balzac, had, from the inelegance of the style of the original, an easier, or at least a lower, task than the translator of George Sand, but he has not acquitted himself so well. He has not succeeded in attaining the faithfulness of rendering which he declares in his introduction to have been his ideal; and the difficulties which he had to contend with from his author's clumsy use of French are increased by his own clumsy use of English. When he writes of "the contingent extracted with great difficulty from the district of Fougères, and due by it in virtue of the levy which the executive Directory of the French Republic had ordered by virtue of the law of the tenth Messidor preceding," the vice of his "virtues" is in no wise derived from Balzac; and similar encumbrances strew his pages. A more serious sort of blundering is shown in his translation of "Recteur" by *Rector* (and also "Curé" by *Curate*), a translation which is hardly ever accurate, and which, if used here, should have been so only with a careful explanation, since in this story the title belongs to a certain class of revolutionary priests among the peasants of the Vendée—*Directors* they might be styled—in connection with whom the associations with the title Rector have an almost ludicrous effect. Mr. Saintsbury shows that he is not at home in the French language, though familiar with its literature, by a footnote on p. 19, where he sees a misprint in a phrase which is the same in every past edition of Balzac, and will be the same in every future one, and by which a Frenchman would not be for a moment perplexed.

But when all is said, it must be confessed that the interest of the story overmasters any stumbling in the speech, whether on the part of Mr. Saintsbury or of Balzac himself. This was the first of Balzac's successful works (he had been for ten years writing unsuccessful ones), and though he did not evince in this tale his full strength of peculiar power, no competent critic could doubt then, and still less now, that it is the work of a master. Its historic character and its imitation of Scott (but Balzac was a better and less romantic historian than Scott) set it apart from most of the other volumes of the "Comédie Humaine," and not less its agreeable lack of any need of expurgation. The scene opens the very year that Balzac himself was born, and one feels that if not an eye-witness, it is at least an ear-witness, who writes. He tells the story as it had been told to him by those who had taken part in the terrible struggle out of which he created his drama; and our sense of its reality is deepened by this impression.

The illustrations of this handsome volume do not—and how often is this the case!—illustrate it. It would almost seem as if the artist had not read the text. His representation of one of the most important and picturesque figures, Marche-à-Terre, is absurdly untrue; and the *things* seen, which Balzac, as always, describes with such extraordinary accuracy of detail that he almost provides an illustrator with "working plans," are drawn with foolish vagueness and meaninglessness.

Geschichte der Deutschen Verfassungsfrage während der Befreiungskriege und des Wiener Kongresses, 1812 bis 1815. Von Wilhelm Adolf Schmidt. Aus dessen Nachlass herausgegeben von Alfred Stern. Stuttgart: G. I. Goschen. 1890. 8vo, pp. iv, 498.

THE author of this work, and of two other works treating of Prussian history, died in 1887. The present book is said (by its preface) to have occupied his attention from about 1870. It is calculated to interest professional students of history rather than the general reader, consisting as it does mainly of an array of historical documents, some of which have not before appeared in print, and all of which are accompanied by a running commentary designed to elucidate their bearing on the topic in hand. Incidentally the author points out that where Treitschke differs from older authorities the latter are more nearly right than the former; and he makes out an apparently strong showing adverse to Treitschke's accuracy and trustworthiness in many details. There is nothing very surprising in this, as the Prussian historian passes for a thick-and-thin admirer and defender of the most arbitrary measures of Bismarck, and a Prussian Chauvinist of the most extreme type. It may be assumed that, for the period in question, readers of Seeley's 'Life of Stein' (which mainly follows Pertz and Häusser), get a more correct general view than they could obtain from the later and more pretentious writer.

The German confederacy established in 1815 never succeeded in giving satisfaction to any political party, and has been for many years a target for the contempt and obloquy of men of all shades of opinion. Its defects were not due, however, to any lack of deliberation or prudence in calling it into being, for its constitution was the subject of anxious thought to the greatest statesmen of a time that abounded in statesmen. The discussions and proposals which for three years engaged the close attention of men like Stein, Hardenberg, Wilhelm von Humboldt, and Metternich, to name only the greatest, are set forth with much detail in the work under consideration.

The great events which, in our time, have transmogrified Germany, have paled into insignificance the transactions of 1815; but while those transactions may be admitted to possess but a languid interest for the present generation, it may not be useless to note that however much the leading spirits of that day differed on other points, they agreed in taking it for granted, as a matter of course, that Germany without Austria, and, what is more, without Austria overshadowing all the other States, was not to be thought of. This assumption was shared in, not only by the Prussian ministers, but also by the Prussian monarchs even down to our own day. Even the old Emperor, William I., did not, until after the Schleswig-Holstein war of 1864, entirely shake off the hereditary sense of subordination to Austria. Bismarck was the first who dared to attack the venerable superstition. He it was who first was bold enough to conceive of Prussia at the head of a German union from which Austria should be excluded, for even Bismarck could not dream of Austria remaining in Germany if she had to play second fiddle to Prussia. Bismarck never shared in the romantic aspirations for the greatness and unity of Germany any more than Metternich did. Just as Metternich was a faithful servitor of the house of Hapsburg, and labored only to enhance the power of Austria, so Bismarck has been nothing more nor less than a retainer of the Hohenzollerns, and his only aim has been to aggrandize Prussia. If he contributed anything to the glory of Germany, it has been by way of incident.

With such a point of view Stein, although he, too, had been a Prussian minister, was never in sympathy. To him Germany represented an important factor in the European concert, and the interests of any particular dynasty or State were to be regarded as subsidiary to the welfare of the whole country. His somewhat hazy conception of a great and united Germany was shared in greater or less measure by the leading men of his time, and as it lacked a solid foundation in historical facts, the German constitution which emanated from it was never practically workable. Even the present constitution of Germany, consisting of twenty-six States, most of which are ridiculously small, can hardly be regarded as a finality. It would seem the inevitable destiny of such pocket-boroughs as Lippe and Waldeck and half-a-dozen more 12mo "States" to be swallowed up by Prussia. Those who believe that a republican form of government is likely to become prevalent in Europe will perhaps echo the famous aspiration of the Roman emperor, and wish that all of Germany may soon come under a single ruler, because it is easier to cut off a single head than twenty-six of them. The present German *Bund* offers no analogy to our Union. The old Teutonic tradition of local self-government from which our institutions and those of England received their original impulse, died out ages ago in Germany. The small German States support a number of small courts and petty princes, but have no self-government.

Recollections of a Private. A Story of the Army of the Potomac. By Warren Lee Goss. Thomas Y. Crowell & Co.

ALTHOUGH in these days bayonets often think, their open speech is more rare; hence a volume from the ranks, albeit rather belated,

AT THE WARNOLD IN THE "NINE- TEENTH CENTURY."

"The New York NATION—a newspaper which I read regularly and with profit, a newspaper which is the best, so far as my experience goes, of all American newspapers, and one of the best news- papers anywhere."

THE NATION,
an independent weekly journal, was esta lished in 1865. Its contributors in- clude the mo t prominent names in litera- ture, scien , and art both in this coun- try and a oad. It is emphatically found in the h es of people of culture and re- fineme No intelligent American de- rous f keeping abreast of the best oliti al and literary thought of the ay an afford to be without it. Sub- sc tion price, $3.00 a year, postpaid.

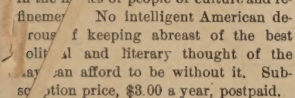
UBLISHER OF THE NATION,
208 Broadway, New York City.



BERMUDA.
The now far-famed BERMUDAS, with cable communication and equable winter temperature of seventy degrees, beautiful scenery, and one hundred miles of good roads, headquarters of the British army and navy of the Atlantic Squad- ron, is unrivalled in its attractiveness, reached by the magnificent iron steamers

ORINOCO or TRINIDAD,

in sixty hours from New York. The Tropical Islands, including

St. Kitts, Martinique, Barbados, and Trinidad,

also afford beautiful and interesting tours, all reached by steamships of the Quebec Steamship Company from New York.

For descriptive pamphlets and dates of sailing apply to

A. EMILIUS OUTERBRIDGE & CO., Agents, 39 Broadway, New York,
or THOMAS COOK & SONS, 261 Broadway, New York.

GOLD MEDAL, PARIS, 1878.

W. BAKER & CO.'S
Breakfast Cocoa
Is absolutely pure and it is soluble.
No Chemicals
are used in its preparation. It has *more than three times the strength* of Cocoa mixed with Starch, Arrowroot or Sugar, and is therefore far more economical, *costing less than one cent a cup.* It is delicious, nourishing, strengthening, EA- SILY DIGESTED, and admirably adapted for invalids as well as persons in health.
Sold by Grocers everywhere.
W. BAKER & CO., Dorchester, Mass.

E. W. NASH, 80 NASSAU ST., NEW York, dealer in Books relating to America, Local History, Genealogy, Indians, etc. Catalogues issued sent on application.

School Trustees,
Principals,
Teachers,

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

The *Nation*, in its special field of political and literary criticism, is unlike any other periodical, American or foreign. About 9,000 copies are circulated weekly, but these figures do not accurately represent the number of its readers. It is taken by reading-clubs and literary associations in a large number of places, and may be found on file in every library of importance in the country. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters.

Advertising rates, 15 cents a line each insertion, with the following discounts: 5 per cent. on four insertions, 10 per cent. on 8 insertions, 12½ per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 208 Broadway, N. Y.

JUST READY:
Wells' College Algebra.
This author's popular *University Algebra* will also continue to be supplied as before.
